The design of Zebra, a striped network file system, is presented. Zebra applies ideas from log-structured file system (LFS) and RAID research to network file systems, resulting in a network file system that has scalable performance, uses its servers efficiently even when its applications are using small files, and provides high availability. Zebra stripes file data across multiple servers, so that the file transfer rate is not limited by the performance of a single server. High availability is achieved by maintaining parity information for the file system. If a server fails its contents can be reconstructed using the contents of the remaining servers and the parity information. Zebra differs from existing striped file systems in the way it stripes file data: Zebra does not stripe on a per-file basis; instead it stripes the stream of bytes written by each client. Clients write to the servers in units called stripe fragments, which are analogous to segments in an LFS. Stripe fragments contain file blocks that were written recently, without regard to which file they belong. This method of striping has numerous advantages over per-file striping, including increased server efficiency, efficient parity computation, and elimination of parity update.

PROTOTYPE PC USER INTERFACE
1993 12 p
(Contract W-7405-eng-36)
(DE93-008008; LA-Sub-93-29) Avail: CASI HC A03/MF A01

The conceptual model of analytical director is implemented to simulate a robotic analytical laboratory. In this model, the robotic table is represented by an abstract workbench; and the laboratory activities are represented by a set of primitive operations. A PC version user interface is developed based on the conceptual model using Microsoft Windows 3.0 programming and object-oriented design technique. With the interface, a user can design a robotic procedure on conceptual level.

CAD DATA EXCHANGE DEVELOPMENT Final Report
J. W. Havenhill Feb. 1993 56 p
(Contract DE-AC04-76DP-00613)
(DE93-008085; KCP-613-4864) Avail: CASI HC A04/MF A01

The capability to automatically transfer electronic product definition files was developed. This data exchange capability provides for automatic transmission of electronic files between an external sending site and Allied-Signal Inc., Kansas City Division (KCD), the receiving site. Data exchange was completely integrated with internal KCD systems and requires no human intervention as incoming and outgoing files are processed by several computers for preparation and routing over networks to the end user.

PCG: A SOFTWARE PACKAGE FOR THE ITERATIVE SOLUTION OF LINEAR SYSTEMS ON SCALAR, VECTOR AND PARALLEL COMPUTERS
W. Joubert and G. F. Carey 1993 5 p Presented at the 6th Society for Industrial and Applied Mathematics Conference on Parallel Processing for Scientific Computing, Norfolk, VA, 21-24 Mar. 1993
(Contract W-7405-eng-36)
(DE93-007366; LA-UR-93-303; CONF-930331-2) Avail: CASI HC A01/MF A01

The expanded use of parallel computers heightens the need for numerical software which meets the joint requirements of ease of use, transportability across different architectures, state-of-the-art methods, and high megaflop rates. The PCG package which is currently being developed to solve sparse systems of linear equations by preconditioned gradient iterative methods is discussed. The basic design and some of the features of the package are described. Issues involved in designing the software to be

transportable across different architectures are discussed. Finally, some preliminary timings for a model test problem are given to verify feasibility. DOE

AN IMPROVED SPECTRAL LOAD BALANCING METHOD
B. Hendrickson and R. Leland 1993 8 p Presented at the 6th Society for Industrial and Applied Mathematics Conference on Parallel Processing for Scientific Computing, Norfolk, VA, 21-24 Mar. 1993
(Contract DE-AC04-76DP-00789)
(DE93-007582; SAND-93-0164C; CONF-930331-4) Avail: CASI HC A02/MF A01

We describe an algorithm for the static load balancing of scientific computations that generalizes and improves upon spectral bisection. Through a novel use of multiple eigenvectors, our new spectral algorithm can divide a computation into 4 or 8 pieces at once. This leads to balanced partitions that have lower communication overhead and are less expensive to compute than those of spectral bisection. In addition, our approach automatically works to minimize message contention on a hypercube or mesh architecture. DOE

ASTROS-ID: SOFTWARE FOR SYSTEM IDENTIFICATION USING MATHEMATICAL PROGRAMMING Final Report, Jun. 1991 - Dec. 1991
Warren C. Gibson Sep. 1992 45 p
(Contract F33615-90-C-3211)
(AD-A260867; ASIAC-TR-92-2; WL-TR-92-3100) Avail: CASI HC A03/MF A01

The multidisciplinary optimization computer program, ASTROS, which was developed for Wright Laboratory, is discussed. It seeks minimum weight structural designs subject to constraints on displacements, stresses, vibration frequencies, flutter speeds, etc. The program is based on a versatile set of software tools including a relational database, a matrix programming language, and an input description facility, all of which make the program readily extensible by knowledgeable users. This report documents an extension to ASTROS (called ASTROS-ID) which makes it possible to tune finite element models to enhance their correspondence with measured frequencies and mode shapes. The existing ASTROS optimization package is used to construct a constrained minimization problem where the user may choose to include particular frequencies and mode shape entries either in the objective function, in a least squares sense, or in constraints which require conformance within a given tolerance. Other terms include an excursion penalty and a weight deviation penalty. At the time of writing, ASTROS-ID was still in the research stage and had not been subject to beta testing. DTIC

TRANSFORMATION OF TWO AND THREE-DIMENSIONAL REGIONS BY ELLIPTIC SYSTEMS Semiannual Status Report, 1 Oct. 1992 - 30 Mar. 1993
C. Wayne Mastin 29 Apr. 1993 10 p
(Grant NsG-1577)
(NASA-CR-192955; NAS 1.26:192955) Avail: CASI HC A02/MF A01

During this contract period, our work has focused on improvements to elliptic grid generation methods. There are two principle objectives in this project. One objective is to make the elliptic methods more reliable and efficient, and the other is to construct a modular code that can be incorporated into the National Grid Project (NGP), or any other grid generation code. Progress has been made in meeting both of these objectives. The two objectives are actually complementary. As the code development for the NGP progresses, we see many areas where improvements in algorithms can be made. Derived from text

A VIRTUAL ENVIRONMENT FOR MANUFACTURING SYSTEMS Quarterly Progress Report, Oct. - Dec. 1992
J. H. Oliver, L. L. Chen, and M. J. Vanderploeg Dec. 1992 2 p
(Contract N00014-92-J-4092)
(AD-A260813) Avail: CASI HC A01/MF A01

From October to December 1992, the research on Assembly Planning Through Visualization has been focused on the development and implementation of algorithms for proposing disassembly trajectories. One of the graduate students has been working on the development of a new set of algorithms for generating potential assembly/disassembly directions for components with free-form surfaces. To generate potentially feasible disassembly directions, an O(n vector 2 alpha(n)) time algorithm has been developed for computing the spherical convex hull of a possibly self intersecting spherical curve consisting of n algebraic curved segments, where alpha(n) is the functional inverse of Ackermann's function and is an extremely slow growing function of n. FIDELITY AND VALIDITY IN DISTRIBUTED INTERACTIVE SIMULATION: QUESTIONS AND ANSWERS Final Report, Nov. 1991 - Nov. 1992
Norman E. Lane and Earl A. Alluisi Nov. 1992 37 p
(Contract MDA903-89-C-0003)
(AD-A260971; IDA-D-1066; IDA/HQ-91-40476) Avail: CASI HC A03/MF A01

Distributed Interactive Simulation (DIS) involves the on-line networking of large numbers of participants operating through simulators, actual equipment, or computer models of friendly and opposing forces in free-play exercises on a simulated battlefield. The DIS employs new simulation-related technologies that can be used to support innovative applications generally not feasible with the older technologies of conventional simulation. It has the potential of revolutionizing future work in the following areas: (1) collective training; (2) the development and evaluation of tactical concepts and doctrine; (3) system test and evaluation; and (4) weapon system concept analysis. Its potential importance is sufficiently great to suggest that special attention be given to issues regarding the desirability or necessity of relevant simulator characteristics. Two such issues are addressed in this document. Specifically, in this document, simulator fidelity and validity issues and applications-based fidelity requirements are addressed in a question-and-answer dialogue format. Secondly, four key drivers of fidelity requirements are identified: (1) the mission to be simulated; (2) the objective(s) of the simulation; (3) the fidelity dimensions; and (4) the simulation components. Thirdly, some conclusions about DIS and the associated fidelity issues are discussed. It is suggested that two parallel trends--the emergence of affordable technology and the continuing drawdowns in military resources--will interact to increase the importance of DIS as a problem-solving tool across a wide variety of potential application areas. It is suggested that the advantages and disadvantages of such DIS applications should be examined carefully and logically for they are capable of providing a powerful supplement or alternative to large-scale field exercises. A DIGITAL HARDWARE TEST SYSTEM ANALYSIS WITH TEST VECTOR TRANSLATION M.S. Thesis
James T. Loeblein Dec. 1992 106 p
(AD-A260849) Avail: CASI HC A06/MF A02

Digital logic testing occurs in two different test environments, digital simulation and actual hardware testing. A computer aided design (CAD) tool applies a set of stimulus/response test vector patterns to check the functionality of a digital circuit design. Once manufactured, the chip with this design is tested by a hardware tester system (i.e., automatic test equipment (ATE)). The ATE performs many tests in addition to the functionality test. However, the stimulus/response test vector formats used in these two environments are different and, therefore, incompatible in present form. This thesis is aimed at two major objectives. First, a system study will be performed on the GenRad-125 VLSI Hardware Tester System,

including its usage, test capabilities and limitations. Secondly, this thesis addresses the problem of test vector format incompatibility between the two testing environments. Special UNIX tools, Lex and Yacc, are used to create a software translator which changes the CAD simulation file into the GenRad-125 Hardware Test System format. DTIC

APPLICATIONS OF PARALLEL AND VECTOR ALGORITHMS IN NONLINEAR STRUCTURAL DYNAMICS USING THE FINITE ELEMENT METHOD

Brian E. Healy, David A. Pecknold, and Robert H. Dodds, Jr. Sep. 1992 116 p

(Contract DE-FG02-85ER-25001)

(AD-A260716; UILU-ENG-92-2011; SRS-571) Avail: CASI HC A06/MF A02

This research is directed toward the numerical analysis of large, three dimensional, nonlinear dynamic problems in structural and solid mechanics. Such problems include those exhibiting large deformations, displacements, or rotations, those requiring finite strain plasticity material models that couple geometric and material nonlinearities, and those demanding detailed geometric modeling. A finite element code was developed, designed around the 3D isoparametric family of elements, and using a Total Lagrangian formulation and implicit integration of the global equations of motion. The research was conducted using the Alliant FX/8 and Convex C240 supercomputers. The research focuses on four main areas: Development of element computation algorithms that exploit the inherent opportunities for concurrency and vectorization present in the finite element method; Comparison of the preconditioned conjugate gradient method to a representative direct solver; Investigation of various nonlinear solution algorithms, such as modified Newton-Raphson, secant-Newton, and nonlinear preconditioned conjugate gradient; and, Discovery of an accurate, robust finite strain plasticity material model. THE SWORD MULTILEVEL SECURE DBMS

Andrew W. Wood, Sharon R. Lewis, and Simon R. Wiseman Feb. 1992 23 p

(RSRE-92005) Copyright Avail: CASI HC A03/MF A01

SWORD is a multilevel secure relational database management system. It adopts the 'Insert Low' approach to the provision of confidentiality controls, rather than the more commonly adopted technique of 'Polyinstantiation'. This allows SWORD to enforce confidentiality and elementary integrity constraints, such as uniqueness. Special techniques allow a multilevel SWORD database to be created and maintained by untrusted database clients working at a single level. In particular, 'Place Holders' allow fields to be created so that the classification of the field's contents dominates the classification of its existence. The report presents an informal description of SWORD and provides a general discussion of the issues. Author (revised)

THE STATE OF COMPUTING AT LOS ALAMOS NATIONAL LABORATORY, FY 1991

Vanessa A. DeLaCruz, ed., Ira A. Agins, Comp., C. Slocomb, M. Trainor, and D. Land Aug. 1992 42 p

(LA-12326-MS; UC-905) Avail: CASI HC A03/MF A01

This study is an effort to provide quantitative data concerning the state of computing at the Los Alamos National Laboratory as of the end of FY-91. It includes information pertaining to the Laboratory's computing equipment inventory, costs associated with the acquisition and support of the Laboratory's computing efforts during that fiscal year, and information related to the Laboratory's central and distributed computing and networking capabilities. The bulk of the data was obtained from the Laboratory's central property and financial databases. Additional information was obtained from the Computing and Communications Division's personal computer and network support organizations. Author (revised)

PERCEPTUAL FACTORS THAT INFLUENCE USE OF COMPUTER ENHANCED VISUAL DISPLAYS Final Report

David Littman and Debbie Boehm-Davis 31 Mar. 1993 37 p

(Grant NAG1-1425)

(NASA-CR-192961; NAS 1.26:192961) Avail: CASI HC A03/MF A01

This document is the final report for the NASA/Langley contract entitled 'Perceptual Factors that Influence Use of Computer Enhanced Visual Displays.' The document consists of two parts. The first part contains a discussion of the problem to which the grant was addressed, a brief discussion of work performed under the grant, and several issues suggested for follow-on work. The second part, presented as Appendix I, contains the annual report produced by Dr. Ann Fulop, the Postdoctoral Research Associate who worked on-site in this project. The main focus of this project was to investigate perceptual factors that might affect a pilot's ability to use computer generated information that is projected into the same visual space that contains information about real world objects. For example, computer generated visual information can identify the type of an attacking aircraft, or its likely trajectory. Such computer generated information must not be so bright that it adversely affects a pilot's ability to perceive other potential threats in the same volume of space. Or, perceptual attributes of computer generated and real display components should not contradict each other in ways that lead to problems of accommodation and, thus, distance judgments. The purpose of the research carried out under this contract was to begin to explore the perceptual factors that contribute to effective use of these displays. Derived from text

REAL-TIME VALUE-DRIVEN MONITORING AND REPAIR Final Report, 1 Sep. 1990 - 31 Aug. 1992

Bruce Dambrosio 30 Dec. 1992 39 p

(Grant AF-AFOSR-0348-90)

(AD-A260959; OSU-CS-92-30-08; AFOSR-93-0141TR) Avail: CASI HC A03/MF A01

Monitoring and repair (diagnosis, for short) are often thought of as isolated tasks in theoretical reasoning (reasoning with the goal of updating our beliefs about the world). We present a decision-theoretic interpretation of diagnosis as a task in practical reasoning (reasoning with the goal of acting in the world), and sketch components of our approach to this task. These components include an abstract problem description, a decision-theoretic model of the basic task, a set of inference methods suitable for evaluating the decision representation in real-time, and a control architecture to provide the needed continuing coordination between the agent and its environment. A principal contribution of this work is the representation and inference methods we have developed, which extend previously available probabilistic inference methods and narrow, somewhat, the gap between probabilistic and logical models of diagnosis. ANALYSIS OF SYMBOLIC PARAMETER MODELS Quarterly Progress Report, 1 Oct. - 30 Dec. 1992

Kurt VanLehn 4 Mar. 1993 3 p

(Contract N00014-91-J-1529)

(AD-A261930) Avail: CASI HC A01/MF A01

This letter is the quarterly progress report for the grant entitled 'Analysis of Symbolic Parameter Models.' This report covers only the work done at

the University of Pittsburgh. The report period is 1 Oct. to 30 Dec. 1992. Early in this report period we finally got enough bugs into Deb so that we could see the expected combinatorial explosion. We began exploring some standard techniques for reducing its search. Because Deb is implemented in Prolog and uses its chronological backtracking technique, our first attempt was to try dependency-directed backtracking, which is usually called intelligent backtracking in the Prolog community. Although there are several versions of intelligent backtracking, we discovered that none of them would reduce Deb's research. The results of our research are discussed. DTIC

BAYESIAN CROSS-ENTROPY RECONSTRUCTION OF COMPLEX IMAGES Final Report, 1 Jul. 1991 - 30 Jun. 1992
B. R. Frieden and Anisa T. Bajkova 16 Nov. 1992 21 p
(Contract N00014-91-J-4056)
(AD-A261812) Avail: CASI HC A03/MF A01

Bajkova's generalized maximum entropy method (GMEM) for reconstruction of complex signals has been further generalized through the use of Kullback-Leibler cross entropy. This permits a priori information in the form of bias functions to be inserted into the algorithm, with resulting benefits to reconstruction quality. Also, the cross-entropy term is imbedded within an overall m.a.p. (maximum a posteriori probability) approach that includes a noise-rejection term. A further modification is transformation of the large, two-dimensional problem due to modest-sized 2-D images into a sequence of one-dimensional problems. Finally, the added operation of three-point median window filtration of each intermediary, one-dimensional output is shown to suppress edge-top overshoots while augmenting edge gradients. Applications to simulated complex images are shown. DTIC

THE DESIGN AND IMPLEMENTATION OF A REUSABLE COMPONENT LIBRARY AND A RETRIEVAL/INTEGRATION SYSTEM M.S. Thesis
Dogan Ozdemir Dec. 1992 344 p
(AD-A261827) Avail: CASI HC A15/MF A03

Rapid prototyping with automated retrieval of reusable software components is a software development method to construct software systems expeditiously. This thesis describes a tool to enhance the practice of software reuse within the Computer Aided Prototyping System (CAPS). A software base interface provides prototype designers with the means to retrieve components and integrate them into new applications. Reusable components are retrieved from the software base using a formal specification as the search key or through a browser. The specification language used is the Prototype System Description Language (PSDL). The software base stores the reusable components in an object oriented database management system (ONTOS) with an appropriate PSDL specification. Following a query conducted by the PSDL specification, chosen retrieved components are transformed and integrated to the system under development. All software base procedures, including the storage, retrieval, and integration of the components, are conducted through a graphical user interface which is designed to demonstrate and manipulate available software base operations. ARC DIGITAL RASTER IMAGERY (ADRI) DEVELOPMENT Final Report, Feb. - Oct. 1991
Bradley A. Rogers Dec. 1992 39 p
(Contract F30602-91-D-0003)
(AD-A261850; RL-TR-92-265) Avail: CASI HC A03/MF A01

This document gives a general overview of the software developed and is intended to provide the knowledge necessary to understand the capabilities and general operation. A full set of design and testing documents were produced. This document is not intended to be a stand-alone user's manual or maintenance manual. The ADRI development system provides a baseline capability to exploit the ADRI product. It provides the ability to perform point positioning against ADRI, as well as the ability to create a compressed ADRI product. The point positioning capability can be performed utilizing either compressed or noncompressed ADRI. The ADRI data compression subsystem provides the capability to take a raw, noncompressed, ADRI product and compress it by a factor of approximately 18:1. DTIC

SYNTHETIC-PERTURBATION TUNING OF MIMD PROGRAMS
G. Lyon, R. Snelick, and R. Kacker Feb. 1993 30 p See also PB91-222588 Sponsored by DARPA
(PB93-161339; NISTIR-5131) Avail: CASI HC A03/MF A01

Synthetic-perturbation tuning (SPT) is a novel technique for assaying and improving the performance of programs on Multiple-instruction Multiple-data (MIMD) systems. Conceptually, SPT brings the powerful, mathematical perspective of statistically designed experiments (DEX) to the interdependent, sometimes refractory aspects of MIMD program tuning. Practically, SPT provides a needed reconfiguration mechanism via synthetic delays for what otherwise would be ad hoc, hand-tailored program setups for DEX. Overall, the technique identifies bottlenecks in programs directly as quantitative effects upon response time. SPT works on programs for both shared and distributed-memory and it scales well with increasing system size. NTIS

AEGIS MEASURES DEFINITION Final Report
Edward J. Dudash and David E. McConnell Mar. 1992 45 p
(AD-A261494; NSWCDD/TR-92/119) Avail: CASI HC A03/MF A01

As part of an effort to improve the development and maintenance processes for AEGIS computer programs at the Naval Surface Warfare Center Dahlgren Division, a software measurement program has been initiated. The measurement program is based on a structure representing the process employed, the products involved, the resources required, and the management controls specified. A standard set of attributes is defined across the software engineering entities as a means of obtaining complete measurement coverage. A life-cycle process model is specified to standardize the collection of required data. Then a set of measures that spans the

entities and attributes and a method for validation of the defined measures is described. The defined measures are intended to be employed as part of a mechanism to provide the objective management necessary to support continuous improvement of AEGIS lifetime processes. DTIC

N93-26378# Carnegie-Mellon Univ., Pittsburgh, PA. School of Computer Science.
SOURCE-LEVEL DEBUGGING OF AUTOMATICALLY PARALLELIZED PROGRAMS Ph.D. Thesis
Robert Cohn 23 Oct. 1992 138 p
(Contract MDA972-90-C-0035; ARPA Order 7330)
(AD-A261520; CMU-CS-92-204) Avail: CASI HC A07/MF A02

Parallelizing compilers automatically translate a sequential program into a parallel program. They simplify parallel programming by freeing the user from the need to consider the details of the parallel architecture and the parallel decomposition. A source-level debugger for automatically parallelized programs hides the parallelism from the user by providing the illusion that the original sequential program is executing. To provide a source-level view, a debugger has two tasks. The first task is to make it appear that programs execute operations in source order. The second task is to hide the decomposition of data and computation. This thesis describes a method for implementing dynamic order restoration and structural mapping in a debugger for automatically parallelized programs. Examples are taken from the domain of loop-based parallelism. DTIC

PSEUDO WIGNER-VILLE DISTRIBUTION, COMPUTER PROGRAM, AND ITS APPLICATIONS TO TIME-FREQUENCY DOMAIN PROBLEMS Report, 1 Oct. 1992 - 28 Feb. 1993
Jae-Jin Jeon and Young S. Shin 1 Mar. 1993 87 p
(AD-A261839; NPS-ME-93-002) Avail: CASI HC A05/MF A01

Machinery operating in non-stationary mode generates a signature which at each instant of time has a distinct frequency. A time-frequency domain representation is needed to characterize such a signature.The pseudo-Wigner-Ville distribution is ideally suited for portraying non-stationary signals in the time-frequency domain and is carried out by adapting the fast Fourier transform algorithm. The important parameters affecting the pseudo-Wigner-Ville distribution are discussed and sensitivity analyses are also performed. Practical examples of an actual transient signal are used to illustrate its dynamic features jointly in time and frequency. DTIC

COMPUTATION AND THEORY IN LARGE-SCALE OPTIMIZATION Final Report, 15 Nov. 1990 - 14 Nov. 1992
Stephen M. Robinson 13 Jan. 1993 5 p
(Grant AF-AFOSR-0089-91)
(AD-A261419; AFOSR-93-0144TR) Avail: CASI HC A01/MF A01

The principal objectives of this research project were (1) improvement of algorithms for solving large-scale, block-structured convex programming problems, (2) approximation of optimization problems for purposes of computational solution, and (3) improvement of algorithms for nonsmooth optimization, as well as (4) use of the research results to improve problem-solving ability in application areas. Progress was achieved in all of these areas, and was documented in eight papers prepared for journal publication as well as one Ph.D. dissertation and two technical reports. DTIC

MANAGING REAL-TIME SOFTWARE PROJECTS: PROBLEMS AND ISSUES
M. S. Luqi, V. Berzins, and L. Chmura 31 Dec. 1992 12 p
(AD-A261428; NPS-CS-92-016) Avail: CASI HC A03/MF A01

Hard real-time systems are defined as those software system in which the correctness of the system depends not only on the logical result of computation, but also on the time at which the results are produced. Hard real-time systems of interest to DoD are tailored specifically to their applications, employ various degrees of fault-tolerance, and are typically embedded in larger systems. The process of design and development of these systems is often plagued with uncertainty, ambiguity and inconsistency. This report examines problems and issues in managing real-time software projects. DTIC

CALS-HSC DATA ELEMENT DICTIONARY Final Report, Mar. 1991 - Oct. 1992
Earl A. Alluisi Oct. 1992 113 p
(Contract MDA903-89-C-0003)
(AD-A261560; IDA-D-1183; IDA/HQ-92-42001; AD-E501629) Avail: CASI HC A06/MF A02

The data element dictionary (DED) presented was developed under a human system integration (HSI) effort to integrate all human system components (HSC) into the weapon system acquisition process as part of a joint Department of Defense (DoD)-industry initiative in computer-assisted acquisition and logistic support/concurrent engineering (CALS/CE). The present version of the CALS-HSC data element dictionary evolved from an earlier CALS-Training DED developed at the Defense Training and Performance Data Center, Orlando, Florida, and augmented later with HSC data elements that extend beyond training. The final set of over 430 data elements was coordinated through the CALS-HSC Work Group with representatives of the DoD and industry, first in May 1990 and more recently in April, May, and June 1992. Although the materials presented constitute a current baseline for the CALS-HSC DED, they are viewed as comprising a living document to be amended and updated continuously. DTIC

SYSTEM CONCEPT OF OPERATIONS EVALUATOR (SCOPE) Final Report, Mar. 1991 - Sep. 1992
Terry R. Raymond and David A. Hathaway Nov. 1992 37 p
(Contract N66604-90-D-0104)
(AD-A261257; D-N01-92; AL-TR-1992-0161) Avail: CASI HC A03/MF A01

Command and control centers and operations centers are environments in which information must be collected, processed, integrated and analyzed in order to accomplish specific missions. To be operationally and economically effective, the system design of these centers and the design of their concept of operations must be coordinated. This is a complex task due to the myriad of information available, the variety and limits of technologies that can be incorporated into the center, and the very large number of activities and information that the technology must support. The System Concept of Operations Evaluator (SCOPE) provides the designer with a tool to address this problem. It enables the designers to capture the complex relationships between various system objects using an object-oriented representation. Furthermore, it facilitates the comparison of alternatives by providing a layered construction process where all the alternatives in a layer utilize the same knowledge defined in the underlying layer. The designer can then analyze either the static relationships of a model or simulate a scenario using discrete event simulation. This report describes the model building concepts and tools concepts of SCOPE. DTIC

ANALYSIS OF LARGE SYSTEM BLACK BOX VERIFICATION TEST DATA
Kenneth C. Clapp (Bell Telephone Labs., Inc., Naperville, IL.) and Ravishankar Krishnan Iyer Apr. 1993 51 p
(Contract NAG1-613; N00014-91-J-1116)
(NASA-CR-192885; NAS 1.26:192885; UILU-ENG-93-2212; CRHC-93-05)
Avail: CASI HC A04/MF A01

Issues regarding black box, large systems verification are explored. It begins by collecting data from several testing teams. An integrated database containing test, fault, repair, and source file information is generated. Intuitive effectiveness measures are generated using conventional black box testing results analysis methods. Conventional analysts methods indicate that the testing was effective in the sense that as more tests were run, more faults were found. Average behavior and individual data points are analyzed. The data is categorized and average behavior shows a very wide variation in number of tests run and in pass rates (pass rates ranged from 71 percent to 98 percent). The 'white box' data contained in the integrated database is studied in detail. Conservative measures of effectiveness are discussed. Testing efficiency (ratio of repairs to number of tests) is measured at 3 percent, fault record effectiveness (ratio of repairs to fault records) is measured at 55 percent, and test script redundancy (ratio of number of failed tests to minimum number of tests needed to find the faults) ranges from 4.2 to 15.8. Error prone source files and subsystems are identified. A correlational mapping of test functional area to product subsystem is completed. A new adaptive testing process based on real-time generation of the integrated database is proposed. Author (revised)

OPTIMAL MESSAGE LOG RECLAMATION FOR INDEPENDENT CHECKPOINTING
Yi-Min Wang and W. Kent Fuchs 14 Apr. 1993 22 p Sponsored in part by ICLASS
(Contract NAG1-613; N00014-91-J-1283)
(NASA-CR-192886; NAS 1.26:192886; UILU-ENG-93-2213; CRHC-93-07)
Avail: CASI HC A03/MF A01

Independent (uncoordinated) check pointing for parallel and distributed systems allows maximum process autonomy but suffers from possible domino effects and the associated storage space overhead for maintaining multiple checkpoints and message logs. In most research on check pointing and recovery, it was assumed that only the checkpoints and message logs older than the global recovery line can be discarded. It is shown how recovery line transformation and decomposition can be applied to the problem of efficiently identifying all discardable message logs, thereby achieving optimal garbage collection. Communication trace-driven simulation for several parallel programs is used to show the benefits of the proposed algorithm for message log reclamation. Author (revised)

A TRACE-DRIVEN ANALYSIS OF NAME AND ATTRIBUTE CACHING IN A DISTRIBUTED SYSTEM
Ken W. Shirriff and John K. Ousterhout May 1992 18 p
(Grants NAG2-591; NSF CCR-89-00029)
(NASA-CR-192899; NAS 1.26:192899) Avail: CASI HC A03/MF A01

This paper presents the results of simulating file name and attribute caching on client machines in a distributed file system. The simulation used trace data gathered on a network of about 40 workstations. Caching was found to be advantageous: a cache on each client containing just 10 directories had a 91 percent hit rate on name look ups. Entry-based name caches (holding individual directory entries) had poorer performance for several reasons, resulting in a maximum hit rate of about 83 percent. File attribute caching obtained a 90 percent hit rate with a cache on each machine of the attributes for 30 files. The simulations show that maintaining cache consistency between machines is not a significant problem; only 1 in 400 name component look ups required invalidation of a remotely cached entry. Process migration to remote machines had little effect on caching. Caching was less successful in heavily shared and modified directories such as /tmp, but there weren't enough references to /tmp overall to affect the results significantly. We estimate that adding name and attribute caching to the Sprite operating system could reduce server load by 36 percent and the number of network packets by 30 percent.

RAMA: A FILE SYSTEM FOR MASSIVELY PARALLEL COMPUTERS
Ethan L. Miller and Randy H. Katz 1993 7 p
(Grant NAG2-591)
(NASA-CR-192906; NAS 1.26:192906) Avail: CASI HC A02/MF A01

This paper describes a file system design for massively parallel computers which makes very efficient use of a few disks per processor. This overcomes the traditional I/O bottleneck of massively parallel machines by storing the data on disks within the high-speed interconnection network. In addition, the file system, called RAMA, requires little inter-node synchronization, removing another common bottleneck in parallel processor file systems. Support for a large tertiary storage system can easily be integrated in lo the file system; in fact, RAMA runs most efficiently when tertiary storage is used. Author

STRUCTURED ADAPTIVE MESH REFINEMENT ON THE CONNECTION MACHINE
M. J. Berger and J. S. Saltzman 1993 5 p Presented at the 6th Society for Industrial and Applied Mathematics Conference on Parallel Processing for Scientific Computing, Norfolk, VA, 21-24 Mar. 1993
(Contract W-7405-eng-36)
(DE93-007368; LA-UR-93-302; CONF-930331-1) Avail: CASI HC A01/MF A01

Adaptive mesh refinement has proven itself to be a useful tool in a large collection of applications. By refining only a small portion of the computational domain, computational savings of up to a factor of 80 in 3 dimensional calculations have been obtained on serial machines. A natural question is, can this algorithm be used on massively parallel machines and still achieve the same efficiencies? A data layout scheme for mapping grid points to processors that preserves locality and minimizes global communication was designed for the CM-200. The effect of the data layout scheme is that at the finest level nearby grid points from adjacent grids in physical space are in adjacent memory locations. Furthermore, coarse grid points are arranged in memory to be near their associated fine grid points. Applications of the algorithm to inviscid compressible fluid flow in two space dimensions is shown. DOE

TOWARD A PARALLEL RECURSIVE SPECTRAL BISECTION MAPPING TOOL
C. A. Leete, B. W. Peyton, and R. F. Sincovec 1993 6 p Presented at the 6th Society for Industrial and Applied Mathematics (SIAM) Conference on Parallel Processing for Scientific Computing, Norfolk, VA, 21-24 Mar. 1993
(Contract DE-AC05-84OR-21400)
(DE93-006632; CONF-930331-3) Avail: CASI HC A02/MF A01

Recent work has shown that the recursive spectral bisection (RSB) partitioning algorithm results in good load balance and low communication costs for PDE calculations on a distributed- multiprocessor. We have enhanced a recent implementation of the method in the following three ways: we have (1) developed parallel implementation, (2) used simple 'proportional mapping' ideas to handle an arbitrary number of processes, and (3) implemented a more flexible load balancing technique. Our tests indicate that the latter two enhancements are quite effective. We also report timings obtained on an Intel iPSC/860. DOE

INTERFACING A HIGH PERFORMANCE DISK ARRAY FILE SERVER TO A GIGABIT LAN
Srinivasan Seshan and Randy H. Katz 21 Apr. 1993 19 p
(Grant NAG2-591)
(NASA-CR-192898; NAS 1.26:192898) Avail: CASI HC A03/MF A01

Our previous prototype, RAID-1, identified several bottlenecks in typical file server architectures. The most important bottleneck was the lack of a high-bandwidth path between disk, memory, and the network. Workstation servers, such as the Sun-4/280, have very slow access to peripherals on busses far from the CPU. For the RAID-2 system, we addressed this problem by designing a crossbar interconnect, Xbus board, that provides a 40MB/s path between disk, memory, and the network interfaces. However, this interconnect does not provide the system CPU with low latency access to control the various interfaces. To provide a high data rate to clients on the network, we were forced to carefully and efficiently design the network software. A block diagram of the system hardware architecture is given. In the following subsections, we describe pieces of the RAID-2 file server hardware that had a significant impact on the design of the network interface. Derived from text

A SOFTWARE DEVELOPMENT APPROACH FOR PARALLEL PROCESSING SYSTEMS INTEGRATING OBJECT-ORIENTED AND FUNCTIONAL PARADIGMS Ph.D. Thesis
Doo-Hwan Bae 1992 167 p
Avail: Univ. Microfilms Order No. DA9303966

Although there are many parallel computers available, the effective use of their computing power is difficult to achieve due to the lack of proper software development methods and techniques for parallel processing systems. In this dissertation, we present a computation model, called PROOF (PaRallel Object-Oriented Functional) as a basis for expressing parallelism, and an intermediate form, called IPR (Intermediate Program Representation) as a basis for exploiting parallelism in software development for parallel processing systems. We also present grain size determination techniques on different types of parallelism. We develop the computation model PROOF in which the object-oriented paradigm is integrated with the functional paradigm without sacrificing the advantages of either. The major features of our computation model include expressing the various granularity levels of parallelism, integrating the referential transparency and history sensitivity, and supporting inheritance and synchronization without interference. The computation model PROOF serves as a basis for developing our approach to the software development for parallel processing systems. We develop the IPR, which is used for representing all the parallelism in the software and performing partitioning analysis. We develop transformation rules from a PROOF code to the IPR and from the IPR to a target code and show that the transformation rules preserve the correctness of the original PROOF programs. For efficient exploitation of parallelism, we present the grain size determination algorithms on various patterns of parallelism and compare them with the existing approaches. Software development based on PROOF has the following distinct advantages: First, parallel aspects of the software can be treated as a prime issue, using object-oriented concepts. Second, our approach can reduce the communication and synchronization errors by automatically embedding proper codes during the transformation stage. Third, the use of the IPR improves portability of the software by separating architecture-dependent issues from the semantics of the software.

PARALLELIZING THE SPECTRAL TRANSFORM METHOD: A COMPARISON OF ALTERNATIVE PARALLEL ALGORITHMS
I. Foster and P. H. Worley (Oak Ridge National Lab., TN.) 1993 9 p Presented at the 6th Society for Industrial and Applied Mathematics Conference on Parallel Processing for Scientific Computing, Norfolk, VA, 21-24 Mar. 1993
(Contract W-31-109-eng-38)
(DE93-008664; ANL/MCS/CP-78727; CONF-930331-6) Avail: CASI HC A02/MF A01

The spectral transform method is a standard numerical technique for solving partial differential equations on the sphere and is widely used in global climate modeling. In this paper, we outline different approaches for parallelizing the method and describe experiments that we are conducting to evaluate the efficiency of these approaches on parallel computers. The experiments are conducted using a testbed code that solves the nonlinear shallow water equations on a sphere, but are designed to permit evaluation in the context of a global model. They allow us to evaluate the relative merits of the approaches as a function of problem size and number of processors. The results of this study are guiding ongoing work on PCCM2, a parallel implementation of the Community Climate Model developed at the National Center for Atmospheric Research. DOE

COMPLEXITY OF CONNECTIONIST AND CONSTRAINT-SATISFACTION NETWORKS Final Report, 1 Dec. 1988 - 30 Apr. 1992
Simon Kasif 30 Apr. 1992 10 p
(Grant AF-AFOSR-0151-89)
(AD-A261617; AFOSR-93-0074TR) Avail: CASI HC A02/MF A01

Since the beginning of the funding of the grant, we established a substantial effort in the area of connectionist optimization algorithms, relaxation networks, and geometrical learning algorithms. All of the above are highly interconnected research projects. We have achieved several significant results that have increased our understanding of the computational capabilities and limitations, of connectionist and constraint network. Our most significant contributions thus far are in the area of parallel complexity of constraint networks, comparative experimentation with learning algorithms, and geometric concept learning. Our results in the area of parallel constraint networks are the subject of several publications in journals and conferences. Our experimental research achieves the best results on several well established benchmarks. Most notably our group achieved the best results (in terms of predictions accuracy) in the area of protein folding. The technical results of the research investigations are summarized in the following sections. DTIC

VERY HIGH-SPEED REPORT FILE SYSTEM Final Report, 20 Sep. 1991 - 19 Sep. 1992
Timothy J. Salo, John D. Cavanaugh, and Michael K. Spengler 15 Dec. 1992 71 p
(Contract DAAL03-91-C-0049)
(AD-A261068; ARO-29396.1-MA) Avail: CASI HC A04/MF A01

The Minnesota Supercomputer Center, Inc. (MSCI), under its Very High-Speed Remote File System (VHSRFS) contract with the Army Research Office, conducted research in: Technologies for integrating TCP/EP protocols with ATM networks; Technologies which will enable gigabit-per-second local area networks (LAN's) and high-performance hosts to use gigabit-speed ATM wide-area networks; Methods by which high-performance, massively parallel processors (MPP's) can connect to high-speed wide-area networks; and Protocols and other technologies required to develop a shared, remote file system capable of transferring data to multiple remote supercomputers over gigabit wide-area networks. The research results of the VHSRFS contract were intended to provide some of the foundation for research in the MAGIC Gigabit Testbed, which has been funded by DARPA. DTIC

SIGNED VECTOR TIMESTAMPS: A SECURE PROTOCOL FOR PARTIAL ORDER TIME
Sean W. Smith and J. D. Tygar Feb. 1993 17 p Sponsored in part by ONR
(Contract F33615-90-C-1465; NSF CCR-88-58087)
(AD-A261371; CMU-CS-93-116-REV) Avail: CASI HC A03/MF A01

The language of partial order time expresses the issues central to many problems in asynchronous distributed systems. A secure partial order time service would provide a general method to develop secure protocols for these problems. In this paper, we sketch out these issues and develop one such protocol: signed vector timestamps. The majority of this paper is drawn verbatim from the first author's October 1991 thesis proposal, the first research into security issues for non-scalar time services and the original presentation of the SVT protocol. USING NEURAL NETWORKS AND DYNA ALGORITHM FOR INTEGRATED PLANNING, REACTING AND LEARNING IN SYSTEMS
Pedro Lima and Randal Beard Aug. 1992 27 p
(Grant NAGw-1333)
(NASA-CR-193018; NAS 1.26:193018; CIRSSE-122) Avail: CASI HC A03/MF A01

The traditional AI answer to the decision making problem for a robot is planning. However, planning is usually CPU-time consuming, depending on the availability and accuracy of a world model. The Dyna system generally described in earlier work, uses trial and error to learn a world model which is simultaneously used to plan reactions resulting in optimal action sequences. It is an attempt to integrate planning, reactive, and learning systems. The architecture of Dyna is presented. The different blocks are described. There are three main components of the system. The first is the world model used by the robot for internal world representation. The input of the world model is the current state and the action taken in the current state. The output is the corresponding reward and resulting state. The second module in the system is the policy. The policy observes the current state and outputs the action to be executed by the robot. At the beginning of program execution, the policy is stochastic and through learning progressively becomes deterministic. The policy decides upon an action according to the output of an evaluation function, which is the third module of the system. The evaluation function takes the following as input: the current state of the system, the action taken in that state, the resulting state, and a reward generated by the world which is proportional to the current distance from the goal state. Originally, the work proposed was as follows: (1) to implement a simple 2-D world where a 'robot' is navigating around obstacles, to learn the path to a goal, by using lookup tables; (2) to substitute the world model and Q estimate function Q by neural networks; and (3) to apply the algorithm to a more complex world where the use of a neural network would be fully justified. In this paper, the system design and achieved results will be described. First we implement the world model with a neural network and leave Q implemented as a look up table. Next, we use a lookup table for the world model and implement the Q function with a neural net. Time limitations prevented the combination of these two approaches. The final section discusses the results and gives clues for future work. Derived from text

ROBUST CONTROLS WITH STRUCTURED PERTURBATIONS Final Report
Leehyun Keel May 1993 47 p
(Grant NAG1-863)
(NASA-CR-192956; NAS 1.26:192956) Avail: CASI HC A03/MF A01

This final report summarizes the recent results obtained by the principal investigator and his coworkers on the robust stability and control of systems containing parametric uncertainty. The starting point is a generalization of Kharitonov's theorem obtained in 1989, and its generalization to the multilinear case, the singling out of extremal stability subsets, and other ramifications now constitutes an extensive and coherent theory of robust parametric stability that is summarized in the results contained here. TWO NEURAL NETWORK ALGORITHMS FOR DESIGNING OPTIMAL TERMINAL CONTROLLERS WITH OPEN FINAL TIME
Edward S. Plumer Oct. 1992 24 p

(Grant NGT-50642)
(NASA-CR-177599; A-92194; NAS 1.26:177599) Avail: CASI HC A03/MF A01

Multilayer neural networks, trained by the backpropagation through time algorithm (BPTT), have been used successfully as state-feedback controllers for nonlinear terminal control problems. Current BPTT techniques, however, are not able to deal systematically with open final-time situations such as minimum-time problems. Two approaches which extend BPTT to open final-time problems are presented. In the first, a neural network learns a mapping from initial-state to time-to-go. In the second, the optimal number of steps for each trial run is found using a line-search. Both methods are derived using Lagrange multiplier techniques. This theoretical framework is used to demonstrate that the derived algorithms are direct extensions of forward/backward sweep methods used in N-stage optimal control. The two algorithms are tested on a Zermelo problem and the resulting trajectories compare favorably to optimal control results. Author

HOW TO COMBINE PROBABILISTIC AND FUZZY UNCERTAINTIES IN FUZZY CONTROL

Hung T. Nguyen (Tokyo Inst. of Tech., Yokahama, Japan.), Vladik Ya. Kreinovich (Texas Univ., El Paso.), and Robert Lea 1991 4 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-TM-108746; NAS 1.15:108746) Avail: CASI HC A01/MF A01

Fuzzy control is a methodology that translates natural-language rules, formulated by expert controllers, into the actual control strategy that can be implemented in an automated controller. In many cases, in addition to the experts' rules, additional statistical information about the system is known. It is explained how to use this additional information in fuzzy control methodology. MAXIMUM ENTROPY APPROACH TO FUZZY CONTROL

Arthur Ramer (New South Wales Univ., Kensington, Australia.) and Vladik Ya. Kreinovich (Texas Univ., El Paso.) 1992 5 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-CR-192949; NAS 1.26:192949) Avail: CASI HC A01/MF A01

For the same expert knowledge, if one uses different &- and V-operations in a fuzzy control methodology, one ends up with different control strategies. Each choice of these operations restricts the set of possible control strategies. Since a wrong choice can lead to a low quality control, it is reasonable to try to loose as few possibilities as possible. This idea is formalized and it is shown that it leads to the choice of min(a + b,1) for V and min(a,b) for &. This choice was tried on NASA Shuttle simulator; it leads to a maximally stable control. Author (revised)

HOW TO CONTROL IF EVEN EXPERTS ARE NOT SURE: ROBUST FUZZY CONTROL

Hung T. Nguyen (Tokyo Inst. of Tech., Yokahama, Japan.), Vladik Ya. Kreinovich (Texas Univ., El Paso.), Robert Lea, and Dana Tolbert 1992 10 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-TM-108745; NAS 1.15:108745) Avail: CASI HC A02/MF A01

In real life, the degrees of certainty that correspond to one of the same expert can differ drastically, and fuzzy control algorithms translate these different degrees of uncertainty into different control strategies. In such situations, it is reasonable to choose a fuzzy control methodology that is the least vulnerable to this kind of uncertainty. It is shown that this 'robustness' demand leads to min and max for &- and V-operations, to 1-x for negation, and to centroid as a defuzzification procedure. Author (revised)

THE 32ND CDC: SYSTEM IDENTIFICATION USING INTERVAL DYNAMIC MODELS

L. H. Keel, J. S. Lew, and S. P. Bhattacharyya (Texas A&M Univ., College Station.) 1992 18 p
(Grant NAG5-2109)
(NASA-CR-192895; NAS 1.26:192895) Avail: CASI HC A03/MF A01

Motivated by the recent explosive development of results in the area of parametric robust control, a new technique to identify a family of uncertain systems is identified. The new technique takes the frequency domain input and output data obtained from experimental test signals and produces an 'interval transfer function' that contains the complete frequency domain behavior with respect to the test signals. This interval transfer function is one of the key concepts in the parametric robust control approach and identification with such an interval model allows one to predict the worst case performance and stability margins using recent results on interval systems. The algorithm is illustrated by applying it to an 18 bay Mini-Mast truss structure. Author (revised)

(Grant NAG5-2109)
(NASA-CR-192894; NAS 1.26:192894) Avail: CASI HC A03/MF A01

The synthesis of robustly stabilizing compensators for interval plants, i.e., plants whose parameters vary within prescribed ranges is discussed. Well-known H(sup infinity) methods are used to establish robust stabilizability conditions for a family of plants and also to synthesize controllers that would stabilize the whole family. Though conservative, these methods give a very simple way to come up with a family of robust stabilizers for an interval plant. Author (revised)

FAST PARALLEL ALGORITHMS THAT COMPUTE TRANSITIVE CLOSURE OF A FUZZY RELATION

Vladik Ya. Kreinovich (Texas Univ., El Paso.) Jan. 1993 9 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-CR-192950; NAS 1.26:192950; CFL-93-002) Avail: CASI HC A02/MF A01

The notion of a transitive closure of a fuzzy relation is very useful for clustering in pattern recognition, for fuzzy databases, etc. The original algorithm proposed by L. Zadeh (1971) requires the computation time O(n(sup 4)), where n is the number of elements in the relation. In 1974, J. C. Dunn proposed a O(n(sup 2)) algorithm. Since we must compute n(n-1)/2 different values s(a, b) (a not equal to b) that represent the fuzzy relation, and we need at least one computational step to compute each of these values, we cannot compute all of them in less than O(n(sup 2)) steps. So, Dunn's algorithm is in this sense optimal. For small n, it is ok. However, for big n (e.g., for big databases), it is still a lot, so it would be desirable to decrease the computation time (this problem was formulated by J. Bezdek). Since this decrease cannot be done on a sequential computer, the only way to do it is to use a computer with several processors working in parallel. We show that on a parallel computer, transitive closure can be computed in time O((log(sub 2)(n))2). Author (revised)

HOW TO HELP INTELLIGENT SYSTEMS WITH DIFFERENT UNCERTAINTY REPRESENTATIONS COOPERATE WITH EACH OTHER

Vladik Ya. Kreinovich (Texas Univ., El Paso.) and Sundeep Kumar (Texas Univ., El Paso.) 1991 6 p Repr. from Cybernetics and Systems: An International Journal, Hemisphere Publishing Corp., no. 22, 1991 p 217-222
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-CR-192947; NAS 1.26:192947) Copyright Avail: CASI HC A02/MF A01

In order to solve a complicated problem one must use the knowledge from different domains. Therefore, if one wants to automatize the solution of these problems, one has to help the knowledge-based systems that correspond to these domains cooperate, that is, communicate facts and conclusions to each other in the process of decision making. One of the main obstacles to such cooperation is the fact that different intelligent

systems use different methods of knowledge acquisition and different methods and formalisms for uncertainty representation. So an interface f is needed, 'translating' the values x, y, which represent uncertainty of the experts' knowledge in one system, into the values f(x), f(y) appropriate for another one. The problem of designing such an interface as a mathematical problem is formulated and solved. It is shown that the interface must be fractionally linear: f(x) = (ax + b)/(cx + d). Author (revised)

NEURAL NETWORKS: WHAT NON-LINEARITY TO CHOOSE

Vladik Ya. Kreinovich (Texas Univ., El Paso.) and Chris Quintana (Texas Univ., El Paso.) 1991 11 p

(Grants NAG9-482; NSF CDA-90-15006)

(NASA-CR-192948; NAS 1.26:192948) Avail: CASI HC A03/MF A01

Neural networks are now one of the most successful learning formalisms. Neurons transform inputs (x(sub 1),...,x(sub n)) into an output f(w(sub 1)x(sub 1) + ... + w(sub n)x(sub n)), where f is a non-linear function and w, are adjustable weights. What f to choose? Usually the logistic function is chosen, but sometimes the use of different functions improves the practical efficiency of the network. The problem of choosing f as a mathematical optimization problem is formulated and solved under different optimality criteria. As a result, a list of functions f that are optimal under these criteria are determined. This list includes both the functions that were empirically proved to be the best for some problems, and some new functions that may be worth trying. Author (revised)

STABILITY MARGINS FOR MULTILINEAR INTERVAL SYSTEMS BY WAY OF PHASE CONDITIONS: A UNIFIED APPROACH

L. H. Keel and S. P. Bhattacharyya (Texas A&M Univ., College Station.) 1992 5 p

(Grant NAG5-2109)

(NASA-CR-192893; NAS 1.26:192893) Avail: CASI HC A01/MF A01

A simple way of checking the stability with respect to an arbitrary stability region of a family of polynomials containing a vector of parameters varying within prescribed intervals is discussed. It is assumed that the parameters appear affine multilinearly in the characteristic polynomial coefficients. The condition proposed is simply to check the phase difference of the vertex polynomials. This test based on the mapping theorem significantly reduces computational complexity. Mathematical proofs are omitted. The results can be used to determine various stability margins of control systems containing interconnected interval subsystems. These include the gain, phase, time-delay, H(sup infinity), and nonlinear sector bounded stability margins of multilinear interval systems. Author (revised)

DYNAMIC ERROR ANALYSIS OF NUMERICAL METHODS FOR SIMULATION OF STATE-VARIABLE DERIVATIVES WITH DISCONTINUITIES Ph.D. Thesis

Amadi Nwankpa 1992 172 p

Avail: Univ. Microfilms Order No. DA9226976

One of the most difficult computer simulation problems is the simulation of dynamic systems which include discontinuous nonlinear elements. When real-time simulation is required, the selection of integration algorithms used to simulate the system is limited to fixed-step methods with inputs compatible with real time. In order to assess the comparative accuracy of the different integration methods and to develop improved algorithms, it is important to have a general method to evaluate the dynamic errors in simulating discontinuous nonlinearities. Procedures to predict dynamic errors in open-loop and closed-loop systems which include discontinuous nonlinearities are introduced in this thesis. The procedures use the concept of a uniform distribution of 'step-begin' times over the integration step containing the discontinuity as well as the concept of ergodicity in order to predict mean-square errors in the frequency domain. These procedures are applied to specific systems, but are shown to be more general, i.e., applicable to a wide range of nonlinear systems which, except for the discontinuous derivative function, can otherwise be linearized for analysis purposes. With the procedures developed in the thesis, the accuracy of different integration algorithms is compared. Simulation experiments are performed on both the bang-bang and effort-limited control systems to confirm the accuracy of the analysis procedures. Finally, a time-domain simulation experiment is performed to show that frequency domain analysis can be used to predict errors in the time-domain. Dissert. Abstr.

PARAMETRIC STABILITY MARGIN FOR MULTILINEAR INTERVAL CONTROL SYSTEMS

L. H. Keel and S. P. Bhattacharyya (Texas A&M Univ., College Station.) 1992 5 p

(Grant NAG5-2109)

(NASA-CR-192892; NAS 1.26:192892) Avail: CASI HC A01/MF A01

Recently, a necessary and sufficient condition to determine the robust stability of a multilinear interval control system has been reported as an extension of the well-known Box theorem which deals with the linear affine case. A simple but computationally efficient algorithm, based on the above result, to check the robust stability of such systems is introduced. The method is also extended to find the parametric stability margin of such a system. Author (revised)

OPTIMAL CONTROL OF LARGE SPACE STRUCTURES Ph.D. Thesis

Mohamed ElBaraka 1992 212 p

Avail: Univ. Microfilms Order No. DA9234558

A computational spectral factorization method is presented to solve the optimal state feedback control problem for flexible structures with the following features: (1) mathematically rigorous; (2) wide range of applicability; (3) flexibility of design; (4) fast and efficient; and (5) mini-computer (versus super-computer) implementation. This method is applied to the following systems: (1) a membrane; (2) a string; (3) an Euler-Bernoulli/Timoshenko beam models; and (4) a beam with structural damping and boundary control. Dissert. Abstr.

N93-25410 Michigan Univ., Ann Arbor.

OPTIMAL THRUST MAGNITUDE ON A SINGULAR ARC IN ATMOSPHERIC FLIGHT Ph.D. Thesis

Sudhakar Medepalli 1992 180 p

Avail: Univ. Microfilms Order No. DA9303785

In optimal control theory, the cases where the second order necessary conditions are trivially satisfied are named the singular cases and the corresponding controls, the singular controls. These are shown to occur quite frequently in a wide variety of practical applications and play an important role. Lie and Poisson brackets can be used to express these singular controls in a very elegant and systematic manner. However, in the literature, Lie bracket solutions are derived only for the simplest cases of a single or multiple inputs appearing linearly in the equations of motion. These come under a category called the totally singular arcs, where all the controls are singular simultaneously. The cases where both singular and non-singular cases occur together, however, are quite common in the literature, especially in trajectory optimization problems. These are called partially singular arcs. This dissertation extends the Lie and Poisson bracket solutions to partially singular arcs of order one. The significance of singular controls in trajectory optimization is illustrated through an example orbital plane change problem. A general trajectory optimization problem in the atmosphere is shown to be partially singular with the thrust magnitude being the singular control and the aerodynamic controls being non-singular. The extended Lie bracket solution is then applied to obtain the thrust magnitude expression on the singular arc. This is shown to be identical to the expression derived by conventional means. It is also shown to be computationally more efficient and to preserve any symmetry properties in the problem. Some interesting sub-cases are studied with the help of the general expression. Further extensions of the Lie bracket solution are suggested for constrained arcs and higher order singular arcs. Vector formulation is used throughout the thesis to make the results concise and independent of the choice of the coordinate system. An example canonical transformation to flight path variables is derived to illustrate how all the results in vector form can be translated in terms of any desired set of variables. Dissert. Abstr.

STRONGLY TRANSITIVE FUZZY RELATIONS: A MORE ADEQUATE WAY TO DESCRIBE SIMILARITY
Vladik Ya. Kreinovich (Texas Univ., El Paso.) 1992 10 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-CR-192951; NAS 1.26:192951) Avail: CASI HC A02/MF A01

The notion of a transitive closure of a fuzzy relation is very useful for clustering in pattern recognition, for fuzzy databases, etc. It is based on translating the standard definition of transitivity and transitive closure into fuzzy terms. This definition works fine, but to some extent it does not fully capture our understanding of transitivity. The reason is that this definition is based on fuzzifying only the positive side of transitivity: if R(a,b) and R(b,c), then R(a,c); but transitivity also includes a negative side: if R(a,b) and not R(a,c), then not R(b,c). In classical logic, this negative statement follows from the standard 'positive' definition of transitivity. In fuzzy logic, this negative part of the transitivity has to be formulated as an additional demand. A strongly transitive fuzzy relation as the one that satisfies both the positive and the negative transitivity demands is defined, the existence of strongly transitive closure is proven, and the relationship between strongly transitive similarity and clustering are found. Author (revised)

MIN AND MAX ARE THE ONLY CONTINUOUS AMPERSAND-, V-OPERATIONS FOR FINITE LOGICS
Vladik Kreinovich 1992 11 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-CR-192952; NAS 1.26:192952) Avail: CASI HC A03/MF A01

Experts usually express their degrees of belief in their statements by the words of a natural language (like 'maybe', 'perhaps', etc.). If an expert system contains the degrees of beliefs t(A) and t(B) that correspond to the statements A and B, and a user asks this expert system whether 'A&B' is true, then it is necessary to come up with a reasonable estimate for the degree of belief of A&B. The operation that processes t(A) and t(B) into such an estimate t(A&B) is called an &-operation. Many different &-operations have been proposed. Which of them to choose? This can be (in principle) done by interviewing experts and eliciting a &-operation from them, but such a process is very time-consuming and therefore, not always possible. So, usually, to choose a &-operation, the finite set of actually possible degrees of belief is extended to an infinite set (e.g., to an interval (0,1)), define an operation there, and then restrict this operation to the finite set. Only this original finite set is considered. It is shown that a reasonable assumption that an &-operation is continuous (i.e., that gradual change in t(A) and t(B) must lead to a gradual change in t(A&B)), uniquely determines min as an &-operation. Likewise, max is the only continuous V-operation. These results are in good accordance with the experimental analysis of 'and' and 'or' in human beliefs. Author (revised)

WHAT PROCEDURE TO CHOOSE WHILE DESIGNING A FUZZY CONTROL? TOWARDS MATHEMATICAL FOUNDATIONS OF FUZZY CONTROL
Vladik Ya. Kreinovich (Texas Univ., El Paso.), Chris Quintana (Texas Univ., El Paso.), and Robert Lea 1991 8 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-TM-108719; NAS 1.15:108719) Avail: CASI HC A02/MF A01

Fuzzy control has been successfully applied in industrial systems. However, there is some caution in using it. The reason is that it is based on quite reasonable ideas, but each of these ideas can be implemented in several different ways, and depending on which of the implementations chosen different results are achieved. Some implementations lead to a high quality control, some of them not. And since there are no theoretical methods for choosing the implementation, the basic way to choose it now is experimental. But if one chooses a method that is good for several examples, there is no guarantee that it will work fine in all of them. Hence the caution. A theoretical basis for choosing the fuzzy control procedures is provided. In order to choose a procedure that transforms a fuzzy knowledge into a control, one needs, first, to choose a membership function for each of the fuzzy terms that the experts use, second, to choose operations of uncertainty values that corresponds to 'and' and 'or', and third, when a membership function for control is obtained, one must defuzzy it, that is, somehow generate a value of the control u that will be actually used. A general approach that will help to make all these choices is described: namely, it is proved that under reasonable assumptions membership functions should be linear or fractionally linear, defuzzification must be described by a centroid rule and describe all possible 'and' and 'or' operations. Thus, a theoretical explanation of the existing semi-heuristic choices is given and the basis for the further research on optimal fuzzy control is formulated. Author (revised)

ANALYTICAL AND EXPERIMENTAL STUDY OF CONTROL EFFORT ASSOCIATED WITH MODEL REFERENCE ADAPTIVE CONTROL Ph.D. Thesis
Richard Scott Messer 1992 164 p
Avail: Univ. Microfilms Order No. DA9234277

During the past decade, researchers have shown much interest in control and identification of Large Space Structures (LSS). Our inability to model these LSS accurately has generated extensive research into robust controllers capable of maintaining stability in the presence of large structural uncertainties as well as changing structural characteristics. In this work the performance of Model Reference Adaptive Control (MRAC) is studied in numerical simulations and verified experimentally, to understand how differences between the plant and the reference model affect the control effort. MRAC is applied analytically and experimentally to a single-degree-of-freedom system and analytically to a multi-degree-of-freedom system and analytically to a multi-degree-of-freedom system with multi-inputs and multi-outputs. Good experiments and it is shown that MRAC does an excellent job of controlling the structures and achieving the desired performance even when large differences between the plant and ideal reference model exist. However, it is shown that reasonable differences between the reference model and the plant significantly increase the required control effect. The effects of increased damping in the reference model are considered, and it is shown that requiring the controller to provide increased damping actually decreases the required control effort when differences between the plant and reference model exist. This result is very useful because one of the first attempts to counteract the increased control effort due to differences between the plant and reference model might be to require less damping, however, this would actually increase the control effort. The use of optimization to successfully improve performance and reduce control effort is shown to be limited, because the actual control-structure system cannot realize all the performance improvements of the analytical optimal system. Finally, it is shown that very large sampling rates may be required to accurately implement MRAC. Dissert. Abstr.

CONSTRUCTION OF A CONNECTIONIST NETWORK SUPERCOMPUTER Technical Progress Report, 1 Nov. 1992 - 1 Feb. 1993
1 Feb. 1993 4 p
(Contract N00014-92-J-1617)
(AD-A260929) Avail: CASI HC A01/MF A01

The first finding is that, in the assessment of our reviewers, the project is technically sound. In particular, there was general agreement that the motivations are reasonable, the physical packaging scheme is plausible, the processor interconnection network is satisfactory, and the VLSI task is attainable. The software strategy was only briefly presented; a more complete software review is planned at a later time. There were several minor points made by the reviewers which are being incorporated in the CNS-1 Architecture Specification. However, we also received suggestion for making better use of industry and academic 'standards', thereby allowing more widespread use of the CNS-1 by others in the field. The subsequent consideration of these suggestions led to the second major result of the review. We are adopting an industry standard instruction set architecture (ISA) for the scalar processor within the Torrent VLSI chip. Although this decision directly only affects about 15 percent of the silicon die area (making it slightly more complex to design), the repercussions are extensive in the software area. By using a standard ISA (we have selected the MIPS R3000), we will be able to take advantage of suitable commercially available and public domain system software, tools, and application libraries. In addition, machines executing the R3000 instruction set are widely available and will be used as development platforms throughout the life of CNS-1. The basic architecture of the Torrent chip

remains the same; it is a scalar processor with a SIMD array of moderate precision datapaths for neural computation. The SIMD array now interfaces to the scalar processor as a vector coprocessor. DTIC

COMPUTATION AND LEARNING IN NEURAL NETWORKS WITH BINARY WEIGHTS Final Report, 1 Sep. 1989 - 31 Aug. 1992
Santosh S. Venkatesh 28 Nov. 1992 325 p
(Grant AF-AFOSR-0523-89)
(AD-A261182; AFOSR-93-0066TR) Avail: CASI HC A14/MF A03

Under the aegis of the AFOSR grant they have been investigating computational learning attributes of networks of formal neurons. The formal neurons considered are linear threshold elements which produce binary outputs based on the sign of a linear form of a set of inputs. The researchers have been interested in (1) exploring the theoretical limitations on what can be computed or learnt in neural network architectures, and (2) developing and analysing learning algorithms which specify weights as a function of a set of examples of a computation. The Space Engineering Research Center (SERC) at MIT, started in Jul. 1988, has completed two years of research. The Center is approaching the operational phase of its first testbed, is midway through the construction of a second testbed, and is in the design phase of a third. We presently have seven participating faculty, four participating staff members, ten graduate students, and numerous undergraduates. This report reviews the testbed programs, individual graduate research, other SERC activities not funded by the Center, interaction with non-MIT organizations, and SERC milestones. Published papers made possible by SERC funding are included at the end of the report. For individual titles, see N93-25834 through N93-25836.

Spacecraft, space-borne robotic systems, and manufacturing equipment often utilize lightweight materials and configurations that give rise to vibration problems. Prior research has led to the development of input command pre-shapers that can significantly reduce residual vibration. These shapers exhibit marked insensitivity to errors in natural frequency estimates and can be combined to minimize vibration at more than one frequency. This paper presents a method for the development of multiple mode input shapers which are simpler to implement than previous designs and produce smaller system response delays. The new technique involves the solution of a group of simultaneous non-linear impulse constraint equations. The resulting shapers were tested on a model of MACE, an MIT/NASA experimental flexible structure. Author

THE MODE FAMILY OF ON-ORBIT EXPERIMENTS: THE MIDDECK ACTIVE CONTROL EXPERIMENT (MACE) **c12**
Edward F. Crawley, David W. Miller, Javier deLuis (Payload Systems, Inc., Cambridge, MA.), Mel Waldman (Lockheed Missiles and Space Co., Greenbelt, MD.), and Andy Bicos (McDonnell-Douglas Space Systems Co., Washington, DC.) *In its* MIT Space Engineering Research Center Dec. 1990 45 p (For primary document see N93-25833 09-63)
Avail: CASI HC A03/MF A02

A flight experiment entitled the Middeck Active Control Experiment (MACE), proposed by the Space Engineering Research Center (SERC) at the Massachusetts Institute of Technology, is described. This is the second in a family of flight experiments being developed at MIT. The first is the Middeck 0-Gravity Dynamics Experiment (MODE) which investigates the nonlinear behavior of contained fluids and truss structures in zero gravity. The objective of the MACE program is to investigate and validate the modeling of the dynamics of an actively controlled flexible, articulating, multibody platform free floating in zero gravity. A rationale and experimental approach for the program are presented. The rationale shows that on-orbit testing, coupled with ground testing and a strong analytical program, is necessary in order to fully understand both how flexibility of the platform affects the pointing problem, as well as how gravity perturbs this structural flexibility causing deviations between 1- and 0-gravity behavior. The experimental approach captures the essential physics of multibody platforms, by identifying the appropriate attributes, tests, and performance metrics of the test article and defines the tests required to successfully validate the analytical framework. (Grant NAGw-1335)
Avail: CASI HC A03/MF A02

The MIT Space Engineering Research Center (SERC) has developed a controlled structures technology (CST) testbed based on one design for a space-based optical interferometer. The role of the testbed is to provide a versatile platform for experimental investigation and discovery of CST approaches. In particular, it will serve as the focus for experimental verification of CSI methodologies and control strategies at SERC. The testbed program has an emphasis on experimental CST--incorporating a broad suite of actuators and sensors, active struts, system identification, passive damping, active mirror mounts, and precision component characterization. The SERC testbed represents a one-tenth scaled version of an optical interferometer concept based on an inherently rigid tetrahedral configuration with collecting apertures on one face. The testbed consists of six 3.5 meter long truss legs joined at four vertices and is suspended with attachment points at three vertices. Each aluminum leg has a 0.2 m by 0.2 m by 0.25 m triangular cross-section. The structure has a first flexible mode at 31 Hz and has over 50 global modes below 200 Hz. The stiff tetrahedral design differs from similar testbeds (such as the JPL Phase B) in that the structural topology is closed. The tetrahedral design minimizes structural deflections at the vertices (site of optical components for maximum baseline) resulting in reduced stroke requirements for isolation and pointing of optics. Typical total light path length stability goals are on the order of lambda/20, with a wavelength of light, lambda, of roughly 500 nanometers. It is expected that active structural control will be necessary to achieve this goal in the presence of disturbances. Author (revised)

AN OPTIMAL SCHEDULING OF PICK-PLACE OPERATIONS OF A ROBOT-VISION-TRACKING SYSTEM BY USING NEURAL NETWORKS AND RULE-BASED SYSTEMS Ph.D. Thesis
Keqi Feng 1992 166 p
Avail: Univ. Microfilms Order No. DA9236738

In this research program, a scheduling of pick-place operations of a robot-vison tracking system which handles multi-type and multi-size objects presented randomly on a moving conveyer has been identified and formulated as a real-time repetitive optimization problem. A mathematical model for calculating robot processing times in a constrained environment is constructed, and the strategy to deal with constraint violation situations is also proposed. The real-time repetitive optimization problem can be

viewed as an associative mapping problem. A scheme which uses both the back-propagation and Hamming networks is proposed to implement the mapping in an attempt to overcome difficulties raised by using traditional methods. To improve the training time, an alternative neural network, a Modified ARTMAP (Adaptive Resonance Theory Networks), which is based on the ARTMAP introduced by Carpenter, et al. has been investigated to solve the optimal scheduling problem. The main modification is that a matching check mechanism is added to the system such that the Modified ARTMAP can cope with situations appearing in the optimal scheduling problem, whereas the original ARTMAP cannot, without using the complement coding technique. The repetitive optimization problem may also be viewed as an on-line decision making problem. A rule-based system can be constructed to conduct the on-line decision making directly is some rules are available. The discrimination net approach is designed for cases where all needed rules can be obtained; the partial search approach is designed for cases where only some of the rules are available. The heuristic approach is proposed for the cases of variable object patterns. Both neural network and ruled-based system approaches are implemented, and the experimental results have shown that time savings of up to 21 percent with only 4 different objects are possible, over first-come, first-served schemes currently used in industry. Dissert. Abstr.

This paper describes a knowledge-based system that has been developed to automate planning and scheduling for the Hubble Space Telescope (HST) Servicing Missions. This new system is the Servicing Mission Planning and Replanning Tool (SM/PART). SM/PART has been delivered to the HST Flight Operations Team (FOT) at Goddard Space Flight Center (GSFC) where it is being used to build integrated time lines and command plans to control the activities of the HST, Shuttle, Crew and ground systems for the next HST Servicing Mission. SM/PART reuses and extends AI/expert system technology from Interactive Experimenter Planning System (IEPS) systems to build or rebuild time lines and command plans more rapidly than was possible for previous missions where they were built manually. This capability provides an important safety factor for the HST, Shuttle and Crew in case unexpected events occur during the mission. Author

Avail: CASI HC A03/MF A03

Autonomous robot systems are being proposed for a variety of missions including the Mars rover/sample return mission. Prior to any other mission objectives being met, an autonomous robot must be able to determine its own location. This will be especially challenging because location sensors like GPS, which are available on Earth, will not be useful, nor will INS sensors because their drift is too large. Another approach to self-localization is required. In this paper, we describe a novel approach to localization by applying a problem solving methodology. The term 'problem solving' implies a computational technique based on logical representational and control steps. In this research, these steps are derived from observing experts solving localization problems. The objective is not specifically to simulate human expertise but rather to apply its techniques where appropriate for computational systems. In doing this, we describe a model for solving the problem and a system built on that model, called localization control and logic expert (LOCALE), which is a demonstration of concept for the approach and the model. The results of this work represent the first successful solution to high-level control aspects of the localization problem. Author

A neural network based system is presented which is able to generate point-to-point movements of robotic manipulators. The foundation of this approach is the use of prototypical control torque signals which are defined by a set of parameters. The parameter set is used for scaling and shaping of these prototypical torque signals to effect a desired outcome of the system. This approach is based on neurophysiological findings that the central nervous system stores generalized cognitive representations of movements called synergies, schemas, or motor programs. It has been proposed that these motor programs may be stored as torque-time functions in central pattern generators which can be scaled with appropriate time and magnitude parameters. The central pattern generators use these parameters to generate stereotypical torque-time profiles, which are then sent to the joint actuators. Hence, only a small number of parameters need to be determined for each point-to-point movement instead of the entire torque-time trajectory. This same principle is implemented for controlling the joint torques of robotic manipulators where a neural network is used to identify the relationship between the task requirements and the torque parameters. Movements are specified by the initial robot position in joint coordinates and the desired final end-effector position in Cartesian coordinates. This information is provided to the neural network which calculates six torque parameters for a two-link system. The prototypical torque profiles (one per joint) are then scaled by those parameters. After appropriate training of the network, our parametric control design allowed the reproduction of a trained set of movements with relatively high accuracy, and the production of previously untrained movements with comparable accuracy. We conclude that our approach was successful in discriminating between trained movements and in generalizing to untrained movements. Author

DETECTION OF BEARING FAILURE IN MECHANICAL DEVICES USING NEURAL NETWORKS

Richard A. Burne, Paul F. Payer, R. Paul Gorman, and Dan T. Horak *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 39-45 (For primary document see N93-25961 09-63)

Avail: CASI HC A02/MF A03

We present a novel time-domain method for the detection of faulty

bearings that has direct applicability to monitoring the health of the turbo pumps on the Space Shuttle Main Engine. A feed-forward neural network was trained to detect modelled roller bearing faults on the basis of the periodicity of impact pulse trains. The network's performance was dependent upon the number of pulses in the network's input window and the signal-to-noise ratio of the input signal. To test the model's validity, we fit the model's parameters to an actual vibration signal generated by a faulty roller element bearing and applied the network trained on this model to detect faults in actual vibration data. When this network was tested on the actual vibration data, it correctly identified the vibration signal as a fault condition 76 percent of the time. Author

MACHINE LEARNING TECHNIQUES FOR FAULT ISOLATION AND SENSOR PLACEMENT

James R. Carnes and Douglas H. Fisher (Vanderbilt Univ., Nashville, TN.) *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 47-58 (For primary document see N93-25961 09-63)

Avail: CASI HC A03/MF A03

Fault isolation and sensor placement are vital for monitoring and diagnosis. A sensor conveys information about a system's state that guides troubleshooting if problems arise. We are using machine learning methods to uncover behavioral patterns over snapshots of system simulations that will aid fault isolation and sensor placement, with an eye towards minimality, fault coverage, and noise tolerance. Avail: CASI HC A03/MF A03

This paper describes Harris AI research performed on the Adaptive Link Reconfiguration (ALR) study for Rome Lab, and focuses on the application of constraint propagation to the problem of link reconfiguration for the proposed space based Strategic Defense System (SDS) Brilliant Pebbles (BP) communications system. According to the concept of operations at the time of the study, laser communications will exist between BP's and to ground entry points. Long-term links typical of RF transmission will not exist. This study addressed an initial implementation of BP's based on the Global Protection Against Limited Strikes (GPALS) SDI mission. The number of satellites and rings studied was representative of this problem. An orbital dynamics program was used to generate line-of-site data for the modeled architecture. This was input into a discrete event simulation implemented in the Harris developed COnstraint Propagation Expert System (COPES) Shell, developed initially on the Rome Lab BM/C3 study. Using a model of the network and several heuristics, the COPES shell was used to develop the Heuristic Adaptive Link Ordering (HALO) Algorithm to rank and order potential laser links according to probability of communication. A reduced set of links based on this ranking would then be used by a routing algorithm to select the next hop. This paper includes an overview of Constraint Propagation as an Artificial Intelligence technique and its embodiment in the COPES shell. It describes the design and implementation of both the simulation of the GPALS BP network and the HALO algorithm in COPES. This is described using a 59 Data Flow Diagram, State Transition Diagrams, and Structured English PDL. It describes a laser communications model and the heuristics involved in rank-ordering the potential communication links. The generation of simulation data is described along with its interface via COPES to the Harris developed View Net graphical tool for visual analysis of communications networks. Conclusions are presented, including a graphical analysis of results depicting the ordered set of links versus the set of all possible links based on the computed Bit Error Rate (BER). Finally, future research is discussed which includes enhancements to the HALO algorithm, network simulation, and the addition of an intelligent routing algorithm for BP. Author

AN ARCHITECTURE FOR OBJECT-ORIENTED INTELLIGENT CONTROL OF POWER SYSTEMS IN SPACE

Sven G. Holmquist, Prakash Jayaram, and Ben H. Jansen *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 75-82 (For primary document see N93-25961 09-63)

Avail: CASI HC A02/MF A03

A control system for autonomous distribution and control of electrical power during space missions is being developed. This system should free the astronauts from localizing faults and reconfiguring loads if problems with the power distribution and generation components occur. The control system uses an object-oriented simulation model of the power system and first principle knowledge to detect, identify, and isolate faults. Each power system component is represented as a separate object with knowledge of its normal behavior. The reasoning process takes place at three different levels of abstraction: the Physical Component Model (PCM) level, the Electrical Equivalent Model (EEM) level, and the Functional System Model (FSM) level, with the PCM the lowest level of abstraction and the FSM the highest. At the EEM level the power system components are reasoned about as their electrical equivalents, e.g, a resistive load is thought of as a resistor. However, at the PCM level detailed knowledge about the component's specific characteristics is taken into account. The FSM level models the system at the subsystem level, a level appropriate for reconfiguration and scheduling. The control system operates in two modes, a reactive and a proactive mode, simultaneously. In the reactive mode the control system receives measurement data from the power system and compares these values with values determined through simulation to detect the existence of a fault. The nature of the fault is then identified through a model-based reasoning process using mainly the EEM. Compound component models are constructed at the EEM level and used in the fault identification process. In the proactive mode the reasoning takes place at the PCM level. Individual components determine their future health status using a physical model and measured historical data. In case changes in the health status seem imminent the component warns the control system about its impending failure. The fault isolation process uses the FSM level for its reasoning base. Author

THE USE OF MULTIPLE MODELS IN CASE-BASED DIAGNOSIS

Stamos T. Karamouzis and Stefan Feyock *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 83-90 (For primary document see N93-25961 09-63)

(Contract NCC1-159)

Avail: CASI HC A02/MF A03

The work described in this paper has as its goal the integration of a number of reasoning techniques into a unified intelligent information system that will aid flight crews with malfunction diagnosis and prognostication. One of these approaches involves using the extensive archive of information contained in aircraft accident reports along with various models of the aircraft as the basis for case-based reasoning about malfunctions. Case-based reasoning draws conclusions on the basis of similarities between the present situation and prior experience. We maintain that the ability of a CBR program to reason about physical systems is significantly enhanced by the addition to the CBR program of various models. This paper describes the diagnostic concepts implemented in a prototypical case based reasoner that operates in the domain of in-flight fault diagnosis, the various models used in conjunction with the reasoner's CBR component, and results from a preliminary evaluation. AN AUTONOMOUS SATELLITE ARCHITECTURE INTEGRATING DELIBERATIVE REASONING AND BEHAVIOURAL INTELLIGENCE

Craig A. Lindley *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 91-106 (For primary document see N93-25961 09-63)

Avail: CASI HC A03/MF A03

This paper describes a method for the design of autonomous spacecraft, based upon behavioral approaches to intelligent robotics. First, a number

of previous spacecraft automation projects are reviewed. A methodology for the design of autonomous spacecraft is then presented, drawing upon both the European Space Agency technological center (ESTEC) automation and robotics methodology and the subsumption architecture for autonomous robots. A layered competency model for autonomous orbital spacecraft is proposed. A simple example of low level competencies and their interaction is presented in order to illustrate the methodology. Finally, the general principles adopted for the control hardware design of the AUSTRALIS-1 spacecraft are described. This system will provide an orbital experimental platform for spacecraft autonomy studies, supporting the exploration of different logical control models, different computational metaphors within the behavioral control framework, and different mappings from the logical control model to its physical implementation. The National Oceanic and Atmospheric Administration's (NOAA) National Environmental Satellite, Data, and Information Service (NESDIS) is responsible for the operation of the NOAA geostationary and polar orbiting satellites. NESDIS provides a wide array of operational meteorological and oceanographic products and services and operates various computer and communication systems on a 24-hour, seven days per week schedule. The Anomaly Reporting System contains a database of anomalous events regarding the operations of the Geostationary Operational Environmental Satellite (GOES), communication, or computer systems that have degraded or caused the loss of GOES imagery. Data is currently entered manually via an automated query user interface. There are 21 possible symptoms (e.g., No Data), and 73 possible causes (e.g., Sectorizer - World Weather Building) of an anomalous event. The determination of an event's cause(s) is made by the on-duty computer operator, who enters the event in a paper based daily log, and by the analyst entering the data into the reporting system. The determination of the event's cause(s) impacts both the operational status of these systems, and the performance evaluation of the on-site computer and communication operations contractor. Author

THE PROBABILISTIC NEURAL NETWORK ARCHITECTURE FOR HIGH SPEED CLASSIFICATION OF REMOTELY SENSED IMAGERY

Samir R. Chettri and Robert F. Cromp *In its* The 1993 Goddard Conference on Space Applications of Artificial Intelligence 1993 p 119-132 (For primary document see N93-25961 09-63)

Avail: CASI HC A03/MF A03

In this paper we discuss a neural network architecture (the Probabilistic Neural Net or the PNN) that, to the best of our knowledge, has not previously been applied to remotely sensed data. The PNN is a supervised non-parametric classification algorithm as opposed to the Gaussian maximum likelihood classifier (GMLC). The PNN works by fitting a Gaussian kernel to each training point. The width of the Gaussian is controlled by a tuning parameter called the window width. If very small widths are used, the method is equivalent to the nearest neighbor method. For large windows, the PNN behaves like the GMLC. The basic implementation of the PNN requires no training time at all. In this respect it is far better than the commonly used backpropagation neural network which can be shown to take O(N6) time for training where N is the dimensionality of the input vector. In addition the PNN can be implemented in a feed forward mode in hardware. The disadvantage of the PNN is that it requires all the training data to be stored. Some solutions to this problem are discussed in the paper. Finally, we discuss the accuracy of the PNN with respect to the GMLC and the backpropagation neural network (BPNN). The PNN is shown to be better than GMLC and not as good as the BPNN with regards to classification accuracy. Author

IMAGE ANALYSIS BY INTEGRATION OF DISPARATE INFORMATION

Jacqueline LeMoigne *In its* The 1993 Goddard Conference on Space Applications of Artificial Intelligence 1993 p 133-144 (For primary document see N93-25961 09-63)

Avail: CASI HC A03/MF A03

Image analysis often starts with some preliminary segmentation which provides a representation of the scene needed for further interpretation. Segmentation can be performed in several ways, which are categorized as pixel based, edge-based, and region-based. Each of these approaches are affected differently by various factors, and the final result may be improved by integrating several or all of these methods, thus taking advantage of their complementary nature. In this paper, we propose an approach that integrates pixel-based and edge-based results by utilizing an iterative relaxation technique. This approach has been implemented on a massively parallel computer and tested on some remotely sensed imagery from the Landsat-Thematic Mapper (TM) sensor. Author

DATA FUSION WITH ARTIFICIAL NEURAL NETWORKS (ANN) FOR CLASSIFICATION OF EARTH SURFACE FROM MICROWAVE SATELLITE MEASUREMENTS

Y. M. Fleming Lure, Norman C. Grody (National Oceanic and Atmospheric Administration, Washington, DC.), Y. S. Peter Chiou, and H. Y. Michael Yeh *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 145-154 (For primary document see N93-25961 09-63)

(Contract F30602-89-C-0130)

Avail: CASI HC A02/MF A03

A data fusion system with artificial neural networks (ANN) is used for fast and accurate classification of five earth surface conditions and surface changes, based on seven SSMI multichannel microwave satellite measurements. The measurements include brightness temperatures at 19, 22, 37, and 85 GHz at both H and V polarizations (only V at 22 GHz). The seven channel measurements are processed through a convolution computation such that all measurements are located at same grid. Five surface classes including non-scattering surface, precipitation over land, over ocean, snow, and desert are identified from ground-truth observations. The system processes sensory data in three consecutive phases: (1) pre-processing to extract feature vectors and enhance separability among detected classes; (2) preliminary classification of Earth surface patterns using two separate and parallely acting classifiers: back-propagation neural network and binary decision tree classifiers; and (3) data fusion of results from preliminary classifiers to obtain the optimal performance in overall classification. Both the binary decision tree classifier and the fusion processing centers are implemented by neural network architectures. The fusion system configuration is a hierarchical neural network architecture, in which each functional neural net will handle different processing phases in a pipelined fashion. There is a total of around 13,500 samples for this analysis, of which 4 percent are used as the training set and 96 percent as the testing set. After training, this classification system is able to bring up the detection accuracy to 94 percent compared with 88 percent for back-propagation artificial neural networks and 80 percent for binary decision tree classifiers. The neural network data fusion classification is currently under progress to be integrated in an image processing system at NOAA and to be implemented in a prototype of a massively parallel and dynamically reconfigurable Modular Neural Ring (MNR). NEURAL NETWORKS FOR ATMOSPHERIC RETRIEVALS

Howard E. Motteler, J. A. Gualtieri, L. Larrabee Strow (Maryland Univ. Baltimore County, Catonsville.), and Larry McMillin (National Oceanic and Atmospheric Administration, Camp Springs, MD.) *In its* The 1993 Goddard Conference on Space Applications of Artificial Intelligence 1993 p 155-167 (For primary document see N93-25961 09-63)

Avail: CASI HC A03/MF A03

We use neural networks to perform retrievals of temperature and water fractions from simulated clear air radiances for the Atmospheric Infrared Sounder (AIRS). Neural networks allow us to make effective use of the large AIRS channel set, and give good performance with noisy input. We retrieve surface temperature, air temperature at 64 distinct pressure levels, and water fractions at 50 distinct pressure levels. Using 728 temperature and surface sensitive channels, the RMS error for temperature retrievals

with 0.2K input noise is 1.2K. Using 586 water and temperature sensitive channels, the mean error with 0.2K input noise is 16 percent. Our implementation of backpropagation training for neural networks on the 16,000-processor MasPar MP-1 runs at a rate of 90 million weight updates per second, and allows us to train large networks in a reasonable amount of time. Once trained, the network can be used to perform retrievals quickly on a workstation of moderate power. Author

CLASSIFYING MULTISPECTRAL DATA BY NEURAL NETWORKS

Brian A. Telfer (Naval Surface Warfare Center, Silver Spring, MD.), Harold H. Szu (Naval Surface Warfare Center, Silver Spring, MD.), and Richard K. Kiang *In its* The 1993 Goddard Conference on Space Applications of Artificial Intelligence 1993 p 169-177 (For primary document see N93-25961 09-63)

Avail: CASI HC A02/MF A03

Several energy functions for synthesizing neural networks are tested on 2-D synthetic data and on Landsat-4 Thematic Mapper data. These new energy functions, designed specifically for minimizing misclassification error, in some cases yield significant improvements in classification accuracy over the standard least mean squares energy function. In addition to operating on networks with one output unit per class, a new energy function is tested for binary encoded outputs, which result in smaller network sizes. The Thematic Mapper data (four bands were used) is classified on a single pixel basis, to provide a starting benchmark against which further improvements will be measured. Improvements are underway to make use of both subpixel and superpixel (i.e. contextual or neighborhood) information in tile processing. For single pixel classification, the best neural network result is 78.7 percent, compared with 71.7 percent for a classical nearest neighbor classifier. The 78.7 percent result also improves on several earlier neural network results on this data. Author

THE WorkPlace DISTRIBUTED PROCESSING ENVIRONMENT

Troy Ames and Scott Henderson (Computer Technology Associates, Inc., Rockville, MD.) *In its* The 1993 Goddard Conference on Space Applications of Artificial Intelligence 1993 p 181-188 (For primary document see N93-25961 09-63)

Avail: CASI HC A02/MF A03

Real time control problems require robust, high performance solutions. Distributed computing can offer high performance through parallelism and robustness through redundancy. Unfortunately, implementing distributed systems with these characteristics places a significant burden on the applications programmers. Goddard Code 522 has developed WorkPlace to alleviate this burden. WorkPlace is a small, portable, embeddable network interface which automates message routing, failure detection, and re-configuration in response to failures in distributed systems. This paper describes the design and use of WorkPlace, and its application in the construction of a distributed blackboard system. Author

MODEL-BASED REASONING FOR SYSTEM AND SOFTWARE ENGINEERING: THE KNOWLEDGE FROM PICTURES (KFP) ENVIRONMENT

Sydney Bailin (Computer Technology Associates, Inc., Rockville, MD.), Frank Paterra (Computer Technology Associates, Inc., Rockville, MD.), Scott Henderson (Computer Technology Associates, Inc., Rockville, MD.), and Walt Truszkowski *In its* The 1993 Goddard Conference on Space Applications of Artificial Intelligence 1993 p 189-200 (For primary document see N93-25961 09-63)

Avail: CASI HC A03/MF A03

This paper presents a discussion of current work in the area of graphical modeling and model-based reasoning being undertaken by the Automation Technology Section, Code 522.3, at Goddard. The work was initially motivated by the growing realization that the knowledge acquisition process was a major bottleneck in the generation of fault detection, isolation, and repair (FDIR) systems for application in automated Mission Operations. As with most research activities this work started out with a simple objective: to develop a proof-of-concept system demonstrating that a draft rule-base for a FDIR system could be automatically realized by reasoning from a graphical representation of the system to be monitored. This work was called Knowledge From Pictures (KFP) (Truszkowski et. al. 1992). As the work has successfully progressed the KFP tool has become an environment populated by a set of tools that support a more comprehensive approach to model-based reasoning. This paper continues by giving an overview of the graphical modeling objectives of the work, describing the three tools that now populate the KFP environment, briefly presenting a discussion of related work in the field, and by indicating future directions for the KFP environment. INFERRING HEURISTIC CLASSIFICATION HIERARCHIES FROM NATURAL LANGUAGE INPUT

Richard Hull and Fernando Gomez *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 201-215 (For primary document see N93-25961 09-63)

(Grant NAG10-0058)

Avail: CASI HC A03/MF A03

A methodology for inferring hierarchies representing heuristic knowledge about the check out, control, and monitoring sub-system (CCMS) of the space shuttle launch processing system from natural language input is explained. Our method identifies failures explicitly and implicitly described in natural language by domain experts and uses those descriptions to recommend classifications for inclusion in the experts' heuristic hierarchies. In this paper, we address the feasibility of partitioning rule-based systems into a number of meaningful units to enhance the comprehensibility, maintainability and reliability of expert systems software. Preliminary results have shown that no single structuring principle or abstraction hierarchy is sufficient to understand complex knowledge bases. We therefore propose the Multi View Point - Clustering Analysis (MVP-CA) methodology to provide multiple views of the same expert system. We present the results of using this approach to partition a deployed knowledge-based system that navigates the Space Shuttle's entry. We also discuss the impact of this approach on verification and validation of knowledge-based systems. Author

Software reuse has become a major goal in the development of space systems, as a recent NASA-wide workshop on the subject made clear. The Data Systems Technology Division of Goddard Space Flight Center has been working on tools and techniques for promoting reuse, in particular in the development of satellite ground support software. One of these tools is the Experiment in Libraries via Incremental Schemata and Cobweb (ElvisC). ElvisC applies machine learning to the problem of organizing a reusable software component library for efficient and reliable retrieval. In this paper we describe the background factors that have motivated this work, present the design of the system, and evaluate the results of its application. Author

Development of an Intelligent Information System (IIS) involves application of numerous artificial intelligence (AI) paradigms and advanced technologies. The National Aeronautics and Space Administration (NASA) is interested in an IIS that can automatically collect, classify, store and retrieve data, as well as develop, manipulate and restructure knowledge regarding the data and its application (Campbell et al., 1987, p.3). This interest stems in part from a NASA initiative in support of the interagency Global Change Research program. NASA's space data problems are so large and varied that scientific researchers will find it almost impossible to access the most suitable information from a software system if meta-information (metadata and meta-knowledge) is not embedded in that system. Even if more, faster, larger hardware is used, new innovative software systems will be required to organize, link, maintain, and properly archive the Earth Observing System (EOS) data that is to be stored and distributed by the EOS Data and Information System (EOSDIS) (Dozier, 1990). Although efforts are being made to specify the metadata that will be used in EOSDIS, meta-knowledge specification issues are not clear. With the expectation that EOSDIS might evolve into an IIS, this paper presents certain ideas on the concept of meta-knowledge and demonstrates how meta-knowledge might be represented in a pixel classification problem. THE StarView INTELLIGENT QUERY MECHANISM
R. D. Semmel and D. P. Silberberg (Space Telescope Science Inst., Baltimore, MD.) *In* NASA. Goddard Space Flight Center, The 1993 Goddard Conference on Space Applicati ons of Artificial Intelligence 1993 p 271-285 (For primary document see N93-25961 09-63)
Avail: CASI HC A03/MF A03

The StarView interface is being developed to facilitate the retrieval of scientific and engineering data produced by the Hubble Space Telescope. While predefined screens in the interface can be used to specify many common requests, ad hoc requests require a dynamic query formulation capability. Unfortunately, logical level knowledge is too sparse to support this capability. In particular, essential formulation knowledge is lost when the domain of interest is mapped to a set of database relation schemas. Thus, a system known as QUICK has been developed that uses conceptual design knowledge to facilitate query formulation. By heuristically determining strongly associated objects at the conceptual level, QUICK is able to formulate semantically reasonable queries in response to high-level requests that specify only attributes of interest. Moreover, by exploiting constraint knowledge in the conceptual design, QUICK assures that queries are formulated quickly and will execute efficiently. Author

NASA's program for the civilian exploration of space is a challenge to scientists and engineers to help maintain and further develop the United States' position of leadership in a focused sphere of space activity. Such an ambitious plan requires the contribution and further development of many scientific and technological fields. One research area essential for the success of these space exploration programs is Intelligent Robotic Systems. These systems represent a class of autonomous and semi-autonomous machines that can perform human-like functions with or without human interaction. They are fundamental for activities too hazardous for humans or too distant or complex for remote telemanipulation. To meet this challenge, Rensselaer Polytechnic Institute (RPI) has established an Engineering Research Center for Intelligent Robotic Systems for Space Exploration (CIRSSE). The Center was created with a five year $5.5 million grant from NASA submitted by a team of the Robotics and Automation Laboratories. The Robotics and Automation Laboratories of RPI are the result of the merger of the Robotics and Automation Laboratory of the Department of Electrical, Computer, and Systems Engineering (ECSE) and the Research Laboratory for Kinematics and Robotic Mechanisms of the Department of Mechanical Engineering, Aeronautical Engineering, and Mechanics (ME,AE,&M), in 1987. This report is an examination of the activities that are centered at CIRSSE. Author (revised)

NONLINEAR SYSTEM DESIGN: ADAPTIVE FEEDBACK LINEARIZATION WITH UNMODELED DYNAMICS Final Technical Report, 1 Oct. 1989 - 30 Sep. 1992
Petar V. Kokotovic 22 Dec. 1992 16 p
(Contract F49620-92-J-0004)
(AD-A261360; AFOSR-93-0098TR) Avail: CASI HC A03/MF A01

The main goal of this research has been to develop a unified geometric-asymptotic-adaptive methodology for feedback design of nonlinear control systems. Such a methodology is needed because the existing differential geometric results are restrictive and often violated by small modeling errors. Effects of these errors can be analyzed asymptotically by singular perturbation methods, which, however, are still lacking a clear geometric interpretation. Neither geometric, nor perturbational problem formulations can cope with large parametric uncertainty, for which an adaptive approach seems suitable. Conversely, both geometric and asymptotic techniques can become constructive steps in the design of an adaptive scheme and in the analysis of its robustness. In our research these three heretofore separate techniques have been to be merged into a methodology which eliminates their individual shortcomings. In a separate research direction we have initiated a study of systems with practically important nondifferentiable nonlinearities such as dead-zone, backlash and hysteresis. These systems can not be analyzed by existing methods. DTIC

ADAPTIVE CONTROL OF NONLINEAR FLEXIBLE SYSTEMS Final Report, 1 Aug. 1990 - 31 Jul. 1992
Robert L. Kosut and M. G. Kabuli 18 Jan. 1993 55 p
(Contract F49620-90-C-0064)
(AD-A261676; ISI-5878-2; AFOSR-93-0081TR) Avail: CASI HC A04/MF A01

The objective is the development of adaptive control methods which can significantly improve closed-loop performance for a broad class of

nonlinear flexible systems. Towards this end, a nonlinear controller, applicable to a broad class of nonlinear systems, was devised. The controller consists of a feedforward signal generator which incorporates a model estimate together with a global feedback linearizer. There is an inner feedback controller which modifies control action in accordance with output errors between the feedforward ideal output and the actual sensed output. The adaptive scheme studied uses measured data to update the model in the feedforward signal generator. It was discovered in many simulations that this two-level approach to adaptive feedback linearization can perform significantly better than feedback linearizers using an observer network. DTIC

Reinforcement learning agents are adaptive, reactive, and self-supervised. The aim of this dissertation is to extend the state of the art of reinforcement learning and enable its applications to complex robot-learning problems. In particular, it focuses on two issues. First, learning from sparse and delayed reinforcement signals is hard and in general a slow process. Techniques for reducing learning time must be devised. Second, most existing reinforcement learning methods assume that the world is a Markov decision process. This assumption is too strong for many robot tasks of interest, This dissertation demonstrates how we can possibly overcome the slow learning problem and tackle non-Markovian environments, making reinforcement learning more practical for realistic robot tasks. DIGITAL FILTER CONTROL OF REMOTELY OPERATED FLEXIBLE ROBOTIC STRUCTURES
J. T. Feddema 1992 6 p Presented at the 5th Topical Meeting on Robotics and Remote Systems, Knoxville, TN, 26-29 Apr. 1993
(Contract DE-AC04-76DP-00789)
(DE93-007587; SAND-92-1630C; CONF-930403-19) Avail: CASI HC A02/MF A01

This paper presents an infinite impulse response (IIR) filtering technique for reducing structural vibration in remotely operated robotic systems. The technique uses a discrete filter between the operator's joy stick and the robot controller to alter the inputs of the system so that residual vibration and swing are reduced. A linearized plant model of the system is analyzed in the discrete time domain, and the filter is designed using pole-zero placement in the z-plane. This technique has been successfully applied to a two link flexible arm and a gantry crane with a suspended payload. DOE

(Contract DE-AC04-76DP-00789)
(DE93-000713; SAND-92-2032C; CONF-930519-3) Avail: CASI HC A02/MF A01

This paper addresses the problem of manipulation planning in the presence of uncertainty. We begin by reviewing the worst-case planning techniques introduced in and show that these methods are hampered by an information gap inherent to worst-case analysis techniques. As the task uncertainty increases, these methods fail to produce useful information even though a high-quality plan may exist. To fill this gap, we present the probabilistic backprojection, which describes the likelihood that a given action will achieve the task goal from a given initial state. We provide a constructive definition of the probabilistic backprojection and related probabilistic models of manipulation task mechanics, and show how these models unify and enhance several past results in manipulation planning. These models capture the fundamental nature of the task behavior, but appear to be very complex. Methods for computing these models are sketched, but efficient computational methods remain unknown. MONTE-CARLO METHODS MAKE DEMPSTER-SHAFER FORMALISM FEASIBLE

Vladik Ya. Kreinovich (Texas Univ., El Paso.), Andrew Bernat (Texas Univ., El Paso.), Walter Borrett (Texas Univ., El Paso.), Yvonne Mariscal (Texas Univ., El Paso.), and Elsa Villa (Texas Univ., El Paso.) 1991 17 p

(Grants NAG9-482; NSF CDA-90-15006)

(NASA-CR-192945; NAS 1.26:192945) Avail: CASI HC A03/MF A01

One of the main obstacles to the applications of Dempster-Shafer formalism is its computational complexity. If we combine m different pieces of knowledge, then in general case we have to perform up to 2(sup m) computational steps, which for large m is infeasible. For several important cases algorithms with smaller running time were proposed. We prove, however, that if we want to compute the belief bel(Q) in any given query Q, then exponential time is inevitable. It is still inevitable, if we want to compute bel(Q) with given precision epsilon. This restriction corresponds to the natural idea that since initial masses are known only approximately, there is no sense in trying to compute bel(Q) precisely. A further idea is that there is always some doubt in the whole knowledge, so there is always a probability p(sub o) that the expert's knowledge is wrong. In view of that it is sufficient to have an algorithm that gives a correct answer a probability greater than 1-p(sub o). If we use the original Dempster's combination rule, this possibility diminishes the running time, but still leaves the problem infeasible in the general case. We show that for the alternative combination rules proposed by Smets and Yager feasible methods exist. We also show how these methods can be parallelized, and what parallelization model fits this problem best. Author (revised)

ASYMPTOTIC DERIVATION OF THE SIMPLIFIED P(SUB N) EQUATIONS

E. W. Larsen (Michigan Univ., Ann Arbor.), J. E. Morel, and J. M. McGhee 1993 13 p Presented at the International Topical Meeting on Mathematical Methods and Supercomputing in Nuclear Applications (M and C Plus SNA 1993), Karlsruhe, Germany, 19-23 Apr. 1993

(Contracts W-7405-eng-36; DE-FG02-92ER-75709)

(DE93-007342; LA-UR-93-180; CONF-930404-5) Avail: CASI HC A03/MF A01

The diffusion and simplified P(sub N) equations are derived from the transport equation by means of an asymptotic expansion in which the diffusion equation is the leading order approximation and the simplified P(sub N) equations are higher-order approximations. In addition, the simplified P(sub N) equations are reformulated in a 'canonical' form that greatly facilitates the formulation of boundary conditions and the implementation of the resulting problem in a conventional multigroup diffusion code. Numerical comparisons of S(sub N), diffusion, and simplified P(sub N) solutions show that the simplified P(sub N) solutions often contain most of the transport corrections for the diffusion approximation. USING A MULTIFRONTAL SPARSE SOLVER IN A HIGH PERFORMANCE, FINITE ELEMENT CODE

Scott D. King, Robert Lucas (Supercomputer Research Center, Bowie, MD.), and Arthur Raefsky (Stanford Univ., CA.) 1990 47 p

(Grants NAG5-1132; NSF EAR-86-18744)

(NASA-CR-192718; NAS 1.26:192718) Avail: CASI HC A03/MF A01

We consider the performance of the finite element method on a vector supercomputer. The computationally intensive parts of the finite element method are typically the individual element forms and the solution of the global stiffness matrix both of which are vectorized in high performance codes. To further increase throughput, new algorithms are needed. We compare a multifrontal sparse solver to a traditional skyline solver in a finite element code on a vector supercomputer. The multifrontal solver uses the Multiple-Minimum Degree reordering heuristic to reduce the number of operations required to factor a sparse matrix and full matrix computational kernels (e.g., BLAS3) to enhance vector performance. The net result in an order-of-magnitude reduction in run time for a finite element application on one processor of a Cray X-MP. Author

ESTIMATION OF COEFFICIENTS IN A RATIONAL FUNCTION FROM OBSERVED VALUES

Betty Emslie Dec. 1992 22 p

(AD-A261126; ARL-TR-8; DODA-AR-007-116) Avail: CASI HC A03/MF A01

A method for estimating the coefficients in a rational function representation of the frequency response function of a dynamic system is presented. A nonlinear least squares approach is used and this requires initial estimates for the coefficients. The first attempt to find initial estimates was not satisfactory, but a second approach, which can be thought of as a linear approximation to the nonlinear problem, was much more successful. Tests have been carried out with both generated and experimental data and reasonable estimates have been achieved. DTIC

THE RAPID SOLUTION OF THE LAPLACE EQUATION ON REGIONS WITH FRACTAL BOUNDARIES

J. H. Ma 21 Oct. 1992 85 p

(Contract N00014-89-J-1527; NSF DMS-90-12751)

(AD-A260585; YaleU/DCS/RR-927) Avail: CASI HC A05/MF A01

Interest in the numerical solution of the Laplace equation on regions with fractal boundaries arises both in mathematics and physics. In mathematics, examples include harmonic measure of fractals, complex iteration theory, and potential theory. In physics, examples include Brownian motion, crystallization, electrodeposition, viscous fingering, and

diffusion-limited aggregation. In a typical application, the numerical simulation has to be on a very large scale involving at least tens of thousands of equations with as many unknowns in order to obtain any meaningful results. Attempts to use conventional techniques have encountered insurmountable difficulties, due to excessive CPU time requirements of the computations involved. Indeed, conventional direct algorithms for the solution of linear systems require order O(N(exp 3)) operations for the solution of an N x N-problem, while classical iterative methods require order O(N(exp 2)) operations, with the constant strongly dependent on the problem in question. In either case, the computational expense is prohibitive for large-scale problems. We present a direct algorithm for the solution of the Laplace equation on regions with fractal boundaries. The algorithm requires O(N) operations with a constant dependent only on the geometry of the fractal boundaries. The performance of the algorithm is demonstrated by numerical examples, and applications and generalizations of the scheme are discussed. DTIC

PDE: DIFFERENTIAL, GEOMETRIC AND ALGEBRAIC METHODS IN NONLINEAR FILTERING Final Report, 21 Aug. 1989 - 20 Aug. 1992
Stephen S. Yau 7 Jan. 1993 11 p
(Contract DAAL03-89-K-0123)
(AD-A260967; ARO-26674.6-MA) Avail: CASI HC A03/MF A01

We have constructed explicitly the most general class of finite dimensional filters which include both Kalman-Bucy filters and Benes filters as special cases. We also proved that if the state space dimension is less than three, then generically all finite dimensional filters must be those constructed by us from the Lie algebraic point of view. Without making any assumption on the drift term of the filtering system, we can write down the asymptotic solution to the famous Kolmogorov equation which is a fundamental equation in Applied Science. Moreover we have an explicit algorithm to construct the convergent solution from this formal asymptotic solution. DTIC

ELASTIC CURVES ON THE SPHERE Technical Report, Sep. - Nov. 1992
Guido Brunnett and Peter E. Crouch 16 Dec. 1992 22 p
(AD-A261057; NPS-MA-93-010) Avail: CASI HC A03/MF A01

This paper deals with the derivation of equations suitable for the computation of elastic curves on the sphere. To this end equations for the main invariants of spherical elastic curves are given. A new method for solving geometrically constraint differential equations is used to compute the curves for given initial values. A classification of the fundamental forms of the curves is presented. Progress was made in the IRTPS initiative in five areas: resolving the relationship between deliberative and reactive planning with a framework for their effective combination; modeling the real-time performance of the Phoenix planner through the application of a powerful statistical technique--path analysis--that can be used to build causal models from observed behavior; developing and applying design-to-time scheduling to design a solution that uses all available resources to maximize solution quality within available time; extending previous work on the real-time monitoring and control structure we call envelopes; and finally, in a new body of research started in Phase 3, delineating a taxonomy of monitoring problems found in real-time domains, and developing optimal monitoring strategies to address these problems. A BRIEF DESCRIPTION OF A NEW NUMERICAL FRAMEWORK FOR SOLVING CONSERVATION LAWS: THE METHOD OF SPACE-TIME CONSERVATION ELEMENT AND SOLUTION ELEMENT
Sin-Chung Chang and Wai-Ming To (Sverdrup Technology, Inc., Brook Park, OH.) Jul. 1992 17 p Presented at the 13th International Conference on Numerical Methods in Fluid Dynamics, Rome, Italy, 6-10 Jul. 1992
(RTOP 505-62-52)
(NASA-TM-105757; E-7169; NAS 1.26:105757) Avail: CASI HC A03/MF A01

A new numerical method for solving conservation laws is being developed. It differs substantially from the well established methods, i.e., finite difference, finite volume, finite element, and spectral methods, in both concept and

methodology. It is much simpler than a typical high resolution method. No flux limiter or any technique related to characteristics is involved. No artificial viscosity or smoothing is introduced, and no moving mesh is used. Yet this method is capable of generating highly accurate shock tube solutions. The slight numerical overshoot and/or oscillations generated can be removed if a simple averaging formula initially used is replaced by a weighted formula. This modification has little effect on other parts of the solution. Because of its simplicity, generalization of this new method for multi-dimensional problems is straightforward. Derived from text

This final report summarizes the contribution of the fourteen articles and two doctoral dissertations that were supported by this grant. The central aim of the work has been to understand the asymptotic behavior of the objective function of problems of classical combinatorial optimization, both in the stochastically modeled cases and in the deterministic worst-case. One of the engaging developments of this investigation has been that there are close parallels in these two problems, despite substantial differences in technique. In addition to reviewing the main contributions, there is a brief discussion of two articles that responded to targets of opportunity. One of these articles received the Wilcoxon Prize for Best Application Paper in 'Technometrics.' DTIC

CONSIDERATIONS OF THE ERROR VARIANCES OF TIME-AVERAGED ESTIMATORS FOR CORRELATED PROCESSES Report, Jun. 1991 - Oct. 1992
James H. Michels Dec. 1992 113 p
(AF Proj. 4506)
(AD-A261796; RL-TR-92-339) Avail: CASI HC A06/MF A02
This report considers the sample and error variances of both time-averaged correlation function and parameter estimators for stationary discrete complex processes. Analytic expressions for the variance of the biased, time-averaged auto, and cross-channel correlation function estimators of stationary discrete complex processes are developed. These expressions relate the variance of these estimators not only to the size of the observation windows used to obtain the estimates, but also to the correlation of the processes as well. They provide a performance measure which can be used to specify the window size of the observation interval required to achieve a specific value of this variance. A unique aspect of this development is the determination of the functional dependence of these expressions in terms of the process temporal and cross-channel correlation. Validation of the analytic expressions is obtained using Monte-Carlo simulation. Furthermore, computed results are presented for the error variances of several parameter estimators for which analytical expressions are lacking. Their performance is compared to that of the exact Cramer-Rao bound as a function of process correlation and data window size. Both Gaussian and non-Gaussian processes are considered as well as both single and multichannel processes. DTIC

In a number of areas of science and technology it is necessary to deal with rhythmic processes, such as the parasitic modulation of shot fluctuations in radio-electronic equipment, changes in the levels of stability of oscillatory parameters of biological systems, modulation of an acoustic field in a layer of water due to heaving of its surface change in meteorological parameters under the action of tidal forces, etc. Many investigators note the advisability of using methods of the theory of stationary random processes for analyzing such essentially nonstationary phenomena as biological, etc. rhythms, and stress the necessity of developing statistical methods, based directly on the properties of this type of nonstationary processes and having an explicit interpretation. MONTE CARLO APPROACH TO THE APPROXIMATION OF INVARIANT MEASURES
F. Y. Hunt Jan. 1993 27 p
(PB93-159069; NISTIR-4980) Avail: CASI HC A03/MF A01
Approximation of absolutely continuous measures of maps of the interval and the closely related tasks of computing Lyapunov exponents and metric entropy are accomplished in principle by iterating the map to produce a sufficiently long trajectory. There is an alternative approach based on approximating the fixed point of the Frobenius-Perron operator. The authors present a Monte-Carlo implementation of the original piecewise constant method proposed by Ulam. The method has the advantage of not requiring explicit evaluation of the elements of the approximate Frobenius-Perron operator. Convergence rates of Ulam's method and some recently proposed higher order variants are discussed. Using the classical Bohman-Korovkin theorems of approximation theory the optimality of the rates are shown to be a consequence of the saturation phenomenon. Finally Ulam's scheme is used to estimate the leading Lyapunov exponent of a one dimensional map with an absolutely continuous measure. The authors propose an analytical criterion for comparing the results of using this method with an estimate obtained by iterating a long trajectory and illustrate its use in a numerical example. SDIO is planning to develop and deploy a ballistic missile defense system called Global Protection Against Limited Strikes (GPALS). Testing of GPALS software will play a critical role in ensuring the cost-effective development and reliable execution of the GPALS system. An earlier IDA study examined the states of the art and practice in the field of software testing. The study identified deficiencies in SDI software testing capabilities and recommended that SDIO launch a technical initiative to address these deficiencies. The current study lays the groundwork for this initiative. Emphasis is placed on three areas: (1) improving current and near-term SDI software testing practices by promoting consistent use of effective technology, (2) identifying promising new testing techniques that can add significantly to the reliability, cost-effectiveness, and quality of SDI software, and (3) fostering research into several fundamental problems of testing large-scale, concurrent, distributed, real-time, and fault-tolerant software systems. The keynote address to the Frequency and Time (F and T) forum is presented. Time is an indispensable parameter for numerous types of physical measurements. It is also the most accurately measurable physical quantity. Space science and technology apply F and T measurements for time tagging of scientific and technical data, for time complexing in the fields of telecommunication, for radiometric tracking, and orbit determination. F and T measurements constitute means for detection and quantification of various phenomena of interest for fundamental science, geoscience, and navigation. Space technology offers special opportunities for time distribution and for new markets of F and T applications, one of which is satellite navigation techniques. ESA

A program for the design and testing of atomic hydrogen (H) masers for general use in space and methods for high precision space to Earth time and frequency comparisons are described. Because of the similarity of the space masers' basic components to those of existing terrestrial masers, their frequency stability is expected to reach well below 1 part in 10(exp 15) for intervals between 1000 and 100,000 sec. A NASA funded development program at the Smithsonian Astrophysical Observatory (SAO), currently in a conceptual design phase, is specifically directed toward producing an H laser for space and testing it for 6 months in the ESA Eureca spacecraft. The maser design will have the capability to cope with stringent dynamic load test levels and will have sufficient lifetime for long term continuous operation in future deep space missions such as a close approach solar probe. The time comparison system for the Eureca test mission will use high precision (less than 50 ps) pulsed laser time transfer between the spacecraft and H maser equipped laser ranging Earth stations. European studies of the proposed inclusion of a second H maser for direct onboard frequency comparisons and of a modified PRARE (Precise Range and Range rate Equipment) microwave system (in addition to the laser system) for worldwide time synchronization are also discussed. MICROWAVE FREQUENCY DISCRIMINATOR WITH A CRYOGENIC SAPPHIRE RESONATOR FOR ULTRA-LOW PHASE NOISE **c33**
G. John Dick and David G. Santiago *In* ESA, Frequency and Time Forum Jun. 1992 p 35-39 Sponsored by NASA (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

Results of an X-band frequency discriminator using a cooled sapphire microwave resonator are presented. These results show a lower close-in (1 Hz to 1 kHz offset) phase noise measurement floor than any oscillator presently available. This performance is made possible by a sapphire 'Whispering gallery' mode resonator which shows the highest quality factor (with Q's up to 30 million) for any RF, microwave, or acoustic resonator at temperatures down to 77K. Performance is further increased by the use of novel phase detection circuitry. The sapphire discriminator was used to characterize the phase noise of a single crystal quartz oscillator of the highest quality, without the use of a second similar oscillator as reference. ESA

THE APPLICATION OF THE PRARE PRINCIPLE FOR PRECISE TWO-WAY TIME TRANSFER TO SPACE-BASED ATOMIC CLOCKS
Wolfgang Schaefer *In* ESA, Frequency and Time Forum Jun. 1992 p 41-47 (For primary document see N93-24978 09-70)
(Grant BMFT-01-QS-154)
Copyright Avail: CASI HC A02/MF A04

System requirements, system layout, performance, and planned improvements, are outlined. The PRARE (Precise Range and Range rate Equipment) principle was originally intended as a universal tool for precise orbit determination of Earth orbiting spacecraft. Its primary purpose was to provide exact measurements of physical quantities required for this task and to avoid, as far as possible, the use of orbit and signal propagation models. Systematic errors were reduced by choosing a near optimum topology. The paper demonstrated that the very demanding requirements of time transfer between an orbiting H maser clock and the ground could be met by the instrument in its basic configuration, provided that the carried phase measurement resolution is increased and the onboard calibration provisions are specifically tailored for this task. An estimation of the expected residual instrumentation error is given in conclusion. ESA

ATOMIC TIME SCALES FOR DYNAMICAL ASTRONOMY **c89**
B. Guinot *In* ESA, Frequency and Time Forum Jun. 1992 p 51-56 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A02/MF A04

A series of recommendations on space-time references issued in the framework of the general theory of relativity in 1991 by the International Astronomical Unions (IAU) is presented. The recommendations, their background, the difficulties that were met, and the connection with previous recommendations--with an emphasis on time--are given. For simplicity of theoretical developments in celestial mechanics, several coordinate systems must be defined. The implied definitions of new coordinate times are presented together with their relation between themselves and to other times. International Atomic Time (TAI) is not affected by these recommendations, but appears now as a realization of the ideal terrestrial time having a clear scientific definition. ESA

N93-24985# Bureau International des Poids et Mesures, Sevres (France).
HOW CAN MILLISECOND PULSARS IMPROVE THE LONG TERM STABILITY OF ATOMIC TIME SCALES?
G. Petit, P. Tavella (Istituto Elettrotecnico Nazionale, Turin, Italy.), and C. Thomas *In* ESA, Frequency and Time Forum Jun. 1992 p 57-60 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The use of millisecond pulsars to improve the long term stability of atomic time scales is addressed. Millisecond pulsars are galactic objects that exhibit a very stable period of rotation. Since the first discovery in 1982, radioastronomers have carried out timing observations, which measure the time of arrival of the radio pulses relative to an atomic time scale. Several tens of millisecond pulsars have now been discovered, located in different parts of the sky. If they are observed regularly for many years, they can be considered as an ensemble of clocks, which although they are affected by frequency drifts, allow an average time scale to be deduced through a stability algorithm. The basis for such an algorithm is presented and applied to simulated pulsar data. The properties of the resulting time scale and how it could monitor the stability of the atomic time scale are discussed. ESA

RELATIVISTIC EFFECTS FOR LOW EARTH ORBIT SATELLITES USING GPS **c13**
A. Spallicci, C. Jimenez (Zaragoza Univ., Spain.), G. Prisco, and N. Ashby (Colorado Univ., Boulder.) *In its* Frequency and Time Forum Jun. 1992 p 61-65 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The relativistic corrections for a low Earth orbit satellite are evaluated. The GPS (Global Positioning System) satellite clock rate is slowed before launch by 4.465 x 10(exp -10), called the 'factory offset', for time dilation and gravitational frequency shift. This offset cancels the main constant relativistic effects for terrestrial users, which in order to operate in coordinate time have only to process the GPS orbital eccentricities, a sinusoidal function whose peaks are in the order of tens of ns, and the Sagnac effect. For a space user the situation greatly differs, because a large part of the relativistic effects are still present due to the high velocity of the satellite and its location in the Earth gravitational field. Past tests and proposals for future measurements with GPS--perigee advance, Shapiro time delay, preferred frame independence, Lense Thirring effect, light bending and gravitational waves--are reviewed. ESA

The activities of the Columbus metrology science team are summarized. The Columbus Attached Pressurized Laboratory of the Freedom Space Station, the Columbus Free Flyer Laboratory, Eureca, and Spacelab might offer the potential for experiments in fundamental metrology. In order to identify the specific opportunities offered by these microgravity carriers, a Columbus metrology science team was sponsored by ESA. A Pico Gravity Box (PGB) for gravitation science experiments and a proposal regarding maser clocks to fly aboard Eureca are mentioned. ESA

PRELIMINARY RESULTS ON AN OPTICALLY-PUMPED Cs BEAM FREQUENCY STANDARD
P. Aynie, J. P. Berthet, S. Bouzid, A. Clairon, E. deClercq, B. Dahmani, A. H. Gerard, P. Leclerc, M. Lours, and G. D. Rovera et al *In* ESA, Frequency and Time Forum Jun. 1992 p 77-81 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

A laboratory, optically pumped Cs-beam frequency standard is described.

The measured short term stability is sigma y(tau) - 2.2 x 10(exp -12)/tau(exp -1/2) for tau greater than 100 s. The velocity distribution in the atomic beam is verified to be Maxwellian weighted by 1/nu as expected. The main frequency shifts were estimated. There is an unexpected power dependent frequency shift which needs further experiments to be explained. ESA

MINIATURE OPTICALLY-PUMPED CESIUM BEAM RESONATOR
P. Petit, V. Giordano, N. Dimarcq, P. Cerez, C. Audoin, and G. Theobald *In* ESA, Frequency and Time Forum Jun. 1992 p 83-86 Sponsored by STEI, France (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The design of a miniature optically pumped cesium beam resonator is described. It is of the flop in type but with a phase difference of 180 deg between the two oscillating fields. In the present circumstances, this small machine operating at low oven temperature (85 C) exhibits a rather outstanding short term frequency stability. This phi = 180 deg cavity configuration makes a lowering of a number of frequency shifts possible. ESA

ACTUAL LIMITS OF FLUORESCENCE S/N RATIO IN AN OPTICALLY-PUMPED CESIUM BEAM RESONATOR
N. Dimarcq, V. Giordano, P. Cerez, and G. Theobald *In* ESA, Frequency and Time Forum Jun. 1992 p 87-90 Sponsored by Bureau National de Metrologie (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The effect of laser noise on the Signal/Noise (S/N) ratio is reported and limits of this ratio are derived. The frequency stability of an optically pumped cesium beam resonator crucially depends on the fluorescence S/N ratio in the detection region. The total noise results from various noise sources: atomic shot noise, photon noise, laser frequency noise, and signal detection noise. A model which gives the fluorescence S/N ratio as a function of the main parameters characterizing the interaction between the atoms and the laser beam is developed. Variations of the S/N ratio with the atomic beam intensity and laser linewidth are presented for various excitation schemes. A good agreement is found between experiments and theory. ESA

LONG TERM DRIFT AND GAMMA-IRRADIATION EFFECT **c72**
J. J. Boy, A. Berthaut, D. Thiebaud, and K. Yamni (Besancon Univ., France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 93-98 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A02/MF A04

The frequency and motional resistance characteristics versus temperature of SC (Stress Compensation) cut resonators were measured before, during, and after irradiation, in order to correlate the influence of the selected chemical impurities on their electrical behavior. The long term drifts were discussed and compared to the Al(3+) ion content. These measurements were performed on BVA (electrodeless quartz resonator) SC cut, which were manufactured using either synthetic (swept or unswept) or natural quartz crystals. The results obtained show that a link could be established between the gamma irradiation sensitivity and the aluminum content and hence, the large difference, on one hand, between natural and synthetic raw material and, on the other hand, between unswept and swept quartz crystals. WEAK MAGNETIC FIELD SENSITIVITY OF QUARTZ CRYSTAL OSCILLATORS **c76**
R. Brendel and E. Robert (Centre National d'Etudes Spatiales, Toulouse, France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 99-104 (For primary document see N93-24978 09-70)
(Contract CNES/CNRS-932-88-53-474-00)
Copyright Avail: CASI HC A02/MF A04

The magnetic sensitivity curves for selected quartz crystal resonators in the range of +/- 40 gauss are presented. It is shown that in most cases the sensitivity to a small magnetic field can hardly be extrapolated from the high field measurements. Also, the frequency versus magnetic field curves often exhibit a strong hysteresis which makes questionable the definition of the resonator's magnetic sensitivity. Although the main cause of this sensitivity remains the ferromagnetic nature of the material used in the plate support, it is shown that the mounting technique can be of great importance. ESA

SYNCHROTRON RADIATION X RAY TOPOGRAPHY STUDY OF LATERAL FIELD RESONATORS
B. Capelle, J. Detaint (Centre National d'Etudes des Telecommunications, Bagneux, France.), J. Schwartzel (Centre National d'Etudes des Telecommunications, Bagneux, France.), Y. Zheng, and A. Zarka *In* ESA, Frequency and Time Forum Jun. 1992 p 105-109 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

Using synchrotron radiation, plano-convex AT resonators excited by a lateral field were studied by the X-ray topography technique. Different overtones and anharmonics of the three types of the thickness modes were observed. The study showed that it is possible to excite more modes with the lateral field excitation than with the thickness field excitation. These modes can present intrinsic interest due to the values of the temperature coefficient and/or of the coupling coefficient. The new degree of freedom, given by the possibility of choosing the direction of the excitation field, permits interesting applications such as the suppression or excitation of one type of mode. This study can help to understand the coupled modes which appear in the thickness excitation resonators. ESA

The measurement of quartz crystal units is standardized in IEC 444. This means that different test fixtures and additional elements must be used, for example in the determination of the load resonance parameters (IEC 444-4) or for the physical static capacitance compensation (IEC 444-3). A method introducing a general approach, which allows the precise determination of all quartz crystal parameters with one test fixture only by appropriate modeling, is presented: inductances in series to the inserted crystal modeling the electrical connection; a capacitance between the PI network ports modeling the crosstalk; and complex impedance of the PI network. All these elements are computed by a calibration routine with an open, a short, and a calibration resistor in the complete frequency range. The quartz crystal parameters are determined by complex mathematical algorithms for the measurement data. Measurement results with different hardware are presented in comparison to the standardized hardware based methods of IEC 444. ESA

THE MEASUREMENT OF THE RESONANT FREQUENCY OF QUARTZ CRYSTAL UNITS: AN ONGOING SAGA
Eric Kentley *In* ESA, Frequency and Time Forum Jun. 1992 p 119-122 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The history of practical methods of industrial measurement leading to the present situation is traced. Resonant frequency measurement of a quartz crystal unit has always presented problems due to the fact that a quartz crystal unit is not an absolute frequency determining device. The frequency of oscillation of a quartz crystal unit in an oscillator circuit is a function of the crystal unit and the maintaining oscillator circuit. Since the introduction of zero phase type measurements in a passive network by the I.E.C. in the early 1970's many of these measurement problems have been eliminated or much reduced, but there are still some problem areas. Using the computer aided test methods now available, automatic crystal measurements can be made. These can cause what might be termed computer aided correlation errors due to slightly different measuring procedures and methods of computation. ESA

A NEW MODEM FOR MICROWAVE TIME SYNCHRONISATION VIA GEOSYNCHRONOUS TELECOMMUNICATION SATELLITES **c32**
Michael Dienert *In* ESA, Frequency and Time Forum Jun. 1992 p 143-147 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

A study illustrating the two way time transfer technique and describing the use of this technique with the MITREX (Microwave Time and Range Experiment) SATRE (Satellite Time and Range Experiment) modems is presented. The two way time transfer technique via geosynchronous telecom satellites is one of the most accurate methods for synchronization and comparison of remote clocks. Most of the unknown propagation delays can be eliminated by the two way principle. The use of a coherent spread spectrum technique with a truncated pseudonoise code offers a resolution better than 30 ps of the measured time interval. The receiver is built around a Delay Locked Loop (DLL), which correlates the received signal with the known PN sequence to derive the control signal of the loop. In the locked state both PN sequences are synchronous and tracking errors of less than 30 ps are possible. Results showing the accuracy of the modem depending on signal to noise ratio and variation of total input power levels are presented and show that the expected improvement of the jitter of the internal delay by an increase of the chip rate is possible. ESA

Copyright Avail: CASI HC A02/MF A04

The important parameters of synchronization, acquisition, and tracking are addressed, and each function is highlighted separately. The following sequence is such as the functions occur in the system in time and for the type of data to be received, with distinction between telemetry and data reception, between direct carrier modulation or the use of a subcarrier, and between deep space and normal reception. For the telemetry reception the acquisition is described taking into account the difference in performances as geostationary or polar orbits, and the dependencies on the different Doppler offsets and rates are distinguished. The related functions and parameters are covered and the specifications of an average receiver are summarized. The synchronization of the valid data is described with a distinction for data directly modulated or via a subcarrier, the type of modulation and bitrate. The relevant functions and parameters of the average receiver/demodulator are summarized. The tracking of the signal in the course of the operational phase is described and relevant parameters of an actual system are presented. The reception of real data is handled and a sequence of acquisition, synchronization, and tracking is applied. Here higher bitrates and direct modulation schemes play an important role. The market equipment with the relevant parameters are discussed. The three functions in cases where deep reception is needed are covered. The high performance receiver/demodulator functions and how the acquisition, synchronization, and tracking is handled in such application, are explained. ESA

MINIATURIZATION AND STABILITY: A NEW GENERATION OF OVENISED OSCILLATORS **c33**

J. P. Aubry, G. Wagner, and V. Candelier *In* ESA, Frequency and Time Forum Jun. 1992 p 173-177 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The design procedure and the electrical performances obtained with very small ovenized oscillators are presented. The sizes were reduced to 40 by 30 by 19, 40 by 30 by 16, and 36 by 26 by 19 cu mm. The oscillator designs offer 'intrinsic' high performances regarding either aging, frequency stability, or phase noise in the way that these performances can be compared to the one achieved from actual standard oscillators designed in a larger package. One of the keys in getting ovenized oscillators in small package is the resonator definition. The use of SC cut allow good performances in ageing, thermal stability and phase noise, in smaller size than an equivalent AT cut. Miniaturized and stable oscillator specifications can be met by using state of the art of oscillators design and manufacture concepts. The experimental results show that tight requirements are obtained with very good oscillator yields. ESA

A SYSTEM DESIGN FOR LASER TIME SYNCHRONIZATION VIA GEODETIC SATELLITE AJISAI **c36**

Hiroo Kunimori, Fujinobu Takahashi, and Atsushi Yamamoto (Maritime Safety Agency, Tokyo, Japan.) *In* ESA, Frequency and Time Forum Jun. 1992 p 181-185 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A laser time synchronization system based on a satellite laser ranging system developed in 1990 is described. The target satellite is the Japanese geodetic satellite Ajisai, which is equipped with corner cubes and mirrors. Feasibility of the experiment is studied including the time transfer equation, the observation system, the link budget, and distribution of reflected beam. Simulation study indicates that two stations thousands of km from each other can be linked by a laser beam with a signal strength of more than 10 photons. The images of the laser beam from the Ajisai mirrors are uniformly distributed on the ground and two stations have many chances to link in a single Ajisai pass. ESA

THE ACCURACY OF SYLT- AND RNS-BASED TIME SCALES AT MTI AND SNT DURING 1990-1991

Tapio Mansten, Kalevi Kalliomaeki (Oulu Univ., Finland.), and Bengt Selin (Swedish National Time and Frequency Lab.) *In* ESA, Frequency and Time Forum Jun. 1992 p 187-190 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The phases of transmissions from Norwegian Sea Loran Sylt and Soviet Radionavigation System (RNS) Bryansk stations were measured at MTI (Metrology National Time and Frequency Laboratory) (Finland) and SNT (Swedish National Time and Frequency Laboratory) (Sweden) daily for two years to find out the uncertainty of time scales based on them. The phases were traced back to UTC by using BIPM time circulars and appropriate time information letters for other laboratories. The reference time scale at MTI is a GPS receiver. The reference time scale at SNT is based on one of three Cs clocks which contribute to UTC. The results show that by common view Sylt measurements, a Loran C based time scale can be maintained at 100 ns level/10 days. By using RNS common view measurements, a time scale at about 500 ns/10 day level is achievable. ESA

ANALYTICAL TECHNIQUES FOR IMPROVED TIME TRANSFER USING COMMON VIEW OF DIRECT BROADCASTING SATELLITES

John A. Davis and Peter R. Pearce *In* ESA, Frequency and Time Forum Jun. 1992 p 195-199 Sponsored by the United Kingdom Measurement System Program for Time and Frequency (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

Time transfer using television signals from direct broadcasting satellites is an accurate and inexpensive method of comparing atomic clocks at distant locations. The major source of error arises from the residual motion of the geostationary satellite. Previous work showed that it is possible to determine the components of the satellite motion by observing two widely spaced geostationary satellites simultaneously from three locations. A method where the common view measurements are corrected for the variation of the positions of the satellites is developed. In contrast to previous work, there is no requirement to calculate explicitly the coordinate of the satellites. Time transfers with uncertainties of a few parts in 10 exp 14 were obtained. The longitudinal drift and periodic variations of the satellite positions were determined. ESA

ELASTIC PLATE MODE SENSITIVITIES TO MASS LOADING APPLICATIONS TO GAS SENSORS **c35**

M. Hoummady and D. Hauden *In* ESA, Frequency and Time Forum Jun. 1992 p 203-207 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The theoretical analysis of the possibility of measuring mass loading variations by means of bulk wave modes generated with Interdigital Transducers (IDT) is addressed. Elastic waves are generated and detected by means of IDT transducers plated on piezoelectric fields or substrates. It was shown that both surface and bulk elastic waves can be launched by IDT's. The type of elastic wave excited is related to the piezoelectric material properties and its crystallographic orientation. In a thin piezoelectric plate, surface and bulk vibrations propagate in the volume of the plate. Thus, propagating plate modes are stationary in the plate thickness. Two kinds of modes can be distinguished: Shear Horizontal (SH) and Lamb modes. To adapt a plate mode device to a gas sensor, it is necessary to deposit a selectivity sensitive film which can absorb the gas to be detected. The velocity of the wave is then modified because the induced variation of the mass loading of the film changes the boundary conditions. The theoretical study of the mass loading sensitity of both SH and Lamb modes is presented. For instance, expected sensitivity for the SH mode of a gas sensor is in the order of 1 ng of the gas for 1 sq cm of sensitive film. ESA

A STATE-OF-THE-ART CRYSTAL FILTER DESIGN PACKAGE USING WINDOWS 3.0 TECHNIQUES **c33**

Markus Frey and Bernd W. Neubig *In* ESA, Frequency and Time Forum Jun. 1992 p 209-216 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A02/MF A04

A company owned software package TeleQuartz (TQ) WINFIL for systematic design of crystal filters is reported. TQ WINFIL offers access to several levels of the filter synthesis: the pole-zero plane, the normalized low pass domain, and the synthesis of the final crystal filter circuit. At each synthesis level, an analysis module as well as an optimization module are included. This allows the user to analyze the theoretical models as well as the real crystal filter circuit including losses, component tolerances, and nonideal characteristics such as spurious responses of the crystals. The optimization modules make it possible to search iteratively for a network solution from a starting set of values in order to meet special requirements. Frequency unsymmetric responses can be computed by a frequency transformation module, which effects the bilinear transformation of all circuit

components of the filter. Any parameter changes in the synthesis and any action of the optimization module not only cause changes of the desired response, they also influence the other characteristics of the filter. The Windows graphical user interface allows the simultaneous display of all interesting parameters and results during the whole cycle of synthesis, analysis, optimization, and transformation. ESA

MONOLITHIC QUARTZ VIBRATING BEAM ACCELEROMETER c35

F. Deyzac, D. Janiaud, and S. Muller *In* ESA, Frequency and Time Forum Jun. 1992 p 217-218 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A monolithic quartz vibrating beam accelerometer is described. The objective is machining, by chemical etching process, miniature accelerometers suitable for various applications, like guidance systems, and vehicle dynamic control. The monolithic quartz active part includes two vibrating beams, the proof mass, and its articulation in a base. It is obtained by a process similar to the one used in watch crystal manufacturing, so the potential cost is very low. The simplicity of piezoelectric excitation and the numerical output (frequency signal) are key features to reduce dimensions and cost. The expected accuracy of this sensor is 0.003 in a harsh environment. First experimental results are presented. ESA

SURFACE TRANSVERSE WAVE (STW) QUARTZ RESONATORS IN THE GHz RANGE

E. Bigler, E. Gavignet, B. A. Auld (Stanford Univ., CA.), E. Ritz (Tektronix, Inc., Beaverton, OR.), and E. Sang (Tektronix, Inc., Beaverton, OR.) *In* ESA, Frequency and Time Forum Jun. 1992 p 219-222 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A model predicting the influence of various design parameters on fundamental properties such as resonant frequency, Q factor, and insertion losses is presented. STW resonators offer several advantages over conventional Rayleigh wave SAW (Surface Acoustic Wave) resonators, one of the most interesting advantages being higher operating frequencies (+60 percent) for given geometrices of the transducers and reflectors. A model to compute the resonant frequency of a three grating STW resonator is presented and and the influence of important design parameters, cavity length, metal thickness, grating periodicities, and finger to gap ratio is discussed. Starting from first experimental results, obtained in metal strip (37 deg Y rotated) quartz STW resonators at 500 MHz, new devices at 1 GHz were fabricated and tested. Experimental results are presented and discussed. ESA

COMPARISON OF ENERGY TRAPPING RESONATORS AND FILTERS USING THE AT CUT OF QUARTZ, BERLINITE AND GALLIUM PHOSPHATE c76

J. Detaint, J. Schwartzel, C. Joly, B. Capelle (Paris VI Univ., France.), A. Zarka (Paris VI Univ., France.), Y. Zheng (Paris VI Univ., France.), Y. Toudic (Centre National d'Etudes des Telecommunications, Lannion, France.), and E. Philippot (Montpellier Univ., France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 223-227 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The properties of the AT cuts of quartz, berlinite, and gallium phosphate are compared (velocity of the shear waves, coupling coefficient, and thermal behavior). A more precise evaluation of the properties of AT cut resonators using the quartz analogs is made in considering the computed properties of energy trapped resonators. The computed properties of resonators are obtained using a three dimensional model based upon the theory of the essentially thickness modes. Using computed equivalent schemes, the bandwidths achievable at 20 MHz are calculated for 4 poles Jaumann filters having a Chebishev response with 14 dB ripple and a maximal termination impedance of 2 kohm. The obtained results indicate that berlinite and gallium phosphate produce a filter with much larger bandwidth than quartz. They suggest that the use of new designs (resonators with elliptical electrodes and/or grooved electrodes, integrated filters etc.) will further lower the equivalent inductance and/or the influence of the stray capacitances. Such designs would lead with the high coupling quartz analogs to much better characteristics than the usual designs using round electrodes. Experimental results (equivalent scheme of resonators, observed mode shape etc.) are successfully compared with computed ones to validate the model use for the computations. ESA

RUBIDIUM ATOMIC FREQUENCY STANDARDS FOR GPS BLOCK 2R

William K. Riley, Jr. *In* ESA, Frequency and Time Forum Jun. 1992 p 231-238 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A02/MF A04

The design, improvements, test results, and progress of the Rubinium Atomic Frequency Standards (RAFS) for the GPS (Global Positioning System) Block 2R Navstar satellites are described. These satellites will replenish and upgrade the space segment of the GPS in the mid 1990's. The RAFS offer an aging rate in the low pp 10 to the 14th power/day range and a drift corrected 1 day stability in the low pp 10 to the 14th power range. The Block 2R version of these devices will have improved performance, higher reliability, smaller size, and greater radiation hardness. The GPS Block 2R atomic clocks have a 'natural frequency' configuration whereby they output a frequency of about 13.4 MHz that is a submultiple of the atomic resonance. The RAFS operate at a low fixed C field for increased stability. The unit was repackaged into a smaller 4.6 by 8.5 by 5.8 inch outline, but is somewhat heavier (12 lbs.) because of additional radiation shielding. Elimination of the ground tuning logic and the secondary loop synthesizer (with its ovenized crystal oscillator) reduced the RAFS complexity and improved its reliability to 0.80 for the 7.5 year mission. The RAFS power consumption is only 13 W at +20 C in vacuum. ESA

MIXED CONSTELLATION SYNCHRONIZATION OF GPS TIME

A. L. Satin, C. H. Yinger, and W. A. Feess *In* ESA, Frequency and Time Forum Jun. 1992 p 239-242 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The Global Positioning System (GPS) will consist of a mixed constellation of Block 2/2A ground navigated and Block 2R autonomously navigated (Autonav) satellites for many years starting in 1996. The GPS time references for these two types of subconstellations must be synchronized to within a few nanoseconds if user navigation accuracy is to be preserved. A technique for achieving Root Mean Square (RMS) phase and rate synchronization of 2.9 ns and 0.13 ns/hr, by steering the ground system to Autonav, is described and validated by simulation. Coincidental with synchronization steering, it is shown that Autonav ensemble time (for a subconstellation of as few as four satellites) can be maintained to within 20.7 ns of Universal Time Coordinated (UTC) using a drift rate steering control law. GPS STANDARDIZATION FOR THE NEEDS OF TIME TRANSFER

W. Lewandowski, G. Petit, and C. Thomas *In* ESA, Frequency and Time Forum Jun. 1992 p 243-248 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A02/MF A04

The need to develop standards in GPS (Global Positioning Systems) receiver software and hardware, in particular with the implementation of Selective Availability (SA) is reported. The most recent activities of the CGGTTS (CCDS Group on GPS Time Transfer Standards) are reported. It has been clear for some time that a desirable and necessary step for improvement of the accuracy of GPS time comparisons is to establish GPS standards which may be adopted by receiver designers and users. For this reason, a formal body, the CGGTTS was created in 1991. The implementation of SA is described and examples of deficiencies caused by a lack of standardization are discussed. ESA

COMPARISON OF GLONASS AND GPS TIME TRANSFERS

P. Daly, N. B. Koshelyaevsky (All-Union Research Inst. for Physical and Radiotechnical Measurements, Mendeleevo, USSR.), W. Lewandowski

(Bureau International des Poids et Mesures, Sevres, France.), G. Petit (Bureau International des Poids et Mesures, Sevres, France.), and C. Thomas (Bureau International des Poids et Mesures, Sevres, France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 249-252 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The Russian Global Space Navigation System GLONASS could provide a technique similar to GPS (Global Positioning System) for international time comparison. The main limitation to its use for time transfer lies in the lack of commercially available time receivers. The building of a GPS/GLONASS receiver and continuous information collected about GLONASS time and its comparison with GPS time are reported. Russian built GLONASS navigation receivers built for time comparisons are addressed. Since June 1991, a GPS time receiver has been operating. This offered for the first time an opportunity for direct comparison of time transfers using GPS and GLONASS. This 7 month experiment shows that even with relatively imprecise data recordings and processing, in terms of time metrology, GLONASS can provide continental time transfer at a level of several tens of nanoseconds. AN EXPERIMENTAL HEALTH MONITORING UNIT FOR GPS AND GLONASS **c04**

B. Eissfeller, M. Haunschild (Maschinenfabrik Augsburg-Nuernberg A.G., Munich, Germany.), A. Jansche, and N. Niklasch (Maschinenfabrik Augsburg-Nuernberg A.G., Munich, Germany.) *In* ESA, Frequency and Time Forum Jun. 1992 p 253-257 (For primary document see N93-24978 09-70)

(Contract ESA-9281/91/F/RD(SC))

Copyright Avail: CASI HC A01/MF A04

The development of an experimental Health Monitoring Unit (HMU) for GPS (Global Positioning System) and GLONASS (Russian Global Space Navigation System) is reported. The purpose of the HMU is to provide timely warnings to the navigation users if the satellite navigation systems should not be used for navigation. The monitoring unit is a key element in the integrity channel concept of a civil overlay Navsat to GPS and GLONASS. The most stringent requirements are those of civil aviation: in the nonprecision approach phase horizontal position errors exceeding the 600 m SPE threshold have to be reported within 10 seconds. The concept of the HMU is to use a GPS receiver as well as a GLONASS reveiver in a known location in order to detect large pseudorange errors and to identify the malfunctioning satellites. This means that the station is able to work autonomously. But it will also provide pseudorange errors compatible with the American RTCA SC-159 approach and for a future wide area DGPS (Differential GPS) system. ESA

DEDICATED OSCILLATOR FOR IMMERSED CRYSTAL SENSOR **c76**

G. Bardeche, C. Filiatre, and J.-P. Valentin *In* ESA, Frequency and Time Forum Jun. 1992 p 265-268 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A study performed with the circuit simulation software PSPICE on the design of an oscillator is presented. For chemical applications a quartz oscillator may be successfully implemented. For these applications, the quartz crystal is generally immersed in liquid medium. Therefore, the quality factor and the motional resistance are very different compared to usual cases. The oscillator circuit must therefore be strongly modified in order to obtain oscillation of the immersed crystal. The characteristics of an immersed quartz crystal are determined, and, from the measured values, an electronic design is proposed. The quartz crystal works in series resonance with a grounded electrode. This circuit can be considered like an approximation of the optimal curcuit where the resonant element is loaded by the zero impedance of a current controlled voltage source. ESA

RADIATION EFFECTS IN GERMANIUM DOPED QUARTZ **c76**

Harish Bahadur *In* ESA, Frequency and Time Forum Jun. 1992 p 269-272 Sponsored by Sandia National Labs. and RADC (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

Cultured quartz crystals doped heavily with Ge (Ge concentration approximately 3000 ppm) were studied for their infrared spectral characteristics as a function of irradiation temperature. The irradiation was done in sequence at 77 K, 300 K, and finally again at 77 K. Infrared spectra show that in addition to the growth defect bands the previously unreported peak at 3656/cm is caused due to the presence of Ge in quartz. Intense irradiation at 77 K in prior 300 K irradiated samples exhibit the presence of a band at 3400/cm which is a different defect center than the growth defect band at this frequency. Production curve for this band shows a linear dose dependence. ESA

TRAPPED ENERGY QUARTZ CRYSTAL RESONATOR ON WEDGE-SHAPED PLATE **c76**

R. Bourquin *In* ESA, Frequency and Time Forum Jun. 1992 p 273-277 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

Based upon the general relation of dispersion for a quartz plate of doubly rotated cut, an analytical model is presented. It describes the modes shapes of a resonator exhibiting a linear thickness variation along in-plane directions and is only submitted to the following assumptions: small wave numbers along the plate plane and slowly varying thickness. The proposed model allows a direct computation of overtones and anharmonic mode frequencies, as well as the motional elements of the resonator, as functions of the tilt angle. ESA

N93-25023# Tekelec-Systemes, Les Ulis (France).

TIME AND FREQUENCY REFERENCE FOR A TRAJECTORY MEASUREMENT SYSTEM

G. Boime *In* ESA, Frequency and Time Forum Jun. 1992 p 279-282 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A time and frequency reference installed on a ship for dating and synchronization of all the different measurement instruments is described. There is a requirement of precise time and frequency referencing in trajectory measurement which allows tracking of long range missiles. Time and frequency are provided to different systems such as radar, optical sighting, and telemetry. The time and frequency system is made up from a main clock reference and secondary clocks synchronized via a local area network. This redundant architecture improves the reliability and allows time and frequency distribution even when the main clock is unavailable. ESA

N93-25024# Observatoire Cantonal, Neuchatel (Switzerland).

BASIC DESIGN OF A SPACEBORNE HYDROGEN MASER **c36**

L. G. Bernier *In* ESA, Frequency and Time Forum Jun. 1992 p 283-286 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The construction of a space qualified atomic hydrogen maser to be flown on Eureca 3 in a technology demonstration experiment is addressed.

The basic issues in the design of the physics package at the feasibility level are discussed. The main topics are the choice of the microwave resonator, the choice of the basic operational parameters, the hydrogen storage, distribution and pumping, the magnetic shielding, and the storage bulb coating. Foreseeable critical issues are the mechanical thermal and magnetic designs. ESA

Schwartzel (Centre National d'Etudes des Telecommunications, Bagneux, France.), J. Detaint (Centre National d'Etudes des Telecommunications, Bagneux, France.), and T. Toudic (Centre National d'Etudes des Telecommunications, Lannion, France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 287-291 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A study to find a hydrothermal method for growing berlinite crystals of sufficently large sizes to use as piezoelectric materials is presented. Natural berlinite of large size are not known. Studies of the optimal conditions of growth were performed using extension of different techniques previously applied particularly to quartz crystals. Two growth techniques obtained large crystals of good quality. The first starts by joining several crystals of the same orientation to make a single seed. If this is not sufficient, a second 'crossed growth' technique can be used. To control the quality of the obtained crystals, x ray topographic studies were done and typical features of the samples are presented. ESA

TF-4020A: TFL'S NEW COMPACT MILITARY RUBIDIUM STANDARD

E. Eltsufin and A. Stern *In* ESA, Frequency and Time Forum Jun. 1992 p 293-296 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A military rubidium frequency standard model TF-4020A is described and analyzed. It is a compact (volume less than 500 cc) military rubidium standard and meets MIL-E-5400 (airborne electronic equipment) class 2 (-55 C to +71 C, 70,000 ft). The physics package shown is extremely small (87 cc) and comprises lamp and cavity subassembly and a twofold magnetic field. The oscillator is a miniature oven controlled crystal oscillator with a SC (Stress Compensated) cut crystal for a low vibration susceptibility. The main effort during the design process was concentrated on the design of reliable circuits: general reliability, stability and low susceptibility to external and internal influences like temperature, vibration and electromagnetic interference (EMI). Key features of the unit are: compact design; extremely small physics package (87 cc) with a special rugged design to withstand strong vibration; high stability over the wide operating temperature range of -55 C to +71 C; low susceptibility to EMI; low sensitivity to external DC and AC magnetic field; excellent short term stability of 7 x 10(exp -12)/square root of tau for tau greater than 0.1 s and less than 300 s; excellent long term stability of 1 x 10(exp -11) per month; and versatility to adopt versions without size increase. ESA

ULTRA STABLE OSCILLATORS FOR SATELLITE APPLICATIONS **c19**

John C. Ho *In* ESA, Frequency and Time Forum Jun. 1992 p 297-300 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

An ultrastable 5 mHz reference oscillator performance specification and a list of satellites that use source ultrastable crystal oscillators are presented. The circuit design and physical package provides an output frequency noise of -145 dBc/Hz 10 Hz from carrier; short term frequency stability is better than 5 pp 10 to the 13th power/second; temperature coefficient is less than 2 pp 10 to the 12th power/C over the operating temperature -20 C to +50 C; vibration 'g' sensitivity less than 6 pp 10 to the 10th power/g; and long term frequency stability less than 5 pp 10 to the 12th power/day in the actual space environment. These precision oscillators have frequency update capability allowing them to be tuned from the ground by command. A built-up 12 bit D/A converter with either parallel or series command codes controls the oscillator frequency. This tuning ability enables the oscillator to remain at an accurate frequency for missions of 10 to 15 years. Radiation hardening protection is also incorporated as required. ESA

USE OF THE TV-SIGNAL IN STABILIZING A LOCAL RUBIDIUM OSCILLATOR **c33**

Reijo Kivelae *In* ESA, Frequency and Time Forum Jun. 1992 p 309-313 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The methods and results of using the 15625 Hz frame synchronizing frequency of a normal television (TV) broadcast as a reference to automatically stabilize a local rubidium oscillator are described. The characteristics of the Finnish TV network were studied. Consequently, TVCRO (TV Controlled Rubidium Oscillator) microcomputer control algorithms and TVCRO prototype hardware were designed. Prototype measurements showed that the daily frequency can be maintained within 5 x 10(exp -12) (peak to peak). The standard deviation around the mean value is 0.9 x 10(exp -12). During a 40 day test run, the TVCRO output phase was within 0.8 microseconds of the TV phase. The long term drift of the TVCRO is in the order of a few parts on 10(exp -13) per year when referenced to transmission center frequency. ESA

QUARTZ CRYSTAL TWINNING UNDER MECHANICAL STRESS: FINITE ELEMENT ANALYSIS **c76**

J. J. Boy, B. Dulmet, and P. Conraux (Framasoft + CSI, Lyon, France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 323-327 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

Some tools to describe the switching process of electrical twinning in various cuts of quartz are proposed. In all cases, the principle of minimal energy, together with a threshold condition is applied to the proper thermodynamic potential to determine which twin will survive the exerted stresses on a quartz sample. An analytical expression useful for samples submitted to a known homogeneous compressive stress is given. For more general stress states, a finite element approach is chosen to study the propagation of the switching process. It is founded upon a bielastic stress-strain relationship introduced into the plasticity model for nonlinear transient analysis in the SYSTUS (trademark) program. ESA

FIRST EXPERIENCE WITH THE ASN-16 GLONASS RECEIVER **c33**

B. Eissfeller, N. Balteas, A. Jansche, and V. Liebig *In* ESA, Frequency and Time Forum Jun. 1992 p 329-332 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

Experience with the ASN-16 GLONASS (Russian Global Space Navigation System), a slow sequencing C/A code receiver working on one channel, is described. It is basically designed for airborne applications but can also be used in terrestrial and maritime applications. It consists of a navigation computer; an RF unit, a control and display unit as well as antenna and preamplifier. An ARINC 429 compatible interface enables data transfer between receiver and external units (input of inertial aiding data, output of position, velocity, and time). A software upgrade also provides access to ephemeris, almanac, pseudorange, and pseudodoppler measurements. The ASN-16 equipment is described on hardware and software level. The first results of test measurements and material on the actual GLONASS constellation is presented. During the test period horizontal position errors of up to 30 m were measured within 24 hours in stationary mode. ESA

STABILITY OF NONLINEAR PHASE MOTION FROM THE STUDY OF OSCILLATOR MAPPINGS **c33**

M. Planat *In* ESA, Frequency and Time Forum Jun. 1992 p 333-336 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A fundamental approach to study the intrinsic stability of phase motion at resonances of oscillator differential equations is reported. An averaging technique was developed to replace the continuous problem by a discrete phase mapping. A criterium of structural stability of resonances was found to numerically plot the diagram of frequency locked states. Typical diagrams have several layers corresponding to seperate power laws in the frequency fluctuation. By studying Hoedler continuity of frequency in parameter space (Omega, c) the phenomenon of Hoedler exponent resonance associated to fractal sets was discovered. In the case epsilon = 0, previous power laws associated to mode lock-in or irrational windings are recovered. Scaling laws associated to the decay in time of frequency fluctuations are studied. In the case of a small epsilon not equal to 0, a wide region of 1/f frequency noise is observed at the bottom of Arnold tongues. ESA

MICROWAVE SYNTHESIZERS IN SPACE **c33**

A. Vulcan and M. Bloch *In* ESA, Frequency and Time Forum Jun. 1992 p 355-359 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

An overview of synthesizers used in the space environment including direct and indirect synthesizers is presented. Synthesizers are used in satellites as local oscillators, reference signal generators for phase locked loops, sources for calibration systems, and any other purposes. The design drivers are small size, low weight, high reliability, and low power consumption. The frequency sources are used in redundant configurations to ensure that there are no single point failures. Space synthesizers have many self test telemetry outputs which provide indications of the unit health and operating mode. They operate either directly from the spacecraft primary power bus or from a centralized DC to DC converter whose outputs are semiregulated voltages. The long term frequency stability depends upon the reference source which may or may not be internal to the synthesizer. Atomic frequency standards or quartz crystal oscillators are used depending on mission stability requirements. ESA

PHASE DIFFERENCES OF THE FIELDS IN A RAMSEY RESONATOR FOR SUBMILLIMETRIC FREQUENCY STANDARDS

E. Bava and P. Tavella (Istituto Elettrotecnico Nazionale, Galileo Ferraris, Turin, Itlay.) *In* ESA, Frequency and Time Forum Jun. 1992 p 371-374 Sponsored in part by CNR (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The study of an open resonator suitable for standards operating in the submillimeter region, such as Mg and Ca beams and hopefully in the infrared region, is addressed. The structure is obtained by weakly coupling two resonators by means of a very thin splitter. One of the resonators is doubly folded, to allow the Ramsey technique, and it is fed in a nearly symmetric way by the other one. The resonances of the overall structure are studied, as they appear at the input, to distinguish the high excitation from the low excitation ones of the folded resonator. This analysis is firstly performed supposing a lossless structure, then the phase relationships between the two separated fields are evaluated in a few special cases for a real structure. ESA

CONTROLLED DISSOLUTION OF A PIEZOELECTRIC MATERIAL BERLINITE (AlPO4) [DISSOLUTION CONTROLEE D'UN MATERIAU PIEZOELECTRIQUE, LA BERLINITE (ALPO4)] **c76**

O. Cambon, A. Goiffon (Montpellier Univ., France.), A. Ibanez (Montpellier Univ., France.), and E. Philippot (Montpellier Univ., France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 377-381 In FRENCH (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The results on the controlled dissolution of berlinite aimed at realizing AT high frequency (75 Hz) resonators are presented. The dissolution takes place in acid solutions (H3PO4 or H2SO4) of aluminum phosphate. The dissolution kinetics and evolution of the surface state are controlled during the chemical machining process by frequency variation of resonance and roughometry. After systematic study, the controlled dissolution bath giving the best results is used to prepare AT berlinite resonators. Theses are characterized by their piezoelectric performances and compared to resonators obtained by ion bombardment or to similarly oriented quartz resonators. ESA

N93-25044# Montpellier Univ. (France).

CRYSTAL GROWTH AND PHYSICAL CHARACTERIZATIONS OF GaPO4 **c76**

E. Philippot, A. Ibanez, A. Goiffon, B. Capelle (Paris VI Univ., France.), A. Zarka (Paris VI Univ., France.), J. Schwartzel (Centre National d'Etudes des Telecommunications, Bagneux, France.), and J. Detaint (Centre National d'Etudes des Telecommunications, Bagneux, France.) *In* ESA, Frequency and Time Forum Jun. 1992 p 383-388 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A02/MF A04

An investigation concerning GaPO4 crystal growth in sulphuric and phosphoric acid media through the slow heating and vertical reverse temperature gradient methods is reported. Systematic study of growth parameters shows a Vx growth rate always much greater than the two other ones: Vz and Vy. The most interesting result is the ability to do GaPO4 epitaxy in large berlinite seems in sulphuric acid and, after that, to use them for GaPO4 crystal growth in phosphoric acid. The good epitaxy process and the crystalline quality were checked by x ray topography. The (OH) content, followed by infrared spectrometry, seems to prove a lower OH concentration than in the berlinite case for approximately the same crystal growth conditions. First piezoelectric characterizations of resonators near the AT cut show GaPO4 to be a very promising piezoelectric material with a large coupling coefficient near 16 percent, a quartz like thermal stability, and a Q factor already nearly sufficient for the applications. ESA

THERMIONIC CURRENT MEASUREMENT IN QUARTZ [MESURE DE COURANTS THERMOIONIQUES DANS LE QUARTZ] **c76**

G. Jeandel, A. Warin, C. Poignon, J. P. Aubry (Compagnie d'Electronique et de Piezo-Electricite, Argenteuil, France.), and G. Morlot *In* ESA, Frequency and Time Forum Jun. 1992 p 389-392 In FRENCH Sponsored by Direction des Recherches, Etudes et Techniques (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The characterization of quartz samples by a thermionic current measurement called Ionic Thermal Current (ITC) is reported. A better understanding of impurity migration, under applied electric field, would enable a more efficient control of the electromigration process used for quartz purification: 'sweeping'. Several blocks originating from the same zone were cut off in the same crystal. The laminas were cut in each of the blocks of perpendicular to the Z or Y axes. Two crystals were studied: one of the I quality (number 272) and the other of standard quality (number 511). The ITC measurements of these two types of crystal are presented. Thermionic currents of laminas cut off more or less further from the nucleus are compared. The effects of 'sweeping' on the ITC current is shown. ESA

THE THIRD-ORDER PERMITTIVITY OF QUARTZ OBTAINED BY DIFFERENT METHODS **c76**

Carl K. Hruska *In* ESA, Frequency and Time Forum Jun. 1992 p 393-395 Sponsored in part by Natural Sciences and Engineering Research Council of Canada and York Univ. (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

A comparison of three values of the third order permittivity constant of quartz obtained independently by three different methods is presented. Each method produces a value of a different order of magnitude and there is no uniformity in sign among them. The difference between the value obtained by the resonator method and the older, original value obtained by the capacitor method, is not statistically significant. On the other hand, the values obtained by the transit time method differs significantly from the previous two results. ESA

THERMOELASTICITY IN QUARTZ **c76**
J. A. Kosinski, J. G. Gualtieri, and A. Ballato *In* ESA, Frequency and Time Forum Jun. 1992 p 397-402 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A02/MF A04

A critical analysis of experimental measurements of alpha quartz thermal expansion reported in the literature is presented. A recommended set of best measured values over the temperature range -50 to +150C was determined, as were values for the coefficient of thermal linear expansion and the thermoelastic coefficients alpha(sub ij)(sup (n)). The new alpha(sub ij)(sup (n)) values are: alpha(sub 11)(sup (1)) = 13.65 times 10 to the minus 6th power/K, alpha(sub 33)(sup (1)) = 7.50 x 10(exp -6)/K, alpha(sub 11)(sup (2)) = 11.02 x 10 (exp 1 9)/K squared, alpha(sub 33)(sup (2)) = 8.00 x 10(exp - 9)/K squared, alpha(sub 11)(sup (3)) = -19.32 x 10(exp 1 12)/K cubed, alpha(sub 33)(sup (3)) = -10.44 x 10(exp -12)/K cubed. The impact of using the new alpha(sub ij)(sup (n)) on determinations of quartz material temperature coefficients and on the calculation of temperature coefficients of frequency for the case of the AT cut are discussed. ESA

THE DEVELOPMENT PROGRESSES OF HYDROGEN MASERS AT SHANGHAI OBSERVATORY **c36**
Z. C. Zhai, H. X. Huang, J. W. He, C. F. Lin, G. X. Jiang, W. H. Luo, and J. F. Lu *In* ESA, Frequency and Time Forum Jun. 1992 p 405-408 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The developments, performances, and applications of hydrogen masers are summarized. After the success of the first Chinese hydrogen maser, five more hydrogen masers with several improvements to the maser design, but still traditional structures, were made for VLBI (Very Long Base Interferometry) observations and timekeeping. To equip the Chinese VLBI network, a new generation of hydrogen maser, an integrated, rugged and easily transportable maser, was developed successfully. For timekeeping with hydrogen masers, a kind of one maser autotuning system was developed. Meanwhile, the third generation of hydrogen maser, an oscillating compact hydrogen maser which employs a compact cavity design, resulting in significant size and weight reductions compared to a conventional maser, is being developed. This kind of maser is suitable for timekeeping because of its excellent long term stability. ESA

CONTROLLING AN OPTICAL FREQUENCY BY A SINGLE ION
I. Siemers, V. Enders, R. Blatt, W. Neuhauser, and P. E. Toschek *In* ESA, Frequency and Time Forum Jun. 1992 p 421-424 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The control of the oscillation frequency of a single mode signal laser by a narrow resonance of a single trapped ion may result in frequency generation of both satisfactory precision and unprecendented accuracy. The signature of resonant excitation cannot be derived from the very weak fluorescence on the control transition. Instead, the rate of dark intervals of simultaneously excited resonance light may be used as a discriminant for the signal resonance. Alternatively, two lasers may excite an E2 transition whose resonance is indicated by a 'dark line' in the resonance fluorescence. Perturbative effects in the dark lines of a single trapped Ba(+) ion, the narrowest of which is 63 kHz, are quantitatively studied and a dark line of a single Yb(+) ion is demonstrated. Systematic shifts of the signal frequency may be eliminated with residual inaccuracy smaller than 10 to the minus 15th power. ESA

The feasibility of a Tunable Frequency Converter (TFC) concept envisaged on board of the Data Relay System Satellites (DRSS), which requires a synthesizer with state of the art phase noise performance that is locked to a common, ultrastable oscillator, is addressed. The DRSS Ka band communication links are discussed with reference to the DRS system and the TCF. The aim is to provide an autonomous TCF unit demonstrating that the advanced channel selection scheme, with all frequency translations locked to one common reference, is feasible. Concept tradeoff and key elements of the frequency synthesizer are outlined. White noise filtering

and reference frequency selection of the reference generator are discussed. The TFC unit allows payload reconfigurability via the frequency setting. The concept is extendable to all TFC types on board of the DRSS. ESA

OSCILLATORS FOR MOBILE GPS RECEIVERS **c33**

J. P. Aubry, P. Canzian, and V. Candelier *In* ESA, Frequency and Time Forum Jun. 1992 p 445-450 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A02/MF A04

The design procedure and optimization of oscillators for mobile GPS (Global Positioning System) receivers and typical results regarding the resonator's performance are presented. The GPS oscillators were designed to meet the GPS system requirements, either for time transfer or localization, in different environment. These oscillators focus either on the absolute accuracy, through low G sensitivity and high stability for the naval ones, or in the warm up, through the use of the airborne TXCO (Temperature Compensated Crystal Oscillator), which provides an accuracy good enough with low power and low size. One of the key points is that most of the applications require low oscillator size. That means that the low G sensitivity must now be achieved with a low size resonator. Significant improvements were carried on HC37 can resonators which can exhibit now G sensitivity better than 5 times 10 to the minus 10th power per G. ESA

MICROWAVE INTERROGATION FREQUENCY NOISE AND CLOCK FREQUENCY STABILITY: EXPERIMENTAL RESULTS

R. Barillet, V. Giordano, J. Viennet, and C. Audoin *In* ESA, Frequency and Time Forum Jun. 1992 p 453-456 Sponsored by Direction des Recherches, Etudes et Techniques (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

Theoretical study shows that the frequency noise of the microwave interrogation may limit the short term frequency stability of passive atomic frequency standards. In order to investigate experimentally this effect, two identical microwave interrogation systems were realized. The phase shift difference of their frequency noise can be increased and measured. The validity of the theoretical model is confirmed by the experimental results. Measurements shows that the frequency stability of an experimental cesium beam tube is close to the limit associated with the use of a high quality 10 MHz VCXO. It will be necessary to take care of this effect in future passive frequency standards using optical pumping and/or cooled atoms. ESA

TIMING AND TIME SIGNAL DISTRIBUTION IN DIGITAL COMMUNICATIONS NETWORKS **c32**

Masami Kihara and Atushi Imaoka *In* ESA, Frequency and Time Forum Jun. 1992 p 489-492 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The timing signal distribution characteristics of a digital communications network are evaluated to determine the Maximum Time Interval Error (MTIE) of the network; reference is made to the performance of network components such as transmission systems, slave clocks and timing distribution systems in intraoffices. The MTIE of each component is measured and used to determine the allowable MTIE of that component. The maximum number of slave node chains is shown to be 20. Time signal distribution performance is detailed. It is shown that time synchronization accuracy is of the order of submicroseconds between nodes separated by 2400 km over a two year period. For intra-office time signal distribution, the relative time accuracy is less than 3 nanoseconds using an 8 Mb/s round trip digital interface to connect a time signal supply in an office to dispersed equipment. ESA

TIMING A NATIONAL TELECOMMUNICATIONS NETWORK USING GPS **c32**

E. W. Butterline, J. E. Abate (Bell Telephone Labs., Inc., Holmdel, NJ.), and G. P. Zampetti *In* ESA, Frequency and Time Forum Jun. 1992 p 493-496 (For primary document see N93-24978 09-70)

Copyright Avail: CASI HC A01/MF A04

The use of signals from the Global Positioning System (GPS) to synchronize national telecommunications networks is addressed. The GPS

based system, termed a Primary Reference Clock (PRC), employs a GPS receiver providing long term timing accuracy along with duplicated disciplined rubidium oscillators providing short term (one day) stability. The PRC system produces a digital signal used to synchronize a master clock in the node which in turn produces a signal that is used to synchronize all other clocks in the node, and distributed on a dedicated digital basis to all neighboring nodes. By use of monitoring equipment at each PRC, the performance of the master clock at every network node will be verified against the PRC signal. For the first time, a national telecommunications network is monitored and verified to be performing to a precision better than existing international standards. ESA

STRATEGIES FOR SYNCHRONISATION IN AN EVOLVING TELECOMMUNICATIONS NETWORK **c32**
Rob Avery (Telecom Solutions Ltd., San Jose, CA.) *In* ESA, Frequency and Time Forum Jun. 1992 p 497-501 (For primary document see N93-24978 09-70)
Copyright Avail: CASI HC A01/MF A04

The achievement of precise synchronization in the telecommunications environment is addressed. Transmitting the timing from node to node has been the inherent problem for all digital networks. Traditional network equipment used to transfer synchronization, such as digital switching ststems, adds impairments to the once traceable signal. As the synchronization signals are passed from node to node, they lose stability by passing through intervening clocks. Timing would be an integrated part of all new network and service deployments. New transmission methods, such as the Synchronous Digital Hierarchy (SDH), survivable network topologies and the issues that arise from them, necessitate a review of current network synchronization strategies. Challenges that face the network are itemized. A demonstration of why localized Primary Reference Clocks (PRC) in key nodes and the Synchronization Supply Unit (SSU) clock architecture of transit and local node clocks is a technically and economically viable solution to the issues facing network planners today is given. ESA

N93-25064# Telecom Solutions Ltd., San Jose, CA.
SYNOPSIS OF TIMING MEASUREMENT TECHNIQUES USED IN TELECOMMUNICATIONS **c32**

Historically, Maximum Time Interval Error (MTIE) and Maximum Relative Time Interval Error (MRTIE) have been the main measurement techniques used to characterize timing performance in telecommunications networks. Recently, a new measurement technique, Time Variance (TVAR) has gained acceptance in the North American (ANSI) standards body. TVAR was developed in concurrence to address certain inadequacies in the MTIE approach. The advantages and disadvantages of each of these approaches are outlined. Real measurement examples are presented to illustrate the critical issues in actual telecommunication applications. An MTIE measurement is proposed (ZTIE) that complements TVAR. The basic concept behind ZTIE is that a peak power measure is needed to complement TVAR. Together, TVAR and ZTIE provide a very good characterization of network timing. ESA

A COMPACT AND HIGH-PERFORMANCE REFERENCE CELL FOR LASER FREQUENCY STABILIZATION **c36**
G. Dudle and T. Thomann *In* ESA, Frequency and Time Forum Jun. 1992 p 511-514 Sponsored in part by Swiss National Fund for Scientific Research (For primary document see N93-24978 09-70)
(Contract ESTEC-9099/90/NL/US(SC))
Copyright Avail: CASI HC A01/MF A04

Frequency stabilized lasers are required for many applications such as length metrology, telecommunications and optically pumped atomic frequency standards. Linear and saturated absorption atomic vapor cells are traditionally used as frequency discriminators to lock the laser frequency to an atomic transmition (for example, the D1 and D2 lines in Cs or Rb). The problems associated with these discriminators may be overcome by using a short and intense atomic beam as a reference. Theoretical considerations show that with a proper design of the atomic beam collimator, an atomic beam discriminator can combine a small residual Doppler width with a high signal to noise ratio and signal to background ratio. The experimental results obtained in a Cs beam show that this high performance discriminator can be realized in practice in a very compact sealed cell, comparable in size with a simple absorption cell. ESA

LINE INHOMOGENEITY EFFECTS AND POWER SHIFT IN MINIATURIZED RUBIDIUM FREQUENCY STANDARDS **c33**
G. Mileti, I. Rueedi, and H. Schweda *In* ESA, Frequency and Time Forum Jun. 1992 p 515-519 Sponsored in part by Swiss Commission for the Encouragement of Research (For primary document see N93-24978 09-70)
(Contract ESTEC-9099/90/NL/US(SC))
Copyright Avail: CASI HC A01/MF A04

The role of the line inhomogeneity in determining the overall performances of a compact rubidium frequency standard is analyzed. The possibility of zero power shift operation is discussed and the effects of the main physical parameters of the standards on this particular operation mode is investigated experimentally. The power shift varies as function of the cell temperature, but only very little with the light intensity. Light attenuation and filtering appears as the main cause. Different C field gradients show variations in the power shift which was predominantly positive in all cases. It was possible to find a C field configuration, and a working point, in which, in addition to zero temperature coefficient, and zero light shift, the power shift is reduced to less than 3 times 10 to the minus 12th power/micro W. This performance was possible at very low operating RF power, less than 0.5 microW, due to an improved microwave structure. ESA

Some frequency reference points in the 1.5 micrometer optical communication band are reviewed, and experimental results on frequency references for the 1.52 micrometers He-Ne laser are presented. A 15-NH3 absorption within the tuning range of the laser is found to be weak and not saturable. A diode laser was used to investigate to 1.52 micrometers

Ne transition observed via the optogalvanic effect in a hollow cathode discharge. Using a similar discharge tube intracavity in a He-Ne laser, optogalvanic saturated absorption dips of about 6 were found in 20-Ne discharges at about 1 torr (133 Pa) pressure. The full width at half maximum was about 100 MHz. ESA

STABILITY ANALYSIS AND MODELING OF ROTATING FLEXIBLE STRUCTURES
C. R. Dohrmann Jan. 1993 99 p
(Contract DE-AC04-76DP-00789)
(DE93-008493; SAND-92-2537) Avail: CASI HC A05/MF A02

A method is presented for determining the nonlinear stability of undamped flexible structures spinning about a principal axis of inertia. Equations of motion are developed for structures that are free of applied forces and moments. The development makes use of a floating reference frame which follows the overall rigid body motion. Within this frame, elastic deformations are assumed to be given functions of n generalized coordinates. A transformation of variables is devised which shows the equivalence of the equations of motion to a Hamiltonian system with n + 1 degrees of freedom. Using this equivalence, stability criteria are developed based upon the normal form of the Hamiltonian. It is shown that a motion which is spin stable in the linear approximation may be unstable when nonlinear terms are included. A stability analysis of a simple flexible structure is provided to demonstrate the application of the stability criteria. Results from numerical integration of the equations of motion are shown to be consistent with the predictions of the stability analysis. A new method for modeling the dynamics of rotating flexible structures is developed and investigated. The method is similar to conventional assumed displacement (modal) approaches with the addition that quadratic terms are retained in the kinematics of deformation. Retention of these terms is shown to account for the geometric stiffening effects which occur in rotating structures. Computational techniques are developed for the practical implementation of the method. The techniques make use of finite element analysis results and thus, are applicable to a wide variety of structures. Motion studies of specific problems are provided to demonstrate the validity of the method. Excellent agreement is found both with simulations presented in the literature for different approaches and with results from a commercial finite element analysis code. The computational advantages of the method are demonstrated. DOE

THEORY FOR NOISE OF PROPELLERS IN ANGULAR INFLOW WITH PARAMETRIC STUDIES AND EXPERIMENTAL VERIFICATION Final Report
Donald B. Hanson and David J. Parzych Washington NASA. Lewis Research Center Mar. 1993 111 p
(Contract NAS3-24222; RTOP 535-03-10)
(NASA-CR-4499; E-7601; NAS 1.26:4499) Avail: CASI HC A06/MF A02

This report presents the derivation of a frequency domain theory and working equations for radiation of propeller harmonic noise in the presence of angular inflow. In applying the acoustic analogy, integration over the tangential coordinate of the source region is performed numerically, permitting the equations to be solved without approximation for any degree of angular inflow. Inflow angle is specified in terms of yaw, pitch, and roll angles of the aircraft. Since these can be arbitrarily large, the analysis applies with equal accuracy to propellers and helicopter rotors. For thickness and loading, the derivation is given in complete detail with working equations for near and far field. However, the quadrupole derivation has been carried only far enough to show feasibility of the numerical approach. Explicit formulas are presented for computation of source elements, evaluation of Green's functions, and location of observer points in various visual and retarded coordinate systems. The resulting computer program, called WOBBLE has been written in FORTRAN and follows the notation of this report very closely. The new theory is explored to establish the effects of varying inflow angle on axial and circumferential directivity. Also, parametric studies were performed to evaluate various phenomena outside the capabilities of earlier theories, such as an unsteady thickness effect. Validity of the theory was established by comparison with test data from conventional propellers and Prop Fans in flight and in wind tunnels under a variety of operating conditions and inflow angles. ON THE EFFECT OF ACOUSTIC COUPLING ON RANDOM AND HARMONIC PLATE VIBRATIONS
A. Frendi (Analytical Services and Materials, Inc., Hampton, VA.) and J. H. Robinson Mar. 1993 20 p
(RTOP 505-63-50-10)
(NASA-TM-107740; NAS 1.15:107740) Avail: CASI HC A03/MF A01

The effect of acoustic coupling on random and harmonic plate vibrations is studied using two numerical models. In the coupled model, the plate response is obtained by integration of the nonlinear plate equation coupled with the nonlinear Euler equations for the surrounding acoustic fluid. In the uncoupled model, the nonlinear plate equation with an equivalent linear viscous damping term is integrated to obtain the response of the plate subject to the same excitation field. For a low-level, narrow-band excitation, the two models predict the same plate response spectra. As the excitation level is increased, the response power spectrum predicted by the uncoupled model becomes broader and more shifted towards the high frequencies than that obtained by the coupled model. In addition, the difference in response between the coupled and uncoupled models at high frequencies becomes larger. When a high intensity harmonic excitation is used, causing a nonlinear plate response, both models predict the same frequency content of the response. However, the level of the harmonics and subharmonics are higher for the uncoupled model. Comparisons to earlier experimental and numerical results show that acoustic coupling has a significant effect on the plate response at high excitation levels. Its absence in previous models may explain the discrepancy between predicted and measured responses. Author

SPECTRA OF STABLE SONOLUMINESCENCE M.S. Thesis
Stephen D. Lewis Dec. 1992 94 p
(AD-A260621) Avail: CASI HC A05/MF A01

The continuous emission of picosecond pulses of light has been observed

to originate from a bubble trapped at the pressure antinode of a resonant sound field in water and in water/glycerin mixtures. The spectra of this light in several solutions has been measured with a scanning monochrometer/photomultiplier detector system. The spectra are broadband and show strong emission in the UV region. A comparison of this measurement to two other independently produced spectra is made. The spectra are also modeled by a blackbody radiation distribution to determine an effective blackbody temperature and a size is deduced as if Sonoluminescence were characterized by blackbody radiation. IN-FLIGHT EVALUATION OF NOISE LEVELS AND ASSESSMENT OF ACTIVE NOISE REDUCTION SYSTEMS IN THE SEAHAWK S-70B-2 HELICOPTER
R. B. King and D. A. Foran 1992 46 p
(AD-A260689; ARL-TR-9; DODA-AR-007-077) Avail: CASI HC A03/MF A01

Cabin and at-ear sound spectra in the S-70B-2 at various crew positions and flight conditions were measured in order to determine the noise attenuation properties of the ALPHA helmet and the effectiveness of active noise reduction (ANR) systems developed by the Defence Research Agency-Aerospace Division (formerly the Royal Aerospace Establishment) and the BOSE Corporation. Results show that if newly proposed hearing conservation guidelines are adopted, aircrew wearing the ALPHA helmet would require additional attenuation devices. It is recommended that an ANR system be incorporated into the S-70B-2 as such a system would allow realistic flight duration to be maintained, improve voice communication, and reduce aircrew fatigue. FAR FIELD ROTOR NOISE Final Report
Valana L. Wells 22 Jan. 1993 27 p
(Contract DAAL03-90-G-0221)
(AD-A260703; ARO-28002.1-EG) Avail: CASI HC A03/MF A01

The work covered two main areas of research--the aerodynamics of rotor blades including viscous and high angle of attack effects and, secondly, the propagation of noise from the rotor blade, particularly the nonlinear propagation. The aerodynamics work included the development and testing of a Navier-Stokes computational solver for rotor blades which incorporates rotating, translating, flapping and feathering motions. Results, which focus on the British Experimental Rotor Programme (BERP) blade, clearly show the importance of including all motions in the calculation of aerodynamic-forces. The acoustics research concentrates on the development of a method for computing the nonlinear propagation of acoustic signals in the atmosphere. The method is based on a boundary-element discretization of the time-dependent, nonlinear wave equation. Results, computed for a spherically symmetric domain, show an equivalence with Whitham's method up to the formation of a shock. DTIC

A COMPUTATIONAL METHOD FOR THE ANALYSIS OF ACOUSTIC RADIATION FROM TURBOFAN INLETS Ph.D. Thesis
G. K. Raviprakash 1992 159 p
Avail: Univ. Microfilms Order No. DA9233579

A computational method is presented for the analysis of the noise radiation from turbofan inlets. The method developed considers the effect of mean flow and can be used at high frequencies. The techniques for generating the grid, solving the acoustic equations, applying radiating conditions on the far-field boundary, imposing inlet-fan interface conditions as well as solving the steady compressible flow equations are embodied in the Inlet Acoustic Analysis Method. The theoretical basis, formulated for 3-D acoustics within an axisymmetric domain, considers the effect of non-uniform mean flow. The discretization of the field equations is done using a finite volume type differencing. This leads to a block tri-diagonal system of equations which is then efficiently solved. A new and powerful method is developed for the application of radiating conditions. A layer potential representation is used in obtaining numerically local radiating conditions. The locally radiating conditions, developed using the single layer source representation, can be used even at the interior eigenvalues. Using this technique, the radiating conditions can be applied very close to the inlet, and hence the computational efficiency can be significantly increased. The irrotationality conditions for the axisymmetric compressible flow are discretized for solving the mean flow field. An iterative scheme is developed to solve for the stream function, the density, and the speed of sound. The inlet-fan interface conditions are incorporated to properly specify the source of noise. The noise source is either directly specified or the interface potential distribution is split into a combination of an imposed right traveling disturbance and an unknown combination of left traveling disturbances, that come out as part of the solution process. The grid generation procedure utilizes algebraic transformations as well as the grid blending techniques. This process is automated to accommodate variations in the grid geometry. Several aspects of the numerical techniques are verified by demonstration problems and comparison with analytical solutions. The noise radiation from a typical inlet with a center-body at different frequencies and circumferential modes is presented including cases with mean flow. The results for a Bellmouth inlet are compared with experimental data and are in good agreement. The noise radiation at a typical blade passing frequency for an inlet with a center-body is also presented.

ON THE CROSS-STREAM SPECTRAL METHOD FOR THE ORR-SOMMERFELD EQUATION
William E. Zorumski and Steven L. Hodge Mar. 1993 47 p
(RTOP 505-59-52)
(NASA-TM-107737; NAS 1.15:107737) Avail: CASI HC A03/MF A01

Cross-stream models are defined as solutions to the Orr-Sommerfeld equation which are propagating normal to the flow direction. These models are utilized as a basis for a Hilbert space to approximate the spectrum of the Orr-Sommerfeld equation with plane Poiseuille flow. The cross-stream basis leads to a standard eigenvalue problem for the frequencies of Poiseuille flow instability waves. The coefficient matrix in the eigenvalue problem is shown to be the sum of a real matrix and a negative-imaginary diagonal matrix which represents the frequencies of the cross-stream modes. The real coefficient matrix is shown to approach a Toeplitz matrix when the row and column indices are large. The Toeplitz matrix is diagonally dominant,

and the diagonal elements vary inversely in magnitude with diagonal position. The Poiseuille flow eigenvalues are shown to lie within Gersgorin disks with radii bounded by the product of the average flow speed and the axial wavenumber. It is shown that the eigenvalues approach the Gersgorin disk centers when the mode index is large, so that the method may be used to compute spectra with an essentially unlimited number of elements. When the mode index is large, the real part of the eigenvalue is the product of the axial wavenumber and the average flow speed, and the imaginary part of the eigen value is identical to the corresponding cross-stream mode frequency. The cross-stream method is numerically well-conditioned in comparison to Chebyshev based methods, providing equivalent accuracy for small mode indices and superior accuracy for large indices. Author

PROPAGATION OF FINITE AMPLITUDE SOUND IN A WAVEGUIDE WITH A PARABOLIC SOUND VELOCITY PROFILE
Douglas E. Reckamp 17 Jun. 1992 61 p
(ARL-TR-92-11) Avail: CASI HC A04/MF A01

The propagation of finite amplitude sound in a waveguide with a parabolic sound velocity profile is investigated theoretically. It is assumed that the primary wave propagates in a single mode at a frequency that is large compared with the cutoff frequency. The energy is therefore concentrated near the axis of the sound channel. Both the primary wave and the nonlinearly generated second harmonic component have mode shapes that are described by Gauss-Hermite eigen functions. For a primary wave in mode m, the second harmonic component is generated in all even modes up to 2m, with most of the energy contained in mode 2m. A nonlinear Schrodinger equation is derived for the envelope of a narrow band pulse that propagates in a single mode. Analytical expressions are derived for the coefficients in the Schrodinger equation, and it is found that only dark envelope solitons can propagate without distortion in the waveguide. Otherwise, the pulses are expected to disperse with distance. Author

Data were collected concerning the amount of comodulation masking release (CMR) obtained when coherent envelope information is presented successively rather than simultaneously. It was determined that off-frequency information, which produces a CMR, can provide only a small release from masking when presented prior and subsequent to the temporal interval containing the signal. Three papers were published and a fourth is undergoing revision. One assessed sensitivity to interaural correlation of the envelope of high-frequency waveforms and whether such sensitivity might account for detectability in an MLD paradigm. Another showed sensitivity to antiphasic sinusoids added only to the envelopes of high-frequency bands of noise as a function of the frequency of the sinusoid and the bandwidth of the masker. A third, with Dr. R. M. Stem, depicts how straightness weighting can be accomplished by a second, physiologically demonstrated, stage of neural processing. The complex, cross-correlation-based model was extended to account for how interaural insensitive disparities in combination with interaural temporal disparities affects lateralization. Software was written for experiments concerning effects of forward masking fringes on the high-frequency MLD and to perform the theoretical analyses of stimuli used in the successive CMR paradigm. The main area of research continues to be spectral shape discrimination, what I have called profile analysis. Three areas continue to receive considerable attention. They are: (1) the cues available for detecting spectral changes as a function of the bandwidth of the stimulus, (2) how the number of components or density of the spectrum affects the ability to hear spectral changes, and (3) temporal effects--how duration of the stimulus appears to interact with other variables to influence the listener's ability to hear spectral changes. In the first two areas, we have used Berg's COSS analysis to great advantage, and we anticipate that we shall continue to utilize that procedure in our research. DTIC

A large hemianechoic (absorptive walls and acoustically hard floor) noise control enclosure was erected around a complex of test stands at the NASA Lewis Research Center in Cleveland, Ohio. This new state-of-the art Aeroacoustic Propulsion Laboratory (APL) provides an all-weather, semi secure test environment while limiting noise to acceptable levels in surrounding residential neighborhoods. The 39.6-m- (130-ft-) diameter geodesic dome houses the new nozzle aeroacoustic test rig (NATR), an ejector-powered Mach 0.3 free jet facility for acoustic testing of supersonic aircraft exhaust nozzles and turbomachinery. A multiaxis, force-measuring, powered lift facility (PLF) stand for testing short takeoff vertical-landing (STOVL) vehicles is also located in the dome. The design of the Aeroacoustic Propulsion Laboratory efficiently accommodates the research functions of two separate test rigs, one of which (NATR) requires a specialized environment for taking acoustic measurements. An absorptive fiberglass wedge treatment on the interior surface of the dome provides a hemianechoic environment for obtaining the accurate acoustic measurements required to meet research program goals. The APL is the first known geodesic dome structure to incorporate transmission-loss properties as well as interior absorption in a free-standing, community-compatible, hemianechoic test facility. NOTES ON RADIAL DRIFT FOR DALITZ DETECTION
James H. Thomas 21 Aug. 1992 6 p
(Contract W-7405-eng-48)
(DE93-006971; UCRL-ID-111522) Avail: CASI HC A02/MF A01

One solution to the problem of identifying electron pairs due to dalitz decay is to exploit the large difference in energy lose by electrons and pions at momenta below 150 MeV/C. The 'restricted' energy loss is measured by averaging the bottom 60 percent of the energy loss samples

in order to avoid the wide fluctuations caused by the Landau tails. Note that the electrons are fully relativistic and well up on the relativistic rise of the dE/dx curve at a momentum of 30 MeV/C whereas the pions are still moving down off the peak of the Bragg curve and are more heavily ionizing than the electrons. The separation between pions and electrons is very good up to about the pion rest mass and so we can in principle separate the species all through the kinematically allowed range for Dalitz decay but, in practice, the dE/dx resolution will eventually limit the technique to the range well below where the curves crossover. We then might need an additional technique for e/pi separation above 110 MeV/C or so. Time of Flight would be a suitable technique. We propose to use a radial drift Time Expansion Chamber (TEC, or sometimes known as at Time Projection Chamber, TPC) to simultaneously measure the energy loss and momentum of electrons and pions. The detector would be placed at Y = 0 and extend to plus or minus 0.5 units of rapidity and the secondary electrons generated by a track would drift radially away from the vertex towards a sensepad plane. The detector would be inside the magnetic field of the RE2 detector and the drift direction would be perpendicular to the field direction. DOE

A METHOD FOR TRANSIENT, THREE-DIMENSIONAL NEUTRON TRANSPORT CALCULATIONS
M. W. Waddell, Jr. (Martin Marietta Energy Systems, Inc., Oak Ridge, TN.) and H. L. Dodds (Tennessee Univ., Oak Ridge.) 28 Dec. 1992 15 p
(Contract DE-AC05-84OR-21400)
(DE93-007243; Y/DD-586) Avail: CASI HC A03/MF A01

The development and evaluation of a method for solving the time-dependent, three-dimensional Boltzmann transport model with explicit representation of delayed neutrons is described. A hybrid stochastic/deterministic technique is utilized with a Monte Carlo code embedded inside of a quasi-static kinetics framework. The time-dependent flux amplitude, which is usually fast varying, is computed deterministically by a conventional point kinetics algorithm. The point kinetics parameters, reactivity, and generation time as well as the flux shape, which is usually slowly varying in time, are computed stochastically during the random walk of the Monte Carlo calculation. To verify the accuracy of this new method, several computational benchmark problems from the Argonne National Laboratory benchmark book, ANL-7416, were calculated. The results are shown to be in reasonably good agreement with other independently obtained solutions. The results obtained indicate that the method/code is working properly and that it is economically feasible for many practical applications provided a dedicated high performance workstation is available. IONIZATION PROBES OF MOLECULAR STRUCTURE AND CHEMISTRY
Progress Report, 15 Jan. 1992 - 14 Jan. 1993
P. M. Johnson Jan. 1993 7 p
(Contract DE-FG02-86ER-13590)
(DE93-008211; DOE/ER-13590/12) Avail: CASI HC A02/MF A01

Development of laser ionization tools toward study of spectroscopy and dynamics of molecules relevant to combustion processes is discussed. Ionization versus dissociation was studied in CO2; the intensity dependence of vibrational structure in photoelectron spectra had no changes over almost a 2(times) factor, indicating that the CO2 multiphoton ionization through its Rydberg states proceeds by autoionization of bound, neutral dissociative states at the four photon level. Variants of threshold ionization spectroscopy were used for studying ions, aromatics, diazines, azines, etc. In collaboration with BNL people, rotational structure of the combustion radicals trans-HOCO and DOCO, and vacuum UV photodissociation of three chlorofluoromethanes were studied. (DE93-007654; LBL-33145; CONF-9209127-1) Avail: CASI HC A03/MF A01

Results from CERN experiment NA36 are reported. Cross sections for the production of singly strange particles in the S + Pb and p + Pb reactions were measured in the rapidity range 1.25 is less than y is less than 3.5 and for p(sub t) is greater than 0.2 GeV. A significant difference in the rapidity distributions of the lambda particles originating from these reactions suggests a fundamental difference in the strangeness production mechanism. DOE

LINE FORMATION AND THE POYNTING-ROBERTSON EFFECT IN ACCRETION DISCS Ph.D. Thesis
Douglas Lee Carroll 1992 222 p
Avail: Univ. Microfilms Order No. DA9304546

A combination of the Sobolev method and a linearization method is used to calculate line profiles from accretion discs which have outer parts optically thin in the continuum, but optically thick in the lines. The Sobolev method is used to find the mean intensity in the lines. The level populations are assumed to be in statistical equilibrium, and it is only the equation governing this equilibrium that is linearized. The temperature in the outer parts is specified as a function of radius. The computed line profiles are compared with those observed from the dwarf nova U Geminorum. The special relativistic equations of motion for a particle and the general relativistic equations of motion for a fluid in an arbitrary radiation field are formulated. The Poynting-Robertson forces are manifested in some of the velocity dependent terms so obtained. Newtonian approximations to the equations of motion are solved for a particle in orbit about a spherically symmetric source of radiation, where the angular size of the source as seen from the orbit is arbitrary. Situations are considered in which the absorption cross section of the particle is independent of frequency as well as when the particle is an atom absorbing in a spectral line. In both

instances it is found that the finite size of the source of radiation leads to Poynting-Robertson drags greater than those caused by a point source of the same luminosity. The Newtonian equations are solved for a particle moving radially outward from the source. Limits for the velocities of high speed particles due to Poynting-Robertson drags are obtained. The fluid equations are discussed briefly in their relation to theoretical treatments of relativistic jets and accretion discs. Dissert. Abstr.

RESULTS FROM THE NA36 ON STRANGENESS PRODUCTION IN 200 GeV/c PER NUCLEON S + Pb AND p - Pb REACTIONS
D. E. Greiner Jul. 1992 12 p Presented at the 22nd International Symposium on Multiparticle Dynamics, Santiago de Compostela, Spain, 13-17 Jul. 1992
(Contracts DE-AC03-76SF-00098; DE-FG02-91ER-40652)
(DE93-007711; LBL-33345; CONF-9207169-3) Avail: CASI HC A03/MF A01

Recent results from CERN experiment NA36 are discussed and compared with models. These results refer to reactions of sulfur and protons of momentum 200 GeV/c per nucleon on a lead target. The lambda spectrum for the sulfur beam was found to peak at mid-rapidity rather than target rapidity as observed in the proton induced reactions. This result indicates different reaction mechanisms are active. We discuss in some detail the analysis methods used. The data are consistent with the assumption of a fireball of high strangeness content being created at mid-rapidity in S plus Pb reactions. DOE

DETECTION OF FRAGMENTS ARISING FROM GREATER THAN 10 GeV ELECTRON-NUCLEUS COLLISIONS
D. M. Moltz, K. A. Griffioen (Pennsylvania Univ., Philadelphia.), and K. VanBibber (Lawrence Livermore National Lab., CA.) Nov. 1992 12 p Presented at the International Seminar on High Energy Physics Problems, Dubna, Russia, 7-12 Sep. 1992
(Contracts DE-AC03-76SF-00098; W-7405-eng-48)
(DE93-007725; LBL-33171; CONF-9209279-3) Avail: CASI HC A03/MF A01

Much is understood about the interaction of both high energy electrons with nucleons and lower energy electrons with nucleons and nuclei. Although a number of experiments involving high energy inelastic scattering of electrons from quarks bound in nuclei have been performed, many interpretations of the data are still discussed. A project called PEGASYS was conceived at PEP to further investigate this physics. Unfortunately, the termination of PEP operations curtailed this experiment and much of the physics remains unexplored. In this paper, we present some details of one proposed part of this project (tagged nuclear structure functions) and some considerations made in designing a detector suitable for observing very low momentum nuclear fragments around a cold-cluster gas target. PRELIMINARY DESIGN OF THE BPM ELECTRONICS MEMORY SCANNER/DUAL BOXCAR AVERAGER FOR THE ADVANCED PHOTON SOURCE
A. J. Votaw 1992 8 p Workshop of the 1992 Accelerator Instrumentation Workshop held in Berkeley, CA, 27-30 Oct. 1992
(Contract W-31-109-eng-38)
(DE93-007893; ANL/ASD/CP-77461; CONF-9210246-17) Avail: CASI HC A02/MF A01

The memory scanner/dual boxcar averager are VXI modules that are part of the Advanced Photon Source (APS) beam position monitor (BPM) data acquisition system. Each pair of modules is designed to gather and process digital data from up to nine digital channels transmitting the BPM data from the storage ring (360 locations) and the synchrotron (80 locations). They store beam history in a buffer, store the latest scan of all channels, and provide boxcar averaged X and Y position data for the global orbit feedback system, provide boxcar average X and Y position data for beam diagnostics, and a buffered output of SCDU data as it is scanned for the beam abort interlock system. The system's capability to support single pass, closed orbit, and tune measurement functions is also be briefly described. DOE

FEEDING AND DECAY OF SUPERDEFORMED STATES
T. L. Khoo, T. Lauritsen, I. Ahmad, M. P. Carpenter, P. B. Fernandez, R. V. F. Janssens, E. F. Moore, F. L. H. Wolfs, Ph. Benet, and P. J. Daly (Purdue Univ., West Lafayette, IN.) et al 1992 15 p Presented at the 1992 International Symposium on Rapidly Rotating Nuclei, Tokyo, Japan, 26-30 Oct. 1992
(Contract W-31-109-eng-38)
(DE93-007899; ANL/PHY/CP-78720; CONF-9210249-6) Avail: CASI HC A03/MF A01

The mechanisms for feeding and decay of superdeformed (SD) bands are examined. Data connected with both processes in Hg-192 are compared with model calculations. The calculations successfully reproduce the data, suggesting that the mechanisms for both processes are understood. Constraints on the energy of the SD band energies and on the well-depths at low and high spins have been obtained. At the point of decay around spin 10, we suggest that the SD band is 3.3-4.3 MeV above the normal yrast line and that the well depths at spin 10 and 40 are 0.5-1.3 and 3.5-4.5 MeV, respectively. DOE

THE STRUCTURE AND ENERGETICS OF Cr(CO)6 AND Cr(CO)5
Leslie A. Barnes, Bowen Liu (International Business Machines Corp., San Jose, CA.), and Roland Lindh (Lund Univ., Sweden.) 1992 34 p Revised
(Contract NCC2-741)
(NASA-CR-192889; NAS 1.26:192889) Avail: CASI HC A03/MF A01

The geometric structure of Cr(CO)6 is optimized at the modified coupled pair functional (MCPF), single and double excitation coupled-cluster (CCSD) and CCSD(T) levels of theory (including a perturbational estimate for connected triple excitations), and the force constants for the totally symmetric representation are determined. The geometry of Cr(CO)5 is partially optimized at the MCPF, CCSD, and CCSD(T) levels of theory. Comparison with experimental data shows that the CCSD(T) method gives the best results for the structures and force constants, and that remaining errors are probably due to deficiencies in the one-particle basis sets used for CO. The total binding energies of Cr(CO)6 and Cr(CO)5 are also determined at the MCPF, CCSD, and CCSD(T) levels of theory. The CCSD(T) method gives a much larger total binding energy than either the MCPF or CCSD methods. An analysis of the basis set superposition error (BSSE) at the MCPF level of treatment points out limitations in the one-particle basis used. Calculations using larger basis sets reduce the BSSE, but the total binding energy of Cr(CO)6 is still significantly smaller than the experimental value, although the first CO bond dissociation energy of Cr(CO)6 is well described. An investigation of 3s3p correlation reveals only a small effect. In the largest basis set, the total CO binding energy of Cr(CO)6 is estimated to be 140 kcal/mol at the CCSD(T) level of theory, or about 86 percent of the experimental value. The remaining discrepancy between the experimental and theoretical value is probably due to limitations in the one-particle basis, rather than limitations in the correlation treatment. In particular an additional d function and an f function on each C and O are needed to obtain quantitative results. This is underscored by the fact that even using a very large primitive set (1042 primitive functions contracted to 300 basis functions), the superposition error for the total binding energy of Cr(CO)6 is 22 kcal/mol at the MCPF level of treatment. Author (revised)

ENERGY TRANSFER PROPERTIES AND MECHANISMS
J. R. Barker 20 Oct. 1992 4 p
(Contract DE-FG02-85ER-13442)
(DE93-008540; DOE/ER-13442/7) Avail: CASI HC A01/MF A01

The overall objective of the research carried out under this program is to determine the principles of collisional energy transfer and use them in predictive models and theories. In order to accomplish this goal, energy transfer properties must be determined and then analyzed to discern the underlying principles involved. In this laboratory, the experimental determination of energy transfer parameters is based on techniques that use physical properties to monitor the amount of energy in excited molecules. These techniques differ from chemical methods, based on unimolecular reaction studies, which are susceptible to interferences from complex chemical mechanisms and other complications. The physical methods have their own weaknesses and limitations, however, and much of our effort has been directed toward gaining a better understanding of these deficiencies. Two physical techniques have been proved to be particularly useful: time-resolved infrared fluorescence (IRF) and time-dependent thermal lensing (TDTL). As described later, we will shortly begin work using resonance enhanced multiphoton ionization (REMPI) techniques to investigate energy transfer in bulbs and 'half collisions' in free jets. We also have completed some experiments and model calculations which explore the approximations we previously have used in calculating infrared emission from highly excited molecules. DOE

DYNAMICS OF COLLISION PROCESSES
A. F. Starace Jan. 1993 4 p
(Contract DE-FG02-88ER-13955)
(DE93-007143; DOE/ER-13955/15) Avail: CASI HC A01/MF A01

Investigations have been carried out of two- and three-photon detachment of the negative hydrogen ion (H(-)) including effects of electron correlations, of two-color detachment of H(-) with excitation of H(n=2), and of the (sup 3)P(sup e) state of H(-). Striking effects of long-range dipole field interactions have been demonstrated. Electron correlation effects on detachment cross sections have been quantified. Variational R-matrix calculations of photodetachment of Li(-) have provided state-of-the-art agreement with recent experimental results. Electric field effects on photodetachment of H(-) above the H(n=2) threshold have also been elucidated. DOE

PHOTOEXCITATION OF CARBON FULLERENES Final Report, 30 Sep. 1991 - 29 Sep. 1992
H. Helm, D. C. Lorents, and Y. K. Bae Dec. 1992 19 p
(Contract DAAL03-91-K-0001)
(AD-A260739; ARO-28955.1-PH) Avail: CASI HC A03/MF A01

Photoexcitation processes in cold and thermal C60 and C70 molecules in the gas phase were studied. We set up a supersonic beam source of cold fullerenes and use measure the beam energies for helium and krypton as driving gas. We studied thermionic emission from fullerenes following multiphoton pumping using laser pulses of 20 ns, 1 ps, and 150 fs duration. The wavelength dependence for REMPI was investigated from 315 to 335 nm. Multiphoton fragmentation processes and ultrafast dynamics of fullerenes were investigated. DTIC

COLLISIONAL ENERGY TRANSFER IN BIOMOLECULAR ION-MOLECULE DYNAMICS Technical Report
Maciej Gutowski, Mark Roberson, Jon Ru, and Jack Simons, II 25 Jan. 1993 50 p
(Contract N00014-89-J-1497)
(AD-A260911; TR-30) Avail: CASI HC A03/MF A01

Guided ion beam kinetic energy thresholds in the ion-molecule reactions M(+) + H2 yields MH(+) + H where M(+) = B(+), Al(+), and Ga(+) exceed by 0.4 to ca. 5 eV the thermodynamic energy requirements or theoretically computed barrier heights of these reactions. In addition, the formation of MD(+) occurs at a significantly lower threshold than MH(+) when M(+) reacts with HD. Moreover, the measured reaction cross sections for production of MH(+) productions are very small (10(exp -17) to 10(exp -20) sq cm.). These facts suggest that a 'dynamical bottleneck' may be operative in these reactions. In this work, the eigenvalues of the mass-weighted Hessian matrix, which provide local normal mode frequencies, are used to identify locations on the ground-state MH2(+) potential energy surfaces where collisional to internal energy transfer can readily take place. In particular, the potential energies at geometries where eigenvalues corresponding to inter-fragment and to internal motions undergo avoided crossings are related to the kinetic energies of apparent reaction thresholds. This near resonance energy transfer model, applied to M(+) + HD reactions, displays the experimentally observed preference to form MD(+) at lower collision energies than MH(+) as well as the fact that reaction thresholds may greatly exceed thermodynamic energy requirements. [DEVELOPING AND IMPROVING NUMERICAL ALGORITHMS TO STUDY INTRINSICALLY CORRELATED ELECTRON SYSTEMS]
Steven R. White 1992 6 p
(Contract N00014-91-J-1143)
(AD-A261214) Avail: CASI HC A02/MF A01

Over the last two years, we have used several different numerical techniques to study a variety of intrinsically correlated electron systems. The three main types of numerical techniques we have used are as follows: (1) finite-temperature quantum Monte Carlo (QMC); (2) exact diagonalization; and (3) numerical renormalization groups. We have made substantial progress both on developing and improving the numerical algorithms and in using these methods to study interesting systems. We have developed techniques for analytically continuing imaginary-time QMC data to obtain dynamical properties, and we have used these techniques to study pseudogap and gap formation in the repulsive and attractive Hubbard models. We have developed a program to calculate two particle interaction vertices with full frequency and momentum dependence using QMC, and we have studied possible magnetic and superconducting instabilities in the Hubbard model. RESEARCH ON LEAD TITANATE FILMS FOR RADIATION DETECTION Final Report, 5 Sep. 1989 - 30 Sep. 1992
Barrett E. Cole, Robert D. Horning, and Paul W. Kruse 4 Nov. 1992 33 p
(AD-A261187; ARO-26791.2-EL) Avail: CASI HC A03/MF A01

The objectives of the contract were to prepare thin films of PbTiO3, measure their properties, and determine their performance for pyroelectric detection of infrared and millimeter-wave (94 GHz) radiation. Thin films of PbTiO3 were deposited on silicon microstructures consisting of Si3N4 membranes over etch pits in silicon substrates. Upper and lower Pt electrodes formed electrical contacts to the PbTiO3 pyroelectric films. Aluminum metallizations in the form of full-wave and half-wave dipoles contacting the PbTiO3 pixels were developed for detection of 94 GHz radiation. Infrared detection was by direct absorption in the PbTiO3 pixel. Two process runs incorporating single pixels and linear arrays were carried out and the results described. DTIC

MODELING OF ATOM-DIATOM SCATTERING
J. M. Sindoni 30 May 1992 46 p
(Contract F19628-89-C-0033)
(AD-A261645; YAI-TR-106; PL-TR-92-2132; AD-E201405; SR-3) Avail: CASI HC A03/MF A01

This report entails the work performed on modeling atom-diatom scattering processes utilizing the Impulse Approach (IA). Results of the model, obtained with a computer code, have proven to be in remarkable agreement with laboratory measurements for several atom-diatom scattering systems. Two scattering systems, in particular, that were successfully modeled and compared to measurements were Ar-KBr and Ar-CsF. The IA model provided an explanation for the rapid deactivation evident in the Ar-KBr system. Experimental results in the Ar-CsF experiment that could not be explained by conventional models were also successfully modeled using the IA. Results fit the experimental observations. DTIC

STATE-SELECTED STUDIES OF ATOMS AND MOLECULES EJECTED FROM ION BOMBARDED SURFACES Technical Report
Nicholas Winograd Jan. 1993 11 p
(Contract N00014-91-J-1410)
(AD-A261275; TR-61) Avail: CASI HC A03/MF A01

A fundamental understanding of the essential physics which contributes to the formation of secondary ions requires a global view of the energy transfer processes which occur subsequent to the ion bombardment event. Many different pathways are known which must contribute to this global view including the desorption of ground state and excited state neutral atoms, desorption of molecules and clusters in various rotation and vibrational excited states, and desorption of species induced by electronic transitions. In many experimental configurations the SIMS component is a minor fraction of the total possible energy-loss pathways. DTIC

PROGRESS IN IMPULSE APPROACH RESEARCH
H. Dothe and J. M. Sindoni 30 Oct. 1992 108 p
(Contract F19628-91-C-0142)
(AD-A261728; YAI-TR-107; PL-TR-92-2296; AD-E201422; SR-1) Avail: CASI HC A06/MF A02

This report entails the progress made during the first contract year in the research of Impulse Approach (IA) modeling. The IA technique was successfully applied to the Ar-CsF scattering system with results that compared favorably with observations. Limitations and discrepancies were also found in the treatment of other scattering systems which were attributed to the confinement of the IA method to the single collision T matrix. Work is at the present progressing on extending the approach to the double collision T Matrix. The Distorted Wave Impulse Approach (DWIA) is also being developed to model observed distributions of rotational transitional probabilities of the Li(+)-N2 scattering system. DTIC

THE PHYSICS OF SPIN POLARIZED GASES Final Report, 1 Mar. 1988 - 29 Feb. 1992
G. D. Cates 2 Jan. 1993 20 p
(Grant AF-AFOSR-0165-88)
(AD-A261396; AFOSR-93-0103TR) Avail: CASI HC A03/MF A01

Over the four year period covered by this grant, we have carried out extensive research involving polarized atoms and nuclei. Using laser optical pumping, high polarizations can be produced in alkali-metal vapors. From this starting point, angular momentum can be transferred to other atoms and nuclei through several different types of spin-exchange collisions. This powerful technique enables us to study a wide variety of spin interactions and spin related phenomena. Among the systems we work with are polarized noble gases, which display extremely long spin-relaxation times that vary from several minutes to many weeks. The use of optical pumping and spin exchange has grown enormously over the past four years. DTIC

PROTON MONTE CARLO TRANSPORT PROGRAM PTRAN
M. J. Berger Jan. 1993 47 p See also PB93-146033 Sponsored by National Cancer Inst.
(PB93-158673; NISTIR-5113) Avail: CASI HC A03/MF A01

The report describes the structure and use of Monte Carlo programs that calculate the transport of proton beams through extended media. Although more generally applicable, the programs have been designed to deal with the penetration of 50- to 250-MeV beams through water phantoms. The Monte Carlo model takes into account multiple-scattering deflections and energy-loss straggling due to Coulomb interactions of protons with atoms and orbital electrons. Nonelastic nuclear interactions are treated as an absorptive effect. The PTRAN system at present consists of several cross-section preparation programs and two main codes, PTRAN3D and PTRAN1D. PTRAN3D applies to an incident narrow pencil beam, and calculates (1) the deposition of energy as function of depth and radial distance from the beam axis, and (2) the energy spectra of the primary protons as function of depth. Program PTRAN1D is a simplified version which runs faster and omits the calculation of the radial distribution of energy deposition. NTIS

PENNING DETACHMENT: A NEW FRONTIER Final Report, 1 Feb. 1989 - 31 Jul. 1992
R. S. Berry 19 Jan. 1993 8 p
(Grant AF-AFOSR-0256-89)
(AD-A261447; AFOSR-93-0039TR) Avail: CASI HC A02/MF A01

The main objective of this project is a first exploration of a process not heretofore studied systematically, the detachment of electrons from negative ions when the ions collide with electronically excited neutral atoms or molecules. A steppingstone experiment, the two-color, two-photon photodetachment of the electrons from negative ions, is a part of the project as it is now being done. This report describes the completion of the apparatus for the steppingstone experiment and the first photodetachment results and outlines precisely what the goals for the next few months will be, based on the success of the ion source and the laser. The steppingstone experiment is being conducted with Cl-ions to determine the dependence of the detachment probability on the total energy and the difference in energies of the two photons; when this is complete, the ion optics and target cell for the collisional detachment experiment will be completed while the photodetachment work is extended to the study of the CN-ion. A variety of Air Force applications require highly detailed information about atoms, molecules, and their interactions. This information is necessary in problems ranging from chemical laser development, to the detection and identification of rocket plumes, to nonlinear optics electron beam technology, and high density and energy fuels. The crucial component needed to understand molecular reactions is the potential energy surfaces (PES) that serve to describe the attractions among the atoms and molecules. However, such information is not easy to obtain. In many cases, the most direct approach to obtaining accurate potential surfaces for molecules, and detailed information about their excited states, vibrational spectra, and a wealth of other quantities is high level ab initio solutions of the Schrodinger equation. DTIC

HALOGEN ADLAYERS ON Ag(111) Technical Report, 30 Jun. 1992 - 31 Mar. 1993
Joachim H. Schott and Henry S. White 20 Mar. 1993 24 p
(Contract N00014-91-J-1927)
(AD-A261792; TR-17) Avail: CASI HC A03/MF A01

Atomically smooth halogen adlayers on Ag(111) (AgX, where X = I, Br, Cl, and F) have been prepared by quenching of heated Ag samples in concentrated acid halide (HX) solutions. The AgX adlayers are chemically stable in air for several hours, allowing detailed characterization of the adlayer atomic structures by scanning tunneling microscopy (STM). STM images of I adlayers are consistent with a nearly perfect square root of 3 times the square root of 3/R30 structure; F, Cl and Br adlayers, however, are characterized by a parallel double row structure of adsorbed halogen atoms, oriented along the (110) direction on the Ag(111) substrate. The

row structure observed by STM for Cl and Br adlayers is shown to be consistent with low-energy-electron-diffraction (LEED) patterns, but inconsistent with the corresponding structures derived from LEED. The degree of symmetry in the various adlayers decreases with increasing adatom electronegativity, indicating that the local charge distribution around the adlayer atom, and its size, are the controlling factors in determining the adlayer structure. THEORETICAL TREATMENT OF SPIN-FORBIDDEN AND ELECTRONICALLY NONADIABATIC PROCESSES. METHODS AND APPLICATIONS Final Report, 1 Nov. 1989 - 31 Oct. 1992
David R. Yarkony 10 Jan. 1993 23 p
(Grant AF-AFOSR-0051-90)
(AD-A261596; AFOSR-93-0061TR) Avail: CASI HC A03/MF A01

This research program focusses on the electronic structure aspects of radiationless decay processes related to the stability and formation of high energy density materials. We have also begun theoretical studies on electronic nonadiabaticity in ion-molecule reactions. These studies are enabled by a unique system of electronic structure algorithms, the BROOKLYN programs, which we have developed over the last decade. These programs provide advanced capabilities for the study of the electronic structure aspects of spin-forbidden and spin-allowed electronically nonadiabatic processes. The methodology we have developed is based exclusively on large scale configuration state function expansions. These methods, which we believe define the state of the art in these areas, have permitted us to make significant contributions to the understanding of electronically nonadiabatic processes. Problems of particular relevance to the high energy density materials program include studies of the stability of the potential energetic species a-N2O2, tetrahedral N4 and the dication HS2(+). We have also initiated a research program in ion-molecule chemistry reporting for the first time a seam of crossings of two states of the same symmetry for the prototypical charge transfer reaction H(+) + NO yields H + NO(+). Finally, a new phase of program development has been initiated with the goal of extending our capabilities for the direct determination of actual/allowed/avoided crossing hyperlines and hyperplanes. The algorithms under development will permit systematic determination of (1) actual/allowed crossing seams passing through a minimum energy crossing point, and (2) avoided crossing seams as a function of an arbitrary set of internal coordinates. LOG-RATIO SIGNAL-PROCESSING TECHNIQUE FOR BEAM POSITION MONITORS
R. E. Shafer 1993 10 p Presented at the 1992 Accelerator Instrumentation Workshop, Berkeley, CA, 27-30 Oct. 1992
(Contract W-7405-eng-36)
(DE93-007356; LA-UR-93-43; CONF-9210246-13) Avail: CASI HC A02/MF A01

Two basic signal-processing techniques are presently in wide use for the processing of signals from beam position monitors (BPM's); difference-over-sum, and amplitude-modulation-to-phase-modulation (AM-PM) conversion. Difference-over-sum offers simplicity and low cost, but poor real-time normalized response and amplitude dynamic range. AM-PM offers fast real-time response and large dynamic range, but is costly and difficult to implement. Logarithmic-ratio processing, a technique using newly available inexpensive hybrid circuits, appears to offer the advantages of both, and the disadvantages of neither. The features of all three processing techniques are reviewed, and the features of the log-ratio technique are highlighted. Among the advantages of log-ratio is a beam-displacement response linearity that is superior to either difference-over-sum or AM-PM for circular-aperture BPM's. DOE

BEAM POSITION AND TOTAL CURRENT MONITOR FOR HEAVY ION FUSION BEAMS
D. Berners and L. L. Reginato Oct. 1992 7 p Presented at the 1992

Accelerator Instrumentation Workshop, Berkeley, CA, 27-30 Oct. 1992
(Contract DE-AC03-76SF-00098)
(DE93-007653; LBL-32918; CONF-9210246-12) Avail: CASI HC A02/MF A01

Heavy ion fusion requires moderate currents, 1-10 A, for a duration of about 1 microsec. For accurate beam transport, the center of charge must be located to within plus or minus 100 microns. Beam position and intensity may be excited at frequencies approaching 10 MHz, and the monitoring system must have adequate bandwidth to respond at these frequencies. The Rogowski technique was modified by using distributed reactance multiturn magnetic loops so that it is suitable for measuring current position as well as amplitude. Four identical stripline coils are wound one per quadrant around a nonmagnetic core. The sensitivity is similar to that of a lumped coil system, with the added advantage of increased bandwidth. The voltages induced on the four separate coils are compared and suitable signal conditioning is performed to recover beam position and intensity information. DOE

TRANSVERSE INSTABILITIES IN A RELATIVISTIC KLYSTRON TWO-BEAM ACCELERATOR
G. A. Westenskow, T. L. Houck, and S. S. Yu (California Univ., Berkeley. Lawrence Berkeley Lab.) Aug. 1992 7 p Presented at the 16th International LINAC Conference, Ottawa, Ontario, 23-28 Aug. 1992
(Contract W-7405-eng-48)
(DE93-007110; UCRL-JC-110195; CONF-9208109-76) Avail: CASI HC A02/MF A01

Transverse beam instabilities have been observed in the traveling-wave output structures of high-power microwave generators driven by induction accelerators. The relativistic klystron two-beam accelerator concept involves the transport of kiloamperes of current through many microwave output sections. Energy in both the cumulative and regenerative beam breakup modes could grow in these two-beam accelerator systems to levels that beam loss would occur. For induction accelerators the current term can be several orders of magnitude larger than values common for RF accelerators, presenting a difficult challenge for beam stability. In this paper we present experimental evidence of beam breakup in the output section of a high-power microwave generator, methods used to suppress the higher order modes in the power extraction sections, and computer modeling for transverse instabilities in larger relativistic klystron two-beam accelerator systems. We report the results of a theoretical/computational research program to develop methods and to investigate the fundamental chemical dynamics of elementary processes important in systems that can potentially yield large amounts of energy when they react. We describe a research program designed to further develop methods and to perform dynamics calculations for fundamental reactions in polyatomic molecules in which tunneling, electronic nonadiabatic processes, and vibrationally mode-selected reactions occur using theoretical methods based on classical trajectories and transition-state theory. Semiclassical corrections were employed to treat nonclassical processes such as tunneling and electronic transitions. DTIC

SURFACE PREPARATION AND CHARACTERIZATION OF A 400 MICROMETER DIAMETER FUSED SILICA OPTICAL FIBER FOR DIRECT OPTICAL INITIATION (DOI) APPLICATIONS
P. E. Klingsporn, Theresa Morris, and Donnie Moore Nov. 1992 37 p
(Contract DE-AC04-76DP-00613)
(DE93-005485; KCP-613-4969) Avail: CASI HC A03/MF A01

Studies were conducted to determine the effect of lapping and polishing variables on fiber optic surface finish, flatness, perpendicularity to axis, and subsurface characteristics. The studies were done with a fiber having a 400 micron diameter fused silica core and a 440 micron outer diameter fused silica cladding used for DOI (direct optical initiation) system developmental work. On fibers polished to the best level of surface finish, laser-induced damage studies conducted at Sandia National Laboratory (SNL) showed that seventy percent of the fibers passed optical power densities in excess of 5 GW/sq cm, without surface damage. The geometry of two fiber optic-connector pairs mated along a common axis in an adapter was investigated to determine the tolerances necessary to achieve a desired degree of angular and positional alignment of the mating fiber surfaces. ADVANCES IN NONLINEAR OPTICAL MATERIALS AND DEVICES
Robert L. Byer [1991] 14 p Partially supported by NASA, Army Research Office,Office of Naval Research, DARPA, NSF, and Sony Corp.
(NASA-CR-192681; NAS 1.26:192681) Avail: CASI HC A03/MF A01

The recent progress in the application of nonlinear techniques to extend the frequency of laser sources has come from the joint progress in laser sources and in nonlinear materials. A brief summary of the progress in diode pumped solid state lasers is followed by an overview of progress in nonlinear frequency extension by harmonic generation and parametric processes. Improved nonlinear materials including bulk crystals, quasiphasematched interactions, guided wave devices, and quantum well intersubband studies are discussed with the idea of identifying areas of future progress in nonlinear materials and devices. APPARATUS FOR IMAGING AN OBJECT IN OR THROUGH A SCATTERING MEDIUM USING COHERENT ANTI-STOKES RAMAN SCATTERING Patent Application
Mark Bashkansky, inventor (to Navy) and John F. Reintjes, inventor (to

Navy) 13 Nov. 1992 24 p
(AD-D015642; US-Patent-Appl-SN-970886; Navy-Case-74286) Avail: CASI HC A03/MF A01

A method and apparatus for imaging an object that is part of, embedded in, or viewed through a scattering medium is provided. A first broadband beam generator, such as a broadband pulse laser, provides a first broadband beam. A second broadband beam generator, such as a Raman Stokes generator disposed to receive the first broadband beam, generates a second broadband beam capable of correlation with the first broadband beam. A coherent anti-Stokes Raman scattering material is disposed to receive the second broadband beam after dispersion in the scattering medium. A variable delay path also illuminates the coherent anti-Stokes Raman scattering material with the first broadband beam. The coherent anti-Stokes Raman scattering material produces an anti-Stokes beam which contains an extracted image of an object in the scattering medium, whose image is recorded on a photodetector. SURFACE DIFFUSION STUDIES BY OPTICAL DIFFRACTION TECHNIQUES Ph.D. Thesis
X. D. Xiao Nov. 1992 165 p
(Contract DE-AC03-76SF-00098)
(DE93-007707; LBL-33248) Avail: CASI HC A08/MF A02

The newly developed optical techniques have been combined with either second harmonic (SH) diffraction or linear diffraction off of a monolayer adsorbate grating for surface diffusion measurement. Anisotropy of surface diffusion of CO on Ni(110) was used as a demonstration for the second harmonic (SH) diffraction method. The linear diffraction method, which possesses a much higher sensitivity than the SH diffraction method, was employed to study the effect of adsorbate-adsorbate interaction on CO diffusion on Ni(110) surface. Results showed that only the short range direct CO-CO orbital overlapping interaction influences CO diffusion, but not the long range dipole-dipole and CO-NI-CO interactions. Effects of impurities and defects on surface diffusion were further explored by using linear diffraction method on CO/Ni(110) system. It was found that a few percent S impurity can alter the CO diffusion barrier height to a much higher value through changing the Ni(110) surface. The point defects of Ni(l10) surface seem to speed up CO diffusion significantly. A mechanism with long jumps over multiple lattice distance initiated by CO filled vacancy is proposed to explain the observed defect effect. DOE

FIBRE OPTIC SENSORS FOR HEAT TRANSFER STUDIES Ph.D. Thesis
Pranay G. Sinha 1991 349 p
Avail: Univ. Microfilms Order No. BRDX97916

This thesis describes the design and development of a prototype sensor, based on a miniature optical fiber Fabry-Perot interferometer, for heat transfer studies on model turbomachinery components in transient flow wind tunnels. These sensors overcome a number of difficulties which are often encountered in using conventional electrical thin-film resistance gauges such as in the measurement of rapidly varying heat transfer rates, spatial resolution, electromagnetic interference, calibration and signal processing. The special features of the optical sensor are: (1) short length (less than 5 mm), and therefore embeddable in thin structures of model components; (2) direct measurement of heat flux rates; (3) calorimetric operation with temperature resolution of less than 25 mK over a measurement bandwidth of 100 kHz; (4) capability of measuring heat flux less than 5 kWm(exp -2) with measurement range in excess of 10 MWm(exp -2); (5) temporal response time of less than 10 microseconds; (6) minimal thermal disturbances because models are often made of ceramic materials with thermal properties similar to those of the optical fiber from which sensors are made;(7) possibility of using in models with dissimilar thermal properties to the optical fiber, for example, metals; (8) spatial resolution of less than 5 microns; (9) remote operation; (10) an ability to be multiplexed; and (11) immunity to electromagnetic interference. A detailed discussion of the design considerations for the sensor, system development, evaluation of the sensor performance both in the laboratory and wind tunnel environments is presented in this thesis. The performance of the sensor compared favorably with electrical gauges namely, platinum thin-film resistance thermometers. A 4-sensor multiplexed system has been successfully operated, and is reported in the thesis. A brief discussion is also included to indicate that the same sensor design may be considered for applications in other engineering areas. Dissert. Abstr.

We have begun the calculation of relaxation of the near neighbors about the native defects in HgCdTe. We have found that approximate self-consistent schemes are inadequate for the large displacements of the highly strained defects, and therefore these calculations are being done self-consistently. The fields produced by long-range strain fields of dislocations via the piezoelectric effect and charged dislocation cores have been calculated for HgCdTe. The impact of dislocation core charges depends on the location of the dislocation and is greater in the depletion region where the screening is reduced and smaller in the neutral regions of the device. We also find that their impact decreases as the temperature is increased. We have completed the calculations of the unrelaxed native point defect energies in ZnSe within the local density approximation and have begun the calculation of the gradient correction to these energies. Based on these preliminary numbers, we predict the zinc vacancy and the zinc antisite, and the zinc interstitial to be the dominant defects in ZnSe. We are currently calculating the relaxation about the most important defects in ZnSe. DTIC

SECOND-HARMONIC GENERATION IN OPTICAL FIBERS AND GLASS Final Report, Aug. 1989 - Aug. 1992
Vincent G. Dominic 30 Sep. 1992 34 p
(Contract DAAL03-89-G-0077)
(AD-A260592; ARO-27005.2-EL-F) Avail: CASI HC A03/MF A01

We report on our investigation into the unusual and unexpected effect of second-harmonic generation in optical fibers and optical fiber preforms. We make three important conclusions: Experimental investigations into this effect are simpler and more controllable if carried out in bulk glass samples (optical fiber preforms) rather than in the optical fibers themselves. The induced second-order nonlinearity arises from a DC electric field which is induced inside the glass by light beams containing a fundamental frequency (omega) and its second harmonic (2 omega). The light beams induce the DC electric field through a multiple-photon process. Specifically, we believe that the interference between several multi-photon ionization channels gives rise to anisotropic emission of photoelectrons. The ejected electrons create a photogalvanic current that builds the DC electric field. DTIC

A HIERARCHICAL TARGET EXTRACTION, RECOGNITION, AND TRACKING (HiTert) SYSTEM Final Report, 1 Apr. 1989 - 31 Mar. 1992

Jun Lu, Dominick Andrisani, II, and M. F. Tenorio 31 Mar. 1992 132 p (Contract DAAL03-89-K-0086)

(AD-A260567; ARO-26813.5-EL) Avail: CASI HC A07/MF A02

This research contributed to the development of a hierarchical target extraction, identification, and tracking system based on imaging sensors. The work suggests that passive tracking of ground targets is a desirable possibility. Our work involved computer rendering of a color image database containing 1000 images of a maneuvering tank; the use of image derived data to help track a violently maneuvering tank; the use of the Cantata Visual Programming Language to design the multiple interconnected algorithms in an intuitive and extensible manner; the delivery of this software to the U.S. Army Armament Research and Development Center (ARDEC) at Picatinny Arsenal, New Jersey; and presentation of a one day short course to engineers at ARDEC concerning the design and use of the software. This final report describes that software. Our research has suggested the need for the following future work: improved realism in the computer generated image database; development of additional higher level image processing and tracking modules using Cantata; and implementation of a way to communicate between competing algorithms. VIDEO SCAN RATE CONVERSION METHOD AND APPARATUS FOR ACHIEVING SAME Patent

George T. Mills, inventor (to Navy) 1 Dec. 1992 9 p Filed 1 Aug. 1991

(AD-D015661; US-Patent-5,168,359; US-Patent-Appl-SN-742235; US-Patent-Class-358-140) Avail: US Patent and Trademark Office

In a video system, a video signal operates at a vertical scan rate to generate a first video frame characterized by a first number of lines per frame. A method and apparatus are provided to convert the first video frame into a second video frame characterized by a second number of lines per frame. The first video frame is stored at the vertical scan rate as digital samples. A portion of the stored digital samples from each line of the first video frame are retrieved at the vertical scan rate. The number of digital samples in the retrieved portion from each line of the first video frame is governed by a ratio equal to the second number divided by the first number, such that the retrieved portion from the first video frame is the second video frame. INTENSITY DISTRIBUTION OF THE X RAY SOURCE FOR THE AXAF VETA-I MIRROR TEST

Ping Zhao, Edwin M. Kellogg, Daniel A. Schwartz, Yibo Shao, and M. Ann Fulton *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 14 p (For primary document see N93-26183 09-74)

Avail: CASI HC A03/MF A02

The X-ray generator for the AXAF VETA-I mirror test is an electron impact X-ray source with various anode materials. The source sizes of different anodes and their intensity distributions were measured with a pinhole camera before the VETA-I test. The pinhole camera consists of a 30 micrometers diameter pinhole for imaging the source and a Microchannel Plate Imaging Detector with 25 micrometers FWHM spatial resolution for detecting and recording the image. The camera has a magnification factor of 8.79, which enables measuring the detailed spatial structure of the source. The spot size, the intensity distribution, and the flux level of each source were measured with different operating parameters. During the VETA-I test, microscope pictures were taken for each used anode immediately after it was brought out of the source chamber. The source sizes and the intensity distribution structures are clearly shown in the pictures. They are compared and agree with the results from the pinhole camera measurements. This paper presents the results of the above measurements. The results show that under operating conditions characteristic of the VETA-I test, all the source sizes have a FWHM of less than 0.45 mm. For a source of this size at 528 meters away, the angular size to VETA is less than 0.17 arcsec which is small compared to the on ground VETA angular resolution (0.5 arcsec, required and 0.22 arcsec, measured). Even so, the results show the intensity distributions of the sources have complicated structures. These results were crucial for the VETA data analysis and for obtaining the on ground and predicted in orbit VETA Point Response Function. Author

VETA-1 X RAY DETECTION SYSTEM

W. A. Podgorski, Kathy A. Flanagan, Mark D. Freeman, R. G. Goddard, Edwin M. Kellogg, T. J. Norton, J. P. Ouellette, A. G. Roy, and Daniel A. Schwartz *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 15 p (For primary document see N93-26183 09-74)

Avail: CASI HC A03/MF A02

The alignment and X-ray imaging performance of the Advanced X-ray Astrophysics Facility (AXAF) Verification Engineering Test Article-I (VETA-I) was measured by the VETA-I X-Ray Detection System (VXDS). The VXDS was based on the X-ray detection system utilized in the AXAF Technology Mirror Assembly (TMA) program, upgraded to meet the more stringent requirements of the VETA-I test program. The VXDS includes two types of X-ray detectors: (1) a High Resolution Imager (HRI) which provides X-ray imaging capabilities, and (2) sealed and flow proportional counters which, in conjunction with apertures of various types and precision translation stages, provide the most accurate measurement of VETA-I performance. Herein we give an overview of the VXDS hardware including X-ray detectors, translation stages, apertures, proportional counters and flow counter gas supply system and associated electronics. We also describe the installation of the VXDS into the Marshall Space Flight Center (MSFC) X-Ray Calibration Facility (XRCF). We discuss in detail the design and performance of those elements of the VXDS which have not been discussed elsewhere; translation systems, flow counter gas supply system, apertures and thermal monitoring system. Author

CORRECTING X RAY SPECTRA OBTAINED FROM THE AXAF VETA-I MIRROR CALIBRATION FOR PILEUP, CONTINUUM, BACKGROUND AND DEADTIME

G. Chartas, Kathy Flanagan, John P. Hughes, Edwin M. Kellogg, D. Nguyen, M. Zombeck, M. Joy, and J. Kolodziejezak *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 10 p (For primary document see N93-26183 09-74)
Avail: CASI HC A02/MF A02

The VETA-I mirror was calibrated with the use of a collimated soft X-ray source produced by electron bombardment of various anode materials. The FWHM, effective area and encircled energy were measured with the use of proportional counters that were scanned with a set of circular apertures. The pulsers from the proportional counters were sent through a multichannel analyzer that produced a pulse height spectrum. In order to characterize the properties of the mirror at different discrete photon energies one desires to extract from the pulse height distribution only those photons that originated from the characteristic line emission of the X-ray target source. We have developed a code that fits a modeled spectrum to the observed X-ray data, extracts the counts that originated from the line emission, and estimates the error in these counts. The function that is fitted to the X-ray spectra includes a Prescott function for the resolution of the detector a second Prescott function for a pileup peak and a X-ray continuum function. The continuum component is determined by calculating the absorption of the target Bremsstrahlung through various filters correcting for the reflectivity of the mirror and convolving with the detector response. AXAF VETA-I MIRROR ENCIRCLED ENERGY MEASUREMENTS AND DATA REDUCTION
Ping Zhao, Mark D. Freeman, John P. Hughes, Edwin M. Kellogg, Dan T. Nguyen, Marshall Joy, and Jeffery J. Kolodziejczak *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 16 p (For primary document see N93-26183 09-74)
Avail: CASI HC A03/MF A02

The AXAF VETA-I mirror encircled energy was measured with a series of apertures and two flow gas proportional counters at five X-ray energies ranging from 0.28 to 2.3 keV. The proportional counter has a thin plastic window with an opaque wire mesh supporting grid. Depending on the counter position, this mesh can cause the X-ray transmission to vary as much as +/-9 percent, which directly translates into an error in the encircled energy. In order to correct this wire mesh effect, window scan measurements were made, in which the counter was scanned in both horizontal (Y) and vertical (Z) directions with the aperture fixed. Post VETA measurement of the VXDS setup were made to determine the exact geometry and position of the mesh grid. Computer models of the window mesh were developed to simulate the X-ray transmission based on this measurement. The window scan data were fitted to such mesh models and corrections were made. After this study, the mesh effect was well understood and the final results of the encircled energy were obtained with an uncertainty of less than 0.8 percent. Author

PRECISION OF THE CALIBRATION OF THE AXAF ENGINEERING TEST ARTICLE (VETA) MIRRORS
D. A. Schwartz, G. Chartas, John P. Hughes, Edwin M. Kellogg, and Ping Zhao *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 20 p (For primary document see N93-26183 09-74)
Avail: CASI HC A03/MF A02

Measurements of the VETA encircled energies have been performed at 5 energies within 16 radii ranging from 0.05 to 200 arcseconds. We report here on the analysis of the accuracy of those measurements. A common 'error tree' structure applies, and we present representative numbers for the larger terms. At 0.277, 1.5, and 2.07 keV, and for radii of 3 arcsec and larger, our measurements have estimated 1 sigma errors of 0.6 to 1.5 percent. Effects of measurement statistics and of the VETA test mount limit the accuracy at smaller angles, and modulation by the counter window support structure together with the imperfect position repeatability limit the accuracy for the 0.93 and 2.3 keV energies. We expect to mitigate these limitations when calibrating the complete AXAF flight mirror assembly. Author

IMAGE ANALYSIS OF THE AXAF VETA-I X RAY MIRROR
Mark D. Freeman, John P Hughes, L. VanSpeybroeck, M. Weisskopf, and J. Bilbro *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 16 p (For primary document see N93-26183 09-74)
Avail: CASI HC A03/MF A02

Initial core scan data of the VETA-I x-ray mirror proved disappointing, showing considerable unpredicted image structure and poor measured FWHM. 2-D core scans were performed, providing important insight into the nature of the distortion. Image deconvolutions using a ray traced model PSF was performed successfully to reinforce our conclusion regarding the origin of the astigmatism. A mechanical correction was made to the optical structure, and the mirror was tested successfully (FWHM 0.22 arcsec) as a result. Author

SURFACE FINISH QUALITY OF THE OUTER AXAF MIRROR PAIR BASED ON X RAY MEASUREMENTS OF THE VETA-I
John P. Hughes, Daniel A. Schwartz, Andrew Szentgyorgyi, Leon VanSpeybroeck, and Ping Zhao *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 10 p (For primary document see N93-26183 09-74)
Avail: CASI HC A02/MF A02

We employ the X-ray measurements of the VETA-I taken at the X-Ray Calibration Facility (XRCF) of the Marshall Space Flight Center (MSFC) to extract information about the surface finish quality of the outermost pair of AXAF mirrors. The particular measurements we consider are one dimensional scans of the core of the point response function (PRF) (full width half maximum (FWHM) scans), the encircled energy as a function of radius, and one dimensional scans of the wings of the PRF. We discuss briefly our ray trace model which incorporates the numerous effects present in the VETA-I test, such as the finite source distance, the size and shape of the X-ray source, the residual gravitational distortions of the optic, the despace of the VETA-I, and particulate contamination. We show how the data constrain the amplitude of mirror surface deviations for spatial frequencies greater than about 0.1 mm(exp -1). Constraints on the average amplitude of circumferential slope errors are derived as well. Author

THE X RAY REFLECTIVITY OF THE AXAF VETA-I OPTICS
Edwin M. Kellogg, G. Chartas, D. Graessle, John P. Hughes, Leon VanSpeybroeck, Ping Zhao, M. C. Weisskopf, R. F. Elsner, and S. L. ODell *In its* VETA-I X Ray Test Analysis 23 Oct. 1992 8 p (For primary document see N93-26183 09-74)
Avail: CASI HC A02/MF A02

The x-ray reflectivity of the VETA-I optic, the outermost shell of the AXAF x-ray telescope, with a bare Zerodur surface, is measured and compared with theoretical predictions. Measurements made at energies of 0.28, 0.9, 1.5, 2.1, and 2.3 keV are compared with predictions based on ray trace calculations. The data were obtained at the x-ray calibrations facility at Marshall Space Flight Center with an electron impact x-ray source located 528 m from the grazing incidence mirror. The source used photoelectric absorption filters to eliminate bremsstrahlung continuum. The mirror has a diameter of 1.2 m and a focal length of 10 m. The incident and reflected x-ray flux are detected using two proportional counters, one located in the incident beam of x-rays at the entrance aperture of the VETA-I, and the other in the focal plane behind an aperture of variable size. Results on the variation of the reflectivity with energy as well as the absolute value of the reflectivity are presented. We also present a synchrotron reflectivity measurement with high energy resolution over the range 0.26 to 1.8 keV on a flat Zerodur sample, done at NSLS. We present evidence for contamination of the flat by a thin layer of carbon on the surface, and the possibility of alteration of the surface composition of the VETA-I mirror perhaps by the polishing technique. The overall agreement between the measured and calculated effective area of VETA-I is between 2.6 percent and 10 percent, depending on which model for the surface composition is adopted. Measurements at individual energies deviate from the best-fitting calculation to 0.3 to 0.8 percent, averaging 0.6 percent at energies below the high energy cutoff of the mirror reflectivity, and are as

high as 20.7 percent at the cutoff. We also discuss the approach to the final preflight calibration of the full AXAF flight mirror. Author

From a simple consideration of the thermal conversation efficiency which can be realized in the non contact pyro-optic system it is shown that for f/1 optics a scene temperature change of 0.1 deg C will realize a change at the detector of 0.001 deg C for a detector thickness of 0.1 micrometer, chopping frequency of 25 Hz. For a simple pixel element 50 micron x 50 micron x 0.1 micron the RMS thermal noise limit in SBSI is calculated to be 3.5 x 10 to the -5 deg C well below the expected signal level. Using a very simple ellipsometric setup working into a photomultiplier detector it is shown that for SbSI single crystals and thin films, temperature oscillations of 0.001 deg C can be detected above noise level. Our research is focused on theoretical investigations of advanced optical fiber communication systems and can be grouped into three broad areas: WDM networks, coherent analog links, and optical fiber nonlinearities. In the area of WDM networks, we proposed and investigated a novel WDM network architecture (STARNET), a novel combined phase/amplitude modulation format, and a high-speed optics-to-computer interface for STARNET. In the area of coherent analog links, we investigated angle and amplitude modulated systems for linewidth-insensitive analog applications and direct-frequency-modulated subcarrier-multiplexed systems. In the area of fiber nonlinearities, we investigated four-wave mixing, thermally induced parasitic phase modulation, and a new type of soliton. DTIC

The design of organic polymers as active mediums for nonlinear optics has attracted much attention because their nature of versatility in synthetic chemistry and in fabrication. A series of new side chain polymers were synthesized and characterized for the second and third order NLO applications. Linear copolymers containing maleic anhydride as an active functional group on the main chain were prepared in this work. The maleic anhydride group reacts, by ring opening esterification with an appropriate alcohol containing an NLO functionality. These copolymers were also found to be suitable for branching or crosslinking reactions with alpha, omega-diols. A series of substituted silicon and aluminum phthalocyanines has been synthesized to study their third order nonlinear responses. A nitro/amino substituted aluminum phthalocyanine has been made along with mixtures of benzo-substituted silicon phthalocyanines. A synthetic route has been investigated to directly give donor acceptor phthalocyanines. To increase mechanical property of phthalocyanine compounds, copolymers with MMA have been synthesized and characterized. All of the copolymers show excellent film forming characteristics. DTIC

The Laboratory for Lightwave Technology at Brown University is one of the few university laboratories at which it is possible to design, fabricate, and characterize optical fibers of not only traditional, but of unusual design. These fibers have an increasingly important role in a host of applications of significance to the defense requirements of the United States. Among these are the following: fiber lasers for the measurement of clear air turbulence (in an important eye-safe region of the spectrum); and fiber sensors for the measurement of temperature and strain, not only in high temperature composite materials, but in structural concrete, which is important for roads, runways, and buildings. We are also engaged in research, an outgrowth of our work in optical fibers, on novel techniques for the formation of nanophase oxide particles, both ceramic and amorphous. The work on amorphous oxides is associated with our MCVD and OVD laboratories. In these labs, we have proposed and studied a new technique for the formation of multi-component oxides to be used in the doping of optical fiber preforms. In this synthesis, an aerosol of organometallic precursors is convectively transported into a reaction zone where it is pyrolized. The liquid aerosol is homogeneous at the molecular level, so that subsequent reactions produce glasses that are not phase separated. This has also been used to study the synthesis of high temperature ceramic nanophase single crystal oxides that may be produced at a high rate. The synthesis of both glasses and ceramics using novel techniques has meshed with our research in novel optical fibers and fiber sensors. In this report, we discuss the general activities of our laboratory. DTIC

UNCERTAINTY IN OBJECT POSE DETERMINATION WITH THREE LIGHT-STRIPE RANGE MEASUREMENTS
Keiichi Kemmotsu and Takeo Kanade Jan. 1993 7 p
(Contract F33615-90-C-1465; ARPA Order 7597)
(AD-A261435; CMU-CS-93-100) Avail: CASI HC A02/MF A01

The pose (position and orientation) of a polyhedral object can be determined with sparse range data obtained from simple light-stripe range finders. However, the sensing data inherently contains some error which introduces uncertainty in the determination of the object's pose. This paper presents a method for estimating the uncertainty in determining the pose of an object when using several light-stripe range finders. Three dimensional line segments obtained by the range finders are matched to model faces based on an interpretation tree search. The object pose is obtained by a least squares fit of the segment-face pairings. We show that the uncertainty in the position of the object can be estimated using the covariance matrix of the endpoint positions of the sensed line segments. Experiments with three light-stripe range finders show that our method makes it possible to estimate how accurately the pose of an object can be determined. DTIC

(Contract N00014-90-C-2183)
(AD-A261891; SCC-R-181F) Avail: CASI HC A02/MF A01

The objective of the study summarized was to develop and evaluate algorithms for detecting low-observable air vehicle targets from a space-based imaging infrared sensor. The effort consisted of theoretical and simulation studies in three areas: frame registration, velocity filtering, and multispectral processing. In the first area, a generalization of the well-known phase-correlation approach for frame registration and clutter suppression was developed. This new approach is significantly more accurate and robust than the standard correlation technique. Also, an improved approach to image interpolation for multi-frame clutter suppression applications was formulated. A major feature of this new approach is the application of the same in-band filtering to every registered frame in order to minimize structured clutter leakage when the frames are differenced. In the second area (velocity filtering), the standard velocity filter approach was extended from fixed-contrast to variable-contrast targets. In the third area (multispectral processing), techniques were developed for clutter suppression and target enhancement for both stationary and moving targets. DTIC

OPTICALLY SMART SURFACES SURVIVABILITY TESTING AT MACH 3 Final Report
Linda G. Smith and Glenn W. Williams Jan. 1993 13 p
(AD-A261785; WL-TM-93-300) Avail: CASI HC A02/MF A01

Optically smart surfaces are being developed as wind tunnel diagnostic techniques for the Wright Laboratory. The optically smart surfaces are holographic optical elements constructed by flow coating an aluminum plate with photoresist as the emulsion material. Survivability of these optically smart surfaces was tested in the Mach 3 High Reynolds Number Facility. The surfaces did not survive at angle of attack to the freestream flow for higher Reynolds numbers and did survive when the surface was parallel to the freestream flow. DTIC

MODELING OF ELECTRIC-FIELD ENHANCEMENT AT NODULAR DEFECTS IN DIELECTRIC MIRROR COATINGS
J. F. DeFord and M. R. Kozlowski Oct. 1992 17 p Presented at the SPIE Symposium on Boulder Damage, Boulder, CO, 28-30 Oct. 1992
(Contract W-7405-eng-48)
(DE93-007513; UCRL-JC-111462; CONF-9210295-2) Avail: CASI HC A03/MF A01

In dielectric multilayer optical coatings, laser induced damage is often associated withmicron-sca le surface defects such as the well known nodule defect. The interaction mechanism of the laser light with the coating defects is not understood, however. Historically, laser damage has been associated with peaks in the standing-wave electric-field distribution within the multilayer films. In the present work we use a finite-difference time-domain electromagnetic modeling code to study the influence of 3-D nodule defects on the E-field distribution. The coating studied is a dielectric multilayer HR consisting of alternating quarter-wave layers of HfO2 and SiO2 at 1.06 microns. The nodule is modeled as a parabolic defect initiated at a spherical seed. The modeling results show that E-field enhancements as large as a factor of 4 can be present at the defects. The enhancement shows a complex dependence on the size, depth, and dielectric constant of the seed material. In general, defects initiated by large, shallow seeds produce the largest E-fields. Voids at the nodule boundary influence the E-field distribution, but have a small effect on the peak field. DOE

DENSITY DEPENDENCE OF LINE INTENSITIES AND APPLICATION TO PLASMA DIAGNOSTICS
Kuniaki Masai Feb. 1993 26 p Submitted for publication
(NIFS-209) Avail: CASI HC A03/MF A01

Electron density dependence of spectral lines are discussed in view of application to density diagnostics of plasmas. The dependence arises from competitive level population processes and radiative and collisional transitions from the excited states. Results of the measurement on tokamak

plasmas are presented to demonstrate the usefulness of line intensity ratios for density diagnostics. Also, general characteristics related to density dependence are discussed with atomic-number scaling for H-like and He-like systems to be helpful for application to higher density plasmas.

EVALUATION OF A CANDIDATE MATERIAL FOR A COAL-FIRED MAGNETOHYDRODYNAMIC (MHD) HIGH TEMPERATURE RECUPERATIVE AIR HEATER
J. Winkler, N. B. Dahotre, and W. Boss 1993 8 p Presented at the 17th Annual Conference on Composites and Advanced Ceramics, Cocoa Beach, FL, 11-15 Jan. 1993
(Contract DE-AC02-79ET-10815)
(DE93-006630; DOE/ET-10815/203; CONF-930164-8) Avail: CASI HC A02/MF A01

In order to achieve the desired efficiency in the magnetohydrodynamic (MHD) cycle, one of two procedures must be employed. The first is to inject pure oxygen during combustion in order to achieve higher combustion temperatures which will yield better conversion efficiencies. The other is to preheat the combustor air through the use of high temperature air heaters (HTAH). A recuperative air heater heats the combustor air directly by passing it through tubes which are in the exhaust gas flow before sending it into the combustor. The procedure of passing air through the furnace requires a material for the tubes which will withstand the high temperatures and corrosive environment of the furnace and should have a high heat transfer coefficient. All of the necessary properties seem to exist in ceramic materials, so ceramics have begun to be studied for high temperature air heaters as well as other high temperature applications. One such effort to evaluate the performance of a ceramic composite tube in a coal fired MHD facility in order to determine any changes in the tube material after exposure to high temperature and a highly corrosive environment is outlined. A recuperative high temperature air heater (HTAH) would be positioned in the radiant furnace, because the radiant furnace provides conditions comparable to an actual MHD facility and is adequate for testing HTAH materials. The temperature conditions in the furnace range from approximately 1600 C to 1890 C, and velocities of approximately 12 m/s to 100 m/s were measured depending on the location in the furnace. The evaluated tube was placed in the furnace in a reducing environment with approximately 14 m/s velocity, 1650 C gas temperature, and 1230 C tube temperature. DOE

ASSESSMENT OF TORSATRONS AS REACTORS
J. F. Lyon and S. L. Painter (Australian National Univ., Canberra.) Dec. 1992 32 p
(Contract DE-AC05-84OR-21400)
(DE93-006721; ORNL/TM-12189) Avail: CASI HC A03/MF A01

Stellarators have significant operational advantages over tokamaks as ignited steady-state reactors because stellarators have no dangerous disruptions and no need for continuous current drive or power recirculated to the plasma, both easing the first wall, blanket, and shield design; less severe constraints on the plasma parameters and profiles; and better access for maintenance. A reactor based on the torsatron configuration (a stellarator variant) could also have up to double the mass utilization efficiency (MUE) and a significantly lower cost of electricity (COE) than a conventional tokamak reactor (ARIES-I) for a range of assumptions. Torsatron reactors can have much smaller coil systems than tokamak reactors because the coils are closer to the plasma and they have a smaller cross section (higher average current density because of the lower magnetic field). The reactor optimization approach and the costing and component models are those used in the current stage of the ARIES-I tokamak reactor study. Typical reactor parameters for a 1-GW(e) Compact Torsatron reactor example are major radius R(sub 0) = 6.6-8.8 m, on-axis magnetic field B(sup 0) = 4.8-7.5 T, B(sub max)(on coils) = 16 T, MUE 140-210 kW(e)/ton, and COE (in constant 1990 dollars) = 67-79 mill/kW(e)h. The results are relatively sensitive to assumptions on the level of confinement improvement and the blanket thickness under the inboard half of the helical windings but relatively insensitive to other assumptions. PLASMA HEATING IN TOROIDAL SYSTEMS
Masao Okamoto and Sadayoshi Murakami Feb. 1993 17 p Presented at the 4th International Toki Conference on Plasma Physics and Controlled Fusion: ITC-4 Fusion and Astrophysical Plasmas, Toki, Japan, 17-20 Nov. 1992 Submitted for publication
(NIFS-208) Avail: CASI HC A03/MF A01

The present status of plasma heating in toroidal systems is reviewed (mainly tokamaks and helical systems) for astrophysical plasma scientists. The main method of plasma heating in toroidal systems or tori is to utilize fast ions (NBI heating and alpha heating). The maximum ion temperature of 3D keV has been achieved at the plasma center by neutral beam injections (NBI's) in the JT-60U tokamak. Ripple trapped losses of fast ions produced by NBI's have been measured also in the JT-60U. The first tokamak discharges in deuterium-tritium fuel led mixtures have been carried out successfully in the JET tokamak. These experimental results are compared with the theoretical predictions based on the Coulomb collisions. Another powerful method is the ICRF heating (Ion Cyclotron Range of Frequency). However, this article is focused mainly on the NBI and alpha heatings. Related to plasma heating, the current drive will be mentioned briefly placing an emphasis on the bootstrap current. Author

Inductively stored pulsed power technology has been used over the past thirty years to produce multi-megaamp currents to implode low inductance loads and produce x-radiation. Because of the large difference in timescales for the delivery of magnetic energy to the load and the desire for high power x-radiation output (short timescale for the implosion), most inductively stored systems require at least one opening switch. The design and understanding of fast, efficient opening switches for multi-megaamp systems represents a long standing problem in pulsed power research. The Los Alamos Foil Implosion Project uses inductively stored magnetic energy to implode thin metallic liners. A plasma flow switch (PFS) has been investigated as the final pulse shaping step for this system. The PFS consists of a wire array and a barrier foil located upstream from the load region. Several stages can be identified in the performance of the plasma flow switch. These are: (1) the vaporization of the wire array; (2) the assembly of the initiated plasma on tie barrier foil to form the switch plasma; (3) the motion of the switch plasma down the coaxial barrel; and (4) current switching to the load (the actual switching stage). The fourth stage affects the switch's efficiency, as well as the quality of the load implosion. Instabilities may develop during any of these four stages, and their presence may seriously degrade the structure of the switch plasma. Two primary criteria may be used to characterize good switching. The first is switching efficiency. A second criterion is transferred to the load during or after switching. This paper summarizes the computational design of the PFS experiments carried out on Pegasus 1. We conclude by considering the implications of these results for the design of a PFS for the higher energy regime (Procyon) regime. DOE

SUMMARY OF PROGRESS IN INERTIAL CONFINEMENT FUSION
S. M. Younger 1992 9 p Presented at the 14th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Wurzburg, Germany, Oct. 1992
(Contract W-7405-eng-36)
(DE93-007350; LA-UR-93-297; CONF-9210315-1) Avail: CASI HC A02/MF A01

Progress in inertial confinement fusion (ICF) has been very rapid over the past two years. Significant advances have been made in the production of smooth laser beams, the focusing of light ions beams, and the development of heavy ion accelerators. The availability of advanced target diagnostics on several major drivers has resulted in an extensive database of target performance over a wide range of conditions. Theoretical models of ICF targets are approaching the predictive level with two and even

three dimensional calculations becoming routine. Within the next several years information should be available to allow confident extrapolation to ignition on the next generation driver. DOE

STATIONARY PLASMA THRUSTER EVALUATION IN RUSSIA
John R. Brophy 15 Mar. 1992 35 p
(Contract NAS7-918)
(NASA-CR-192823; NAS 1.26:192823; JPL-Publ-92-4) Avail: CASI HC A03/MF A01

A team of electric propulsion specialists from U.S. government laboratories experimentally evaluated the performance of a 1.35-kW Stationary Plasma Thruster (SPT) at the Scientific Research Institute of Thermal Processes in Moscow and at 'Fakel' Enterprise in Kaliningrad, Russia. The evaluation was performed using a combination of U.S. and Russian instrumentation and indicated that the actual performance of the thruster appears to be close to the claimed performance. The claimed performance was a specific impulse of 16,000 m/s, an overall efficiency of 50 percent, and an input power of 1.35 kW, and is superior to the performance of western electric thrusters at this specific impulse. The unique performance capabilities of the stationary plasma thruster, along with claims that more than fifty of the 660-W thrusters have been flown in space on Russian spacecraft, attracted the interest of western spacecraft propulsion specialists. A two-phase program was initiated to evaluate the stationary plasma thruster performance and technology. The first phase of this program, to experimentally evaluate the performance of the thruster with U.S. instrumentation in Russia, is described in this report. The second phase objective is to determine the suitability of the stationary plasma thruster technology for use on western spacecraft. This will be accomplished by bringing stationary plasma thrusters to the U.S. for quantification of thruster erosion rates, measurements of the performance variation as a function of long-duration operation, quantification of the exhaust beam divergence angle, and determination of the non-propellant efflux from the thruster. These issues require quantification in order to maximize the probability for user application of the SPT technology and significantly increase the propulsion capabilities of U.S. spacecraft. EFFECT OF CONTINUOUS EIGENVALUE SPECTRUM ON PLASMA TRANSPORT IN TOROIDAL SYSTEMS
Tomejiro Yamagishi (Fukui Inst. of Tech., Japan.) Mar. 1993 25 p Submitted for publication
(NIFS-214) Avail: CASI HC A03/MF A01

The effect of the continuous eigenvalue of the Vlasov equation on the cross field ion thermal flux is investigated. The continuum contribution due to the toroidal drift resonance is found to play an important role in ion transport particularly near the edge, which may apply to the interpretation of the sharp increase of ion heat conductivity near the periphery observed in large tokamaks. (NIFS-211) Avail: CASI HC A03/MF A01

Localizations of helically trapped particle losses on the last closed magnetic surface in different large helical devices (LHD) configurations are studied. The effects of electric field, finite beta, and bootstrap current are taken into account. It is shown that the angular location of the helically trapped particle losses may be controlled by the change of vertical field coil currents. Author (revised)

DEMONSTRATION FOR NOVEL SELF-ORGANIZATION THEORY BY THREE-DIMENSIONAL MAGNETOHYDRODYNAMIC SIMULATION
Yoshiomi Kondoh (Gunma Univ., Japan.), Yasuo Hosaka (Gunma Univ., Japan.), and Jia-Ling Liang (Gunma Univ., Japan.) Mar. 1993 21 p Submitted for publication
(NIFS-212) Avail: CASI HC A03/MF A01

It is demonstrated by three-dimensional simulations for resistive magnetohydrodynamic (MHD) plasmas with both 'spatially nonuniform resistivity eta' and 'uniform eta' that the attractor of the dissipative structure in the resistive MHD plasmas is given by del x (eta)j) = (alpha/2)B which is derived from a self-organization theory based on the minimum dissipation rate profile. It is shown by the simulations that the attractor is reduced to del x B = (lambda)B in the special case with the 'uniform eta' and no pressure gradient. Author (revised)

TWO-STREAM INSTABILITY FOR A LIGHT ION BEAM-PLASMA SYSTEM WITH EXTERNAL MAGNETIC FIELD
T. Okada (Tokyo Univ. of Agriculture and Technology, Japan.) and H. Tazawa (Tokyo Univ. of Agriculture and Technology, Japan.) 3 Dec. 1992 14 p Submitted for publication
(NIFS-204) Avail: CASI HC A03/MF A01

For inertial confinement fusion, a focused light ion beam (LIB) is required to propagate stably through a chamber to a target. The applied external magnetic field is important for LIB propagation. To investigate the influence of the external magnetic field on the LIB propagation, the electrostatic dispersion relation of magnetized light ion beam-plasma system was analyzed. The particle in-cell (PIC) simulation results are presented for a light ion beam-plasma system with external magnetic field. Author (revised)

ION TEMPERATURE MEASUREMENTS IN THE MARYLAND SPHEROMAK Ph.D. Thesis
Jean-Luc Gauvreau 1992 137 p
Avail: Univ. Microfilms Order No. DA9304323

Initial spectroscopic data from MS showed evidence of ion heating as deduced from the line widths of different ion species. Detailed measurements of O IV spectral emission line profiles in space and time revealed that heating takes place at early time, before spheromak formation and is occurring within the current discharge. The measured ion temperature is several times the electron temperature and cannot be explained by classical (Spitzer) resistivity. Classically, ions are expected to have lower temperatures than the electrons and therefore, lower temperatures than observed. High ion temperatures have been observed in different RFP's and Spheromaks but are usually associated with relaxation to the Taylor state and occur in the sustainment phase. During formation, the current delivered to start the discharge is not axisymmetric and as a consequence, X-points appear in the magnetic flux. A two dimensional analysis predicts that magnetic reconnection occurring at an X-point can give rise to high ion heating rates. A simple 0-dimensional calculation showed that within the first 20 microsec, a conversion of mass flow kinetic energy into ion temperature could take place due to viscosity. Dissert. Abstr.

BOUNDARY PLASMA MODELLING FOR ITER
B. J. Braams Jan. 1993 9 p
(Contract DE-FG02-92ER-54165)
(DE93-007963; DOE/ER-54165/1) Avail: CASI HC A02/MF A01

Computer programs were developed to model the effect of nonaxisymmetric magnetic perturbations upon divertor heat load, and have explored what kind of externally applied perturbations are the most effective for heat load reduction without destroying core plasma confinement. We find that a carefully tuned set of coils located about 0.3 m outside the separatrix can be used to spread the heat load over about 0.1 m perpendicular to flux surfaces at the ITER divertor plate, even at a very low level of anomalous cross-field heat transport. As such a spreading would significantly extend the permissible regime of operation for ITER, it is recommended that this study be pursued at the level of detail required for engineering design. In other work under this grant, the B2 code is being modified to handle correctly a non-orthogonal geometry. DOE

METAL ION IMPLANTATION FOR LARGE SCALE SURFACE MODIFICATION
I. G. Brown Oct. 1992 21 p Presented at the 39th National Symposium of the American Vacuum Society, Chicago, IL, 9-13 Nov. 1992

(Contract DE-AC03-76SF-00098)
(DE93-007649; LBL-32203; CONF-921129-6) Avail: CASI HC A03/MF A01

Intense energetic beams of metal ions can be produced by using a metal vapor vacuum arc as the plasma discharge from which the ion beam is formed. A number of ion sources of this kind were developed and a metal ion implantation facility was built which can produce repetitively pulsed ion beams with mean ion energy up to several hundred keV, pulsed beam current of more than an ampere, and time averaged current of several tens of milliamperes delivered onto a downstream target. Also some preliminary work was done on scaling up this technology to very large size. For example, a 50-cm diameter (2000 cm(sup 2)) set of beam formation electrodes was used to produce a pulsed titanium beam with ion current over 7 amperes at a mean ion energy of 100 keV. Separately, a dc embodiment was used to produce a dc titanium ion beam with current over 600 mA, power supply limited, and up to 6 amperes of dc plasma ion current was maintained for over an hour. In a related program, a plasma immersion method was developed for applying thin metallic and compound films in which the added species is atomically mixed to the substrate. By adding a gas flow to the process, well-bonded compound films can also be formed; metallic films and multilayers as well as oxides and nitrides with mixed transition zones some hundreds of angstroms thick were synthesized. These parallel metal-plasma-based research programs are outlined and the hardware that was developed and some of the surface modification research that was done with it are described. DOE

THERMAL AND ELECTRIC OSCILLATION DRIVEN BY ORBIT LOSS IN HELICAL SYSTEMS
K. Itoh, H. Sanuki, and S.-I. Itoh (Kyushu Univ., Fukuoka, Japan.) Mar. 1993 22 p Submitted for publication
(NIFS-213) Avail: CASI HC A03/MF A01

Coupled oscillation of the radial electric field, the heating power, and the plasma temperature in helical systems is analyzed. This oscillation is caused by the influence of the radial electric field on the direct loss of injected fast ions. The damped oscillations of the radial electric field, temperature, and fast-ion loss are predicted. Conditions for the mode and the dependence of the frequency are discussed. Author (revised)

A COMPACT NEUTRON COUNTER TELESCOPE WITH THICK RADIATOR (Cotetra) FOR FUSION EXPERIMENT
M. Osakabe, S. Itoh (Nagoya Univ., Japan.), Y. Gotoh, M. Sasao, and J. Fujita Jan. 1993 33 p Submitted for publication
(NIFS-205) Avail: CASI HC A03/MF A01

A new type of neutron spectrometer, based on recoil proton measurement, was developed for diagnosing a DT fusion plasma. This spectrometer has such advantages as: (1) direct measurement of the neutron energy without the unfolding procedure, (2) relatively high detection efficiency for 14 MeV neutrons, (3) a wide dynamic range of counting rate, and (4) perfect n-gamma discrimination. To examine the performance of this spectrometer, a Monte Carlo simulation code was developed. It predicts that we may achieve energy resolution up to 3 percent with a detection efficiency of 10(exp -5) (count cm(sup 2)/n) if we could successfully adjust the condition of the spectrometer. A prototype spectrometer was constructed and was compared with the Monte Carlo prediction. The energy resolution of 5.3 plus or minus 0.7 percent for 14 MeV neutron was obtained for the prototype spectrometer and the calculation agrees with the experimental results within its margin of error if we take into account the intrinsic energy resolution of the detector that is used in the prototype.

SIMULATION STUDY OF MHD DYNAMO: CONVECTION IN A ROTATING SPHERICAL SHELL
A. Kageyama (Hiroshima Univ., Japan.), K. Watanabe, and T. Sato Feb. 1993 46 p Submitted for publication Original contains color illustrations
(NIFS-207) Avail: CASI HC A03/MF A01

Numerical simulations on the thermal convection of a neutral fluid (without the magnetic field) in a rotating spherical shell have been performed. The results indicate that if the rotation is sufficiently rapid, the fluid results in a strong differential rotation where an equatorial acceleration is remarkable. The formation dynamics of convection columns aligned to the rotation axis is studied extensively. A new model of generation mechanism of the differential rotation is then proposed which concludes that the fluid motion generates an equatorial acceleration by selectively exciting the cyclonic columns in the spherical shell. DIAGNOSTICS OF DIAMOND FILM DEPOSITION PLASMAS Final Report, 19 Sep. 1989 - 18 Sep. 1992
Kenneth R. Stalder and Jay B. Jeffries Nov. 1992 20 p
(Contract DAAL03-89-K-0157)
(AD-A260866; SRI-MP-257; ARO-26959.5-PH) Avail: CASI HC A03/MF A01

Diagnostic methods were developed and applied toward understanding the gas phase processes occurring in diamond film deposition plasmas. Diagnostics were applied in plasma arcjet environments, hot filament systems, and in radio frequency plasma systems. The diagnostic methods included optical emission spectroscopy, surface Raman spectroscopy, scanning electron microscopy, laser-induced fluorescence, and surface analysis by laser ionization. The parameters that were measured included radical concentrations and temperatures, ground-state and excited-state temperatures of C2 and CH molecules, electron temperatures and energy distribution functions, ion densities, and the observation of acetylene and other hydrocarbon species. Some modeling and comparison of experimental results to model predictions were also performed. DTIC

STUDIES OF SEVERAL SMALL SEAWATER MHD THRUSTERS USING THE HIGH-FIELD SOLENOID OF MIT'S BITTER MAGNET LABORATORY Annual Report, 1 Feb. 1992 - 31 Jan. 1993
T. F. Lin, D. L. Aumiller, J. B. Gilbert, and M. J. Coslo Feb. 1993 100 p
(Contract N00014-89-J-1693)
(AD-A260645) Avail: CASI HC A05/MF A02

The performance of several small, seawater magnetohydrodynamic (MHD) thrusters was studied in a closed loop environment. Three different thrusters were designed, constructed, and evaluated. For the first time, videographic and photographic recordings of flow through MHD thrusters were obtained. The MHD induced flowrate, thrust, and mechanical efficiency was measured/calculated for each thruster at different combinations of electric current and magnetic field strength. Direct determination of thrust, and subsequently of efficiency were not possible. Therefore, the hydraulic resistance of each different thruster was correlated with flowrate. This information was used in conjunction with the measured MHD induced flowrate to calculate the thrust and efficiency of each thruster. Experimental results were repeatable. A theoretical model was developed to predict the performance of each thruster. The results of this model are presented for one thruster at several magnetic field strengths at various electric currents. These predictions corresponded well with the measured/calculated values of MHD induced flowrate and mechanical efficiency. Finally, several MHD thrusters with radically different configurations are proposed. DTIC

THE GENERATION OF LANGMUIR WAVES BY THICK TARGET ELECTRON BEAMS IN SOLAR FLARES Ph.D. Thesis
Kenneth George McClements 1987 183 p
Avail: Univ. Microfilms Order No. BRDX98127

This thesis is concerned with the generation of Langmuir waves by collimated beams of electrons. In Chapter 1 we review observations of solar flares across the electromagnetic spectrum. Particular emphasis is given to the impulsive phase, and to those observations which provide strong evidence for the existence of electron beams. Solar flare theory, insofar as it is pertinent to the original work of this thesis, is reviewed in Chapter 2. After briefly discussing models of primary energy release and particle acceleration, we consider in detail the theoretical interpretation of hard X-ray and microwave observations. In Chapter 3 we use the quasi-linear theory to determine the conditions required for the stability of a steady state electron beam propagating in the solar corona. The growth rate for electron plasma waves in a magnetized plasma is evaluated, with the electron distribution being given by an analytic solution of the linearized Fokker-Planck equation. A stability boundary in parameter space is determined, indicating that electron beams must be highly collimated at injection to be Langmuir unstable at any point in space. In Chapters 4 and 5 we investigate the quasi-linear dynamics of thick target electron beams, using a combination of analytical and numerical techniques. In Chapter 4, one dimensional quasi-linear equations are derived from the general three dimensional equations for an axisymmetric beam in a magnetized collisional plasma. Numerical computations of the thick target electron distribution and the associated Langmuir wave level are presented in Chapter 5. It is shown that the energy deposition rate and bremsstrahlung X-ray signature of a thick target beam are essentially unaffected by the presence of Langmuir turbulence. In Chapter 6 we consider Langmuir wave generation by a time dependent beam. It is shown that the steady state model remains valid if the electrons are injected on a time scale greater than about 1s. If the injection time scale is as short as 100ms, however, the energy density of Langmuir waves produced by a given instantaneous flux of electrons may be amplified by as much as an order of magnitude. In Chapter 7 we consider thick target beam relaxation in an inhomogeneous plasma, and the induced scattering of Langmuir waves on thermal ions.

THE FORMATION AND CHARACTERISTICS OF E-REGION THIN IONIZATION LAYERS AT HIGH LATITUDES Ph.D. Thesis
William Albert Bristow 1992 186 p
Avail: Univ. Microfilms Order No. DA9303405

Thin layers of ionization are often observed in the E region ionosphere. The layers are 1 to 3 km in thickness and are of high density, often as high as 5 x 10(exp 5) cm(exp -3). The density of the layers is a large enhancement over the background density. The layers are primarily composed of metallic ions, which have long lifetimes and can accumulate to high densities. Thin ionization layers at mid-latitudes are formed by the action of neutral wind shears redistributing the background ionization. At high latitudes wind-shears are not as effective at the redistribution of ionization, and it is found that the high-latitude electric fields may cause layer formation. Here the mechanism for high-latitude layer formation is studied through numerical simulation and incoherent-scatter radar observations. A one-dimensional simulation examined high-latitude layer formation in detail, in particular it examined the effects of the direction of the electric field. It was found that thin ionization layers formed for electric fields directed in the north-west and south-west quadrants. The layers formed by electric fields in the south-west quadrant form at altitudes which are consistent with observations, while fields in the north-west quadrant resulted in layer altitudes which were higher than usually observed. It was also found that the neutral wind acting in concert with the electric field may affect the altitude and thinness of layers. The one-dimensional simulation was extended to a three-dimensional model of the polar cap ionosphere. The three dimensional simulation showed that large areas of thin ionization layers may form for widely varying geophysical conditions. Incoherent-scatter radar observations showed the presence of thin ionization layers on 12 out of 16 nights of observation. High-resolution spectral data showed that the average ion mass within the layers was higher than that in the background ionization, demonstrating the presence of heavy metallic ions. Concurrent observation of thin layers and electric fields showed layers present for field directions between 40 degrees and 140 degrees west of the magnetic north, which agrees with the simulation however the range of angles is more limited than was predicted. Antenna scanning observations examined the latitudinal extent of the layers, and found the layers were of a limited extent; the largest extent observed was about 200 km. Dissert. Abstr.

DIRECT MEASUREMENT OF VELOCITY SPACE TRANSPORT IN A PLASMA Ph.D. Thesis
Jeffrey Henry Bowles 1992 156 p
Avail: Univ. Microfilms Order No. DA9306174

This work reports the direct measurement of velocity space transport in a plasma. Transport is interpreted in terms of diffusion and convection coefficients. These coefficients are compared to the Fokker-Planck coefficients for a fully ionized plasma. Measurements were made in a quiet (low fluctuation level) plasma and in a plasma with drift waves or broadband electrostatic ion cyclotron waves present. The measured coefficients agree with classical collision theory in the quiet plasma. Coefficients measured in the presence of fluctuations are generally larger and have different velocity dependences than those measured in a quiet plasma. Test particle distributions are created and interrogated using the method of optical tagging in a Q-machine plasma (T sub i = T sub e = 0.17 eV, 5 x 10(exp 8) less than or = n less than or = 8 x 10(exp 9) cm(exp -3)). The short time (much less than 90 deg collision time) relaxation of the test particle distribution function was measured as a function of density and temperature of the background plasma and as a function of the velocity of the test particle distribution. The values of the convection and diffusion coefficients were extracted from these measurements. Additionally, in the quiet plasma case, the relaxation of the test particle distribution was measured for a time that was a significant fraction of the 90 deg collision time. The short time coefficients were used to predict the long time shape of the distribution and this was compared to the measured distributions. The diffusion of the distribution was seen to be accurately predicted while the measurement of the convection suffered from experimental difficulties. The short-time relaxation of test-particle distributions was also measured in the presence of drift waves and EIC waves. Drift waves were destabilized by a density gradient across the plasma column. The EIC waves were created by the parametric decay of lower hybrid waves. Coefficients measured under these conditions were generally larger and had different velocity dependencies than those predicted classically.

(DE93-007354; LA-UR-93-0045; CONF-921133-18) Avail: CASI HC A02/MF A01

One possible way to obtain a preheated and magnetized plasma suitable for subsequent implosion is the 'MAGO' concept. The unique MAGO discharge consists of two chambers, with electrical current flowing in one chamber accelerating plasma flow into an implosion chamber. Up to 4 x 10(sup 13) D-T neutrons have been produced in the MAGO discharge. In this paper, we discuss our computational modeling of MAGO. Our objectives are to characterize the plasma, compare with the limited diagnostics available, and to understand the neutron production. We also discuss, briefly, some other possible means for creating a magnetized plasma.

The ultra-high magnetic fields produced by cylindrical implosions are expected to be of increasing interest for solid state physics applications, plasma compression for fusion, and isentropic compression of condensed matter. Calculated one-dimensional time-dependent radius and magnetic field behavior during the compression process will depend on the descriptions of material equations of state, conductivities, strength of materials, high-explosive type and model, temperature, geometric dimensions of the implosion system, and the numerical models. The influence of some these parameters on calculations of the magnetic field and liner properties is described in this paper. DOE

We demonstrated that the remote PECVD process can be used to deposit heavily doped n-type and p-type a-Si:H thin films. We optimized conditions for depositing undoped, near-intrinsic and heavily doped thin films of micro-c(microcrystalline)-Si by remote PECVD. We extended the remote PECVD process to the deposition of undoped and doped a-Si,C:H and micro-c-Si,C alloy films. We analyzed transport data for the dark conductivity in undoped and doped a-Si:H, a-Si,C:H, micro-c-Si and micro-c-Si,C films. We studied the properties of doped a-Si:H and micro-c-Si in MOS capacitors using approximately 10 Omega-cm p-type crystalline substrates and thermally grown SiO2 dielectric layers. We collaborated with a group at RWTH in Aachen, Germany, and studied the contributions of process induced defect states to the recombination of photogenerated electron pairs. We applied a tight-binding model to Si-Bethe lattice structures to investigate the effects of bond angle, and dihedral angle disorder. We used ab initio and empirical calculations to study non-random bonding arrangements in a-Si,O:H and doped a-Si:H films. DOE

PHOTOLUMINESCENCE OF SILICON NANOSTRUCTURES FORMED BY ION BEAM IMPLANTATION
D. A. Redman, D. M. Follstaedt, T. Guilinger, and M. Kelly 1992 7 p Presented at the 16th Material Research Society International Symposium on the Scientific Basis for Nuclear Waste Management, Boston, MA, 30 Nov. - 5 Dec. 1992
(Contract DE-AC04-76DP-00789)
(DE93-006777; SAND-92-1487C; CONF-921101-86) Avail: CASI HC A02/MF A01

A new method was used to fabricate nanometer-scale structures in Si for photoluminescence (PL) studies. He ions were implanted to form a dense subsurface layer of small cavities (1-8 nm diameters). The implanted specimens were either annealed in H or anodized with HF to evaluate the quantum confinement model for PL from porous Si. Incomplete passivation apparently prevented PL in the H-annealed specimens. Implantation combined with anodization produced a substantial blue shift relative to anodization alone, which is consistent with quantum confinement. DOE

STUDYING THE KINETICS OF MAGNETIZATION IN HIGH Tc SUPERCONDUCTORS Final Report
Marina Turchinskaya 8 Feb. 1993 11 p
(Grant NAG5-1890)
(NASA-CR-192916; NAS 1.26:192916) Avail: CASI HC A03/MF A01

The first microscopic maps of magnetic induction in YBa2Cu3O(7-x) crystals which directly show the dependence of flux flow on twin density and polytwin block and twin boundary orientation are reported. These maps were obtained by means of a recently-improved magneto-optical imaging technique. Pinning was lowest in untwinned regions and increased with increasing twin density. An isotropy in twin boundary pinning, defined as the ratio of the magnetic induction gradient across twin boundaries to that along twin boundaries, was 10 at 17 K; this ratio increased with increasing temperature. In polycrystals, twin boundaries also had a strongly anisotropic effect on flux flow into a grain from a grain boundary. Author (revised)

RESEARCH ON STABLE, HIGH-EFFICIENCY AMORPHOUS SILICON MULTIJUNCTION MODULES
M. Ghosh, J. DelCueto, J. Xi, and F. Kampus Feb. 1993 13 p Prepared in cooperation with Advanced Photovoltaic Systems, Princeton, NJ
(Contract DE-AC02-82CH-10093)
(DE93-000072; NREL/TP-411-5327) Avail: CASI HC A03/MF A01

Results from the first phase of a three-phase contract for the development of stable, high-efficiency, same-band-gap, amorphous silicon (a-Si) multijunction photovoltaic (PV) modules are described. The program involved improving the properties of individual layers of semiconductor and non-semiconductor materials and small-area single-junction and multijunction devices, as well as the multijunction modules. The semiconductor materials research was performed on a-Si p, i, and n layers, and on microcrystalline silicon n layers. These were deposited using plasma-enhanced chemical vapor deposition. The non-semiconductor materials studied were tin oxide, for use as a transparent-conducting-oxide (TCO), and zinc oxide, for use as a back reflector and as a buffer layer between the TCO and the semiconductor layers. Tin oxide was deposited using atmospheric-pressure chemical vapor deposition. Zinc oxide was deposited using magnetron sputtering. The research indicated that the major challenge in the fabrication of a-Si multijunction PV modules is the contact between the two p-i-n cells. A structure that has low optical absorption but that also facilitates the recombination of electrons from the first p-i-n structure with holes from the second p-i-n structure is required. Non-semiconductor layers and a-Si semiconductor layers were tested without achieving the desired result. DOE

DEVELOPMENT OF HIGH Tc (GREATER THAN 100 K) Bi, Tl AND Y-BASED MATERIALS AS SUPERCONDUCTING CIRCUIT ELEMENTS Annual Report, Feb. 1992-1993
Gene Haertling, Gregory Grabert, and Phillip Gilmour 31 Mar. 1993 107 p
(Grant NAG1-1108)
(NASA-CR-192344; NAS 1.26:192344) Avail: CASI HC A06/MF A02

Results on this project over the past three years have shown that the Bi and Tl-based superconducting materials in bulk form are noticeably different from the Y-based 123 material in that superconductivity is considerably harder to achieve, maintain and reproduce. This is due primarily to the difficulty in obtaining the higher Tc phase in pure form since it commonly co-exists with other undesirable, lower Tc phases. In particular, it has been found that long processing times for calcining and firing (20 - 200 hrs.) and close control of temperatures which are very near the melting point are required in order to obtain higher proportions of the desirable, high Tc (2223) phase. FNAS COMPUTATIONAL MODELING Final Report No. 4, 18 Aug. 1992 - 17 Feb. 1993
J. R. Franz 17 Feb. 1993 11 p
(Contract NAS8-38609)
(NASA-CR-192512; NAS 1.26:192512) Avail: CASI HC A03/MF A01

Numerical calculations of the electronic properties of liquid II-VI semiconductors, particularly CdTe and ZnTe were performed. The measured conductivity of these liquid alloys were modeled by assuming that the dominant temperature effect is the increase in the number of dangling bonds with increasing temperature. For low to moderate values of electron correlation, the calculated conductivity as a function of dangling bond concentration closely follows the measured conductivity as a function of temperature. Both the temperature dependence of the chemical potential and the thermal smearing in region of the Fermi surface have a large effect on calculated values of conductivity. Author (revised)

QUANTUM CONDUCTANCE FLUCTUATIONS IN SELF-ALIGNED, PINCH-NARROWED MOSFETs Ph.D. Thesis
David Allen Slimmer 1992 96 p
Avail: Univ. Microfilms Order No. DA9302834

We have investigated transport phenomena in pinch-narrowed p-channel accumulation mode metal-oxide-semiconductor field-effect-transistors (MOSFETs). The devices were fabricated using a conventional twin well complementary MOS process with gate widths of order 1.3 microns. Biasing the pinch electrodes was found to be an effective means for changing the dimensions of the conducting channel. Measurements with these devices have been made at temperatures down to 0.75 K and in magnetic fields up to 8 Tesla. At temperatures below 8 K, we observe fluctuations from ordinary linear MOSFET behavior in the channel conductance as a function of gate voltage. These fluctuations, the well known signature of quantum phenomena in mesoscopic systems, are aperiodic and reproducible between thermal cycling. Similar observations have been reported in n-channel systems of comparable design, but with the pinch regions formed with diffusion over 1 micron. The n(+) pinch electrodes in these devices are anticipated to produce uniform channel widths because they were ion implanted with the gate structure serving as the mask. These are also the first observations of mesoscopic conductance fluctuations in p-channel systems. We calculate the expected magnitude of the variations according to the theory of universal conductance fluctuations from measured device parameters. A technique has been constructed in order to extract fluctuations due to the constriction based upon the effective channel dimensions and the total device conductance. The values we obtain for the fluctuation amplitudes and correlation ranges in Fermi energy are in good agreement with the theoretical predictions. Dissert. Abstr.

RHEOLOGY OF YBa2Cu3O(7-x) PRECURSORS
Timothy M. Green and Mufit Akinc 1992 5 p Presented at the Symposium on Rheology of Dense Suspensions, Boston, MA, 30 Nov. - 4 Dec. 1992
(Contract W-7405-eng-82)
(DE93-007285; IS-M-745; CONF-9211189-1) Avail: CASI HC A01/MF A01

Nitrate and acetate precursors to YBa2Cu3O(7-x) (123) are prepared using a molten salt technique. The viscosity and shear stress of the paste are controlled by evaporation of water from the paste. The pastes contain approximately 20-80 vol. percent solids. Rheometry over strain rates of 0-200 sec(exp -1) shows both systems are shear-thinning. Both systems are thixotropic. The nitrate system may be described by a two-stage Bingham Plastic model, the acetate by a Hershel-Bulkley model. The existence of more than one region of flow behavior suggests that there are at least two mechanisms which contribute to flow. In the low strain rate region, flow resistance is due to the existence of flocs in the colloidal assembly. At higher strain rates, flow is probably controlled by interlaminar drag interactions. Precursors produced by both methods have been used to form fibers of YBa2Cu3O(7-x), by ram extrusion. DOE

CORRELATED WAVEFUNCTION QUANTUM MONTE CARLO APPROACH TO SOLIDS
S. G. Louie Oct. 1992 13 p Presented at the 15th Taniguchi International Symposium on Condensed Matter Theory, Kashikojima, Japan, 19-23 Oct. 1992
(Contract DE-AC03-76SF-00098)
(DE93-007730; LBL-33057; CONF-9210314-1) Avail: CASI HC A03/MF A01

A method for calculating the electronic and structural properties of solids using correlated wavefunctions together with quantum Monte Carlo techniques is described. The approach retains the exact Coulomb interaction between the electrons and employs a many-electron wavefunction of the Jastrow-Slater form. Several examples are given to illustrate the utility of the method. Topics discussed include the cohesive properties of bulk semiconductors, the magnetic field induced Wigner crystal in two dimensions, and the magnetic structure of bcc hydrogen. Landau level mixing is shown to be important in determining the transition between the fractional quantum Hall liquid and the Wigner crystal. Information on electron correlations such as the pair correlation functions which are not accessible to one-electron theories is also obtained. DOE

MAGNETIC EXCITATIONS IN ANTIFERROMAGNETICALLY COUPLED SUPERLATTICES: Fe/Mo AND Fe/Cr
M. Grimsdtich, S. Kumar, and E. E. Fullerton Jan. 1993 10 p Presented at the 7th Latin-American Symposium on Surface Science, Bariloche, Argentina, 14-21 Nov. 1992
(Contract W-31-109-eng-38)
(DE93-007894; ANL/MSD/CP-78798; CONF-9211193-2) Avail: CASI HC A02/MF A01

We report the results of a Brillouin light scattering (BLS) study of magnetic excitations in antiferromagnetically (AF) coupled Fe/Mo and Fe/Cr superlattices. This technique, already having been applied to AF coupled tri-layer films, shows that these systems reflect coupling (ferromagnetic and antiferromagnetic) between ferromagnetic layers. However, since in ordinary magnetic superlattices, new collective modes exist resulting from dipolar coupling of the ferromagnetic layers, it could be expected that these new antiferromagnetic systems will also show novel behavior. Only the magnetization and BLS results are presented and discussed. DOE

METASTABLE SiC AND SiGeC ALLOYS BY CARBON IMPLANTATION AND SOLID PHASE EPITAXY
J. W. Strane, W. J. Edwards (Cornell Univ., Ithaca, NY.), J. W. Mayer (Arizona State Univ., Tempe.), H. S. Stein, S. R. Lee, B. L. Doyle, and S. T. Picraux 1992 4 p Fall Meeting of the 16th Material Research Society Internation Symposium on the Scientific Basis for Nuclear Waste Management held in Boston, MA, 30 Nov. - 5 Dec. 1992
(Contract DE-AC04-76DP-00789)
(DE93-007594; SAND-92-1617C; CONF-921101-89) Avail: CASI HC A01/MF A01

We demonstrate the formation of metastable Si(1-y)C(y) and Si(1-y-x)Ge(x)C(y) alloys by C ion implantation and solid phase epitaxial regrowth. Carbon was introduced into Si and SiGe layers by 5, 12, and 25

keV implants to achieve nearly uniform profiles of 0.7 and 1.4 at. percent C. The 0.7 at. percent C specimens exhibit the highest quality epitaxial layers after SPE regrowth, whereas in higher C concentration specimens solid phase regrowth was impeded. The localized vibrational mode of C occupying substitutional lattice sites in the diamond lattice provides a signature of the metastable phase and is used to monitor the loss of stability due to precipitation of silicon carbide. The SiC and SiGeC alloys retained substitutional carbon during 30 minute isochronal anneals up to 850 C. DOE

THE DX CENTERS IN THREE TO FIVE SEMICONDUCTORS UNDER HYDROSTATIC PRESSURE Ph.D. Thesis
J. A. Wolk Nov. 1992 176 p
(Contract DE-AC03-76SF-00098)
(DE93-007701; LBL-33379) Avail: CASI HC A09/MF A02

The DX centers are deep level defects found in some 3-5 semiconductors. They have persistent photoconductivity and large difference between thermal and optical ionization energies. Hydrostatic pressure was used to study microstructure of these defects. A new local vibrational mode (LVM) was observed in hydrostatically stressed, Si-doped GaAs. Corresponding infrared absorption peak is distinct from the Si(sub Ga) shallow donor LVM peak, which is the only other LVM peak observed in our samples, and is assigned to the Si DX center. Analysis of the relative intensities of the Si DX LVM and the Si shallow donor LVM peaks, combined with Hall effect and resistivity indicate that the Si DX center is negatively charged. Frequency of this new mode provides clues to the structure of this defect. A pressure induced deep donor level in S-doped InP was also discovered which has the properties of a DX center. Pressure at which the new defect becomes more stable than the shallow donor is 82 kbar. Optical ionization energy and energy dependence of the optical absorption cross section was measured for this new effect. The capture barriers from the conduction band into the DX state were also determined. That DX centers can be formed in InP by pressure suggests that DX states should be common in n-type 3-5 semiconductors. A method is suggested for predicting under what conditions these defects will be the most stable form of the donor impurity. DOE

INELASTIC SCATTERING IN CONDENSED MATTER WITH HIGH INTENSITY MOESSBAUER RADIATION
W. B. Yelon and G. Schupp Feb. 1993 34 p
(Contract DE-FG02-85ER-45200)
(DE93-008763; DOE/ER-45200/T2) Avail: CASI HC A03/MF A01

The QUEGS facility at MURR has produced a number of new results and demonstrated the range of potential applications of high resolution, high intensity Moessbauer scattering. This work has been carried out by both MU and Purdue researchers and includes published results on Na, W, pentadecane, polydimethylsiloxane and other systems, manuscripts submitted on alkali halides (Phys. Rev. B) and accurate Moessbauer lineshape measurements (Phys. Rev. C), and manuscripts in preparation on glycerol, NiAl and Moessbauer spectra obtained by modulating a scattering crystal. Recently, new collaborations have been initiated which will substantially enhance our efforts. These are with W. Steiner (Vienna), G. Coddens (Saclay), and R. D. Taylor (Los Alamos). Steiner is experienced with Fe-57 Moessbauer scattering, while Coddens specializes in quasielastic neutron scattering; both of these areas naturally complement our work. R. D. Taylor has pioneered Moessbauer spectroscopy from the time of its discovery and has already made important contributions to our study of lattice dynamics and superconductivity for lead alloyed with small quantities of tin. At the same time, a significant instrument upgrade is underway, funded in part by the DOE-URIP program. DOE

ENVIRONMENTAL TEST PROGRAM FOR SUPERCONDUCTING MATERIALS AND DEVICES
H. Randolph and D. Verebelyi 1992 24 p
(Contract DE-AC09-89SR-18035)
(DE93-003646; WSRC-TR-91-673) Avail: CASI HC A03/MF A01

The properties of YBa2Cu3O(7-x) superconducting tapes designed and fabricated into SAFIRE-type, encapsulated, grounding links by the Ceramic Engineering Department at Clemson University were investigated. Testing at the Savannah River Site included gamma irradiation, vibration, magnetic field, and long-term evaluation. Irradiation and vibration did not change the physical or electrical properties of the tested samples. An applied magnetic field of 1000 Gauss increased the superconduction resistance and invoked semiconductor electrical properties of some samples. The long-term testing began in January 1991 and resistance data showed no increases. No gaseous decomposition has been found. DOE

THERMODYNAMIC, KINETIC, AND STRUCTURAL PROPERTIES OF LINEAR POLYETHYLENE CRYSTALLIZED FROM POLYMER-DILUENT MIXTURE Ph.D. Thesis
Lida Lu 1992 228 p
Avail: Univ. Microfilms Order No. DA9303354

The crystallization behavior in the extremes of crystallization of pure polymer and from dilute solution have been extensively studied. However, studies over the intervening concentration range are very sparse. Therefore, studies have been carried out toward the structural properties, morphology and crystallization kinetics of polyethylene crystallized from solution, over a wide concentration range (from dilute to pure polymer), and a wide range of molecular weights (from low to very high molecular weight) using many analytical techniques. By the use of Raman spectroscopy, the phase structure of the three major regions of crystalline polymer, i.e., the ordered crystalline region, the disordered liquid-like interlamellar region, and the interfacial region, has been examined. The major parameters obtained are the thicknesses and mass fraction of the three regions. The mass fraction of ordered crystalline region showed a sharp increase in the range of 10-20 percent polymer concentration, and the mass fraction of interfacial region showed a sharp drop at a similar concentration. It is shown that chain entanglements play a very important role in determining the final structure crystallized from solution. The entanglement effect on the interfacial structure is very significant. When entanglements are trapped in the interphase, the amount of tight adjacent chain folds is reduced, and the interfacial thickness and the interfacial free energy increase. Studies of crystallization kinetics, over the large composition and molecular weight range also reveal the influence of entanglements and a correlation with resulting properties. The crystallization behavior in concentrated solution differs from that in dilute solution because of the entanglement effect. The supermolecular structure developed are very sensitive to the polymer concentration and molecular weight. Significant changes take place in the morphological map with dilution. Very high molecular weights, which from randomly oriented lamellar structure in the melt, can develop spherulitic structure in solution. Under particular conditions of composition, molecular weight and temperature very large polyethylene spherulites develop. Dissert. Abstr.

ADAPTIVE LIQUID CRYSTAL TV BASED JOINT TRANSFORM CORRELATOR AS APPLIED TO REAL-TIME PATTERN RECOGNITION Final Report, 15 Apr. 1991 - 14 Dec. 1992
Francis T. Yu 5 Jan. 1993 172 p
(Contract DAAL03-91-G-0112)
(AD-A260724; ARO-28502.1-PH) Avail: CASI HC A08/MF A02

The primary goal of this research is to study a programmable joint-transform correlator (JTC) using liquid crystal television (LCTV) panels for adaptive realtime pattern recognition applications. The technique can improve the pattern recognition and identification technology that is of interest to the U.S. Army. The technique we studied is a real-time programmable electro-optical architecture. There are several reasons for selecting the optical technique over their digital and electronic counterparts,

as follows: Optical technique is capable of handling a large space-bandwidth image; optical technique is capable of performing parallel operations; optics can perform massive interconnections; optical transformation can be operated at high speed, etc. By using the LCTV, the pattern under observation can be correlated with a large number of recallable image memories. In addition, the LCTV technique is rather simple and economical to operate. The LCTV-optical correlator, in principle, can be designed into a compact portable form for in situ application. Brief outlines of the major research findings and publications are provided in this report. DTIC

AEROSPACE DEVICES FOR MAGNETIC REPLICAS Final Report
Roy Weinstein 1 May 1993 67 p
(Grant NAG9-592)
(NASA-CR-192958; NAS 1.26:192958) Avail: CASI HC A04/MF A01

Retained persistent magnetic field has been studied and improved in the superconductor YBa2Cu3O7 (Y123). During the study, trapped magnetic field, B(t), has been increased by over a factor of 10(exp 5). Methods used to improve magnetic field trapping were principally: (1) the adoption of the Melt Texturing process to increase grain size; (2) the addition of excess Y to disperse deposits of Y2BaCuO5 (Y211) and again increase grain size; (3) irradiation with high energy particles including 1H+, 3He++, 4He++, and fission fragments; and (4) utilizing temperatures below 77 K has also been quantified as a way to increase trapped field. In addition, in our study of B(t), we have found laws governing creep, activation, temperature dependence, creep vs. current flow, etc. In the range 20 K less than or equal to T less than or equal to 65 K, and for B less than 10 Tesla, a simple empirical relationship was found: B(trap) (T2) = B(trap) (T1) ((Tc - T2)/(Tc - T1))squared where Tc is the critical temperature. The highest experimental trapped field was B(trap) = 3.96 Tesla, at 65 K. We believe this to be the highest persistent field ever produced, by any method. A two component model of the persistent currents has been developed. This accurately reproduces the data, using as parameters only the magnitude of a constant surface current, J(s), and a constant volume current J(v). The model successfully predicts B(t) (xyz) for the case of maximum trapped field, for all samples observed. It has also been extended to describe the unsaturated case either zero field cooled, or field cooled. Loss of strap with time has been studied for the critical state (Bt,max), and non critical state (Bt less than Bt,max), for times from a few minutes to a few months, for unirradiated material, for irradiation by 1H+, 3He++, 4He++, high z projectiles, and neutrons, and for all materials used in the overall study. We conclude that: (1) multi Tesla trapped fields are attained; (2) fields over 10 T are achievable; (3) creep is not a large problem; (4) application is feasible to motors, generators, magnets for particle beam optics, separators, levitating bearings, energy storage, shielding, and transportation. Author (revised)

ELECTRIC FIELD EFFECTS ON QUANTUM-CONFINED SEMICONDUCTOR STRUCTURES Ph.D. Thesis
Byungsu Yoo 1992 275 p
Avail: Univ. Microfilms Order No. DA9301926

Effects of electric field on quantum well systems have been studied by FIR magneto-spectroscopy. Two systems have been investigated; One is an external electric field applied to the QW's system doped with shallow donors in the wells. In this case the effect of the electric field with the shallow impurities confined in quantum wells was determined. A p-'i'-n diode structure was used to produce the controllable electric field, and the states of donors doped in the well center were monitored by far-infrared magnetospectroscopy. A broadened, impurity-related peak is observed, which changes significantly both in shape and in position with electric field. In order to provide a basis for interpretation of the experimental data, a variational calculation was carried out for the low lying energy states of an effective-mass electron in the presence of an electric field at zero magnetic field. Also the absorption line profile that incorporates the impurity distribution within the well was calculated for comparison with experiment. Observed shifts of the position of the minimum are in good agreement with the variational calculation. The observed line-shape evolution with increasing electric field is explained by considering the impurity distribution in the well. With a rectangular distribution displaced by about 30A along the growth direction, qualitative agreement with experiment is obtained. The second case considered is that of built-in electric fields in strained-layer superlattices (SLS's). Significant strain-induced electric fields are known to occur in (111)-oriented strained-layer superlattices. Hole cyclotron resonance was observed in both nominally undoped InGaAs/AlGaAs SLS samples. Magnetoreflectivity spectra show features whose magnetic field dependence demonstrates their excitonic origin. A doublet structure observed in the reflectivity spectra is correlated with Landau-level-confinement-subband coupling experiments in cyclotron resonance (CR) in a tilted magnetic field which gives a subband separation of 11 meV. Hall measurements were performed to verify that CR was due to holes. To provide a basis for interpretation, subband energy separations and interband energy separations are calculated as a function of electric field. The parameter combinations are varied to fit to the observed experimental data. A perturbation method was used to calculate the energy splitting in the Landau-level-confinement-subband coupling experiments. Finally, from these calculations and comparison with experiments the strength of the built-in electric field was estimated on one of the SLS sample. The obtained value (3 x 10(exp 4)V/cm) is substantially smaller than predicted (approx. 1 x 10(exp 5)V/cm) from the piezoelectric coefficients and strain expected from pseudomorphic growth. Dissert. Abstr.

TRANSMISSION ELECTRON MICROSCOPY INVESTIGATION OF ION IMPLANTATION DAMAGE IN GaAs AND OTHER SEMICONDUCTORS Ph.D. Thesis
Michael Wayne Bench 1992 189 p
Avail: Univ. Microfilms Order No. DA9305465

The crystalline-to-amorphous transition induced by ion implantation was investigated in GaAs and GaP using transmission electron microscopy. The experiments included those performed in situ using the HVEM-Tandem Accelerator Facility at Argonne National Laboratory and also those performed using high-resolution TEM. The implantations were made with Ar+, Kr+, Xe+, and Au+ ions (energy 50 or 80 keV) at 30 and 300 K. The high-resolution experiments confirmed the amorphous nature of the damage produced in individual displacement cascades. The in situ experiments at 30 K showed that amorphous zones are produced within isolated cascades with high probability. It was found that the efficiency of production of amorphous damage increases with increasing ion mass. The probability that an individual cascade will generate an amorphous region decreases when the implantation is performed at room temperature in GaAs but remains the same for GaP. Annealing experiments in the 30-300 K range demonstrated that there is significant damage recovery below 300 K in GaAs but none in GaP. Calculations of the energy density deposited in the cascades, determined through Monte-Carlo simulations, suggest that the formation and subsequent quenching of a molten zone may be responsible for the production of the amorphous damage. In addition to the experiments on damage production, electron beam induced recrystallization of isolated amorphous zones was investigated in GaAs, GaP, Si, and Ge. Regrowth was induced in all materials at electron energies below the threshold displacement energy. However, a minimum energy threshold was found only in Si. Results in the other three materials, particularly Ge, suggest that beam-induced ionization may be playing a role in the solid-phase epitaxial regrowth process in each of those materials. Dissert. Abstr.

ANALYSIS OF THE GAP IN HIGH-TEMPERATURE SUPERCONDUCTORS USING PHOTOEMISSION SPECTROSCOPY Ph.D. Thesis
Barrett Otis Wells 1992 144 p
Avail: Univ. Microfilms Order No. DA9302335

The discovery of the cuprate superconductors had led to intensive research activity aimed at discovering the mechanism of high temperature superconductivity. A key feature in the electronic structure of a superconductor is the energy gap in the excitation spectrum. While gaps have been detected in the cuprate superconductors, traditional techniques for measuring the gap often give confusing or inconsistent results. The high transition temperatures and correspondingly large gaps of the cuprate superconductors have allowed photoemission spectroscopy to be used for the first time as a technique for studying the superconducting gap. Advantages of photoemission include that is is a direct measure of the gap, the surface studied is by necessity a clean, well defined region with variable depth, and the gap can be measured as a function of position in

k-space. The largest disadvantage of photoemission as tool for studying the gap is that the best resolution available so far is only on the order of the gap size. This makes a determination of gap size difficult. We have used photoemission to study the behavior of the gap near the surface of Bi2Sr2CaCu2O(8 + delta) and its variation as a function of k position. We have found that the gap does not diminish near the surface, an indication of the highly two dimensional nature of these materials. Our photoemission experiment has shown no evidence of a proximity effect in a metal overlayer. We have also found that the gap is anisotropic in k space within the planes themselves. In particular, by measuring how the gap varies with k, we can gain information on the symmetry of the gap function. Our data is consistent with a mixed s+id symmetry gap and possibly with a pure d wave gap. Determining the symmetry of the gap provides one of the most stringent experimental constraints on the theory of high T(sub c) superconductivity yet found. We compare our result with other experiments which measure the gap in order to attempt to provide a complete and consistent picture of what is presently known of the behavior of the superconducting gap in cuprate superconductors. Dissert. Abstr.

CRACK TIP FIELDS IN DUCTILE CRYSTALS AND BICRYSTALS Ph.D. Thesis
Maryam Saeedvafa 1992 167 p
Avail: Univ. Microfilms Order No. DA9228274

Crack tip fields are analyzed in order to explain fracture processes in ductile crystals. The focus is to understand the stress and deformation fields, and cracking mechanisms. Both asymptotic and finite element models based on continuum plasticity for single crystals are used. The ductility of interfacial in sigma-9 copper bicrystals has been observed experimentally to depend on the cracking direction, with the (114) being the brittle cracking direction and the (114) the ductile one. Although the continuum plasticity solutions given here show that the tensile stresses ahead of the crack is essentially identical for the two cracking directions, the overall plastic zone size is much larger in the ductile case. Also, the orientations of the zones of concentrated shearing ahead of the crack, observed in the ideally plastic model, suggest two different dislocation shearing mechanisms. Analysis of the crack tip field for an ideally plastic NiAl single crystal which has only 3 independent slip systems at room temperature (the (100) /100/ systems), shows that the stress field has a lnr type singularity, with a shearing discontinuity at 90 degrees. The largest zone over which the stresses on either (110) /111/ or (112) /111/ systems exceeds the critical resolved shear stress on the (110) /100/ system is of the same order as the plastic zone site, although very close to the crack tip the stresses on some of these systems become significant due to the stress singularity, and thus they may become activated. A finite element model based on a single crystal plasticity was adopted to examine the domain of validity of HRR fields. The results show that domain of validity of HRR stress fields increases from 0.4 to 0.5 percent of the overall plastic zone sizes as the hardening exponent n increases from 3 to 20. Both the finite element and the HRR asymptotic results coverage to the discontinuous stress field of Rice's (1987) solution for ideally plastic material as n gets larger. Even though clear the displacements remain continuous in the ideally plastic limit, zones of very high slopes located across the sector boundaries can be observed in the finite element results. Dissert. Abstr.

A NUMERICAL SIMULATION OF ADSORPTION ONTO A CRYSTALLINE SURFACE
J. A. Hernando (Comision Nacional de Energia Atomica, Buenos Aires, Argentina.) and L. Blum 15 Jan. 1993 5 p
(AD-A261079; TR-25) Avail: CASI HC A01/MF A01

A particular model for the adsorption of a dense fluid onto a crystalline surface has been studied. The fluid is arbitrary and the crystalline surface is modelled by a hard wall decorated with a triangular lattice of sticky sites. This model can be mapped on a lattice gas model with interaction potentials related to the particle distribution functions of the smooth (undecorated) wall problem. Approximate adsorption isotherms in the theta-p plane (fraction of occupied sites vs. bulk density) have also been drawn. However, the effect that the three particle distribution function has on the critical point has also been estimated, and it is quite important. We have performed Monte Carlo simulations of a model system inspired on this work. It is a 2D system interacting via a hard sphere plus a triangular well potential and immersed in an external field described by a triangular lattice of sticky sites. We have studied its phase diagram paying some attention also to its behavior in the limit of infinitesimally small sticky adhesion. DTIC

MEASUREMENT OF OPTICAL PROPERTIES OF INFRARED BANDGAP SUPERLATTICES Final Report, 18 Jan. 1989 - 17 Jul. 1992
Donald F. Nelson Oct. 1992 17 p
(Contract DAAL03-89-K-0030)
(AD-A260859; ARO-26188.4-EL) Avail: CASI HC A03/MF A01

The lattice-matched bandgap-tunable heterostructure system Ga(x)In(1-x)As(y)P(1-y)/InP is technologically important because the bandgap can be tuned with composition between 1.55 and 0.90 micron wavelengths. Because the range of bandgaps in this heterostructure system is further into the infrared when compared to the much studied GaAs/Ga(x)Al(1-x)As system, many spectroscopic techniques are more difficult. For example, prior to this study no inelastic light scattering had been done in this heterostructure system for laser wavelengths longer than the InP bandgap wavelength, that is, in a region where resonant interaction with the confined states of the wells is possible and where four polarization combinations of incident and scattered light are possible (rather than only two when backscattering is done at an opaque wavelength). Utilizing this technique was one of the primary goals of this project. A second goal was to attempt to clarify a confusing situation in this heterostructure system in which previous photoluminescence measurement gave huge discrepancies with predicted emission photon energies of between 50 and 200 meV. This contrasted sharply with the GaAs/GaAlAs system in which agreement was in 1 to 2 meV range. DTIC

MOLECULAR DEVICES BASED ON NEW MONOLAYER-FORMING SYSTEMS Final Report, 1 Sep 1989 - 31 Oct. 1992
Craig J. Eckhardt 21 Dec. 1992 6 p
(Contract DAAL03-89-G-0094)
(AD-A260996; ARO-27195.1-CH-SM) Avail: CASI HC A02/MF A01

The formation of novel planar lattices formed by monolayers of new amphiphilic molecules is reported. The rigid amphiphiles have cross-sections designed to provide two-dimensional crystals of the hexagonal, rectangular and oblique crystal classes. The packings are studied by atomic force microscopy. One amphiphile of triangular cross-section forms a hexagonal lattice. Two other amphiphiles, a tetracyclic and binapthyl, are chiral and synthesized as racemates. The single binapthyl amphiphile forms two commensurate lattices, rectangular and oblique, in the same monolayer. The tetracyclic amphiphile shows three phases on water and upon transfer at their respective formation pressures onto mica, three phases are observed: glass-like, rectangular and oblique. The oblique phase results as a phase separation of the enantiomers as a result of spontaneous resolution in two dimensions. Atom-atom potential calculation are shown to be essential to the design and understanding of these planar lattices. The results have important implications beyond monolayer chemistry and physics for fields such as liquid crystals and biophysics. DTIC

SHORT-PERIOD SUPERLATTICE MATERIALS FOR HETEROJUNCTION BIPOLAR TRANSISTORS Final Report, 1 May 1989 - 31 Dec. 1992
David L. Miller 30 Jan. 1993 9 p
(Contract DAAL03-89-K-0093)
(AD-A260701; ARO-26444.4-EL) Avail: CASI HC A02/MF A01

This is the final report of the project Short-period Superlattice Materials for Heterojunction Bipolar Transistors, for the period 5/01/89-12/31/92. The goal of this project was to investigate the usefulness of short-period superlattices (SPSL) of InAs/GaAs and InAs/AlAs for heterojunction bipolar transistors (HBT's). Because of difficulties encountered early in the project in growing high structural quality SPSL's, the emphasis of the project was shifted to attempting to understand the growth of HBT material at low temperatures using migration-enhanced epitaxy and the incorporation of that material into HBT's. To summarize our technical results, we have grown InAs/GaAs SPSL on InP and GaAs and determined their surface roughening behavior with thickness and InAs content; correlated x-ray line widths with RHEED observations of roughening; developed methods to

use migration-enhanced epitaxy to grow doped GaAs on (111) and (100) substrates, with material on both orientations having good mobilities; studied the properties of low-temperature conducting GaAs, determining Schottky barrier heights; and applied the migration-enhanced epitaxy technique to the low temperature growth of Be-doped base materials for HBT's with usable gain and no Be diffusion during growth. FUNDAMENTAL AND APPLIED ASPECTS OF DEFECT ENGINEERING IN GaAs Final Report, 12 Jan. 1990 - 30 Sep. 1992
Jacek Lagowski 8 Dec. 1992 20 p
(Contract DAAL03-90-G-0020)
(AD-A260573; ARO-27764.1-MS) Avail: CASI HC A03/MF A01

The program was aimed at advancing the fundamental and applied knowledge required for defect engineering in bulk GaAs. It was focussed on deep level defects, especially antisite defects such as arsenic-antisite related EL2 defect and gallium antisite acceptor defects. Using non-stoichiometric crystal methods, with controlled cooling rates, we established, for the first time, quantitative temperature characteristics of the EL2 formation rate. We determined melt stoichiometry and Fermi energy dependence of the native acceptor concentration. The latter results has stimulated theoretical interest and ab initio calculations by the Xerox group of the negative 'U' property of the Ga(sub As) antisite. Recently we also completed a study on the hetero-antisite defect, Sb(sub Ga). Using our knowledge of EL2 formation/annihilation, we were able to engineer defect structures in arsenic-rich crystal leading to very low EL2 and EL3 concentrations. This enabled the first positive identification of both, single and double levels of Sb(sub Ga) defects otherwise marked by the EL2 and EL3 defects. The program has also lead to the discovery of a non-contract, no preparation, wafer scale, deep level defect characterization method based on the surface photovoltage transient. DTIC

ANALYSIS OF TRANSIENT PHOTOLUMINESCENCE MEASUREMENTS ON GaAs AND AlGaAs DOUBLE HETEROSTRUCTURES
Dean C. Marvin, Steven C. Moss, and Linda F. Halle 13 Jan. 1993 58 p
(Contract F04701-88-C-0089)
(AD-A261154; TR-0091(6925-11)-2; SMC-TR-93-03) Avail: CASI HC A04/MF A01

We discuss the analysis of transient photoluminescence measurements and the extraction of carrier recombination lifetimes in GaAs and AlGaAs double heterostructures. In contrast to recently reported claims, we demonstrate that even in regions where the measured decay curves show single exponential behavior, the slopes do not, in general, correspond to any single physical carrier lifetime, such as the minority carrier lifetime. A series of measurements over a range of incident optical intensities is required to extract such lifetimes. DTIC

METHOD OF JOINING DIAMOND STRUCTURES Patent
Lawrence T. Kabacoff, inventor (to Navy) and John Barkyoumb, inventor (to Navy) 5 Jan. 1993 5 p Filed 8 Jul. 1991
(AD-D015671; US-Patent-5,176,788; US-Patent-Appl-SN-726483) Avail: US Patent and Trademark Office

A process for bonding two diamond surfaces together is described. The method is as follows: (1) form a layer of opaque non-diamond carbon material between the two diamond surfaces; (2) press the diamond surfaces together with the opaque non-diamond material sandwiched between the diamond surfaces; (3) use pulse lased light to quickly melt all the opaque non-diamond carbon material before a significant amount of heat is lost through the diamond surface; and then (4) allow the resulting carbon melt to cool and solidify as polycrystalline diamond which grows homoepitaxially from the diamond surfaces bonding those surfaces together. OPTOELECTRONIC III-V HETEROSTRUCTURES ON Si SUBSTRATES Final Report, 15 Sep. 1989 - 14 Sep. 1992
Gary Y. Robinson 14 Sep. 1992 26 p
(Grant AF-AFOSR-0153-89)
(AD-A261651; AFOSR-93-0106TR) Avail: CASI HC A03/MF A01

The results of a three-year program to investigate the epitaxial growth of the 3-5 semiconductors, particularly the InGaAsP/InP materials system, on Si substrates is presented. The heterostructures were grown by gas-source molecular beam epitaxy (GSMBE) and were designed for applications in optoelectronics. With regard to growth of InP and InGaAsP alloys on Si, the research program was successful in reducing misfit dislocations and stacking faults resulting from the 8 percent lattice mismatch between InP and Si. A strained layer superlattice of In(x)Ga(1-x)P/In(y)Ga(1-y)P (X not equal Y) was used as a buffer layer. The use of InGaP as buffer layers led to extensive development, in parallel with the InP-on-Si work, of InGaP layers by GSMBE. The Schottky barrier energies for both n-type and p-type materials were measured for the first time for the wide bandgap alloys InGaP and InGaAlP when lattice matched to GaAs. DTIC

EXPERIMENTAL AND THEORETICAL STUDIES OF PROXIMITY EFFECT AND COULOMB BLOCKADE PHENOMENA IN JOSEPHSON JUNCTIONS Final Report, 15 May 1989 - 29 Mar. 1992
E. L. Wolf and B. Laikhtman 27 Jan. 1993 35 p
(Grant AF-AFOSR-0338-89)
(AD-A261652; AFOSR-93-0105TR) Avail: CASI HC A03/MF A01

The topics of theoretical and experimental interest in this research are as follows: behavior of ultrasmall low capacitance (Coulbomb-blockaded) Josephson and normal metal tunnel junction microstructures; and experimental evaluation of the associated microstructures (STM). A particular interest is in the fundamentally new mechanisms of interaction with radiation believed to operate in these systems. The Proximity Induced Josephson Effect (PIJE), an effect occurring at a Normal Metal/Superconductor (N/S) interface which displays many of the features of the Josephson effect, and whose device potential has not been at all explored, is also researched. Related topics in our research in this project have been methods to form Josephson junctions using cuprate superconductors and methods to prepare and modify the surface of cuprate superconductors to make Josephson junctions and other electronic devices. (Contract DAAL03-86-K-0131)
(AD-A260968; ARO-23662.7-EL) Avail: CASI HC A02/MF A01

The work performed under this contract represents an extension of our past work on mercury cadmium telluride (MCT). Under this contract we have focussed on the use of spectroscopic ellipsometry (SE) and the development of new theoretical and analytical tools for the analysis of SE data. Our major achievement was the demonstration of an excellent, physically understandable correlation between the low-temperature dark storage time of MIS devices built on bulk MCT samples and a parameter measured by room-temperature electrolyte electroreflectance (EER) on those samples. The analysis which led to this result required the input of SE data obtained under this contract as well as the EER data. The other experimental results obtained under this grant were the determination of the nature of the broadening of critical-point transition energies in

semiconductor alloys and compounds and SE measurements of critical-point energies and of the thickness of the ZnSe epilayers for ZnSe/GaAs heterojunctions. Theoretical and analytical work performed under this contract included the determination of the origin of the quasiperiodic oscillations in numerically differentiated SE data, a procedure to minimize those oscillations, the development of a method to obtain more accurate values of critical-point energies and linewidths from SE data, and the initial work on the development of a greatly improved model for the optical dielectric function. PROCEEDINGS OF THE 16TH INTERNATIONAL WORKSHOP ON CONDENSED MATTER THEORIES
L. Blum and F. B. Malik 15 Jan. 1993 15 p Workshop held in San Juan, Puerto Rico, 1-5 Jun. 1992 Prepared in cooperation with University of Southern Illinois, Carbondale
(Contract N00014-90-J-1263)
(AD-A261078; TR-21) Avail: CASI HC A03/MF A01

This report outlines the proceedings of the XVI International Workshop on Condensed Matter Physics containing contributions to solid, liquid, interfacial, quantum and classical physics. The 16th International Workshop on Condensed Matter Theories (CMT) was held in San Juan, Puerto Rico between June 1 and 5, 1992. A number of outstanding lectures were given on solid state physics, density functional theory, diffusion limited aggregation, cellular automata, superconductivity, quantum fluids (Bose and Fermi liquids), theory of inhomogeneous classical fluids, nonequilibrium and equilibrium fluids, phase transitions, nuclear structure, lattices, as well as a number of excellent posters. RESONANT TUNNELING THROUGH CHEMISORBED HALOGEN ATOMS ON Ag(111) Technical Report, 30 Jun. 1992 - 31 Mar. 1993
Joachim H. Schott and Henry S. White 20 Mar. 1993 17 p
(Contract N00014-91-J-1927)
(AD-A261794; TR-18) Avail: CASI HC A03/MF A01

Tunneling spectroscopy measurements performed with a scanning tunneling microscope (STM) on Ag(111) surfaces coated with a monolayer of halogen atoms (F, Cl, Br, and I) are reported. Maxima in the tunneling spectra are assigned to resonance tunneling through both the occupied p- and virtual bound states of the halogen atoms. The observed minimum tunneling resistance at resonance is pi(h)/e(exp 2) (is approximately 12.6 k-ohms), in agreement with theoretical predictions. DTIC

(Contract N00014-91-J-1896)
(AD-A261803; TR-64) Avail: CASI HC A03/MF A01

A quantitative comparison between an experimental and a theoretical description of any Auger spectrum requires a common energy reference point such as the Fermi level. With non-conductors this is problematic, since the Fermi level is not well defined and charging may shift the Fermi level. A common approach to overcome this problem employs spectra containing the Auger peak, core, and valence band (VB) photoemission peaks. One then has only to locate a common reference point in the Auger and VB spectra relative to the core level peak. We have developed a procedure where a comparison is made between model theoretical and experimental spectra so that a large energy range (about 20 eV) of each spectrum can be utilized to locate the common reference points. We have found that this method enables accurate reference points to be determined even with severe sample charging. The method is precise enough to observe what may be a differential charging effect in the polyethylene (PE) spectra. This suggests that the photoelectron and Auger peaks may not shift an equal amount with charging in all instances. Although much smaller than that previously reported, a breakdown in the Cini-Sawatzky expression as modified for covalent systems still is suggested for PE. DTIC

SINGLE ELECTRON CHARGING EFFECTS IN MESOSCOPIC SYSTEMS Interim Technical Report
Ashraf E. Hanna Oct. 1992 156 p
(Contracts N00014-89-J-1023; N00014-89-J-1565)
(AD-A261228; TR-34) Avail: CASI HC A08/MF A02

We report the investigation of two ultra-small tunnel junctions in series. These junctions have capacitances on the order of 10-18 to 10-19 F each. In this regime the charging energy associated with a single electron tunneling event (e2/2C) can be made significantly larger than thermal fluctuations (kBT) at liquid helium temperatures. As such, measurements of the tunneling current as a function of voltage show unique features associated with individual electron tunneling events. DTIC

INVESTIGATION OF COUPLED ANALYSIS TECHNIQUES FOR ADAPTIVE MATERIAL STRUCTURAL SYSTEMS Final Technical Report, 15 Sep. 1991 - 14 Sep. 1992
Craig A. Rogers 15 Nov. 1992 112 p
(Grant AF-AFOSR-0416-91)
(AD-A261359; AFOSR-93-0146TR) Avail: CASI HC A06/MF A02

The objective of this research program is to investigate coupled analysis techniques for adaptive material structural systems. There are two aspects of this research: one is to develop a nonlinear full-field constitutive model for ferroelectric materials, including piezoelectric and electrostrictive materials; the other is to develop an impedance-based analysis technique for adaptive material systems. A coupled electro-thermal-mechanical nonlinear constitutive relation for piezoelectric materials has been developed and verified based on experimental data from the literature. This model uses the polarization fraction as a newly established internal variable. This internal variable is related to other parameters such as electric field, stress, frequency, etc., using a hyperbolic tangent function, which accurately describes the nonlinearity, including the hysteresis of ferroelectric materials. The same approach has also been utilized in the modeling of relaxor ferroelectric PMN-PT materials. An impedance methodology for the dynamic analysis of adaptive material systems has been developed. This approach can provide accurate theoretical prediction of the dynamic response of a structure driven by any type of actuator and yet reflect the physical essence of the actuator/structure interaction. This model has been experimentally verified. DTIC

(Contract F49620-92-J-0409)
(AD-A261485; AFOSR-93-0099TR) Avail: CASI HC A02/MF A01

By any number of measures the 1992 Gordon Research Conference on Point Defects, Line Defects, and Interfaces in Semiconductors was very successful. The Gordon conference organization evaluates all of its conferences by means of a questionnaire to all participants. Our conference was ranked 20 out of 134 conferences held during the summer of 1992. This is especially good for a field that is so mature. Good choices of discussion leaders and speakers were key to this success. Speakers from

related fields where new and important defect problems are emerging generated a lot of excitement. The 23 invited talks were presented in sessions run by 11 different discussion leaders. In addition 59 posters were presented. The total number of participants was about 125. In this year of reduced travel budgets, many key people would not have been able to participate without financial support. Having so many younger scientists among the participants was also important. The conference finances are summarized on the attached sheet. Since no conference proceedings or abstract book was printed, I have submitted the final program along with a complete list of the poster presentations as the final report. DTIC

Superconductor-normal-superconductor Josephson junctions are a prime candidate for the active devices in electronic circuits based on high-temperature superconductors. In this program, CaRuO3 was used as a normal metal layer and yttrium barium copper oxide as the superconducting layers to produce Josephson junctions in edge-junction geometry. These superconductor-normal-superconductor junctions have been studied to determine their suitability for use in integrated circuits. The devices worked as Josephson junctions at temperatures up to at least 77 K with characteristic voltages in the range of 100-750 microvolts over most of their operating temperature range. The resistance of the junctions was dominated by the interface region rather than by the barrier layer itself. The properties of dc SQUIDs made from the junctions were excellent at 77 K. The variation in junction parameters over multiple devices was on the order of plus-or-minus thirty percent, which is encouraging but not yet sufficient for integrated circuit applications. Further process refinements may lead to more desirable device uniformity. DTIC

(AD-A261703; FRACTO-1992; AFOSR-93-0078TR) Avail: CASI HC A14/MF A03

Based on our capabilities to (1) detect and characterize particle release from surfaces on fast time scales, (2) to measure rapid electrical transients, and (3) to obtain high resolution topographical information utilizing scanning tunneling and atomic force microscopy, we present new results on the time sequence of events leading up to defect initiation and growth which ultimately leads to fracture. We employ dynamic methods as well as post-fracture examination in polymers, ceramics, metals, and interfaces. We emphasize mechanisms, with interpretation and connections between these results and the creation and evolution of defects in materials under mechanical stress. In many cases, the information we are acquiring has important implications concerning dissipation of energy (e.g., plastic deformation, microcracking, crack branching, and crack deflection) which play critical roles in controlling the strength and toughness of materials. (Contract W-7405-eng-36)
(DE93-003854; LA-UR-92-3827; CONF-921005-8) Avail: CASI HC A02/MF A01

The radiation damage resulting from the large particle fluences predicted at the Superconducting Super Collider will induce significant leakage currents in silicon detectors. In order to limit those currents, we plan to operate the detectors at reduced temperatures (approximately 0 deg C). In this paper, we present the results of a study of temperature effects on both the initial radiation damage and the long-term annealing of that damage in silicon PIN detectors. Depletion voltage results are reported. The detectors were exposed to approximately 10(sup 14)/cm(sup 2) 650 MeV protons. Very pronounced temperature dependencies were observed. DOE

COMPUTATION OF COMPLEX SOLIDIFICATION MORPHOLOGIES USING A PHASE-FIELD MODEL
B. T. Murray, A. A. Wheeler (Bristol Univ., England.), W. J. Boettinger, and G. B. McFadden Feb. 1993 23 p
(PB93-156743; NISTIR-5124) Avail: CASI HC A03/MF A01

An anisotropic phase-field model is used to calculate numerically the solidification patterns of a pure material into an undercooled liquid in a two-dimensional rectangular region. In the phase-field approach, the solid-liquid interface is treated as diffuse, and a dynamic equation for the phase variable is introduced in addition to the equation for heat flow. The phase-field model equations are solved using finite-difference techniques on a uniform mesh. Calculations for dendritic growth are presented for both four-fold and six-fold anisotropy, and the effect of the level of anisotropy on the growth of a dendrite is investigated. A previous study has shown that performing computations with an interface that is sufficiently thin for the numerical solution to accurately represent a sharp interface model is computationally demanding. However, even with a relatively thick interface, the computations using the phase-field model show many of the qualitative features of dendritic growth, and the method is well suited for handling the evolution of very complex, realistic interface shapes. TRANSITION METAL CHELATE-FULLERIDE COMPOUNDS: ELECTROCRYSTALLIZATION OF SEMICONDUCTING (Ru(bpy)S)(C60)2 Interim Report
Colby A. Foss, Jr., Daniel L. Feldheim, Del R. Lawson, Peter K. Dorhout, C. M. Elliott, C. R. Martin, and B. A. Parkinson Feb. 1992 13 p
(Contract N00014-82-K-0612)
(AD-A261549; ONR-TR-83) Avail: CASI HC A03/MF A01

Two recent breakthroughs in the chemistry of fullerenes have provided the impetus for using fullerenes to prepare solid state materials: a method to produce large amounts of C60 and related materials, and the discovery of superconductivity in fullerides of K, Rb, and Cs. The superconducting alkali metal compounds, which appear to contain C60(3-) show a trend toward higher transition temperatures upon increasing the size of the unit cell up to the composition Rb2CsC60. It was thought that the synthesis of new compounds of reduced fullerenes with large cations might produce materials with interesting properties. Transition metal complexes with neutral chelating ligands (e.g., Ru(bpy)3(2+), where bpy = 2,2' bipyridine) seemed like good candidates as cations for C60 salts. Such complex cation have a rich electrochemistry and photochemistry. Furthermore, the electronic and optical properties can be varied via ligand and metal substitution, providing a route for tuning the properties of the new materials. DTIC

OPTICAL CHARACTERIZATION OF Ga(1-x)In(x)As(y)Sb(1 y)/GaSb ALLOY AND DEVICE APPLICATION Final Report, 1 Nov. 1988 - 30 Oct. 1992
S. Iyer and A. Abul-Fadl 15 Dec. 1992 80 p
(Contract F46920-89-C-0004)
(AD-A261713; TR-3; AFOSR-93-0096TR) Avail: CASI HC A05/MF A01

GaSb and GaInAsSb layers of excellent optical quality with compositions corresponding to the room temperature photoluminescence peak wavelength of 1.7 microns to 2.32 microns were grown by liquid phase electroepitaxial (LPEE) technique. These layers were characterized using x-ray diffraction, energy dispersive X-ray analysis, and low temperature Fourier transform photoluminescence (PL) with emphasis on the latter. The variation in the low temperature photoluminescence spectra of these alloys as a function of the alloy compositions was the subject of detailed investigation. The nature of the recombination processes was identified from the temperature and intensity dependence of the PL spectra. N-type doping of the layers was achieved using tellurium. The PL spectra become increasingly complicated and considerable change in the PL spectra with the excitation intensity is also observed. A systematic and quantitative evaluation of the effects of compensation in GaSb was examined as a function of Te concentration in the layers under both low and high excitation conditions. Photoreflectance spectroscopy was assembled for the characterization of semiconductor band structure and surface, PIN photodiode device was fabricated using the doped layers and characterized using I-V and C-V measurements. LASER DAMAGE TO PRODUCTION- AND RESEARCH-GRADE KDP CRYSTALS
F. Rainer, L. J. Atherton, and J. J. DeYoreo Oct. 1992 13 p Presented at the SPIE Symposium on Boulder Damage, Boulder, CO, 28-30 Oct. 1992
(Contract W-7405-eng-48)
(DE93-007517; UCRL-JC-111463; CONF-9210295-3) Avail: CASI HC A03/MF A01

We present the results of laser damage measurements conducted on potassium dihydrogen phosphate (KDP) and deuterated potassium dihydrogen phosphate (KD0P) crystals that were grown recently for both production and research applications by several sources. We have measured extrinsic damage thresholds that cover wavelengths from 1064 nm to 266 nm at pulse durations in the 3- to 10-ns regime. Many of the samples were extracted from boules grown specifically to yield large-area crystals, up to 32-sq cm, for laser fusion applications. These crystals were the result of efforts, both by the Lawrence Livermore National Laboratory (LLNL) and commercial crystal-growth companies, to yield high-threshold KDP. In particular we have established that such crystals can reliably survive fluences exceeding 15 j/sq cm at 355 nm and 20 j/sq cm at 1064 nm when irradiated with 3-ns pulses. We present details of how bulk and surface damage to these crystals scale with pulse duration and wavelength as well as of morphological effects due to laser conditioning. DOE

TWISTOR DIAGRAMS AND A QUANTUM FIELD THEORY Ph.D. Thesis
Lewis ODonald 1992 145 p
Avail: Univ. Microfilms Order No. BRD-98304

This thesis uses twistor diagram theory, as developed by Penrose (1975) and Hodges (1990c), to try to approach some of the difficulties inherent in the standard quantum field theoretic description of particle interactions. The resolution of these issues is the eventual goal of the twistor diagram program. First twistor diagram theory is introduced from a physical view-point, with the aim of studying larger diagrams than have been typically explored. Methods are evolved to tackle the double box and triple box diagrams. These lead to three methods of constructing an amplitude for the double box, and two ways for the triple box. Next this theory is applied to translate the channels of a Yukawa Feynman diagram, which has more than four external states, into various twistor diagrams. This provides a test of the skeleton hypothesis (of Hodges, l990c) in these cases, and also shows that conformal breaking must enter into twistor diagrams before the translation of loop level Feynman diagrams. The issue of divergent Feynman diagrams is then considered. By using a twistor equivalent of the sum-over-states idea of quantum field theory, twistor translations of loop diagrams are conjectured. The various mass less propagator corrections and vacuum diagrams calculated give results consistent with Feynman theory. Two diagrams are also found that give agreement with the finite parts of the Feynman 'fish' diagrams of phi(sup 4)-theory. However it is found that a more rigorous translation for the time-like fish requires new boundaries to be added to the twistor sum-over-states. The twistor diagram obtained is found to give the finite part of the relevant Feynman diagram. Dissert. Abstr.

N93-25742 Princeton Univ., NJ.
FROM FRACTALS TO WORMHOLES VIA STRING THEORY Ph.D. Thesis
Andrew George Felce 1992 110 p
Avail: Univ. Microfilms Order No. DA9302070

The thesis is in two parts. The first part is devoted to a study of the definition of mass for soliton solutions in string theory. In the context of the low-energy effective field theory, there are three distinct quantities from which one can extract the mass of a soliton: the ADM mass, the static action and the kinetic energy. The three corresponding masses are carefully defined and shown to be equal for a representative class of string solitons, the so-called 'black fivebranes'. Along the way a potential confusion in the definition of the action is cleared up, and it is shown that the kinetic energy of a moving soliton is given in terms of a surface integral at spacelike infinity. This result for the kinetic energy is used to motivate a conjecture about the exact value of soliton masses in string theory: That in conformal field theory the kinetic mass is realized as the norm of the (1,1) deformation induced by the collective coordinate. Such deformations are usually treated as unphysical because they appear to be pure gauge and have zero norm. In a soliton conformal field theory, a finite number of these gauge transformations become physical because of a subtlety involving the boundary at spatial infinity. Some proposals for concrete exploration of this phenomenon are discussed. The second part of the thesis concerns the connection between string theory and an important problem in condensed matter physics. It has recently been shown that the dissipative Hofstadter model (dissipative quantum mechanics of an electron subject to uniform magnetic field and periodic potential in two dimensions) exhibits critical behavior on a network of lines in the dissipation/magnetic field plane. Apart from their obvious condensed matter interest, the corresponding critical theories represent non-trivial solutions of open string field theory containing a tachyon and gauge field background. A detailed account of their properties would be interesting from several points of view. The thesis reports the results of an initial investigation of the free energy, N-point functions and boundary state for this type of critical theory.

Although the primary goal is to study the magnetic field dependence of these quantities, some new results are presented which bear on the zero magnetic field case as well. Dissert. Abstr.

INTRODUCTION OF CHAOTIC DYNAMICAL SYSTEMS M.S. Thesis
Michael A. Bernhard Dec. 1992 78 p
(AD-A261747) Avail: CASI HC A05/MF A01

The emerging discipline known as chaos theory is a relatively new field of study with a diverse range of applications (economics, biology, meteorology, etc.). Despite this, there is not as yet a universally accepted definition for 'chaos' as it applies to general dynamical systems. Various approaches range from topological methods of a qualitative description, to physical notions of randomness, information, and entropy in ergodic theory, to the development of computational definitions and algorithms designed to obtain quantitative information. This thesis develops some of the current definitions and discusses several quantitative measures of chaos. It is intended to stimulate the interest of undergraduate and graduate students and is accessible to those with a knowledge of advanced calculus and ordinary differential equations. In covering chaos for continuous systems it serves as a complement to the work done by Philip Beaver which details chaotic dynamics for discrete systems. DTIC

THE 1993/1994 NASA GRADUATE STUDENT RESEARCHERS PROGRAM
Sep. 1992 98 p Original contains color illustrations
(NASA-EP-283; NAS 1.19:283) Avail: CASI HC A05/MF A02; 17 functional color pages

The NASA Graduate Student Researchers Program (GSRP) attempts to reach a culturally diverse group of promising U.S. graduate students whose research interests are compatible with NASA's programs in space science and aerospace technology. Each year we select approximately 100 new awardees based on competitive evaluation of their academic qualifications, their proposed research plan and/or plan of study, and their planned utilization of NASA research facilities. Fellowships of up to $22,000 are awarded for one year and are renewable, based on satisfactory progress, for a total of three years. Approximately 300 graduate students are, thus, supported by this program at any one time. Students may apply any time during their graduate career or prior to receiving their baccalaureate degree. An applicant must be sponsored by his/her graduate department chair or faculty advisor; this book discusses the GSRP in great detail.

PROCEDURAL JUSTICE, OCCUPATIONAL IDENTIFICATION, AND ORGANIZATIONAL COMMITMENT Final Report
L. A. Witt Jun. 1992 13 p
(FAA Proj. AM-C-92-HRR-122)
(DOT/FAA/AM-92/21) Avail: CASI HC A03/MF A01

Extending Tyler's (1989) group-value model, the present study tested the hypothesis that procedural justice may be of differential salience in the development of organizational commitment among individuals who identify primarily with their employing organization versus their occupation. Data collected from 1,235 FAA employees indicated that procedural justice scores were moderately related to commitment scores. Contrary to the hypothesis, occupational identification had no moderating effect on the procedural justice-organizational commitment relationship. Consistent with the multiple commitment literature, employees identifying primarily with their occupation perceived more procedural justice, but expressed less commitment to the organization, than those identifying with their organization. These results provide little support for this extension of the group-value model of procedural justice but some support for the multiple commitment approach to the study of work commitment. Author

SMALL BUSINESS ACCESS TO EQUITY CAPITAL Final Report
Robert J. Gaston 7 Aug. 1992 112 p
(Contract SBA-5654-OA-90)
(PB93-144582) Avail: CASI HC A06/MF A02

An entrepreneur's own contribution to the equity capital of their business is constrained by their wealth. If those constraints are binding, entrepreneurs often seek to attract equity capital from external sources. Because formal investors in small businesses incur relatively high transaction costs, some small business owners seek to attract informal investors. The report uses special survey data to explore how and where entrepreneurs find equity capital. Author (DTIC)

DESIGN AND IMPLEMENTATION OF A PILOT ORIENTATION PROGRAM FOR NEW NASA ENGINEERING EMPLOYEES
Ronald E. Graham, Randall B. Furnas, and Maria Babula May 1993 14 p
(NASA-TM-105907; E-7687; NAS 1.15:105907) Avail: CASI HC A03/MF A01

This paper describes the design and field testing of an orientation program for new employees of NASA Lewis Research Center's Engineering Directorate. A group of new employees designed the program using a series of TQM analysis techniques. The program objectives were: provide consistent treatment for new employees; assist management and clerical staff with their responsibility for orientation; introduce the employee to as many facets of the organization as possible; allow the employee to feel like a member of the organization as early as possible; maximize the use of existing services; and use up-to-date information. The major aspects of the program included: training of management and clerical staff; lab tours

and briefings describing the organization; shepherding, using senior employees as shepherds; a handbook of information about the center and the directorate; a package of information about northeast Ohio; and social activities involving the new employees and shepherds. The program was tested on a pilot group of six new employees over a four month period and was considered to be highly successful by both the employees and management. Aspects of the program have subsequently been adopted for center-wide use. Author

METHODS OF OPTIMIZATION UNDER UNCERTAINTY Final Report
R. T. Rockafellar 29 Dec. 1992 14 p
(Grant AF-AFOSR-0081-89)
(AD-A261487; AFOSR-93-0089TR) Avail: CASI HC A03/MF A01

Research under this grant has focused on a large-scale optimization methodology connected with the solution of problems in which decisions must be made in the face of uncertainty: stochastic programming problems. The principal techniques developed for modeling such problems have made use of various kinds of decomposition--into small-scale optimization problems in extended linear-quadratic programming. Extended linear-quadratic programming goes beyond ordinary linear and quadratic programming in allowing for objective functions to incorporate penalty terms and other features which create piecewise linear or quadratic formulas. The new decomposition techniques include the following: primal-dual Lagrangian decomposition; and forward-backward splitting. DTIC

TCMS OPERATIONS AND MAINTENANCE PHILOSOPHY
David P. Buehler and Rock E. Griffin 25 Feb. 1992 32 p
(NASA-TM-108756; NAS 1.15:108756; TS-TCMS-92001) Avail: CASI HC A03/MF A01

The purpose is to describe the basic philosophies of operating and maintaining the Test, Control, and Monitor System (TCMS) equipment. TCMS is a complex and sophisticated checkout system. Operations and maintenance processes developed to support it will be based upon current experience, but will be focused on the specific needs of TCMS in support of Space Station Freedom Program (SSFP) and related activities. An overview of the operations and maintenance goals and philosophies are presented. The assumptions, roles and responsibilities, concepts and interfaces for operation, on-line maintenance, off-line support, and Operations and Maintenance (O&M) personnel training on all TCMS equipment located at KSC are described. Author (revised)

TEST, CONTROL AND MONITOR SYSTEM (TCMS) OPERATIONS PLAN
C. K. Macfarlane and M. P. Conroy 29 Jan. 1993 132 p
(Contract NAS10-11400)
(NASA-CR-193098; NAS 1.26:193098; TS-TCMS-92002) Avail: CASI HC A07/MF A02

The purpose is to provide a clear understanding of the Test, Control and Monitor System (TCMS) operating environment and to describe the method of operations for TCMS. TCMS is a complex and sophisticated checkout system focused on support of the Space Station Freedom Program (SSFP) and related activities. An understanding of the TCMS operating environment is provided and operational responsibilities are defined. NASA and the Payload Ground Operations Contractor (PGOC) will use it as a guide to manage the operation of the TCMS computer systems and associated networks and workstations. All TCMS operational functions are examined. Other plans and detailed operating procedures relating to an individual operational function are referenced within this plan. This plan augments existing Technical Support Management Directives (TSMD's), Standard Practices, and other management documentation which will be followed where applicable. Author (revised)

N93-26420*# McDonnell-Douglas Space Systems Co., Cocoa Beach, FL.
TEST, CONTROL AND MONITOR SYSTEM MAINTENANCE PLAN
David P. Buehler and M. J. Lougheed 19 Jan. 1993 163 p
(Contract NAS10-11400)
(NASA-CR-193099; NAS 1.26:193099; TS-TCMS-92003) Avail: CASI HC A08/MF A02

The maintenance requirements for Test, Control, and Monitor System (TCMS) and the method for satisfying these requirements prior to First Need Date (FND) of the last TCMS set are described. The method for satisfying maintenance requirements following FND of the last TCMS set will be addressed by a revision to this plan. This maintenance plan serves as the basic planning document for maintenance of this equipment by the NASA Payloads Directorate (CM) and the Payload Ground Operations Contractor (PGOC) at KSC. The terms TCMS Operations and Maintenance (O&M), Payloads Logistics, TCMS Sustaining Engineering, Payload Communications, and Integrated Network Services refer to the appropriate NASA and PGOC organization. For the duration of their contract, the Core Electronic Contractor (CEC) will provide a Set Support Team (SST). One of the primary purposes of this team is to help NASA and PGOC operate and maintain TCMS. It is assumed that SST is an integral part of TCMS O&M. The purpose of this plan is to describe the maintenance concept for TCMS hardware and system software in order to facilitate activation, transition planning, and continuing operation. When software maintenance is mentioned in this plan, it refers to maintenance of TCMS system software. Author (revised)

IMPROVING INFORMATION SEARCH AT THE USER INTERFACE: THE IMPACT OF GRAPHICAL INNOVATION ON QUERY FORMULATION AND EXPRESSION Ph.D. Thesis
Troy Cannon Beecroft 1992 129 p
Avail: Univ. Microfilms Order No. DA9302035

The performance of current textual information retrieval systems is limited by informationally impoverished topic descriptions. User-interface innovation may be a suitable method for diminishing human difficulties in query specification. The utility of graphical user-interface artifacts was assessed in several problem areas. First, graphical network displays of index term relations are compared with list displays for their effectiveness in conveying the topical content of a database. Next, queries formed while referring to either a list or network term display are compared, with respect to composition and effectiveness, to a no-display condition. Finally, a traditional syntax for articulating Boolean queries was compared with a novel graphical specification. In each of the above cases, the graphical user-interface components demonstrated a potential to positively impact the query specification process. Dissert. Abstr.

HOW FAR WE ARE FROM THE COMPLETE KNOWLEDGE: COMPLEXITY OF KNOWLEDGE ACQUISITION IN DEMPSTER-SHAFER APPROACH
Bassam A. Chokr (Texas Univ., El Paso.) and Vladik Ya. Kreinovich (Texas Univ., El Paso.) 1991 21 p
(Grants NAG9-482; NSF CDA-90-15006)
(NASA-CR-192944; NAS 1.26:192944) Avail: CASI HC A03/MF A01

When a knowledge base represents the experts' uncertainty, then it is reasonable to ask how far we are from the complete knowledge, that is, how many more questions do we have to ask (to these experts, to nature by means of experimenting, etc) in order to attain the complete knowledge. Of course, since we do not know what the real world is, we cannot get the precise number of questions from the very beginning: it is quite possible, for example, that we ask the right question first and thus guess the real state of the world after the first question. So we have to estimate this number and use this estimate as a natural measure of completeness for a given knowledge base. We give such estimates for Dempster-Shafer formalism. Namely, we show that this average number of questions can be obtained by solving a simple mathematical optimization problem. In principle this characteristic is not always sufficient to express the fact that sometimes we have more knowledge. For example, it has the same value if we have an event with two possible outcomes and nothing else is known, and if there is an additional knowledge that the probability of every outcome is 0.5. We'll show that from the practical viewpoint this is not a problem, because the difference between the necessary number of questions in both cases is practically negligible. Author

THE GENERAL INFORMATION PROGRAMME (PGI) AND DEVELOPING COUNTRIES: A CASE STUDY OF IRAQ Ph.D. Thesis
Victoria Yousip Zado 1990 231 p
Avail: Univ. Microfilms Order No. BRDX97669

The existing information services in Iraq are inefficient and inadequate. They are contributing very little to the development process in the country. Therefore, they need to be improved and developed. The majority of the developing countries, of which Iraq is one and with which we are especially concerned, are undergoing a development process which, in itself, forms a force that develops demand for information services (libraries, documentation, and archives centers). The present situation of information services in Iraq are described, their deficiencies examined, and the possibility of establishing effective guidelines for their development within the conceptual framework of the General Information Programme (GPI) of Unesco, so that they can contribute to the national development plans of the country is considered. The vital role of information services in development and the functions of collecting, organizing, retrieving and disseminating information at the national, regional and international level is explained. The factors that are hindering the development of information services are identified. The measures and steps that must be taken to bring about a fundamental change in the development of these services in Iraq and that might be useful for other developing countries, especially Arab countries are identified.

AN ADVANCED DATA-ACQUISITION SYSTEM FOR WIND ENERGY PROJECTS
D. A. Simms and K. L. Cousineau Oct. 1992 10 p Presented at the Windpower '92, Seattle, WA, 19-23 Oct. 1992 Prepared in cooperation with Zond Systems, Inc., Tehachapi, CA
(Contract DE-AC02-83CH-10093)
(DE93-000079; NREL/TP-442-5102; CONF-921049-9) Avail: CASI HC A02/MF A01

NREL has subcontracted with Zond Systems, Inc. to develop an advanced data-acquisition system (ADAS) for wind energy projects. The ADAS can be used to simplify the process of making accurate measurements and analyzing. The system utilizes state-of-the-art electronics and telemetry to provide distributed multi-source, multi-channel data acquisition. Local stand-alone microprocessor-based data acquisition modules (DAMs) can be located near sources of measurement. These allow analog data values to be digitized close to the measurement source, thus eliminating the need for long data runs and slip rings. Signals from digital sensors and transducers can also be directly input to the local DAMS. A PC-based ground station is used to coordinate data transmission to and from all remote DAMS, display real-time values, archive data sets, and process and analyze results. The system is capable of acquiring synchronized time-series data from sensors and transducers under a variety of test configurations in an operational wind-park environment. Data acquisition needs of the wind industry differ significantly from those of most other technologies. Most conventional system designs do not handle data coming from multiple distributed sources, nor do they provide telemetry or the ability to mesh multiple incoming digital data streams. This paper describes the capabilities of the ADAS, and how its design and cost objectives are geared to meet anticipated US wind industry needs. DOE

USE OF FUZZY RELATIONAL INFORMATION RETRIEVAL TECHNIQUE FOR GENERATING CONTROL STRATEGIES IN RESOLUTION-BASED AUTOMATED REASONING Ph.D. Thesis
Yong-Gi Kim 1992 270 p
Avail: Univ. Microfilms Order No. DA9233293

Current resolution based automated theorem provers, such as ITP and OTTER, adopt strategies to avoid many fruitless paths by their judicious and 'informed' application. Without a suitable strategy guiding the inference, too many often irrelevant clauses may derive, and those clauses may lead the program easily into a blind alley. Therefore, the strategies are the must in any serious use of automated reasoning. Weighting strategy is one of the necessary strategies to produce an answer in allowably short time and space along with the set of support strategy in the area of the resolution based automated reasoning. But, the weighting strategy is still based on the user's knowledge or intuition of the problem to be solved. A method for control of inferential strategies of resolution based architectures is suggested, and then the method is applied to some of domains in automated reasoning fields to inspect the effect of the new scheme. Also, the results of using the various fuzzy implication operators were compared by means of the new weighting mechanism to give a choice of a fuzzy implication operator in a specific domain of automated reasoning. The method for speeding up the logical inference is tested in conjunction with both of the theorem provers called ITP and OTTER. The new weighting mechanism will help the user of the resolution based mechanical theorem prover decide the weighting pattern and the weights to reduce the deduction time and space automatically from the given input problem. The new mechanism employs the triangle fuzzy relational products and fast fuzzy relational algorithm. Dissert. Abstr.

CONCURRENCY CONTROL IN REAL-TIME DATABASE SYSTEMS Ph.D. Thesis
Oezguer Ulusoy 1992 214 p
Avail: Univ. Microfilms Order No. DA9305720

A 'real-time database system (RTDBS)' is a database system designed to provide real-time information to data-intensive applications. Each RTDB transaction is associated with a timing constraint, typically in the form of a deadline. It is difficult, in a RTDBS, to meet all timing constraints due to the consistency requirements of the underlying database. Efficient resource scheduling algorithms and concurrency control protocols are required to maximize the number of transactions satisfying their timing constraints. In our work, we concentrated on the concurrency control problem in RTDBS's. We evaluated the real-time performance of existing concurrency control approaches in RTDBS's, and we proposed new concurrency control protocols to improve the performance. The protocols take the real-time requirements of the transactions into account in ordering data accesses, while maintaining data consistency via enforcing serializability. The relative performance of the protocols was evaluated in both single-site and distributed RTDBS environments in terms of fraction of satisfied deadlines and average lateness of the tardy transactions. We also investigated the performance impact of different aspects of data distribution and data replication in distributed RTDBS's. Dissert. Abstr.

OPTIMIZATION OF KNOWLEDGE-BASED SYSTEMS AND EXPERT SYSTEM BUILDING TOOLS Final Technical Report, 1 Jan. 1986 - 31 Mar. 1993

Phyllis Yasuda and Donald McKellar 31 Mar. 1993 4 p
(Contract NCC2-342)
(NASA-CR-192763; NAS 1.26:192763) Avail: CASI HC A01/MF A01

The objectives of the NASA-AMES Cooperative Agreement were to investigate, develop, and evaluate, via test cases, the system parameters and processing algorithms that constrain the overall performance of the Information Sciences Division's Artificial Intelligence Research Facility. Written reports covering various aspects of the grant were submitted to the co-investigators for the grant. Research studies concentrated on the field of artificial intelligence knowledge-based systems technology. Activities included the following areas: (1) AI training classes; (2) merging optical and digital processing; (3) science experiment remote coaching; (4) SSF data management system tests; (5) computer integrated documentation project; (6) conservation of design knowledge project; (7) project management calendar and reporting system; (8) automation and robotics technology assessment; (9) advanced computer architectures and operating systems; and (10) honors program. A DISTRIBUTED HETEROGENEOUS CLIENT-SERVER ENVIRONMENT
W. M. Buckley and J. B. Carlson Apr. 1992 10 p Presented at the North American Ingres Users Association Meeting, Tarpan Springs, FL, May 1992
(Contract W-7405-eng-48)
(DE93-007496; UCRL-JC-109178; CONF-9205138-3) Avail: CASI HC A02/MF A01

What we have done and will be doing to facilitate operations in a networked multi-vendor environment used by chemists who will not need to know details of how their data migrates between various environments is addressed. The Nuclear Chemistry Division at Lawrence Livermore National Laboratory (LLNL) is using Ingres Release 6.3 in VMS and Sun-OS environments on VAXes, Suns, and Solbournes to manage and analyze data that support the division's missions. The database and applications reside in both the VMS and UNIX environments. Additionally, they have to exchange data and otherwise cooperate with MS-DOS PC's, Macintoshes, remote Ingres databases, and other commercial database products. This environment is relatively seamless and transparent to the users and we strive to use commercial off-the-shelf solutions wherever practical. A very general client-server computing environment is described, but neither a leading-edge client-server environment nor federated or other multidatabase concepts are described. What is described is a cooperative environment that is heterogeneous with respect to hardware and software vendors, network protocols, and user community. Our approach to constructing this cooperative environment and some aspects of our management of that environment are discussed. DOE

HIERARCHICAL DYNAMICS IN DISTRIBUTED INFORMATION PROCESSING Ph.D. Thesis
Erik Daniel Lumer 1992 127 p
Avail: Univ. Microfilms Order No. DA9234132

The large size of distributed processing systems, the nontrivial dynamics of their local processes, and the emergence of collective states having a computational interpretation, call for new theories which predict the behavior of these systems and point at the relevant macroscopic measures with which to characterize them. This dissertation focuses on the collective computation that arises in the context of two phenomena: decentralized resource allocation in distributed system, and visual processing with large assemblies of oscillators. In the study of decentralized resource allocation, a renormalization group analysis elucidates the relationship between individual interactions and global migration of resources among clusters when the interactions follow a hierarchy of time scales. From this study, a formal hierarchy that manages computational resources is derived and its dynamics in the face of delays and so-called informal links is investigated theoretically. Experiments on a hypercube parallel computer confirm the predicted regimes. For the model of visual processing, the basic conditions under which collective rhythmic activity can exist in a population of phase coupled oscillators with a hierarchy of coupling strengths and a distribution of intrinsic frequencies are established. Novel regimes, such as a cascade of discrete phase transitions into global synchrony, are also exhibited. These regimes are interpreted in terms of grouping and segmentation operations in the visual system. A solution to the problem of internal access to the perceptual groups constructed in this way is given in the form of a dynamic network called the phase-tracker of attention. Simulations show that the network's behavior matches a number of psychophysical observations on human visual attention. Dissert. Abstr.

AN EXPERIMENTAL EXAMINATION OF THE EFFECTS OF EXPERTISE AND PROBLEM-SOLVING CUES ON THE IDENTIFICATION OF IDEAS FOR STRATEGIC INFORMATION SYSTEMS Ph.D. Thesis
Jeffrey Lynn Sampler 1992 280 p
Avail: Univ. Microfilms Order No. DA9304198

The topic of developing strategic information systems, and potentially using them to gain competitive advantage, has been a focus of much research activity over the past decade. The result of this literature has been the development of several frameworks to aid in the identification of strategic information applications. Unfortunately, only one comparative study evaluating these techniques has been performed, and this study did not examine the role of expertise of subjects solving the task (Bergeron, Buteau, and Raymond, 1991). The purpose of this dissertation was to look at the role of individual expertise and problem solving cues as they affect the definition of the strategic information system. These questions were investigated in a 2 x 2 x 4 factorial designed experiment with factors of: (1) type of expertise (banking and IS); (2) level of expertise (expert and novice); and (3) problem solving cue (control, 'Be Creative', Competitive Forces, and CRLC). Using multivariate and univariate analysis of variance, it appears that expertise in both banking and IS is necessary to develop solutions of high quality, usefulness, and feasibility. Also, banking expertise is necessary to develop solutions that are specific, detailed, and well justified. The problem solving cue used by subjects had no significant effect on the quality of the solutions developed. In one treatment of the dependent variables, there was a significant interaction effect between IS expertise and problem solving cues. Dissert. Abstr.

FACTORS ASSOCIATED WITH PERCEPTIONS OF PRODUCTIVITY AND USAGE OF INFORMATION TECHNOLOGY IN A SERVICE ORGANIZATION Ph.D. Thesis
Shashi Rao Karpur 1992 174 p
Avail: Univ. Microfilms Order No. DA9302118

One of the most important issues facing organizations is to evaluate the value gained from information and communication technologies, particularly in terms of productivity. While there have been numerous economic justifications for implementing information systems, this study argues for the importance of defining productivity from an end-user point of view. The objective of this study was to understand user perceptions of productivity from utilizing information technology in their work environment, to examine the relationship between these perceptions and usage of the technology, and to explore the association of individual, organizational and technical factors with these dependent variables. Data for the study was collected using survey methodology from 289 users of banking automation systems at a large Northeast regional bank. Self-report survey data was enhanced with actual data on system usage. Four hypotheses were proposed that tested a research model outlining the relationship between perceived productivity, system usage, and individual, organizational, and technical variables. Results showed that users perceived their productivity to have increased from using the banking automation system. These perceptions were attributed to feelings of being more efficient and competent because of the system, having the ability to be creative and flexible, and from just having the access to using the technology. Perceptions of productivity were most strongly associated with users' satisfaction with technical characteristics of the system, with their attitude towards computers, their rating of their skill level, and with their satisfaction with system-relevant communication and training. Satisfaction with enhancements to the system also proved important. Although a significant relationship between user perceptions of productivity and usage of the system was established, the strength of the relationship was only moderate. Again, satisfaction with technical characteristics and organizational support variables were most significantly associated with usage. The study also found that self-reports on usage when compared with actual data was reasonably reliable. The study provided directions to increase the value of information technology by highlighting factors most important to enhancing user perceptions of productivity and their usage of the technology. Dissert. Abstr.

WAVELET TRANSFORM-VECTOR QUANTIZATION COMPRESSION OF SUPERCOMPUTER OCEAN MODEL SIMULATION OUTPUT
J. N. Bradley and C. M. Brislawn 12 Nov. 1992 13 p Presented at the 1993 Data Compression Conference, Snowbird, UT, 30 Mar. - 1 Apr. 1993
(Contract W-7405-eng-36)
(DE93-005453; LA-UR-92-4002; CONF-930390-1) Avail: CASI HC A03/MF A01

We describe a new procedure for the efficient compression of digital information for storage and transmission purposes. The algorithm involves a discrete wavelet transform subband decomposition of the data set. This is followed by vector quantization of the wavelet transform coefficients using application-specific vector quantizers. The new vector quantizer design procedure optimizes the assignment of both memory resources and vector dimensions to the transform subbands by minimizing an exponential rate-distortion functional subject to constraints on both overall bit-rate and encoder complexity. The wavelet-vector quantization method, which originates in digital image compression, is applicable to the compression of other multidimensional data sets possessing some degree of smoothness. In this paper, we discuss the use of this technique for compressing the output of supercomputer simulations of global climate models. The data presented here comes from Semtner-Chervin global ocean models run at the National Center for Atmospheric Research and at the Los Alamos Advanced Computing Laboratory. DOE

A LOGIC-BASED APPROACH TO FEDERATED DATABASES Ph.D. Thesis
Whan-Kyu Whang 1992 149 p
Avail: Univ. Microfilms Order No. DA9304071

Current systems for federated database management have concentrated on either schema integration using semantic models or query processing by the relational model, but not both issues in a single framework. In this dissertation we explored an alternative approach to database integration based on using Horn-clause logic as a canonical, intermediate form. First-order logic is used as a language for specifying an integration of component schemas as well as expressing integrity constraints associated with global and component schemas. A first-order logic-based language is rich enough to be used for canonical representation at the intermediate level. Global to local query mapping is done using unification in logic programming. Query optimization is performed using integrity constraints such as functional, inclusion, and data integration dependencies. Moreover, the logic programming language PROLOG can provide a tool for implementation. Therefore, the logic-based approach increases processing capability by providing a single formal framework for design and implementation of integrating heterogeneous databases. In this dissertation we deal with schemas of relational databases as component schemas. To generate a single integrated schema from component schemas at the initial phase of schema integration, five types of equivalences (EQUAL, CONTAIN, CONTAINED IN, OVERLAP, DISJOINT) are to be identified between a pair of relations. An algorithm is developed to aid the designer in deriving new equivalences from partially known equivalences as well as to check the consistency of equivalences that are previously specified. To provide set operations on the component relations related to one another by the five types of equivalences, we have developed an extended SQL (ESQL). The set operations in ESQL are expressed non-procedurally in a single statement, unlike conventional SQL which requires blocks of code with set operations among the blocks. The overall approach to processing of queries in ESQL, their optimization, and decomposition against component databases is discussed. Several parts of the proposed architecture are implemented using PROLOG. Dissert. Abstr.

ADAPTIVE DECISION SUPPORT SYSTEMS: CONCEPTS, CHARACTERIZATION, AND AN APPLICATION Ph.D. Thesis
Jigish Shirish Zaveri 1992 306 p
Avail: Univ. Microfilms Order No. DA9303651

An examination of machine learning strategies employed in existing decision support system (DSS) paradigms suggests that problem processing knowledge (PPK) is acquired through one or more supervised learning strategies. Therefore, specific instances of these paradigms are dependent, to varying degrees, upon external agents for acquiring needed PPK. Such dependence imposes two limitations on a system: (1) the extent of its intelligence is largely governed by the agent's intelligence, and (2) in typical, dynamic contexts, the system soon becomes obsolete unless its PPK is continually updated with the aid of an agent. A possible alternative is to construct a system with the ability to independently acquire, utilize, and dispose of some or all of the needed PPK during the course of one or more problem processing episodes, and to generalize what has been learned to other, similar problem instances. Such an approach is especially desirable in complex domains where predefinition of PPK may be impossible and/or undesirable. A new DSS paradigm called the Adaptive DSS (AdDSS) is proposed, it is characterized in terms of key problem processing features, it is contrasted with existing paradigms, and a prototype system within one application context is constructed and tested. By our definition, an AdDSS possesses a problem processor which makes heavy use of some form of unsupervised induction, in addition to rote and, perhaps, other forms of learning. Thus, unlike earlier paradigns, AdDSS has the ability to acquire some or much of its PPK without the assistance of an external entity. In order to examine the viability of developing useful AdDSS's in practice, the paradigm is applied in developing a DSS to support static scheduling decisions in flexible manufacturing contexts and study its performance through a series of experiments. This system uses generic algorithms in conjunction with predefined algorithmic search knowledge to effectively combine unsupervised induction with rote learning. Our experiments seek to contrast the performance of the AdDSS with systems relying wholly on memorization, analyze its learning behavior, and assess its ability to automatically specify some of the needed input parameters.

DESIGN AND ANALYSIS OF ALGORITHMS FOR PROCESSING QUERIES IN DATABASE SYSTEMS Ph.D. Thesis
Shu-Shang Sam Wei 1992 174 p
Avail: Univ. Microfilms Order No. DA9238296

This dissertation studies various strategies for reducing I/O costs in database systems in the following perspectives. (1) Join operations in relational database system. While an indexed file structure is available for each operand relation, join operations are usually modeled by page connectivity graphs. In such graphs, each node represents a page of a relation and two nodes are linked with an edge if their corresponding pages contain tuples that may need to be joined. Two problems regarding reducing I/O costs are widely studied. They are the minimum page retrieval problem and the minimum buffer size problem. The minimum page retrieval problem asks for a page retrieval sequence to perform a join operation such that the number of disk pages retrieved into a given fixed size memory buffer is minimum. The minimum buffer size problem asks for a page retrieval sequence to perform a join operation such that each page is retrieved at most once and the size of the memory buffer required is minimum. These two problems are both known to be NP-hard in general cases. We first show that the minimum page retrieval problem remains NP-hard when the page connectivity graph is bipartite. Then we discover that the page connectivity graphs of many frequently encountered join operations belong to a special class of graphs called 'forward-convex bipartite graphs'. For such graphs, we propose an efficient algorithm for each of the above problems. (2) Composition operation is relational database systems. The page connectivity graphs do not model composition operations as successfully as they do join operations. For composition operation, we propose a heuristic algorithm which uses a new hot-spot technique. (3) Linear recursive rules in deductive database systems. The page connectivity graphs are also useless for describing the processing of recursive rules in deductive databases. In such cases, we develop a methodology that utilizes a multiple query optimization technique to generate a query processing plan where the number of relations accessed is minimum. Dissert. Abstr.

PERFORMANCE STUDIES OF CACHE CONSISTENCY AND CONCURRENCY CONTROL ALGORITHMS IN A DISTRIBUTED CLIENT/SERVER DBMS ARCHITECTURE Ph.D. Thesis
Yongdong Wang 1992 206 p
Avail: Univ. Microfilms Order No. DA9305108

This dissertation presents a performance study of database concurrency control and application program cache consistency algorithms in a distributed

client/server database system (DBMS) architecture. The database resides on the server and application programs. To reduce object access latency and network and server load, objects are cached in the application program. Mechanisms must be provided to guarantee that concurrent transactions accessing the cached objects and the database do not interfere with each other. We distinguished between caching within a transaction (intra-transaction) and between transactions (inter-transaction). Two intra-transaction cache consistency algorithms and five inter-transaction cache consistency algorithms are described. A simulator was developed to compare the average transaction response time and server throughput rate for these algorithms under different workloads and system configurations. The simulator supported an innovative object reference model. Four workloads were included in our experiments: small batch transactions, large batch transactions, interactive transactions, and mixed transactions. System configurations included a system where the server CPU was the bottleneck, a system where the server disk was the bottleneck, a system where the network was the bottleneck, and systems with different client cache sizes. Our simulation experiments show that two-phase locking and call-back locking dominate no-wait locking and no-wait locking with notification where the server or the network is a bottleneck. Callback locking is better than two-phase locking when the intertransaction locality is high and the probability of object update is low because it avoids handshake with the server when accessing cached objects. Two-phase locking is better when write probability is high because it causes the least number of transaction restarts. When the server disk is a bottleneck, no-wait locking with notification performs the best because it propagates updates to clients directly and hence saves server disk I/O's. It is critical for client caches to be larger than the working set of the applications on a client. Dissert. Abstr.

DISTRIBUTED INFORMATION STORAGE Ph.D. Thesis
James Richard Roche 1992 130 p
Avail: Univ. Microfilms Order No. DA9234155

Information is distributed in many different applications. In conventional parallel processing, for example, data is distributed in order to speed up computation. We consider the less-studied problem of distributing data among different sites for fault-tolerance. The primary example that we consider involves storing information on a network of disks so that the information can be recovered reliably even when some of the disks fail. The techniques developed in this thesis apply equally well, however, to problems in which communication links can fail and information packets can be lost. Using techniques from Galois field theory and network flow theory, we show how to store information at different sites with an absolute minimum of redundancy so as to prevent any loss of data if several sites become inaccessible. We allow the different sites to have different storage capacities and to be arranged in a variety of network topologies. The theoretical results on reliable information storage derived for general networks can be specialized to a particular configuration of disks that is widely used in practice. Although the information storage scheme for this configuration is simple in principle, there are practical difficulties because of the need to update parity-check blocks continually as data blocks are modified. For the setup above, the delay between reading a parity block and writing its updated value back onto the disk can seriously degrade the performance of a disk array. We analyze a technique called floating parity track that dramatically reduces the average delay between reading and writing a parity block. We find that the delay can typically be reduced by a factor of thirty in return for a slight decrease in storage efficiency.

A FRAMEWORK FOR THE DESIGN OF USABLE ELECTRONIC TEXT Ph.D. Thesis
Andrew Patrick Dillon 1991 258 p
Avail: Univ. Microfilms Order No. BRDX97673

This thesis examines the human issues underlying the design and usability of electronic text systems. In so doing it develops a framework for the conceptualization of these issues that aims to guide designers of electronic texts in their attempts to produce usable systems. The thesis commences with a review of the traditional human factors literature on electronic text according to three basic themes: its concern with perceptual, manipulatory and structural issues. From this examination it is concluded that shortcomings in translating this work into design result from the adoption of overly narrow uni-disciplinary views of reading taken from cognitive psychology and information science which are inappropriate to serve the needs of electronic text designers. In an attempt to provide a more relevant description of the reading process a series of studies examining readers and their views as well as uses of texts if reported. In the first, a repertory grid based investigation revealed that all texts can be described in reader-relevant terms according to three criteria: why a text is read, what a text contains and how it is read. These criteria then form the basis of two investigations of reader-text interaction using academic journals and user manuals. The results of these studies highlighted the need to consider readers' models of a document's structure in discussing text usability. Subsequent experimental work on readers' models of academic articles demonstrated not only that such models are important aspects of reader-text interaction but that data of this form could usefully be employed in the design of an electronic text system. The proposed framework provides a broad, qualitative model of the important issues for designers to consider when developing a product. It consists of four interactive elements that focus attention on aspects of reading that have been identified as central to usability. Simple tests of the utility and validity of the framework are reported and it is shown that the framework both supports reasoned analysis and subsequent prediction of reader behavior as well as providing a parsimonious account of their verbal utterances while reading. The thesis concludes with an analysis of the likely uses of such a framework and the potential for electronic text systems in an increasingly information-hungry world. Dissert. Abstr.

INTEGRATED DEVELOPMENT SUPPORT ENVIRONMENT (IDSE) Interim Report, Jan. 1990 - Mar. 1991
Richard J. Mayer, Martha S. Wells, and Michael K. Painter Nov. 1992 68 p
(Contract MIPR-FQ7624-90-00010; AF Proj. 2940)
(AD-A261088; AL-TP-1992-0052) Avail: CASI HC A04/MF A01

Businesses today are rapidly recognizing that information assets are a resource that belongs to, and can be more effectively used by, the enterprise as a whole to realize major advancements in competitiveness. Attempts to leverage and reuse these assets, however, have long been plagued by the inability of our information systems to adapt and evolve gracefully to a changing environment. The ability to leverage corporate information assets therefore necessitates an altogether new way of thinking about, and developing, enterprise information systems. If information is to be controlled and managed as a global enterprise resource, then enterprise information systems will require the consistent, long-term involvement of large numbers of individuals, many of whom are not computer specialists. An Integrated Development Support Environment (IDSE) provides a system which supports user-driven development and evolution of information systems through graceful change to both (1) the information needs to be supported, and (2) the degree and types of automation. This report describes the design concepts for an IDSE centering around a scalable architectural design strategy enabling enterprise-level evaluation towards the desired levels of integration, automation, and sophistication. APPLIED INFORMATION SYSTEMS RESEARCH PROGRAM (AISRP). WORKSHOP 2: MEETING PROCEEDINGS
1992 262 p Workshop held in Boulder, CO, 11-13 Aug. 1992 Sponsored by NASA. Washington
(NASA-CR-193096; NAS 1.26:193096) Avail: CASI HC A12/MF A03

The Earth and space science participants were able to see where the current research can be applied in their disciplines and computer science participants could see potential areas for future application of computer and information systems research. The Earth and Space Science research proposals for the High Performance Computing and Communications (HPCC) program were under evaluation. Therefore, this effort was not discussed at the AISRP Workshop. OSSA's other high priority area in computer science is scientific visualization, with the entire second day of the workshop devoted to it. For individual titles, see N93-25793 through N93-25814.

AN INTERACTIVE ENVIRONMENT FOR THE ANALYSIS OF LARGE EARTH OBSERVATION AND MODEL DATA SETS Abstract Only
Kenneth P. Bowman, John E. Walsh, and Robert B. Wilhelmson *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

We propose to develop an interactive environment for the analysis of large Earth science observation and model data sets. We will use a standard scientific data storage format and a large capacity (greater than 20 GB) optical disk system for data management; develop libraries for coordinate transformation and regridding of data sets; modify the NCSA X Image and X Data Slice software for typical Earth observation data sets by including map transformations and missing data handling; develop analysis tools for common mathematical and statistical operations; integrate the components described above into a system for the analysis and comparison of observations and model results; and distribute software and documentation to the scientific community. Author

INTERACTIVE INTERFACE FOR NATIONAL CENTER FOR ATMOSPHERIC RESEARCH (NCAR) GRAPHICS Abstract Only
William Buzbee and Robert L. Lackman *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

NCAR Graphics is a FORTRAN 77 library of over 30 high-level graphics modules which are heavily used by science and engineering researchers at over 1500 sites world-wide including many universities and government agencies. These Earth science oriented modules now have a FORTRAN callable subroutine interface which excludes their use by non-programming researchers. This proposal outlines the development of a fully interactive 'point and click' menu-based interface using the prevailing toolkit standard for the X-window systems. Options for direct output to the display window and/or output to a Computer Graphics Metafile (CGM) will be provided. X, PEX, and PHIGS will be implemented as the underlying windowing and graphics standards. Associated meteorological and geometric data sets would exploit the network extended NASA Common Data Format, netCDF. Author

DEVELOPMENT OF A TOOL-SET FOR SIMULTANEOUS, MULTI-SITE OBSERVATIONS OF ASTRONOMICAL OBJECTS Abstract Only c89
Supriya Chakrabarti, J. Garrett Jernigan, and Herman L. Marshall *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

A network of ground and space based telescopes can provide continuous observation of astronomical objects. In a 'Target of Opportunity' scenario triggered by the system, any telescope on the network may request supporting observations. We propose to develop a set of data collection and display tools to support these observations. We plan to demonstrate the usefulness of this tool set for simultaneous multi-site observations of astronomical targets. Possible candidates for the proposed demonstration include the Extreme Ultraviolet Explorer, International Ultraviolet Explorer, ALEXIS, and sounding rocket experiments. Ground based observations operated by the University of California, Berkeley; the Jet Propulsion Laboratory; and Fairborn Observatory, Mesa, Arizona will be used to demonstrate the proposed concept. Although the demonstration will involve astronomical investigations, these tools will be applicable to a large number of scientific disciplines. The software tools and systems developed as a result of our work will be made available to the scientific community. Author

MULTIVARIATE STATISTICAL ANALYSIS SOFTWARE TECHNOLOGIES FOR ASTROPHYSICAL RESEARCH INVOLVING LARGE DATA BASES
Stanislav Djorgovski *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 2 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

The existing and forthcoming data bases from NASA missions contain an abundance of information whose complexity cannot be efficiently tapped with simple statistical techniques. Powerful multivariate statistical methods already exist which can be used to harness much of the richness of these data. Automatic classification techniques have been developed to solve the problem of identifying known types of objects in multi parameter data sets, in addition to leading to the discovery of new physical phenomena and classes of objects. We propose an exploratory study and integration of promising techniques in the development of a general and modular classification/analysis system for very large data bases, which would enhance and optimize data management and the use of human research resources. A LAND-SURFACE TESTBED FOR EOSDIS Abstract Only
William Emery, Jeff Dozier (California Univ., Santa Barbara.), and Paul Rotar (National Center for Atmospheric Research, Boulder, CO.) *In its* Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

We propose to develop an on-line data distribution and interactive display system for the collection, archival, distribution and analysis of operational weather satellite data for applications in land surface studies. A 1,000 sq km scene of the western U.S. (centered on the Colorado Rockies) will be extracted from Advanced Very High Resolution Radiometer (AVHRR) imagery collected from morning and afternoon passes of the NOAA polar-orbiters at the direct readout stations operated by CU/CCAR. All five channels of these AVHRR data will be navigated and map registered at CU/CCAR and then be transferred to NCAR for storage in an on-line data system. Software will also be available at NCAR to process and navigate the raw AVHRR data as needed. A display workstation software, based on a Macintosh II computer, will be developed that will display and further process the AVHRR data for studies of vegetation monitoring and snowpack assessment. Various options of presently used techniques for both vegetation and snowpack monitoring will be implemented in the workstation software to provide the individual investigator with the freedom to interact with the satellite image data. The display software will be freely distributed online to interested investigators and the AVHRR data will be made available on-line to anyone interested. In addition, potential users will be sought out and connected to the on-line data archive. This experiment with an active on-line archive and interactive analysis systems will provide experience with a small scale EOSDIS. Author

GEOGRAPHIC INFORMATION SYSTEM FOR FUSION AND ANALYSIS OF HIGH-RESOLUTION REMOTE SENSING AND GROUND TRUTH DATA Abstract Only
Anthony Freeman, Jo Bea Way, Pascale DuBois, and Franz Leberl (Vexcel Corp., Boulder, CO.) *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 2 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

We seek to combine high-resolution remotely sensed data with models and ground truth measurements, in the context of a Geographical Information System, integrated with specialized image processing software. We will use this integrated system to analyze the data from two Case Studies, one at a bore AI forest site, the other a tropical forest site. We will assess the information content of the different components of the data, determine the optimum data combinations to study biogeophysical changes in the forest, assess the best way to visualize the results, and validate the models for the forest response to different radar wavelengths/polarizations. During the 1990's, unprecedented amounts of high-resolution images from space of the Earth's surface will become available to the applications scientist from the LANDSAT/TM series, European and Japanese ERS-1 satellites, RADARSAT and SIR-C missions. When the Earth Observation Systems (EOS) program is operational, the amount of data available for a particular site can only increase. The interdisciplinary scientist, seeking to

use data from various sensors to study his site of interest, may be faced with massive difficulties in manipulating such large data sets, assessing their information content, determining the optimum combinations of data to study a particular parameter, visualizing his results and validating his model of the surface. The techniques to deal with these problems are also needed to support the analysis of data from NASA's current program of Multi-sensor Airborne Campaigns, which will also generate large volumes of data. In the Case Studies outlined in this proposal, we will have somewhat unique data sets. For the Bonanza Creek Experimental Forest (Case I) calibrated DC-8 SAR data and extensive ground truth measurement are already at our disposal. The data set shows documented evidence to temporal change. The Belize Forest Experiment (Case II) will produce calibrated DC-8 SAR and AVIRIS data, together with extensive measurements on the tropical rain forest itself. The extreme range of these sites, one an Arctic forest, the other a tropical rain forest, has been deliberately chosen to find common problems which can lead to generalized observations and unique problems with data which raise issues for the EOS System. CONSTRUCTION OF AN ADVANCED SOFTWARE TOOL FOR PLANETARY ATMOSPHERIC MODELING c61

Peter Friedland, Richard M. Keller, Christopher P. McKay, Michael H. Sims, and David E. Thompson *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 2 p (For primary document see N93-25792 09-82)

Avail: CASI HC A01/MF A03

Scientific model-building can be a time intensive and painstaking process, often involving the development of large complex computer programs. Despite the effort involved, scientific models cannot be distributed easily and shared with other scientists. In general, implemented scientific models are complicated, idiosyncratic, and difficult for anyone but the original scientist/programmer to understand. We propose to construct a scientific modeling software tool that serves as an aid to the scientist in developing, using and sharing models. The proposed tool will include an interactive intelligent graphical interface and a high-level domain-specific modeling language. As a test bed for this research, we propose to develop a software prototype in the domain of planetary atmospheric modeling. Author

SYSTEM OF EXPERTS FOR INTELLIGENT DATA MANAGEMENT (SEIDAM) Abstract Only

David G. Goodenough, Joji Iisaka, and Ko Fung (Ottawa Univ., Ontario.) *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)

Avail: CASI HC A01/MF A03

It is proposed to conduct research and development on a system of expert systems for intelligent data management (SEIDAM). CCRS has much expertise in developing systems for integrating geographic information with space and aircraft remote sensing data and in managing large archives of remotely sensed data. SEIDAM will be composed of expert systems grouped in three levels. At the lowest level, the expert systems will manage and integrate data from diverse sources, taking account of symbolic representation differences and varying accuracies. Existing software can be controlled by these expert systems, without rewriting existing software into an Artificial Intelligence (AI) language. At the second level, SEIDAM will take the interpreted data (symbolic and numerical) and combine these with data models. At the top level, SEIDAM will respond to user goals for predictive outcomes given existing data. The SEIDAM Project will address the research areas of expert systems, data management, storage and retrieval, and user access and interfaces. Author

KNOWLEDGE-BASED ASSISTANCE FOR SCIENCE VISUALIZATION AND ANALYSIS USING LARGE DISTRIBUTED DATABASES Abstract Only

Thomas H. Handley, Jr., Allan S. Jacobson, Richard J. Doyle, and Donald J. Collins *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)

Avail: CASI HC A01/MF A03

Within this decade, the growth in complexity of exploratory data analysis and the sheer volume of space data require new and innovative approaches to support science investigators in achieving their research objectives. To date, there have been numerous efforts addressing the individual issues involved in inter-disciplinary, multi-instrument investigations. However, while successful in small scale, these efforts have not proven to be open and scaleable. This proposal addresses four areas of significant need: scientific visualization and analysis; science data management; interactions in a distributed, heterogeneous environment; and knowledge-based assistance for these functions. The fundamental innovation embedded within this proposal is the integration of three automation technologies, namely, knowledge-based expert systems, science visualization and science data management. This integration is based on the concept called the Data Hub. With the Data Hub concept, NASA will be able to apply a more complete solution to all nodes of a distributed system. Both computation nodes and interactive nodes will be able to effectively and efficiently use the data services (access, retrieval, update, etc.) with a distributed, interdisciplinary information system in a uniform and standard way. This will allow the science investigators to concentrate on their scientific endeavors, rather than to involve themselves in the intricate technical details of the systems and tools required to accomplish their work. Thus, science investigators need not be programmers. The emphasis will be on the definition and prototyping of system elements with sufficient detail to enable data analysis and interpretation leading to publishable scientific results. In addition, the proposed work includes all the required end-to-end components and interfaces to demonstrate the completed concept. Author

N93-25802*# Colorado Univ., Boulder.

EXPERIMENTER'S LABORATORY FOR VISUALIZED INTERACTIVE SCIENCE Abstract Only

Elaine R. Hansen, Marjorie K. Klemp, Sally W. Lasater, Marti R. Szczur (National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, MD.), and Joseph B. Klemp (National Center for Atmospheric Research, Boulder, CO.) *In its* Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)

Avail: CASI HC A01/MF A03

The science activities of the 1990's will require the analysis of complex phenomena and large diverse sets of data. In order to meet these needs, we must take advantage of advanced user interaction techniques: modern user interface tools; visualization capabilities; affordable, high performance graphics workstations; and interoperable data standards and translator. To meet these needs, we propose to adopt and upgrade several existing tools and systems to create an experimenter's laboratory for visualized interactive science. Intuitive human-computer interaction techniques have already been developed and demonstrated at the University of Colorado. A Transportable Applications Executive (TAE+), developed at GSFC, is a powerful user interface tool for general purpose applications. A 3D visualization package developed by NCAR provides both color shaded surface displays and volumetric rendering in either index or true color. The Network Common Data Form (NetCDF) data access library developed by Unidata supports creation, access and sharing of scientific data in a form that is self-describing and network transparent. The combination and enhancement of these packages constitutes a powerful experimenter's laboratory capable of meeting key science needs of the 1990's. This proposal encompasses the work required to build and demonstrate this capability. Author

TOPOGRAPHY FROM SHADING AND STEREO Abstract Only

Berthold P. Horn and Michael Caplinger (Arizona State Univ., Tempe.) *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)

Avail: CASI HC A01/MF A03

Methods exploiting photometric information in images that have been developed in machine vision can be applied to planetary imagery. Present techniques, however, focus on one visual cue, such as shading or binocular

stereo, and produce results that are either not very accurate in an absolute sense or provide information only at few points on the surface. We plan to integrate shape from shading, binocular stereo and photometric stereo to yield a robust system for recovering detailed surface shape and surface reflectance information. Such a system will be useful in producing quantitative information from the vast volume of imagery being received, as well as in helping visualize the underlying surface. The work will be carried out on a popular computing platform so that it will be easily accessible to other workers. Author

A DISTRIBUTED SYSTEM FOR VISUALIZING AND ANALYZING MULTIVARIATE AND MULTIDISCIPLINARY DATA Abstract Only
Allan S. Jacobson, Mark Allen, Michael Bailey, Ronald Blom, Leo Blume, and Lee Elson *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

The Linked Windows Interactive Data System (Link Winds) is being developed with NASA support. The objective of this proposal is to adapt and apply that system in a complex network environment containing elements to be found by scientists working multidisciplinary teams on very large scale and distributed data sets. The proposed three year program will develop specific visualization and analysis tools, to be exercised locally and remotely in the Link Winds environment, to demonstrate visual data analysis, interdisciplinary data analysis and cooperative and interactive televisualization and analysis of data by geographically separated science teams. These demonstrations will involve at least two science disciplines with the aim of producing publishable results. Author

MULTI-LAYER HOLOGRAPHIC BIFURCATIVE NEURAL NETWORK SYSTEM FOR REAL-TIME ADAPTIVE EOS DATA ANALYSIS
Hua-Kuang Liu, K. Huang (University of Southern California, Los Angeles.), and J. Diep *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 2 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

Optical data processing techniques have the inherent advantage of high data throughout, low weight and low power requirements. These features are particularly desirable for onboard spacecraft in-situ real-time data analysis and data compression applications. The proposed multi-layer optical holographic neural net pattern recognition technique will utilize the nonlinear photorefractive devices for real-time adaptive learning to classify input data content and recognize unexpected features. Information can be stored either in analog or digital form in a nonlinear photorefractive device. The recording can be accomplished in time scales ranging from milliseconds to microseconds. When a system consisting of these devices is organized in a multi-layer structure, a feed forward neural net with bifurcating data classification capability is formed. The interdisciplinary research will involve the collaboration with top digital computer architecture experts at the University of Southern California. Author

DEVELOPMENT OF AN EXPERT DATA REDUCTION ASSISTANT
Glenn E. Miller, Mark D. Johnston, and Robert J. Hanisch *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

We propose the development of an expert system tool for the management and reduction of complex data sets. The proposed work is an extension of a successful prototype system for the calibration of CCD images developed by Dr. Johnston in 1987. The reduction of complex multi-parameter data sets presents severe challenges to a scientist. Not only must a particular data analysis system be mastered, (e.g. IRAF/SDAS/MIDAS), large amounts of data can require many days of tedious work and supervision by the scientist for even the most straightforward reductions. The proposed Expert Data Reduction Assistant will help the scientist overcome these obstacles by developing a reduction plan based on the data at hand and producing a script for the reduction of the data in a target common language. Author

N93-25809*# Maryland Univ., College Park.
VIEWCACHE: AN INCREMENTAL POINTER-BASED ACCESS METHOD FOR AUTONOMOUS INTEROPERABLE DATABASES Abstract Only
N. Roussopoulos and Timos Sellis *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

One of biggest problems facing NASA today is to provide scientists efficient access to a large number of distributed databases. Our pointer-based incremental database access method, VIEWCACHE, provides such an interface for accessing distributed data sets and directories. VIEWCACHE allows database browsing and search performing inter-database cross-referencing with no actual data movement between database sites. This organization and processing is especially suitable for managing Astrophysics databases which are physically distributed all over the world. Once the search is complete, the set of collected pointers pointing to the desired data are cached. VIEWCACHE includes spatial access methods for accessing image data sets, which provide much easier query formulation by referring directly to the image and very efficient search for objects contained within a two-dimensional window. We will develop and optimize a VIEWCACHE External Gateway Access to database management systems to facilitate distributed database search. Author

ADVANCED DATA VISUALIZATION AND SENSOR FUSION: CONVERSION OF TECHNIQUES FROM MEDICAL IMAGING TO EARTH SCIENCE Abstract Only
Richard C. Savage, Chin-Tu Chen (Chicago Univ., IL.), Charles Pelizzari (Chicago Univ., IL.), and Veerabhadran Ramanathan (Chicago Univ., IL.) *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

Hughes Aircraft Company and the University of Chicago propose to transfer existing medical imaging registration algorithms to the area of

multi-sensor data fusion. The University of Chicago's algorithms have been successfully demonstrated to provide pixel by pixel comparison capability for medical sensors with different characteristics. The research will attempt to fuse GOES, AVHRR, and SSM/I sensor data which will benefit a wide range of researchers. The algorithms will utilize data visualization and algorithm development tools created by Hughes in its EOSDIS prototyping. This will maximize the work on the fusion algorithms since support software (e.g. input/output routines) will already exist. The research will produce a portable software library with documentation for use by other researchers. Author

HIGH PERFORMANCE COMPRESSION OF SCIENCE DATA Abstract Only
James A. Storer and Martin Cohn *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

In the future, NASA expects to gather over a tera-byte per day of data requiring space for levels of archival storage. Data compression will be a key component in systems that store this data (e.g., optical disk and tape) as well as in communications systems (both between space and Earth and between scientific locations on Earth). We propose to develop algorithms that can be a basis for software and hardware systems that compress a wide variety of scientific data with different criteria for fidelity/bandwidth tradeoffs. The algorithmic approaches we consider are specially targeted for parallel computation where data rates of over 1 billion bits per second are achievable with current technology. Author

SAVS: A SPACE ANALYSIS AND VISUALIZATION SYSTEM Abstract Only
Edward P. Szuszczewicz, Alan Mankofsky, and Charles C. Goodrich (Maryland Univ., College Park.) *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

We propose to develop, test, demonstrate, and deliver to NASA a powerful and versatile data acquisition, manipulation, analysis and visualization system which will enhance scientific capabilities in the display and interpretation of diverse and distributed data within an integrated user-friendly environment. Our approach exploits existing technologies and combines three major elements into an easy-to-use interactive package: (1) innovative visualization software; (2) advanced database techniques; and (3) a rich set of mathematical and image processing tools. Visualization capabilities will include one-, two-, and three-dimensional displays, along with animation, compression, warping and slicing functions. Analysis tools will include generic mathematical and statistical techniques along with the ability to use large scale models for interactive interpretation of large volume data sets. Our system will be implemented on Sun and DEC UNIX workstations and on the Stardent Graphics Super computer. Our final deliverable will include complete documentation and a NASA/NSF-CDAW/SUNDIAL campaign demonstration. Author

A SPATIAL ANALYSIS AND MODELING SYSTEM (SAMS) FOR ENVIRONMENT MANAGEMENT
Charles H. Vermillion, Fran Stetina, John Hill (Louisiana State Univ., Baton Rouge.), Paul Chan (Science Systems and Applications, Inc., Greenbelt, MD.), Robert Jaske (Federal Emergency Management Agency, Denver, CO.), and Gilbert Rochon (Dillard Univ., New Orleans, LA.) *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

This is a proposal to develop a uniform global environmental data gathering and distribution system to support the calibration and validation of remotely sensed data. SAMS is based on an enhanced version of FE MA's Integrated Emergency Management Information Systems and the Department of Defense's Air Land Battlefield Environment Software Systems. This system consists of state-of-the-art graphics and visualization techniques, simulation models, database management and expert systems for conducting environmental and disaster preparedness studies. This software package will be integrated into various Landsat and UNEP-GRID stations which are planned to become direct readout stations during the EOS timeframe. This system would be implemented as a pilot program to support the Tropical Rainfall Measuring Mission (TRMM). This will be a joint NASA-FEMA-University-Industry project. Author

N93-25814*# Illinois Univ., Urbana.
A DISTRIBUTED ANALYSIS AND VISUALIZATION SYSTEM FOR MODEL AND OBSERVATIONAL DATA Abstract Only
Robert Wilhelmson and Steven Koch (National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, MD.) *In* Colorado Univ., Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings 1992 1 p (For primary document see N93-25792 09-82)
Avail: CASI HC A01/MF A03

The objective of this proposal is to develop an integrated and distributed analysis and display software system which can be applied to all areas of the Earth System Science to study numerical model and earth observational data from storm to global scale. This system will be designed to be easy to use, portable, flexible and easily extensible and to adhere to current and emerging standards whenever possible. It will provide an environment for visualization of the massive amounts of data generated from satellites and other observational field measurements and from model simulations during or after their execution. Two- and three-dimensional animation will also be provided. This system will be based on a widely used software package from NASA called GEMPAK and prototype software for three dimensional interactive displays built at NCSA. The underlying foundation of the system will be a set of software libraries which can be distributed across a UNIX based supercomputer and workstations. Author

INTELLIGENT ACCESS TO MULTIPLE RELATIONAL DATABASE SYSTEMS Final Report
Peggy Wright Nov. 1992 183 p
(AD-A261198; WES/TR/ITL-92-9) Avail: CASI HC A09/MF A02

The combination of artificial intelligence (AI) and database technology allows the capability of extending the usefulness of existing database applications. More specifically, the use of AI provides the means to develop an intelligent front end to allow nonintrusive assess to multiple relational databases. A knowledge source is built for each participating database application. A meta-knowledge source, constructed from all knowledge sources in the system, is consulted to determine the appropriate application to which a database request is channeled. This report introduces a proposed architecture and presents a prototype developed to accomplish this task. DTIC

AGREEMENT IN NAMING OBJECTS AND CONCEPTS FOR INFORMATION RETRIEVAL Ph.D. Thesis
Lourdes Y. Collantes 1992 395 p
Avail: Univ. Microfilms Order No. DA9232906

The naming of objects and concepts in information retrieval contexts by users themselves was explored because of the vocabulary problem in communication between users and information system. How do people name things? Can they find information about these things by using these names? The study investigated the representation of users' knowledge (names of objects and concepts), database representation for similar objects/concepts, and degree of agreement among users and between users and information system. Three groups of users (undergraduates, graduate students, librarians) were asked to give names to 20 illustrations and 20 texts. Names generated were compared with each other and with LC subject headings on exact and keyword basis. Degree of agreement was calculated using similarity measures. Analysis was on name and user levels. Cross product ratio analysis was used to explore the relationship between agreement on names and retrieval of information. The study identified patterns of naming and patterns of agreement in naming objects and concepts. Findings suggest wide variability in naming. The number of names differed greatly from one stimulus to another. Agreement on particular

names was low but at least one name for each item was relatively popular among users. Agreement between pairs of users averaged 25 to 26 percent. While some users tend to agree more than others, there is no difference among user groups in number of names generated or in agreement on names. Levels of agreement, in descending order, were highest for names given to illustrations, followed by abstracts and lowest for names given to search statements. Average match with LCSH was 6 names per item and 7.68 names based on keywords. Name-LCSH agreement was low but names with higher agreement among users were more likely to match LCSH. Naming of objects and concepts indicated a pattern of agreement and variability. Retrieval system design and document representation should accommodate the characteristics of naming and the natural pattern of users' naming behavior. Naming seems to be user specific and object/concept specific, suggesting that any naming paradigm should be broadened to include aspects both internal and external with respect to the user. Dissert. Abstr.

A METHODOLOGY AND SOFTWARE ENVIRONMENT FOR TESTING PROCESS MODEL'S SEQUENTIAL PREDICTIONS WITH PROTOCOLS M.S. Thesis

Frank E. Ritter 21 Dec. 1992 210 p

(Contract F33615-90-C-1465; ARPA Order 7597)

(AD-A260980; CMU-CS-93-101) Avail: CASI HC A10/MF A03

Getting the most out of information processing models requires that testing and refining them be straightforward. This requires that (1) large amounts of data be easily compared with the model's performance, (2) descriptions of how and where the model mismatches are readily available and easy to interpret, and (3) the models themselves can be refined in a straightforward way. Current methods for testing the sequential predictions of process models provides none of these. It is a difficult, time consuming, boring task, requiring the full attention of a skilled analyst despite the importance and and difficulty of testing process models against protocol data, and in contrast to the rich methodology for analyzing samples of numerical data, there is no explicit methodology or set of tools for automatically or semi-automatically doing this task. This thesis specifies a methodology for testing process models sequential predictions through comparison with verbal and non-verbal protocols. Each of its steps are delineated, and the requirements to perform these steps developed. DTIC

DEPARTMENT OF ENERGY: BETTER INFORMATION RESOURCES MANAGEMENT NEEDED TO ACCOMPLISH MISSIONS. REPORT TO THE SECRETARY OF ENERGY

Sep. 1992 64 p

(GAO/IMTEC-92-53; B-248529) Avail: CASI HC A04/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

The Department of Energy (DOE) is responsible for multiple energy and defense missions that are important to economic growth, public health and safety, and the nation's security. DOE also faces complex challenges, such as massive environmental damage and unsafe nuclear weapons production facilities, and management problems, such as weak controls over contractor activities. To successfully accomplish DOE'S missions and correct existing problems, the Secretary and departmental and contractor managers need timely, reliable, and relevant information. GAO examined key aspects of the Department's information resources management (IRM) program, focusing primarily on the environmental restoration, safety and health management, nuclear weapons production, and security mission areas. GAO'S objectives were to determine whether (1) information shortfalls impair managers' ability to fulfill their responsibilities, (2) DOE's strategic IRM planning is linked to strategic mission planning, and (3) management control over the acquisition and operation of information systems is adequate to ensure compliance with federal and DOE IRM policies and requirements. STRATEGIC INFORMATION PLANNING: FRAMEWORK FOR DESIGNING AND DEVELOPING SYSTEM ARCHITECTURES

Jun. 1992 34 p

(GAO/IMTEC-92-51) Avail: CASI HC A03/MF A01; GAO, PO Box 6015, Gaithersburg, MD 20877 HC

Managing and modernizing the federal government's information resources is an enormously complex task. The purposes of government information systems vary widely from business applications, such as payroll or personnel, to worldwide military command, control, and communications systems. Identifying the best solution to a problem in terms of operational effectiveness, flexibility, maintenance, and cost requires detailed, structured analyses of user needs and identification of technical alternatives and supporting technologies for the system's software, hardware, communications, data management, and security infrastructures. This framework is intended to (1) provide a basis for systematically determining information needs, (2) identify and analyze information and data needs and relationships, (3) identify and analyze alternative ways to satisfy information needs, and (4) provide factors to be considered in arriving at the best way to satisfy information needs. The framework is not meant to be a 'cookbook,' but a guide for systematically identifying and evaluating an organization's information needs and laying out a disciplined process to satisfy those needs. Methodologies for identifying information needs and planning acquisitions to fill those needs were devised. The assessment and evaluation of the various methodologies resulted in this generic framework for analyzing, designing, and developing open and flexible information system architectures that can be used to meet any information processing need. OSSA INFORMATION SYSTEMS PROGRAM Annual Report, 1992

David H. Brown 1993 30 p

(Grant NAGw-4561)

(NASA-TM-108774; NAS 1.15:108774) Avail: CASI HC A03/MF A01

The Office of Space Science and Applications' (OSSA) Information Systems Program was established to coordinate and enhance activities that support the processing analysis, transport, archival, and access of space science data. Within OSSA, the science discipline divisions have the ultimate responsibility for the proper management of the data generated by their missions. The OSSA Information Systems Branch works in concert with the divisions to provide an infrastructure of information system services and expertise in operations, policy, planning, and technology. Discipline specific and infrastructure activities are coordinated through participation in the OSSA Information Systems Management Board. The Information Systems Program is organized into four program areas: Scientific Computing, Networking, Data Management and Archiving, and Applied Information Systems Technology. Together, these program areas form a solid technical and policy development base that supports the overall OSSA information systems strategy. The underlying theme of each element is to facilitate science research and ensure the efficient implementation and utilization of OSSA information systems resources. The annual report for 1992 is presented. Derived from text

FY92 CONTRIBUTIONS TO THE DATABASE MANAGEMENT SYSTEM INTERFACE STANDARDS WORKING GROUP OF THE NAVY NEXT GENERATION COMPUTER RESOURCES PROGRAM Final Report
Karen D. Gordon Oct. 1992 34 p
(Contract MDA903-89-C-0003)
(AD-A261348; IDA-D-1244; IDA/HQ-92-42853) Avail: CASI HC A03/MF A01

The Next Generation Computer Resources (NGCR) Program is a Navy standardization effort designed to fulfill the Navy's needs for standard computer resources while at the same time allowing it to take advantage of commercial products and investments and to field new technology more quickly and effectively. The program is centered around the selection and adoption of open system standards in several areas, including backplanes, local area networks, operating systems, project support environments, graphics, and database management systems. IDA is providing support through participation in a recently formed group known as the NGCR Database Management System (DBMS) Interface Standards Working Group (DISWG). The objective of the NGCR DISWG is to identify and help define nonproprietary industry-based database management system interface standards for use in the development and maintenance of future Navy mission-critical computing systems. The document is a compilation of IDA written contributions to the NGCR DISWG from April 1992 through September 1992. DTIC

DESIGN KNOWLEDGE MANAGEMENT SYSTEM (DKMS) BETA TEST REPORT Interim Report, Nov. 1990 - Jun. 1992
Richard J. Mayer, Thomas M. Blinn, David C. Browne, Matthew A. Grisius, Arthur A. Keen, Jeffrey C. Lockledge, and Les Sanders Nov. 1992 73 p
(Contract F33615-90-C-0011)
(AD-A261453; AL-TP-1992-0043) Avail: CASI HC A04/MF A01

The Beta Test Report documents potential use of the Design Knowledge Management System (DKMS) in research and industry. Industry concerns, gathered from surveys, are addressed in each subsection. The appendix gives an in-depth overview of the entire DKMS. The DKMS consists of the following components: Container Object System--a flexible means of storing computer objects and constraints, so that a design can easily evolve as information changes; Model Design Support Environment--a method for automatic solution and code generation based on the problem, the 'givens', and the real-world equations that rule the environment; High-Productivity CAD--a toolbox for CAD designers; Shape-based Design Knowledge Representation and Reasoning--a component which allows shape information as a key factor in the design; and Integration Platform--a component which helps user select and translate services. INFORMATION TRANSMISSION USING CHAOS Final Report, May - Aug. 1992
Scott Hayes, Celso Grebogi, and Edward Ott Feb. 1993 13 p
(AD-A261519; ARL-TR-94) Avail: CASI HC A03/MF A01

The use of chaos to transmit information is described. Chaotic dynamical systems, such as electrical oscillators with very simple structures, naturally produce complex waveforms. We show that the symbolic dynamics of a chaotic oscillator can be made to follow a desired symbol sequence by using small perturbations, thus allowing us to encode a message in the waveform. We illustrate this using a simple numerical electrical oscillator model. DTIC

FAST MUTUAL EXCLUSION FOR UNIPROCESSORS
Brian N. Bershad, David D. Redell (Digital Equipment Corp., Palo Alto, CA.), and John R. Ellis (Digital Equipment Corp., Palo Alto, CA.) Oct. 1992 13 p
(Contract MDA972-90-C-0035; ARPA Order 7330)
(AD-A261663; CMU-CS-92-183) Avail: CASI HC A03/MF A01

In this paper we describe restartable atomic sequences, an optimistic mechanism for implementing simple atomic operations (such as Test-and-Set) on a uniprocessor. A thread that is suspended within a restartable atomic sequence is resumed by the operating system at the beginning of the sequence, rather than at the point of suspension. This guarantees that the thread eventually executes the sequence atomically. A restartable atomic sequence has significantly less overhead than other software-based synchronization mechanisms, such as kernel emulation or software, reservation. Consequently, it is an attractive alternative for use on uniprocessors that do not support atomic operations. Even on processors that do support atomic operations in hardware, restartable atomic sequences can have lower overhead. We describe different implementations of restartable atomic sequences for the Mach 3.0 and Taos operating systems. These systems' thread management packages rely on atomic operations to implement higher-level mutual exclusion facilities. We show that improving the performance of low-level atomic operations, and therefore mutual exclusion mechanisms, improves application performance. DTIC

Topography and crustal structure variations have significant effects on the propagation of regional seismic phases. Geological and geophysical data are also useful for other aspects of the problems of nonproliferation, verification, and yield estimation. We are collecting datasets for Eurasia, China, the Middle East, and North Africa. Available now are digital databases of topography, crustal thicknesses, and sedimentary basin depths. Work continues on collecting and organizing available topographical, geological, and geophysical datasets. We store the data in an information system with a network-accessible server to which we can connect client modules of future versions of the Intelligent Monitoring System (IMS) running at the Center for Seismic Studies and other DARPA researchers. We have created regularly spaced grids of the crustal and sediment thickness values from preliminary maps that can be used to create profiles of crustal structure. These profiles can be compared by an analyst or an automatic program with the crustal seismic phases received along the propagation path to better understand and predict the path effects on phase amplitudes, a key to estimating magnitudes and yields. The gridded data can also be used to model propagation of crustal phases in three dimensions. The data server at Cornell allows clients to directly connect to databases that we are generating and improving. This allows IMS users and other DARPA researchers to utilize data as soon as it is available. We encourage researchers to contact us about access to these databases and with suggestions for improvements. DTIC

IDEF6: A DESIGN RATIONALE CAPTURE METHOD CONCEPT PAPER Interim Report, Jan. 1990 - Mar. 1991

Richard J. Mayer, Patricia A. Griffith, and Christopher P. Menzel Nov. 1992 28 p

(Contract FQ7624-90-00010)

(AD-A261594; AL-TP-1992-0050) Avail: CASI HC A03/MF A01

When explicitly captured, design rationale typically exists in the form of unstructured textual comments. In addition to making it difficult, if not impossible to find relevant information on demand, lack of a structured method for organizing and providing completeness criteria for design rationale capture makes it unlikely that important information will be documented. Unlike design methods which serve to document WHAT a design is (Design Specification), the IDEF6 Design Rationale Capture Method is targeted at capturing WHY a design is the way it is -- or WHY it is not manifested in some other form -- together with HOW the final design configuration was reached. IDEF6 was intended to be a method with the representational capability to capture information system design rationale and associate that rationale with the design models and documentation for the end system. Thus, IDEF6 attempts to capture the logic underlying the decisions contributing to, or resulting in, the final design. The explicit capture of design rationale serves to help avoid repeating past mistakes, provides a direct means for determining the impact of proposed design changes, forces the explicit statement of goals and assumptions, and aids in the communication of final system specifications. DEPARTMENT OF DEFENSE TECHNICAL ARCHITECTURE FRAMEWORK FOR INFORMATION MANAGEMENT. VOLUME 1: IMPLEMENTATION CONCEPT, VERSION 1.1

John Keane 21 Oct. 1992 37 p

(AD-A261911) Avail: CASI HC A03/MF A01

This document provides a broad overview of the technical architecture framework program in the context of the DoD Information Management (IM) initiatives, such as Information Technology Reuse (ITRUS). It describes the relationships to the ITRUS and Software Reuse Program and how the Technical Architecture Framework is used by developers and integrators to build information systems. The DoD technical infrastructure includes support applications, computing platforms, and communications networks. The current DoD technical infrastructure consists largely of stove-piped, single-purpose, and inflexible systems which are costly to develop and maintain. The evolving DoD enterprise vision for Information Management (IM) emphasizes integration, interoperability, flexibility and efficiency through the development of a common, multi-purpose, standards-based technical infrastructure. DTIC

N93-26532# Defense Information Systems Agency, Arlington, VA. Center for Information Management.

DEPARTMENT OF DEFENSE TECHNICAL ARCHITECTURE FRAMEWORK FOR INFORMATION MANAGEMENT. VOLUME 2: ARCHITECTURE GUIDANCE AND DESIGN CONCEPTS, VERSION 1.1

John Keane 21 Oct. 1992 151 p

(AD-A261912) Avail: CASI HC A08/MF A02

This document provides the overall guidance and concepts needed to develop technical architectures in the DoD. An information system (IS) consists of three elements: data; mission-specific applications; and a technical infrastructure consisting of support applications, computing platforms, and communications networks. Each of these IS elements has a unique life-cycle which requires distinct development and maintenance approaches. For example, data definitions and formats may have a useful life that is many times longer than the applications that manipulate and use the data definitions, and the hardware and software that comprise the technical infrastructure may have a half-life that is less than the applications. Based on the necessity to manage the IS elements according to different life-cycles, an information system architecture includes a data architecture, an application software architecture (mission-specific), and a technical (i.e., support applications, computing platforms and communications networks) architecture. SPACE SCIENCE LABORATORY PUBLICATIONS AND PRESENTATIONS Technical Memorandum, 1 Jan. - 31 Dec. 1992

T. W. Moorehead, comp. Apr. 1993 63 p

(NASA-TM-108402; NAS 1.15:108402) Avail: CASI HC A04/MF A01

This document lists the significant publications and presentations of the Space Science Laboratory during the period January 1 - December 31, 1992. Entries in the main part of the document are categorized according to NASA Reports (arranged by report number), Open Literature, and Presentations (arranged alphabetically by title). Also included for completeness is an Appendix (arranged by report number) listing preprints issued by the Laboratory during this reporting period. Some of the preprints have not been published; those already published are so indicated. Most of the articles listed under Open Literature have appeared in refereed professional journals, books, monographs, or conference proceedings. Although many published abstracts are eventually expanded into full papers for publications in scientific and technical journals, they are often sufficiently comprehensive to include the significant results of the research reported. Therefore, published abstracts are listed separately in a subsection under Open Literature. The organizational code of the cognizant SSL branch or office is given at the end of each entry. Author (revised)

DEVELOPMENT OF A CONCEPT FOR A NATIONAL CONSTRUCTION INDUSTRY HEALTH AND SAFETY DATA BASE Final Report

M. Kent, W. Perry, and R. Burt 27 Aug. 1992 158 p

(Contract NIOSH-CDC-299-90-2847)

(PB93-159325) Avail: CASI HC A08/MF A02

An operations oriented data base concept was developed for health and safety data for the construction industry. Construction industry hazards were investigated, and potential users were surveyed. Possible data base designs were identified. Resources for development and maintenance of a data base were determined, and methods for distributing the data base were identified. Sources of information were examined. The data base concept as developed was operations oriented as opposed to bibliographic or technology oriented in order to best serve the industry. The data base would be continually updated with information concerned with safety, health and ergonomic hazards associated with the industry. Information on the control methods used to combat the hazards would also be included in the data base. Methods for distributing the data base were briefly considered; multiple distribution methods eventually may be used. NTIS

A HYPERTEXT FRAMEWORK FOR GROUP SUPPORT SYSTEMS
Interim Report, Jul. - Dec. 1991
Michael D. Wolfe and Kenneth J. Moen Nov. 1992 47 p
(AD-A261731; AL-TR-1992-0165) Avail: CASI HC A03/MF A01

The formula, generic description, and framework for the study of Decision Support Systems (DSS's) developed by Bonczek, Change, Holsapple, and Whinston is extended to Group Support Systems (GSS's). The original description was based on three components: a language system, a knowledge system, and a problem processing system. This was later extended to a hyperknowledge framework, which was a comprehensive foundational framework. The hyperknowledge framework for DSS is extended to a GSS framework which includes multiple copies of individual DSS (IDSS), the communications between the IDSS, and a special system for a facilitator. A representative selection of the most common commercially available GSS's are presented together; these are all shown to fit the framework. In addition, the framework suggests directions for the design of an architecture to support multicultural GSS, which may cross international and/or interfunctional boundaries. DTIC

83 ECONOMICS AND COST ANALYSIS

Includes cost effectiveness studies.

N93-26158# Commerce Dept., Washington, DC. Office of Business Analysis.
SPACE BUSINESS INDICATORS
Jun. 1992 61 p
Avail: CASI HC A04/MF A01

This report is intended as a one-stop collection of economic data and information on space business industries. Initiated by the Office of Space Commerce, the Economics and Statistics Administration was selected to compile business-related statistics on the markets for space-related goods and services using the best available sources, public and private. In-depth analysis of the industries monitored by the International Trade Administration--satellites and launch services--is also included. Although the focus is on the commercial sector, data and information on Government space programs are also included because many space commerce companies have government, as well as private, customers. With its emphasis on the business side of space activity, the report will be useful for investors, market and financial planners, entrepreneurs, market analysts, and policymakers. The report is divided into two sections: an introductory text with industry analysis and forecasts; and a large section of statistical tables and charts. We welcome suggestions for improvement in industry coverage and accuracy. Author (revised)

FUNCTIONAL ECONOMIC ANALYSIS GUIDEBOOK, VERSION 1.1 Final Report
15 Jan. 1993 156 p
(AD-A261390) Avail: CASI HC A08/MF A02

Functional Economic Analysis is an evolving methodology. It will change as new techniques and tools are developed and as experience is gained in applying the methodology. This Guidebook shows how to prepare an FEA through practical examples and illustrations that are consistent with OSD policy. Also, this Guidebook shows that FEA is most effectively done in conjunction with functional process improvement analysis. DTIC

84 LAW, POLITICAL SCIENCE AND SPACE POLICY

Includes NASA appropriation hearings; aviation law; space law and policy; international law; international cooperation; and patent policy.

SCIENCE, TECHNOLOGY, AND NATIONAL SECURITY
Dec. 1992 24 p
Avail: CASI HC A03/MF A01

During nearly half a century of cold war, America used technological superiority to offset the numerical advantage of Soviet military power. More recently, the spectacular performance of U.S. defense and intelligence technology in Operation Desert Storm graphically demonstrated to the world an American technological prowess that is matched by no other nation. Leadership in science and technology helped make American leadership in world affairs effective. Yet science and technology are forever moving forward: today's cutting edge can easily become tomorrow's trailing edge. Thus, continuation of America's advantage cannot be taken for granted, but must be constantly renewed through vigorous and far-sighted policies and programs. The panel has been given the task of proposing policies that will provide to future Presidents as wide a lead in national security technology as America enjoys today. In its deliberations, the panel has identified six critical objectives for presidential attention: (1) preserving and

extending our capability to gather and interpret essential intelligence by exploiting advanced science and technology for intelligence; (2) staving off proliferation of weapons of mass destruction and advanced conventional weapons, which opponents will try to use to undercut our unmatched capability for intense, precision, conventional warfare; (3) restructuring government's approach to applying technology and acquiring new high-tech defense and intelligence systems, so we can continue to have modern forces despite budget cutbacks; (4) attracting and retaining technically qualified people to serve in key national security posts; (5) giving a new emphasis to exploring defensive technology, so that have options to defend our nation, our allies, and our forces in proliferation does occur; and (6) enunciating a presidential strategy for continued superiority in science and technology, so that government and industry leaders clearly recognize that the advantage we displayed in Desert Storm must be preserved in the future. SCIENCE, TECHNOLOGY, AND INDUSTRIAL POLICY IN THE FORMER SOVIET UNION
1992 27 p Conference held in Washington, DC, 27-28 Apr. 1992 Prepared in cooperation with Commerce Dept., Washington, DC and Carnegie Commission on Science, Technology, and Goverment, New York, NY
(Contract DE-AI01-92IN-00554)
(DE93-006528; CONF-9204225-Summ) Avail: CASI HC A03/MF A01

The conference was intended to give members of the American government and business communities a better understanding of the changes taking place in science, technology and industry in the Former Soviet Union. Science and technology issues were accorded a prominent place in the program of perestroika. In the six turbulent years of perestroika great strides were made in identifying problems, shortcomings and difficult relationships. But implementation of solutions to the problems has been far more modest. The science and technology community has been affected by the turmoil in the country, and continues to search for a viable and productive future. The objective of the conference was to examine the current state of science, technology and industry in Russia and the other states of the Commonwealth, and consider its possible future development. The specific topics and questions conference speakers were asked to address included: Analyze current science, technology and industrial policy. What is the new legal framework for science, technology and industry? How are property rights and intellectual property rights being handled? What has been done to insure individual rights and freedoms? What are the organizational and management structures at the national level and at lower levels? What impact is decentralization having on priorities and funding? What industries are being de-nationalized? What will be the relationship between private and government sponsored research? To what extent will reductions in the budget for military R&D affect non-defense S&T funding? How will reductions in military R&D affect the long-term outlook for research? How serious has the brain-drain become in the military R&D sector. What has been the effect of glasnost on the R&D community. How might improved international contacts affect S&T? What economic forecasting, if any, is feasible?. DOE

85 URBAN TECHNOLOGY AND TRANSPORTATION

Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.

TECHNOLOGY TRANSFER 92/93
Jan. 1993 193 p Presented at the National Technology Initiative Conference, St. Louis, MO, 25 Jun. 1992
(DE93-003623; DOE/ST-0005P) Avail: CASI HC A09/MF A03

Technology transfer is one of the primary missions of the US Department of Energy (DOE). The purpose of Technology Transfer 92/93 is as follows: to reflect the depth and breadth of DOE's scientific and technical capabilities; describe its technology transfer activities; and indicate opportunities for industry, academia, state and local governments, and others to join DOE in these activities for the overall enhancement of US technical competitiveness. This document also introduces those unfamiliar with DOE to its major programs, laboratories, and facilities, and it provides information about the various mechanisms available for working with DOE in research and development, technology transfer, and commercialization of technological innovations. It is designed to serve as a guide for pinpointing the most appropriate DOE program office or laboratory to meet specific needs or interests. In short, this document tells how to contact the right person in the right office so work can get started quickly. DOE

TECHNOLOGY FOR AMERICA'S ECONOMIC GROWTH: A NEW DIRECTION TO BUILD ECONOMIC STRENGTH
William J. Clinton and Albert Gore, Jr. 22 Feb. 1993 47 p
(AD-A261553) Avail: CASI HC A03/MF A01

Investing in technology is investing in America's future: a growth economy with more high-skill, high-wage jobs for American workers; a cleaner environment where energy efficiency increases profits and reduces pollution; a stronger, more competitive private sector able to maintain U.S. leadership in critical world markets; an educational system where every student is challenged; and an inspired scientific and technological research community focused on ensuring not just our national security but our very quality of life. American technology must move in a new direction to build economic strength and spur economic growth. The traditional federal role in technology development has been limited to support of basic science and mission-oriented research in the Defense Department, NASA, and other agencies. This strategy was appropriate for a previous generation but not for today's profound challenges. We cannot rely on the serendipitous application of defense technology to the private sector. We must aim directly at these new challenges and focus our efforts on the new opportunities before us, recognizing that government can play a role helping private firms develop and profit from innovations. GAS-GRAIN SIMULATION FACILITY (GGSF). VOLUME 1: STAGE 1 FACILITY DEFINITION STUDIES
Nahum Gat (TRW Space Technology Labs., Redondo Beach, CA.) Mar. 1993 231 p
(Contract NAS2-13408; RTOP 107-20-06)
(NASA-CR-177606; A-93055; NAS 1.26:177606) Avail: CASI HC A11/MF A03

The Gas-Grain Simulation Facility (GGSF) is a facility-type payload to be included in the Space Station Freedom (SSF). The GGSF is a multidisciplinary facility that will accommodate several classes of experiments, including exobiology, planetary science, atmospheric science, and astrophysics. The physical mechanisms envisioned to be investigated include crystal growth, aggregation, nucleation, coagulation, condensation, collisions, fractal growth, cycles of freezing and evaporation, scavenging, longevity of bacteria, and more. TRW performed a Phase A study that included analyses of the science and technical (S&T) requirements, the development of facility functional requirements, and a conceptual design of the facility. The work that was performed under Stage 1 of the Phase A study and the results to date are summarized. In this stage, facility definition studies were conducted in sufficient detail to establish the technical feasibility of the candidate strawman experiments. The studies identified technical difficulties, identified required facility subsystems, surveyed existing technology studies and established preliminary facility weight, volume, power consumption, data systems, interface definition, and crew time requirements. The results of this study served as the basis for Stage 2 of the Phase A study in which a conceptual design and a reference design were performed. The results also served as a basis for a related study for a Gas-Grain Simulation Experiment Module (GGSEM), which is an apparatus intended to perform a subset of the GGSF experiments on board a low-Earth-orbiting platform.

(NASA-CR-177604; A-93022; NAS 1.26:177604) Avail: CASI HC A12/MF A03

Five hundred and fifty six stars in the IRAS PSC-2 that are suitable for stellar radiometric standards and are brighter than 1 Jy at 25 microns were identified. In addition, 123 stars that meet all of our criteria for calibration standards, but which lack a luminosity class were identified. An approach to absolute stellar calibration of broadband infrared filters based upon new models of Vega and Sirius due to Kurucz (1992) is presented. A general technique used to assemble continuous wide-band calibrated infrared spectra is described and an absolutely calibrated 1-35 micron spectrum of alpha(Tau) is constructed and the method using new and carefully designed observations is independently validated. The absolute calibration of the IRAS Low Resolution Spectrometer (LRS) database is investigated by comparing the observed spectrum of alpha(Tau) with that assumed in the original LRS calibration scheme. Neglect of the SiO fundamental band in alpha(Tau) has led to the presence of a specious 'emission' feature in all LRS spectra near 8.5 microns, and to an incorrect spectral slope between 8 and 12 microns. Finally, some of the properties of asteroids that effect their utility as calibration objects for the middle and far infrared region are examined. A technique to determine, from IRAS multiwaveband observations, the basic physical parameters needed by various asteroid thermal models that minimize the number of assumptions required is developed. RADIAL VELOCITY STUDIES OF THE SECONDARY IN CATACLYSMIC VARIABLES M.S. Thesis
J. S. Martin 1988 177 p
Avail: Univ. Microfilms Order No. BRDX98316

The derivation and use of radial velocity curves of the secondary star to determine the component masses in cataclysmic variables is investigated. A brief review of these objects, especially their observational properties and possible evolutionary history is presented. This highlights the uncertain state of understanding in this area and shows the need for accurate component masses. A critical review of the various methods which have been employed for mass determinations is presented. The observational procedure and data reduction methods are covered. CCD spectroscopy in the near infra-red is used to detect the spectrum of the secondary star in four systems (IP Peg, CN Ori, AM Her, and U Gem), the first two of which are new detections. Radial velocity curves are produced by cross-correlation against the spectra of field stars. The observed spectra and radial velocity curves are reported together with the results of orbital fits to the curves. In three systems, a significant apparent eccentricity is detected. This may be due to irradiation of the inner face of the secondary or contamination by disc emission. To correct the orbital parameters for the effect of irradiation as well as tidal distortion and variation in surface gravity, a computer simulation of the secondary radial velocity curve was developed. The assumptions and methods used to produce simulated spectra and derive radial velocity curves from them are described. The observational consequences of the above effects ruling out all but the reduction of line strength by irradiation as significant sources of eccentricity (contamination from the disc was not included) are investigated. The corrections derived from the simulation are applied to the observations to produce masses for the four systems. The main findings are summarized and further work needed in this field is suggested. Dissert. Abstr.

A STUDY OF THE LARGE-SCALE INFRARED EMISSION FROM A SELECTED DARK CLOUD Final Technical Report, 15 Aug. 1989 - 14 Sep. 1990
Erick T. Young 14 Sep. 1990 6 p
(Grant NAG5-1221)
(NASA-CR-192775; NAS 1.26:192775) Avail: CASI HC A02/MF A01

An investigation of the infrared emission energetics and embedded population in the rho Ophiuchi dark cloud is summarized. With a distance of approximately 140 pc, the rho Ophiuchi cloud is one of the closest regions of recent star formation. It is also one of the best studied such regions with numerous observations at all wavelengths. The IRAS data of the cloud provided a new glimpse of the overall structure of the cloud. In particular, the interaction of radiation from the Sco-Oph OB Association on the external heating of the cloud was very evident on Skyflux and Survey Co-Add images produced by IRAS. The infrared survey also revealed a number of new embedded sources in the cloud which have subsequently been observed from the ground. An earlier study explored the overall energetics of the cloud using the IRAS data. The main conclusions of that work were: (1) the overall luminosity of the cloud is well explained by the emission of the known B-stars, HD 147889, SR-3, and S1, along with a 15 percent contribution from the external radiation field; (2) the dust physical temperatures were significantly lower than the observed CO gas temperatures; and (3) dust grains are heated to only 10 percent to 20 percent of the total depth into the cloud. This analysis is extended by drawing on data from large-scale CO maps and from near-infrared surveys of the embedded population. Author (revised)

DEVELOPMENT OF LASER GUIDE STARS AND ADAPTIVE OPTICS FOR LARGE ASTRONOMICAL TELESCOPES
C. E. Max, K. Avicola, H. Bissinger, J. M. Brase, D. T. Gavel, H. Friedman, J. R. Morris, S. S. Olivier, D. Rapp, and J. T. Salmon et al 29 Jun. 1992 10 p Presented at the Progress in Telescope and Instrumentation Technologies, Garching, Germany, 27-30 Apr. 1992
(Contract W-7405-eng-48)
(DE93-007511; UCRL-JC-107218; CONF-920401-1) Avail: CASI HC A02/MF A01

A feasibility experiment to demonstrate high-order adaptive optics using a sodium-layer laser guide star is described. The copper-vapor-pumped dye lasers developed for LLNL's atomic Vapor Laser Isotope Separation program is used to create the laser guide star. Closed-loop adaptive corrections will be accomplished using a 69-subaperture adaptive optics system on a one-meter telescope at LLNL. The laser beam is projected upwards from a beam director approximately 5 meters away from the main telescope, and is expected to form a spot 1-2 meters in diameter at the atmospheric sodium layer (95 km altitude). The overall system architecture and adaptive optics components are described, and the expected performance is analyzed. Our long-term goal is to develop sodium-layer laser guide stars and adaptive optics for large astronomical telescopes. Preliminary design trade-offs for the Keck Telescope at Mauna Kea are discussed. DOE

THE STRUCTURE OF THE NEARBY UNIVERSE TRACED BY THEIRAS GALAXIES Final Report

Amos Yahil 8 Apr. 1993 4 p

(Grant NAG5-1228)

(NASA-CR-192809; NAS 1.26:192809) Avail: CASI HC A01/MF A01

One of the most important discoveries of the Infrared Astronomical Satellite (IRAS) has been the detection of about 20,000 galaxies with 60 microns fluxes above 0.5 Jy. From the observational point of view, the IRAS galaxies are ideal tracers of density, since they are homogeneously detected over most of the sky, and their fluxes are unaffected by galactic extinction. The nearby universe was mapped by the IRAS galaxies to a distance of approximately 200 h(exp -1) Mpc for the absolute value of b less than 5 deg. The ability to map down to such low galactic latitudes has proven to be particularly imporant, since some of the most important nearby large-scale structures, such as the Great Attractor, the Perseus-Pisces region, and the Shapley concentration, all lie there. Two major results of the U.S. IRAS redshift survey are discussed. Derived from text

N93-25440 California Univ., Berkeley.

A SUPERCONDUCTING TUNNEL JUNCTION RECEIVER FOR SUBMILLIMETER ASTRONOMY, AND ANALYSIS OF OBSERVATIONS OF POST-AGB STAR MOLECULAR ENVELOPES Ph.D. Thesis

Paul Aloysius Jaminet 1992 150 p

Avail: Univ. Microfilms Order No. DA9304952

A heterodyne receiver designed for astronomical use between 450 and 520 GHz has been constructed. Very low capacitance (C approximately = 5-10 fF) Superconductor-Insulator-Superconductor (SIS) junctions have been fabricated as the detectors; these junctions lie on the edges of niobium thin films and form Nb-Al-Al2O3-Al-Nb sandwiches. The double sideband (DSB) receiver noise temperature is between 400 K and 800 K throughout the 70 GHz band. In addition, detailed modelling and analysis of astronomical observations of two post-AGB (Asymptotic Giant Branch) stars was performed. The observations were made with an SIS receiver designed for 345 GHz. CO observations and modelling of the young planetary nebula NGC 7027 provided the best determination yet of its AGB mass loss rate, the first direct evidence for bipolarity in its AGB mass loss, evidence for close hydrodynamic coupling between the planetary nebula and the relic AGB wind, and evidence for evolution in the metallicity of the stellar wind. Observations of the proto-planetary nebula CRL 2688 found evidence for spatially extended fast wind emission with a non-bipolar morphology, and evidence for evolution in elemental abundances in the stellar wind. Dissert. Abstr.

N93-25536 Oxford Univ. (England).

THE TAURID METEOROID COMPLEX Ph.D. Thesis

D. J. Asher 1991 211 p

Avail: Univ. Microfilms Order No. BRD-98276

The aim of this work is to produce quite a detailed model, consistent with observations, of the evolution of the Taurid complex of interplanetary objects. The Taurids do not produce a spectacular meteor shower but the great breadth of the Taurid stream means that it is a major stream with regard to amount of material. The real size of the stream is evidenced by the fact that the activity lasts at least three months at both relevant times of year. As observations have been done over the years, new names have been given to showers coming from different longitudes in the sky, the Taurids not having as localized a radiant as many of the well-known and more compact streams. But despite the fact that the orbits of meteors in the various showers are comparatively spread out, they are still well enough aligned, and of similar size and shape, that they must be related (i.e., have a common origin). Around three quarters of meteors are sporadic rather than belonging to well-defined streams, although the dividing line is not clear-cut, perhaps 20 percent of meteors sometimes classified as sporadic actually occur as part of minor showers. The sporadic meteoroids move on similar orbits to meteoroids that are part of what is generally recognized as the Taurid stream, but there is a somewhat greater dispersion of elements in the sporadic stream. We point out the existence of a apex (AP) source which dominates for fainter (10th magnitude, say) meteors. There is a tendency for larger orbits in the Taurid stream to be at greater longitudes (cf. trends with longitude calculated by Stohl and Porubcan 1990). This is because of the differential effect of Jupiter on the rate of longitude precession on orbits of different sizes. We shall see that this dispersal in longitude is associated with a timescale of (is) approximately (or equivalent, similar) 10 kyr (1 kyr = 1000 years). One of the main questions will be the mechanism for generating the range in size of orbits (which then undergo differential precession due to Jupiter). We shall see that the distribution of Taurid meteor orbits as detected by photography and radar is best explained by a model in which large cometary fragments split from the parent object (the Encke progenitor) at perihelion and these fragments then undergo catastrophic collisions with objects in the astroid belt. Dissert. Abstr.

N93-25621 California Univ., Santa Cruz.

TULLY-FISHER DISTANCES AND MOTIONS IN THE NORTHERN SKY Ph.D. Thesis

Stephane Courteau 1992 275 p

Avail: Univ. Microfilms Order No. DA9235704

The results of a study to test for large-scale velocity deviations in a uniformly expanding universe are presented. At the onset of this work, galaxy motions in the northern hemisphere, contrary to the impressive sky coverage in the south, were still very poorly mapped. To improve on this situation, we identified a well-defined sample of 380 northern Sb-Sc UGC spirals in the range of 2000-10000 km sec(exp -1). Distances are estimated using the Tully-Fisher relation but with rotation velocities measured from long slit spectra in lieu of 21 cm delta V's. Surface brightness profiles and total magnitudes are extracted for 820 r-band images, and (H alpha + (NII)) rotation curves, fluxes, and rotation profiles are measured from 450 red spectra. The galaxy magnitudes are accurate internally to plus or minus 0(exp m)022 and the delta V's agree internally to plus or minus 12 km s(exp -1). A tight linear correlation of optical versus radio velocity widths with a scatter of 25 km s(exp -1) is also derived. We find evidence for large-scale motions near the concentration of Perseus-Pisces (PP), but identify a vast region of unperturbed, quiet Hubble flow (QHF) perpendicular to PP. The peculiar velocity (PV) data are corrected for uniform density Malmquist bias when they are analyzed in estimated distance space; an empirical correction for selection effects mainly due to magnitude cutoff is derived from the QHF region and applied to the PVs in redshift space. Both analyses are consistent in showing the PP Supercluster as streaming in bulk towards the Local Group at 392 plus or minus 79 km s(exp -1) (with respect to the microwave background restframe). The cause for such motion remains undetermined. Gravitational collapse within PP is detected, but the statistical error is large. An emerging picture of large-scale velocity fields shows the main infall regions to be correlated with the observed clumpiness of luminous matter. Our data, combined with published PV surveys, provide strong support for the existence of low-amplitude perturbations in the universe on scales not yet probed by current samples (approxmately greater than 120h(exp -1)Mpc). The implications of cosmic bulk motions with such large coherence lengths pose a serious challenge for models of generation of structure in the universe. Dissert. Abstr.

N93-25624 Delaware Univ., Newark.

STEADY-STATE NUMERICAL MODELS OF ACCRETING NEUTRON STARS: THE EFFECT OF ATMOSPHERIC CNO DEPLETION AND DIFFUSION Ph.D. Thesis

Jason Clark Tillett 1992 114 p

Avail: Univ. Microfilms Order No. DA9301779

We use the observed variation of burst properties of x-ray burst sources, with the persistent flux to determine if nuclear reactions are proceeding in a carbon poor or carbon rich environment. We find that by reducing the CNO cycle burning rate, which corresponds to a carbon poor environment, we cannot reproduce observed variations in the burst properties with persistent flux. Recent work on the surface boundary conditions of accreting neutron stars indicates that appreciable amounts of CNO elements can be destroyed by spallation. Previous authors assume an accretion of near solar abundance material which is not altered by boundary effects. Here we construct steady-state models of accreting neutron stars assuming all but traces of metals are destroyed due to spallation in the surface layers. We also construct models with solar accretion for comparison. The models are compared with EXOSAT observations of 4U/MXB 1636-53. We find that the simplification introduced by assuming CNO destruction does not bring theory closer to describing what is observed. Elemental diffusion has never been incorporated into the equations of stellar structure when solving for the steady-state structure of an accreting neutron star. A simple order

of magnitude estimate of the timescale for diffusion indicates that this process may be important, particularly for bursts with long recurrence intervals. We solve the equations of stellar structure with diffusion and show that the results indicate that the star may not be in a steady-state.
Dissert. Abstr.

OPTICAL AND INFRARED STUDIES OF DISTANT GALAXIES Ph.D. Thesis
Alfonso Aragon-Salamanca 1991 278 p
Avail: Univ. Microfilms Order No. BRD-97956

This thesis investigates the evolution of galaxies as a function of look-back time, concentrating on early-type cluster galaxies. We demonstrate that selecting galaxies in the near-infrared produces samples that are representative of the galaxy population at intermediate and high redshift, and that such samples are likely to contain approximately the same proportion of all galaxy classes independently of z, avoiding the biases introduced by optical selection criteria. We have developed observing and data processing techniques using infrared arrays that yield high precision near-infrared photometry to very faint limits. Combining such data with optical photometry for the galaxy samples, we have been able to quantify the amount of color evolution in early-type cluster galaxies up to redshifts z approx. 0.9. At z = 0.37 the mean color-luminosity (c-L) relation for early-type cluster galaxies is compatible in slope and zero point with that of present-day ellipticals, indicating that the bulk of the stellar population at that epoch does not show any significant color evolution. However, the scatter around the main c-L line is significantly larger than the observational errors, and distinctively non-Gaussian. We interpret this as evidence that a large fraction (approx. 60 percent) of the early-type members have suffered a burst of star formation (involving approx. 10 percent of the galaxy mass) approx. 1 Gyr prior to the epoch of observation. In the redshift range 0.5 less than z less than 0.9, we detect systematic color evolution with redshift in the red cluster galaxies. In particular, at z approx. 0.9 there are no galaxies as red as present day ellipticals at all wavelengths. The detected evolution is compatible with the passive aging of stellar populations formed before z approx. equals 2. Superimposed on that, there is evidence for subsequent bursts of star formation happening on a substantial fraction of the cluster galaxies, but affecting only a small fraction of the total galaxy mass. We suggest this may be related to the Butcher-Oemler effect observed at lower redshifts. We did not detect significant amounts of galaxy luminosity evolution at 2 microns, in contrast with the results for radio galaxies. We finally propose and test three new approaches to the study of normal field and cluster galaxies beyond z = 1: a study of gravitationally lensed galaxies, a search for galaxies producing clustered metallic absorption lines in QSO's and an infrared follow-up of ROSAT X-ray detected high redshift clusters.

FAR-INFRARED EMISSION, GAS, AND ULTRALUMINOUS HII REGIONS IN M101 Final Report
J. D. P. Kenney and N. Z. Scoville 1992 1 p
(Grant NAG5-1803)
(NASA-CR-192791; NAS 1.26:192791) Avail: CASI HC A01/MF A01

We have made deconvolved maps of M101 in each of the 4 IRAS bands using a new maximum-entropy based model for reconstructing distributions with correlated structure on multiple scales. This new deconvolution procedure, developed by Weir (1992, J.Opt.Soc.Am., submitted), is superior to other maximum entropy-based techniques for several reasons. For our purposes, an important advantage is that it has less artifacts and greatly reduced systematic biases compared with the 'HiRes' maps of M101 produced by Aumann, Fowler, and Melnyk (1990, AJ, 99, 1674), thus it is accurate enough to perform aperture photometry. The deconvolved maps have a maximum resolution of approximately 30 sec, sufficient to resolve the brightest HII complexes and much of the spiral structure. The new maps and our comparison of the far-infrared, gas, and optical distributions are being written up in Kenney, Weir & Scoville (1992, in preparation). The quality of the reconstructed far-infrared maps is good enough for us to carry out most of the analyses outlined in the original proposal. From a ratio of the 60 micron and 100 micron maps, we have found that the ultraluminous HII complexes in the outer galaxy have the hottest dust temperatures with T approximately 50-60 K, which is twice as hot as most of the disk. Their extraordinary luminosity in the far-infrared is due to a relatively small amount of dust being heated to high temperatures, rather than a large concentration of dust and gas. A map of the dust opacity at 60 microns shows good overall agreement with a map of cold gas (HI+H2), indicating that throughout most of the galaxy only approximately 20 percent of the dust is warm enough to be detected by IRAS. The ultraluminous HII complexes have a high luminosity-to-gas mass ratio, independent of whether the far-infrared or the H-alpha emission line is used to measure the luminosity, which implies that gas is being converted into high mass stars more rapidly in these complexes compared to other locations in the disk.

(Contract NAS5-30960; RTOP 633-00-00)
(NASA-RP-1300-Vol-1; Rept-93B00049-Vol-1; NAS 1.61:1300-Vol-1) Avail: CASI HC A19/MF A04

The Cape Photographic Durchmusterung (CPD Gill and Kapteyn 1895-1900) is a photographic survey of southern stars in the declination range -18 to -90 degrees. This volume covers the declination range -18 through -37 degrees. Positions are given for the 1875 equinox. The summary of the positional uncertainties quoted in the third volume of the published catalog gives +/- 0.28 sec (R.A.) +/- 0.044 arcmin (Dec.) for zones -18 to -57 degrees. The probable error of a photographic magnitude as determined by combining results for different magnitudes and weighting proportionately according to the numbers of stars in each class of magnitude is given as +/- 0.055 mag. From an analysis of the taint magnitude limits on the plates discussed in the third volume introduction, the catalog as a whole can be considered complete to photographic magnitude 9.2 but it is stated that it will be found practically complete in or near the Milky Way, to magnitude 9.5.

ROSAT INVESTIGATION OF FLARING AND ACTIVITY ON PROX CEN Final Report, 5 May 1992 - 4 May 1993
Bernhard Haisch 4 May 1993 30 p
(Contract NAS5-31844)
(NASA-CR-192972; NAS 1.26:192972) Avail: CASI HC A03/MF A01

The objective of this program was to investigate with high sensitivity the low-level flare activity which may underlie coronal heating. This was done. The ROSAT observations of Prox Cen were scheduled for 50 ks spread out from 26 Feb. - 10 Mar. 1992. Unfortunately because of spacecraft problems many of these pointings turned out to contain no useful data or extremely truncated valid data sets. Considerable time was spent trying to determine which of the data would be scientifically useful and which would not. Fortunately, several developments took place to augment the original data in such a way that the scientific goal of advancing the study of flaring and variability was able to be achieved after all. These are as follows: (1) a second round of ROSAT observations was carried out in Feb. 1993 which only came to the attention of the PI in Apr. 1993 when a new data tape arrived; (2) simultaneous IUE observations were requested and obtained; (3) data from the UK WFC are available via the collaboration with Dr. G. Bromage; and (4) the 'cleaned-up' original data set was found to include one major flare and 2 moderate flares. Because of the problems with the original data set, the unexpected acquisition of new data only two months ago, and the availability of IUE and WFC data, an article on Prox Cen for publication is not ready at this time. Such an article is being developed and can be completed as part of ongoing ROSAT research efforts on stellar coronae and flaring. Author (revised)

ROSAT X RAY SURVEY OBSERVATIONS OF ACTIVE CHROMOSPHERIC BINARY SYSTEMS AND OTHER SELECTED SOURCES Final Technical Report
Lawrence W. Ramsey 24 Apr. 1993 7 p
(Grant NAG5-1435)
(NASA-CR-192933; NAS 1.26:192933) Avail: CASI HC A02/MF A01

The connection between processes that produce optical chromospheric activity indicators and those that produce x-rays in RS CVn binary systems by taking advantage of the ROSAT All-Sky Survey (RASS) results and our unique ground-based data set was investigated. In RS CVn systems, excess emission in the Ca 2 resonance (K & H) and infrared triplet (IRT) lines and in the Balmer lines of hydrogen is generally cited as evidence for chromospheric activity, which is usually modeled as scaled up solar-type activity. X-ray emission in RS CVn systems is believed to arise from coronal loop structures. Results from spectra data obtained from RASS observations are discussed and presented. Derived from text

OBSERVATIONS AND MODELS OF SHOCK STRUCTURES IN HERBIG-HARO OBJECTS Ph.D. Thesis
Jon Arthur Morse 1992 215 p
Avail: Univ. Microfilms Order No. DA9302552

Herbig-Haro objects are emission-line nebulae that result from radiative shock waves formed by the interaction of a collimated supersonic stellar wind, driven by an embedded young stellar object, with the ambient molecular material out of which the star formed. This dissertation is a study of these energetic outflows using detailed spectrophotometry of the emitting gas and dynamical models of the wind/cloud interactions. Three stellar jets with prominent bow-shaped Herbig-Haro objects have been studied, with the following principal results: (1) the stellar jets all show signs of being velocity-variable (i.e., non-steady); (2) the densities in the jets are approximately 10 times the densities in the ambient environments; and (3) magnetic fields do not appear to play a major role in the dynamics of the outflows, at least in the regions of the outer bow shocks. COSMIC STRING COSMOLOGY Ph.D. Thesis
Robert Reynolds Caldwell 1992 151 p
Avail: Univ. Microfilms Order No. DA9300075

Cosmological aspects of cosmic strings are studied. The formation, growth, and evolution of small scale structure on cosmic strings are studied. It is found that the accumulation of small scale structure alters the appearance and behavior of the cosmic string network and changes the means by which cosmic strings may contribute to the formation of large scale structure from loops to long strings. Next, the density of gravitational radiation produced by a realistic cosmic string network, evolving in a realistic universe, is calculated. Cosmological observations of nucleosynthesis and noise in pulsar timing measurements are used to constrain the density of cosmic string gravitational radiation. It is found that cosmic string scenarios which may realistically contribute to the formation of large scale structure are heavily restricted. Dissert. Abstr.

PROPAGATION OF RADIATION IN ASTROPHYSICAL MEDIA: GRAVITATIONAL LENSES AND ASTROPHYSICAL MASERS Ph.D. Thesis
Gerardo Angelo Scappaticci 1992 146 p
Avail: Univ. Microfilms Order No. DA9305679

In Part 1 the time variability of the radiation emitted by astrophysical masers is studied by numerically solving the system of time dependent non-linear partial differential equations of radiative transfer through a masing gas. The calculations demonstrate for the first time how oscillations, with periods which are comparable to the light travel time through the maser, might develop as a result of radiative instabilities. In addition, we perform a linear stability analysis of the radiative transfer equations and the rate equations for the molecular populations of the masing transition. We use this stability analysis to determine the conditions and parameters for which an astrophysical maser would become unstable. Our results are in agreement with recent observations of astrophysical masers in which fluctuations are found on time scales as short as one thousand seconds. In Part 2 statistical methods are applied to analytically calculate the properties of the fluctuations, in intensity and luminosity, of gravitationally lensed images of quasars, due to compact masses lying within the deflecting galaxy. We compute the fluctuations in intensity, and apparent luminosity, of the gravitationally lensed source as measured by quantities such as the standard deviation, autocorrelation function, and power spectrum. We also compare our results with numerical data we received from P. Schneider and A. Weiss, which for the first time directly compares a Monte Carlo type method with a totally analytical calculation. NEAR EARTH OBJECT FUELS (NEO-FUELS): DISCOVERY, PROSPECTING AND USE
Anthony C. Zuppero and Michael G. Jacox 25 Aug. 1992 9 p Presented at the 43rd Congress of the International Astronautical Federation, Washington, DC, 28 Aug. - 5 Sep. 1992
(Contract DE-AC07-76ID-01570)
(DE93-005185; EGG-M-92057; CONF-9208154-2) Avail: CASI HC A02/MF A01

The 1992 discovery of a water-ice, near-Earth object (NEO) in the space near Earth is evaluated as a source of rocket fuel and life support materials for Earth orbit use. Nuclear thermal rockets using steam propellant are evaluated and suggested. The space geological formation containing such water-rich NEO's is described. An architecture couples near-Earth object fuels (neo-fuel) extraction with use in Earth orbits. Preliminary mass payback analyses show that space tanker systems fueled from space can return in excess of 100 times their launched mass from the NEO, per trip. Preliminary cost estimates indicate neo-fuel costs at Earth orbit can be 3 orders of magnitude below today's cost. A suggested resource verification plan is presented. DOE

[THEORETICAL CALCULATIONS ON THE ELECTRON ABSORPTION SPECTRA OF SELECTED POLYCYCLIC AROMATIC HYDROCARBONS (PAH) AND DERIVATIVES] Final Technical Report
Ping Du 5 Apr. 1993 55 p Submitted for publication
(Contract NCC2-733)
(NASA-CR-192762; NAS 1.26:192762) Avail: CASI HC A04/MF A01

As a theoretical component of the joint effort with the laboratory of Dr. Lou Allamandola to search for potential candidates for interstellar organic carbon compound that are responsible for the visible diffuse interstellar absorption bands (DIB's), quantum mechanical calculations were performed on the electron absorption spectra of selected polycyclic aromatic hydrocarbons (PAH) and derivatives. In the completed project, 15 different species of naphthalene, its hydrogen abstraction and addition derivatives, and corresponding cations and anions were studied. Using semiempirical quantum mechanical method INDO/S, the ground electronic state of each species was evaluated with restricted Hartree-Fock scheme and limited configuration interaction. The lowest energy spin state for each species was used for electron absorption calculations. Results indicate that these calculations are accurate enough to reproduce the spectra of naphthalene cation and anion observed in neon matrix. The spectral pattern of the hydrogen abstraction and addition derivatives predicted based on these results indicate that the electron configuration of the pi orbitals of these species is the dominant determinant. A combined list of 19 absorptions calculated from 4500 A to 10,400 A were compiled and suggested as potential candidates that are relevant for the DIB's absorptions. Continued studies on pyrene and derivatives revealed the ground state symmetries and multiplicities of its neutral, anionic, and cationic species. Spectral calculations show that the cation (B(sub 3g)-2) and the anion (A(sub u)-2) are more likely to have low energy absorptions in the regions between 10 kK and 20 kK, similar to naphthalene. These absorptions, together with those to be determined from the hydrogen abstraction and addition derivatives of pyrene, can be used to provide additional candidates and suggest experimental work in the search for interstellar compounds that are responsible for DIB's. STARBURST GALAXIES: HARD X-RAY SPECTRA AND CONTRIBUTION TO THE DIFFUSE BACKGROUND Final Report
Duane E. Gruber 3 Mar. 1993 5 p
(Grant NAG5-1385)
(NASA-CR-192790; NAS 1.26:192790) Avail: CASI HC A01/MF A01

During the period of this grant two main tasks were performed: a determination of a selection criterion for starburst galaxies most likely to emit X-rays, and performance of a pilot study of the X-ray emission from nine such systems. Starburst galaxies may be expected to emit flat-spectrum X-ray at energies above 10 keV resulting from the various remnants of the short-lived massive stars which characterize the starburst. The investigation to determine the optimum sample resulted in a change from an X-ray selected (HEAO-2) sample to infrared selection based on the IRAS catalogue. A much broader sample thereby available for study, and selection could be limited to only the nearest objects and still obtain a reasonably large sample. A sample of 99 of the brightest infrared starburst galaxies was settled on for the X-ray survey. For a set of practical size, this was then reduced to a subset of 53, based on luminosity and nearness. X-ray emission from these objects was individually measured from the UCSD HEAO-1 all-sky survey in four energy bands between 13 keV to 160 keV. This data base consists of about 20 optical disk volumes. Net significance for the result was roughly two sigma, and a very hard spectral shape is indicated for the net spectrum of the surveyed galaxies. With the possibility of detection of the class, it was then felt worthwhile to examine fluxes from these sources in other archival data. This was performed with the HEAO-1 A2 data and the HEAO-2 (EINSTEIN) main archive and slew survey. Positive results were also obtained for the sample, but again at weak significance. With three independent measures of weak X-ray fluxes from nearby starburst galaxies, we wrote a letter to the Astrophysical Journal (enclosed) discussing these results and their likely significance, in particular, for the contribution to the cosmic diffuse x-ray background, perhaps as much as 25 percent. FAR INFRARED SPECTRA OF AMORPHOUS AND CRYSTALLINE WATER ICE AND CHANGES IN THESE PHASES AS THE RESULT OF PROTON IRRADIATION
Reggie L. Hudson (Eckerd Coll., Saint Petersburg, FL.) and Marla H. Moore Chicago, IL University of Chicago Press 20 Nov. 1992 25 p Submitted for publication
(Grants NAG5-1843; NsG-5172)
(NASA-CR-192849; NAS 1.26:192849) Avail: CASI HC A03/MF A01

Far infrared spectra from 20 microns (500 cm(sup -1)) to 100 microns (100 cm(sup -1)) of water ice were measured. Amorphous ice deposited at 13 K has one absorption band at 45 microns (220 cm(sup -1)). Amorphous ice evolves into a crystalline form with absorptions at 44 microns (229 cm(sup -1)) and 62 microns (162 cm(sup -1)) as the temperature is increased to 155 K. Spectra documenting this phase change are presented as well as spectra of crystalline ice at temperatures between 13 K and 155 K. Far infrared spectra of amorphous and crystalline water ice before and after proton irradiation are also presented. Changes in these two forms are discussed in relation to ices in comets, grains, and planetary satellites in various radiation environments. Observations of non-terrestrial clathrate hydrates are still lacking despite the fact that clathrates first were suggested to exist in cometary and interstellar ices over forty years ago. Spectroscopy, the most direct method of astronomical detection, has been hampered by

the similarity of clathrate hydrate spectra to those of unenclathrated guest molecules and solid H2O. A methanol (CH3OH) clathrate hydrate, using a recently published procedure, was prepared and its far-IR spectrum investigated. The spectrum is quite differenct from that of either unenclathrated CH3OH or solid H2O and so should be of value in astronomical searches for this clathrate. Author (revised)

ORIGIN AND EVOLUTION OF CATACLYSMIC VARIABLES M.S. Thesis
D. Thomas 1988 268 p
Avail: Univ. Microfilms Order No. BRDX98319

The basic model of a cataclysmic variable, incorporating a low mass dwarf transferring material via an accretion disc to a white dwarf, is well founded. However, the details of how such systems form and evolve is still uncertain. Some of the problems are discussed in the background presented in Part 1. One obstacle to a solution of these evolutionary problems is the lack of accurate information on component masses. Part 2 presents the results of an observing program aimed at providing further information for use in mass determinations. Chapter 3 reports on survey of 65 cataclysmic variables in which 16 secondary stars were detected through the lambda 8190 A NaI doublet. Several other interesting spectroscopic features are also discussed. In Chapters 4 and 5, radial velocity studies of five secondaries are presented. Improved periods are determined for three objects and preliminary mass determinations are carried out for all, using mass ratios found from the rotational broadening and white dwarf radial velocity semi-amplitudes. Chapter 6 presents a preliminary kinematic study of cataclysmic variables using gamma velocities from secondary star observations. Unfortunately, radial velocity measurements using the lambda 8190 A doublet are often severely distorted by line flux variations caused by irradiation and contamination. Such effects were observed as apparently eccentric orbits in CH UMa and SS Aur. Corrections may be calculated by measuring the line flux variations. This was attempted for RU Peg and SS Cyg in Chapter 7. No significant eccentricities or line flux variations were detected, but the results indicate that direct NaI line flux measurements are difficult. The secondary star in RU Peg, CH UMa, MU Cen, SS Cyg, and DO Dra appears cooler than expected if it obeys the often assumed main sequence mass-radius relation. Part 3 reports evolutionary calculations, using the latest theories for disc and stellar magnetic braking, aimed at explaining this over-cool tendency. The most likely explanation is that the single star mass-radius relations are not valid for cataclysmic variable secondaries. For the longer period systems, mass determinations imply the secondaries have evolved significantly across the main sequence. Different rates of angular momentum loss may also explain the different appearances of secondary stars in systems with similar periods. Part 4 provides a detailed summary of the preceding work and suggests possible approaches for the future. Dissert. Abstr.

STRUCTURE AND STAR FORMING ACTIVITIES OF THE COLD MASSIVE MOLECULAR CLOUD G216-2.5 Ph.D. Thesis
Youngung Lee 1992 181 p
Avail: Univ. Microfilms Order No. DA9305858

The gas and dust properties and the star forming activity in G216-2.5 (also called Maddalena's cloud), a cold, massive giant molecular cloud (GMC) that has no evidence for star formation are studied. We have mapped 11 square degrees in the J = 1-0 transitions of CO-12 and CO-13 using the QUARRY fifteen-beam array receiver on the 14 m telescope at FCRAO. We have confirmed the results of Maddalena and Thaddeus (1985) that the cloud is unusually cold and has very broad linewidths (delta(V) is approximately 8 km/s). The visual extinction to CO-13 column density ratio is found to be similar to that in local molecular clouds, suggesting that if the gas to dust ratio is normal, the CO-13 abundance relative to molecular hydrogen in this cloud is similar to that found for clouds near the sun. The low gas and dust temperatures found for this cloud are largely due to the absence of heating by massive stars. The exceptionally low gas temperature can be explained if the cosmic-ray heating rate is reduced by a factor of two in the outer Galaxy. Low luminosity, and presumably low mass, young stars were identified in this cloud. These young stars are found preferentially on the edge of the cloud. Clusters of T Tauri stars are found in two locations within G216-2.5. The mass of the cloud was established by several techniques and masses between 1 x 10(exp 5) and 6 x 10(exp 5) M solar magnitudes were obtained. It is suggested that G216-2.5 is a remnant cloud from a past episode of massive star formation for the following reasons. First, the cloud has a relatively large velocity dispersion for a non-star-forming GMC. Second, there is clear evidence for shells and rings within the cloud, which may be the fossil remains of its earlier star formation activity. Third, the kinematics of the cloud is dominated by a global velocity gradient suggesting that the cloud is part of a very large expanding shell. Lastly, the discrepancy between the local thermodynamic equilibrium (LTE) and virial masses may be explained if the cloud has been severely perturbed and is currently expanding. G216-2.5 may be part of a larger star forming complex that includes the adjacent H 2 region S287 and its molecular cloud.

NUMERICAL MODELING OF BARRED SPIRAL GALAXIES Ph.D. Thesis
Elizabeth Mary Moore 1992 250 p
Avail: Univ. Microfilms Order No. DA9304032

A two-component, self-consistent computer code to model spiral galaxies was written and tested and a method of inducing and controlling bar formation is developed. This work presents a departure from former modeling work done at the University of Florida, which depended on the beam scheme, a hydrodynamical code with a number of limitations. In particular, only the gas component could be modeled, no self-gravitational forces were included, and the viscosity inherent to the code could not be controlled easily. These shortcomings are overcome in the new algorithm. Most importantly, an attempt has been made to keep the models self-consistent. No perturbing potentials are imposed or required to excite bar and spiral structure. The code can model both the stellar and the gaseous component of a spiral galaxy. The stellar component feels only gravitational forces, while the gas component feels both gravitational and viscous forces. In addition, a halo force can be imposed for the purpose of stabilizing the disk. The code is a hybrid grid/smooth particle code. The gravitational forces are calculated on a Cartesian grid using a Fast Fourier Transform, while the gas viscous forces are calculated in a smooth particle manner. A mechanism for creating warm, featureless, stable disks is developed by taking moments of the collision less Boltzmann equation. In order to induce and control bar and spiral arm formation, the stabilizing stellar velocity dispersions are reduced in the center of the disk, but maintained in the outer regions. A bar forms naturally in the interior and the rotation of this bar helps maintain spiral structure in the outer gas disk. Realistic-looking spiral features are maintained in the gas component for as long as the models are calculated. A wide variety of bar and spiral structure can be formed by varying the size of the unstable central region, the rate of 'turn on', of the heating and the halo mass. We would like to test the model results by comparing them with observations and so a second part of the thesis consists of observing and reducing 21 cm line data of NGC 1398 and NGC 1784 at the Very Large Array. Low (C/D array) and high (B/C) resolution data were obtained, calibrated and combined to make maps of the integrated column density and mean radial velocity of the neutral hydrogen. In the future, the code will be used to try to model these galaxies. Dissert. Abstr.

SHELLS, OUTFLOWS AND STAR FORMATION IN THE GIANT MOLECULAR CLOUD MONOCEROS R2 Ph.D. Thesis
Taoling Xie 1992 241 p
Avail: Univ. Microfilms Order No. DA9305918

To improve our understanding about giant molecular clouds (GMC) associated with R-associations, a CO-12 J = 1-0 map of 167,000 spectra with 45 inch resolution and 25 inch spacing, a CO-13 J = 1-0 map of approximately 40,000 spectra with 1.5 foot resolution and 1 foot spacing, IRAS BIGMAP images, and maps of high density molecular tracers for the dense cores are obtained for the GMC Monoceros R2 (D = 830 plus or minus 50 pc). These data reveal that the large-scale structure of Mon R2 is dominated by an expanding bubble shell (approximately 30 pc) with front side moving towards us at a radial velocity of approximately 4-5 km/s. Distortions of this shell are obvious, suggesting of the inhomogeneity of the cloud before the formation of the bubble. There is no evidence for red-shifted shell at the far side of the bubble. There are at least two generations of star formation in Mon R2. The older generation of stars with an age of 6-10 x 10(exp 6) years are represented mostly by reflection nebulae. The younger generation of stars with an age of approximately

10(exp 5) years are represented mostly by IRAS point sources. It is proposed that the large-scale expanding bubble shell is the result of combined effects of ionizing flux and stellar winds originating from the older generation of young stellar objects, but perhaps dominated by O type stars which either are obscured or left main sequence. It is suggested that the formation of the younger generation of stars has been triggered by the older generation of stars. The main and the GGD12-15 cores are located on the large-scale expanding shell, and their harboring both generations of stars can be explained were the cores preexisting clumps. Our CO data reveal an eggplant-shaped bipolar outflow shell, whose shape can be satisfactorily modeled with radially directed stellar winds sweeping up ambient material with momentum conservation. An inversion method is implemented for analyzing dust emission spectra at FIR wavelengths in terms of a continuous dust temperature distribution, and was applied to IRAS BIGMAP images of Mon R2. Computer programs are developed for identifying clumps and determining their properties in molecular emission maps. The results support the reality of size-linewidth and mass-linewidth relations for clumps in individual GMC's. Dissert. Abstr.

30 DORADUS IN THE LARGE MAGELLANIC CLOUD: THE STELLAR CONTENT AND INITIAL MASS FUNCTION Ph.D. Thesis
Joel William Parker 1992 240 p
Avail: Univ. Microfilms Order No. DA9304594

UBV photometry for 2400 stars in the OB associations of 30 Doradus in the LMC and new spectroscopic classifications for 54 stars including 23 O stars are presented. The entire catalog (exclusive of the dense core cluster R 136) is photometrically complete to V = B = 18(sup m) and U = 17(sup m), although the completeness magnitudes are fainter for regions with less nebular contamination. From these data, I have determined the effective temperatures and bolometric magnitudes of the stars and placed them on the theoretical H-R diagram. Using stellar evolution models, I then bin the stars by mass to obtain the initial mass function (IMF), which is the number distribution as a function of mass. The IMF shows marked curvature, flattening out to lower masses, even for masses above which the photometry is complete. Best estimates of the IMF slope yield values of gamma = -1.3 to -1.5 for M approximately greater than 12 solar mass, where the Salpeter slope is gamma = -1.35. However, there are indications that different regions of 30 Doradus have different IMF slopes, perhaps as the result of sequential star formation effects. Calculations of the Lyman continuum photon luminosity, N(sub Ly), lead to the result that approximately 3.2 x 10(exp 51) photons s(sup -1) are being produced by the observed stars in 30 Doradus. Less than 60 percent of this luminosity comes from the 150 stars with spectroscopic classifications, implying that there still remain a large number of OB stars yet to be observed spectroscopically. This, along with stellar evolution effects, could explain the IMF curvature and the apparent deficiency of stars in the most massive bins of the IMF. For an ionization-bounded H 2 region, the H alpha luminosity due to the Lyman continuum photons produced by the stars would be L(sub H alpha) is approximately equal to 4.5 x 10(exp 39) erg s(exp -1). This value agrees with the luminosity determined from the observed H alpha flux, but is a lower limit since the effects of W-R stars and the unresolved cluster of R 136 were not included. Dissert. Abstr.

THE EFFECTS OF ROTATION ON THE WINDS FROM HOT STARS Ph.D. Thesis
Jon Eric Bjorkman 1992 186 p
Avail: Univ. Microfilms Order No. DA9221466

We present three studies in which we attempt to develop an understanding of both the geometry and origin of circumstellar disks in the winds from Be stars. In the first study, we develop analytic expressions for the infrared excess and optical intrinsic polarization produced by an ad hoc density distribution that permits us to study the effect of the disk thickness and inclination angle on the observed IR flux and intrinsic polarization. Fits to the data predict a disk that is either very thin (HWHM approx. equals 0.5 degrees), or relatively thick (HWHM approx. equals 43 degrees). In the second study, we address the origin of the disk. We present a simple approximation that permits us to obtain the axisymmetric 2-D supersonic solution of a rotating radiation driven stellar wind from a 1-D model of the equatorial flow. Our solution predicts the formation of a dense equatorial disk of the rotation rate of the star is above a threshold value. We find that the disk forms because the supersonic wind that leaves the stellar surface at high latitudes travels along trajectories that carry it down to the equatorial plane, where it passes through a standing oblique shock on top of the disk. The disk is predicted to be quite thin (approx. equals 0.5 degrees opening angle) and has a density enhancement rho(sub eq)/rho(sub pole) approx. equals 10(exp 3). Adjacent to the disk, the standing shock heats the flow that enters the equatorial region to temperatures of 10(exp 5) to 10(exp 6) K before the material finally mixes with the disk. This temperature is sufficient to produce the observed degree of superionization in the winds of Be stars. In the final study, we develop the fluid equations for a 1-D model of an equatorial circumstellar disk with finite thickness while accounting for the addition of mass and momentum from the stellar wind of a rapidly rotating star. We find that the disk rotation speed initially falls faster than 1/r. We also find that the location of the disk in our model is determined by a critical point condition in the disk outflow. Dissert. Abstr.

DISKOSEISMOLOGY: PROBING RELATIVISTIC ACCRETION DISKS Ph.D. Thesis
Michael Allen Nowak 1992 126 p
Avail: Univ. Microfilms Order No. DA9302280

Helioseismology has provided a wealth of information about the structure of the solar atmosphere. Little is known, however, about the structure of accretion disks that are thought to exist around black holes and neutron stars. In this thesis we present calculations of modes that are trapped in thin Keplerian accretion disks. We hope to use observations of thes modes to elucidate the structure of the inner relativistic regions of accretion disks. Our calculations assume that the thin disk is terminated by an innermost stable orbit, as would occur around a slowly rotating black hole or weakly magnetized compact neutron star. The dominant relativistic effects, which allow modes to be trapped within the inner region of the disk, are approximated via a modified Newtonian potential. Using the Lagrangian formulation of Friedman and Schutz, we develop a general formalism for investigating the adiabatic oscillations of arbitrary unperturbed disk models. First we consider the special case of acoustic waves in disks with isothermal atmospheres. Next we describe the Lagrangian perturbation vectors in terms of the derivatives of a scalar potential, as has been done by Ipser and Lindblom. Using this potential, we derive a single partial differential equation governing the oscillations of a disk. The eigenfunctions and eigenfrequencies of a variety of disk models are found to fall into two main classes which are analogous to the p-modes and g-modes in the sun. Specifically we use the potential formalism to compute the g-modes for disks with isothermal atmospheres. Physical arguments show that both the p-modes and g-modes belong to the same family of modes as the p-modes and g-modes in the sun, just viewed in a different parameter regime. With the aid of the Lagrangian formalism we consider possible growth or damping mechanisms and compute the (assumed) relatively small rates of growth or damping of the modes. Specifically, we consider gravitational radiation reaction and parameterized models of viscosity. Both isotropic and anisotropic viscosity models are considered. We find that isotropic viscosity models tend to lead toward mode growth, while anisotropic viscosity models tend to lead toward damping. We consider possible physical explanations for this effect. Finally, by considering the stochastic driving of the modes by free turbulence (i.e. shear driven turbulence) we present estimates of the mode amplitudes. These estimates, coupled with simple estimates of the luminosity variations caused by the modes, are used to gauge the observational appearance of the modes. We calculate the expected fractional variation of the R-band magnitude for parameters suitable to the study of Active Galactic Nuclei. We explore various criteria for selecting suitable objects in which to search for these modes, and present a preliminary list of candidate objects. Dissert. Abstr.

PHOTOSPHERIC ABUNDANCE ANALYSIS OF LOW-MASS PRE-MAIN SEQUENCE STARS Ph.D. Thesis
Deborah Lynne Padgett 1992 222 p
Avail: Univ. Microfilms Order No. DA9232213

This thesis investigation uses photospheric abundance analysis techniques to determine metal abundances both for individual weakly active T Tauri stars and the molecular clouds with which these stars are associated. Using the high resolution echelle spectrographs of the Palomar 1.5m and

the Las Campanas Observatory 2.5m telescopes, high signal-to-noise ratio spectra have been obtained for 53 low pre-main sequence stars in six major northern and southern hemisphere star formation regions. Spectra were also taken of 14 main sequence stars with known effective temperatures and metallicity to serve as spectral standards. Equivalent widths of a large number of Fe I absorption lines have been measured, as well as lines of Ca I, Al I, V I, Ni I, Ti I, K I, and Li I. Temperature-sensitive line ratios of neutral iron and vanadium calibrated against the spectral standards are used to derive effective temperatures for 30 weak-line T Tauri stars, which are much improved over the low resolution spectral classifications found for these objects in the literature. Microturbulent velocities have also been found for 16 of the pre-main sequence stars in the sample. Several stars with abnormally high microturbulences for their spectral type have been found. Using these improved stellar parameters, metallicities of a large number of T Tauri stars have been determined for the first time. Abundance analyses of iron, aluminum, calcium, nickel, and titanium are performed on 30 low masses, pre-main sequence stars. In the star-formation regions of Taurus-Auriga, Orion, Chamaeleon, and Ophiuchus, which each contributed five or more association members to the young star survey, bulk metallicities have been determined. The results indicate that the current metal abundances in these clouds are near or slightly above solar values. Cloud material metallicities are then used to calibrate ultraviolet line-of-sight metal depletion studies for the Orion and rho Ophiuchi clouds. The final chapter of this work is a lithium abundance analysis for the entire sample of 53 pre-main sequence stars. Dissert. Abstr.

RADIAL VELOCITY MEASUREMENTS OF CARBON STARS Ph.D. Thesis
Cecilia Syfert Barnbaum 1992 236 p
Avail: Univ. Microfilms Order No. DA9303482

This is a study of the atmospheric structure of AGB carbon stars. I have measured the radial velocities of individual transitions in the optical region, both in absorption and emission. The data are high resolution echelle spectra ranging from 5085 A to 7800 A on 87 optically bright carbon stars in the solar neighborhood, using the 3 m Shane Telescope at Lick Observatory. It has been known for some time that the atmospheric velocities of another group of evolved star, oxygen-rich in composition, are consistently redshifted from center-of-mass motion. I have found the same trend for carbon-rich Mira variables and have shown that carbon-rich SR variables do not show a redshift bias, suggesting that either the atmospheric dynamics or the composition of the dusty circumstellar envelopes differ between the two kinds of carbon stars. Also, I have found a number of differences in the velocity behavior with time between Mira and SR carbon stars: Miras have (1) stronger emission lines, (2) greater amplitude of atmospheric velocity variation with phase, and (3) greater velocity dispersion among atomic lines. In Miras for which I have obtained adequate phase coverage, the velocities of atomic and molecular lines converge near minimum light and have their greatest differences from each other near maximum light, whereas the fluctuations in SR velocities are much smaller and are not as obviously correlated with phase. Also presented for the first time are the emission lines in inverse (Mg I) and classical (K I) P Cygni profiles for 15 carbon stars, all Miras. Using the velocities of these lines and other absorption features, I present a qualitative model of the atmosphere. Another important result from this study is the identification of a broadened spectrum in one carbon star, V Hya. The broadened optical spectrum indicates that this star is rotating rapidly. Models which explain bipolar outflows invoke either binary systems, rotation, or common envelope evolution in which a close companion is engulfed by the giant primary star. If the optical broadening of V Hya is correctly ascribed to rotation, models for asymmetric mass loss, which call on binarity, rotation or common evolution, merge into a coherent picture. Dissert. Abstr.

INVERSE PROBLEM WITH CONTINUOUS PARAMETERS FOR SOLAR OSCILLATIONS Ph.D. Thesis
Yeming Gu 1992 180 p
Avail: Univ. Microfilms Order No. DA9303296

Solar seismology is a relatively new field in solar astrophysics. It provides us a way of 'looking' into the deep interior of the Sun. The goal of solar seismology is to derive information about the internal structure of the Sun from the observed properties of solar oscillations. This is called the inverse problem of solar seismology. This project is to explore a new set of methods and algorithms to solve the inverse problem. The continuous orthonormalization (CON) method and the adjoint method adapted by Rosenwald can be used to compute the eigenfrequency sensitivities to the solar structure parameters in a very efficient way. In this work, the computational algorithm for using these methods has been modified and improved. Continuous parameterization for the internal structure of the Sun is introduced. The solar interior is subdivided into sections, and polynomial fits are applied to the solar structure parameters in each section. The eigenfrequency sensitivities to these polynomial coefficients - the continuous parameters - are computed. These sensitivities can be used to predict the change in solar eigenfrequencies when the structure parameters are perturbed (with the necessary physical constraints satisfied). The inverse problem for the solar internal structure is formulated by using these sensitivities. The generalized inverse technique is used to solve the nonlinear inverse problem in an iterative process. Observed data of low-degree g-modes have been used for a preliminary inversion. The nonlinearity of the solar seismic inverse problem is demonstrated. A nonlinear inversion process has been successfully performed and the results analyzed. The inversion results indicate that the standard solar model is a good approximation of the real Sun. Only relatively small peturbations to the model are needed to explain the frequency deviations between observation and theory. Dissert. Abstr.

THE PHYSICAL PROPERTIES OF LOW SURFACE BRIGHTNESS GALAXIES Ph.D. Thesis
Stacy Sutton McGaugh 1992 179 p
Avail: Univ. Microfilms Order No. DA9303781

Low Surface Brightness (LSB) galaxies are those with central disk surface brightnesses many standard deviations fainter than the canonical value. Severe selection effects stemming from the contrast relative to the arbitrary level of the sky background act to limit knowledge of the LSB component of the galaxy population. This component could be numerically dominant, yet very little is known about the physical properties of such galaxies. This situation is addressed by making a detailed examination of a large sample of LSB galaxies. Structurally, LSB galaxies are similar to high surface brightness (HSB) spiral galaxies. They are comparable in size, and span an enormous range in both surface brightness and luminosity. There is no correlation between size and surface brightness, and galaxies occupy the entire plane defined by these parameters. Physically, LSB galaxies are observed to typically be metal poor, very blue, and possess large gas mass fractions and small mass to light ratios. These indicate a relatively unevolved state, with less of the original gas converted into stars than in HSB galaxies. The blue colors are extreme and are difficult to understand, but probably indicate stellar populations with young mean ages and underpopulated giant branches. There are some cases of galaxies which may be undergoing their first episode of star formation. The elemental abundance ratios indicate either very peculiar star formation histories and IMFs, or some external source of enrichment. The latter provides a better empirical fit, but is not readily explicable without altering standard primordial nucleosynthesis. The low degree of evolution of LSB galaxies is caused by the low surface densities of their atomic gas disks. These remain predominantly below the threshold for star formation, so that this occurs only sporadically, and evolution proceeds gradually. The low densities of LSB galaxies are a natural consequence of their formation from modest initial density fluctuations. From this, it follows that LSB galaxies should be common at all masses, though they may be subject to destruction in high density environments. Thus, observational selection effects may indeed have severely limited knowledge of the majority of the galaxy population. Dissert. Abstr.

MAGNETOTAIL PROCESSES ASSOCIATED WITH AURORAL SURGE FORMATION
L. R. Lyons 15 Apr. 1993 16 p Sponsored by NSF
(Grant NSF ATM-88-00602)
(ATR-90(7186)-1) Avail: CASI HC A03/MF A01

The current wedge that forms during substorms is associated with significant magnetic field (B) changes and particle injections observed at synchronous orbit. It is argued that the B changes associated with the

current wedge lead to a distortion of the separatrix between open and closed field lines that extends from the ionosphere to at least x = -22 R(sub e) in the tail. It is suggested that the distortion forms the auroral bulge observed in the ionosphere during the expansion phase of substorms and that it causes the plasma sheet to expand at longitudes within the current wedge and to thin at longitudes near, but outside, the current wedge. A number of important substorm phenomena observed in the tail beyond synchronous orbit can be interpreted to be a result of the distortion of the separatrix. These include plasma sheet thinning and concurrent enhanced stretching of B after expansion phase onset, plasma sheet expansion that follows thinning and should be concurrent with a field dipolarization, and tailward plasma flows and associated negative B(sub z)'s during some expansion phases. The above phenomena are expected to occur at longitudes outside the current wedge that forms at onset. At longitudes within the initial current wedge, dispersionless particle injection and concurrent dipolarization of B is expected at onset as has recently been observed out to x = -22 R(sub e). BIT HIT/SOLAR ACTIVITY CORRELATION STUDY
Mary L. Hart Dec. 1992 35 p
(AD-A261381; USAFETAC/PR-92/007) Avail: CASI HC A03/MF A01

This report documents a study of statistical correlations between Global Positioning System (GPS) satellite anomalies (bit hits) and the state of the actual space environment from 1 October 1984 through 31 March 1991. The study compared distributions of space environmental data with GPS anomalies to determine the correlations (if any) of GPS anomaly occurrences with space environment variables such as global geomagnetic index and proton/electron counts. Using stepwise linear regression and discriminant analysis, correlations were found to be very low. Regression equations were found to predict the probability of satellite anomalies only slightly better than random chance. DTIC

CHROMOSPHERIC ACTIVITY IN ALGOL BINARIES Annual Report, 1 Oct. 1991 - 30 Sep. 1992
Mercedes T. Richards 10 Aug. 1992 4 p
(Contract F49620-92-J-0024)
(AD-A261440; AFOSR-93-0044TR) Avail: CASI HC A01/MF A01

A literature search was performed for the probable magnetic properties of 15 Algol-type binaries. The properties examined included detection of Calcium, Hydrogen and Potassium emission, the x-ray luminosity determined from x-ray flares, detection of radio emission and type of polarization, evidence of variations in the brightness of the cool secondary and changes in the orbital periods of the binary which can be linked to changes in the polarity of the magnetic field of the cool star. The technique of Doppler Tomography was used in an attempt to isolate the source of the emission seen in the Hydrogen alpha difference profiles of Algol. The Doppler images indicate that most of the emission is not associated with the cool star but with the mass transfer process and, in particular, with gas found between the two stars. DTIC

THE VENUS 130-nm DAYGLOW AS A DIAGNOSTIC OF THERMOSPHERIC STRUCTURE AND DYNAMICS Ph.D. Thesis
M. Joan Alexander 1992 159 p
Avail: Univ. Microfilms Order No. DA9304538

The bright emission at 130-nm from atomic oxygen in the Venus thermosphere, as measured by the Pioneer Venus Orbiter Ultraviolet Spectrometer (PVOUVS), can serve as a diagnostic of Venus thermospheric structure. Images from the PVOUVS at this wavelength reveal unusual large-scale patterns in the emission which can be interpreted as variations in the O/CO2 ratio in the middle thermosphere. Through analysis of these images, a high-contrast asymmetry in local-time has been revealed which has not previously been observed or predicted by any existing models. The asymmetry can be interpreted as up to a factor of two increase in PM oxygen densities over corresponding AM times, and this basic pattern has been present in every image examined, spanning the period 1980-1990. This local-time asymmetry in O can be understood in the context of the subsolar-to-antisolar flow pattern which dominates the thermospheric circulation: gravity waves, originating in the middle atmosphere of Venus where a westward zonal flow pattern dominates, will preferentially enhance eddy mixing in the morning hours if these waves propagate into the thermosphere. Enhanced eddy mixing tends to lower thermospheric O. This sam mechanism can also explain zonal asymmetries known to be present in the thermospheric subsolar-to-antisolar wind pattern, since these waves provide a net transport of westward momentum to the thermosphere. Dissert. Abstr.

A robotic precursor mission to the Lunar surface is proposed. The objective of the mission is to place six to ten 15-kg micro-rovers on the planet to investigate equipment left behind during the Apollo missions and to perform other science and exploration duties. The micro-rovers are teleoperated from Earth. All equipment on the rovers is existing technology from NASA, DOE, SDIO, DoD, and industry. The mission is designed to involve several NASA centers, the National Laboratories, multiple universities, and the private sector. A major long-term goal which is addressed is the educational outreach aspect of space exploration. DOE

MARS: THE DYNAMICS OF ORBITING SATELLITES AND GRAVITY MODEL DEVELOPMENT Ph.D. Thesis
Frank George Rodrigu Lemoine 1992 448 p
Avail: Univ. Microfilms Order No. DA9304574

Three major questions are addressed: (1) what is the sensitivity of satellites to the Mars gravity field?; (2) can the range measurements to the Viking Orbiters be used to improve the solutions for the Mars gravity field?; and (3) what improvements can be made to the force models for spacecraft in orbit about Mars? Mars orbiting satellites, including the Mariner 9 spacecraft, the two Viking Orbiters, the Mars Observer spacecraft (scheduled for launch in September 1992), and the natural Martian satellites of Phobos and Deimos have orbits with different periods and geometries. Kaula's (1966) linear theory of orbit element perturbations was used to analyze the sensitivity of these satellites to the Mars gravity field. Numerical procedures were developed to evaluate the Kaula eccentricity functions, and to determine the RMS position and velocity sensitivity of the highly

eccentric Viking and Mariner 9 orbits. The amplitude and frequency of the orbit perturbations were characterized. This information was used to optimize the processing of the Viking and Mariner 9 tracking data for the task of Mars gravity field determination. Over the course of the Viking mission 26,000 range measurements to the two Viking Orbiters were obtained. This observable has not previously been incorporated into Mars gravity solutions. A portion of the range data was processed simultaneously with the Doppler data to develop spherical harmonic models of the Mars gravity field. Tests with orbit overlaps, orbit predictions, and with the gravity field covariances show that the range data contribute positively to the gravity field solutions. This research indicates that the range measurements to the Mars Observer spacecraft can be used to supplement the Doppler data by improving the determination of both orbit and the gravity field. Previous analyses have not incorporated the perturbing force due to the Martian moons, and due to the Mars radiation pressure on the trajectories of Mars orbiting satellites. The magnitude of these perturbations was calculated for Mariner 9 and the Viking Orbiters, as well as for Mars Observer. It is shown that Phobos produces measurable third-body perturbations on the orbits of both Mariner 9 and the Vikings. The Infrared Thermal Mapper (IRTM) measurements of the Mars albedo and thermal emission (obtained by Viking Orbiters 1 and 2) were used to develop zonal spherical harmonic models of the Mars albedo, and third degree and order spherical harmonic models of the Mars thermal emission. These models were applied to the Mars Observer (MO) mapping orbit. This research shows that the Mars radiation pressure will produce perturbations on the orbit of MO that exceed the planned precision of the X-band Doppler data (0.1 mm/s). The effects of the Mars radiation pressure must be included in the trajectory force model for this spacecraft. Dissert. Abstr.

EVALUATING SCIENCE RETURN IN SPACE EXPLORATION INITIATIVE ARCHITECTURES

Nancy Ann Budden and Paul D. Spudis (Lunar and Planetary Inst., Houston, TX.) Washington Mar. 1993 13 p

(NASA-TP-3339; S-704; NAS 1.60:3339) Avail: CASI HC A03/MF A01

Science is an important aspect of the Space Exploration Initiative, a program to explore the Moon and Mars with people and machines. Different SEI mission architectures are evaluated on the basis of three variables: access (to the planet's surface), capability (including number of crew, equipment, and supporting infrastructure), and time (being the total number of man-hours available for scientific activities). This technique allows us to estimate the scientific return to be expected from different architectures and from different implementations of the same architecture. Our methodology allows us to maximize the scientific return from the initiative by illuminating the different emphases and returns that result from the alternative architectural decisions. Author

EnviroNET is a service/facility that provides users with on-line, dial-up technical information concerning environmental conditions likely to be encountered by instruments and experimental arrangements carried aboard spacecraft. EnviroNET incorporates at present a combination of expository text and numerical tables amounting to about two million characters (bytes), plus FORTRAN programs that model the space environment. The topics covered are presented in viewgraph form and include the following: advantages of EnviroNET; thermal and humidity; vibration and acoustics; electromagnetic interference; loads and low frequency dynamics; microbial and toxic contaminants; molecular contamination; natural environment; orbiter motion; particulate environment; surface interactions; spacecraft anomalies; and interactive graphics facility. RESIDUAL MEAN MERIDIONAL CIRCULATION IN TITAN'S MIDDLE ATMOSPHERE Final Report
J. R. Dire Oct. 1992 17 p
(PB93-162931; USCGA-17-92) Copyright Avail: CASI HC A03/MF A01

The Transformed Eulerian-Mean Equations are solved to yield an elliptical partial differential equation in the stream function. The PDE is solved numerically and the meridional and vertical mean residual speeds are calculated from the stream function. Newtonian cooling provides the thermal forcing. The mechanical forcing in the present model is due to Rayleigh friction and molecular diffusion. The nominal model atmosphere assumes an isothermal tropopause and at 0.4 mbar the temperature at 85 degrees N is approximately 8 degrees lower than at 85 degrees S. The vertical temperature profile is after Lindal et al (1983, Icarus, 53, 348) and eddy coefficients are taken from Yung et al (1984, Astrophys. J. Suppl., 55, 465). The zonal speeds are estimated using the gradient wind balance. The nominal model results in meridional Hadley cells with little transport across the equator. The effects on the meridional circulation and hemispheric transport by varying the forcing parameters will be shown. NTIS

SUMMARY INFORMATION AND DATA SETS FOR NREL'S SOLAR RADIATION RESEARCH LABORATORY, 1981 - 1991
W. Marion Jan. 1993 76 p
(Contract DE-AC02-83CH-10093)
(DE93-000052; NREL/TP-463-5217) Avail: CASI HC A05/MF A01

This report summarizes the solar radiation and meteorological data collected at the Solar Radiation Research Laboratory in Golden, Colorado, from 1981 through 1991. The data collection was part of the National Renewable Energy Laboratory's Solar Radiation Resource Assessment Project. The report includes long-term averages and monthly and annual variability for key solar radiation elements and describes the hourly data sets for 1981 through 1991. Described in the report are how the elements were measured and how the data were collected and processed into hourly values. Procedures used for quality assessment of the hourly data values are presented, and the position of the solar radiation and meteorological elements in the data sets are defined; samples of read statements are provided. AN INVESTIGATION OF NEUTRINO PROPERTIES THROUGH STUDY OF THE SUN, SUPERNOVAE, THE EARLY UNIVERSE AND LAB DATA Ph.D. Thesis
Ira Ziv Rothstein 1992 119 p
Avail: Univ. Microfilms Order No. DA9304386

In this thesis I propose theories to explain two experiments whose results are incompatible with the standard model of particle physics. More specifically, these experiments indicate a need for considerable augmentation in the neutrino sector of the Weinberg-Salam model. The first part of this thesis deals with explaining the results of the search for solar neutrinos. Three solar neutrino experiments have been performed and all see only a fraction of the expected number of neutrinos. Moreover, one of the experiments (seems to) see an anti-correlation of the neutrino flux with the magnetic field intensity in the convective zone of the sun, while the second does not (the third has not been running long enough to see any time variation). Here it is shown that by assuming that the neutrinos have masses, as well as considerable magnetic moments, it is possible to explain not only the dearth in the flux but also its time variation. The second part of this work is dedicated to explaining the results of the recent experiments which claim the existence of a 17 keV neutrino which mixes with the electron neutrino with a mixing angle of 10 percent. Such a neutrino is especially meddlesome to theorists because of the encyclopedic constraints from lab data, supernovae, and big-bang nucleosynthesis. In this thesis I show that such a neutrino is compatible with all the constraints if one is willing to go well beyond the standard model. Dissert. Abstr.

COMPARISON OF HIGH-RESOLUTION SOLAR IRRADIANCE SPECTRA AND THE SOLAR LUMINOSITY IN THE PERIOD 1980-1989 Final Report
Walter E. Mitchell, Jr. Apr. 1992 17 p
(Grant NAG5-1326; RF Proj. 768121/723186)
(NASA-CR-192776; NAS 1.26:192776) Avail: CASI HC A03/MF A01

In this research, we aim to determine to what extent the solar irradiance changes measured through the 1980's from orbiting vehicles are accompanied by spectroscopic irradiance changes observable from the ground. We describe fractional changes in line absorption as 'blanketing'. In section 2, we briefly review results obtained in an earlier project and which have been published. Section 3 describes the data of this investigation; section 4 describes the data reduction; section 5 describes the observational results in terms of blanketing; and section 6 describes the interpretation of the measured changes. Section 7 contains an outline of possible uses for Doppler-shift data that emerges with the measurements of the blanketing variations. Section 8 is an outline for future research suggested by our results in this project. Author

Two experiments now in progress have reported measurements of the flux of high energy neutrinos from the Sun. Since about 1970, Davis and his co-workers have been using a (Cl-37)-based detector to measure the Be-7 and B-8 solar neutrino flux and have found it to be at least a factor of three lower than that predicted by the Standard Solar Model (SSM). The Kamiokande collaborations has been taking data since 1986 using a large light-water Cerenkov detector and have confirmed that the flux is about two times lower than predicted. Recent results from the SAGE and GALLEX gallium-based detectors show that there is also a deficit of the low energy pp solar neutrinos. These discrepancies between experiment and theory could arise because of inadequacies in the theoretical models of solar energy generation or because of previously unobserved properties of neutrinos. The Sudbury Neutrino Observatory (SNO) will provide the information necessary to decide which of these solutions to the 'solar neutrino problem' is correct. DOE

A revised and expanded catalog of coronal mass ejections identified in data from the High Altitude Observatory's coronograph aboard NASA's Solar Maximum Mission spacecraft is presented. The list includes events observed during 1980 and the period 1984 - 1989. Th first edition was published in July 1990. Descriptions and measurements of mass ejections included in the first catalog were expanded and revised. A few additional mass ejections were identified in the data and were added to the listing. The catalog was expanded to include morphological descriptions of each event and apparent speed measurements, whenever possible. Author (revised)

TIME DEPENDENT SIMULATION OF COSMIC-RAY SHOCKS INCLUDING ALFVEN TRANSPORT
T. W. Jones 1993 10 p
(Grants NAGw-2548; NSF AST-91-00486)
(NASA-CR-192931; NAS 1.26:192931) Avail: CASI HC A02/MF A01

Time evolution of plane, cosmic-ray modified shocks was simulated numerically for the case with parallel magnetic fields. Computations were done in a 'three-fluid' dynamical model incorporating cosmic-ray and Alfven wave energy transport equations. Nonlinear feedback from the cosmic-rays and Alfven waves is included in the equation of motion for the underlying plasma, as is the finite propagation speed and energy dissipation of the Alfven waves. Exploratory results confirm earlier, steady state analyses that found these Alfven transport effects to be potentially important when the upstream Alfven speed and gas sound speeds are comparable. As noted earlier Alfven transport effects tend to reduce the transfer of energy through a shock from gas to energetic particles. These studies show as well that the time scale for modification of the shock is altered in nonlinear ways. It is clear, however, that the consequences of Alfven transport are strongly model dependent and that both advection of cosmic-rays by the waves and dissipation of wave energy in the plasma will be important to model correctly when quantitative results are needed. Comparison is made between simulations based on a constant diffusion coefficient and more realistic diffusion models allowing the diffusion coefficient to vary in response to changes in Alfven wave intensity. No really substantive differences were found between them. Author (revised)

ALFVEN WAVE TRANSPORT EFFECTS IN THE TIME EVOLUTION OF PARALLEL COSMIC-RAY MODIFIED SHOCKS
T. W. Jones 1993 33 p
(Grants NAGw-2548; NSF AST-91-00486)
(NASA-CR-192932; NAS 1.26:192932) Avail: CASI HC A03/MF A01

Some of the issues associated with a more complete treatment of Alfven transport in cosmic ray shocks are explored qualitatively. The treatment is simplified in some important respects, but some new issues are examined and for the first time a nonlinear, time dependent study of plane cosmic ray mediated shocks with both the entropy producing effects of wave dissipation and effects due to the Alfven wave advection of the cosmic ray relative to the gas is included. Examination of the direct consequences of including the pressure and energy of the Alfven waves in the formalism began. Author (revised)

THE ALEXIS DATA PROCESSING PACKAGE: AN UPDATE
J. J. Bloch, B. W. Smith, and B. C. Edwards 1993 4 p Presented at the Astronomical Data Analysis Software and Systems, Boston, MA, 2-4 Nov. 1992
(Contract W-7405-eng-36)
(DE93-007374; LA-UR-93-263; CONF-9211188-1) Avail: CASI HC A01/MF A01

The ALEXIS experiment (Array of Low Energy X Ray Imaging Sensors),

is a mini-satellite containing six wide angle EUV/ultrasoft x ray telescopes. Its purpose is to map out the sky in three narrow (5 percent) bandpasses around 66, 71, and 93 eV. The 66 and 71 eV bandpasses are centered on intense Fe emission lines which are characteristic of million-degree plasmas such as the one thought to produce the soft x ray background. The 93 eV bandpass is not near any strong emission lines and is more sensitive to continuum sources. The mission will be launched on the Pegasus Air-Launched Vehicle in early 1993 into a 400-nautical-mile, high-inclination orbit and will be controlled entirely from a small ground station located at Los Alamos. The project is a collaborative effort between Los Alamos National Laboratory, Sandia National Laboratory, and the University of California-Berkeley Space Sciences Laboratory. DOE

COSMIC RAY COMPOSITION INVESTIGATIONS USING ICE/ISEE-3
Mark E. Wiedenbeck 1992 9 p
(Grant NAG5-308)
(NASA-CR-192808; NAS 1.26:192808) Avail: CASI HC A02/MF A01

The analysis of data from the high energy cosmic experiment on ISEE-3 and associated modeling and interpretation activities are discussed. The ISEE-3 payload included two instruments capable of measuring the composition of heavy cosmic rays. The designs of these two instruments incorporated innovations which made it possible, for the first time, to measure isotopic as well as the chemical composition for a wide range of elements. As the result of the demonstrations by these two instruments of the capability to resolve individual cosmic ray isotopes, a new generation of detectors was developed using very similar designs, but having improved reliability and increased sensitive area. The composition measurements which were obtained from the ISEE-3 experiment are summarized. Derived from text

GRAVITATIONAL RADIATION FROM COALESCING BINARY STAR SYSTEMS Ph.D. Thesis
Alan Gray Wiseman 1992 119 p
Avail: Univ. Microfilms Order No. DA9305287

Nonlinear contributions to the gravitational radiation emitted during the late stages of a binary-star coalescence involving neutron stars or black holes are investigated using a post-Newtonian approximation to general relativity. A waveform which is accurate to (post)(exp 3/2)-Newtonian order is obtained. It includes corrections of O((Gm/rc(exp 2))(exp 3/2)) approx. equals O((v/c)(exp 3)) beyond the lowest order quadrupole radiation, where m is the total mass of the system, r is the separation of the bodies, v is the relative velocity of the bodies, G is the gravitational constant, and c is the speed of light. This waveform is used to examine the post-Newtonian correction to the linear momentum carried off in the radiation, thus allowing an estimate of the upper bound of the center of mass recoil velocity for coalescing neutron star systems, V(sub C.M.) less than or equal to km s(exp -1). At (post)(exp 3/2)-Newtonian order the effects of the gravitational wave 'tail' also enter the waveform. The tail of the radiation, which is caused by scatter of the radiation from the background spacetime curvature, does not depend solely on the instantaneous state of the system at the retarded time, but rather depends on the integrated past history of the system. However, we show the dependence on the remote past of the system is quite weak. The nonlinear contribution to the gravitational radiation which has as its source the quadrupole radiation itself is studied. This effect is shown to enter the waveform at the (post)(exp 5/2)-Newtonian order. The detectability of these contributions to the waveform by laser interferometric gravitational wave observatories (LIGO) is discussed.
Dissert. Abstr.

N93-25828 Princeton Univ., NJ.
GRAVITATIONAL LENSING AND GAMMA RAY BURSTS Ph.D. Thesis
Shude Mao 1992 116 p
Avail: Univ. Microfilms Order No. DA9302076

This thesis is divided into two parts, the first part (chapters 2-4) is on gravitational lensing, and the second part (chapters 5-8) on gamma ray bursts (GRBs). In chapter 2, the assumptions in the analysis of gravitational lensing statistics are examined. It is shown that a redshift cutoff model, which may result from galaxy evolution, can reduce the lensing probability and explain the large mean separation of gravitational lenses. We show that the reduction of the lensing probability due to the finite core radii of galaxies is likely to be no more than a factor of 2 and the most recent galaxy luminosity function gives a lensing probability that is smaller than previously estimated by a factor of approximately 3. In chapter 3, gravitational microlensing by a single star plus external shear is discussed. It is shown analytically that for a general cusp the magnification probability distribution follows p(sub c)(A)dA is approximately A(exp -7/2)dA asymptotically, in excellent agreement with the numerical results obtained from an adaptive grid technique. In chapter 4, gravitational microlensing by double lenses is applied to the galactic bulge stars. We estimate that approximately 10 percent of all lensing episodes of the galactic bulge stars will display complicated light curves due to the binary nature of the lens. The effect is strong even if the companion is a planet. A search for microlensing of the galactic bulge stars may lead to a discovery of extrasolar planetary systems. In chapter 5, statistical properties of GRBs are calculated for a large number of luminosity functions and density profiles assuming that the sources are galactic. We find that no galactic disk model can be reconciled with the statistical properties observed by the Burst and Transient Source Experiment (BATSE), and a galactic halo distribution must have a core radius R(sub c) greater than 18 kpc (3 sigma) to have no measured dipole anisotropy. In chapter 6, statistical properties of GRBs are analyzed assuming that the sources are cosmological. The range of observations is estimated to be z approximately equals 1.5 for BATSE, and z approximately equals 0.2 for the Pioneer Venus Orbiter. Assuming isotropic radiation, the rate of events is approximately 2 x 10(exp -6) yr(exp -1) per L* galaxy, approximately 3,000 yr(exp -1) in the whole observable universe, and their peak luminosity is approximately 2 x 10(exp 51) h(sub 100)(exp -2) erg s(exp -1). In chapters 7 and 8, gravitational lensing of GRBs is studied. The lensing frequency of GRBs by galaxies is approximately 0.1 percent, while that by black holes (M greater than 10(exp 6) solar M) for the Gnedin & Ostriker model is approximately 5 percent. BATSE may observe several lensing events and thus provide an unambiguous determination of the origin of GRBs.

NEUTRON ENERGY DETERMINATION WITH A HIGH-PURITY GERMANIUM DETECTOR Final Report, 1989 - 1992
Gene A. Beck 20 Feb. 1992 37 p
(Grant NAG5-1273)
(NASA-CR-192773; NAS 1.26:192773) Avail: CASI HC A03/MF A01

Two areas that are related to planetary gamma-ray spectrometry are investigated. The first task was the investigation of gamma rays produced by high-energy charged particles and their secondaries in planetary surfaces by means of thick target bombardments. The second task was the investigation of the effects of high-energy neutrons on gamma-ray spectral features obtained with high-purity Ge-detectors. For both tasks, as a function of the funding level, the experimental work was predominantly tied to that of other researchers, whenever there was an opportunity to participate in bombardment experiments at large or small accelerators for charged particles.

OBLIQUE MHD COSMIC-RAY MODIFIED SHOCKS: TWO-FLUID NUMERICAL SIMULATIONS
Adam Frank, T. W. Jones, and Dongsu Ryu (Princeton Univ. Observatory, NJ.) 1991 14 p
(Grants NAGw-2548; NSF AST-91-00486)
(NASA-CR-192930; NAS 1.26:192930) Avail: CASI HC A03/MF A01

We present the first results of time dependent, two-fluid, cosmic-ray (CR) modified, MHD shock simulations. The calculations were carried out with a new numerical code for 1-D ideal MHD. By coupling this code with the CR energy transport equation we can simulate the time-dependent evolution of MHD shocks including the acceleration of the CR and their feedback on the shock structures. We report tests of the combined numerical method including comparisons with analytical steady state results published earlier by Webb, as well as internal consistency checks for more general MHD CR shock structures after they appear to have converged to dynamical steady states. We also present results from an initial time dependent simulation which extend the parameter space domain of previous analytical models. These new results support Webb's suggestion that equilibrium oblique shocks are less effective than parallel shocks in the acceleration of CR. However, for realistic models of anisotropic CR diffusion, oblique

shocks may achieve dynamical equilibrium on shorter timescale than parallel shocks. Author (revised)

This issue of Energy and Technology Review focuses on cooperative research and development agreements (CRADA's)--one of the Laboratory's most effective means of technology transfer. The first article chronicles the legislative evolution of these agreements. The second article examines the potential beneficial effects of CRADA's on the national economy and discusses their role in the development and marketing of Laboratory technologies. The third article provides information on how to initiate and develop CRADA's at LLNL, and the fourth and fifth articles describe the Laboratory's two most prominent technology transfer projects. One is a 30-month CRADA with General Motors to develop advanced lasers for cutting, welding, and heat-treating operations. The cover photograph shows this laser cutting through a piece of steel 1/16 of an inch thick. The other project is a three-year CRADA with Amoco, Chevron-Conoco, and Unocal to refine our oil shale retorting process. DOE

JSC RESEARCH AND TECHNOLOGY Annual Report, 1992
1993 167 p
(NASA-TM-104763; S-713; NAS 1.15:104763) Avail: CASI HC A08/MF A02

The primary roles and missions of JSC incorporate all aspects of human presence in space. Therefore, the Center is involved in the development of technology that will allow humans to stay longer in Earth orbit, allow safe flight in space, and provide capabilities to explore the Moon and Mars. The Center's technology emphasis areas include human spacecraft development, human support systems and infrastructure, and human spacecraft operations. Safety and reliability are critical requirements for the technologies that JSC pursues for long-duration use in space. One of the objectives of technology development at the Center is to give employees the opportunity to enhance their technological expertise and project management skills by defining, designing, and developing projects that are vital to the Center's strategy for the future. This report is intended to communicate within and outside the Agency our research and technology (R&T) accomplishments, as well as inform Headquarters program managers and their constituents of the significant accomplishments that have promise for future Agency programs. While not inclusive of all R&T efforts, the report presents a comprehensive summary of JSC projects in which substantial progress was made in the 1992 fiscal year. At the beginning of each project description, names of the Principal Investigator (PI) and the Technical Monitor (TM) are given, followed by their JSC mail codes or their company or university affiliations. The funding sources and technology focal points are identified in the index. Derived from text

INEL SPRAY-FORMING RESEARCH **c27**
Kevin M. McHugh and James F. Key *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 15-24 (For primary document see N93-25561 09-99)
(Contract DE-AC07-76ID-01570)
Avail: CASI HC A02/MF A04

Spray forming is a near-net-shape fabrication technology in which a spray of finely atomized liquid droplets is deposited onto a suitably shaped substrate or mold to produce a coherent solid. The technology offers unique opportunities for simplifying materials processing without sacrificing, and oftentimes substantially improving, product quality. Spray forming can be performed with a wide range of metals and nonmetals, and offers property improvements resulting from rapid solidification (e.g., refined microstructures, extended solid solubilities and reduced segregation). Economic benefits result from process simplification and the elimination of unit operations. Researchers at the Idaho National Engineering Laboratory (INEL) are developing spray-forming technology for producing near-net-shape solids and coatings of a variety of metals, polymers, and composite materials. Results from several spray forming programs are presented to illustrate the range of capabilities of the technique as well as the accompanying technical and economic benefits. Low-carbon steel strip greater than 0.75 mm thick and polymer membranes for gas/gas and liquid/liquid separations that were spray formed are discussed; recent advances in spray forming molds, dies, and other tooling using low-melting-point metals are described. FILM FABRICATION TECHNOLOGIES AT NREL **c27**
Robert D. McConnell *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 25-29 (For primary document see N93-25561 09-99)
Avail: CASI HC A01/MF A04

The National Renewable Energy Laboratory (NREL) has extensive capabilities for fabricating a variety of high-technology films. Much of the in-house work in NREL's large photovoltaics (PV) program involves the fabrication of multiple thin-film semiconducting layers constituting a thin-film PV device. NREL's smaller program in superconductivity focuses on the fabrication of superconducting films on long, flexible tape substrates. This paper focuses on four of NREL's in-house research groups and their film fabrication techniques, developed for a variety of elements, alloys, and compounds to be deposited on a variety of substrates. As is the case for many national laboratories, NREL's technology transfer efforts are focusing on Cooperative Research and Development Agreements (CRADA's) between NREL researchers and private industry researchers. OPTICAL AND SCRATCH RESISTANT PROPERTIES OF DIAMONDLIKE CARBON FILMS DEPOSITED WITH SINGLE AND DUAL ION BEAMS **c27**
Michael T. Kussmaul (Sverdrup Technology, Inc., Brook Park, OH.), Michael S. Bogdanski (Case Western Reserve Univ., Cleveland, OH.), Bruce A. Banks, and Michael J. Mirtich *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 30-40 (For primary document see N93-25561 09-99)
Avail: CASI HC A03/MF A04

Amorphous diamond-like carbon (DLC) films were deposited using both

single and dual ion beam techniques utilizing filament and hollow cathode ion sources. Continuous DLC films up to 3000 A thick were deposited on fused quartz plates. Ion beam process parameters were varied in an effort to create hard, clear films. Total DLC film absorption over visible wavelengths was obtained using a Perkin-Elmer spectrophotometer. An ellipsometer, with an Ar-He laser (wavelength 6328 A) was used to determine index of refraction for the DLC films. Scratch resistance, frictional, and adherence properties were determined for select films. Applications for these films range from military to the ophthalmic industries. Author

PROPERTIES OF EXTRUDED PS-212 TYPE SELF-LUBRICATING MATERIALS **c27**

W. J. Waters (Sverdrup Technology, Inc., Cleveland, OH.), H. E. Sliney, and R. F. Soltis (Cortez 3 Services Corp., Brook Park, OH.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 41-55 (For primary document see N93-25561 09-99)

Avail: CASI HC A03/MF A04

Research has been underway at the NASA Lewis Research Center since the 1960's to develop high temperature, self-lubricating materials. The bulk of the research has been done in-house by a team of researchers from the Materials Division. A series of self-lubricating solid material systems has been developed over the years. One of the most promising is the composite material system referred to as PS-212 or PM-212. This material is a powder metallurgy product composed of metal bonded chromium carbide and two solid lubricating materials known to be self-lubricating over a wide temperature range. NASA feels this material has a wide potential in industrial applications. Simplified processing of this material would enhance its commercial potential. Processing changes have the potential to reduce processing costs, but tribological and physical properties must not be adversely affected. Extrusion processing has been employed in this investigation as a consolidation process for PM-212/PS-212. It has been successful in that high density bars of EX-212 (extruded PM-212) can readily be fabricated. Friction and strength data indicate these properties have been maintained or improved over the P.M. version. A range of extrusion temperatures have been investigated and tensile, friction, wear, and microstructural data have been obtained. Results indicate extrusion temperatures are not critical from a densification standpoint, but other properties are temperature dependent. Author

MEASURING THE METASTATIC POTENTIAL OF CANCER CELLS **c51**

Dennis R. Morrison, Howard Gratzner (DNA Sciences, Houston, TX.), and M. Z. Atassi (Baylor Coll. of Medicine, Houston, TX.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 59-70 (For primary document see N93-25561 09-99)

Avail: CASI HC A03/MF A04

Cancer cells must secrete proteolytic enzymes to invade adjacent tissues and migrate to a new metastatic site. Urokinase (uPA) is a key enzyme related to metastasis in cancers of the lung, colon, gastric, uterine, breast, brain, and malignant melanoma. A NASA technology utilization project has combined fluorescence microscopy, image analysis, and flow cytometry, using fluorescent dyes, and urokinase-specific antibodies to measure uPA and abnormal DNA levels (related to cancer cell proliferation) inside the cancer cells. The project is focused on developing quantitative measurements to determine if a patient's tumor cells are actively metastasizing. If a significant number of tumor cells contain large amounts of uPA (esp. membrane-bound) then the post-surgical chemotherapy or radiotherapy can be targeted for metastatic cells that have already left the primary tumor. These analytical methods have been applied to a retrospective study of biopsy tissues from 150 node negative, stage 1 breast cancer patients. Cytopathology and image analysis has shown that uPA is present in high levels in many breast cancer cells, but not found in normal breast. Significant amounts of uPA also have been measured in glioma cell lines cultured from brain tumors. Commercial applications include new diagnostic tests for metastatic cells, in different cancers, which are being developed with a company that provides a medical testing service using flow cytometry for DNA analysis and hormone receptors on tumor cells from patient biopsies. This research also may provide the basis for developing a new 'magic bullet' treatment against metastasis using chemotherapeutic drugs or radioisotopes attached to urokinase-specific monoclonal antibodies that will only bind to metastatic cells. AUTOMATED SYSTEM FOR EARLY BREAST CANCER DETECTION IN MAMMOGRAMS **c52**

Isaac N. Bankman, Dong W. Kim, William A. Christens-Barry, Irving N. Weinberg, Olga B. Gatewood, and William R. Brody *In* NASA, Washington Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 77-85 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

The increasing demand on mammographic screening for early breast cancer detection, and the subtlety of early breast cancer signs on mammograms, suggest an automated image processing system that can serve as a diagnostic aid in radiology clinics. We present a fully automated algorithm for detecting clusters of microcalcifications that are the most common signs of early, potentially curable breast cancer. By using the contour map of the mammogram, the algorithm circumvents some of the difficulties encountered with standard image processing methods. The clinical implementation of an automated instrument based on this algorithm is also discussed. Author

THE DESIGN OF MECHANICALLY COMPATIBLE FASTENERS FOR HUMAN MANDIBLE RECONSTRUCTION **c52**

Jack C. Roberts, John A. Ecker, and Paul J. Biermann *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 86-95 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

Mechanically compatible fasteners for use with thin or weakened bone sections in the human mandible are being developed to help reduce large strain discontinuities across the bone/implant interface. Materials being considered for these fasteners are a polyetherertherketone (PEEK) resin with continuous quartz or carbon fiber for the screw. The screws were designed to have a shear strength equivalent to that of compact/trabecular bone and to be used with a conventional nut, nut plate, or an expandable shank/blind nut made of a ceramic filled polymer. Physical and finite element models of the mandible were developed in order to help select the best material fastener design. The models replicate the softer inner core of trabecular bone and the hard outer shell of compact bone. The inner core of the physical model consisted of an expanding foam and the hard outer shell consisted of ceramic particles in an epoxy matrix. This model has some of the cutting and drilling attributes of bone and may be appropriate as an educational tool for surgeons and medical students. The finite element model was exercised to establish boundary conditions consistent with the stress profiles associated with mandible bite forces and muscle loads. Work is continuing to compare stress/strain profiles of a reconstructed mandible with the results from the finite element model. When optimized, these design and fastening techniques may be applicable, not only to other skeletal structures, but to any composite structure. Author

DEVELOPMENT OF A CONE PENETROMETER FOR MEASURING SPECTRAL CHARACTERISTICS OF SOILS IN SITU **c46**
Landris T. Lee, Jr. and Philip G. Malone *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 99-108 Sponsored in part by Army Toxic and Hazardous Materials Agency (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

A patent was recently granted to the U.S. Army for an adaptation of a soil cone penetrometer that can be used to measure the spectral characteristics (fluorescence or reflectance) of soils adjacent to the penetrometer rod. The system can use a variety of light sources and spectral analytical equipment. A laser induced fluorescence measuring system has proven to be of immediate use in mapping the distribution of oil contaminated soil at waste disposal and oil storage areas. The fiber optic adaptation coupled with a cone penetrometer permits optical characteristics of the in-situ soil to be measured rapidly, safely, and inexpensively. The fiber optic cone penetrometer can be used to gather spectral data to a depth of approximately 25 to 30 m even in dense sands or stiff clays and can investigate 300 m of soil per day. Typical detection limits for oil contamination in sand is on the order of several hundred parts per million. Author

RECLAMATION WITH RECOVERY OF RADIONUCLIDES AND TOXIC METALS FROM CONTAMINATED MATERIALS, SOILS, AND WASTES **c45**
A. J. Francis and C. J. Dodge *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 109-117 (For primary document see N93-25561 09-99)
(Contract DE-AC02-76CH-00016)
Avail: CASI HC A02/MF A04

A process has been developed at Brookhaven National Laboratory (BNL) for the removal of metals and radionuclides from contaminated materials, soils, and waste sites. In this process, citric acid, a naturally occurring organic complexing agent, is used to extract metals such as Ba, Cd, Cr, Ni, Zn, and radionuclides Co, Sr, Th, and U from solid wastes by formation of water soluble, metal-citrate complexes. Citric acid forms different types of complexes with the transition metals and actinides, and may involve formation of a bidentate, tridentate, binuclear, or polynuclear complex species. The extract containing radionuclide/metal complex is then subjected to microbiological degradation followed by photochemical degradation under aerobic conditions. Several metal citrate complexes are biodegraded, and the metals are recovered in a concentrated form with the bacterial biomass. Uranium forms binuclear complex with citric acid and is not biodegraded. The supernatant containing uranium citrate complex is separated and upon exposure to light, undergoes rapid degradation resulting in the formation of an insoluble, stable polymeric form of uranium. Uranium is recovered as a precipitate (polyuranate) in a concentrated form for recycling or for appropriate disposal. This treatment process, unlike others which use caustic reagents, does not create additional hazardous wastes for disposal and causes little damage to soil which can then be returned to normal use. CONVERTING ENVIRONMENTAL WASTES INTO VALUABLE RESOURCES **c44**
Leonard A. Duval *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 118-120 (For primary document see N93-25561 09-99)
Avail: CASI HC A01/MF A04

This concept employs a viable energy saving method that uses a solvent to separate oil from particle matter; it can be used in metal forming industries to deoil sludges, oxides, and particle matter that is presently committed to landfill. If oily particles are used in their oily state, severe consequences to environmental control systems such as explosions or filter blinding, occur in the air handling equipment. This is due to the presence of hydrocarbons in the stack gasses resulting from the oily particles. After deoiling, the particles can be recycled and the separated oil can be used as a fuel. The process does not produce a waste of it's own and does not harm air or water. It demonstrates the dual benefits of it being commercially viable and in the national interest of conserving resources. Author

LOW COST DEWATERING OF WASTE SLURRIES **c45**
J. B. Peterson, S. K. Sharma, R. H. Church, and B. J. Scheiner *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 121-126 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

The U.S. Bureau of Mines has developed a technique for dewatering mineral waste slurries which utilizes polymer and a static screen. A variety of waste slurries from placer gold mines and crushed stone operations have been successfully treated using the system. Depending on the waste, a number of polymers have been used successfully with polymer costs ranging from $0.05 to $0.15 per 1,000 gal treated. The dewatering is accomplished using screens made from either ordinary window screen or wedge wire. The screens used are 8 ft wide and 8 ft long. The capacity of the screens varies from 3 to 7 gpm/sq. ft. The water produced is acceptable for recycling to the plant or for discharge to the environment. For example, a fine grain dolomite waste slurry produced from a crushed stone operation was dewatered from a nominal 2.5 pct solids to greater than 50 pct solids using $0.10 to $0.15 worth of polymer per 1,000 gal of slurry. The resulting waste water had a turbidity of less than 50 NTU and could be discharged or recycled. The paper describes field tests conducted using the polymer-screen dewatering system. Author

USE OF HIGH PERFORMANCE NETWORKS AND SUPERCOMPUTERS FOR REAL-TIME FLIGHT SIMULATION **c09**
Jeff I. Cleveland, II *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 129-138 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

In order to meet the stringent time-critical requirements for real-time man-in-the-loop flight simulation, computer processing operations must be consistent in processing time and be completed in as short a time as possible. These operations include simulation mathematical model computation and data input/output to the simulators. In 1986, in response to increased demands for flight simulation performance, NASA's Langley Research Center (LaRC), working with the contractor, developed extensions to the Computer Automated Measurement and Control (CAMAC) technology which resulted in a factor of ten increase in the effective bandwidth and reduced latency of modules necessary for simulator communication. This technology extension is being used by more than 80 leading technological developers in the United States, Canada, and Europe. Included among the commercial applications are nuclear process control, power grid analysis, process monitoring, real-time simulation, and radar data acquisition. Personnel at LaRC are completing the development of the use of supercomputers for mathematical model computation to support real-time flight simulation. This includes the development of a real-time operating system and development of specialized software and hardware for the simulator network. This paper describes the data acquisition technology and the development of supercomputing for flight simulation. Author

SPLASH 2 **c61**
Jeffrey M. Arnold, Duncan A. Buell, and Walter J. Kleinfelder *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 139-145 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Splash 2 is an attached processor system for Sun SPARC 2 workstations that uses Xilinx 4010 Field Programmable Gate Arrays (FPGA's) as its processing elements. The purpose of this paper is to describe Splash 2. The predecessor system, Splash 1, was designed to be used as a systolic processing system. Although it was very successful in that mode, there were many other applications that were not systolic, but which were successful, nonetheless, on Splash 1, or that were not implemented

successfully due to one or more architectural limitations, most notably I/O bandwidth and interprocessor communication. Although other uses to increase computational performance have been found for the Xilinx FPGA's that are Splash's processing elements. Splash is unique in its goal to be programmable in a general sense. Author

Avail: CASI HC A02/MF A04

Distributed computing systems are proliferating, owing to the availability of powerful, affordable microcomputers and inexpensive communication networks. A critical problem in developing such systems is getting application programs to interact with one another across a computer network. Remote interprogram connectivity is particularly challenging across heterogeneous environments, where applications run on different kinds of computers and operating systems. NetWorks! (trademark) is an innovative software product that provides an object-oriented messaging solution to these problems. This paper describes the design and functionality of NetWorks! and illustrates how it is being used to build complex distributed applications for NASA and in the commercial sector. Author

THE DATABASE QUERY SUPPORT PROCESSOR (QSP) **c60**
In NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 156-165 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

The number and diversity of databases available to users continues to increase dramatically. Currently, the trend is towards decentralized, client server architectures that (on the surface) are less expensive to acquire, operate, and maintain than information architectures based on centralized, monolithic mainframes. The database query support processor (QSP) effort evaluates the performance of a network level, heterogeneous database access capability. Air Force Material Command's Rome Laboratory has developed an approach, based on ANSI standard X3.138 - 1988, 'The Information Resource Dictionary System (IRDS)' to seamless access to heterogeneous databases based on extensions to data dictionary technology. To successfully query a decentralized information system, users must know what data are available from which source, or have the knowledge and system privileges necessary to find out this information. Privacy and security considerations prohibit free and open access to every information system in every network. Even in completely open systems, time required to locate relevant data (in systems of any appreciable size) would be better spent analyzing the data, assuming the original question was not forgotten. Extensions to data dictionary technology have the potential to more fully automate the search and retrieval for relevant data in a decentralized environment. Substantial amounts of time and money could be saved by not having to teach users what data resides in which systems and how to access each of those systems. Information describing data and how to get it could be removed from the application and placed in a dedicated repository where it belongs. The result simplified applications that are less brittle and less expensive to build and maintain. Software technology providing the required functionality is off the shelf. The key difficulty is in defining the metadata required to support the process. The database query support processor effort will provide quantitative data on the amount of effort required to implement an extended data dictionary at the network level, add new systems, adapt to changing user needs, and provide sound estimates on operations and maintenance costs and savings. ULTRASONIC POLISHING **c31**
Randy Gilmore *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 182-192 (For primary document see N93-25561 09-99)
Avail: CASI HC A03/MF A04

The ultrasonic polishing process makes use of the high-frequency (ultrasonic) vibrations of an abradable tool which automatically conforms to the work piece and an abrasive slurry to finish surfaces and edges on complex, highly detailed, close tolerance cavities in materials from beryllium copper to carbide. Applications range from critical deburring of guidance system components to removing EDM recast layers from aircraft engine components to polishing molds for forming carbide cutting tool inserts or injection molding plastics. A variety of materials including tool steels, carbides, and even ceramics can be successfully processed. Since the abradable tool automatically conforms to the work piece geometry, the ultrasonic finishing method described offers a number of important benefits in finishing components with complex geometries. TWO- AND THREE-DIMENSIONAL HIGH PERFORMANCE, PATTERNED OVERLAY MULTI-CHIP MODULE TECHNOLOGY **c33**
James Lyke *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 195-204 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

A two- and three-dimensional multi-chip module technology was developed in response to the continuum in demand for increased performance in electronic systems, as well as the desire to reduce the size, weight, and power of space systems. Though developed to satisfy the needs of military programs, such as the Strategic Defense Initiative Organization, the technology, referred to as High Density Interconnect, can also be advantageously exploited for a wide variety of commercial applications, ranging from computer workstations to instrumentation and microwave telecommunications. The robustness of the technology, as well as its high performance, make this generality in application possible. More encouraging is the possibility of this technology for achieving low cost through high volume usage. Author (revised)

IMPROVED PERFORMANCE AND SAFETY FOR HIGH ENERGY BATTERIES THROUGH USE OF HAZARD ANTICIPATION AND CAPACITY PREDICTION **c33**

Terrill Atwater *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 205-212 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Prediction of the capacity remaining in used high rate, high energy batteries is important information to the user. Knowledge of the capacity remaining in used batteries results in better utilization. This translates into improved readiness and cost savings due to complete, efficient use. High rate batteries, due to their chemical nature, are highly sensitive to misuse (i.e., over discharge or very high rate discharge). Battery failure due to misuse or manufacturing defects could be disastrous. Since high rate, high energy batteries are expensive and energetic, a reliable method of predicting both failures and remaining energy has been actively sought. Due to concerns over safety, the behavior of lithium/sulphur dioxide cells at different temperatures and current drains was examined. The main thrust of this effort was to determine failure conditions for incorporation in hazard anticipation circuitry. In addition, capacity prediction formulas have been developed from test data. A process that performs continuous, real-time hazard anticipation and capacity prediction was developed. The introduction of this process into microchip technology will enable the production of reliable, safe, and efficient high energy batteries. Author (revised)

THIN RECHARGEABLE BATTERIES FOR CMOS SRAM MEMORY PROTECTION **c33**

Dennis N. Crouse *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 213-218 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

New rechargeable battery technology is described and compared with classical primary battery back-up of SRAM PC cards. Thin solid polymer electrolyte cells with the thickness of TSOP memory components (1 mm nominal, 1.1 mm max) and capacities of 14 mAh/sq cm can replace coin cells. The SRAM PC cards with permanently installed rechargeable cells and optional electrochromic low battery voltage indicators will free the periodic PC card user from having to 'feed' their PC cards with coin cells and will allow a quick visual check of stored cards for their battery voltage status. A NOVEL METHOD FOR CHARACTERIZATION OF SUPERCONDUCTORS: PHYSICAL MEASUREMENTS AND MODELING OF THIN FILMS **c76**

B. F. Kim, K. Moorjani, T. E. Phillips, F. J. Adrian, J. Bohandy, and Q. E. Dolecek *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 223-230 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

A method for characterization of granular superconducting thin films has been developed which encompasses both the morphological state of the sample and its fabrication process parameters. The broad scope of this technique is due to the synergism between experimental measurements and their interpretation using numerical simulation. Two novel technologies form the substance of this system: the magnetically modulated resistance method for characterizing superconductors; and a powerful new computer peripheral, the Parallel Information Processor card, which provides enhanced computing capability for PC computers. This enhancement allows PC computers to operate at speeds approaching that of supercomputers. This makes atomic scale simulations possible on low cost machines. The present development of this system involves the integration of these two technologies using mesoscale simulations of thin film growth. A future stage of development will incorporate atomic scale modeling. Author (revised)

PRODUCTION OF ULTRAFINE, HIGH-PURITY CERAMIC POWDERS USING THE US BUREAU OF MINES DEVELOPED TURBOMILL **c27**

Jesse L. Hoyer *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 231-240 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Turbomilling, an innovative grinding technology developed by the U.S. Bureau of Mines in the early 1960's for delaminating filler-grade kaolinitic clays, has been expanded into the areas of particle size reduction, material mixing, and process reaction kinetics. The turbomill, originally called an attrition grinder, has been used for particle size reduction of many minerals, including natural and synthetic mica, pyrophyllite, talc, and marble. In recent years, an all-polymer version of the turbomill has been used to produce ultrafine, high-purity, advanced ceramic powders such as SiC, Si3N4, TiB2, and ZrO2. In addition to particle size reduction, the turbomill has been used to produce intimate mixtures of high surface area powders and whiskers. Raw materials, TiN, AlN, and Al2O3, used to produce a titanium nitride/aluminum oxynitride (TiN/AlON) composite, were mixed in the turbomill, resulting in strength increases over samples prepared by dry ball milling. Using the turbomill as a leach vessel, it was found that 90.4 pct of the copper was extracted from the chalcopyrite during a 4-hour leach test in ferric sulfate versus conventional processing which involves either roasting of the ore for Cu recovery or leaching of the ore for several days.

MULLITE WHISKERS AND MULLITE-WHISKER FELT **c24**

Inna G. Talmy and Deborah A. Haught *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 241-249 Sponsored in part by Office of Naval Technology (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

The Naval Surface Warfare Center has developed processes for the preparation of mullite (3(Al2O3)(dot)2(SiO2)) whiskers and mullite-whisker felt. Three patents on the technology were issued in 1990. The processes are based on chemical reactions between AlF3, Al2O3, and SiO2. The felt is formed in-situ during the processing of shaped powdered precursors. It consists of randomly oriented whiskers which are mutually intergrown forming a rigid structure. The microstructure and properties of the felt and size of the whiskers can be modified by varying the amount of Al2O3 in the starting mixture. Loose mullite whiskers can be used as a reinforcement for polymer-, metal-, and ceramic-matrix composites. The felt can be used as preforms for fabricating composite materials as well as for thermal insulation and high temperature, chemically stable filters for liquids (melts) and gases. Author (revised)

GRAPHITE/EPOXY COMPOSITE LAMINATES WITH CO-CURED INTERLAMINAR DAMPING LAYERS **c24**

J. Michael Pereira *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 250-255 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Damped composite laminates were fabricated by co-curing viscoelastic damping film with graphite/epoxy prepreg plies. The dynamic response of the damped plates was measured using an impulse response technique and compared with the response of similar undamped laminates. Modal damping was computed from the frequency response data. Micrographs of the damped laminates showed that the damping layers retained their integrity during the fabrication process. The layers significantly increased the damping in the composite laminates. The use of the constrained viscoelastic film as an integral part of composite structures appears to be a feasible approach to passive vibration control. Composite plates manufactured with co-cured damping layers may have commercial applications in cases where light weight, strength, and vibration and noise reduction are important considerations. EXPERT SYSTEM FOR UNIX SYSTEM RELIABILITY AND AVAILABILITY ENHANCEMENT **c38**

Catherine Q. Xu *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 259-267 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Highly reliable and available systems are critical to the airline industry. However, most off-the-shelf computer operating systems and hardware do not have built-in fault tolerant mechanisms, the UNIX workstation is one example. In this research effort, we have developed a rule-based Expert System (ES) to monitor, command, and control a UNIX workstation system with hot-standby redundancy. The ES on each workstation acts as an on-line system administrator to diagnose, report, correct, and prevent certain types of hardware and software failures. If a primary station is approaching failure, the ES coordinates the switch-over to a hot-standby secondary workstation. The goal is to discover and solve certain fatal problems early enough to prevent complete system failure from occurring and therefore to enhance system reliability and availability. Test results show that the ES can diagnose all targeted faulty scenarios and take desired actions in a consistent manner regardless of the sequence of the faults. The ES can perform designated system administration tasks about ten times faster than an experienced human operator. Compared with a single workstation system, our hot-standby redundancy system downtime is predicted to be reduced by more than 50 percent by using the ES to command and control the system. THE GENERIC SPACECRAFT ANALYST ASSISTANT (GenSAA): A TOOL FOR DEVELOPING GRAPHICAL EXPERT SYSTEMS **c61**

Peter M. Hughes *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 268-278 (For primary document see N93-25561 09-99)

Avail: CASI HC A03/MF A04

During numerous contacts with a satellite each day, spacecraft analysts must closely monitor real-time data. The analysts must watch for combinations of telemetry parameter values, trends, and other indications that may signify a problem or failure. As the satellites become more complex and the number of data items increases, this task is becoming increasingly difficult for humans to perform at acceptable performance levels. At NASA GSFC, fault-isolation expert systems are in operation supporting this data monitoring task. Based on the lessons learned during these initial efforts in expert system automation, a new domain-specific expert system development tool named the Generic Spacecraft Analyst Assistant (GenSAA) is being developed to facilitate the rapid development and reuse of real-time expert systems to serve as fault-isolation assistants for spacecraft analysts. Although initially domain-specific in nature, this powerful tool will readily support the development of highly graphical expert systems for data monitoring purposes throughout the space and commercial industry. TARGET: RAPID CAPTURE OF PROCESS KNOWLEDGE **c61**

C. J. Ortiz, H. V. Ly, T. Saito (Computer Sciences Corp., Houston, TX.), and R. B. Loftin (Houston Univ., TX.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 279-288 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

TARGET (Task Analysis/Rule Generation Tool) represents a new breed of tool that blends graphical process flow modeling capabilities with the function of a top-down reporting facility. Since NASA personnel frequently perform tasks that are primarily procedural in nature, TARGET models mission or task procedures and generates hierarchical reports as part of the process capture and analysis effort. Historically, capturing knowledge has proven to be one of the greatest barriers to the development of intelligent systems. Current practice generally requires lengthy interactions between the expert whose knowledge is to be captured and the knowledge engineer whose responsibility is to acquire and represent the expert's knowledge in a useful form. Although much research has been devoted to the development of methodologies and computer software to aid in the capture and representation of some types of knowledge, procedural knowledge has received relatively little attention. In essence, TARGET is one of the first tools of its kind, commercial or institutional, that is designed to support this type of knowledge capture undertaking. This paper will describe the design and development of TARGET for the acquisition and representation of procedural knowledge. The strategies employed by TARGET to support use by knowledge engineers, subject matter experts, programmers and managers will be discussed. This discussion includes the method by which the tool employs its graphical user interface to generate a task hierarchy report. Next, the approach to generate production rules for incorporation in and development of a CLIPS based expert system will be elaborated. TARGET also permits experts to visually describe procedural tasks as a common medium for knowledge refinement by the expert community and knowledge engineer making knowledge consensus possible. The paper briefly touches on the verification and validation issues facing the CLIPS rule generation aspects of TARGET. A description of efforts to support TARGET's interoperability issues on PCs, Macintoshes and UNIX workstations concludes the paper. Author (revised)

TREE CLASSIFICATION SOFTWARE **c61**

Wray Buntine *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 289-298 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

This paper introduces the IND Tree Package to prospective users. IND does supervised learning using classification trees. This learning task is a basic tool used in the development of diagnosis, monitoring and expert systems. The IND Tree Package was developed as part of a NASA project to semi-automate the development of data analysis and modelling algorithms using artificial intelligence techniques. The IND Tree Package integrates features from CART and C4 with newer Bayesian and minimum encoding methods for growing classification trees and graphs. The IND Tree Package also provides an experimental control suite on top. The newer features give improved probability estimates often required in diagnostic and screening tasks. The package comes with a manual, Unix 'man' entries, and a guide to tree methods and research. The IND Tree Package is implemented in C under Unix and was beta-tested at university and commercial research laboratories in the United States. Author (revised)

AUTOMATIC DETECTION OF SEIZURES WITH APPLICATIONS **c52**

Dale E. Olsen, John C. Harris, Protagoras N. Cutchis, John A. Cristion, Ronald P. Lesser (Johns Hopkins Univ., Baltimore, MD.), and W. Robert S. Webber (Johns Hopkins Univ., Baltimore, MD.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 301-307 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

There are an estimated two million people with epilepsy in the United States. Many of these people do not respond to anti-epileptic drug therapy. Two devices can be developed to assist in the treatment of epilepsy. The first is a microcomputer-based system designed to process massive amounts of electroencephalogram (EEG) data collected during long-term monitoring of patients for the purpose of diagnosing seizures, assessing the effectiveness of medical therapy, or selecting patients for epilepsy surgery. Such a device would select and display important EEG events. Currently many such events are missed. A second device could be implanted and would detect seizures and initiate therapy. Both of these devices require a reliable seizure detection algorithm. A new algorithm is described. It is believed to represent an improvement over existing seizure detection algorithms because better signal features were selected and better standardization methods were used. Author (revised)

A FIBER OPTIC PROBE FOR THE DETECTION OF CATARACTS **c52**

Rafat R. Ansari and Harbans S. Dhadwal (State Univ. of New York, Stony Brook.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 308-316 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

A compact fiber optic probe developed for on-orbit science experiments was used to detect the onset of cataracts, a capability that could eliminate physicians' guesswork and result in new drugs to 'dissolve' or slow down the cataract formation before surgery is necessary. The probe is based upon dynamic light scattering (DLS) principles. It has no moving parts, no

apertures, and requires no optical alignment. It is flexible and easy to use. Results are presented for excised but intact human eye lenses. In a clinical setting, the device can be easily incorporated into a slit-lamp apparatus (ophthalmoscope) for complete eye diagnostics. In this set-up, the integrated fiber optic probe, the size of a pencil, delivers a low power cone of laser light into the eye of a patient and guides the light which is backscattered by the protein molecules of the lens through a receiving optical fiber to a photo detector. The non-invasive DLS measurements provide rapid determination of protein crystalline size and its size distribution in the eye lens. Author (revised)

MAC TO VAX CONNECTIVITY: HEARTRATE SPECTRAL ANALYSIS SYSTEM **c52**
Hasan H. Rahman and Monazer Faruque *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 317-321 Prepared for NASA. Johnson Space Center, Houston, TX (For primary document see N93-25561 09-99)
Avail: CASI HC A01/MF A04

The heart rate Spectral Analysis System (SAS) acquires and analyzes, in real-time, the Space Shuttle onboard electrocardiograph (EKG) experiment signals, calculates the heartrate, and applies a Fast Fourier Transformation (FFT) to the heart rate. The system also calculates other statistical parameters such as the 'mean heart rate' over specific time period and heart rate histogram. This SAS is used by NASA Principal Investigators as a research tool to determine the effects of weightlessness on the human cardiovascular system. This is also used to determine if Lower Body Negative Pressure (LBNP) is an effective countermeasure to the orthostatic intolerance experienced by astronauts upon return to normal gravity. In microgravity, astronauts perform the LBNP experiment in the mid deck of the Space Shuttle. The experiment data are downlinked by the orbiter telemetry system, then processed and analyzed in real-time by the integrated Life Sciences Data Acquisition (LSDS) - Spectral Analysis System. The data system is integrated within the framework of two different computer systems, VAX and Macintosh (Mac), using the networking infrastructure to assist the investigators in further understanding the most complex machine on Earth--the human body. THE APPLICATION OF INTEGRATED KNOWLEDGE-BASED SYSTEMS FOR THE BIOMEDICAL RISK ASSESSMENT INTELLIGENT NETWORK (BRAIN) **c53**
Karin C. Loftin (Krug Life Sciences, Inc., Houston, TX.), Bebe Ly, Laurie Webster, James Verlander (Krug Life Sciences, Inc., Houston, TX.), Gerald R. Taylor, Gary Riley, Chris Culbert, Tina Holden (Lockheed Engineering and Sciences Co., Houston, TX.), and Marianne Rudisill *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 322-331 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

One of NASA's goals for long duration space flight is to maintain acceptable levels of crew health, safety, and performance. One way of meeting this goal is through the Biomedical Risk Assessment Intelligent Network (BRAIN), an integrated network of both human and computer elements. The BRAIN will function as an advisor to flight surgeons by assessing the risk of in-flight biomedical problems and recommending appropriate countermeasures. This paper describes the joint effort among various NASA elements to develop BRAIN and an Infectious Disease Risk Assessment (IDRA) prototype. The implementation of this effort addresses the technological aspects of the following: (1) knowledge acquisition; (2) integration of IDRA components; (3) use of expert systems to automate the biomedical prediction process; (4) development of a user-friendly interface; and (5) integration of the IDRA prototype and Exercise Countermeasures Intelligent System (ExerCISys). Because the C Language, CLIPS (the C Language Integrated Production System), and the X-Window System were portable and easily integrated, they were chosen as the tools for the initial IDRA prototype. The feasibility was tested by developing an IDRA prototype that predicts the individual risk of influenza. The application of knowledge-based systems to risk assessment is of great market value to the medical technology industry. Author (revised)

SOLID-STATE ISOTOPIC POWER SOURCE FOR COMPUTER MEMORY CHIPS **c33**
Paul M. Brown *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 335-340 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Recent developments in materials technology now make it possible to fabricate nonthermal thin-film radioisotopic energy converters (REC) with a specific power of 24 W/kg and a 10 year working life at 5 to 10 watts. This creates applications never before possible, such as placing the power supply directly on integrated circuit chips. The efficiency of the REC is about 25 percent which is two to three times greater than the 6 to 8 percent capabilities of current thermoelectric systems. Radio isotopic energy converters have the potential to meet many future space power requirements for a wide variety of applications with less mass, better efficiency, and less total area than other power conversion options. These benefits result in significant dollar savings over the projected mission lifetime.

PHOTOVOLTAIC POWER WITHOUT BATTERIES FOR CONTINUOUS CATHODIC PROTECTION **c44**
W. W. Muehl, Sr. *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 341-344 (For primary document see N93-25561 09-99)
Avail: CASI HC A01/MF A04

The objective of this project was to successfully demonstrate that renewable energy can efficiently and economically replace dedicated non-renewable power sources. The COASTSYSTA designed, installed, and started up on 20 Jan. 1990, a state-of-the-art photovoltaic powered impressed current cathodic protection system (PVCPSYS) for steel and iron submerged structures. This system does not require any auxiliary/battery backup power. The PVCPSYS installed on 775 ft. of steel sheet piling of a Navy bulkhead is continuing to provide complete, continuous corrosion protection. This installation is well documented by COASTSYSTA and was verified on-site by the U.S. Army Corps of Engineers. The PVCPSYS uses only renewable energy and is environmentally clean. A patent is pending on the new technology. Other possible PVCPSYS applications are mothballed ships, docks, dams, locks, bridges, marinas, and pipelines. The Department of Defense Photovoltaic Review Committee and Sandia National Laboratories consider this successful and cost effective system a major advance in the application of photovoltaics. HIGH SPEED SOLID STATE CIRCUIT BREAKER **c33**
Thomas F. Podlesak *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 345-352 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

The U.S. Army Research Laboratory, Fort Monmouth, NJ, has developed and is installing two 3.3 MW high speed solid state circuit breakers at the Army's Pulse Power Center. These circuit breakers will interrupt 4160V three phase power mains in no more than 300 microseconds, two orders of magnitude faster than conventional mechanical contact type circuit breakers. These circuit breakers utilize Gate Turnoff Thyristors (GTO's) and are currently utility type devices using air cooling in an air conditioned enclosure. Future refinements include liquid cooling, either water or two phase organic coolant, and more advanced semiconductors. Each of these refinements promises a more compact, more reliable unit. Author

VARIABLE-SPEED GENERATORS WITH FLUX WEAKENING **c33**
A. A. Fardoun, E. F. Fuchs, and P. W. Carlin (Midwest Research Inst., Golden, CO.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 353-362 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

A cost-competitive, permanent-magnet 20 kW generator is designed such that the following criteria are satisfied: an (over) load capability of at

least 30 kW over the entire speed range of 60-120 rpm, generator weight of about 550 lbs with a maximum radial stator flux density of 0.82 T at low speed, unity power factor operation, acceptably small synchronous reactances and operation without a gear box. To justify this final design four different generator designs are investigated: the first two designs are studied to obtain a speed range from 20 to 200 rpm employing rotor field weakening, and the latter two are investigated to obtain a maximum speed range of 40 to 160 rpm based on field weakening via the stator excitation. The generator reactances and induced voltages are computed using finite element/difference solutions. Generator losses and efficiencies are presented for all four designs at rated temperature of Tr=120C. Author

SCIENTIFIC VISUALIZATION USING THE FLOW ANALYSIS SOFTWARE TOOLKIT (FAST) **c61**
Gordon V. Bancroft, Paul G. Kelaita, R. Kevin McCabe, Fergus J. Merritt, Todd C. Plessel, Timothy A. Sandstrom, and John T. West *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 366-375 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Over the past few years the Flow Analysis Software Toolkit (FAST) has matured into a useful tool for visualizing and analyzing scientific data on high-performance graphics workstations. Originally designed for visualizing the results of fluid dynamics research, FAST has demonstrated its flexibility by being used in several other areas of scientific research. These research areas include earth and space sciences, acid rain and ozone modelling, and automotive design, just to name a few. This paper describes the current status of FAST, including the basic concepts, architecture, existing functionality and features, and some of the known applications for which FAST is being used. A few of the applications, by both NASA and non-NASA agencies, are outlined in more detail. Described in the Outlines are the goals of each visualization project, the techniques or 'tricks' used lo produce the desired results, and custom modifications to FAST, if any, done to further enhance the analysis. Some of the future directions for FAST are also described. Author

Avail: CASI HC A02/MF A04

In many industries there has recently been a concerted movement toward 'quality management' and the issue of how to accomplish work more efficiently. Part of this effort is focused on concurrent engineering; the idea of integrating the design and analysis processes so that they are not separate, sequential processes (often involving design rework due to analytical findings) but instead form an integrated system with smooth transfers of information. Presented herein are several specific examples of concurrent engineering methods being carried out at Langley Research Center (LaRC): integration of thermal, structural and optical analyses to predict changes in optical performance based on thermal and structural effects; integration of the CAD design process with thermal and structural analyses; and integration of analysis and presentation by animating the thermal response of a system as an active color map -- a highly effective visual indication of heat flow. DATA SYSTEMS DYNAMIC SIMULATOR **c61**
Christopher Rouff, Melana Clark, Bill Davenport, and Philip Message (Stanford Telecommunications, Inc., Seabrook, MD.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 385-393 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

The Data System Dynamic Simulator (DSDS) is a discrete event simulation tool. It was developed for NASA for the specific purpose of evaluating candidate architectures for data systems of the Space Station era. DSDS provides three methods for meeting this requirement. First, the user has access to a library of standard pre-programmed elements. These elements represent tailorable components of NASA data systems and can be connected in any logical manner. Secondly, DSDS supports the development of additional elements. This allows the more sophisticated DSDS user the option of extending the standard element set. Thirdly, DSDS supports the use of data streams simulation. Data streams is the name given to a technique that ignores packet boundaries, but is sensitive to rate changes. Because rate changes are rare compared to packet arrivals in a typical NASA data system, data stream simulations require a fraction of the CPU run time. Additionally, the data stream technique is considerably more accurate than another commonly-used optimization technique. Author

Avail: CASI HC A02/MF A04

This paper describes two processing algorithms that can be implemented optically: the Radon transform and angular correlation. These two algorithms can be combined in one optical processor to extract all the basic geometric and amplitude features from objects embedded in video imagery. We show that the internal amplitude structure of objects is recovered by the Radon transform, which is a well-known result, but, in addition, we show simulation results that calculate angular correlation, a simple but unique algorithm that extracts object boundaries from suitably threshold images from which length, width, area, aspect ratio, and orientation can be derived. In addition to circumventing scale and rotation distortions, these simulations indicate that the features derived from the angular correlation algorithm are relatively insensitive to tracking shifts and image noise. Some optical architecture concepts, including one based on micro-optical lenslet arrays, have been developed to implement these algorithms. Simulation test and evaluation using simple synthetic object data will be described, including results of a study that uses object boundaries (derivable from angular correlation) to classify simple objects using a neural network. VISION-AIDED MONITORING AND CONTROL OF THERMAL SPRAY, SPRAY FORMING, AND WELDING PROCESSES **c31**
John E. Agapakis and Jon Bolstad (Control Vision, Inc., Idaho Falls, ID.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 407-414 Sponsored in part by DOE (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Vision is one of the most powerful forms of non-contact sensing for monitoring and control of manufacturing processes. However, processes involving an arc plasma or flame such as welding or thermal spraying pose particularly challenging problems to conventional vision sensing and processing techniques. The arc or plasma is not typically limited to a single spectral region and thus cannot be easily filtered out optically. This paper presents an innovative vision sensing system that uses intense stroboscopic illumination to overpower the arc light and produce a video image that is free of arc light or glare and dedicated image processing and analysis schemes that can enhance the video images or extract features of interest and produce quantitative process measures which can be used for process monitoring and control. Results of two SBIR programs sponsored by NASA and DOE and focusing on the application of this innovative vision sensing and processing technology to thermal spraying and welding process monitoring and control are discussed. ROBOTIC VARIABLE POLARITY PLASMA ARC (VPPA) WELDING **c37**
Waris S. Jaffery *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 415-424 (For primary document see N93-25561 09-99)
(Contract NAS8-50000)
Avail: CASI HC A02/MF A04

The need for automated plasma welding was identified in the early stages of the Space Station Freedom Program (SSFP) because it requires approximately 1.3 miles of welding for assembly. As a result of the Variable Polarity Plasma Arc Welding (VPPAW) process's ability to make virtually defect-free welds in aluminum, it was chosen to fulfill the welding needs. Space Station Freedom will be constructed of 2219 aluminum utilizing the computer controlled VPPAW process. The 'Node Radial Docking Port', with it's saddle shaped weld path, has a constantly changing surface angle over 360 deg of the 282 inch weld. The automated robotic VPPAW process requires eight-axes of motion (six-axes of robot and two-axes of positioner movement). The robot control system is programmed to maintain Torch Center Point (TCP) orientation perpendicular to the part while the part positioner is tilted and rotated to maintain the vertical up orientation as required by the VPPAW process. The combined speed of the robot and the positioner are integrated to maintain a constant speed between the part and the torch. A laser-based vision sensor system has also been integrated to track the seam and map the surface of the profile during welding. Author

FIRMWARE DEVELOPMENT IMPROVES SYSTEM EFFICIENCY c60

E. James Chern and David W. Butler *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 425-434 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

Most manufacturing processes require physical pointwise positioning of the components or tools from one location to another. Typical mechanical systems utilize either stop-and-go or fixed feed-rate procession to accomplish the task. The first approach achieves positional accuracy but prolongs overall time and increases wear on the mechanical system. The second approach sustains the throughput but compromises positional accuracy. A computer firmware approach has been developed to optimize this point wise mechanism by utilizing programmable interrupt controls to synchronize engineering processes 'on the fly'. This principle has been implemented in an eddy current imaging system to demonstrate the improvement. Software programs were developed that enable a mechanical controller card to transmit interrupts to a system controller as a trigger signal to initiate an eddy current data acquisition routine. The advantages are: (1) optimized manufacturing processes, (2) increased throughput of the system, (3) improved positional accuracy, and (4) reduced wear and tear on the mechanical system. Author

ELASTOMER COMPOUND DEVELOPED FOR HIGH WEAR APPLICATIONS c27

D. Crawford, H. Feuer, D. Flanagan, G. Rodriguez, A. Teets, and P. Touchet *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 438-445 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

The U.S. Army is currently spending 300 million dollars per year replacing rubber track pads. An experimental rubber compound has been developed which exhibits 2 to 3 times greater service life than standard production pad compounds. To improve the service life of the tank track pads various aspects of rubber chemistry were explored including polymer, curing and reinforcing systems. Compounds that exhibited superior physical properties based on laboratory data were then fabricated into tank pads and field tested. This paper will discuss the compounding studies, laboratory data and field testing that led to the high wear elastomer compound. Author

DYNAMIC HARDNESS TESTER AND CURE METER c35

Walter M. Madigosky and Ralph B. Fiorito *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 446-450 (For primary document see N93-25561 09-99)

Avail: CASI HC A01/MF A04

The Shore hardness tester is used extensively throughout industry to determine the static modulus of materials. The new apparatus described here extends the capability of an indentor-type tester into the dynamic regime, and provides a measurement of the dynamic shear or Young's modulus and loss factor as a function of frequency. The instrument, model and data of typical rubber samples are given and compared to other dynamic measurements. Author

INSTRUMENTATION FOR MEASUREMENT OF GAS PERMEABILITY OF POLYMERIC MEMBRANES c37

Billy T. Upchurch, George M. Wood, Kenneth G. Brown (Old Dominion Univ., Norfolk, VA.), and Karen S. Burns (Old Dominion Univ., Norfolk, VA.) *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 451-460 (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

A mass spectrometric 'Dynamic Delta' method for the measurement of gas permeability of polymeric membranes has been developed. The method is universally applicable for measurement of the permeability of any gas through polymeric membrane materials. The usual large sample size of more than 100 square centimeters required for other methods is not necessary for this new method which requires a size less than one square centimeter. The new method should fulfill requirements and find applicability for industrial materials such as food packaging, contact lenses and other commercial materials where gas permeability or permselectivity properties are important. A SOFTWARE PACKAGE FOR NEURAL NETWORK APPLICATIONS DEVELOPMENT c63

Robert H. Baran *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 463-472 Sponsored in part by Office of Naval Technology (For primary document see N93-25561 09-99)

Avail: CASI HC A02/MF A04

Original Backprop (Version 1.2) is an MS-DOS package of four stand-alone C-language programs that enable users to develop neural network solutions to a variety of practical problems. Original Backprop generates three-layer, feed-forward (series-coupled) networks which map fixed-length input vectors into fixed length output vectors through an intermediate (hidden) layer of binary threshold units. Version 1.2 can handle up to 200 input vectors at a time, each having up to 128 real-valued components. The first subprogram, TSET, appends a number (up to 16) of classification bits to each input, thus creating a training set of input output pairs. The second subprogram, BACKPROP, creates a trilayer network to do the prescribed mapping and modifies the weights of its connections incrementally until the training set is leaned. The learning algorithm is the 'back-propagating error correction procedures first described by F. Rosenblatt in 1961. The third subprogram, VIEWNET, lets the trained network be examined, tested, and 'pruned' (by the deletion of unnecessary hidden units). The fourth subprogram, DONET, makes a TSR routine by which the finished product of the neural net design-and-training exercise can be consulted under other MS-DOS applications. Author

This paper considers the use of neural networks (NN's) in controlling a nonlinear, stochastic system with unknown process equations. The NN is used to model the resulting unknown control law. The approach here is based on using the output error of the system to train the NN controller without the need to construct a separate model (NN or other type) for the unknown process dynamics. To implement such a direct adaptive control approach, it is required that connection weights in the NN be estimated while the system is being controlled. As a result of the feedback of the unknown process dynamics, however, it is not possible to determine the

gradient of the loss function for use in standard (back-propagation-type) weight estimation algorithms. Therefore, this paper considers the use of a new stochastic approximation algorithm for this weight estimation, which is based on a 'simultaneous perturbation' gradient approximation that only requires the system output error. It is shown that this algorithm can greatly enhance the efficiency over more standard stochastic approximation algorithms based on finite-difference gradient approximations. Author

ADAPTIVE PROCESS CONTROL WITH FUZZY LOGIC AND GENETIC ALGORITHMS **c63**
C. L. Karr *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 483-490 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Researchers at the U.S. Bureau of Mines have developed adaptive process control systems in which genetic algorithms (GA's) are used to augment fuzzy logic controllers (FLC's). GA's are search algorithms that rapidly locate near-optimum solutions to a wide spectrum of problems by modeling the search procedures of natural genetics. FLC's are rule based systems that efficiently manipulate a problem environment by modeling the 'rule-of-thumb' strategy used in human decision-making. Together, GA's and FLC's possess the capabilities necessary to produce powerful, efficient, and robust adaptive control systems. To perform efficiently, such control systems require a control element to manipulate the problem environment, an analysis element to recognize changes in the problem environment, and a learning element to adjust to the changes in the problem environment. Details of an overall adaptive control system are discussed. A specific laboratory acid-base pH system is used to demonstrate the ideas presented. Author

(Contract NCC9-16)
Avail: CASI HC A02/MF A04

The Space Station Freedom will require the supply of items in a regular fashion. A schedule for the delivery of these items is not easy to design due to the large span of time involved and the possibility of cancellations and changes in shuttle flights. This paper presents the basic concepts of a genetic algorithm model, and also presents the results of an effort to apply genetic algorithms to the design of propellant resupply schedules. As part of this effort, a simple simulator and an encoding by which a genetic algorithm can find near optimal schedules have been developed. Additionally, this paper proposes ways in which robust schedules, i.e., schedules that can tolerate small changes, can be found using genetic algorithms. Author

PRELIMINARY STUDIES LEADING TOWARD THE DEVELOPMENT OF A LIDAR BATHYMETRY MAPPING INSTRUMENT **c35**
John M. Hill (Houston Advanced Research Center, The Woodlands, TX.), Brendan D. Krenek (Houston Advanced Research Center, The Woodlands, TX.), Terry D. Kunz (Houston Advanced Research Center, The Woodlands, TX.), William Krabill, and Fran Stetina *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 503-514 (For primary document see N93-25561 09-99)
Avail: CASI HC A03/MF A04

The National Aeronautics and Space Administration (NASA) at Goddard Space Flight Center (GSFC) has developed a laser ranging device (LIDAR) which provides accurate and timely data of earth features. NASA/GSFC recently modified the sensor to include a scanning capability to produce LIDAR swaths. They have also integrated a Global Positioning System (GPS) and an Inertial Navigation System (INS) to accurately determine the absolute aircraft location and aircraft attitude (pitch, yaw, and roll), respectively. The sensor has been flown in research mode by NASA for many years. The LIDAR has been used in different configurations or modes to acquire such data as altimetry (topography), bathymetry (water depth), laser-induced fluorosensing (tracer dye movements, oil spills and oil thickness, chlorophyll and plant stress identification), forestry, and wetland discrimination studies. NASA and HARC are developing a commercial version of the instrument for topographic mapping applications. The next phase of the commercialization project will be to investigate other applications such as wetlands mapping and coastal bathymetry. In this paper we report on preliminary laboratory measurements to determine the feasibility of making accurate depth measurements in relatively shallow water (approximately 2 to 6 feet deep) using a LIDAR system. The LIDAR bathymetry measurements are relatively simple in theory. The water depth is determined by measuring the time interval between the water surface reflection and the bottom surface reflection signals. Depth is then calculated by dividing by the index of refraction of water. However, the measurements are somewhat complicated due to the convolution of the water surface return signal with the bottom surface return signal. Therefore in addition to the laboratory experiments, computer simulations of the data were made to show these convolution effects in the return pulse waveform due to: (1) water depth, and (2) changes in bottom surface reflectivity. Avail: CASI HC A03/MF A04

NASA's Office of Commercial Programs is funding a multispectral sensor system to be used in the development of remote sensing applications. The Airborne Terrestrial Applications Sensor (ATLAS) is designed to provide versatility in acquiring spectral and spatial information. The ATLAS system will be a test bed for the development of specifications for airborne and spaceborne remote sensing instrumentation for dedicated applications. This objective requires spectral coverage from the visible through thermal infrared wavelengths, variable spatial resolution from 2-25 meters; high geometric and geo-location accuracy; on-board radiometric calibration; digital recording; and optimized performance for minimized cost, size, and weight. ATLAS is scheduled to be available in 3rd quarter 1992 for acquisition of data for applications such as environmental monitoring, facilities management, geographic information systems data base development, and mineral exploration. INTERACTIVE FORECASTING WITH THE NATIONAL WEATHER SERVICE RIVER FORECAST SYSTEM **c47**
George F. Smith and Donna Page *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 527-536 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

The National Weather Service River Forecast System (NWSRFS) consists of several major hydrometeorologic subcomponents to model the physics of the flow of water through the hydrologic cycle. The entire NWSRFS currently runs in both mainframe and minicomputer environments, using command oriented text input to control the system computations. As computationally powerful and graphically sophisticated scientific workstations became available, the National Weather Service (NWS) recognized that a graphically based, interactive environment would enhance the accuracy and timeliness of NWS river and flood forecasts. Consequently, the operational forecasting portion of the NWSRFS has been ported to run under a UNIX operating system, with X windows as the display environment on a system of networked scientific workstations. In addition, the NWSRFS Interactive Forecast Program was developed to provide a graphical user

interface to allow the forecaster to control NWSRFS program flow and to make adjustments to forecasts as necessary. The potential market for water resources forecasting is immense and largely untapped. Any private company able to market the river forecasting technologies currently developed by the NWS Office of Hydrology could provide benefits to many information users and profit from providing these services. SPACE LIFE SUPPORT TECHNOLOGY APPLICATIONS TO TERRESTRIAL ENVIRONMENTAL PROBLEMS **c54**
Steven H. Schwartzkopf and Howard L. Sleeper *In* NASA, Washington, Technology 2002: The Third National Technology Transfer Conference and Exposition, Volume 1 Feb. 1993 p 537-543 (For primary document see N93-25561 09-99)
Avail: CASI HC A02/MF A04

Many of the problems now facing the human race on Earth are, in fact, life support issues. Decline of air Quality as a result of industrial and automotive emissions, pollution of ground water by organic pesticides or solvents, and the disposal of solid wastes are all examples of environmental problems that we must solve to sustain human life. The technologies currently under development to solve the problems of supporting human life for advanced space missions are extraordinarily synergistic with these environmental problems. The development of these technologies (including both physicochemical and bioregenerative types) is increasingly focused on closing the life support loop by removing and recycling contaminants and wastes to produce the materials necessary to sustain human life. By so doing, this technology development effort also focuses automatically on reducing resupply logistics requirements and increasing crew safety through increased self-sufficiency. This paper describes several technologies that have been developed to support human life in space and illustrates the applicability of the technologies to environmental problems including environmental remediation and pollution prevention. (AD-A260675; AFOSR-TR-92-1010) Avail: CASI HC A04/MF A01

The Research Proposal Quarterly Status Report is published in March, June, September, and December by the Air Force Office of Scientific Research (AFOSR). It lists all the research proposals received by AFOSR in the previous six months along with the action taken (Initiated, Declined or Withdrawn) on each report. The report is divided into two parts. The Institution index lists proposals alphabetically by institution. This is followed by a more detailed listing by Directorate, and by Program Manager within the Directorate. This Report is designed to inform other Government sponsoring agencies of the proposals received by the AFOSR and the action taken on these proposals. Readers must keep in mind that declined proposals should not necessarily be considered as scientifically unacceptable; many declinations result from a lack of funds or as a result of special programmatic emphasis. ROME LABORATORY JOURNAL, 1992
1992 232 p
(AD-A260821) Avail: CASI HC A11/MF A03

The Rome Laboratory is the Air Force's center of expertise for advancing the state-of-the-art in command, control, communications, and intelligence. This mission is accomplished by: (1) Conducting vigorous research, development, and test programs in all applicable technologies; (2) Transitioning technology to current and future Air Force systems to improve operational capability, readiness, and supportability; (3) Providing a full range of technical support to AFSC product divisions and other Air Force organizations; and (4) Conducting selected acquisition programs for low volume, limited quantity intelligence and software systems. The Laboratory maintains leading edge technological expertise in the following areas: surveillance, communications, command and control, intelligence, reliability science, electromagnetic technology, photonics, signal processing, and computational science. The Laboratory is organized into four major staff directorates and four mission directorates: Surveillance and Photonics, Command Control and Communications, Intelligence and Reconnaissance and Electromagnetics and Reliability. We recognize that a system approach, integrating efforts across the Laboratory's organizational structure, is required to develop effective C3I systems. Journal papers are presented. DTIC

DATA ANALYSIS AND INTERPRETATION OF LUNAR DUST EXOSPHERE Final Report **c91**
George A. Andrews, Jr. *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 11 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

The lunar horizon glow observed by Apollo astronauts and captured on film during the Surveyor mission is believed to result from the scattering of sunlight off lunar fines suspended in a dust layer over the lunar surface. For scale heights on the order of tens of kilometers, it is anticipated that the size of the dust particles will be small enough to admit Rayleigh scattering. Such events would result in scattered light which is polarized to a degree which is a function of observation angle and produce spectra containing large high frequency components ('bluing'). Believing these signatures to be observable from ground based telescopes, observational data has been collected from McDonald Observatory and the task of reduction and analysis of this data is the focus of the present report. COMPOSITE MATERIALS FOR THE EXTRAVEHICULAR MOBILITY UNIT Final Report **c24**
Enrique V. Barrera and Hector M. Tello *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 15 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

The extravehicular mobility unit (EMU), commonly known as the astronaut space suit assembly (SSA) and primary life support system (PLSS), has evolved through the years to incorporate new and innovative materials in order to meet the demands of the space environment. The space shuttle program which is seeing an increasing level of extravehicular activity (EVA), also called space walks, along with interest in an EMU for Lunar-Mars missions means even more demanding conditions are being placed on the suit and PLSS. The project for this NASA-ASEE Summer Program was to investigate new materials for these applications. The focus was to emphasize the use of composite materials for every component of the EMU to enhance the properties while reducing the total weight of the EMU. To accomplish this, development of new materials called fullerene reinforced materials (FRM's) was initiated. Fullerenes are carbon molecules which when added to a material significantly reduce the weight of that material. The Faculty Fellow worked directly on the development of the fullerene reinforced materials. A chamber for fullerene production was designed and assembled and first generation samples were processed. He also supervised with the JSC Colleague, a study of composite materials for the EMU conducted by the student participant in the NASA-ASEE Program, Hector Tello a Rice University graduate student, and by a NASA Aerospace Technologist (Materials Engineer) Evelyne Orndoff, in the Systems Engineering Analysis Office (EC7), also a Rice University graduate student. Hector Tello conducted a study on beryllium and Be alloys and initiated a study of carbon and glass reinforced composites for space applications. Evelyne Orndoff compiled an inventory of the materials on the SSA. Ms. Orndoff also reviewed SSA material requirements and cited aspects of the SSA design where composite materials might be further considered. Hector Tello spent part of his time investigating the solar radiation sensitivity of anodic coatings. This project was directed toward the effects of ultra-violet radiation on high emissivity anodic coatings. The work of both Evelyne Orndoff and Hector Tello is of interest to the Engineering Directorate at NASA/JSC and is also directed toward their research as Rice University graduate students. Author

INVESTIGATION OF THE EFFECTS OF EXTRA VEHICULAR ACTIVITY (EVA) AND LAUNCH AND ENTRY (LES) GLOVES ON PERFORMANCE Final Report **c54**

Ram R. Bishu *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 15 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

Human capabilities such as dexterity, manipulability, and tactile perception are unique and render the hand as a very versatile, effective and a multipurpose tool. This is especially true for unknown environments such as the EVA environment. In the microgravity environment interfaces, procedures, and activities are too complex, diverse, and defy advance definition. Under these conditions the hand becomes the primary means of locomotion, restraint, and material handling. Facilitation of these activities, with simultaneous protection from the cruel EVA environment are the two, often conflicting, objectives of glove design. The objectives of this study was (1) to assess the effects of EVA gloves at different pressures on human hand capabilities, (2) to devise a protocol for evaluating EVA gloves, (3) to develop force time relations for a number of EVA glove pressure combinations, and (4) to evaluate two types of launch and entry suit gloves. The objectives were achieved through three experiments. The experiments for achieving objectives 1, 2, and 3 were performed in the glove box in building 34. In experiment 1 three types of EVA gloves were tested at five pressure differentials. A number of performance measures were recorded. In experiment 2 the same gloves as in experiment 1 were evaluated in a reduced number of pressure conditions. The performance measure was endurance time. Six subjects participated in both the experiments. In experiment 3 two types of launch and entry suit gloves were evaluated using a paradigm similar to experiment 1. Currently the data is being analyzed. However for this report some summary analyses have been performed. The results indicate that a) With EVA gloves strength is reduced by nearly 50 percent, b) performance decrements increase with increasing pressure differential, c) TMG effects are not consistent across the three gloves tested, d) some interesting gender glove interactions were observed, some of which may have been due to the extent (or lack of) fit of the glove to the hand, and e) differences in performance exist between partial pressure suit glove and full pressure suit glove, especially in the unpressurized condition. VOLATILES IN INTERPLANETARY DUST PARTICLES: A COMPARISON WITH CI AND CM CHONDRITES Final Report **c90**

Roberta Bustin *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 14 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

In an effort to classify and determine the origin of interplanetary dust particles (IDPs), 14 of these particles were studied using a laser microprobe/mass spectrometer. The mass spectra for these particles varied dramatically. Some particles released hydroxide or water which probably originated in hydroxide-bearing minerals or hydrates. Others produced spectra which included a number of hydrocarbons and resembled meteorite spectra. However, none of the individual IDPs gave spectra which could be matched identically with a particular meteorite type such as a CI or CM carbonaceous chondrite. We believe this was due to the fact that 10-20 micron size IDPs are too small to be representative of the parent body. To verify that the diversity was due primarily to the small particle sizes, small grains of approximately the same size range as the IDPs were obtained from two primitive meteorites, Murchison and Orgueil, and these small meteorite particles were treated exactly like the IDPs. Considerable diversity was observed among individual grains, but a composite spectrum of all the grains from one meteorite closely resembled the spectrum obtained from a much larger sample of that meteorite. A composite spectrum of the 14 IDPs also resembled the spectra of the CM and CI meteorites, pointing to a possible link between IDPs and carbonaceous chondrites. This also illustrates that despite the inherent diversity in particles as small as 10-20 micron, conclusions can be drawn about the possible origin and overall composition of such particles by looking not only at results from individual particles but also by including many particles in a study and basing conclusions on some kind of composite data. USE OF TAGUCHI DESIGN OF EXPERIMENTS TO OPTIMIZE AND INCREASE ROBUSTNESS OF PRELIMINARY DESIGNS Final Report **c31**

Hector R. Carrasco *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 14 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

The research performed this summer includes the completion of work begun last summer in support of the Air Launched Personnel Launch System parametric study, providing support on the development of the test matrices for the plume experiments in the Plume Model Investigation Team Project, and aiding in the conceptual design of a lunar habitat. After the conclusion of last years Summer Program, the Systems Definition Branch continued with the Air Launched Personnel Launch System (ALPLS) study by running three experiments defined by L27 Orthogonal Arrays. Although the data was evaluated during the academic year, the analysis of variance and the final project review were completed this summer. The Plume Model Investigation Team (PLUMMIT) was formed by the Engineering Directorate to develop a consensus position on plume impingement loads and to validate plume flowfield models. In order to obtain a large number of individual correlated data sets for model validation, a series of plume experiments was planned. A preliminary 'full factorial' test matrix indicated that 73,024 jet firings would be necessary to obtain all of the information requested. As this was approximately 100 times more firings than the scheduled use of Vacuum Chamber A would permit, considerable effort was needed to reduce the test matrix and optimize it with respect to the specific objectives of the program. Part of the First Lunar Outpost Project deals with Lunar Habitat. Requirements for the habitat include radiation

protection, a safe haven for occasional solar flare storms, an airlock module as well as consumables to support 34 extra vehicular activities during a 45 day mission. The objective for the proposed work was to collaborate with the Habitat Team on the development and reusability of the Logistics Modules. Author

STUDY OF PLATE-FIN HEAT EXCHANGER AND COLD PLATE FOR THE ACTIVE THERMAL CONTROL SYSTEM OF SPACE STATION Final Report **c18**

Ming-C. Chyu *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 15 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

Plate-fin heat exchangers will be employed in the Active Thermal Control System of Space Station Freedom. During ground testing of prototypic heat exchangers, certain anomalous behaviors have been observed. Diagnosis has been conducted to determine the cause of the observed behaviors, including a scrutiny of temperature, pressure, and flow rate test data, and verification calculations based on such data and more data collected during the ambient and thermal/vacuum tests participated by the author. The test data of a plate-fin cold plate have been also analyzed. Recommendation was made with regard to further tests providing more useful information of the cold plate performance. Author

A PROTOTYPE FOR SIMULATION OF THE SPACE-TO-GROUND ASSEMBLY/CONTINGENCY SYSTEM OF SPACE STATION FREEDOM Final Report **c18**

Louis A. DeAcetis *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 7 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A02/MF A02

This project was a continuation of work started during the Summer of 1991 when techniques and methods were investigated for simulating equipment components of the Communications and Tracking System on Space Station Freedom (SSF). The current work involved developing a design for simulation of the entire Assembly/Contingency Subsystem (ACS), which includes the Baseband Signal Processor, standard TDRSS Transponder and the RF Group antenna assembly. A design prototype of the ACS was developed. Methods to achieving 'high fidelity' real-time simulations of the ACS components on IBM-PC compatible computers were considered. The intention is to have separate component simulations running on separate personal computers (PC's), with the capability of substituting actual equipment units for those being simulated when such equipment becomes available for testing. To this end, a scheme for communication between the various simulated ACS components was developed using the serial ports of the PC's hosting the simulations. In addition, control and monitoring of ACS equipment on SSF will be via a MIL-STD 1553B bus. The proposed simulation includes actual 1553B hardware as part of the test bed. Author

METABOLIC RESPONSE OF ENVIRONMENTALLY ISOLATED MICROORGANISMS TO INDUSTRIAL EFFLUENTS: USE OF A NEWLY DESCRIBED CELL CULTURE ASSAY Final Report **c51**

Robert N. Ferebee *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 15 Sep. 1992 10 p (For primary document see N93-26058 09-99)
Avail: CASI HC A02/MF A02

An environmental application using a microtiter culture assay to measure the metabolic sensitivity of microorganisms to petrochemical effluents will be tested. The Biomedical Operations and Research Branch at NASA JSC has recently developed a rapid and nondestructive method to measure cell growth and metabolism. Using a colorimetric procedure the uniquely modified assay allows the metabolic kinetics of prokaryotic and eukaryotic cells to be measured. Use of such an assay if adapted for the routine monitoring of waste products, process effluents, and environmentally hazardous substances may prove to be invaluable to the industrial community. The microtiter method as described will be tested using microorganisms isolated from the Galveston Bay aquatic habitat. The microbial isolates will be identified prior to testing using the automated systems available at JSC. Sodium dodecyl sulfate (SDS), cadmium, and lead will provide control toxic chemicals. The toxicity of industrial effluent from two industrial sites will be tested. An effort will be made to test the efficacy of this assay for measuring toxicity in a mixed culture community. Author

GEOCHEMISTRY AND PETROLOGY OF PRIMITIVE ACHONDRITE METEORITES LEW 88280, MAC 88177, ALHA 81187, EET 84302, AND LEW 88663 Final Report **c90**

Stephen W. Field *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 14 Aug. 1992 17 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

Primitive achondrites are meteorites that have mineral and bulk chemical compositions similar to the most primitive meteorites (chondrites) but have textures similar to more evolved meteorites (achondrites). The unique geochemistry and texture of the primitive achondrites suggest these meteorites may be genetic intermediates between chondrites and achondrites and may preserve evidence of processes occurring in the early solar system. Five primitive achondrites LEW 88280, MAC 88177, ALHA 81187, EET 84302, and LEW 88663 were examined in this study in order to classify the meteorites and to determine processes that have affected them. Bulk chemical analyses of Nap, K2O, CaO, FeO, Cr, Co, Ni, Sc, Ir, Au, As, Sb, Se, Br, Cs, Ba, La, Ce, Nd, Sm, Eu, Tb, Yb, and Lu were determined for each meteorite by Instrumental Neutron Activation Analysis (INAA). Concentrations of Hf, U, and Th were determined for some meteorites. Polished thin sections of the five meteorites were examined in transmitted and reflected light microscopy to identify minerals and examine petrographic relationships. Minerals found in the meteorites include olivine, orthopyroxene, clinopyroxene, plagioclase, Cr-spinel, phosphates, troilite, kamecite, and taenite along with other minor phases. Mineral compositions were determined with an electron microprobe. The initial study suggests that the meteorites have been altered by metamorphic processes although igneous processes may also have played a role in the evolution of these rocks. Further studies of isotope and bulk chemistry are planned for these meteorites. Author

THE ROLE OF PYRIDOXINE AS A COUNTERMEASURE FOR IN-FLIGHT LOSS OF LEAN BODY MASS Final Report **c52**

Joyce A. Gilbert *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 4 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A01/MF A02

Ground based and in flight research has shown that humans, under conditions of microgravity, sustain a loss of lean body tissue (protein) and changes in several biological processes including, reductions in red blood cell mass, and neurotransmitters. The maintenance of muscle mass, the major component of lean body mass, is required to meet the needs of space station EVAs. Central to the biosynthesis of amino acids, the building blocks of protein, is pyridoxine (vitamin B-6). Muscle mass integrity requires the availability of vitamin B-6 for protein metabolism and neurotransmitter synthesis. Furthermore, the formation of red blood cells require pyridoxine as a cofactor in the biosynthesis of hemoglobin, a protein that carries oxygen to tissues. In its active form, pyridoxal-5'-phosphate (PLP), vitamin B-6 serves as a link between amino acid and carbohydrate metabolism through intermediates of glycolysis and the tricarboxylic acid cycle. In addition to its role in energy metabolism, PLP is involved in the biosynthesis of hemoglobin and neurotransmitter which are necessary for neurological

functions. Alterations in pyridoxine metabolism may affect countermeasures designed to overcome some of these biochemical changes. The focus of this research is to determine the effects of microgravity on the metabolic utilization of vitamin B-6, integrating nutrition as an integral component of the countermeasure (exercise) to maintain lean body mass and muscle strength. The objectives are: 1) to determine whether microgravity effects the metabolic utilization of pyridoxine and 2) to quantitate changes in B-6 vitamer distribution in tissue and excreta relative to loss of lean body tissue. The rationale for this study encompasses the unique challenge to control biochemical mechanisms effected during space travel and the significance of pyridoxine to maintain and counter muscle integrity for EVA activities. This experiment will begin to elucidate the importance of biochemical interactions between micronutrients and the homeostasis condition of biological processes in the space environment. To address this research topic a simulated microgravity model has been developed. The experiment uses radioisotopically labelled pyridoxine administered as an oral dose to rats which are maintained by tail suspension to simulate a microgravity environment. At the termination of the study, liver, muscle, blood and urine are collected and analyzed by reverse phase high pressure liquid chromatography to determine the quantity and distribution of the B-6 vitamers in tissue and excreta relative to lean body tissue loss. Earlier studies, published by this investigator, have shown that differences in vitamer distribution among samples from experimental versus control subjects indicate changes in metabolic utilization and storage of vitamin B-6.

ANALYSIS OF THE LETTUCE DATA FROM THE VARIABLE PRESSURE GROWTH CHAMBER AT NASA JOHNSON SPACE CENTER: A THREE-STAGE NESTED DESIGN MODEL Final Report **c51**

Tze-San Lee *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 1 Dec. 1992 14 p (For primary document see N93-26058 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

A model of three-stage nested experimental design was applied to analyze the lettuce data obtained from the variable pressure growth chamber test bed at NASA-Johnson Space Center. From the results of an application of the analysis of variance and covariance on the data set, it was noted that all of the (uncontrollable) factors, Side, Zone, Height and (controllable) PAR (photosynthetically active radiation), had nonhomogeneous effects on the dry weight of the edible biomass of lettuce per pot. Incidentally, the variations accountable to the (uncontrollable) factorial heterogeneities are merely 9 percent and 17 percent of the total variation for both the first and second crop test, respectively. After adjusting for the PAR as a covariate in the no-intercept model, the accountable variations to all the four factors are 94 percent and 92 percent for the first and the second crop test, respectively. With the use of a no-intercept simple linear regression model, the accountable variations to the factor PAR are 92 percent and 90 percent for the first and the second crop test, respectively. Evidently, the (controllable) factor PAR is the dominating one. Author

A VISION ARCHITECTURE FOR THE EXTRAVEHICULAR ACTIVITY RETRIEVER Final Report **c63**

Michael Magee *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 10 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A02/MF A02

The Extravehicular Activity Retriever (EVAR) is a robotic device currently being developed by the Automation and Robotics Division at the NASA Johnson Space Center to support activities in the neighborhood of the Space Shuttle or Space Station Freedom. As the name implies, the Retriever's primary function will be to provide the capability to retrieve tools, equipment or other objects which have become detached from the spacecraft, but it will also be able to rescue a crew member who may have become inadvertently de-tethered. Later goals will include cooperative operations between a crew member and the Retriever such as fetching a tool that is required for servicing or maintenance operations. This report documents a preliminary design for a Vision System Planner (VSP) for the EVAR that is capable of achieving visual objectives provided to it by a high level task planner. Typical commands which the task planner might issue to the VSP relate to object recognition, object location determination, and obstacle detection. Upon receiving a command from the task planner, the VSP then plans a sequence of actions to achieve the specified objective using a model-based reasoning approach. This sequence may involve choosing an appropriate sensor, selecting an algorithm to process the data, reorienting the sensor, adjusting the effective resolution of the image using lens zooming capability, and/or requesting the task planner to reposition the EVAR to obtain a different view of the object. An initial version of the Vision System Planner which realizes the above capabilities using simulated images has been implemented and tested. The remaining sections describe the architecture and capabilities of the VSP and its relationship to the high level task planner. In addition, typical plans that are generated to achieve visual goals for various scenarios will be discussed. Specific topics to be addressed will include object search strategies, repositioning of the EVAR to improve the quality of information obtained from the sensors, complementary usage of the sensors and redundant capabilities. A STUDY OF MAPPING EXOGENOUS KNOWLEDGE REPRESENTATIONS INTO CONFIG Final Report **c63**

Blayne E. Mayfield *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 15 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

Qualitative reasoning is reasoning with a small set of qualitative values that is an abstraction of a larger and perhaps infinite set of quantitative values. The use of qualitative and quantitative reasoning together holds great promise for performance improvement in applications that suffer from large and/or imprecise knowledge domains. Included among these applications are the modeling, simulation, analysis, and fault diagnosis of physical systems. Several research groups continue to discover and experiment with new qualitative representations and reasoning techniques. However, due to the diversity of these techniques, it is difficult for the programs produced to exchange system models easily. The availability of mappings to transform knowledge from the form used by one of these programs to that used by another would open the doors for comparative analysis of these programs in areas such as completeness, correctness, and performance. A group at the Johnson Space Center (JSC) is working to develop CONFIG, a prototype qualitative modeling, simulation, and analysis tool for fault diagnosis applications in the U.S. space program. The availability

of knowledge mappings from the programs produced by other research groups to CONFIG may provide savings in CONFIG's development costs and time, and may improve CONFIG's performance. The study of such mappings is the purpose of the research described in this paper. Two other research groups that have worked with the JSC group in the past are the Northwest University Group and the University of Texas at Austin Group. The former has produced a qualitative reasoning tool named SIMGEN, and the latter has produced one named QSIM. Another program produced by the Austin group is CC, a preprocessor that permits users to develop input for eventual use by QSIM, but in a more natural format. CONFIG and CC are both based on a component-connection ontology, so a mapping from CC's knowledge representation to CONFIG's knowledge representation was chosen as the focus of this study. A mapping from CC to CONFIG was developed. Due to differences between the two programs, however, the mapping transforms some of the CC knowledge to CONFIG as documentation rather than as knowledge in a form useful to computation. The study suggests that it may be worthwhile to pursue the mappings further. By implementing the mapping as a program, actual comparisons of computational efficiency and quality of results can be made between the QSIM and CONFIG programs. A secondary study may reveal that the results of the two programs augment one another, contradict one another, or differ only slightly. If the latter, the qualitative reasoning techniques may be compared in other areas, such as computational efficiency. Author

INVESTIGATION INTO THE COMMON MODE REJECTION RATIO OF THE PHYSIOLOGICAL SIGNAL CONDITIONER CIRCUIT Final Report **c51**

Edward M. OBrien *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 10 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A02/MF A02

The common mode rejection ratio (CMRR) of the single operational amplifier (op amp) differential amplifier and of the three operational amplifier differential amplifier was investigated. The three op amp differential amplifier circuit is used in the signal conditioner circuit which amplifies signals such as the electromyograph or electrocardiogram. The investigation confirmed via SPICE modeling what has been observed by others in the recent literature that the CMRR for the circuit can be maximized without precision resistor values or precisely matched op amps. This can be done if one resistor in the final stage can be adjusted either by a potentiometer or by laser trimming in the case of hybrid circuit fabrication. Author

IMPLEMENTATION OF QUALITY IMPROVEMENT TECHNIQUES FOR MANAGEMENT AND TECHNICAL PROCESSES IN THE ACRV PROJECT Final Report **c38**

Laura B. Raiman *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 9 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A02/MF A02

Total Quality Management (TQM) is a cooperative form of doing business that relies on the talents of everyone in an organization to continually improve quality and productivity, using teams and an assortment of statistical and measurement tools. The objective of the activities described in this paper was to implement effective improvement tools and techniques in order to build work processes which support good management and technical decisions and actions which are crucial to the success of the ACRV project. The objectives were met by applications in both the technical and management areas. The management applications involved initiating focused continuous improvement projects with widespread team membership. The technical applications involved applying proven statistical tools and techniques to the technical issues associated with the ACRV Project. Specific activities related to the objective included working with a support contractor team to improve support processes, examining processes involved in international activities, a series of tutorials presented to the New Initiatives Office and support contractors, a briefing to NiO managers, and work with the NIO Q+ Team. On the technical side, work included analyzing data from the large-scale W.A.T.E.R. test, landing mode trade analyses, and targeting probability calculations. The results of these efforts will help to develop a disciplined, ongoing process for producing fundamental decisions and actions that shape and guide the ACRV organization . Author

DISTRIBUTED PROJECT SCHEDULING AT NASA: REQUIREMENTS FOR MANUAL PROTOCOLS AND COMPUTER-BASED SUPPORT Final Report **c61**

Stephen F. Richards *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 13 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

The increasing complexity of space operations and the inclusion of interorganizational and international groups in the planning and control of space missions lead to requirements for greater communication, coordination, and cooperation among mission schedulers. These schedulers must jointly allocate scarce shared resources among the various operational and mission oriented activities while adhering to all constraints. This scheduling environment is complicated by such factors as the presence of varying perspectives and conflicting objectives among the schedulers, the need for different schedulers to work in parallel, and limited communication among schedulers. Smooth interaction among schedulers requires the use of protocols that govern such issues as resource sharing, authority to update the schedule, and communication of updates. This paper addresses the development and characteristics of such protocols and their use in a distributed scheduling environment that incorporates computer-aided scheduling tools. An example problem is drawn from the domain of Space Shuttle mission planning. Author

DEVELOPMENT OF A PYROLYSIS WASTE RECOVERY MODEL WITH DESIGNS, TEST PLANS, AND APPLICATIONS FOR SPACE-BASED HABITATS Final Report **c54**

Bobby J. Roberson *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 13 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

Extensive literature searches revealed the numerous advantages of using pyrolysis as a means of recovering usable resources from inedible plant biomass, paper, plastics, other polymers, and human waste. A possible design of a pyrolysis reactor with test plans and applications for use on a space-based habitat are proposed. The proposed system will accommodate the wastes generated by a four-person crew while requiring solar energy as the only power source. Waste materials will be collected and stored during the 15-day lunar darkness periods. Resource recovery will occur during the daylight periods. Usable gases such as methane and hydrogen and a solid char will be produced while reducing the mass and volume of the waste to almost infinitely small levels. The system will be operated economically, safely, and in a non-polluting manner. Author

UTILIZATION OF THE GRADED UNIVERSAL TESTING SYSTEM TO INCREASE THE EFFICIENCY FOR ASSESSING AEROBIC AND ANAEROBIC CAPACITY Final Report **c51**

Sandra L. Rodgers *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 9 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A02/MF A02

The in-flight exercise test performed by cosmonauts as part of the Russian Exercise Countermeasure Program is limited to 5 minutes due to

communication restrictions. During a recent graded exercise test on a U.S. Shuttle flight, the test was terminated early due to an upcoming loss of signal (LOS) with the ground. This exercise test was a traditional test where the subject's exercise capacity dictates the length of the test. For example, one crew member may take 15 minutes to complete the test, while another may take 18 minutes. The traditional exercise test limits the flight schedulers to large blocks of space flight time in order to provide medical and research personnel information on the fitness capacity (maximal oxygen uptake: VO2max) of crew members during flight. A graded exercise test that would take a finite amount of time and a set preparation and recovery time would ease this problem by allowing flight schedulers to plan exercise tests in advance of LOS. The Graded Universal Testing System (GUTS) was designed to meet this goal. Fitness testing of astronauts before and after flight provides pertinent data on many variables. The Detailed Supplemental Objective (DSO608) protocol (6) is one of the graded exercise tests (GXT) currently used in astronaut testing before and after flight. Test times for this protocol have lasted from 11 to 18 minutes. Anaerobic capacity is an important variable that is currently not being evaluated before and after flight. Recent reports (1,2,5) from the literature have suggested that the oxygen deficit at supramaximal exercise is a measure of anaerobic capacity. We postulated that the oxygen deficit at maximal exercise would be an indication of anaerobic capacity. If this postulate can be accepted, then the efficiency of acquiring data from a graded exercise test would increase at least twofold. To examine this hypothesis anaerobic capacity was measured using a modified treadmill test (3,4) designed to exhaust the anaerobic systems in approximately 45 to 75 seconds. Lactate concentration in the blood was analyzed after all tests, since lactate is the end-product of anaerobic energy production. Therefore, the peak lactate response is an additional indication of anaerobic capacity. A preliminary comparison of the GUTS and the DSO608 suggests that the GUTS protocol would increase the efficiency of VO2max testing of astronauts before and after flight. Results for anaerobic capacity have not been tabulated. Author

A HYBRID MULTIGRID TECHNIQUE FOR COMPUTING STEADY-STATE SOLUTIONS TO SUPERSONIC FLOWS Final Report **c02**
Richard Sanders *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 p 16 (For primary document see N93-26070 09-99)
(Grant NGT-44-001-800)
Avail: CASI HC A03/MF A02

Recently, Li and Sanders have introduced a class of finite difference schemes to approximate generally discontinuous solutions to hyperbolic systems of conservation laws. These equations have the form together with relevant boundary conditions. When modelling hypersonic spacecraft reentry, the differential equations above are frequently given by the compressible Euler equations coupled with a nonequilibrium chemistry model. For these applications, steady state solutions are often sought. Many tens (to hundreds) of super computer hours can be devoted to a single three space dimensional simulation. The primary difficulty is the inability to rapidly and reliably capture the steady state. In these notes, we demonstrate that a particular variant from the schemes presented can be combined with a particular multigrid approach to capture steady state solutions to the compressible Euler equations in one space dimension. We show that the rate of convergence to steady state coming from this multigrid implementation is vastly superior to the traditional approach of artificial time relaxation. Moreover, we demonstrate virtual grid independence. That is, the rate of convergence does not depend on the degree of spatial grid refinement. Author

MODELING OF THE WSTF FRICTIONAL HEATING APPARATUS IN HIGH PRESSURE SYSTEMS Final Report **c25**
Christopher T. Skowlund *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 p 13 (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

In order to develop a computer program able to model the frictional heating of metals in high pressure oxygen or nitrogen a number of additions have been made to the frictional heating model originally developed for tests in low pressure helium. These additions include: (1) a physical property package for the gases to account for departures from the ideal gas state; (2) two methods for spatial discretization (finite differences with quadratic interpolation or orthogonal collocation on finite elements) which substantially reduce the computer time required to solve the transient heat balance; (3) more efficient programs for the integration of the ordinary differential equations resulting from the discretization of the partial differential equations; and (4) two methods for determining the best-fit parameters via minimization of the mean square error (either a direct search multivariable simplex method or a modified Levenburg-Marquardt algorithm). The resulting computer program has been shown to be accurate, efficient and robust for determining the heat flux or friction coefficient vs. time at the interface of the stationary and rotating samples. SPACELAB, SPACEHAB, AND SPACE STATION FREEDOM PAYLOAD INTERFACE PROJECTS Final Report **c18**
Dean Lance Smith *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 5 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A01/MF A02

Contributions were made to several projects. Howard Nguyen was assisted in developing the Space Station RPS (Rack Power Supply). The RPS is a computer controlled power supply that helps test equipment used for experiments before the equipment is installed on Space Station Freedom. Ron Bennett of General Electric Government Services was assisted in the design and analysis of the Standard Interface Rack Controller hardware and software. An analysis was made of the GPIB (General Purpose Interface Bus), looking for any potential problems while transmitting data across the bus, such as the interaction of the bus controller with a data talker and its listeners. An analysis was made of GPIB bus communications in general, including any negative impact the bus may have on transmitting data back to Earth. A study was made of transmitting digital data back to Earth over a video channel. A report was written about the study and a revised version of the report will be submitted for publication. Work was started on the design of a PC/AT compatible circuit board that will combine digital data with a video signal. Another PC/AT compatible circuit board is being designed to recover the digital data from the video signal. A proposal was submitted to support the continued development of the interface boards after the author returns to Memphis State University in the fall. A study was also made of storing circuit board design software and data on the hard disk server of a LAN (Local Area Network) that connects several IBM style PCs. A report was written that makes several recommendations. A preliminary design review was started of the AIVS (Automatic Interface Verification System). The summer was over before any significant contribution could be made to this project. Author

MODEL REDUCTION FOR SPACE STATION FREEDOM Final Report **c18**
Trevor Williams *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 p 15 (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

Model reduction is an important practical problem in the control of flexible spacecraft, and a considerable amount of work has been carried out on this topic. Two of the best known methods developed are modal truncation and internal balancing. Modal truncation is simple to implement but can give poor results when the structure possesses clustered natural frequencies, as often occurs in practice. Balancing avoids this problem but has the disadvantages of high computational cost, possible numerical sensitivity problems, and no physical interpretation for the resulting balanced 'modes'. The purpose of this work is to examine the performance of the

subsystem balancing technique developed by the investigator when tested on a realistic flexible space structure, in this case a model of the Permanently Manned Configuration (PMC) of Space Station Freedom. This method retains the desirable properties of standard balancing while overcoming the three difficulties listed above. It achieves this by first decomposing the structural model into subsystems of highly correlated modes. Each subsystem is approximately uncorrelated from all others, so balancing them separately and then combining yields comparable results to balancing the entire structure directly. The operation count reduction obtained by the new technique is considerable: a factor of roughly r(exp 2) if the system decomposes into r equal subsystems. Numerical accuracy is also improved significantly, as the matrices being operated on are of reduced dimension, and the modes of the reduced-order model now have a clear physical interpretation; they are, to first order, linear combinations of repeated-frequency modes. THE ADULT LITERACY EVALUATOR: AN INTELLIGENT COMPUTER-AIDED TRAINING SYSTEM FOR DIAGNOSING ADULT ILLITERATES Final Report **c53**
David B. Yaden, Jr. *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 p 16 (For primary document see N93-26070 09-99)
(Grant NAG9-562)
Avail: CASI HC A03/MF A02

An important part of NASA's mission involves the secondary application of its technologies in the public and private sectors. One current application being developed is The Adult Literacy Evaluator, a simulation-based diagnostic tool designed to assess the operant literacy abilities of adults having difficulties in learning to read and write. Using ICAT system technology in addition to speech recognition, closed-captioned television (CCTV), live video and other state-of-the art graphics and storage capabilities, this project attempts to overcome the negative effects of adult literacy assessment by allowing the client to interact with an intelligent computer system which simulates real-life literacy activities and materials and which measures literacy performance in the actual context of its use. The specific objectives of the project are as follows: (1) To develop a simulation-based diagnostic tool to assess adults' prior knowledge about reading and writing processes in actual contexts of application; (2) to provide a profile of readers' strengths and weaknesses; and (3) to suggest instructional strategies and materials which can be used as a beginning point for remediation. In the first and developmental phase of the project, descriptions of literacy events and environments are being written and functional literacy documents analyzed for their components. Examples of literacy events and situations being considered included interactions with environmental print (e.g., billboards, street signs, commercial marquees, storefront logos, etc.), functional literacy materials (e.g., newspapers, magazines, telephone books, bills, receipts, etc.) and employment related communication (i.e., job descriptions, application forms, technical manuals, memorandums, newsletters, etc.). Each of these situations and materials is being analyzed for its literacy requirements in terms of written display (i.e., knowledge of printed forms and conventions), meaning demands (i.e., comprehension and word knowledge) and social situation. From these descriptions, scripts are being generated which define the interaction between the student, an on-screen guide and the simulated literacy environment. The proposed outcome of the Evaluator is a diagnostic profile which will present broad classifications of literacy behaviors across the major areas of metacognitive abilities, word recognition, vocabulary knowledge, comprehension and writing. From these classifications, suggestions for materials and strategies for instruction with which to begin corrective action will be made. The focus of the Literacy Evaluator will be essentially to provide an expert diagnosis and an interpretation of that assessment which then can be used by a human tutor to further design and individualize a remedial program as needed through the use of an authoring system. THE REUSE OF LOGISTICS CARRIERS FOR THE FIRST LUNAR OUTPOST ALTERNATIVE HABITAT STUDY Final Report **c31**
Carolina Vargas *In* NASA. Johnson Space Center, National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, Volume 2 Dec. 1992 15 p (For primary document see N93-26070 09-99)
(Grant NGT-44-005-803)
Avail: CASI HC A03/MF A02

The Systems Definition Branch deals with preliminary concepts/designs of various projects currently in progress at NASA. One of these projects is called the First Lunar Outpost. The First Lunar Outpost (FLO) is a proposed permanent lunar base to be located on the moon. In order to better understand the Lunar Habitat, a detailed analysis of the lunar environment as well as conceptual studies of the physical living arrangements for the support crew is necessary. The habitat will be inhabited for a period of 45 days followed by a six month dormant period. Requirements for the habitat include radiation protection, a safe haven for occasional solar flare storms, an airlock module and consumables to support a crew of 4 with a schedule of 34 extra vehicular activities. Consumables in order to sustain a crew of four for 45 days ranges from 430 kg of food to only 15 kg for personal hygiene items. These consumables must be brought to the moon with every mission. They are transported on logistics carriers. The logistics carrier must be pressurized in order to successfully transport the consumables. Refrigeration along with other types of thermal control and variation in pressure are defined by the list of necessary consumables. The objective of the proposed work was to collaborate the Habitat Team with their study on Logistic Carriers as possible alternatives for additional habitable volume. Options for possible reuses was also determined. From this analysis, a recommended design is proposed. Author

ENGINEERING: RESEARCH DEVELOPMENT AND TECHNOLOGY Thrust Area Report, FY 1991
Jul. 1992 274 p
(Contract W-7405-eng-48)
(UCRL-53868-91) Avail: CASI HC A12/MF A03

The mission of the Engineering Research, Development, and Technology Program at Lawrence Livermore National Laboratory (LLNL) is to develop technical staff and the technology needed to support current and future LLNL programs. To accomplish this mission, the Engineering Research, Development, and Technology Program has two important goals: (1) to identify key technologies and (2) conduct high quality work to enhance our capabilities in these key technologies. To help focus our efforts, technology thrust areas are identified. The thrust areas are integrated engineering activities and, rather than being based on individual disciplines, they are staffed by personnel from Electronics Engineering, Mechanical Engineering, and other LLNL organizations, as appropriate. This annual report, organized by thrust area, describes activities conducted within the Program for the fiscal year, 1991. Its intent is to provide timely summaries of objectives, theories, methods, and results. Readers desiring more information are encouraged to contact the individual thrust area leaders or authors. Thrust areas include: computational electronics and electromagnetics, computational mechanics, diagnostics and microelectronics, fabrication technology, materials science and engineering, microwave and pulsed power, nondestructive evaluation, remote sensing and imaging, signal engineering, and emerging technologies. AFOSR TECHNICAL REPORT SUMMARIES Quarterly Report, Oct. - Dec. 1992

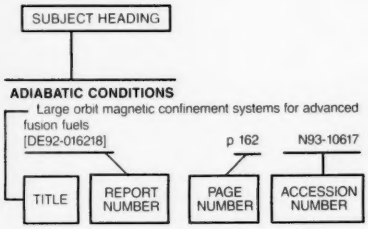
Debra L. Tyrrell Dec. 1992 170 p

(AD-A261551; AFOSR-TR-93-0051) Avail: CASI HC A08/MF A02

The AFOSR Technical Report Summaries are published quarterly of each calendar year. They consist of a brief summary of each AFOSR technical report received in the Technical Information Division and submitted to the Defense Technical Information Center for that quarter. DTIC

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

Determination of burn rate requirements from ASRM performance specifications p 2627 N93-26023

ADVANCED VERY HIGH RESOLUTION RADIOMETER
Correlation between NDVI values derived from NOAA AVHRR HRPT data and ground measurements of precipitation in the EFEDA study area (Spain) p 2738 N93-24780
Determination of environmental dynamics using NOAA satellite data and a water balance model for the Mediterranean landscape p 2741 N93-24794
Demonstration of seasonal changes in the territory of Finland using multitemporal NOAA-AVHRR data p 2742 N93-24801
Application of satellite imageries data to fisheries in Japan p 2745 N93-24822
Assessment and forecasting of crop yield in Niger through NOAA NDVI data p 2750 N93-24851
Interest of complementary data of coarse and high spatial resolution for agro-climatic crop monitoring p 2750 N93-24853
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854

AERIAL PHOTOGRAPHY
A method for sequential image analysis of hazard areas p 2743 N93-24810

AERIAL RECONNAISSANCE
Commercial applications multispectral sensor system p 2758 N93-25615

AEROACOUSTICS
Theory for noise of propellers in angular inflow with parametric studies and experimental verification
| NASA-CR-4499 | p 2844 N93-25094
Rotating rake design for unique measurement of fan-generated spinning acoustic modes
| NASA-TM-105946 | p 2595 N93-26161
Computation of broadband mixing noise from turbomachinery
| AD-A261611 | p 2846 N93-26165
A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems
| NASA-TM-106015 | p 2846 N93-26551

AEROASSIST
Space transfer vehicle concepts and requirements study. Volume 2, book 4: Integrated advanced technology development
| NASA-CR-192528 | p 2611 N93-25512

AEROBES
Utilization of the graded universal testing system to increase the efficiency for assessing aerobic and anaerobic capacity p 2794 N93-26077

AERODYNAMIC BALANCE
An integrated finite-state model for rotor deformation, nonlinear airloads, inflow, and trim p 2588 N93-25538

AERODYNAMIC CHARACTERISTICS
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
Computational study of the aerodynamics and control by blowing of asymmetric vortical flows over delta wings p 2574 N93-24772
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
Integrated aerodynamic-structural wing design optimization p 2587 N93-25279

Computation of transonic flow over a porous surface projectile p 2577 N93-25409
Structural and aerodynamic optimization of joined-wing aircraft p 2588 N93-25526
Tangential fuselage blowing on an ogive cylinder p 2578 N93-25545
Structural dynamic analysis of bearingless rotor blade p 2590 N93-25719
Experimental study of the effect of helical grooves on an infinite cylinder
| AD-A260890 | p 2676 N93-25912
Jet-induced ground effects on a parametric flat-plate model in hover
| NASA-TM-104001 | p 2581 N93-26099

AERODYNAMIC COEFFICIENTS
Aerodynamic foundations for use of unsteady aerodynamic effects in flight control p 2576 N93-25274

AERODYNAMIC CONFIGURATIONS
A computational aerodynamic design optimization method using sensitivity analysis p 2589 N93-25552

AERODYNAMIC DRAG
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948
Uniform roughness studies
| WL-TR-92-3041 | p 2706 N93-25951
Modified point mass trajectory simulation for base-burn projectiles
| BRL-TR-3321 | p 2609 N93-25985

AERODYNAMIC FORCES
Prediction of forces and moments for hypersonic flight vehicle control effectors
| NASA-CR-193033 | p 2595 N93-24762
Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272
Aerodynamic foundations for use of unsteady aerodynamic effects in flight control p 2576 N93-25274
Helicopter forced response vibration analysis method RTVIB20
| AD-A261809 | p 2597 N93-26260

AERODYNAMIC HEATING
SRB environment evaluation and analysis. Volume 1: Redesigned SRB flight heating evaluation
| NASA-CR-192517 | p 2631 N93-26053

AERODYNAMIC LOADS
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087
An integrated finite-state model for rotor deformation, nonlinear airloads, inflow, and trim p 2588 N93-25538

AERODYNAMIC NOISE
Far field rotor noise
| AD-A260703 | p 2845 N93-25651

AERODYNAMIC STABILITY
AEW aircraft design
| AD-A261800 | p 2590 N93-26444

AERODYNAMICS
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Applied aerodynamics: Challenges and expectations
| NASA-TM-103963 | p 2575 N93-25091
Digest of Russian Space Life Sciences, issue 33
| NASA-CR-3922(39) | p 2792 N93-25195
Optimal thrust magnitude on a singular arc in atmospheric flight p 2819 N93-25410
A computational aerodynamic design optimization method using sensitivity analysis p 2589 N93-25552
Numerical simulation of hypersonic aerodynamics and the computational needs for the design of an aerospace plane
| AD-A260681 | p 2580 N93-25894
Radial inflow turbine study
| AD-A260767 | p 2594 N93-25917

AEROELASTICITY
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation p 2574 N93-24756
Application of finite-state inflow to flap-lag-torsion damping in hover p 2587 N93-25486
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
An integrated finite-state model for rotor deformation, nonlinear airloads, inflow, and trim p 2588 N93-25538
Supersonic aeroelastic instability results for a NASP-like wing model
| NASA-TM-107739 | p 2591 N93-26553

AEROMANEUVERING
Space transfer vehicle concepts and requirements study. Volume 2, book 4: Integrated advanced technology development
| NASA-CR-192528 | p 2611 N93-25512

AERONAUTICAL ENGINEERING
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 9, September 1992
| JPRS-UAC-93-003 | p 2574 N93-26325

AERONAUTICS
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 9, September 1992
| JPRS-UAC-93-003 | p 2574 N93-26325

AEROSOLS
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow
| DE93-003362 | p 2695 N93-24963
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
The role of multiple scattering in twilight zenith sky observations of atmospheric absorbers: Diurnal photochemistry and airmass factors p 2772 N93-25535
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874
Summary by the cloud and aerosol research group for ASTEX
| AD-A261292 | p 2766 N93-26292

AEROSPACE ENGINEERING
Digest of Russian Space Life Sciences, issue 33
| NASA-CR-3922(39) | p 2792 N93-25195
Former Soviet Republic capabilities in space and science
| DE93-007613 | p 2598 N93-25322
Scientific visualization using the Flow Analysis Software Toolkit (FAST) p 2814 N93-25600
Space life support technology applications to terrestrial environmental problems p 2803 N93-25617
MIT Space Engineering Research Center
| NASA-CR-192879 | p 2821 N93-25833
Space research in Sweden, 1990-1991 p 2888 N93-25887
Aeronautics in NACA and NASA
| NASA-NP-156 | p 2574 N93-26422
AGARD membership, 1993
| AGARD-MEMB-93 | p 2873 N93-26428

AEROSPACE ENVIRONMENTS
Composite materials for the extravehicular mobility unit p 2642 N93-26060
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
Space environmental interactions for the space exploration initiative p 2897 N93-26396
EnviroNET p 2886 N93-26398

AEROSPACE INDUSTRY
Applied aerodynamics: Challenges and expectations
| NASA-TM-103963 | p 2575 N93-25091
Development of ASTM standards in support of advanced ceramics development
| DE93-003024 | p 2654 N93-25361
Space business indicators p 2886 N93-26158

AEROSPACE MEDICINE
Digest of Russian Space Life Sciences, issue 33
| NASA-CR-3922(39) | p 2792 N93-25195
The prevalence of artificial lens implants in the civil airman population
| DOT/FAA/AM-92/14 | p 2794 N93-25214
Space biology research development
| NASA-CR-192830 | p 2792 N93-25242
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-022 | p 2795 N93-25407
The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859
The use of extended wear contact lenses in the aviation environment: An Army-wide study
| AD-A260938 | p 2795 N93-26218

AEROSPACE PLANES
Trajectory optimization for the National aerospace plane
| NASA-CR-192954 | p 2589 N93-25670
Numerical simulation of hypersonic aerodynamics and the computational needs for the design of an aerospace plane
| AD-A260681 | p 2580 N93-25894
Supersonic aeroelastic instability results for a NASP-like wing model
| NASA-TM-107739 | p 2591 N93-26553

AEROSPACE SAFETY
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
A review of civil aviation propeller-to-person accidents: 1980-1989
| AD-A260695 | p 2583 N93-25896
Nuclear safety policy working group recommendations on nuclear propulsion safety for the space exploration initiative
| NASA-TM-105705 | p 2632 N93-26200
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263

AEROSPACE SCIENCES
JPRS report: Science and technology. Japan. 30th National Aerospace Laboratory Conference
| JPRS-JST-93-009 | p 2901 N93-25418
Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings
| NASA-CR-193096 | p 2877 N93-25792
The Space and Earth Science Data Compression Workshop
| NASA-CP-3183 | p 2803 N93-25921
OSSA Information Systems Program
| NASA-TM-108774 | p 2882 N93-26231
Aeronautics in NACA and NASA
| NASA-NP-156 | p 2574 N93-26422
Space Science Laboratory Publications and Presentations
| NASA-TM-108402 | p 2884 N93-26562

AEROSPACE SYSTEMS
The Telecommunications and Data Acquisition Report
| NASA-CR-192887 | p 2671 N93-24659
An application of machine learning to the organization of institutional software repositories p 2825 N93-25981
Assured crew return vehicle man-systems integration standards
| NASA-CR-193065 | p 2614 N93-26329

AEROSPACE TECHNOLOGY TRANSFER
JPRS report: Science and technology. Japan. 30th National Aerospace Laboratory Conference
| JPRS-JST-93-009 | p 2901 N93-25418

AEROSPACE VEHICLES
Geometric modeling for computer aided design
| NASA-CR-192891 | p 2808 N93-24750
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
Maneuvering a reentry body via magneto-gasdynamic forces p 2615 N93-25207
Aerospace vehicle model simplification for feedback control p 2596 N93-25292
Characterization of aerospace grade resins and composites through pressurized volumetric dilatometry
| AD-A260794 | p 2639 N93-25918

AEROTHERMODYNAMICS
Development and application of computational aerothermodynamics flowfield computer codes
| NASA-CR-192940 | p 2574 N93-24736
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106

AGENA ROCKET VEHICLES
Report of the Seasat Failure Review Board p 2619 N93-24693

AGGLOMERATION
Particle size as a factor in agglomeration in slurry fuels p 2625 N93-26013

AGING (MATERIALS)
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632

AGREEMENTS
Energy and Technology Review, August-September 1992
| DE93-005882 | p 2901 N93-24974

AGRICULTURE
The photointerpretation of the area taken over from agriculture by intense urbanization at Villabate (Palermo, Italy) p 2742 N93-24800
Remote sensing applied to agriculture state of the art and new trends p 2745 N93-24818

Toward a satellite based crop information system in Hungary p 2750 N93-24849
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850

AGROCLIMATOLOGY
Agroclimatological zonation by AVHRR data for vegetation monitoring p 2741 N93-24795

AH-64 HELICOPTER
Hydrogen-induced stress corrosion cracking susceptibility analysis of pitch links from the AH-64 Apache helicopter
| AD-A260692 | p 2651 N93-25895

AIR
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886
Development and use of hydrogen-air torches in an altitude facility
| NASA-TM-106047 | p 2598 N93-26214

AIR BREATHING ENGINES
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets p 2625 N93-26012

AIR COOLING
An evaluation of thermal energy storage options for precooling gas turbine inlet air
| DE93-005980 | p 2758 N93-24975

AIR CURRENTS
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956

AIR DEFENSE
An environmental audit management plan for the Royal Australian Air Force
| AD-A261092 | p 2765 N93-25765

AIR DUCTS
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940

AIR FILTERS
Development and demonstration of a new filter system to control emissions during jet engine testing
| AD-A261203 | p 2766 N93-26243

AIR FLOW
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956
Uniform roughness studies
| WL-TR-92-3041 | p 2706 N93-25951
Method of measuring cross-flow vortices by use of an array of hot-film sensors
| NASA-CASE-LAR-14824-1-SB | p 2706 N93-26000
Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF) p 2598 N93-26006

AIR INTAKES
An evaluation of thermal energy storage options for precooling gas turbine inlet air
| DE93-005980 | p 2758 N93-24975

AIR JETS
Fuel injector: Air swirl characterization aerothermal modeling, phase 2, volume 1
| NASA-CR-189193 | p 2592 N93-24754
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106

AIR LAND INTERACTIONS
Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment
| NASA-CR-192826 | p 2769 N93-24945
Effects of Taiwan orography on the motion and structure of typhoons
| AD-A261819 | p 2786 N93-26270

AIR MASSES
The role of multiple scattering in twilight zenith sky observations of atmospheric absorbers: Diurnal photochemistry and airmass factors p 2772 N93-25535

AIR POLLUTION
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation p 2760 N93-24908
The AFTAC model integration project
| DE93-003334 | p 2761 N93-25122
AQUIS: A PC-based air inventory and permit manager
| DE93-003006 | p 2761 N93-25143
Trends '91: A compendium of data on global change. Highlights
| DE93-003112 | p 2761 N93-25144
A study of mass size distributions and particle deposition velocities in ambient air p 2763 N93-25263
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
Magnitude and value of electric vehicle emissions reductions for six driving cycles in four US cities with varying air quality problems
| DE93-006417 | p 2660 N93-25298
SIHTI: The research and development program of energy and environmental technology
| DE93-769925 | p 2763 N93-25360
National air pollutant emission estimates
| PB93-157808 | p 2765 N93-25850
Using terrestrial plants in biomonitoring
| PB93-158780 | p 2766 N93-26316
Particulate emissions from gas turbine engines
| AD-A261374 | p 2595 N93-26339
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

AIR PURIFICATION
Integrated oxygen recovery system
| NASA-CR-192982 | p 2801 N93-26088

AIR QUALITY
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
| DE93-002862 | p 2760 N93-24675
AQUIS: A PC-based air inventory and permit manager
| DE93-003006 | p 2761 N93-25143
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
Magnitude and value of electric vehicle emissions reductions for six driving cycles in four US cities with varying air quality problems
| DE93-006417 | p 2660 N93-25298
Space life support technology applications to terrestrial environmental problems p 2803 N93-25617
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585

AIR TO AIR MISSILES
ASTROS-ID: Software for system identification using mathematical programming
| AD-A260867 | p 2810 N93-25627

AIR TRAFFIC
The ATC evaluation of the prototype Airport Surveillance Radar Wind Shear Processor (ASR-WSP) at Orlando International Airport
| DOT/FAA/CT-TN92/48 | p 2673 N93-25210
Design of an air traffic computer simulation system to support investigation of civil tiltrotor aircraft operations
| NASA-CR-192920 | p 2585 N93-26052

AIR TRAFFIC CONTROL
The ATC evaluation of the prototype Airport Surveillance Radar Wind Shear Processor (ASR-WSP) at Orlando International Airport
| DOT/FAA/CT-TN92/48 | p 2673 N93-25210
A longitudinal examination of applicants to the air traffic control supervisory identification and development program
| DOT/FAA/AM-92/16 | p 2796 N93-25213
Runway Visual Range (RVR) Operational Test and Evaluation (OT&E) integration and OT&E operational test report
| DOT/FAA/CT-TN93/37 | p 2584 N93-25243
Design of a cooperative problem-solving system for enroute flight planning: An empirical study of its use by airline dispatchers
| NASA-CR-192709 | p 2585 N93-25330
Design of an air traffic computer simulation system to support investigation of civil tiltrotor aircraft operations
| NASA-CR-192920 | p 2585 N93-26052
Piloted simulation of an air-ground profile negotiation process in a time-based Air Traffic Control environment
| NASA-TM-107748 | p 2585 N93-26087
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138
The Data Multiplexing Network (DMN) phase 3 Extended Distance Data Cable (EDDC) test and evaluation
| DOT/FAA/CT-TN93/11 | p 2680 N93-26160

AIR TRAFFIC CONTROLLERS (PERSONNEL)
A longitudinal examination of applicants to the air traffic control supervisory identification and development program
| DOT/FAA/AM-92/16 | p 2796 N93-25213
Conversion of the CTA, Inc., en route operations concepts database into a formal sentence outline job task taxonomy
| AD-A261410 | p 2586 N93-26447

AIR WATER INTERACTIONS
Simulation and prediction of tropical SST with a coupled ocean-atmosphere model p 2789 N93-25469
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657
An investigation into the causative mechanisms for explosive cyclone development over the Atlantic
| AD-A261831 | p 2786 N93-26273
An observational study of the local and remote response of the equatorial Pacific to westerly wind events during the 1991-92 El Nino
| AD-A261777 | p 2787 N93-26286
Experiments on the physics of turbulent mixing in stably stratified ocean layers
| AD-A261312 | p 2790 N93-26298
Wind-driven coastal generation of annual mesoscale eddy activity in the California current
| AD-A261355 | p 2790 N93-26331
Coastal ocean processes: A science prospectus
| AD-A261702 | p 2790 N93-26384

AIRBORNE EQUIPMENT
Use of airborne imaging spectrometry to the definition of optimised specifications for land applications with future spaceborne imaging spectrometers p 2738 N93-24776
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887
Commercial applications multispectral sensor system p 2758 N93-25615

AIRBORNE/SPACEBORNE COMPUTERS
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618

AIRCRAFT ACCIDENT INVESTIGATION
Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827
The use of multiple models in case-based diagnosis p 2823 N93-25969

AIRCRAFT ACCIDENTS
Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827
A review of civil aviation propeller-to-person accidents: 1980-1989
| AD-A260695 | p 2583 N93-25896
The use of multiple models in case-based diagnosis p 2823 N93-25969

AIRCRAFT ANTENNAS
Experimental study of the effect of helical grooves on an infinite cylinder
| AD-A260890 | p 2676 N93-25912

AIRCRAFT APPROACH SPACING
Visual approach data collection at St. Louis Lambert Field (STL)
| DOT/FAA/CT-TN93/2 | p 2584 N93-24948
The dependent converging instrument approach procedure: An analysis of its safety and applicability
| DOE/FAA/RD-93/6 | p 2585 N93-25456

AIRCRAFT COMPARTMENTS
In-flight evaluation of noise levels and assessment of active noise reduction systems in the Seahawk S-70B-2 helicopter
| AD-A260689 | p 2845 N93-25649

AIRCRAFT CONFIGURATIONS
Structural and aerodynamic optimization of joined-wing aircraft p 2588 N93-25526
An approach to configuration design synthesis of subsonic transport aircraft using artificial intelligence techniques p 2589 N93-25692

AIRCRAFT CONSTRUCTION MATERIALS
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
Comparison of the damage for various types of fibre reinforced composites due to different lightning test standards (MIL-STD-1757A, German military VG-standard 96903) p 2642 N93-24891
Fatigue in single crystal nickel superalloys
| AD-A261742 | p 2652 N93-26282

AIRCRAFT CONTROL
Prediction of forces and moments for hypersonic flight vehicle control effectors
| NASA-CR-193033 | p 2595 N93-24762
Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199
Control and optimization of aircraft trajectories p 2596 N93-25543

AIRCRAFT DESIGN
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
Integrated aerodynamic-structural wing design optimization p 2587 N93-25279
Structural and aerodynamic optimization of joined-wing aircraft p 2588 N93-25526
An approach to configuration design synthesis of subsonic transport aircraft using artificial intelligence techniques p 2589 N93-25692
ASTOVL combat aircraft design synthesis and optimization p 2589 N93-25704
Techniques for designing rotorcraft control systems
| NASA-CR-192960 | p 2597 N93-26046
AEW aircraft design
| AD-A261800 | p 2590 N93-26444

AIRCRAFT ENGINES
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079
Simulation of aircraft gas turbine engine p 2594 N93-25751
Development and demonstration of a new filter system to control emissions during jet engine testing
| AD-A261203 | p 2766 N93-26243
Particulate emissions from gas turbine engines
| AD-A261374 | p 2595 N93-26339
A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems
| NASA-TM-106015 | p 2846 N93-26551

AIRCRAFT EQUIPMENT
Alternative equipment test procedures for simultaneous current injection on multiple cable bundles p 2693 N93-24903
Special tooling disposition for aircraft entering post production support
| AD-A261614 | p 2573 N93-26168

AIRCRAFT FUEL SYSTEMS
Military standardization handbook: Aircraft refueling handbook
| AD-A261755 | p 2662 N93-26600

AIRCRAFT GUIDANCE
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
Control and optimization of aircraft trajectories p 2596 N93-25543
Image-based ranging and guidance for rotorcraft
| NASA-CR-177608 | p 2586 N93-26549

AIRCRAFT HAZARDS
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263

AIRCRAFT INSTRUMENTS
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887

AIRCRAFT LANDING
Visual approach data collection at St. Louis Lambert Field (STL)
| DOT/FAA/CT-TN93/2 | p 2584 N93-24948

AIRCRAFT MAINTENANCE
Reliability assessment at airline inspection facilities. Volume 1: A generic protocol for inspection reliability experiments
| DOT/FAA/CT-92/12-VOL-1 | p 2582 N93-25110
Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques
| DE93-008074 | p 2721 N93-25518
Human Factors in Aviation Maintenance, phase 2
| DOT/FAA/AM-93/5 | p 2802 N93-26089
An analysis of the reliability and maintainability of the Jian 6 and Jian 7 aircraft and ways to improve them
| AD-A261060 | p 2574 N93-26238

AIRCRAFT MODELS
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202

AIRCRAFT NOISE
Rotating rake design for unique measurement of fan-generated spinning acoustic modes
| NASA-TM-105946 | p 2595 N93-26161

AIRCRAFT PERFORMANCE
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898
Experimental performance of a ventral nozzle with pitch and yaw vectoring capability for SSTOVL aircraft
| NASA-TM-106054 | p 2592 N93-25129
Generic hypersonic vehicle performance model
| NASA-CR-192953 | p 2587 N93-25162
Jet-induced ground effects on a parametric flat-plate model in hover
| NASA-TM-104001 | p 2581 N93-26099

AIRCRAFT PILOTS
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933
The use of extended wear contact lenses in the aviation environment: An Army-wide study
| AD-A260938 | p 2795 N93-26218

AIRCRAFT PRODUCTION
Special tooling disposition for aircraft entering post production support
| AD-A261614 | p 2573 N93-26168

AIRCRAFT RELIABILITY
An analysis of the reliability and maintainability of the Jian 6 and Jian 7 aircraft and ways to improve them
| AD-A261060 | p 2574 N93-26238

AIRCRAFT SAFETY
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Zoning of aircraft: A review of the definitions p 2583 N93-24880
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
Narrow-body aircraft water spray optimization study
| DOT/FAA/CT-TN93/3 | p 2582 N93-25224
A review of civil aviation propeller-to-person accidents: 1980-1989
| AD-A260695 | p 2583 N93-25896
Military standardization handbook: Aircraft refueling handbook
| AD-A261755 | p 2662 N93-26600

AIRCRAFT STRUCTURES
Crashworthiness of composite seats for civil aircraft p 2582 N93-24773
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Comparison of the damage for various types of fibre reinforced composites due to different lightning test standards (MIL-STD-1757A, German military VG-standard 96903) p 2642 N93-24891
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701
Hydrogen-induced stress corrosion cracking susceptibility analysis of pitch links from the AH-64 Apache helicopter
| AD-A260692 | p 2651 N93-25895
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371

AIRCRAFT SURVIVABILITY
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898

AIRFOILS
Aerodynamic foundations for use of unsteady aerodynamic effects in flight control p 2576 N93-25274
Flow control of low heat load turbine airfoils
| AD-A260941 | p 2595 N93-26219
Fatigue in single crystal nickel superalloys
| AD-A261742 | p 2652 N93-26282

AIRFRAMES
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Zoning of aircraft by electric field modelling p 2583 N93-24894
Helicopter forced response vibration analysis method RTVIB20
| AD-A261809 | p 2597 N93-26260
AEW aircraft design
| AD-A261800 | p 2590 N93-26444

AIRGLOW
Gravity waves from O2 airglow p 2772 N93-25547
Further analysis of ECOM-721 data
| AD-A260863 | p 2774 N93-25790

AIRLINE OPERATIONS
Design concepts for the development of cooperative problem-solving systems
| NASA-CR-192708 | p 2585 N93-25261
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588

AIRPORTS
Visual approach data collection at St. Louis Lambert Field (STL)
| DOT/FAA/CT-TN93/2 | p 2584 N93-24948
The dependent converging instrument approach procedure: An analysis of its safety and applicability
| DOE/FAA/RD-93/6 | p 2585 N93-25456
Expedient repair of structural facilities
| AD-A260727 | p 2598 N93-25656

AIRSPEED
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739

ALBEDO
Small satellites and RPA's in global-change research
| AD-A260762 | p 2765 N93-25837

ALCOHOLS
Design of a high activity and selectivity alcohol catalyst
| DE93-008101 | p 2659 N93-25111
Design of a high activity and selectivity alcohol catalyst
| DE93-008103 | p 2659 N93-25112
Catalytic conversion of light alkanes
| DE93-009646 | p 2644 N93-25499

ALGAE
NORSMAP 1989: Norwegian remote sensing spectrometry for mapping and monitoring of algal blooms and pollution p 2746 N93-24824
Algal blooms and gel production in Adriatic Sea observed by remote sensing techniques p 2747 N93-24831

ALGEBRA
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
| NASA-CR-191095 | p 2694 N93-24759
Tables for the thermophysical properties of ethane
| PB93-160786 | p 2646 N93-26319

ALGORITHMS
A (72, 36; 15) box code p 2671 N93-24663
The analysis of convolutional codes via the extended Smith algorithm p 2671 N93-24664
Image coding by way of wavelets p 2671 N93-24665
Failure monitoring in dynamic systems: Model construction without fault training data p 2672 N93-24666
Star tracker operation in a high density proton field p 2600 N93-24699
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Polar decomposition for attitude determination from vector observations p 2602 N93-24711
Rate determination from vector observations p 2603 N93-24713
Analysis of the Command and Control Segment (CCS) attitude estimation algorithm p 2604 N93-24722

Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
Using neural networks and Dyna algorithm for integrated planning, reacting and learning in systems
|NASA-CR-193018| p 2817 N93-24743
Optimal message log reclamation for independent checkpointing
|NASA-CR-192886| p 2815 N93-24749
Geometric modeling for computer aided design
|NASA-CR-192891| p 2808 N93-24750
Satellite altimetry p 2734 N93-24930
Algorithms for optimal redundancy allocation
|DE93-005709| p 2827 N93-24973
How can millisecond pulsars improve the long term stability of atomic time scales? p 2832 N93-24985
Improved PI-network measurement of all quartz crystal parameters by appropriate modelling of the test fixture p 2833 N93-24995
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018
A contribution to the great Riemann solver debate
|NASA-CR-191409| p 2575 N93-25083
Two neural network algorithms for designing optimal terminal controllers with open final time
|NASA-CR-177599| p 2817 N93-25137
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications
|NASA-CR-192715| p 2673 N93-25198
Use of fuzzy relational information retrieval technique for generating control strategies in resolution-based automated reasoning p 2874 N93-25258
Concurrency control in real-time database systems p 2874 N93-25271
Toward a parallel recursive spectral bisection mapping tool
|DE93-006632| p 2816 N93-25414
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
|DE93-005453| p 2876 N93-25448
A software development approach for parallel processing systems integrating object-oriented and functional paradigms p 2816 N93-25481
Design and analysis of algorithms for processing queries in database systems p 2876 N93-25482
Parallelizing the spectral transform method: A comparison of alternative parallel algorithms
|DE93-008664| p 2816 N93-25521
Performance studies of cache consistency and concurrency control algorithms in a distributed client/server DBMS architecture p 2876 N93-25554
Tree classification software p 2814 N93-25591
Automatic detection of seizures with applications p 2796 N93-25592
A software package for neural network applications development p 2827 N93-25610
Control of complex dynamic systems by neural networks p 2827 N93-25611
Adaptive process control with fuzzy logic and genetic algorithms p 2827 N93-25612
Setting values for TDWR/LLWAS 3 integration parameters
|AD-A260740| p 2783 N93-25645
Efficient generation of synthetic terrain imagery for automatic target recognition
|AD-A260705| p 2756 N93-25653
Developing and improving numerical algorithms to study intrinsically correlated electron systems
|AD-A261214| p 2849 N93-25734
Multilevel techniques in large scale computation
|AD-A261082| p 2828 N93-25762
Effect of cytoskeletal reagents on stretch activated ion channels
|AD-A261089| p 2793 N93-25764
High performance compression of science data p 2881 N93-25811
Applications of parallel and vector algorithms in nonlinear structural dynamics using the finite element method
|AD-A260716| p 2811 N93-25845
Probability and statistics applied to the theory of algorithms
|AD-A261019| p 2830 N93-25863
A Hierarchical Target Extraction, Recognition, and Tracking (HiTert) system
|AD-A260567| p 2854 N93-25898
The rapid solution of the Laplace equation on regions with fractal boundaries
|AD-A260585| p 2828 N93-25905
Subband coding for image data archiving p 2803 N93-25922
Methods of evaluating the effects of coding on SAR data p 2804 N93-25926
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967
A vision architecture for the extravehicular activity retriever p 2827 N93-26071
Complexity of connectionist and constraint-satisfaction networks
|AD-A261617| p 2817 N93-26169
Algorithms for the analysis of penetration by shaped charge jets
|UCRL-LR-109887| p 2730 N93-26178
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
|AD-A261811| p 2681 N93-26261
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
|NASA-CR-191711| p 2787 N93-26492

ALIPHATIC HYDROCARBONS
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
|DE93-002862| p 2760 N93-24675

ALKALI METAL COMPOUNDS
Transition metal chelate-fulleride compounds: Electrocrystallization of semiconducting (Ru(bpy)s)(C60)2
|AD-A261549| p 2869 N93-26577

ALKALI METALS
The physics of spin polarized gases
|AD-A261396| p 2850 N93-26288
Electrochemical and spectroscopic studies of molten halides
|AD-A261687| p 2646 N93-26439

ALKANES
Catalytic conversion of light alkanes
|DE93-009646| p 2644 N93-25499

ALKENES
Energetic materials from cubane
|AD-A261317| p 2662 N93-26308

ALKYL COMPOUNDS
Energetic materials from cubane
|AD-A261317| p 2662 N93-26308

ALLOYING
Mechanical alloying processing and application to development of structural materials
|AD-A261251| p 2652 N93-26264

ALLOYS
Ir-Zr alloys as diffusion barriers between Cu and Si(100)
|AD-A261919| p 2652 N93-26197

ALTERNATING CURRENT
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition
|DE93-007908| p 2654 N93-25372

ALTERNATING DIRECTION IMPLICIT METHODS
Implicit multigrid solution of the compressible Navier-Stokes equations with application to distributed parallel processing p 2702 N93-25546

ALTERNATIVES
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
|DE93-002862| p 2760 N93-24675

ALTITUDE
What is the relationship between altitude and weight in a model rocket? p 2603 N93-24715

ALUMINIDES
Hot corrosion of the B2 nickel aluminides
|NASA-CR-191082| p 2649 N93-25128
High temperature fracture toughness of Ni3Al alloy IC-396M
|DE93-008564| p 2650 N93-25492
Micromechanics of fatigue
|AD-A260577| p 2729 N93-25901
Thermal coatings for titanium-aluminum alloys
|NASA-TM-107760| p 2651 N93-26048

ALUMINUM
Laser initiated corrosion pits on aluminum p 2650 N93-25464
Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques
|DE93-008074| p 2721 N93-25518

ALUMINUM ALLOYS
Ignition and combustion of lunar propellants
|NASA-CR-192814| p 2659 N93-24745
Hot corrosion of the B2 nickel aluminides
|NASA-CR-191082| p 2649 N93-25128
Dynamic deformations and analysis of a metal matrix composite p 2634 N93-25234
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
|DE93-007504| p 2635 N93-25383
Laser welding of selected aerospace alloys p 2718 N93-25435
Chromate-free corrosion resistant talc coatings for aluminum alloys
|DE93-005370| p 2655 N93-25446
High temperature fracture toughness of Ni3Al alloy IC-396M
|DE93-008564| p 2650 N93-25492
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
|AD-A260886| p 2651 N93-25632
The corrosion of metal matrix composites p 2638 N93-25723
In situ surface studies of conversion coatings for steel and aluminum
|AD-A261016| p 2655 N93-25861

ALUMINUM ARSENIDES
Short-period superlattice materials for heterojunction bipolar transistors
|AD-A260701| p 2866 N93-25897

ALUMINUM BORON COMPOSITES
Finite element micromechanics modeling of inelastic deformation of unidirectionally fiber-reinforced composites p 2637 N93-25680

ALUMINUM COMPOUNDS
Comparison of energy trapping resonators and filters using the AT cut of quartz, berlinite and gallium phosphate p 2836 N93-25013
Crystal growth of berlinite: Methods for growing longer crystals and improving the quality p 2838 N93-25025
Controlled dissolution of a piezoelectric material berlinite (AlPO4) p 2840 N93-25043

ALUMINUM GALLIUM ARSENIDES
Noise measurements in single-mode GaAlAs diode lasers p 2716 N93-25067
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
|DE93-000073| p 2759 N93-25102
Analysis of transient photoluminescence measurements on GaAs and AlGaAs double heterostructures
|AD-A261154| p 2867 N93-25947

ALUMINUM OXIDES
Dynamic deformations and analysis of a metal matrix composite p 2634 N93-25234
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR
|AD-A261224| p 2645 N93-26300

AMBIENT TEMPERATURE
An evaluation of thermal energy storage options for precooling gas turbine inlet air
|DE93-005980| p 2758 N93-24975
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007

AMBIPOLAR DIFFUSION
A study of vibrationally excited N2(+) ions in the daytime thermosphere p 2770 N93-25179

AMINES
Polyimides with improved compression moldability
|NASA-CASE-LAR-14457-1| p 2656 N93-25997

AMMONIUM CHLORIDES
Flow and morphological conditions associated with the directional solidification of aqueous ammonium chloride
|DE93-008886| p 2644 N93-25495

AMMONIUM COMPOUNDS
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037
Thermal decomposition and stabilization of ammonium dinitramide p 2630 N93-26038

AMMONIUM NITRATES
Thermal decomposition and stabilization of ammonium dinitramide p 2630 N93-26038

AMMUNITION
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
|AD-A261116| p 2660 N93-25769

AMORPHOUS MATERIALS
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition
|DE93-007908| p 2654 N93-25372
The nature of the glass transition and its determination by thermal analysis
|DE93-006746| p 2654 N93-25374
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams p 2658 N93-25564
Ir-Zr alloys as diffusion barriers between Cu and Si(100)
|AD-A261919| p 2652 N93-26197
Research support for the Laboratory for Lightwave Technology
|AD-A261488| p 2856 N93-26343

AMORPHOUS SILICON
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD)
|DE92-010560| p 2862 N93-24953
Research on stable, high-efficiency amorphous silicon multijunction modules
|DE93-000072| p 2862 N93-25163

AMPLIFICATION
Scalar gain interpretation of large order filters p 2606 N93-24729
Stability margins for multilinear interval systems by way of phase conditions: A unified approach
|NASA-CR-192893| p 2819 N93-25226
AMPLIFIERS
Investigation of a background suppression transimpedance amplifier for photovoltaic detectors
|AD-A261828| p 2691 N93-26272
AMPLITUDE MODULATION
Advanced optical fiber communication systems
|AD-A261802| p 2856 N93-26256
Properties of readings of periodically correlated random processes
|AD-A261225| p 2686 N93-26573
ANALOG DATA
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
ANALOG TO DIGITAL CONVERTERS
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
|NASA-TM-106103| p 2718 N93-25672
ANALOGIES
Strongly transitive fuzzy relations: A more adequate way to describe similarity
|NASA-CR-192951| p 2820 N93-25425
The use of multiple models in case-based diagnosis p 2823 N93-25969
ANALYSIS OF VARIANCE
ANOVA method to estimate vegetation indices sensitivity assessing nitrogen fertilizing influence on spectral reflectance coefficients p 2739 N93-24782
ANATOMY
Proceedings of Workshop 1: The Human Brainmap Database
|AD-A260720| p 2796 N93-25654
Anatomy and physiology of plant conductive systems
|PB93-156032| p 2793 N93-25877
ANECHOIC CHAMBERS
A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems
|NASA-TM-106015| p 2846 N93-26551
ANGLE OF ATTACK
The transient development of vortices over delta wings p 2576 N93-25269
Computation of transonic flow over a porous surface projectile p 2577 N93-25409
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
|NASA-TP-3259| p 2581 N93-26134
ANGULAR DISTRIBUTION
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
|AD-A261851| p 2850 N93-26287
ANGULAR MOMENTUM
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Liquid and solid ion plasmas
|AD-A261888| p 2862 N93-26528
ANGULAR VELOCITY
A nanoradian differential VLBI tracking demonstration p 2677 N93-26108
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109
ANHYDRIDES
Polyimides with improved compression moldability
|NASA-CASE-LAR-14457-1| p 2656 N93-25997
Polyimides containing the cyclobutene-3,4-dione moiety
|NASA-CASE-LAR-14753-1| p 2656 N93-25999
ANIMATION
Combining particles and waves for fluid animation p 2699 N93-25348
ANIONS
Penning detachment: A new frontier
|AD-A261447| p 2850 N93-26346
ANISOTROPIC MEDIA
Methods of determining loads and fiber orientations in anisotropic non-crystalline materials using energy flux deviation
|NASA-CASE-LAR-14399-1| p 2729 N93-26102
ANISOTROPY
Anisotropic etching of silicon in KOH solutions p 2647 N93-25037
Surface diffusion studies by optical diffraction techniques
|DE93-007707| p 2853 N93-25550
Electrorheological fluids: A structural approach to mechanisms
|AD-A260563| p 2645 N93-25879
Oblique MHD cosmic-ray modified shocks: Two-fluid numerical simulations
|NASA-CR-192930| p 2900 N93-26132
Phase-field models for anisotropic interfaces
|PB93-164564| p 2646 N93-26323
Microstrip antennas on/in anisotropic material layers
|AD-A261700| p 2681 N93-26383
ANNEALING
The interaction of HCN/DCN with Si(100)-2x1
|AD-A260837| p 2645 N93-25920
Temperature dependence of radiation damage and its annealing in silicon detectors
|DE93-003854| p 2869 N93-26494
ANNUAL VARIATIONS
Demonstration of seasonal changes in the territory of Finland using multitemporal NOAA-AVHRR data p 2742 N93-24801
Role of the ocean in climate changes p 2732 N93-24918
Operational seasonal and interannual predictions of ocean conditions p 2733 N93-24921
Indian Ocean analyses p 2733 N93-24925
Satellite monitoring of the global ocean surface during 1987-1989 p 2734 N93-24926
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007
Summary information and data sets for NREL's Solar Radiation Research Laboratory, 1981 - 1991
|DE93-000052| p 2898 N93-25101
Numerical simulation of the seasonal and interannual variability of the tropical Atlantic Ocean circulation during the 1980's p 2789 N93-25445
Observed annual and interannual variations in tropospheric water vapor p 2782 N93-25549
On the vertical structure of seasonal, interannual and intraseasonal flows p 2782 N93-25557
ANNULAR FLOW
Annular flow enhanced two-phase evaporative heat exchanger for space-based systems p 2700 N93-25478
ANODES
Anode power deposition in coaxial MPD thrusters p 2623 N93-25665
ANODIC COATINGS
Adhesion and corrosion behavior of Al-Zn and TiN/Ti/TiN coatings on a DU-0.75 wt. percent Ti alloy
|MTL-TR-92-56| p 2658 N93-26433
ANODIZING
Laser welding of selected aerospace alloys p 2718 N93-25435
ANOMALIES
The initial flight anomalies of Skylab 1 p 2619 N93-24692
Anomalous event diagnosis for environmental satellite systems p 2619 N93-25971
ANTARCTIC REGIONS
Passive microwave remote sensing of snow-covered floating ice during spring conditions in the Arctic and Antarctic
|ISBN-0-315-70444-6| p 2754 N93-25422
JARE data reports. No. 171 (upper atmosphere physics 9). Data, Syowa and Asuka Stations, 1989 p 2774 N93-25889
ANTENNA ARRAYS
A functional description of the Buffered Telemetry Demodulator (BTD) p 2614 N93-24667
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview p 2680 N93-26128
Microstrip antennas on/in anisotropic material layers
|AD-A261700| p 2681 N93-26383
ANTENNA DESIGN
DSS-13 26-meter antenna upgraded radiometer system p 2679 N93-26122
Sequential design of a linear quadratic controller for the Deep Space Network antennas p 2679 N93-26123
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview p 2680 N93-26128
ANTENNA RADIATION PATTERNS
Influence due to antenna pattern change in brightness temperature estimation for a space-based microwave radiometer p 2753 N93-24868
ANTENNAS
Design of the reduced LQG compensator for the DSS-13 antenna p 2672 N93-24669
ANTHROPOMETRY
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988
|AD-A260869| p 2800 N93-25628
Anthropometry of the foot and lower leg of U.S. Army soldiers: Fort Jackson, SC
|AD-A261405| p 2802 N93-26404
ANTIBODIES
Measuring the metastatic potential of cancer cells p 2794 N93-25566
Primary events in olfactory reception
|AD-A260562| p 2795 N93-25944
Pseudomonas screening assay
|NASA-CASE-NPO-17653-1-CU| p 2793 N93-25994
ANTIFERROMAGNETISM
Molecular/polymeric magnetism
|DE93-008635| p 2847 N93-25114
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
|DE93-007894| p 2863 N93-25369
Magnetic multilayer strain gage
|AD-D015672| p 2710 N93-26141
ANTIFRICTION BEARINGS
Radial spline assembly for antifriction bearings
|NASA-CASE-MFS-28629-1| p 2719 N93-26001
ANTIOXIDANTS
Development of a method to determine the autoxidation of turbine fuels
|AD-A260578| p 2661 N93-25902
ANTIREFLECTION COATINGS
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy
|DE93-007509| p 2654 N93-25384
Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings
|DE93-007513| p 2857 N93-26593
APERTURES
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
A fiber optic probe for the detection of cataracts p 2796 N93-25593
Correcting x ray spectra obtained from the AXAF VETA-I mirror calibration for pileup, continuum, background and deadtime p 2854 N93-26187
APPLICATIONS OF MATHEMATICS
Current research activities: Applied and numerical mathematics, fluid mechanics, experiments in transition and turbulence and aerodynamics, and computer science
|NASA-CR-191408| p 2803 N93-25084
Strongly transitive fuzzy relations: A more adequate way to describe similarity
|NASA-CR-192951| p 2820 N93-25425
APPLICATIONS PROGRAMS (COMPUTERS)
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
Geometric modeling for computer aided design
|NASA-CR-192891| p 2808 N93-24750
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
OCEAN-PC and a distributed network for ocean data p 2734 N93-24928
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
|DE93-002943| p 2760 N93-24955
EXCHANGE
|DE93-007227| p 2808 N93-24962
PCG: A software package for the iterative solution of linear systems on scalar, vector and parallel computers
|DE93-007366| p 2809 N93-25315
A software package for neural network applications development p 2827 N93-25610
Experimenter's laboratory for visualized interactive science p 2879 N93-25802
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
A distributed analysis and visualization system for model and observational data p 2881 N93-25814
DSD Technology: A detonation reactive Huygens code
|LA-12235-MS| p 2706 N93-25987
Techniques for designing rotorcraft control systems
|NASA-CR-192960| p 2597 N93-26046
EnviroNET p 2886 N93-26398
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
|AD-A261912| p 2884 N93-26532
Directory of US Government software for mainframes and microcomputers, 1993
|PB93-111565| p 2807 N93-26569
APPROACH
Visual approach data collection at St. Louis Lambert Field (STL)
|DOT/FAA/CT-TN93/2| p 2584 N93-24948

APPROACH CONTROL
The dependent converging instrument approach procedure: An analysis of its safety and applicability
| DOE/FAA/RD-93/6 | p 2585 N93-25456
Control of complex dynamic systems by neural networks p 2827 N93-25611
APPROXIMATION
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773
Approximate analysis on strain rate effects and behavior of stress and strain fields at the crack tip in Mode 2 in metallic materials, appendix no. 1
| AD-A260836 | p 2728 N93-25785
Monte Carlo approach to the approximation of invariant measures
| PB93-159069 | p 2830 N93-26317
AQUEOUS SOLUTIONS
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
AQUIFERS
Aquifer thermal energy (heat and chill) storage
| DE93-006446 | p 2759 N93-25183
ARC DISCHARGES
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE93-009707 | p 2644 N93-25500
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171
ARCHAEOLOGY
Archaeological, historical and geoelectrical data as ground truth for Landsat TM imagery application to coastal plain evolution studies p 2742 N93-24799
ARCHITECTURE (COMPUTERS)
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
A comparison using APPL and PVM for a parallel implementation of an unstructured grid generation program
| NASA-CR-191425 | p 2808 N93-25073
RAMA: A file system for massively parallel computers
| NASA-CR-192906 | p 2815 N93-25297
Interfacing a high performance disk array file server to a Gigabit LAN
| NASA-CR-192898 | p 2816 N93-25458
Real-time construction of three-dimensional occupancy maps
| DE93-001645 | p 2756 N93-25505
Performance studies of cache consistency and concurrency control algorithms in a distributed client/server DBMS architecture p 2876 N93-25554
Splash 2 p 2814 N93-25575
A novel method for characterization of superconductors: Physical measurements and modeling of thin films p 2871 N93-25584
Data systems dynamic simulator p 2814 N93-25602
Construction of a connectionist network supercomputer
| AD-A260929 | p 2820 N93-25648
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
Integrated Development Support Environment (IDSE)
| AD-A261088 | p 2877 N93-25763
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
Multi-layer holographic bifurcative neural network system for real-time adaptive EOS data analysis p 2880 N93-25807
Computation and learning in neural networks with binary weights
| AD-A261182 | p 2821 N93-25821
Intelligent access to multiple relational database systems
| AD-A261198 | p 2881 N93-25824
Information requirements analyses for transatmospheric vehicles
| AD-A261189 | p 2590 N93-25949
Strategic information planning: Framework for designing and developing system architectures
| GAO/IMTEC-92-51 | p 2882 N93-26097
National Launch System. Task 4: System architecture options analysis
| MCR-92-5011 | p 2609 N93-26098
An OSI architecture for the Deep Space Network p 2679 N93-26121
Deep Space Network information system architecture study p 2679 N93-26126
Source-level debugging of automatically parallelized programs
| AD-A261520 | p 2813 N93-26378
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
| AD-A261912 | p 2884 N93-26532
ARCS
Optimal thrust magnitude on a singular arc in atmospheric flight p 2819 N93-25410
ARCTIC OCEAN
Radar backscatter measurements from Arctic sea ice during the fall freeze-up
| NASA-CR-193100 | p 2790 N93-26050
ARCTIC REGIONS
Passive microwave remote sensing of snow-covered floating ice during spring conditions in the Arctic and Antarctic
| ISBN-0-315-70444-6 | p 2754 N93-25422
Radar backscatter measurements from Arctic sea ice during the fall freeze-up
| NASA-CR-193100 | p 2790 N93-26050
A climatology of polar low occurrences in the Nordic Seas and an examination of katabatic winds as a triggering mechanism
| AD-A261719 | p 2786 N93-26245
ARGON PLASMA
Particle simulation for 10.6 micron picosecond laser-induced breakdown in gases p 2712 N93-25280
ARITHMETIC
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
ARITHMETIC AND LOGIC UNITS
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
ARMED FORCES (FOREIGN)
An environmental audit management plan for the Royal Australian Air Force
| AD-A261092 | p 2765 N93-25765
ARMED FORCES (UNITED STATES)
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988
| AD-A260869 | p 2800 N93-25628
Aircraft electrical and environmental systems, AFSCs 452x5, 454x5, and 454x6
| AD-A261213 | p 2590 N93-25733
United States Army space experiment 601
| AD-A261460 | p 2798 N93-26353
ARMOR
Algorithms for the analysis of penetration by shaped charge jets
| UCRL-LR-109887 | p 2730 N93-26178
ARRAYS
Splash 2 p 2814 N93-25575
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618
Method of measuring cross-flow vortices by use of an array of hot-film sensors
| NASA-CASE-LAR-14824-1-SB | p 2706 N93-26000
ARTIFICIAL INTELLIGENCE
Weather forecasting expert system study
| NASA-CR-192929 | p 2777 N93-24747
An expert system shell for inferring vegetation characteristics: Inrerface for the addition of techniques (Task H)
| NASA-CR-192897 | p 2754 N93-25154
Optimization of knowledge-based systems and expert system building tools
| NASA-CR-192763 | p 2874 N93-25288
Radiation-hardened control system
| DE93-007248 | p 2688 N93-25377
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516
An approach to configuration design synthesis of subsonic transport aircraft using artificial intelligence techniques p 2589 N93-25692
System of Experts for Intelligent Data Management (SEIDAM) p 2879 N93-25800
Development of an expert data reduction assistant p 2880 N93-25808
Intelligent access to multiple relational database systems
| AD-A261198 | p 2881 N93-25824
Center for intelligent control systems
| AD-A260995 | p 2821 N93-25853
The 1993 Goddard Conference on Space Applications of Artificial Intelligence
| NASA-CP-3200 | p 2822 N93-25961
Using AI/expert system technology to automate planning and replanning for the HST servicing missions p 2822 N93-25962
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967
An architecture for object-oriented intelligent control of power systems in space p 2823 N93-25968
An autonomous satellite architecture integrating deliberative reasoning and behavioural intelligence p 2823 N93-25970
Visualizing the semantic content of large text databases using text maps p 2826 N93-25982
The StarView intelligent query mechanism p 2826 N93-25984
NASA Center for Intelligent Robotic Systems for Space Exploration
| NASA-CR-193208 | p 2826 N93-25986
Using modular neural networks with local representations to control dynamic systems
| AD-A261597 | p 2826 N93-26162
Complexity of connectionist and constraint-satisfaction networks
| AD-A261617 | p 2817 N93-26169
Real-time value-driven monitoring and repair
| AD-A260959 | p 2811 N93-26221
Neural basis of motion perception
| AD-A261452 | p 2798 N93-26349
Design Knowledge Management System (DKMS) Beta Test Report
| AD-A261453 | p 2883 N93-26350
IDEF6: A design rationale capture method concept paper
| AD-A261594 | p 2884 N93-26523
ARTIFICIAL SATELLITES
Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem p 2603 N93-24718
Mars: The dynamics of orbiting satellites and gravity model development p 2896 N93-25439
Orbital parameter estimation using an extended Kalman filter
| AD-A260618 | p 2608 N93-25636
Small satellites and RPA's in global-change research
| AD-A260762 | p 2765 N93-25837
Space research in Sweden, 1990-1991 p 2888 N93-25887
A Biphase Shift Keying (BPSK), direct sequence, spread spectrum modem for Petite Amateur Navy Satellite (PANSAT)
| AD-A261301 | p 2618 N93-26295
Trellis coded CPFSK
| AD-A261788 | p 2682 N93-26441
ASCENT TRAJECTORIES
Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272
ASIA
A geological and geophysical information system for Eurasia
| AD-A261789 | p 2883 N93-26442
ASSAYING
Pseudomonas screening assay
| NASA-CASE-NPO-17653-1-CU | p 2793 N93-25994
ASSEMBLING
A virtual environment for manufacturing systems
| AD-A260813 | p 2810 N93-25699
ASSESSMENTS
An introductory guide to uncertainty analysis in environmental and health risk assessment
| DE93-002873 | p 2760 N93-24676
The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
ASSIMILATION
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
ASTROGRAPHY
Geometric distortion analysis of a wide-field astrograph p 2621 N93-26111
ASTROMETRY
The Telecommunications and Data Acquisition Report
| NASA-CR-192804 | p 2676 N93-26105
ASTRONAUTICS
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 9, September 1992
| JPRS-UAC-93-003 | p 2574 N93-26325
ASTRONAUTS
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133
ASTRONOMICAL CATALOGS
30 Doradus in the Large Magellanic Cloud: The stellar content and initial mass function p 2894 N93-25559
Cape Photographic Durchmusterung, volume 1
| NASA-RP-1300-VOL-1 | p 2890 N93-26002

Cape Photographic Durchmusterung, volume 2
| NASA-RP-1300-VOL-2 | p 2890 N93-26003
Cape Photographic Durchmusterung, volume 3
| NASA-RP-1300-VOL-3 | p 2890 N93-26004
Hubble Space Telescope: The archived exposures catalog, version 2.0
| NASA-CR-192896 | p 2883 N93-26423

ASTRONOMICAL MODELS
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770
Numerical modeling of barred spiral galaxies p 2893 N93-25537

ASTRONOMICAL PHOTOMETRY
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770

ASTRONOMICAL SPECTROSCOPY
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770

ASTRONOMY
Development of a tool-set for simultaneous, multi-site observations of astronomical objects p 2878 N93-25795
High-performance compression of astronomical images p 2805 N93-25931

ASTROPHYSICS
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers p 2892 N93-24949
Correlative studies of astrophysical sources of very high and ultra high energy gamma-rays
| NASA-CR-192781 | p 2888 N93-25172
Multivariate statistical analysis software technologies for astrophysical research involving large data bases p 2878 N93-25796
VIEWCACHE: An incremental pointer-based access method for autonomous interoperable databases p 2880 N93-25809

ASYMPTOTIC GIANT BRANCH STARS
A superconducting tunnel junction receiver for submillimeter astronomy, and analysis of observations of post-AGB star molecular envelopes p 2889 N93-25440
Radial velocity measurements of carbon stars p 2895 N93-25713

ASYMPTOTIC METHODS
Asymptotic studies of gravity-driven reacting coating flows and pultrusion processes p 2704 N93-25683
Nonlinear system design: Adaptive feedback linearization with unmodeled dynamics
| AD-A261360 | p 2826 N93-26333

ASYMPTOTIC PROPERTIES
Control of nonlinear systems under input constraints with applications to flight control p 2596 N93-25353
Boundedness and asymptotics of the generalized theodorus iteration
| AD-A261427 | p 2829 N93-26452

ASYMPTOTIC SERIES
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151
Modelling of microgravity ignition phenomena p 2664 N93-25465
Phase-field models for anisotropic interfaces
| PB93-164564 | p 2646 N93-26323

ATLANTIC OCEAN
The JGOFS North Atlantic Bloom Experiment: An overview p 2735 N93-24934
Numerical simulation of the seasonal and interannual variability of the tropical Atlantic Ocean circulation during the 1980's p 2789 N93-25445
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea
| AD-A261205 | p 2757 N93-25868

ATLANTIS (ORBITER)
STS-44 Space Shuttle mission report
| NASA-TM-108735 | p 2612 N93-25988

ATMOSPHERIC ATTENUATION
Effect-specific analysis of propagation parameters p 2684 N93-26478
The Virginia Tech OLYMPUS propagation experiment p 2685 N93-26479

ATMOSPHERIC BOUNDARY LAYER
An investigation of the role of flux divergence in the turbulent kinetic energy balance of the atmospheric surface layer p 2773 N93-25756
SAR-related stress variability in the marine atmospheric boundary layer
| AD-A261129 | p 2775 N93-25946

ATMOSPHERIC CHEMISTRY
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation p 2760 N93-24908
Selected translated abstracts of Russian-language climate-change publications: 1. Surface energy budget
| DE93-003189 | p 2760 N93-24952
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
The Martian lower atmosphere p 2897 N93-26394
Long term modeling of the links between economics, technical progress, and environment: Evolution of approaches and new trends
| DE93-005035 | p 2767 N93-26497

ATMOSPHERIC CIRCULATION
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
A comparison of the WIND System atmospheric models and MATS data
| DE93-002687 | p 2760 N93-24673
Empirical wind model for the middle and lower atmosphere. Part 1: Local time average
| NASA-TM-104581 | p 2770 N93-25160
A dynamical theory for hurricane spiral bands p 2782 N93-25352
FORTRAN M as a language for building earth system models
| DE93-007897 | p 2763 N93-25370
Evaluating climate-vegetation interactions at climate model sub-grid scales p 2764 N93-25476
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
| AD-A260889 | p 2783 N93-25633
Pressure torques and circulation changes in Rocky Mountain lee cyclones p 2783 N93-25724
Tropical cyclone/upper-atmospheric interaction as inferred from satellite total ozone observations p 2784 N93-25741
SAR-related stress variability in the marine atmospheric boundary layer
| AD-A261129 | p 2775 N93-25946
Effects of surface thermal forcing on stratified flow past an isolated obstacle
| PB93-156776 | p 2776 N93-26548
Residual mean meridional circulation in titan's middle atmosphere
| PB93-162931 | p 2898 N93-26571

ATMOSPHERIC COMPOSITION
Trends '91: A compendium of data on global change. Highlights
| DE93-003112 | p 2761 N93-25144
Aspects of the design of a satellite borne infra-red radiometer p 2620 N93-25474
Climate Monitoring and Diagnostics Laboratory
| PB93-156388 | p 2785 N93-25871
Redistribution of trace chemical species by a small convective cloud
| PB93-156164 | p 2765 N93-25873
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
| NASA-CR-192937 | p 2767 N93-26427
ATMOS: Long term atmospheric measurements for mission to planet Earth
| NASA-TM-108720 | p 2757 N93-26429
Long term modeling of the links between economics, technical progress, and environment: Evolution of approaches and new trends
| DE93-005035 | p 2767 N93-26497

ATMOSPHERIC CORRECTION
Inherent optical properties of lakes as measured by Landsat 5 Thematic Mapper p 2746 N93-24828
Atmospheric correction of Landsat/TM data over mountainous terrain for forestry applications p 2752 N93-24862

ATMOSPHERIC DIFFUSION
Chaos metrics for testing lagrangian particle models
| AD-A261429 | p 2776 N93-26454

ATMOSPHERIC EFFECTS
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 1: Workshop objectives and summary
| NASA-RP-1292-VOL-1 | p 2762 N93-25157
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 2: Comparisons with global atmospheric measurements
| NASA-RP-1292-VOL-2 | p 2762 N93-25158
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 3: Special diagnostic studies
| NASA-RP-1292-VOL-3 | p 2762 N93-25159
Laser propagation through turbulence
| AD-A260712 | p 2714 N93-26217

ATMOSPHERIC ELECTRICITY
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Launch pad lightning protection enhancement by induced streamers p 2609 N93-24876
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
Zoning of aircraft: A review of the definitions p 2583 N93-24880
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888
Lightning characteristics in the north-east part of Japan observed by a magnetic direction-finder network p 2779 N93-24892
Zoning of aircraft by electric field modelling p 2583 N93-24894
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
Comparative performance of lightning air terminals under natural storm conditions p 2781 N93-24902

ATMOSPHERIC GENERAL CIRCULATION MODELS
The effects of sampling frequency on the climate statistics of the ECMWF general circulation model
| DE93-003338 | p 2761 N93-25145
Empirical wind model for the middle and lower atmosphere. Part 1: Local time average
| NASA-TM-104581 | p 2770 N93-25160
CHAMMP
| DE93-007290 | p 2762 N93-25184
Rossby-gravity waves in tropical total ozone data
| NASA-CR-192983 | p 2764 N93-25432
Numerical simulation of the seasonal and interannual variability of the tropical Atlantic Ocean circulation during the 1980's p 2789 N93-25445

ATMOSPHERIC HEATING
Numerical simulation of the seasonal and interannual variability of the tropical Atlantic Ocean circulation during the 1980's p 2789 N93-25445

ATMOSPHERIC IONIZATION
A study of vibrationally excited N2(+) ions in the daytime thermosphere p 2770 N93-25179

ATMOSPHERIC LASERS
Development of laser guide stars and adaptive optics for large astronomical telescopes
| DE93-007511 | p 2888 N93-25320

ATMOSPHERIC MODELS
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
A comparison of the WIND System atmospheric models and MATS data
| DE93-002687 | p 2760 N93-24673
The AFTAC model integration project
| DE93-003334 | p 2761 N93-25122
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 1: Workshop objectives and summary
| NASA-RP-1292-VOL-1 | p 2762 N93-25157
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 2: Comparisons with global atmospheric measurements
| NASA-RP-1292-VOL-2 | p 2762 N93-25158
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 3: Special diagnostic studies
| NASA-RP-1292-VOL-3 | p 2762 N93-25159
Applications of wavelet-based compression to multidimensional earth science data
| DE93-007348 | p 2762 N93-25166
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
Propagation at microwave frequencies in the presence of tropospheric stratified layers p 2674 N93-25340
A dynamical theory for hurricane spiral bands p 2782 N93-25352
FORTRAN M as a language for building earth system models
| DE93-007897 | p 2763 N93-25370
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448

Simulation and prediction of tropical SST with a coupled ocean-atmosphere model p 2789 N93-25469
Evaluating climate-vegetation interactions at climate model sub-grid scales p 2764 N93-25476
Parallelizing the spectral transform method: A comparison of alternative parallel algorithms
| DE93-008664 | p 2816 N93-25521
Land surface processes and climate modeling p 2783 N93-25685
Prediction of global cloud cover with a very high resolution global spectral model
| AD-A261047 | p 2785 N93-25777
Construction of an advanced software tool for planetary atmospheric modeling p 2815 N93-25799
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430
Chaos metrics for testing lagrangian particle models
| AD-A261429 | p 2776 N93-26454
The Earth's climate as a dynamical system
| DE93-004666 | p 2767 N93-26496
Long term modeling of the links between economics, technical progress, and environment: Evolution of approaches and new trends
| DE93-005035 | p 2767 N93-26497
Boundary layer coupling between an explosive cyclone and the Gulf Stream during ERICA
| AD-A261577 | p 2787 N93-26513
Residual mean meridional circulation in titan's middle atmosphere
| PB93-162931 | p 2898 N93-26571

ATMOSPHERIC MOISTURE
Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment
| NASA-CR-192826 | p 2769 N93-24945
Observed annual and interannual variations in tropospheric water vapor p 2782 N93-25549
Computation of moisture flux from ocean to atmosphere using a synergy of SSM/I-derived precipitable water and ECMWF analyses p 2774 N93-25757
A proposed study of multiple scattering through clouds up to 1 THz p 2684 N93-26474

ATMOSPHERIC OPTICS
Laser propagation through turbulence
| AD-A260712 | p 2714 N93-26217

ATMOSPHERIC PHYSICS
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-003 | p 2737 N93-25398
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-93-001 | p 2599 N93-25400
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-002 | p 2737 N93-25426
Climate data bases of the People's Republic of China, 1841-1988
| DE93-007907 | p 2764 N93-25517
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
JARE data reports. No. 171 (upper atmosphere physics 9). Data, Syowa and Asuka Stations, 1989 p 2774 N93-25889

ATMOSPHERIC PRESSURE
A systematic satellite approach for estimating central pressures of mid-latitude oceanic storms
| NOAA-TR-NESDIS-63 | p 2781 N93-25220
The pressure modulation system in the Improved Stratospheric and Mesospheric Sounder p 2773 N93-25739
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584

ATMOSPHERIC RADIATION
WCRP surface radiation budget shortwave data product description, version 1.1
| NASA-TM-107747 | p 2777 N93-24742
Gravity waves from O2 airglow p 2772 N93-25547

ATMOSPHERIC REFRACTION
Proceedings of the 5th International Symposium on Long Range Sound Propagation
| AD-A260666 | p 2845 N93-25643

ATMOSPHERIC SCATTERING
Proceedings of the 5th International Symposium on Long Range Sound Propagation
| AD-A260666 | p 2845 N93-25643
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280
Brightness temperature and attenuation diversity statistics at 20.6 and 31.65 GHz for the Colorado Research Network p 2684 N93-26473
A proposed study of multiple scattering through clouds up to 1 THz p 2684 N93-26474

ATMOSPHERIC SOUNDING
The pressure modulation system in the Improved Stratospheric and Mesospheric Sounder p 2773 N93-25739
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283

ATMOSPHERIC STRATIFICATION
SAR-related stress variability in the marine atmospheric boundary layer
| AD-A261129 | p 2775 N93-25946

ATMOSPHERIC TEMPERATURE
Winter warming from large volcanic eruptions
| NASA-CR-192848 | p 2763 N93-25244
Aspects of the design of a satellite borne infra-red radiometer p 2620 N93-25474
Observed annual and interannual variations in tropospheric water vapor p 2782 N93-25549
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657
The Martian lower atmosphere p 2897 N93-26394

ATMOSPHERIC TURBULENCE
An investigation of the role of flux divergence in the turbulent kinetic energy balance of the atmospheric surface layer p 2773 N93-25756
Laser propagation through turbulence
| AD-A260712 | p 2714 N93-26217

ATOMIC BEAMS
Preliminary results on an optically-pumped Cs beam frequency standard p 2832 N93-24989
Miniature optically-pumped cesium beam resonator p 2833 N93-24990
Actual limits of fluorescence S/N ratio in an optically-pumped cesium beam resonator p 2833 N93-24991
Phase differences of the fields in a Ramsey resonator for submillimetric frequency standards p 2840 N93-25042
A compact and high-performance reference cell for laser frequency stabilization p 2716 N93-25065

ATOMIC CLOCKS
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
The advances in F and T technology: Their benefits of and for space science and technology p 2831 N93-24979
Hydrogen masers for space p 2716 N93-24980
A simple and compact source of cold atoms for cesium fountains and microgravity clocks p 2831 N93-24981
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks p 2832 N93-24983
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites p 2686 N93-24999
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007
Rubidium atomic frequency standards for GPS block 2R p 2836 N93-25014
Collaboration in the UK on time transfer using the GLONASS system p 2837 N93-25019
Microwave interrogation frequency noise and clock frequency stability: Experimental results p 2842 N93-25056
Solid state frequency synthesis up to 600 GHz: An application to the Mg frequency standard p 2842 N93-25058
A compact and high-performance reference cell for laser frequency stabilization p 2716 N93-25065

ATOMIC COLLISIONS
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281

ATOMIC ENERGY LEVELS
Solid state frequency synthesis up to 600 GHz: An application to the Mg frequency standard p 2842 N93-25058

ATOMIC EXCITATIONS
State-selected studies of atoms and molecules ejected from ion bombarded surfaces
| AD-A261275 | p 2850 N93-26267

ATOMIC PHYSICS
The physics of spin polarized gases
| AD-A261396 | p 2850 N93-26288

ATOMIC STRUCTURE
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
Theoretical predictions of platinum-rhodium bimetallic catalysts
| DE93-007540 | p 2649 N93-25428
A novel method for characterization of superconductors: Physical measurements and modeling of thin films p 2871 N93-25584
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646
Fundamental aspects of metal joining: The study of strong interfaces
| AD-A261293 | p 2653 N93-26304
Halogen adlayers on Ag(111)
| AD-A261792 | p 2850 N93-26443
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528

ATOMIZERS
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
| AD-A260915 | p 2661 N93-25914
Atomization and combustion of a gelled, metallized slurry fuel
| AD-A261778 | p 2647 N93-26602

ATOMIZING
Fuel injector: Air swirl characterization aerothermal modeling, phase 2, volume 1
| NASA-CR-189193 | p 2592 N93-24754
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
A summary of the JANNAF workshop on liquid rocket atomization p 2625 N93-26014

ATOMS
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528

ATROPHY
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763

ATTITUDE (INCLINATION)
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory p 2600 N93-24697
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
Real-time attitude determination and gyro calibration p 2602 N93-24708
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Improvements in ERBS attitude determination without gyros p 2602 N93-24710
Polar decomposition for attitude determination from vector observations p 2602 N93-24711
Attitude analysis in Flatland: The plane truth p 2603 N93-24712
Rate determination from vector observations p 2603 N93-24713
Analysis of the Command and Control Segment (CCS) attitude estimation algorithm p 2604 N93-24722
SCATHA mission termination report p 2605 N93-24725
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Attitude control of the LACE satellite: A gravity gradient stabilized spacecraft p 2605 N93-24727
Quaternion normalization in spacecraft attitude determination p 2606 N93-24730
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Upper Atmosphere Research Satellite (UARS) attitude accuracy using coarse attitude sensors p 2607 N93-24735
Apparatus for determining the attitude of a vehicle
| AD-D015667 | p 2710 N93-26092

ATTITUDE CONTROL
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
Analysis of the Command and Control Segment (CCS) attitude estimation algorithm p 2604 N93-24722
Nonlinear stability analysis of the attitude motion of spin-stabilized thrusting spacecraft p 2617 N93-25527
Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Apparatus for determining the attitude of a vehicle
| AD-D015667 | p 2710 N93-26092
Dynamics of on-orbit construction process p 2669 N93-26406

ATTITUDE GYROS
Real-time attitude determination and gyro calibration p 2602 N93-24708
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734

ATTITUDE INDICATORS
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory p 2600 N93-24697
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
Real-time attitude determination and gyro calibration p 2602 N93-24708
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Improvements in ERBS attitude determination without gyros p 2602 N93-24710
Polar decomposition for attitude determination from vector observations p 2602 N93-24711
Rate determination from vector observations p 2603 N93-24713
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Quaternion normalization in spacecraft attitude determination p 2606 N93-24730
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Upper Atmosphere Research Satellite (UARS) attitude accuracy using coarse attitude sensors p 2607 N93-24735

ATTITUDE STABILITY
Spacecraft detumbling through energy dissipation p 2600 N93-24696

AUDIO DATA
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915

AUDIO EQUIPMENT
Inflight evaluation of an acoustic orientation instrument
| AD-A260752 | p 2591 N93-25909

AUDIO FREQUENCIES
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521

AUDIO SIGNALS
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915

AUDITORY PERCEPTION
Speech research
| AD-A260643 | p 2675 N93-25639
Complex auditory signals
| AD-A261491 | p 2846 N93-26374

AUDITORY SIGNALS
Inflight evaluation of an acoustic orientation instrument
| AD-A260752 | p 2591 N93-25909
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915
Complex auditory signals
| AD-A261491 | p 2846 N93-26374

AUGER SPECTROSCOPY
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258

AURORAL ZONES
Sounding rocket observations of precipitating ions in the morning auroral region p 2773 N93-25732

AURORAS
Mercury: The Los Alamos ICF KrF laser system
| DE93-007363 | p 2713 N93-25379
Further analysis of ECOM-721 data
| AD-A260863 | p 2774 N93-25790
Particle simulation of auroral double layers p 2774 N93-25830
JARE data reports. No. 171 (upper atmosphere physics 9). Data, Syowa and Asuka Stations, 1989 p 2774 N93-25889
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159

AUSTRALIA
An environmental audit management plan for the Royal Australian Air Force
| AD-A261092 | p 2765 N93-25765

AUTOCORRELATION
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 4
| NASA-CR-192834 | p 2769 N93-24910
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 2
| NASA-CR-192833 | p 2770 N93-25088
Spontaneous discovery and use of categorical structure
| AD-A261658 | p 2798 N93-26364

AUTOIONIZATION
Ionization probes of molecular structure and chemistry
| DE93-008211 | p 2847 N93-25310

AUTOMATIC CONTROL
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
Ice thickness measurement system for the icing research tunnel calibration
| NASA-TM-106095 | p 2708 N93-24737
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085
How to combine probabilistic and fuzzy uncertainties in fuzzy control
| NASA-TM-108746 | p 2818 N93-25138
Automated system for early breast cancer detection in mammograms p 2796 N93-25568
An architecture for object-oriented intelligent control of power systems in space p 2823 N93-25968
Architecture of autonomous systems
| NASA-CR-192974 | p 2801 N93-26047
DSS-13 26-meter antenna upgraded radiometer system p 2679 N93-26122
Automated inspection of solder joints for surface mount technology
| NASA-TM-104580 | p 2721 N93-26137

AUTOMATIC FLIGHT CONTROL
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914

AUTOMATIC FREQUENCY CONTROL
Investigations of the frequency instability of CH1-75 hydrogen masers p 2716 N93-25049
Frequency generation and synthesis in the DRSS p 2693 N93-25054

AUTOMATIC TEST EQUIPMENT
A digital hardware test system analysis with test vector translation
| AD-A260849 | p 2810 N93-25786

AUTOMATION
Use of fuzzy relational information retrieval technique for generating control strategies in resolution-based automated reasoning p 2874 N93-25258

AUTOMOBILE FUELS
Emissions from ethanol and LPG fueled vehicles
| DE93-006410 | p 2660 N93-25192
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585
Documentation for propane fleet conversion cost-effectiveness model
| PB93-165611 | p 2720 N93-26590

AUTOMOBILES
Magnitude and value of electric vehicle emissions reductions for six driving cycles in four US cities with varying air quality problems
| DE93-006417 | p 2660 N93-25298
Development of ASTM standards in support of advanced ceramics development
| DE93-003024 | p 2654 N93-25361
Theoretical predictions of platinum-rhodium bimetallic catalysts
| DE93-007540 | p 2649 N93-25428

AUTONOMIC NERVOUS SYSTEM
Autonomic physiological data associated with simulator discomfort
| NASA-CR-177609 | p 2794 N93-24738

AUTONOMOUS NAVIGATION
Using neural networks and Dyna algorithm for integrated planning, reacting and learning in systems
| NASA-CR-193018 | p 2817 N93-24743
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516

AUTONOMY
Experimental modal survey of the probe mass mock-up
| DE93-008846 | p 2617 N93-25494
VIEWCACHE: An incremental pointer-based access method for autonomous interoperable databases p 2880 N93-25809
Knowledge-based control for robot self-localization p 2822 N93-25963
An architecture for object-oriented intelligent control of power systems in space p 2823 N93-25968
An autonomous satellite architecture integrating deliberative reasoning and behavioural intelligence p 2823 N93-25970
NASA Center for Intelligent Robotic Systems for Space Exploration
| NASA-CR-193208 | p 2826 N93-25986
Architecture of autonomous systems
| NASA-CR-192974 | p 2801 N93-26047

AUTOREGRESSIVE PROCESSES
Failure monitoring in dynamic systems: Model construction without fault training data p 2672 N93-24666
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255

AVAILABILITY
GPS standardization for the needs of time transfer p 2836 N93-25016

AVALANCHE DIODES
The sub 60 ps timing resolution using large area silicon avalanche diodes
| DE93-007723 | p 2688 N93-25365
Studies of avalanche photodiodes for scintillating fibre tracking readout
| DE93-008370 | p 2689 N93-25491

AVALANCHES
New concepts for high efficiency energy conversion: The avalanche heterostructure and superlattice solar cells
| DE92-010592 | p 2758 N93-25098
Advanced technology for portable personal visualization
| AD-A261294 | p 2807 N93-26293

AVIATION METEOROLOGY
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
A procedure for defining lightning risk to air vehicles p 2583 N93-24885

AVIONICS
Alternative equipment test procedures for simultaneous current injection on multiple cable bundles p 2693 N93-24903
Aircraft electrical and environmental systems, AFSCs 452x5, 454x5, and 454x6
| AD-A261213 | p 2590 N93-25733
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
| AD-A261105 | p 2591 N93-26572

AXIAL FLOW
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760

AXIAL LOADS
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912

Continuum and micromechanics treatment of constraint in fracture
| AD-A260927 | p 2727 N93-25647
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768

AXIAL STRAIN
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912

AXISYMMETRIC FLOW
Simulation of vortex bursting p 2580 N93-25881

AZIMUTH
Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem p 2603 N93-24718

AZORES
Summary by the cloud and aerosol research group for ASTEX
| AD-A261292 | p 2766 N93-26292

B

B STARS
The effects of rotation on the winds from hot stars p 2894 N93-25620

BACKGROUND NOISE
Figure of merit for direct-detection optical channels p 2678 N93-26117
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261

BACKGROUND RADIATION
Starburst Galaxies: Hard X-ray spectra and contribution to the diffuse background
| NASA-CR-192790 | p 2892 N93-25211
Investigation of a background suppression transimpedance amplifier for photovoltaic detectors
| AD-A261828 | p 2691 N93-26272
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373

BACKSCATTERING
A fiber optic probe for the detection of cataracts p 2796 N93-25593
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632
Enhanced backscattering from rough surfaces
| AD-A261000 | p 2676 N93-25855
Radar backscatter measurements from Arctic sea ice during the fall freeze-up
| NASA-CR-193100 | p 2790 N93-26050
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280

BACTERIA
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496
Biological conversion of synthesis gas
| DE93-009092 | p 2660 N93-25523

BALANCE
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351

BALANCING
An improved spectral load balancing method
| DE93-007582 | p 2810 N93-25386
Toward a parallel recursive spectral bisection mapping tool
| DE93-006632 | p 2816 N93-25414

BALLOON-BORNE INSTRUMENTS
The charge and size of precipitation particles inside thunderstorms and mesoscale convective systems on the Great Plains p 2781 N93-25275

BALTIC SEA
Data availability and data archeology from the former Soviet Union p 2735 N93-24932

BANDPASS FILTERS
Distortion measurements on bandpass filters with powdered iron toroidal inductors
| AD-A260790 | p 2675 N93-25689
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261

BANDSTOP FILTERS
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261

BANDWIDTH
Robo-line storage: Low latency, high capacity storage systems over geographically distributed networks
| NASA-CR-192910 | p 2805 N93-25130
Striped tape arrays
| NASA-CR-192914 | p 2806 N93-25267
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120
Complex auditory signals
| AD-A261491 | p 2846 N93-26374

BAROCLINIC INSTABILITY
Dynamics of Gulf Stream meanders and frontal eddies in the South Atlantic Bight p 2788 N93-25354
Wind-driven coastal generation of annual mesoscale eddy activity in the California current
| AD-A261355 | p 2790 N93-26331

BAROTROPIC FLOW
Dynamics of Gulf Stream meanders and frontal eddies in the South Atlantic Bight p 2788 N93-25354

BARRED GALAXIES
Numerical modeling of barred spiral galaxies p 2893 N93-25537

BARYONS
High-energy pion-nucleus scattering at LAMPF
| DE93-007364 | p 2852 N93-25380

BASALT
Indigenous lunar construction materials p 2670 N93-26413

BASE FLOW
Modified point mass trajectory simulation for base-burn projectiles
| BRL-TR-3321 | p 2609 N93-25985

BASE PRESSURE
Modified point mass trajectory simulation for base-burn projectiles
| BRL-TR-3321 | p 2609 N93-25985

BATCH PROCESSING
TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703

BATHYMETERS
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument p 2711 N93-25614

BATTERY CHARGERS
Characterization of electrochemical systems and batteries: Materials and systems
| DE93-003472 | p 2687 N93-24964

BAUSCHINGER EFFECT
Internal stresses and the cyclic deformation of an aluminum matrix composite p 2650 N93-25436

BAYES THEOREM
Bayesian cross-entropy reconstruction of complex images
| AD-A261812 | p 2812 N93-26257
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279

BCH CODES
Soft decoding a self-dual (48, 24; 12) code p 2671 N93-24662
A (72, 36; 15) box code p 2671 N93-24663
Golay and other box codes p 2678 N93-26116

BEACONS
DORIS precise orbit determination and location system performances of ultra stable oscillators p 2608 N93-24997

BEAM CURRENTS
Metal ion implantation for large scale surface modification
| DE93-007649 | p 2859 N93-25324
Beam position and total current monitor for heavy ion fusion beams
| DE93-007653 | p 2851 N93-25325

BEAM INJECTION
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092

BEAM WAVEGUIDES
A technique for computation of noise temperature due to a beam waveguide shroud p 2671 N93-24661
Performance of a 12-GHz fiber-optic system for beam-waveguide antenna stability testing p 2677 N93-26113
Optimizing the G/T ratio of the DSS-13 34-meter beam-waveguide antenna p 2678 N93-26118

BEAMFORMING
A compact and versatile pulse generation and shaping subsystem for high energy laser systems
| DE93-007114 | p 2711 N93-24961
Analysis and design of a novel robotic finger-tip sensor for adaptive grasping p 2719 N93-25745

BEAMS (RADIATION)
Log-ratio signal-processing technique for beam position monitors
| DE93-007356 | p 2851 N93-25314
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368

BEARINGLESS ROTORS
Structural dynamic analysis of bearingless rotor blade p 2590 N93-25719

BEARINGS
Tuned circuit electric levitation bearings for microactuators p 2689 N93-25619
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816

BEECHCRAFT AIRCRAFT
Development of a flight instrument package
| AD-A260830 | p 2591 N93-25783

BENDING
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760

BENZENE
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518

BERMUDA
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study p 2736 N93-24938

BIAS
Magnetic multilayer strain gage
| AD-D015672 | p 2710 N93-26141
Bayesian cross-entropy reconstruction of complex images
| AD-A261812 | p 2812 N93-26257

BIBLIOGRAPHIES
Selected translated abstracts of Russian-language climate-change publications: 1. Surface energy budget
| DE93-003189 | p 2760 N93-24952
Pyroshock: Bibliography
| DE93-007605 | p 2726 N93-25489
Bibliography on propulsion airframe integration technologies for high-speed civil transport applications, 1980-1991
| NASA-TM-105602 | p 2573 N93-26136
Bibliography of remote sensing techniques used in wetland research
| AD-A261704 | p 2757 N93-26440
Space Science Laboratory Publications and Presentations
| NASA-TM-108402 | p 2884 N93-26562

BICRYSTALS
Crack tip fields in ductile crystals and bicrystals p 2866 N93-25749

BIMETALS
Design of a high activity and selectivity alcohol catalyst
| DE93-008101 | p 2659 N93-25111
Theoretical predictions of platinum-rhodium bimetallic catalysts
| DE93-007540 | p 2649 N93-25428

BINARY CODES
Soft decoding a self-dual (48, 24; 12) code p 2671 N93-24662
Golay and other box codes p 2678 N93-26116
A proposed study of multiple scattering through clouds up to 1 THz p 2684 N93-26474

BINARY DATA
Goldstone solar system radar signal processing p 2680 N93-26130

BINARY PHASE SHIFT KEYING
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261
A Biphase Shift Keying (BPSK), direct sequence, spread spectrum modem for Petite Amateur Navy Satellite (PANSAT)
| AD-A261301 | p 2618 N93-26295
Geolocation of an electromagnetic emitter using a cyclostationary time difference of arrival technique
| AD-A261781 | p 2686 N93-26603

BINARY STARS
Gravitational radiation from coalescing binary star systems p 2900 N93-25625
Chromospheric activity in algol binaries
| AD-A261440 | p 2896 N93-26508

BINAURAL HEARING
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358

BINOCULAR VISION
Coordinated action in 3-D space
| AD-A261418 | p 2799 N93-26449

BIOACOUSTICS
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521
BIOASSAY
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
BIOCHEMISTRY
Primary events in olfactory reception
| AD-A260562 | p 2795 N93-25944
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
Inorganic and biological electron transfer across an electronically conductive composite polymer membrane
| AD-A261642 | p 2656 N93-26172
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518
BIOCONVERSION
Biological conversion of synthesis gas
| DE93-009092 | p 2660 N93-25523
BIODEGRADATION
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571
BIODYNAMICS
Evaluation of lens distortion errors in video-based motion analysis
| NASA-TP-3266 | p 2797 N93-25736
BIOELECTRIC POTENTIAL
Anomalous bioelectric potentials of silk trees in Naples zoo (Italy) prior to an earthquake in May, 1991 p 2753 N93-24873
Comparative analytical study of evoked and event related potentials as correlates of cognitive processes
| AD-A261388 | p 2799 N93-26446
BIOELECTRICITY
Anomalous bioelectric potentials of silk trees in Naples zoo (Italy) prior to an earthquake in May, 1991 p 2753 N93-24873
Biomagnetic localization from transient quasi-static events
| DE93-007328 | p 2794 N93-25186
BIOGEOCHEMISTRY
The JGOFS North Atlantic Bloom Experiment: An overview p 2735 N93-24934
Data management for JGOFS: Theory and design p 2735 N93-24935
Data management for community research projects: A JGOFS case study p 2736 N93-24936
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study p 2736 N93-24938
Automated in situ observations of upper ocean biogeochemistry, bio-optics, and physics and their potential use for global studies p 2736 N93-24939
Planetary Biology and Microbial Ecology: Molecular Ecology and the Global Nitrogen cycle
| NASA-CR-4497 | p 2803 N93-26157
BIOINSTRUMENTATION
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-93-002 | p 2737 N93-25399
BIOLOGICAL MODELS (MATHEMATICS)
Anatomy and physiology of plant conductive systems
| PB93-156032 | p 2793 N93-25877
BIOLOGY
Achieving the promise of the bioscience revolution: The role of the Federal Government
| PB93-139970 | p 2793 N93-25457
BIOMAGNETISM
Biomagnetic localization from transient quasi-static events
| DE93-007328 | p 2794 N93-25186
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521
BIOMASS
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854
Biodiversity indication by Earth observation data p 2751 N93-24858
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea
| AD-A261205 | p 2757 N93-25868
Analysis of the lettuce data from the variable pressure growth chamber at NASA Johnson Space Center: A three-stage nested design model p 2794 N93-26069
Development of a pyrolysis waste recovery model with designs, test plans, and applications for space-based habitats p 2803 N93-26076
BIOREACTORS
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496
Biological conversion of synthesis gas
| DE93-009092 | p 2660 N93-25523
BIOSYNTHESIS
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068

The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
BIPOLAR TRANSISTORS
Short-period superlattice materials for heterojunction bipolar transistors
| AD-A260701 | p 2866 N93-25897
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
BIRDS
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763
BISMUTH OXIDES
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
| NASA-CR-192344 | p 2863 N93-25219
BIT SYNCHRONIZATION
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
BL LACERTAE OBJECTS
Correlative studies of astrophysical sources of very high and ultra high energy gamma-rays
| NASA-CR-192781 | p 2888 N93-25172
BLACK BODY RADIATION
Spectra of stable sonoluminescence
| AD-A260621 | p 2844 N93-25637
BLACK HOLES (ASTRONOMY)
Diskoseismology: Probing relativistic accretion disks p 2894 N93-25622
Gravitational radiation from coalescing binary star systems p 2900 N93-25625
BLADE-VORTEX INTERACTION
Flow visualizations of perpendicular blade vortex interactions
| NASA-CR-192725 | p 2696 N93-25208
BLADES
Flow visualizations of perpendicular blade vortex interactions
| NASA-CR-192725 | p 2696 N93-25208
BLASIUS FLOW
Instability of flow in a streamwise corner
| NASA-CR-191410 | p 2576 N93-25153
BLAST LOADS
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
| AD-A261116 | p 2660 N93-25769
BLOOD PLASMA
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133
BLOOD VOLUME
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133
BLOWING
Computational study of the aerodynamics and control by blowing of asymmetric vortical flows over delta wings p 2574 N93-24772
Tangential fuselage blowing on an ogive cylinder p 2578 N93-25545
BLUFF BODIES
Vortex shedding in oscillatory flow p 2700 N93-25438
BOATTAILS
Computation of transonic flow over a porous surface projectile p 2577 N93-25409
BODY CENTERED CUBIC LATTICES
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
BODY FLUIDS
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133
BODY-WING CONFIGURATIONS
Experimental effects of wing location on wing-body pressures at supersonic speeds
| NASA-TM-4434 | p 2581 N93-26085
BOLTS
Behavior of a steel-liner-and-bolts system under very high thermal and mechanical loading: The CONVEX Liner Add-On to DIAMOND FORTUNE
| DE93-007512 | p 2731 N93-26507
BOLTZMANN TRANSPORT EQUATION
A method for transient, three-dimensional neutron transport calculations
| DE93-007243 | p 2847 N93-25256
BONDED JOINTS
Models of crack growth along polymer interfaces p 2728 N93-25750
BONDING
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
| DE93-007504 | p 2635 N93-25383
Method of joining diamond structures
| AD-D015671 | p 2867 N93-26140
BONES
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
BOOSTER ROCKET ENGINES
SRB environment evaluation and analysis. Volume 3: ASRB plume induced environments
| NASA-CR-192519 | p 2631 N93-26054
SRB environment evaluation and analysis. Volume 2: RSRB joint filling test/analysis improvements
| NASA-CR-192518 | p 2631 N93-26057
Liquid Rocket Booster (LRB) for the Space Transportation System (STS) Systems Study. Amendment 13: Orientation meeting
| NASA-CR-192515 | p 2614 N93-26152
Space transportation booster engine thrust chamber technology, large scale injector
| NASA-CR-192531 | p 2633 N93-26557
BORANES
Mechanisms of decomposition and oxidation of borane compounds
| AD-A261137 | p 2645 N93-26045
BORESIGHTS
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
BORON
Development of dispersion-strengthened XD (trademark) Cu alloys for high heat-flux applications
| NASA-CR-191124 | p 2653 N93-24761
BORON NITRIDES
Workshop on Diamond and Diamond-Like-Carbon Films for the Transportation Industry
| DE93-007491 | p 2658 N93-26506
BOROSILICATE GLASS
Ceramic fiber reinforced glass-ceramic matrix composite
| NASA-CASE-LEW-15262-1 | p 2640 N93-26100
BOTANY
Anatomy and physiology of plant conductive systems
| PB93-156032 | p 2793 N93-25877
BOULES
Laser damage to production- and research-grade KDP crystals
| DE93-007517 | p 2870 N93-26594
BOUNDARIES
High resolution interface nanochemistry and structure
| DE93-009750 | p 2635 N93-25501
BOUNDARY CONDITIONS
Minimization of heat slab nodes with higher order boundary conditions
| DE93-004238 | p 2695 N93-24966
High-order cyclo-difference techniques: An alternative to finite differences
| NASA-TM-107745 | p 2575 N93-25074
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151
An outgoing energy flux boundary condition for finite difference ICRP antenna models
| DE93-007788 | p 2674 N93-25300
BOUNDARY ELEMENT METHOD
Three-dimensional boundary element analysis of contact and fracture problems p 2725 N93-25335
BOUNDARY LAYER COMBUSTION
Hybrid rocket fuel combustion study p 2626 N93-26019
BOUNDARY LAYER CONTROL
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865

BOUNDARY LAYER FLOW
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
Measurements of density, temperature, and their fluctuations in turbulent supersonic flow using UV laser spectroscopy
| NASA-TM-103943 | p 2708 N93-25076
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087
Spatial simulation of transition in wall-bounded shear flows: Active control and effects of surface roughness p 2701 N93-25483
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738
Large-eddy simulation of temporally developing boundary layers with embedded streamwise vortices p 2705 N93-25753
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

BOUNDARY LAYER PLASMAS
Boundary plasma modelling for ITER
| DE93-007963 | p 2859 N93-25302

BOUNDARY LAYER SEPARATION
Development of an expendable particle sensor
| AD-A261127 | p 2710 N93-26044
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

BOUNDARY LAYER STABILITY
Instability of flow in a streamwise corner
| NASA-CR-191410 | p 2576 N93-25153
Large-eddy simulation of temporally developing boundary layers with embedded streamwise vortices p 2705 N93-25753

BOUNDARY LAYERS
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow
| DE93-003362 | p 2695 N93-24963
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087
Numerical simulation of leading-edge receptivity to freestream vorticity p 2577 N93-25388

BOUNDARY VALUE PROBLEMS
Solution of nonlinear boundary value problem on successively refined grids
| AD-A261395 | p 2829 N93-26519

BRAIN
Biomagnetic localization from transient quasi-static events
| DE93-007328 | p 2794 N93-25186
Proceedings of Workshop 1: The Human Brainmap Database
| AD-A260720 | p 2796 N93-25654
Imaging regional changes in the spontaneous activity of the brain: An extension of the minimum-norm least-squares estimate
| AD-A261593 | p 2798 N93-26436
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521

BRAIN DAMAGE
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347

BRAKES (FOR ARRESTING MOTION)
Turbine turbobrake systems p 2717 N93-25268

BRAKING
Turbine turbobrake systems p 2717 N93-25268

BREADBOARD MODELS
Preliminary results of a newly designed mini-OCXO oscillator especially dedicated to space applications p 2621 N93-25028

BREATHING APPARATUS
Inward contaminant leakage tests of the S-Tron Corporation emergency escape breathing device. Phase 1: Tests of the original design. Phase 2: Tests with the redesigned neck seal
| DOT/FAA/AM-92/18 | p 2582 N93-25205

BRICKS
Advanced engineering analysis
| KCP-613-4967 | p 2669 N93-26212

BRIDGES (STRUCTURES)
Fatigue resistance of orthotropic plates with trapezoidal stiffeners
| TRL-TRANS-T3908 | p 2726 N93-25419

BRIGHTNESS TEMPERATURE
Influence due to antenna pattern change in brightness temperature estimation for a space-based microwave radiometer p 2753 N93-24868
Cloud properties as inferred from HIRS/2 multi-spectral data p 2782 N93-25293
Spectra of stable sonoluminescence
| AD-A260621 | p 2844 N93-25637
Vector radiative transfer model: Application to rainfall retrieval with microwave radiometric data p 2784 N93-25743
Brightness temperature and attenuation diversity statistics at 20.6 and 31.65 GHz for the Colorado Research Network p 2684 N93-26473

BRILLOUIN EFFECT
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369

BRITTLENESS
Micromechanics of fatigue
| AD-A260577 | p 2729 N93-25901
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235

BROADBAND
Very wide bandwidth HF crystal filters p 2693 N93-25039
A modular wideband sound absorber
| BBC-RD-1992/11 | p 2673 N93-25171
Apparatus for imaging an object in or through a scattering medium using coherent anti-Stokes Raman scattering
| AD-D015642 | p 2852 N93-25358
Computation of broadband mixing noise from turbomachinery
| AD-A261611 | p 2846 N93-26165
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261

BROADCASTING
An example of a phase-segregated enhanced PAL broadcasting system
| BBC-RD-1992/6 | p 2674 N93-25239
Experiments with the HIVITS HDTV contribution CODED
| BBC-RD-1992/12 | p 2674 N93-25391
WARC 92 and some thoughts as to its impact on the NASA propagation program p 2684 N93-26475

BROKEN SYMMETRY
Consequences of spontaneous and anomalous symmetry breaking for the orbital and mass flow hydrodynamics of He-3 - A p 2698 N93-25295

BROMIDES
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629

BSCCO SUPERCONDUCTORS
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
| NASA-CR-192344 | p 2863 N93-25219
Analysis of the gap in high-temperature superconductors using photoemission spectroscopy p 2865 N93-25744

BUBBLES
Modeling of bubble and drop formation in flowing liquids in terrestrial and microgravity environments p 2664 N93-25390
Simulation of vortex bursting p 2580 N93-25881

BUCKLING
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
The damage, repair and design of fiber composite structural materials p 2635 N93-25532

BUFFER STORAGE
An investigation of memory latency reduction using an address prediction buffer
| AD-A261010 | p 2806 N93-25858
The design and implementation of a read prediction buffer
| AD-A260902 | p 2806 N93-25934

BUILDINGS
Stochastic and seismic design response of linear and nonlinear structures p 2726 N93-25484
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584

BULKHEADS
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597

BUOYANCY
Heat transfer in rotating serpentine passages with selected model orientation for smooth or skewed trip walls
| NASA-TM-106126 | p 2667 N93-25177
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657

BURNING RATE
Calculations of combustion response profiles and oscillations
| NASA-TM-106135 | p 2623 N93-25236
The burning rate behavior of pure nitrocellulose propellant samples
| AD-A261009 | p 2661 N93-25857
Thermal radiation in non-metalized solid rocket motors: Effect on burning rate and temperature sensitivity p 2626 N93-26020
Improved burn rate determination techniques p 2627 N93-26021
Determination of burn rate requirements from ASRM performance specifications p 2627 N93-26023
Flame response in oscillatory solid propellant combustion p 2630 N93-26041
An experimental and analytical study of the unsteady combustion of homogeneous energetic solids using the laser-recoil method p 2630 N93-26042
Dynamic burning rate measurements of metalized composite propellants using the laser-recoil technique p 2631 N93-26043

BURNING TIME
Improved burn rate determination techniques p 2627 N93-26021

BURNOUT
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946

BY-PRODUCTS
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496

BYPASS RATIO
Transient performance of fan engine with water ingestion
| NASA-CR-190778 | p 2573 N93-25134

C

C (PROGRAMMING LANGUAGE)
A software package for neural network applications development p 2827 N93-25610
Implementation of custom colors in the DECwindows environment
| AD-A261456 | p 2757 N93-26574

CABLES
Equipment testing with damped sinewaves between 1 and 50 MHz p 2692 N93-24881
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Alternative equipment test procedures for simultaneous current injection on multiple cable bundles p 2693 N93-24903

CADMIUM TELLURIDES
Role of polycrystallinity in CdTe and CuInSe2 photovoltaic cells
| DE93-000045 | p 2759 N93-25504
IR materials producibility
| AD-A261099 | p 2853 N93-25766

CALCIUM OXIDES
Temperature-dependent electrical conductivity of soda-lime glass
| DE93-007872 | p 2654 N93-25359

CALCULUS OF VARIATIONS
Incompressible spectral-element method: Derivation of equations
| NASA-TM-106109 | p 2708 N93-26554

CALIBRATING
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory p 2600 N93-24697
Real-time attitude determination and gyro calibration p 2602 N93-24708
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Ice thickness measurement system for the icing research tunnel calibration
| NASA-TM-106095 | p 2708 N93-24737
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777
The scope of DLR's SAR calibration program p 2738 N93-24778
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888
An atlas of selected calibrated stellar spectra
| NASA-CR-177604 | p 2888 N93-25135
Thermal expansion measurements of polymer matrix composites and syntactics
| MTL-TR-92-27 | p 2640 N93-25954
System for calibrating a gyro navigator
| AD-D015668 | p 2586 N93-26093
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109
VETA-I x ray test analysis
| NASA-CR-192321 | p 2854 N93-26183

Precision of the calibration of the AXAF engineering test article (VETA) mirrors p 2855 N93-26189
Surface finish quality of the outer AXAF mirror pair based on x ray measurements of the VETA-I p 2855 N93-26191
The x ray reflectivity of the AXAF VETA-I optics p 2855 N93-26192

CALIFORNIA
Geologic structure and processes of the eastern Pacific margin: California and Costa Rica p 2771 N93-25424

CALORIMETERS
Compressor calorimeter performance of refrigerant blends: Comparative methods and results for a refrigerator/freezer application
| DE93-006734 | p 2667 N93-24970

CAMBER
Aerodynamic foundations for use of unsteady aerodynamic effects in flight control p 2576 N93-25274

CAMERAS
High speed x ray gating cameras for ICF imaging applications
| DE93-007500 | p 2709 N93-25515
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634

CANADA
Integrating satellite imagery and digital elevation data for geobotanical mapping in Quetico Provincial Park, Ontario, Canada p 2754 N93-25430

CANCER
Measuring the metastatic potential of cancer cells p 2794 N93-25566
Immunoconjugates: Magic bullets for cancer therapy? p 2796 N93-25567
Automated system for early breast cancer detection in mammograms p 2796 N93-25568

CANONICAL FORMS
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151

CAP CLOUDS
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874

CAPACITANCE
On machine capacitance dimensional and surface profile measurement system p 2670 N93-25579
Single electron charging effects in mesoscopic systems
| AD-A261228 | p 2868 N93-26302
Large area, low capacitance Si(Li) detectors for high rate x ray applications
| DE93-007661 | p 2692 N93-26598

CAPACITANCE SWITCHES
OSCCAR: Oscillator-compensated with a capacitance array p 2693 N93-25002

CAPACITANCE-VOLTAGE CHARACTERISTICS
Liquid filled variable capacitor
| AD-D015639 | p 2687 N93-25212

CAPACITORS
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD)
| DE92-010560 | p 2862 N93-24953
Liquid filled variable capacitor
| AD-D015639 | p 2687 N93-25212
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
| DE93-007601 | p 2689 N93-25417

CAPE KENNEDY LAUNCH COMPLEX
Weather forecasting expert system study
| NASA-CR-192929 | p 2777 N93-24747
Launch pad lightning protection enhancement by induced streamers p 2609 N93-24876
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889

CAPILLARY FLOW
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221
Numerical simulation of time-dependent thermocapillary convection in layered fluid systems p 2700 N93-25472
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779

CARBIDES
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE93-009707 | p 2644 N93-25500

CARBON
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams p 2658 N93-25564
Method of joining diamond structures
| AD-D015671 | p 2867 N93-26140
Workshop on Diamond and Diamond-Like-Carbon Films for the Transportation Industry
| DE93-007491 | p 2658 N93-26506

CARBON COMPOUNDS
Structure and properties of a-C: N filns prepared by pulsed excimer laser deposition
| DE93-007908 | p 2654 N93-25372

CARBON DIOXIDE
The properties of and analytical methods for detection of LiOH and Li2CO3
| NASA-CR-192771 | p 2643 N93-25240
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037
Long term modeling of the links between economics, technical progress, and environment: Evolution of approaches and new trends
| DE93-005035 | p 2767 N93-26497
IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source
| AD-A261399 | p 2862 N93-26520

CARBON DIOXIDE LASERS
IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source
| AD-A261399 | p 2862 N93-26520

CARBON FIBER REINFORCED PLASTICS
Effect of water immersion on fiber/matrix adhesion
| AD-A260704 | p 2636 N93-25652

CARBON FIBERS
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Zoning of aircraft by electric field modelling p 2583 N93-24894
Effect of water immersion on fiber/matrix adhesion
| AD-A260704 | p 2636 N93-25652
The corrosion of metal matrix composites p 2638 N93-25723
The 0.3 mm diameter flexible amperometric lactate probe
| AD-A260826 | p 2690 N93-25782

CARBON MONOXIDE
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

CARBON STARS
Radial velocity measurements of carbon stars p 2895 N93-25713

CARBON STEELS
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
| DE93-007504 | p 2635 N93-25383

CARBON TETRAFLUORIDE
Global warming potential for CF4
| DE93-005740 | p 2762 N93-25146

CARBON-CARBON COMPOSITES
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533
Characterization of aerospace grade resins and composites through pressurized volumetric dilatometry
| AD-A260794 | p 2639 N93-25918

CARBONACEOUS CHONDRITES
Volatiles in interplanetary dust particles: A comparison with CI and CM chondrites p 2896 N93-26062

CARBONYL COMPOUNDS
A novel process for methanol synthesis
| DE93-008037 | p 2659 N93-25118
The structure and energetics of Cr(CO)6 and Cr(CO)5
| NASA-CR-192889 | p 2848 N93-25450

CARBOXYL GROUP
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518

CARBOXYLIC ACIDS
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
Energetic materials from cubane
| AD-A261317 | p 2662 N93-26308

CARDIOVASCULAR SYSTEM
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133

CARDS
Thin rechargeable batteries for CMOS SRAM memory protection p 2694 N93-25583
A novel method for characterization of superconductors: Physical measurements and modeling of thin films p 2871 N93-25584

CARRIER INJECTION
Alternative equipment test procedures for simultaneous current injection on multiple cable bundles p 2693 N93-24903

CARRIER WAVES
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120

CASCADE FLOW
Flow and heat transfer experiments in the turbine airfoil/endwall region p 2704 N93-25725

CASING
Design and performance of nozzle-less volute casings for inward flow radial turbines p 2593 N93-25471

CASSINI MISSION
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660

CASTINGS
High temperature fracture toughness of Ni3Al alloy IC-396M
| DE93-008564 | p 2650 N93-25492
Indigenous lunar construction materials p 2670 N93-26413
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526

CASTS
Indigenous lunar construction materials p 2670 N93-26413

CATACLYSMIC VARIABLES
Origin and evolution of cataclysmic variables p 2893 N93-25245
Radial velocity studies of the secondary in cataclysmic variables p 2888 N93-25286

CATALOGS (PUBLICATIONS)
A revised and expanded catalogue of mass ejections observed by the Solar Maximum Mission coronagraph
| NASA-CR-193146 | p 2899 N93-26556

CATALYSIS
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529

CATALYSTS
Design of a high activity and selectivity alcohol catalyst
| DE93-008101 | p 2659 N93-25111
Design of a high activity and selectivity alcohol catalyst
| DE93-008103 | p 2659 N93-25112
Probe molecule studies: Active species in alcohol synthesis
| DE93-008097 | p 2659 N93-25119
Theoretical predictions of platinum-rhodium bimetallic catalysts
| DE93-007540 | p 2649 N93-25428
Direct methane conversion to methanol
| DE93-009183 | p 2660 N93-25497
Catalytic conversion of light alkanes
| DE93-009646 | p 2644 N93-25499
Activation of methane by clean and chemically modified single crystal oxide surfaces
| PB93-157295 | p 2644 N93-25817

CATARACTS
A fiber optic probe for the detection of cataracts p 2796 N93-25593

CATHODE RAY TUBES
Emerging large-screen display technology
| AD-A261066 | p 2681 N93-26241

CATHODIC COATINGS
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597

CAUCHY PROBLEM
Activity report
| AD-A261933 | p 2829 N93-26199

CAVITIES
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967
Poly-coil design for a 60 tesla quasi-stationary magnet
| DE93-007353 | p 2688 N93-25313
A model for the filling of cold cavities with solidifying, semi-crystalline polymers
| DE93-003817 | p 2655 N93-25507
Ultrasonic polishing p 2670 N93-25580

Another look at the driven cavity problem
| AD-A261903 | p 2708 N93-26543

CAVITY FLOW
Numerical study of cavity natural convection flow with augmenting and counteracting effects by projection finite element method p 2701 N93-25540
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542

CAVITY RESONATORS
Basic design of a spaceborne hydrogen maser p 2716 N93-25024
Efficient nonlinear optical conversion of 1.319-micron laser radiation
| AD-A261309 | p 2715 N93-26297

CD-ROM
OCEAN-PC and a distributed network for ocean data p 2734 N93-24928
Satellite altimetry p 2734 N93-24930
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369

CELESTIAL MECHANICS
Atomic time scales for dynamical astronomy p 2832 N93-24984

CELESTIAL REFERENCE SYSTEMS
Atomic time scales for dynamical astronomy p 2832 N93-24984

CELLS (BIOLOGY)
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763
Measuring the metastatic potential of cancer cells p 2794 N93-25566
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764

CELLULOSE NITRATE
The burning rate behavior of pure nitrocellulose propellant samples
| AD-A261009 | p 2661 N93-25857

CEMENTATION
Particle size as a factor in agglomeration in slurry fuels p 2625 N93-26013

CENTAURUS CONSTELLATION
ROSAT investigation of flaring and activity on Prox Cen
| NASA-CR-192972 | p 2891 N93-26139

CENTER OF GRAVITY
Experimental performance of a ventral nozzle with pitch and yaw vectoring capability for SSTOVL aircraft
| NASA-TM-106054 | p 2592 N93-25129
Apparatus and methods for determining balance of a cylindrical vehicle
| AD-D015637 | p 2717 N93-25228

CENTER OF MASS
Helmeted head and neck dynamics under whole-body vibration p 2800 N93-25531

CENTRAL PROCESSING UNITS
Using a Cray Y-MP as an array processor for a RISC Workstation
| NASA-TM-103961 | p 2809 N93-25246
The database Query Support Processor (QSP) p 2807 N93-25577
The design and implementation of a read prediction buffer
| AD-A260902 | p 2806 N93-25934

CENTRIFUGAL COMPRESSORS
Numerical modelling of viscous turbomachinery flows with a pressure correction method p 2594 N93-25702

CENTRIFUGAL FORCE
A numerical and experimental studies of flow characteristics in centrifugal fans p 2577 N93-25339

CENTROIDS
Geometric distortion analysis of a wide-field astrograph p 2621 N93-26111

CERAMIC FIBERS
Internal strain analysis of ceramics using scanning laser acoustic microscopy
| NASA-CR-191118 | p 2721 N93-25451
Passive vibration damping materials: Piezoelectric ceramics composites for vibration damping applications
| AD-A260792 | p 2727 N93-25690
The corrosion of metal matrix composites p 2638 N93-25723
International Workshop on Advances in Inorganic Fibre Technology
| AD-A260719 | p 2639 N93-25908
Ceramic fiber reinforced glass-ceramic matrix composite
| NASA-CASE-LEW-15262-1 | p 2640 N93-26100

CERAMIC MATRIX COMPOSITES
Development of ASTM standards in support of advanced ceramics development
| DE93-003024 | p 2654 N93-25361
Internal strain analysis of ceramics using scanning laser acoustic microscopy
| NASA-CR-191118 | p 2721 N93-25451
High resolution interface nanochemistry and structure
| DE93-009750 | p 2635 N93-25501
Mullite whiskers and mullite-whisker felt p 2642 N93-25586
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760
International Workshop on Advances in Inorganic Fibre Technology
| AD-A260719 | p 2639 N93-25908
Processing and properties of silicon carbide reinforced reaction bonded silicon nitride composites
| AD-A260570 | p 2640 N93-26236
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355

CERAMICS
Evaluation of a candidate material for a coal-fired magnetohydrodynamic (MHD) high temperature recuperative air heater
| DE93-006630 | p 2858 N93-24968
Development of thin film thermocouples on ceramic materials for advanced propulsion system applications
| NASA-TM-106017 | p 2709 N93-25173
Temperature-dependent electrical conductivity of soda-lime glass
| DE93-007872 | p 2654 N93-25359
Development of ASTM standards in support of advanced ceramics development
| DE93-003024 | p 2654 N93-25361
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
| DE93-007601 | p 2689 N93-25417
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill p 2659 N93-25585
Electroelastic equations for electroded thin plates subject to large driving voltages
| AD-A261123 | p 2675 N93-25772
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204
Processing and properties of silicon carbide reinforced reaction bonded silicon nitride composites
| AD-A260570 | p 2640 N93-26236
Research support for the Laboratory for Lightwave Technology
| AD-A261488 | p 2856 N93-26343
Densification of ceramics by gas overpressure sintering
| MTL-TR-92-45 | p 2657 N93-26432
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588

CEREBRAL CORTEX
Duration of alpha suppression increases with angle in a mental rotation task
| AD-A261592 | p 2798 N93-26435
Imaging regional changes in the spontaneous activity of the brain: An extension of the minimum-norm least-squares estimate
| AD-A261593 | p 2798 N93-26436
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521

CERENKOV COUNTERS
The Sudbury Neutrino Observatory
| DE93-007697 | p 2899 N93-25327

CERIUM OXIDES
In situ surface studies of conversion coatings for steel and aluminum
| AD-A261016 | p 2655 N93-25861

CERTIFICATION
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739
Zoning of aircraft: A review of the definitions p 2583 N93-24880

CESIUM
A simple and compact source of cold atoms for cesium fountains and microgravity clocks p 2831 N93-24981
Preliminary results on an optically-pumped Cs beam frequency standard p 2832 N93-24989
Miniature optically-pumped cesium beam resonator p 2833 N93-24990
Actual limits of fluorescence S/N ratio in an optically-pumped cesium beam resonator p 2833 N93-24991
A compact and high-performance reference cell for laser frequency stabilization p 2716 N93-25065

CHANGE DETECTION
The regional planning and control using the satellite data p 2740 N93-24788
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
Detection of land use/land cover changes using remote sensing and GIS in Vietnam p 2740 N93-24791
Hel's peninsula coastal zone changes in the last 40 years on a base of remote sensing methods p 2747 N93-24832
Monitoring and evaluation of morphohydrographical changes in the Danube Delta by remote-sensing p 2747 N93-24834
The national parks of Bavarian Forest and Sumava: A Landsat TM perspective on the structure and dynamics of the largest woodland of Central Europe p 2748 N93-24837
Interpretation and segmentation of changed forest stands from difference imagery based on regression functions p 2748 N93-24839
Assessment of storm damage in forests using SPOT imagery p 2748 N93-24842
Observation of forest damages in the Harz mountains by means of satellite remote sensing p 2749 N93-24848

CHANNEL FLOW
Propagation velocity and space-time correlation of perturbations in turbulent channel flow
| NASA-TM-103932 | p 2695 N93-25082
Spatial simulation of transition in wall-bounded shear flows: Active control and effects of surface roughness p 2701 N93-25483
Computational modelling of 3D flow in complex ducts and passages p 2704 N93-25698

CHANNELS (DATA TRANSMISSION)
Figure of merit for direct-detection optical channels p 2678 N93-26117
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289

CHAOS
Introduction of chaotic dynamical systems
| AD-A261747 | p 2872 N93-26250
Information transmission using CHAOS
| AD-A261519 | p 2883 N93-26377
Chaos metrics for testing lagrangian particle models
| AD-A261429 | p 2776 N93-26454
1992 technical digest series volume 16. Conference edition: Summaries of papers presented at the Nonlinear Dynamics in Optical Systems Topical Meeting
| AD-A261915 | p 2857 N93-26544

CHAPLYGIN EQUATION
Nonholonomic geometry, mechanics and control p 2724 N93-25270

CHARACTERIZATION
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
| DE93-002943 | p 2760 N93-24955
Characterization of electrochemical systems and batteries: Materials and systems
| DE93-003472 | p 2687 N93-24964
Crystal growth and physical characterizations of GaPO4 p 2840 N93-25044
Interface engineering in oxide fiber/oxide matrix composites
| AD-A261705 | p 2641 N93-26579

CHARGE COUPLED DEVICES
Star tracker operation in a high density proton field p 2600 N93-24699
High resolution stereo imaging and data compression p 2753 N93-24867

CHARGE DISTRIBUTION
Halogen adlayers on Ag(111)
| AD-A261792 | p 2850 N93-26443

CHARGE TRANSFER
Halogen adlayers on Ag(111)
| AD-A261792 | p 2850 N93-26443
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525

CHARGED PARTICLES
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887
Neutron energy determination with a high-purity germanium detector
| NASA-CR-192773 | p 2900 N93-25890

CHARPY IMPACT TEST
Mechanical properties of martensitic alloy AISI 422
| DE93-006563 | p 2649 N93-25255

CHEBYSHEV APPROXIMATION
An approach for finding long period elliptical orbits for precursor SEI missions p 2604 N93-24720
CHECKOUT
Source-level debugging of automatically parallelized programs
| AD-A261520 | p 2813 N93-26378
TCMS operations and maintenance philosophy
| NASA-TM-108756 | p 2873 N93-26418
Test, Control and Monitor System (TCMS) operations plan
| NASA-CR-193098 | p 2873 N93-26419
CHELATES
Transition metal chelate-fulleride compounds: Electrocrystallization of semiconducting (Ru(bpy)s)(C60)2
| AD-A261549 | p 2869 N93-26577
CHEMICAL ANALYSIS
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study p 2736 N93-24938
Studies of the analyte-carrier interface in flow injection analysis
| DE93-008374 | p 2644 N93-25311
High resolution interface nanochemistry and structure
| DE93-009750 | p 2635 N93-25501
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874
Quality control: Variability in protocols
| PB93-157790 | p 2766 N93-25876
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315
CHEMICAL BONDS
The interaction of HCN/DCN with Si(100)-2x1
| AD-A260837 | p 2645 N93-25920
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525
CHEMICAL CLEANING
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940
Aqueous cleaning of flux residue from solder joints
| KCP-613-4803 | p 2652 N93-26208
CHEMICAL COMPOSITION
Characterization of electrochemical systems and batteries: Materials and systems
| DE93-003472 | p 2687 N93-24964
Cosmic ray composition investigations using ICE/ISEE-3
| NASA-CR-192808 | p 2900 N93-25241
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519
Modeling of H2/N2O flames p 2627 N93-26026
CHEMICAL EQUILIBRIUM
A novel process for methanol synthesis
| DE93-008037 | p 2659 N93-25118
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642
CHEMICAL EXPLOSIONS
Hazards of explosives dusts: Particle size effects
| DE93-009380 | p 2668 N93-25498
CHEMICAL LASERS
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967
Experimental and theoretical study of cw HF chemical laser overtone performance p 2713 N93-25420
Experimental and theoretical study of CW HF chemical laser residual fundamental gain p 2714 N93-25721
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
CHEMICAL MACHINING
Monolithic quartz vibrating beam accelerometer p 2711 N93-25011
Controlled dissolution of a piezoelectric material berlinite (AlPO4) p 2840 N93-25043
CHEMICAL PROPERTIES
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
Electrochemical and spectroscopic studies of molten halides
| AD-A261687 | p 2646 N93-26439
CHEMICAL REACTIONS
Design and synthesis of reactive separation systems
| DE93-008764 | p 2642 N93-25115
The properties of and analytical methods for detection of LiOH and Li2CO3
| NASA-CR-192771 | p 2643 N93-25240
Mechanistic studies of the CVD of silicon nitride from SiF4 and NH3
| DE93-004500 | p 2644 N93-25312
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Chemical dynamics studies of high energy species
| AD-A260743 | p 2852 N93-25676
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces
| AD-A261265 | p 2657 N93-26303
Energetic materials from cubane
| AD-A261317 | p 2662 N93-26308
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
CHEMICAL REACTORS
Direct methane conversion to methanol
| DE93-009183 | p 2660 N93-25497
CHEMISORPTION
Design of a high activity and selectivity alcohol catalyst
| DE93-008103 | p 2659 N93-25112
Resonant tunneling through chemisorbed halogen atoms on Ag(111)
| AD-A261794 | p 2868 N93-26254
CHEMOTHERAPY
Measuring the metastatic potential of cancer cells p 2794 N93-25566
Immunoconjugates: Magic bullets for cancer therapy? p 2796 N93-25567
CHINA
Climate data bases of the People's Republic of China, 1841-1988
| DE93-007907 | p 2764 N93-25517
CHINESE AIRCRAFT
An analysis of the reliability and maintainability of the Jian 6 and Jian 7 aircraft and ways to improve them
| AD-A261060 | p 2574 N93-26238
CHIPS (ELECTRONICS)
Two- and three-dimensional high performance, patterned overlay multi-chip module technology p 2694 N93-25581
Improved performance and safety for high energy batteries through use of hazard anticipation and capacity prediction p 2694 N93-25582
Solid-state isotopic power source for computer memory chips p 2694 N93-25596
Gigabit network communications research
| AD-A260644 | p 2675 N93-25640
Construction of a connectionist network supercomputer
| AD-A260929 | p 2820 N93-25648
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
| AD-A260901 | p 2727 N93-25658
VLSI for high-speed digital signal processing
| AD-A260754 | p 2690 N93-25678
The design and implementation of a read prediction buffer
| AD-A260902 | p 2806 N93-25934
AMPHIB: A users manual
| AD-A261769 | p 2669 N93-26285
Considerations for space and naval aviation applications of ferroelectric memory
| AD-A261300 | p 2807 N93-26294
Multichip module high speed testing
| AD-A261391 | p 2856 N93-26306
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311
CHIPS (MEMORY DEVICES)
Solid-state isotopic power source for computer memory chips p 2694 N93-25596
CHLOROCARBONS
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
| DE93-002862 | p 2760 N93-24675
CHLOROETHYLENE
Development of a replacement for trichloroethylene in the two-stage cleaning process
| KCP-613-4941 | p 2669 N93-26207
CHLOROFLUOROCARBONS
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
| DE93-002862 | p 2760 N93-24675
CHLOROPLASTS
Kinetic studies of interfacial photocurrents in platinized chloroplasts
| DE93-002344 | p 2792 N93-25104
CHROMATES
Chromate-free corrosion resistant talc coatings for aluminum alloys
| DE93-005370 | p 2655 N93-25446
CHROMIUM CARBIDES
Electrodeposition in low gravity p 2663 N93-24774
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
CHROMIUM STEELS
Interaction of O2 with the Fe(.84)Cr(.16) (001) surface studied by photoelectron spectroscopy
| AD-A261065 | p 2645 N93-26251
CHROMOSPHERE
ROSAT x ray survey observations of active chromospheric binary systems and other selected sources
| NASA-CR-192933 | p 2891 N93-26426
Chromospheric activity in algol binaries
| AD-A261440 | p 2896 N93-26508
CIRCUIT BOARDS
Aqueous cleaning of flux residue from solder joints
| KCP-613-4803 | p 2652 N93-26208
CIRCUIT BREAKERS
High speed solid state circuit breaker p 2694 N93-25598
CIRCUIT RELIABILITY
Dynamic behavior of helix interaction circuits
| AD-A261362 | p 2692 N93-26334
CIRCUITS
The constant current loop: A new paradigm for resistance signal conditioning
| NASA-TM-108744 | p 2673 N93-25181
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
| NASA-CR-192344 | p 2863 N93-25219
Radiation-hardened control system
| DE93-007248 | p 2688 N93-25377
Tuned circuit electric levitation bearings for microactuators p 2689 N93-25619
A design of a fast and area efficient multi-input Muller C-element
| AD-A261002 | p 2690 N93-25856
Utilization of an electronic circuit simulator in CMOS latch-up studies
| AD-A260877 | p 2690 N93-25935
Investigation into the common mode rejection ratio of the physiological signal conditioner circuit p 2794 N93-26073
Dynamic behavior of helix interaction circuits
| AD-A261362 | p 2692 N93-26334
CIRCULAR CYLINDERS
Experimental study of the effect of helical grooves on an infinite cylinder
| AD-A260890 | p 2676 N93-25912
CIRCULAR ORBITS
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272
Generalized probability model for calculation of interference to the Deep Space Network due to circularly Earth-orbiting satellites p 2679 N93-26127
CIRCULAR TUBES
Analysis of longitudinal impact on semi-infinite circular bars and tubes. Appendix no. 2
| AD-A261556 | p 2731 N93-26459
CIRCULATION DISTRIBUTION
Supersonic shock wave/vortex interaction
| NASA-CR-192917 | p 2576 N93-25249
CITRIC ACID
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571
CIVIL AVIATION
Design concepts for the development of cooperative problem-solving systems
| NASA-CR-192708 | p 2585 N93-25261
A review of civil aviation propeller-to-person accidents: 1980-1989
| AD-A260695 | p 2583 N93-25896
Design of an air traffic computer simulation system to support investigation of civil tiltrotor aircraft operations
| NASA-CR-192920 | p 2585 N93-26052
Bibliography on propulsion airframe integration technologies for high-speed civil transport applications, 1980-1991
| NASA-TM-105602 | p 2573 N93-26136
CLADDING
Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications
| DE93-005485 | p 2852 N93-25182
CLASSIFICATIONS
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777

Remote sensed spectral signatures classification and recognition by neural networks: An approach to unsupervised techniques p 2738 N93-24779
The regional planning and control using the satellite data p 2740 N93-24788
A knowledge-based approach to waste disposal sites detection through integration of Landsat-TM imagery and geographical context information p 2741 N93-24796
European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820
The national parks of Bavarian Forest and Sumava: A Landsat TM perspective on the structure and dynamics of the largest woodland of Central Europe p 2748 N93-24837
Application of photographic remote sensing data from space for information about forests p 2748 N93-24838
The use of polarimetric radar remote sensing data for application in forestry p 2749 N93-24845
Swedish forest information atlas p 2749 N93-24847
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856
Appliction of remote sensing to forestry mapping: Experience from the European collaborative programme for the less favoured areas p 2751 N93-24857
Biodiversity indication by Earth observation data p 2751 N93-24858
Combining spectral information with crop rotation knowledge for crop classifications p 2752 N93-24861
Tree classification software p 2814 N93-25591
The SWORD multilevel secure DBMS
|RSRE-92005| p 2811 N93-25942
The probabilistic neural network architecture for high speed classification of remotely sensed imagery p 2824 N93-25972
Data fusion with artificial neural networks (ANN) for classification of earth surface from microwave satellite measurements p 2824 N93-25974
Classifying multispectral data by neural networks p 2825 N93-25976
Inferring heuristic classification hierarchies from natural language input p 2825 N93-25979

CLASSIFIERS
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
|NASA-CR-191711| p 2787 N93-26492

CLATHRATES
Far infrared spectra of amorphous and crystalline water ice and changes in these phases as the result of proton irradiation
|NASA-CR-192849| p 2892 N93-25230

CLAYS
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill p 2659 N93-25585

CLEAN ENERGY
Documentation for propane fleet conversion cost-effectiveness model
|PB93-165611| p 2720 N93-26590

CLEAN FUELS
Catalytic conversion of light alkanes
|DE93-009646| p 2644 N93-25499

CLEAR AIR TURBULENCE
Research support for the Laboratory for Lightwave Technology
|AD-A261488| p 2856 N93-26343

CLIMATE
WCRP surface radiation budget shortwave data product description, version 1.1
|NASA-TM-107747| p 2777 N93-24742
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
|ESA-ISY-1-VOL-2| p 2737 N93-24775
Verification of a climate convention: Role and limitations of a space based remote sensing system p 2738 N93-24781
Proceedings of the Ocean Climate Data Workshop
|NASA-TM-108711| p 2732 N93-24915
International organisation of ocean programs: Making a virtue of necessity p 2732 N93-24917
Role of the ocean in climate changes p 2732 N93-24918
The role of the World Data Centers in handling ocean climate data p 2732 N93-24919
Operational seasonal and interannual predictions of ocean conditions p 2733 N93-24921
Indian Ocean analyses p 2733 N93-24925
Ocean climate data for user community in West and Central Africa: Needs, opportunities, and challenges p 2735 N93-24933
International ocean services: Is it time - will it ever be time? p 2737 N93-24941
Computer systems p 2737 N93-24942
FORTRAN M as a language for building earth system models
|DE93-007897| p 2763 N93-25370
Evaluating climate-vegetation interactions at climate model sub-grid scales p 2764 N93-25476
Climate data bases of the People's Republic of China, 1841-1988
|DE93-007907| p 2764 N93-25517
Parallelizing the spectral transform method: A comparison of alternative parallel algorithms
|DE93-008664| p 2816 N93-25521
Land surface processes and climate modeling p 2783 N93-25685
National Weather Service Winter Weather Workshop
|PB93-146785| p 2785 N93-25775
Climate Monitoring and Diagnostics Laboratory
|PB93-156388| p 2785 N93-25871
Rainfall frequency atlas of the Midwest
|PB93-164606| p 2785 N93-25872
The Earth's climate as a dynamical system
|DE93-004666| p 2767 N93-26496

CLIMATE CHANGE
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
|ESA-ISY-1-VOL-2| p 2737 N93-24775
Role of the ocean in climate changes p 2732 N93-24918
Sea level variation p 2734 N93-24929
Data management for JGOFS: Theory and design p 2735 N93-24935
Selected translated abstracts of Russian-language climate-change publications: 1. Surface energy budget
|DE93-003189| p 2760 N93-24952
Analysis of LARI sensor system
|DE93-006334| p 2761 N93-24977
Application of optical remote sensing to the study of surface fluxes related to cloud formation
|DE93-003783| p 2781 N93-25125
Trends '91: A compendium of data on global change. Highlights
|DE93-003112| p 2761 N93-25144
CHAMMP

Climate data bases of the People's Republic of China, 1841-1988
|DE93-007907| p 2764 N93-25517
Inverse sequential procedures for the monitoring of time series
|NASA-CR-192959| p 2765 N93-25666
Response and feedbacks of forest ecosystems to global climate change
|PB93-167252| p 2767 N93-26510

CLIMATOLOGY
WCRP surface radiation budget shortwave data product description, version 1.1
|NASA-TM-107747| p 2777 N93-24742
Correlation between NDVI values derived from NOAA AVHRR HRPT data and ground measurements of precipitation in the EFEDA study area (Spain) p 2738 N93-24780
The need for spaceborne observations for meteorology and climatology p 2744 N93-24813
World Ocean Circulation Experiment p 2733 N93-24922
The Global Ocean Observing System p 2733 N93-24923
Indian Ocean analyses p 2733 N93-24925
The use of remotely sensed data for operational fisheries oceanography p 2734 N93-24927
Ocean climate data for user community in West and Central Africa: Needs, opportunities, and challenges p 2735 N93-24933
The effects of sampling frequency on the climate statistics of the ECMWF general circulation model
|DE93-003338| p 2761 N93-25145
Climate data bases of the People's Republic of China, 1841-1988
|DE93-007907| p 2764 N93-25517
Parallelizing the spectral transform method: A comparison of alternative parallel algorithms
|DE93-008664| p 2816 N93-25521
Local and regional estimates of sensible and latent heat flux densities from a patch-work surface
|ISBN-0-315-70882-4| p 2772 N93-25556
National Weather Service Winter Weather Workshop
|PB93-146785| p 2785 N93-25775
Climate Monitoring and Diagnostics Laboratory
|PB93-156388| p 2785 N93-25871
Rainfall frequency atlas of the Midwest
|PB93-164606| p 2785 N93-25872
A climatology of polar low occurrences in the Nordic Seas and an examination of katabatic winds as a triggering mechanism
|AD-A261719| p 2786 N93-26245

CLINICAL MEDICINE
Automated system for early breast cancer detection in mammograms p 2796 N93-25568

CLOCKS
Timing a national telecommunications network using GPS p 2687 N93-25062
Strategies for synchronisation in an evolving telecommunications network p 2687 N93-25063

CLOSED CIRCUIT TELEVISION
The adult literacy evaluator: An intelligent computer-aided training system for diagnosing adult illiterates p 2799 N93-26082

CLOSED CYCLES
FALCON nuclear-reactor-pumped laser program and wireless power transmission
|DE93-007607| p 2715 N93-26597

CLOSED ECOLOGICAL SYSTEMS
A survey of life support system automation and control
|NASA-TM-103977| p 2667 N93-25085

CLOSURE LAW
Fast parallel algorithms that compute transitive closure of a fuzzy relation
|NASA-CR-192950| p 2818 N93-25190

CLOUD COVER
Application of optical remote sensing to the study of surface fluxes related to cloud formation
|DE93-003783| p 2781 N93-25125
Prediction of global cloud cover with a very high resolution global spectral model
|AD-A261047| p 2785 N93-25777

CLOUD GLACIATION
The initiation of lightning and the growth of electric fields in thunderstorms
|AD-A261455| p 2787 N93-26352

CLOUD SEEDING
Investigation of winter mountain storms in Utah during the 1989 Utah/NOAA field program
|PB93-153021| p 2785 N93-25849
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
|PB93-153096| p 2786 N93-25874

CLOUDS (METEOROLOGY)
WCRP surface radiation budget shortwave data product description, version 1.1
|NASA-TM-107747| p 2777 N93-24742
Cloud properties as inferred from HIRS/2 multi-spectral data p 2782 N93-25293

CLUSTER ANALYSIS
Discrete range clustering using Monte Carlo methods
|NASA-TM-104004| p 2584 N93-24914
Improving performance through concept formation and conceptual clustering
|NASA-CR-192726| p 2828 N93-25262

CLUTTER
Theoretical study of topside ionospheric clutter
|AD-A260982| p 2774 N93-25852
High Frequency (HF) radiowave propagation
|AD-A261726| p 2681 N93-26280

CMOS
Thin rechargeable batteries for CMOS SRAM memory protection p 2694 N93-25583
Smart microsensors for high temperature applications
|AD-A260747| p 2710 N93-25677
A design of a fast and area efficient multi-input Muller C-element
|AD-A261002| p 2690 N93-25856
Utilization of an electronic circuit simulator in CMOS latch-up studies
|AD-A260877| p 2690 N93-25935

COAL
Biological production of ethanol from coal
|DE93-008947| p 2660 N93-25496

COAL DERIVED LIQUIDS
Production of low-cost hydrogen
|DE93-008070| p 2643 N93-25305

COAL GASIFICATION
Production of low-cost hydrogen
|DE93-008070| p 2643 N93-25305

COAL LIQUEFACTION
Production of low-cost hydrogen
|DE93-008070| p 2643 N93-25305

COASTAL CURRENTS
Wind-driven coastal generation of annual mesoscale eddy activity in the California current
|AD-A261355| p 2790 N93-26331

COASTAL ECOLOGY
Oil pollution and water quality mapping of Augusta Bay, Italy using remote sensing techniques p 2746 N93-24823

Hel's peninsula coastal zone changes in the last 40 years on a base of remote sensing methods
p 2747 N93-24832

COASTAL PLAINS
Archaeological, historical and geoelectrical data as ground truth for Landsat TM imagery application to coastal plain evolution studies p 2742 N93-24799
Remote sensing of coastal zone Sabkha deposits, Gulf of Sirt, Libya p 2746 N93-24827

COASTAL WATER
Multi-date algorithms for predicting surface water quality parameters in estuarine and coastal waters using Landsat TM data
| ED-659-CP | p 2746 N93-24829
Evaluation of nearshore suspended sediment concentration through Landsat TM data: First results
p 2747 N93-24833
Coastal environmental mapping using Landsat data
| ED-658-CP | p 2747 N93-24835
Loss of temporal coherence of laser light propagated through simulated coastal waters
| AD-A261303 | p 2715 N93-26296

COASTS
Applications of remote sensing for tidal waters, coastal areas and inland waters p 2745 N93-24819
Supporting the Portuguese fisheries with satellites
p 2745 N93-24821
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164
Coastal ocean processes: A science prospectus
| AD-A261702 | p 2790 N93-26384
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586

COATING
Asymptotic studies of gravity-driven reacting coating flows and pultrusion processes p 2704 N93-25683
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278

COATINGS
Process for bonding elastomers to metals
| NASA-CASE-LAR-13645-1 | p 2656 N93-25995
New directions in phthalocyanine pigments
| NASA-CR-192443 | p 2656 N93-26155
Optically smart surfaces survivability testing at Mach 3
| AD-A261785 | p 2857 N93-26566

COAXIAL PLASMA ACCELERATORS
Preliminary investigation of power flow and electrode phenomena in a multi-megawatt coaxial plasma thruster
| NASA-CR-191084 | p 2633 N93-26555

COBALT ALLOYS
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519
Position sensitive atom probe study of the decomposition of a Cu-2.6 at. percent Co alloy
| DE93-006737 | p 2653 N93-26500

CODERS
Entropy reduction via simplified image contourization
p 2804 N93-25924
Compression of spectral meteorological imagery
p 2804 N93-25925
Trellis coded CPFSK
| AD-A261788 | p 2682 N93-26441

CODING
The analysis of convolutional codes via the extended Smith algorithm p 2671 N93-24664
Image coding by way of wavelets
p 2671 N93-24665
Experiments with the HIVITS HDTV contribution CODED
| BBC-RD-1992/12 | p 2674 N93-25391
Subband coding for image data archiving
p 2803 N93-25922
Adjustable lossless image compression based on a natural splitting of an image into drawing, shading, and fine-grained components p 2804 N93-25923
Methods of evaluating the effects of coding on SAR data p 2804 N93-25926
Multi-rate, real time image compression for images dominated by point sources p 2805 N93-25932
Variable pulse rate circuit
| AD-D015675 | p 2691 N93-26233

COEFFICIENTS
Thermoelasticity in quartz p 2841 N93-25047
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773
Thermal expansion measurements of polymer matrix composites and syntactics
| MTL-TR-92-27 | p 2640 N93-25954

COGNITION
Facilitation and interference in identification of pictures and words
| AD-A261484 | p 2798 N93-26356
Duration of alpha suppression increases with angle in a mental rotation task
| AD-A261592 | p 2798 N93-26435
Comparative analytical study of evoked and event related potentials as correlates of cognitive processes
| AD-A261388 | p 2799 N93-26446

COGNITIVE PSYCHOLOGY
A cognitive architecture for human performance process model research
| AD-A261040 | p 2797 N93-25815
Neural basis of motion perception
| AD-A261452 | p 2798 N93-26349
Facilitation and interference in identification of pictures and words
| AD-A261484 | p 2798 N93-26356
Spontaneous discovery and use of categorical structure
| AD-A261658 | p 2798 N93-26364
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521

COHERENT LIGHT
Loss of temporal coherence of laser light propagated through simulated coastal waters
| AD-A261303 | p 2715 N93-26296

COHERENT RADAR
Remote sensing of precipitation and electrification with a dual-polarization, coherent, wideband radar system
| AD-A260779 | p 2756 N93-25679

COHERENT SCATTERING
Apparatus for imaging an object in or through a scattering medium using coherent anti-Stokes Raman scattering
| AD-D015642 | p 2852 N93-25358

COHESION
Theoretical predictions of platinum-rhodium bimetallic catalysts
| DE93-007540 | p 2649 N93-25428

COLD FRONTS
A three-dimensional study of the influence of mountains on a front
| AD-A261927 | p 2787 N93-26545

COLD GAS
Far-infrared emission, gas, and ultraluminous HII regions in M101
| NASA-CR-192791 | p 2890 N93-25755

COLD SURFACES
Numerical simulation of time-dependent thermocapillary convection in layered fluid systems
p 2700 N93-25472
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779

COLD TOLERANCE
Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900

COLD TRAPS
Optical detection of laser-cooled ions in a Penning trap p 2838 N93-25031

COLLISIONS
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827

COLLOCATION
Optimal cooperative power-limited rendezvous
p 2607 N93-24904

COLLOIDS
Colloid formation in implanted glasses
| DE93-006763 | p 2653 N93-24971

COLOR
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea
| AD-A261205 | p 2757 N93-25868
Advanced technology development multi-color holography
| NASA-CR-192451 | p 2711 N93-26154
Implementation of custom colors in the DECwindows environment
| AD-A261456 | p 2757 N93-26574

COLOR TELEVISION
An example of a phase-segregated enhanced PAL broadcasting system
| BBC-RD-1992/6 | p 2674 N93-25239

COLUMBUS SPACE STATION
The Columbus Metrology Science Team: Report on activities p 2670 N93-24987

COMBINATIONS (MATHEMATICS)
Monte-Carlo methods make Dempster-Shafer formalism feasible
| NASA-CR-192945 | p 2828 N93-25140

COMBINATORIAL ANALYSIS
Probability and statistics applied to the theory of algorithms
| AD-A261019 | p 2830 N93-25863

COMBUSTIBLE FLOW
A basic research model of natural gas combustion in turbulent flow, phase 2
| PB93-158509 | p 2644 N93-25819
Influence of supercritical conditions on pre-combustion chemistry and transport behavior of jet fuels
| AD-A261813 | p 2661 N93-26268

COMBUSTION
Catalytic conversion of light alkanes
| DE93-009646 | p 2644 N93-25499
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948
The 29th JANNAF Combustion Subcommittee Meeting, volume 2
| CPIA-PUB-593-VOL-2 | p 2624 N93-26005
Particle size as a factor in agglomeration in slurry fuels p 2625 N93-26013
A summary of the JANNAF workshop on liquid rocket atomization p 2625 N93-26014
Development of a second generation spray combustion code p 2626 N93-26016
Kinetic studies in gas-phase reaction mechanisms important to the combustion process of high energy density materials: The H2/NO2 reaction p 2628 N93-26027
Chemistry during the induction time in heated nitramines p 2629 N93-26035
An experimental and analytical study of the unsteady combustion of homogeneous energetic solids using the laser-recoil method p 2630 N93-26042

COMBUSTION CHAMBERS
Fuel injector: Air swirl characterization aerothermal modeling, phase 2, volume 1
| NASA-CR-189193 | p 2592 N93-24754
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
| NASA-CR-191095 | p 2694 N93-24759
Evaluation of the Migrating Combustion Chamber (MCC) engine
| AD-A260780 | p 2718 N93-25682
Particle behavior in solid propellant rocket motors and plumes
| AD-A260900 | p 2624 N93-25913
The effect of entrance radius and film injection on wall heating in scramjet nozzles p 2625 N93-26009
Solid fuel supersonic combustion
p 2625 N93-26010
Gasp 1.3 results for the transverse hydrogen reacting jet p 2625 N93-26011
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets
p 2625 N93-26012
A summary of the JANNAF workshop on liquid rocket atomization p 2625 N93-26014
Measurement of droplet vaporization rate enhancement caused by acoustic disturbances p 2626 N93-26015
A new approach to cooled combustion chambers: The 40K formed platelet chamber p 2626 N93-26018

COMBUSTION CHEMISTRY
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets
p 2625 N93-26012
Condensed-phase processes during solid propellant combustion. Part 4: Chemical and microscopic examination of laser-irradiated propellant samples
p 2628 N93-26032

COMBUSTION EFFICIENCY
Solid fuel supersonic combustion
p 2625 N93-26010
Gasp 1.3 results for the transverse hydrogen reacting jet p 2625 N93-26011
Development and use of hydrogen-air torches in an altitude facility
| NASA-TM-106047 | p 2598 N93-26214

COMBUSTION PHYSICS
A premixed laminar flame interacting with a vortex resulting in flame stretch and quenching
p 2642 N93-24771
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946
Calculations of combustion response profiles and oscillations
| NASA-TM-106135 | p 2623 N93-25236
Ionization probes of molecular structure and chemistry
| DE93-008211 | p 2847 N93-25310
Modelling of microgravity ignition phenomena
p 2664 N93-25465

The 29th JANNAF Combustion Subcommittee Meeting, volume 2
| CPIA-PUBL-593-VOL-2 | p 2624 N93-26005
Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF)
p 2598 N93-26006
Solution of nonlinear boundary value problem on successively refined grids
| AD-A261395 | p 2829 N93-26519

COMBUSTION PRODUCTS
SIHTI: The research and development program of energy and environmental technology
| DE93-769925 | p 2763 N93-25360
Experimental investigation of flow turning losses in unstable rocket motors p 2630 N93-26040
Development and demonstration of a new filter system to control emissions during jet engine testing
| AD-A261203 | p 2766 N93-26243
Particulate emissions from gas turbine engines
| AD-A261374 | p 2595 N93-26339
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

COMBUSTION STABILITY
Calculations of combustion response profiles and oscillations
| NASA-TM-106135 | p 2623 N93-25236
Modelling of microgravity ignition phenomena
p 2664 N93-25465
The 29th JANNAF Combustion Subcommittee Meeting, volume 2
| CPIA-PUBL-593-VOL-2 | p 2624 N93-26005
Space transportation booster engine thrust chamber technology, large scale injector
| NASA-CR-192531 | p 2633 N93-26557

COMBUSTION TEMPERATURE
Evaluation of a candidate material for a coal-fired magnetohydrodynamic (MHD) high temperature recuperative air heater
| DE93-006630 | p 2858 N93-24968

COMMAND AND CONTROL
Analysis of the Command and Control Segment (CCS) attitude estimation algorithm p 2604 N93-24722
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588
Fidelity and validity in distributed interactive simulation: Questions and answers
| AD-A260971 | p 2810 N93-25711
Rome Laboratory Journal, 1992
| AD-A260821 | p 2911 N93-25910
Flight termination receiver catalog
| AD-A261558 | p 2682 N93-26460
System Concept of Operations Evaluator (SCOPE)
| AD-A261257 | p 2813 N93-26563

COMMERCE
Advanced energy systems and technologies - National R and D programme
| DE93-769943 | p 2758 N93-25097
Small business access to equity capital
| PB93-144582 | p 2872 N93-25735

COMMERCIAL AIRCRAFT
Evaluation of advanced displays for engine monitoring and control
| NASA-CR-191418 | p 2591 N93-24764
Lightning data acquisition p 2778 N93-24883
Applied aerodynamics: Challenges and expectations
| NASA-TM-103963 | p 2575 N93-25091

COMMUNICATION EQUIPMENT
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. B: Sloping-vee beams
| AD-A261866 | p 2682 N93-26388

COMMUNICATION NETWORKS
Crossing the frontier between publishing and information service
| DE93-002894 | p 2873 N93-24677
Time generation and distribution system for a military national synchronization p 2842 N93-25060
Timing and time signal distribution in digital communications networks p 2686 N93-25061
Timing a national telecommunications network using GPS p 2687 N93-25062
Strategies for synchronisation in an evolving telecommunications network p 2687 N93-25063
Robo-line storage: Low latency, high capacity storage systems over geographically distributed networks
| NASA-CR-192910 | p 2805 N93-25130
The PACSAT Communications Experiment (PCE)
| DE93-008185 | p 2674 N93-25308
Object-oriented tools for distributed computing
p 2817 N93-25576
The database Query Support Processor (QSP)
p 2807 N93-25577
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967
An OSI architecture for the Deep Space Network
p 2679 N93-26121
Deep Space Network information system architecture study p 2679 N93-26126
High performance computing and communications panel report p 2807 N93-26131
The Data Multiplexing Network (DMN) phase 3 Extended Distance Data Cable (EDDC) test and evaluation
| DOT/FAA/CT-TN93/11 | p 2680 N93-26160
Admission control in integrated voice/data multihop radio networks
| AD-A261055 | p 2680 N93-26227
Advanced optical fiber communication systems
| AD-A261802 | p 2856 N93-26256
Very high-speed report file system
| AD-A261068 | p 2817 N93-26277
FY92 contributions to the Database Management System Interface Standards Working Group of the Navy Next Generation Computer Resources Program
| AD-A261348 | p 2883 N93-26313
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. B: Sloping-vee beams
| AD-A261866 | p 2682 N93-26388
EnviroNET p 2886 N93-26398
Telerobotic rovers for extraterrestrial construction
p 2670 N93-26416
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430
ETS-5, ETS-6, and COMETS projects in Japan
p 2683 N93-26470
OSSA Information Systems Program
| NASA-TM-108758 | p 2883 N93-26491
Department of Defense technical architecture framework for information management. Volume 1: Implementation concept, version 1.1
| AD-A261911 | p 2884 N93-26531
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
| AD-A261912 | p 2884 N93-26532
A comparison of ionospheric propagation mode delay predictions from ADVANCED PROPHET 4.3 with measured data
| AD-A261782 | p 2686 N93-26604

COMMUNICATION SATELLITES
The PACSAT Communications Experiment (PCE)
| DE93-008185 | p 2674 N93-25308
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438
ETS-5, ETS-6, and COMETS projects in Japan
p 2683 N93-26470

COMMUTER AIRCRAFT
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739

COMPARISON
Prospects of two-way international time scale comparisons p 2832 N93-24988
Comparison of GLONASS and GPS time transfers
p 2836 N93-25017

COMPENSATORS
Design of the reduced LQG compensator for the DSS-13 antenna p 2672 N93-24669
The 32nd CDC: Robust stabilizer synthesis for interval plants using Nevanlina-pick theory
| NASA-CR-192894 | p 2818 N93-25156

COMPETITION
Energy and Technology Review, August-September 1992
| DE93-005882 | p 2901 N93-24974

COMPLEX SYSTEMS
Control of complex dynamic systems by neural networks p 2827 N93-25611
The rapid solution of the Laplace equation on regions with fractal boundaries
| AD-A260585 | p 2828 N93-25905
Proceedings of the complex systems engineering synthesis and assessment technology workshop
| AD-A261404 | p 2807 N93-26403

COMPOSITE MATERIALS
Method for providing EMI/EMP hardening and breakdown protection in composite materials
| AD-D015638 | p 2634 N93-25283
Numerical and experimental analyses of large composite skeletal satellite systems p 2616 N93-25463
Design and validation of optimal experiments for estimating thermal properties of composite materials
p 2635 N93-25541
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements
p 2635 N93-25544
INEL spray-forming research p 2658 N93-25562
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
Improved composite fabrication process
| AD-D015679 | p 2640 N93-26145

COMPOSITE PROPELLANTS
Dynamic burning rate measurements of metalized composite propellants using the laser-recoil technique
p 2631 N93-26043

COMPOSITE STRUCTURES
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
A procedure for defining lightning risk to air vehicles
p 2583 N93-24885
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912
High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
| NASA-TM-106001 | p 2723 N93-24913
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements
p 2635 N93-25544
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
Graphite/epoxy composite laminates with co-cured interlaminar damping layers p 2642 N93-25587
Low-velocity impact of composite sandwich plate
p 2637 N93-25695
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701
A three-dimensional model for the residual stresses in a unidirectional composite plate p 2728 N93-25825
Damage detection and mitigation of composite structures using smart materials
| AD-A261121 | p 2639 N93-25945
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522
Japanese Technology Evaluation Center Workshop on Advanced Manufacturing Technology for Polymer Composite Structures in Japan
| PB93-165249 | p 2641 N93-26589

COMPOUND A
Sputter deposition of yttrium-oxides
| DE93-007499 | p 2654 N93-25382

COMPRESSED GAS
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585

COMPRESSIBILITY
European tri-service advanced materials workshop on compressive strength in rigid-rod polymers
| AD-A261517 | p 2658 N93-26576

COMPRESSIBILITY EFFECTS
The effects of video compression on acceptability of images for monitoring life sciences' experiments
p 2805 N93-25930

COMPRESSIBLE BOUNDARY LAYER
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls
| NASA-TM-106087 | p 2696 N93-25175
Shock tube application to the study of compressible turbulent boundary layer with mass injection
p 2697 N93-25252

COMPRESSIBLE FLOW
A convergent finite difference scheme for the Navier-Stokes equations of nonisentropic compressible fluid flow p 2695 N93-24906
Implementation of the Turn Function Method in a three-dimensional, parallelized hydrodynamics code
| DE93-003744 | p 2696 N93-25124

Assessment of closure coefficients for compressible-flow turbulence models
| NASA-TM-103882 | p 2697 N93-25247
Structured adaptive mesh refinement on the connection machine
| DE93-007368 | p 2816 N93-25316
Implicit multigrid solution of the compressible Navier-Stokes equations with application to distributed parallel processing p 2702 N93-25546
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198

COMPRESSING
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997

COMPRESSION LOADS
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912
Numerical simulation of damage and progressive failures in composite laminates using the layerwise plate theory p 2636 N93-25661

COMPRESSION RATIO
Compression of spectral meteorological imagery p 2804 N93-25925
Fractal image compression: A resolution independent representation for imagery p 2804 N93-25927

COMPRESSION TESTS
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760

COMPRESSIVE STRENGTH
European tri-service advanced materials workshop on compressive strength in rigid-rod polymers
| AD-A261517 | p 2658 N93-26576

COMPRESSOR BLADES
The effects of reaction on axial compressor performance p 2594 N93-25882
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

COMPRESSORS
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529

COMPUTATION
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
An improved spectral load balancing method
| DE93-007582 | p 2810 N93-25386
Parallel matrix computations
| AD-A260783 | p 2828 N93-25687
Knowledge-based assistance for science visualization and analysis using large distributed databases p 2879 N93-25801
High performance compression of science data p 2881 N93-25811
Computation and learning in neural networks with binary weights
| AD-A261182 | p 2821 N93-25821
Power iterations and the dominant eigenvalue problem
| AD-A261695 | p 2829 N93-26370

COMPUTATIONAL FLUID DYNAMICS
Prediction of forces and moments for hypersonic flight vehicle control effectors
| NASA-CR-193033 | p 2595 N93-24762
Computation of hypersonic viscous flowfields using the parabolized Navier-Stokes equations p 2694 N93-24766
Computational study of the aerodynamics and control by blowing of asymmetric vortical flows over delta wings p 2574 N93-24772
A convergent finite difference scheme for the Navier-Stokes equations of nonisentropic compressible fluid flow p 2695 N93-24906
Rapid exploration of curvilinear grids using direct volume rendering
| NASA-CR-192765 | p 2808 N93-24944
Propagation velocity and space-time correlation of perturbations in turbulent channel flow
| NASA-TM-103932 | p 2695 N93-25082
A contribution to the great Riemann solver debate
| NASA-CR-191409 | p 2575 N93-25083
Prediction of unsteady flows in turbomachinery using the linearized Euler equations on deforming grids
| NASA-CR-192919 | p 2696 N93-25109
Implementation of the Turn Function Method in a three-dimensional, parallelized hydrodynamics code
| DE93-003744 | p 2696 N93-25124
Transient performance of fan engine with water ingestion
| NASA-CR-190778 | p 2573 N93-25134
Instability of flow in a streamwise corner
| NASA-CR-191410 | p 2576 N93-25153
The modeling of complex continua: Fundamental obstacles and grand challenges
| DE93-006507 | p 2696 N93-25193
Assessment of closure coefficients for compressible-flow turbulence models
| NASA-TM-103882 | p 2697 N93-25247
Direct solutions of the Navier-Stokes equations with application to static aeroelasticity p 2697 N93-25259
The steady Navier-Stokes problem for low Reynolds number viscous jets p 2698 N93-25264
Data parallel finite element techniques for large-scale computational fluid dynamics p 2699 N93-25334
A compact high-order Euler solver for unstructured grids p 2699 N93-25341
Some new results for solving linear systems arising from computational fluid dynamics problems p 2699 N93-25349
Numerical simulation of leading-edge receptivity to freestream vorticity p 2577 N93-25388
Spatial simulation of transition in wall-bounded shear flows: Active control and effects of surface roughness p 2701 N93-25483
Numerical study of cavity natural convection flow with augmenting and counteracting effects by projection finite element method p 2701 N93-25540
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542
Implicit multigrid solution of the compressible Navier-Stokes equations with application to distributed parallel processing p 2702 N93-25546
Dynamics of turbulent slugging in transitional pipe flow p 2702 N93-25548
A computational aerodynamic design optimization method using sensitivity analysis p 2589 N93-25552
The instability of a liquid jet in a compressible airstream p 2703 N93-25560
Stabilized finite element methods for incompressible flows with emphasis on moving boundaries and interfaces p 2703 N93-25663
Computational modelling of 3D flow in complex ducts and passages p 2704 N93-25698
Analysis of wing wake roll-up using a vortex-in-cell method p 2579 N93-25706
Flow between finite rotating disks and its linear stability p 2705 N93-25747
Large-eddy simulation of temporally developing boundary layers with embedded streamwise vortices p 2705 N93-25753
A new LU-SGS flow solver for calculating reentry flows p 2579 N93-25759
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865
Simulation of vortex bursting p 2580 N93-25881
Numerical simulation of hypersonic aerodynamics and the computational needs for the design of an aerospace plane
| AD-A260681 | p 2580 N93-25894
Workshop Report: A validation study of Navier-Stokes codes for transverse injection into a Mach 2 flow p 2624 N93-26008
Development of a second generation spray combustion code p 2626 N93-26016
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine p 2626 N93-26017
External tank aerothermal design criteria verification
| NASA-CR-192514 | p 2618 N93-26055
An extended Lagrangian method
| NASA-TM-106129 | p 2707 N93-26203
Influence of supercritical conditions on pre-combustion chemistry and transport behavior of jet fuels
| AD-A261813 | p 2661 N93-26268
Massively-parallel computational fluid dynamics
| AD-A261815 | p 2707 N93-26269
Computational methods for flow problems: Parallel algorithms, flow control, and novel approaches
| AD-A261400 | p 2707 N93-26400
Another look at the driven cavity problem
| AD-A261903 | p 2708 N93-26543
Effects of surface thermal forcing on stratified flow past an isolated obstacle
| PB93-156776 | p 2776 N93-26548
Incompressible spectral-element method: Derivation of equations
| NASA-TM-106109 | p 2708 N93-26554
A brief description of a new numerical framework for solving conservation laws: The method of space-time conservation element and solution element
| NASA-TM-105757 | p 2829 N93-26560

COMPUTATIONAL GRIDS
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
| NASA-CR-191095 | p 2694 N93-24759
Rapid exploration of curvilinear grids using direct volume rendering
| NASA-CR-192765 | p 2808 N93-24944
A contribution to the great Riemann solver debate
| NASA-CR-191409 | p 2575 N93-25083
Prediction of unsteady flows in turbomachinery using the linearized Euler equations on deforming grids
| NASA-CR-192919 | p 2696 N93-25109
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
A compact high-order Euler solver for unstructured grids p 2699 N93-25341
Transformation of two and three-dimensional regions by elliptic systems
| NASA-CR-192955 | p 2810 N93-25669
Analysis of wing wake roll-up using a vortex-in-cell method p 2579 N93-25706
Multilevel techniques in large scale computation
| AD-A261082 | p 2828 N93-25762
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198
An extended Lagrangian method
| NASA-TM-106129 | p 2707 N93-26203
Solution of nonlinear boundary value problem on successively refined grids
| AD-A261395 | p 2829 N93-26519

COMPUTER AIDED DESIGN
Geometric modeling for computer aided design
| NASA-CR-192891 | p 2808 N93-24750
A state-of-the-art crystal filter design package using Windows 3.0 techniques p 2693 N93-25010
Integration of design, thermal, structural, and optical analysis, including thermal animation p 2814 N93-25601
An approach to configuration design synthesis of subsonic transport aircraft using artificial intelligence techniques p 2589 N93-25692
High-performance visualization applied to computational electromagnetics: Method-of-moments on a silicon graphics workstation
| AD-A260820 | p 2675 N93-25700
ASTOVL combat aircraft design synthesis and optimization p 2589 N93-25704
A digital hardware test system analysis with test vector translation
| AD-A260849 | p 2810 N93-25786
Computer-aided design package for designers of digital optical computers
| AD-A260757 | p 2806 N93-25848
An autonomous satellite architecture integrating deliberative reasoning and behavioural intelligence p 2823 N93-25970
Model reduction for Space Station Freedom p 2620 N93-26081
Design Knowledge Management System (DKMS) Beta Test Report
| AD-A261453 | p 2883 N93-26350
IDEF6: A design rationale capture method concept paper
| AD-A261594 | p 2884 N93-26523
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526
System Concept of Operations Evaluator (SCOPE)
| AD-A261257 | p 2813 N93-26563

COMPUTER AIDED MANUFACTURING
A virtual environment for manufacturing systems
| AD-A260813 | p 2810 N93-25699
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526

COMPUTER AIDED TOMOGRAPHY
Intraplate deformation, stress in the lithosphere and the driving mechanism for plate motions
| NASA-CR-192782 | p 2772 N93-25529
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526
X ray computed tomography for failure analysis
| AD-A261884 | p 2722 N93-26527

COMPUTER ASSISTED INSTRUCTION
Integrated Development Support Environment (IDSE)
| AD-A261088 | p 2877 N93-25763
Computation and learning in neural networks with binary weights
| AD-A261182 | p 2821 N93-25821
Human Factors in Aviation Maintenance, phase 2
| DOT/FAA/AM-93/5 | p 2802 N93-26089

COMPUTER DESIGN
Computer-aided design package for designers of digital optical computers
| AD-A260757 | p 2806 N93-25848

COMPUTER GRAPHICS
Demonstration of seasonal changes in the territory of Finland using multitemporal NOAA-AVHRR data p 2742 N93-24801
Improving information search at the user interface: The impact of graphical innovation on query formulation and expression p 2873 N93-24905
A state-of-the-art crystal filter design package using Windows 3.0 techniques p 2693 N93-25010
Efficient inspection of network pollution data
| DE93-003810 | p 2761 N93-25126
Scientific visualization using the Flow Analysis Software Toolkit (FAST) p 2814 N93-25600
Interactive interface for National Center for Atmospheric Research (NCAR) Graphics p 2878 N93-25794
Measures of user-system interface effectiveness: An encoding scheme and indicators for assessing the usability of graphical, direct-manipulation style user interfaces
| AD-A260606 | p 2801 N93-25840
Advanced technology for portable personal visualization
| AD-A261294 | p 2807 N93-26293
Three view language: A graphics-based language for requirements definition, version 01.00.00
| AD-A261732 | p 2813 N93-26583

COMPUTER INFORMATION SECURITY
The database Query Support Processor (QSP) p 2807 N93-25577
The SWORD multilevel secure DBMS
| RSRE-92005 | p 2811 N93-25942

COMPUTER NETWORKS
Crossing the frontier between publishing and information service
| DE93-002894 | p 2873 N93-24677
EXCHANGE
| DE93-007227 | p 2808 N93-24962
On the robustness of Herlihy's hierarchy
| NASA-CR-193002 | p 2808 N93-25107
Robo-line storage: Low latency, high capacity storage systems over geographically distributed networks
| NASA-CR-192910 | p 2805 N93-25130
Zebra: A striped network file system
| NASA-CR-192912 | p 2809 N93-25250
A trace-driven analysis of name and attribute caching in a distributed system
| NASA-CR-192899 | p 2815 N93-25251
CAD data exchange development
| DE93-008085 | p 2809 N93-25307
A distributed heterogeneous client-server environment
| DE93-007496 | p 2875 N93-25319
Object-oriented tools for distributed computing p 2817 N93-25576
The database Query Support Processor (QSP) p 2807 N93-25577
Fidelity and validity in distributed interactive simulation: Questions and answers
| AD-A260971 | p 2810 N93-25711
Distributed information storage p 2877 N93-25722
The state of computing at Los Alamos National Laboratory, FY 1991
| LA-12326-MS | p 2811 N93-25943
An OSI architecture for the Deep Space Network p 2679 N93-26121
Deep Space Network information system architecture study p 2679 N93-26126
High performance computing and communications panel report p 2807 N93-26131
The Data Multiplexing Network (DMN) phase 3 Extended Distance Data Cable (EDDC) test and evaluation
| DOT/FAA/CT-TN93/11 | p 2680 N93-26160
Complexity of connectionist and constraint-satisfaction networks
| AD-A261617 | p 2817 N93-26169
Very high-speed report file system
| AD-A261068 | p 2817 N93-26277
FY92 contributions to the Database Management System Interface Standards Working Group of the Navy Next Generation Computer Resources Program
| AD-A261348 | p 2883 N93-26313
Test, Control and Monitor System (TCMS) operations plan
| NASA-CR-193098 | p 2873 N93-26419
OSSA Information Systems Program
| NASA-TM-108758 | p 2883 N93-26491
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
| AD-A261912 | p 2884 N93-26532

COMPUTER PROGRAM INTEGRITY
The SWORD multilevel secure DBMS
| RSRE-92005 | p 2811 N93-25942

COMPUTER PROGRAMMING
Geometric modeling for computer aided design
| NASA-CR-192891 | p 2808 N93-24750
Putting time into proof outlines
| NASA-CR-192978 | p 2809 N93-25152
Using a Cray Y-MP as an array processor for a RISC Workstation
| NASA-TM-103961 | p 2809 N93-25246
Deterministic parallel FORTRAN
| DE93-008665 | p 2816 N93-25522
Technology 2002: The Third National Technology Transfer Conference and Exposition, volume 1
| NASA-CP-3189-VOL-1 | p 2901 N93-25561
Splash 2 p 2814 N93-25575
Proceedings of Workshop 1: The Human Brainmap Database
| AD-A260720 | p 2796 N93-25654
Software lifecycle support environment (SLCSE) knowledge-based enhancements
| AD-A261042 | p 2811 N93-25791
Set based program analysis
| AD-A260979 | p 2806 N93-25841
Model-based reasoning for system and software engineering: The Knowledge From Pictures (KFP) environment p 2825 N93-25978
The design and implementation of a reusable component library and a retrieval/integration system
| AD-A261827 | p 2812 N93-26271
FY92 contributions to the Database Management System Interface Standards Working Group of the Navy Next Generation Computer Resources Program
| AD-A261348 | p 2883 N93-26313
Research directions in software analysis, synthesis and certification
| AD-A261367 | p 2812 N93-26336
Towards a formalism for program generation
| AD-A261689 | p 2812 N93-26368
AEGIS measures definition
| AD-A261494 | p 2812 N93-26375
Managing real-time software projects: Problems and issues
| AD-A261428 | p 2813 N93-26453
Three view language: A graphics-based language for requirements definition, version 01.00.00
| AD-A261732 | p 2813 N93-26583

COMPUTER PROGRAMS
Development and application of computational aerothermodynamics flowfield computer codes
| NASA-CR-192940 | p 2574 N93-24736
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758
Evaluation of MARC for the analysis of rotating composite blades
| NASA-TM-4423 | p 2723 N93-24909
High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
| NASA-TM-106001 | p 2723 N93-24913
Federal Communications Commission (FCC) Transponder Loading Data Conversion Software. User's guide and software maintenance manual, version 1.2
| NASA-CR-191067 | p 2808 N93-24947
A state-of-the-art crystal filter design package using Windows 3.0 techniques p 2693 N93-25010
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
Supercomputer Debugging Workshop 1992
| DE93-007322 | p 2805 N93-25165
Using a multifrontal sparse solver in a high performance, finite element code
| NASA-CR-192718 | p 2828 N93-25223
BBU code development for high-power microwave generators
| DE93-007111 | p 2688 N93-25397
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574
TARGET: Rapid capture of process knowledge p 2814 N93-25590
Scientific visualization using the Flow Analysis Software Toolkit (FAST) p 2814 N93-25600
Simulation of aircraft gas turbine engine p 2594 N93-25751
Development of a flight instrument package
| AD-A260830 | p 2591 N93-25783
Interactive interface for National Center for Atmospheric Research (NCAR) Graphics p 2878 N93-25794
Construction of an advanced software tool for planetary atmospheric modeling p 2815 N93-25799
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
High performance compression of science data p 2881 N93-25811
An application of machine learning to the organization of institutional software repositories p 2825 N93-25981
Development of a second generation spray combustion code p 2626 N93-26016
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine p 2626 N93-26017
Design of an air traffic computer simulation system to support investigation of civil tiltrotor aircraft operations
| NASA-CR-192920 | p 2585 N93-26052
A study of mapping exogenous knowledge representations into CONFIG p 2827 N93-26072
Modeling of the WSTF frictional heating apparatus in high pressure systems p 2648 N93-26079
Spacelab, Spacehab, and Space Station Freedom payload interface projects p 2620 N93-26080
DSS-13 26-meter antenna upgraded radiometer system p 2679 N93-26122
Analysis of shaped charge jet penetration experiments with Pen
| UCRL-LR-110773 | p 2730 N93-26177
VETA-I x ray test analysis
| NASA-CR-192321 | p 2854 N93-26183
Analysis of symbolic parameter models
| AD-A261930 | p 2811 N93-26253
Arc Digital Raster Imagery (ADRI) development
| AD-A261850 | p 2812 N93-26275
AMPHIB: A users manual
| AD-A261769 | p 2669 N93-26285
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315
Software testing initiative for strategic defense systems
| AD-A261350 | p 2831 N93-26330
AEGIS measures definition
| AD-A261494 | p 2812 N93-26375
Pseudo Wigner-Ville distribution, computer program, and its applications to time-frequency domain problems
| AD-A261839 | p 2813 N93-26431
METal matrix composite ANalyzer (METCAN): Theoretical manual
| NASA-TM-106025 | p 2641 N93-26552
Directory of US Government software for mainframes and microcomputers, 1993
| PB93-111565 | p 2807 N93-26569

COMPUTER STORAGE DEVICES
Robo-line storage: Low latency, high capacity storage systems over geographically distributed networks
| NASA-CR-192910 | p 2805 N93-25130
An analysis of file migration in a UNIX supercomputing environment
| NASA-CR-192908 | p 2809 N93-25131
Thin rechargeable batteries for CMOS SRAM memory protection p 2694 N93-25583
Considerations for space and naval aviation applications of ferroelectric memory
| AD-A261300 | p 2807 N93-26294

COMPUTER SYSTEMS DESIGN
Technology 2002: The Third National Technology Transfer Conference and Exposition, volume 1
| NASA-CP-3189-VOL-1 | p 2901 N93-25561
Deep Space Network information system architecture study p 2679 N93-26126
Very high-speed report file system
| AD-A261068 | p 2817 N93-26277
Proceedings of the complex systems engineering synthesis and assessment technology workshop
| AD-A261404 | p 2807 N93-26403

COMPUTER SYSTEMS PERFORMANCE
Robo-line storage: Low latency, high capacity storage systems over geographically distributed networks
| NASA-CR-192910 | p 2805 N93-25130
RAID-2: Design and implementation of a large scale disk array controller
| NASA-CR-192911 | p 2806 N93-25233
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588
An investigation of memory latency reduction using an address prediction buffer
| AD-A261010 | p 2806 N93-25858
Proof of fault coverage for a formal protocol test procedure
| AD-A261612 | p 2680 N93-26166
Complexity of connectionist and constraint-satisfaction networks
| AD-A261617 | p 2817 N93-26169
NSWC library of mathematics subroutines
| AD-A261511 | p 2884 N93-26575

COMPUTER SYSTEMS PROGRAMS
Interfacing a high performance disk array file server to a Gigabit LAN
| NASA-CR-192898 | p 2816 N93-25458
Multi-viewpoint clustering analysis p 2825 N93-25980

COMPUTER TECHNIQUES
Computer systems p 2737 N93-24942
Analysis of LARI sensor system
| DE93-006334 | p 2761 N93-24977

Current research activities: Applied and numerical mathematics, fluid mechanics, experiments in transition and turbulence and aerodynamics, and computer science
| NASA-CR-191408 | p 2803 N93-25084
Robo-line storage: Low latency, high capacity storage systems over geographically distributed networks
| NASA-CR-192910 | p 2805 N93-25130
Design concepts for the development of cooperative problem-solving systems
| NASA-CR-192708 | p 2585 N93-25261
Automatic detection of seizures with applications p 2796 N93-25592
Proceedings of Workshop 1: The Human Brainmap Database
| AD-A260720 | p 2796 N93-25654
Computational gearing mechanics
| NASA-CR-191127 | p 2719 N93-25884
Distributed project scheduling at NASA: Requirements for manual protocols and computer-based support p 2815 N93-26075
The adult literacy evaluator: An intelligent computer-aided training system for diagnosing adult illiterates p 2799 N93-26082
FY92 contributions to the Database Management System Interface Standards Working Group of the Navy Next Generation Computer Resources Program
| AD-A261348 | p 2883 N93-26313

COMPUTER VISION
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516
Topography from shading and stereo p 2879 N93-25803
Center for intelligent control systems
| AD-A260995 | p 2821 N93-25853
Modeling of a full vision system using combined Visual/Haptic search for remote object identification
| AD-A260977 | p 2801 N93-25867
Uncertainty in object pose determination with three light-stripe range measurements
| AD-A261435 | p 2857 N93-26488
Receptoral and neural aliasing
| AD-A261438 | p 2799 N93-26489

COMPUTERIZED SIMULATION
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Crashworthiness of composite seats for civil aircraft p 2582 N93-24773
High-order cyclo-difference techniques: An alternative to finite differences
| NASA-TM-107745 | p 2575 N93-25074
Rotor design optimization using a free wake analysis
| NASA-CR-177612 | p 2575 N93-25075
A contribution to the great Riemann solver debate
| NASA-CR-191409 | p 2575 N93-25083
Plasma sheath effects on ion collection by a pinhole
| NASA-TM-106098 | p 2615 N93-25090
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096
The effects of sampling frequency on the climate statistics of the ECMWF general circulation model
| DE93-003338 | p 2761 N93-25145
Two-stream instability for a light ion beam-plasma system with external magnetic field
| NIFS-204 | p 2859 N93-25248
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
Particle simulation for 10.6 micron picosecond laser-induced breakdown in gases p 2712 N93-25280
Radial velocity studies of the secondary in cataclysmic variables p 2888 N93-25286
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
Boundary plasma modelling for ITER
| DE93-007963 | p 2859 N93-25302
Radiation-induced disordering and defect production in CuAu and NiAl studied by molecular dynamics simulation
| DE93-007506 | p 2649 N93-25336
Propagation at microwave frequencies in the presence of tropospheric stratified layers p 2674 N93-25340
A compact neutron counter telescope with thick radiator (Cotetra) for fusion experiment
| NIFS-205 | p 2860 N93-25347
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356
Detailed solution to a complex kinematics chain manipulator
| DE93-004619 | p 2725 N93-25357
Transverse instabilities in a relativistic klystron two-beam accelerator
| DE93-007110 | p 2852 N93-25375
BBU code development for high-power microwave generators
| DE93-007111 | p 2688 N93-25397
Computation of transonic flow over a porous surface projectile p 2577 N93-25409
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448
Annular flow enhanced two-phase evaporative heat exchanger for space-based systems p 2700 N93-25478
TSC plasma halo simulation of a D3-D vertical displacement episode
| DE93-008688 | p 2860 N93-25493
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574
Data systems dynamic simulator p 2814 N93-25602
A novel optical/digital processing system for pattern recognition p 2814 N93-25603
Efficient generation of synthetic terrain imagery for automatic target recognition
| AD-A260705 | p 2756 N93-25653
Gas turbine system simulation: An object-oriented approach
| NASA-TM-106044 | p 2593 N93-25673
Thermal infrared radiation transfer in the planetary boundary layer p 2772 N93-25688
Fidelity and validity in distributed interactive simulation: Questions and answers
| AD-A260971 | p 2810 N93-25711
A computational method for the analysis of acoustic radiation from turbofan inlets p 2845 N93-25717
Simulation of aircraft gas turbine engine p 2594 N93-25751
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767
A numerical simulation of adsorption onto a crystalline surface
| AD-A261079 | p 2866 N93-25781
A basic research model of natural gas combustion in turbulent flow, phase 2
| PB93-158509 | p 2644 N93-25819
Computer modelling of cyclic deformation of high-temperature materials
| AD-A260978 | p 2639 N93-25936
Analysis of transient photoluminescence measurements on GaAs and AlGaAs double heterostructures
| AD-A261154 | p 2867 N93-25947
Dark zone modeling of solid propellant flames p 2628 N93-26028
Design of an air traffic computer simulation system to support investigation of civil tiltrotor aircraft operations
| NASA-CR-192920 | p 2585 N93-26052
A prototype for simulation of the space-to-ground assembly/contingency system of Space Station Freedom p 2619 N93-26065
A study of mapping exogenous knowledge representations into CONFIG p 2827 N93-26072
Goldstone solar system radar signal processing p 2680 N93-26130
AXAF VETA-I mirror encircled energy measurements and data reduction p 2855 N93-26188
Advanced engineering analysis
| KCP-613-4967 | p 2669 N93-26212
Effect of image update rate on moving-target identification range
| AD-A261562 | p 2591 N93-26462
A database for propagation models p 2684 N93-26472
Very low frequency signals and whistler-mode amplification in the magnetosphere and limit-cycle behavior in the CECAF infrared free electronic laser
| AD-A261776 | p 2716 N93-26601

COMPUTERS
Computer systems p 2737 N93-24942
EXCHANGE
| DE93-007227 | p 2808 N93-24962
High performance compression of science data p 2881 N93-25811

CONCATENATED CODES
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications
| NASA-CR-192715 | p 2673 N93-25198

CONDENSED MATTER PHYSICS
The interaction of swift electrons with surface excitations
| DE93-007245 | p 2848 N93-25376
Inelastic scattering in condensed matter with high intensity Moessbauer radiation
| DE93-008763 | p 2864 N93-25503
From fractals to wormholes via string theory p 2871 N93-25742
Proceedings of the 16th International Workshop on Condensed Matter Theories
| AD-A261078 | p 2868 N93-26252
Sensitivity of magnetic flux compression in cylindrical implosions to model parameters
| DE93-003819 | p 2861 N93-26512

CONDENSERS (LIQUEFIERS)
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221

CONDENSING
Condensation on cooled surfaces of optical devices at the cosmic conditions p 2753 N93-24869
The nature of the glass transition and its determination by thermal analysis
| DE93-006746 | p 2654 N93-25374

CONDUCTING FLUIDS
Maneuvering a reentry body via magneto-gasdynamic forces p 2615 N93-25207

CONDUCTING POLYMERS
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524
Polymers by non-redox processes: Synthesis, physical studies, and application
| AD-A261064 | p 2657 N93-26240
Electrical conductivity of ion implanted ladder and semi-ladder polymers
| AD-A261401 | p 2657 N93-26401

CONDUCTION BANDS
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490

CONDUCTIVE HEAT TRANSFER
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533

CONDUCTIVITY
Template synthesis of electronically conductive polymers: A new route for achieving higher electronic conductivities
| AD-A261616 | p 2658 N93-26437

CONES
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570

CONFERENCES
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
Aquifer thermal energy (heat and chill) storage
| DE93-006446 | p 2759 N93-25183
JPRS report: Science and technology. Japan. 30th National Aerospace Laboratory Conference
| JPRS-JST-93-009 | p 2901 N93-25418
Technology 2002: The Third National Technology Transfer Conference and Exposition, volume 1
| NASA-CP-3189-VOL-1 | p 2901 N93-25561
National Weather Service Winter Weather Workshop
| PB93-146785 | p 2785 N93-25775
Nonlinear vibrations, stability, and dynamics of structures and mechanisms
| AD-A260871 | p 2728 N93-25838
International Workshop on Advances in Inorganic Fibre Technology
| AD-A260719 | p 2639 N93-25908
The 1993 Goddard Conference on Space Applications of Artificial Intelligence
| NASA-CP-3200 | p 2822 N93-25961
Proceedings of the 33rd Annual Military LibrariansWorkshop
| AD-A261071 | p 2882 N93-26242
Proceedings of the 16th International Workshop on Condensed Matter Theories
| AD-A261078 | p 2868 N93-26252
Optical computing. Volume 6: Organization of the Optical Society of America photonic science topical meeting series
| AD-A261267 | p 2856 N93-26266
Gordon Conference on Point Defects, Line Defects and Interfaces in Semiconductors
| AD-A261485 | p 2868 N93-26357
Summary report of the Defense Sciences Research Council Summer Conference
| AD-A261375 | p 2917 N93-26359
Proceedings of the complex systems engineering synthesis and assessment technology workshop
| AD-A261404 | p 2807 N93-26403
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405

The Earth's climate as a dynamical system
| DE93-004666 | p 2767 N93-26496
Workshop on Diamond and Diamond-Like-Carbon Films for the Transportation Industry
| DE93-007491 | p 2658 N93-26506
European tri-service advanced materials workshop on compressive strength in rigid-rod polymers
| AD-A261517 | p 2658 N93-26576
Japanese Technology Evaluation Center Workshop on Advanced Manufacturing Technology for Polymer Composite Structures in Japan
| PB93-165249 | p 2641 N93-26589

CONFIGURATION INTERACTION
Theoretical calculations on the electron absorption spectra of selected Polycyclic Aromatic Hydrocarbons (PAH) and derivatives
| NASA-CR-192762 | p 2892 N93-25200

CONFIGURATION MANAGEMENT
Management of space networks p 2672 N93-24671

CONFINEMENT
Assessment of torsatrons as reactors
| DE93-006721 | p 2858 N93-24969
Modelling of microgravity ignition phenomena p 2664 N93-25465

CONICAL BODIES
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438

CONICAL NOZZLES
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758
An experimental study of under-expanded jets p 2577 N93-25467

CONICAL SCANNING
Accurate attitude determination of the LACE satellite p 2605 N93-24726

CONIFERS
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864

CONJUGATE GRADIENT METHOD
Configuration optimization of space structures p 2670 N93-26415

CONJUGATION
Immunoconjugates: Magic bullets for cancer therapy? p 2796 N93-25567

CONNECTION MACHINE
Structured adaptive mesh refinement on the connection machine
| DE93-007368 | p 2816 N93-25316

CONNECTORS
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416

CONSERVATION LAWS
A brief description of a new numerical framework for solving conservation laws: The method of space-time conservation element and solution element
| NASA-TM-105757 | p 2829 N93-26560

CONSISTENCY
Concurrency control in real-time database systems p 2874 N93-25271
Performance studies of cache consistency and concurrency control algorithms in a distributed client/server DBMS architecture p 2876 N93-25554

CONSTITUTIVE EQUATIONS
Investigation of coupled analysis techniques for adaptive material structural systems
| AD-A261359 | p 2868 N93-26332

CONSTRAINTS
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967

CONSTRUCTION
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
Real-time construction of three-dimensional occupancy maps
| DE93-001645 | p 2756 N93-25505
Construction of a connectionist network supercomputer
| AD-A260929 | p 2820 N93-25648
Construction of an advanced software tool for planetary atmospheric modeling p 2815 N93-25799
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Dynamics of on-orbit construction process p 2669 N93-26406
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410
Indigenous lunar construction materials p 2670 N93-26413
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
Lunar surface structural concepts and construction studies p 2670 N93-26417

CONSTRUCTION INDUSTRY
Development of a concept for a national construction industry health and safety data base
| PB93-159325 | p 2884 N93-26568

CONSTRUCTION MATERIALS
Indigenous lunar construction materials p 2670 N93-26413

CONTACT LENSES
The use of extended wear contact lenses in the aviation environment: An Army-wide study
| AD-A260938 | p 2795 N93-26218

CONTACT LOADS
Optimization techniques for contact stress analysis
| AD-A260846 | p 2729 N93-25911

CONTAINMENT
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957

CONTAMINANTS
Non-local description of pollution transport in random medium p 2763 N93-25329
National air pollutant emission estimates
| PB93-157808 | p 2765 N93-25850
Pollution prevention 1991: Progress on reducing industrial pollutants
| PB93-157725 | p 2766 N93-25875
Effects of moisture and other contaminants in friction composites
| AD-A261226 | p 2640 N93-26301
Using terrestrial plants in biomonitoring
| PB93-158780 | p 2766 N93-26316
Particulate emissions from gas turbine engines
| AD-A261374 | p 2595 N93-26339
Inorganic nitrogen and phosphorus dynamics in the water column of the Patuxent River
| PB93-172955 | p 2767 N93-26511
Model for transport of floating debris in the ocean
| PB93-172997 | p 2768 N93-26559

CONTAMINATION
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570
Military standardization handbook: Aircraft refueling handbook
| AD-A261755 | p 2662 N93-26600

CONTINENTAL SHELVES
Interaction of an eddy with a continental slope
| AD-A261550 | p 2791 N93-26578

CONTINUITY (MATHEMATICS)
Min and max are the only continuous ampersand-, V-operations for finite logics
| NASA-CR-192952 | p 2820 N93-25452

CONTINUOUS SPECTRA
Effect of continuous eigenvalue spectrum on plasma transport in toroidal systems
| NIFS-214 | p 2859 N93-25215

CONTINUOUS WAVE LASERS
Experimental and theoretical study of cw HF chemical laser overtone performance p 2713 N93-25420
Experimental and theoretical study of CW HF chemical laser residual fundamental gain p 2714 N93-25721

CONTINUUM MECHANICS
Development and application of computational aerothermodynamics flowfield computer codes
| NASA-CR-192940 | p 2574 N93-24736

CONTINUUMS
Continuum and micromechanics treatment of constraint in fracture
| AD-A260927 | p 2727 N93-25647

CONTOURS
Entropy reduction via simplified image contourization p 2804 N93-25924

CONTROL SIMULATION
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574

CONTROL STABILITY
Design of the reduced LQG compensator for the DSS-13 antenna p 2672 N93-24669
Robust controls with structured perturbations
| NASA-CR-192956 | p 2817 N93-24757
The 32nd CDC: Robust stabilizer synthesis for interval plants using Nevanlina-pick theory
| NASA-CR-192894 | p 2818 N93-25156
Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199
Stability margins for multilinear interval systems by way of phase conditions: A unified approach
| NASA-CR-192893 | p 2819 N93-25226
Parametric stability margin for multilinear interval control systems
| NASA-CR-192892 | p 2819 N93-25296
Control of nonlinear systems under input constraints with applications to flight control p 2596 N93-25353

CONTROL SURFACES
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196

CONTROL SYSTEMS DESIGN
Robust controls with structured perturbations
| NASA-CR-192956 | p 2817 N93-24757
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137
The 32nd CDC: System identification using interval dynamic models
| NASA-CR-192895 | p 2818 N93-25155
Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
Aerospace vehicle model simplification for feedback control p 2596 N93-25292
Parametric stability margin for multilinear interval control systems
| NASA-CR-192892 | p 2819 N93-25296
Identification and control of lightly damped, large space structures: An experimental evaluation p 2616 N93-25351
Application of non-thermal plasmas to pollution control
| DE93-007515 | p 2763 N93-25385
A control structure for fault-tolerant operation of robotic manipulators
| DE93-005783 | p 2717 N93-25413
Human factors engineering: A key element of instrumentation and control system design
| DE93-006731 | p 2800 N93-25415
What procedure to choose while designing a fuzzy control? Towards mathematical foundations of fuzzy control
| NASA-TM-108719 | p 2820 N93-25459
Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system
| AD-A260793 | p 2599 N93-25693
Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Control and stabilization of nonholonomic dynamic systems p 2596 N93-25729
Passivity motivated controller design for flexible structures
| AD-A261122 | p 2719 N93-25771
Center for intelligent control systems
| AD-A260995 | p 2821 N93-25853
Recommendations for a Kalman filter to estimate and control freeze and sublime rates of gaseous diffusion plant freezer/sublimer systems
| ORNL/TM-12183 | p 2668 N93-25937
Techniques for designing rotorcraft control systems
| NASA-CR-192960 | p 2597 N93-26046
Sequential design of a linear quadratic controller for the Deep Space Network antennas p 2679 N93-26123
Nonlinear system design: Adaptive feedback linearization with unmodeled dynamics
| AD-A261360 | p 2826 N93-26333

CONTROL THEORY
Robust controls with structured perturbations
| NASA-CR-192956 | p 2817 N93-24757
Maximum entropy approach to fuzzy control
| NASA-CR-192949 | p 2818 N93-25141
How to control if even experts are not sure: Robust fuzzy control
| NASA-TM-108745 | p 2818 N93-25142
The 32nd CDC: Robust stabilizer synthesis for interval plants using Nevanlina-pick theory
| NASA-CR-192894 | p 2818 N93-25156
Optimal thrust magnitude on a singular arc in atmospheric flight p 2819 N93-25410
Control of complex dynamic systems by neural networks p 2827 N93-25611
Control and stabilization of nonholonomic dynamic systems p 2596 N93-25729
Digital filter control of remotely operated flexible robotic structures
| DE93-007587 | p 2827 N93-26596

CONTROLLABILITY
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode p 2605 N93-24724
CONTROLLED ATMOSPHERES
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
CONTROLLED FUSION
R and D of transmission lines for ECH system
| NIFS-210 | p 2687 N93-24951
CONTROLLERS
Design of the reduced LQG compensator for the DSS-13 antenna p 2672 N93-24669
Experimental results of the performance of the new phase and frequency controller p 2839 N93-25035
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137
RAID-2: Design and implementation of a large scale disk array controller
| NASA-CR-192911 | p 2806 N93-25233
Identification and control of lightly damped, large space structures: An experimental evaluation p 2616 N93-25351
A control structure for fault-tolerant operation of robotic manipulators
| DE93-005783 | p 2717 N93-25413
The design of a propulsion system using vent gas from a liquid helium cryogenic system p 2623 N93-25539
Firmware development improves system efficiency p 2807 N93-25606
Adaptive process control with fuzzy logic and genetic algorithms p 2827 N93-25612
Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system
| AD-A260793 | p 2599 N93-25693
Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Passivity motivated controller design for flexible structures
| AD-A261122 | p 2719 N93-25771
Techniques for designing rotorcraft control systems
| NASA-CR-192960 | p 2597 N93-26046
Spacelab, Spacehab, and Space Station Freedom payload interface projects p 2620 N93-26080
Sequential design of a linear quadratic controller for the Deep Space Network antennas p 2679 N93-26123
VETA x ray data acquisition and control system p 2854 N93-26186
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196
Adaptive control of nonlinear flexible systems
| AD-A261676 | p 2826 N93-26365
Controls for orbital assembly of large space structures p 2620 N93-26408
CONVECTION
Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment
| NASA-CR-192826 | p 2769 N93-24945
Minimization of heat slab nodes with higher order boundary conditions
| DE93-004238 | p 2695 N93-24966
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356
Flow and morphological conditions associated with the directional solidification of aqueous ammonium chloride
| DE93-008886 | p 2644 N93-25495
On the vertical structure of seasonal, interannual and intraseasonal flows p 2782 N93-25557
Tropical cyclogenesis in the western North Pacific p 2783 N93-25714
Two-dimensional fin analysis p 2705 N93-25737
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740
Direct measurement of velocity space transport in a plasma p 2861 N93-25831
CONVECTION CLOUDS
Redistribution of trace chemical species by a small convective cloud
| PB93-156164 | p 2765 N93-25873
CONVECTION CURRENTS
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
| AD-A260889 | p 2783 N93-25633
CONVECTION-DIFFUSION EQUATION
Non-local description of pollution transport in random medium p 2763 N93-25329
CONVECTIVE FLOW
Numerical study of cavity natural convection flow with augmenting and counteracting effects by projection finite element method p 2701 N93-25540
Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779
CONVECTIVE HEAT TRANSFER
Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551
Two-dimensional fin analysis p 2705 N93-25737
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779
CONVENTIONS
Verification of a climate convention: Role and limitations of a space based remote sensing system p 2738 N93-24781
CONVERGENCE
Activity report
| AD-A261933 | p 2829 N93-26199
Integrated approaches to parallelism in optimization and the solution of inverse problems
| AD-A261490 | p 2829 N93-26344
CONVERGENT-DIVERGENT NOZZLES
Direct solutions of the Navier-Stokes equations with application to static aeroelasticity p 2697 N93-25259
CONVERSION
Direct methane conversion to methanol
| DE93-009183 | p 2660 N93-25497
CONVOLUTION INTEGRALS
The analysis of convolutional codes via the extended Smith algorithm p 2671 N93-24664
Interest of complementary data of coarse and high spatial resolution for agro-climatic crop monitoring p 2750 N93-24853
COOLING
A simple and compact source of cold atoms for cesium fountains and microgravity clocks p 2831 N93-24981
Optical detection of laser-cooled ions in a Penning trap p 2838 N93-25031
Winter warming from large volcanic eruptions
| NASA-CR-192848 | p 2763 N93-25244
A heat transfer analysis of a mobile vehicle radiation-shielded operator compartment
| DE93-007428 | p 2800 N93-25318
Two-dimensional fin analysis p 2705 N93-25737
AMPHIB: A users manual
| AD-A261769 | p 2669 N93-26285
COOLING SYSTEMS
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221
High speed solid state circuit breaker p 2694 N93-25598
COORDINATE TRANSFORMATIONS
Orbital parameter estimation using an extended Kalman filter
| AD-A260618 | p 2608 N93-25636
COORDINATES
Atomic time scales for dynamical astronomy p 2832 N93-24984
Evaluation of lens distortion errors in video-based motion analysis
| NASA-TP-3266 | p 2797 N93-25736
Occultation of a compact radio source by Venus p 2676 N93-26107
COPOLYMERS
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
Multichip module high speed testing
| AD-A261391 | p 2856 N93-26306
Development of organic nonlinear optical materials
| AD-A261332 | p 2856 N93-26309
COPPER ALLOYS
Development of dispersion-strengthened XD (trademark) Cu alloys for high heat-flux applications
| NASA-CR-191124 | p 2653 N93-24761
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632
Position sensitive atom probe study of the decomposition of a Cu-2.6 at. percent Co alloy
| DE93-006737 | p 2653 N93-26500
COPPER SELENIDES
Non-H2Se, ultra-thin CIS devices
| DE93-000078 | p 2759 N93-25253
Role of polycrystallinity in CdTe and CuInSe2 photovoltaic cells
| DE93-000045 | p 2759 N93-25504
CORE FLOW
Steady induction effects in geomagnetism. Part 1B: Geomagnetic estimation of steady surficial core motions: A non-linear inverse problem
| NASA-TP-3272-PT-1B | p 2776 N93-26421
CORIOLIS EFFECT
Heat transfer in rotating serpentine passages with selected model orientation for smooth or skewed trip walls
| NASA-TM-106126 | p 2667 N93-25177
CORN
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818
CORNER FLOW
Instability of flow in a streamwise corner
| NASA-CR-191410 | p 2576 N93-25153
CORONAGRAPHS
A revised and expanded catalogue of mass ejections observed by the Solar Maximum Mission coronagraph
| NASA-CR-193146 | p 2899 N93-26556
CORRECTION
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
Analytical techniques for improved time transfer using common view of direct broadcasting satellites p 2835 N93-25008
AXAF VETA-I mirror encircled energy measurements and data reduction p 2855 N93-26188
CORRELATION
Correlation between NDVI values derived from NOAA AVHRR HRPT data and ground measurements of precipitation in the EFEDA study area (Spain) p 2738 N93-24780
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy
| DE93-007509 | p 2654 N93-25384
Tables for the thermophysical properties of ethane
| PB93-160786 | p 2646 N93-26319
Properties of readings of periodically correlated random processes
| AD-A261225 | p 2686 N93-26573
CORROSION
Laser initiated corrosion pits on aluminum p 2650 N93-25464
The corrosion of metal matrix composites p 2638 N93-25723
CORROSION PREVENTION
Chromate-free corrosion resistant talc coatings for aluminum alloys
| DE93-005370 | p 2655 N93-25446
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
In situ surface studies of conversion coatings for steel and aluminum
| AD-A261016 | p 2655 N93-25861
CORROSION RESISTANCE
Hot corrosion of the B2 nickel aluminides
| NASA-CR-191082 | p 2649 N93-25128
Chromate-free corrosion resistant talc coatings for aluminum alloys
| DE93-005370 | p 2655 N93-25446
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278
CORROSION TESTS
Hydrogen-induced stress corrosion cracking susceptibility analysis of pitch links from the AH-64 Apache helicopter
| AD-A260692 | p 2651 N93-25895
COSMIC BACKGROUND EXPLORER SATELLITE
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
Real-time attitude determination and gyro calibration p 2602 N93-24708
COSMIC DUST
Space environmental interactions for the space exploration initiative p 2897 N93-26396

COSMIC RAYS
Time dependent simulation of cosmic-ray shocks including Alfven transport
| NASA-CR-192931 | p 2899 N93-24752
Alfven wave transport effects in the time evolution of parallel cosmic-ray modified shocks
| NASA-CR-192932 | p 2899 N93-25161
Cosmic ray composition investigations using ICE/ISEE-3
| NASA-CR-192808 | p 2900 N93-25241
Oblique MHD cosmic-ray modified shocks: Two-fluid numerical simulations
| NASA-CR-192930 | p 2900 N93-26132
COSMOLOGY
Cosmic string cosmology p 2891 N93-24907
COSMONAUTS
Utilization of the graded universal testing system to increase the efficiency for assessing aerobic and anaerobic capacity p 2794 N93-26077
COST ANALYSIS
Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721
Space transfer vehicle concepts and requirements study. Volume 3, book 1: Program cost estimates
| NASA-CR-192529 | p 2611 N93-25514
Space transfer concepts and analyses for exploration missions. Technical directive 12: Beamed power systems study
| NASA-CR-192532 | p 2599 N93-26146
Functional Economic Analysis Guidebook, version 1.1
| AD-A261390 | p 2886 N93-26305
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Regulatory impact analysis of the Part 503 sewage sludge regulation
| PB93-110625 | p 2768 N93-26567
COST EFFECTIVENESS
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
Space transfer vehicle concepts and requirements study. Volume 1: Executive summary
| NASA-CR-192524 | p 2610 N93-25479
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597
Variable-speed generators with flux weakening p 2694 N93-25599
Automation and robotics human performance
| NASA-CR-193049 | p 2802 N93-26153
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585
Documentation for propane fleet conversion cost-effectiveness model
| PB93-165611 | p 2720 N93-26590
COST ESTIMATES
What is a system? NASA's phased project description p 2665 N93-24681
Magnitude and value of electric vehicle emissions reductions for six driving cycles in four US cities with varying air quality problems
| DE93-006417 | p 2660 N93-25298
Aerial photographic sampling for statewide resource inventory p 2755 N93-25441
Space transfer vehicle concepts and requirements study. Volume 3, book 1: Program cost estimates
| NASA-CR-192529 | p 2611 N93-25514
COST REDUCTION
Design and analysis of algorithms for processing queries in database systems p 2876 N93-25482
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818
COSTA RICA
Geologic structure and processes of the eastern Pacific margin: California and Costa Rica p 2771 N93-25424
COSTS
Management issues in systems engineering p 2665 N93-24682
The importance of cost considerations in the systems engineering process p 2666 N93-24686
Data parallel finite element techniques for large-scale computational fluid dynamics p 2699 N93-25334
The state of computing at Los Alamos National Laboratory, FY 1991
| LA-12326-MS | p 2811 N93-25943
COUETTE FLOW
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738
COULOMB COLLISIONS
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092
COUNTER ROTATION
The interaction of modulated vortex pairs with a free surface p 2701 N93-25485
COUNTERFLOW
Solution of nonlinear boundary value problem on successively refined grids
| AD-A261395 | p 2829 N93-26519
COUNTERMEASURES
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
COUPLING
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369
COUPLINGS
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
COVALENCE
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258
COVARIANCE
TDRSS orbit determination using short baseline differenced carrier phase p 2601 N93-24701
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
CRACK INITIATION
Approximate analysis on strain rate effects and behavior of stress and strain fields at the crack tip in Mode 2 in metallic materials, appendix no. 1
| AD-A260836 | p 2728 N93-25785
Micromechanics of fatigue
| AD-A260577 | p 2729 N93-25901
CRACK OPENING DISPLACEMENT
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
CRACK PROPAGATION
Numerical investigations on fracture behavior of ductile materials p 2725 N93-25411
High temperature fracture toughness of Ni3Al alloy IC-396M
| DE93-008564 | p 2650 N93-25492
Development and application of an advanced ductile fracture mechanics methodology p 2727 N93-25718
Models of crack growth along polymer interfaces p 2728 N93-25750
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522
CRACK TIPS
Continuum and micromechanics treatment of constraint in fracture
| AD-A260927 | p 2727 N93-25647
Crack tip fields in ductile crystals and bicrystals p 2866 N93-25749
Approximate analysis on strain rate effects and behavior of stress and strain fields at the crack tip in Mode 2 in metallic materials, appendix no. 1
| AD-A260836 | p 2728 N93-25785
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
Approximate techniques for predicting size effects on cleavage fracture toughness (J(sub c))
| AD-A261591 | p 2731 N93-26516
CRACKING (FRACTURING)
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
Crack tip fields in ductile crystals and bicrystals p 2866 N93-25749
CRACKS
Fracture of an elliptical inclusion and its implications for the properties of short fiber composites p 2634 N93-25333
Three-dimensional boundary element analysis of contact and fracture problems p 2725 N93-25335
Continuum and micromechanics treatment of constraint in fracture
| AD-A260927 | p 2727 N93-25647
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768
Nondestructive evaluation of ferrite c-cores
| KCP-613-4677 | p 2721 N93-25939
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
CRANES
Lunar surface structural concepts and construction studies p 2670 N93-26417
CRASHES
Virtually-synchronous communication based on a weak failure suspector
| NASA-CR-193003 | p 2721 N93-26135
CRASHWORTHINESS
Crashworthiness of composite seats for civil aircraft p 2582 N93-24773
CRATERS
Hypervelocity impact study: The effect of impact angle on crater morphology
| NASA-CR-192711 | p 2724 N93-25260
CRAY COMPUTERS
An analysis of file migration in a UNIX supercomputing environment
| NASA-CR-192908 | p 2809 N93-25131
Using a multifrontal sparse solver in a high performance, finite element code
| NASA-CR-192718 | p 2828 N93-25223
Using a Cray Y-MP as an array processor for a RISC Workstation
| NASA-TM-103961 | p 2809 N93-25246
CREEP PROPERTIES
Inelastic behavior of thermoplastic composites p 2636 N93-25674
Models of crack growth along polymer interfaces p 2728 N93-25750
CRITERIA
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
CRITICAL LOADING
Estimating turbine limit load
| NASA-CR-191105 | p 2580 N93-25883
CRITICAL POINT
Malone refrigeration
| DE93-005439 | p 2668 N93-25447
CRITICAL TEMPERATURE
Molecular/polymeric magnetism
| DE93-008635 | p 2847 N93-25114
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
| NASA-CR-192344 | p 2863 N93-25219
CROP IDENTIFICATION
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850
CROP INVENTORIES
Remote sensing applied to agriculture state of the art and new trends p 2745 N93-24818
Toward a satellite based crop information system in Hungary p 2750 N93-24849
Assessment and forecasting of crop yield in Niger through NOAA NDVI data p 2750 N93-24851
Multi-temporal satellite image analysis for crop inventories in the Po River Valley (Italy) p 2755 N93-25434
CROSS CORRELATION
Radial velocity studies of the secondary in cataclysmic variables p 2888 N93-25286
An investigation on planar velocimetry by spatial cross-correlation p 2578 N93-25664
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358
CROSS FLOW
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865
Method of measuring cross-flow vortices by use of an array of hot-film sensors
| NASA-CASE-LAR-14824-1-SB | p 2706 N93-26000
Reduction in size and unsteadiness of a VTOL ground vortex by ground fences
| NASA-CR-192997 | p 2580 N93-26049
On the cross-stream spectral method for the Orr-Sommerfeld equation
| NASA-TM-107737 | p 2845 N93-26086
CROSS POLARIZATION
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
CROSSLINKING
Development of organic nonlinear optical materials
| AD-A261332 | p 2856 N93-26309

CRUISE MISSILES
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202
CRUISING FLIGHT
Optimized scramjet engine integration on a waverider airframe p 2593 N93-25480
CRUSTAL FRACTURES
Crustal deformation studies in subaerial parts of the world oceanic rift system: Iceland and Afar
p 2789 N93-25558
Proceedings of the Government Users Workshop on Ground Penetrating Radar Applications and Equipment
| AD-A261873 | p 2686 N93-26541
CRUSTS
Crustal deformation studies in subaerial parts of the world oceanic rift system: Iceland and Afar
p 2789 N93-25558
CRYODEPOSITS
Condensation on cooled surfaces of optical devices at the cosmic conditions p 2753 N93-24869
CRYOGENIC WIND TUNNELS
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087
CRYOGENICS
Microwave frequency discriminator with a cryogenic sapphire resonator for ultra-low phase noise
p 2693 N93-24982
CRYOLITE
Electrochemical and spectroscopic studies of molten halides
| AD-A261687 | p 2646 N93-26439
CRYSTAL DEFECTS
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD)
| DE92-010560 | p 2862 N93-24953
Radiation-induced disordering and defect production in CuAu and NiAl studied by molecular dynamics simulation
| DE93-007506 | p 2649 N93-25336
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
Defect initiation/growth and energy dissipation induced by deformation and fracture
| AD-A261703 | p 2869 N93-26385
CRYSTAL FILTERS
A state-of-the-art crystal filter design package using Windows 3.0 techniques p 2693 N93-25010
Very wide bandwidth HF crystal filters
p 2693 N93-25039
CRYSTAL GROWTH
Crystal growth and physical characterizations of GaPO4 p 2840 N93-25044
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218
Fast diagnostics of laser ablation used for pulsed laser deposition
| DE93-005155 | p 2713 N93-25508
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740
Computation of complex solidification morphologies using a phase-field model
| PB93-156743 | p 2869 N93-26547
Laser damage to production- and research-grade KDP crystals
| DE93-007517 | p 2870 N93-26594
CRYSTAL LATTICES
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
A numerical simulation of adsorption onto a crystalline surface
| AD-A261079 | p 2866 N93-25781
Molecular devices based on new monolayer-forming systems
| AD-A260996 | p 2866 N93-25854
Fundamental aspects of metal joining: The study of strong interfaces
| AD-A261293 | p 2653 N93-26304
CRYSTAL OSCILLATORS
Weak magnetic field sensitivity of quartz crystal oscillators p 2833 N93-24993
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
OSCCAR: Oscillator-compensated with a capacitance array p 2693 N93-25002
Control of environmental and clock parameters in Time and Frequency Standards Laboratory
p 2835 N93-25007
Dedicated oscillator for immersed crystal sensor
p 2837 N93-25020
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026
Ultra stable oscillators for satellite applications
p 2621 N93-25027
Preliminary results of a newly designed mini-OCXO oscillator especially dedicated to space applications
p 2621 N93-25028
Use of the TV-signal in stabilizing a local rubidium oscillator p 2693 N93-25029
Quartz oscillators, frequency synthesizers, and timing systems for geodesy and radio science applications
p 2693 N93-25052
Space radiation susceptibility of ultra stable crystal oscillators p 2693 N93-25053
Oscillators for mobile GPS receivers
p 2694 N93-25055
CRYSTAL STRUCTURE
Sputter deposition of yttrium-oxides
| DE93-007499 | p 2654 N93-25382
Thermodynamic, kinetic, and structural properties of linear polyethylene crystallized from polymer-diluent mixture p 2864 N93-25528
The influence of primary and secondary orientations on the elastic response of a nickel-base single-crystal superalloy
| NASA-TM-106125 | p 2731 N93-26550
CRYSTAL SURFACES
A numerical simulation of adsorption onto a crystalline surface
| AD-A261079 | p 2866 N93-25781
Activation of methane by clean and chemically modified single crystal oxide surfaces
| PB93-157295 | p 2644 N93-25817
Dynamics of gas-surface interactions
| AD-A261402 | p 2646 N93-26402
CRYSTALLINITY
A model for the filling of cold cavities with solidifying, semi-crystalline polymers
| DE93-003817 | p 2655 N93-25507
CRYSTALLITES
Control of crystallite size in diamond film chemical vapor deposition
| AD-D015660 | p 2867 N93-26090
CRYSTALLIZATION
The nature of the glass transition and its determination by thermal analysis
| DE93-006746 | p 2654 N93-25374
A model for the filling of cold cavities with solidifying, semi-crystalline polymers
| DE93-003817 | p 2655 N93-25507
Thermodynamic, kinetic, and structural properties of linear polyethylene crystallized from polymer-diluent mixture p 2864 N93-25528
Transition metal chelate-fulleride compounds: Electrocrystallization of semiconducting (Ru(bpy)s)(C60)2
| AD-A261549 | p 2869 N93-26577
CRYSTALLOGRAPHY
Measurement results of the crystallographic orientation of the SC cut round plates p 2840 N93-25040
A micromechanical viscoplastic stress-strain model with grain boundary sliding
| DE93-009109 | p 2649 N93-25095
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204
CRYSTALS
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
Molecular devices based on new monolayer-forming systems
| AD-A260996 | p 2866 N93-25854
CUBANE
Energetic materials from cubane
| AD-A261317 | p 2662 N93-26308
CULTURE TECHNIQUES
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496
Metabolic response of environmentally isolated microorganisms to industrial effluents: Use of a newly described cell culture assay p 2794 N93-26066
CUMULUS CLOUDS
Redistribution of trace chemical species by a small convective cloud
| PB93-156164 | p 2765 N93-25873
The initiation of lightning and the growth of electric fields in thunderstorms
| AD-A261455 | p 2787 N93-26352
CURING
Process for bonding elastomers to metals
| NASA-CASE-LAR-13645-1 | p 2656 N93-25995
In-process cure monitoring of composites via fiber-optic fluorescence
| AD-A261712 | p 2641 N93-26580
CURRENT DENSITY
Assessment of torsatrons as reactors
| DE93-006721 | p 2858 N93-24969
Laser initiated corrosion pits on aluminum
p 2650 N93-25464
Anode power deposition in coaxial MPD thrusters
p 2623 N93-25665
CURVED BEAMS
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701
CURVES (GEOMETRY)
Elastic curves on the sphere
| AD-A261057 | p 2829 N93-26228
CUTTING
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
CYCLES
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
CYCLIC HYDROCARBONS
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame
| NASA-CR-191099 | p 2642 N93-25116
CYCLIC LOADS
Internal stresses and the cyclic deformation of an aluminum matrix composite p 2650 N93-25436
CYCLOGENESIS
Tropical cyclogenesis in the western North Pacific
p 2783 N93-25714
An investigation into the causative mechanisms for explosive cyclone development over the Atlantic
| AD-A261831 | p 2786 N93-26273
CYCLONES
A systematic satellite approach for estimating central pressures of mid-lattitude oceanic storms
| NOAA-TR-NESDIS-63 | p 2781 N93-25220
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
| AD-A260889 | p 2783 N93-25633
Tropical cyclogenesis in the western North Pacific
p 2783 N93-25714
Pressure torques and circulation changes in Rocky Mountain lee cyclones p 2783 N93-25724
Tropical cyclone/upper-atmospheric interaction as inferred from satellite total ozone observations
p 2784 N93-25741
An investigation into the causative mechanisms for explosive cyclone development over the Atlantic
| AD-A261831 | p 2786 N93-26273
Boundary layer coupling between an explosive cyclone and the Gulf Stream during ERICA
| AD-A261577 | p 2787 N93-26513
CYCLOTRON FREQUENCY
Optical detection of laser-cooled ions in a Penning trap p 2838 N93-25031
Nonlinear wave phenomena related to interactions in the ionosphere
| AD-A261450 | p 2776 N93-26348
CYCLOTRON RADIATION
Nonlinear wave phenomena related to interactions in the ionosphere
| AD-A261450 | p 2776 N93-26348
CYCLOTRON RESONANCE DEVICES
Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation
| AD-A261117 | p 2609 N93-25770
Magnetic field source for bi-chambered electron beam devices
| AD-A261316 | p 2691 N93-26299
CYLINDRICAL BODIES
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967
Apparatus and methods for determining balance of a cylindrical vehicle
| AD-D015637 | p 2717 N93-25228
Tangential fuselage blowing on an ogive cylinder
p 2578 N93-25545
Positive displacement rotary pump
| AD-D015678 | p 2719 N93-26144
CYTOMETRY
Measuring the metastatic potential of cancer cells
p 2794 N93-25566

D

DAMAGE
Mapping of windfall damage in the Hunsrueck plateau with Landsat TM-data p 2749 N93-24843
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Comparison of the damage for various types of fibre reinforced composites due to different lightning test standards (MIL-STD-1757A, German military VG-standard 96903) p 2642 N93-24891
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
Analysis of matrix damage in unidirectional composites p 2634 N93-25338
The damage, repair and design of fiber composite structural materials p 2635 N93-25532
Expedient repair of structural facilities
|AD-A260727| p 2598 N93-25656
Numerical simulation of damage and progressive failures in composite laminates using the layerwise plate theory p 2636 N93-25661
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
Transmission electron microscopy investigation of ion implantation damage in GaAs and other semiconductors p 2865 N93-25715
Damage and failure analysis on continuous fiber-reinforced polymer composites p 2637 N93-25716
Computer modelling of cyclic deformation of high-temperature materials
|AD-A260978| p 2639 N93-25936
Damage detection and mitigation of composite structures using smart materials
|AD-A261121| p 2639 N93-25945
Remtech SSME nozzle design TPS
|NASA-CR-192516| p 2631 N93-26056
Electrostatic fiber spreader
|AD-D015677| p 2640 N93-26143

DAMAGE ASSESSMENT
The use of SPOT data in natural disaster prevention and damage assessment p 2743 N93-24811
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864
Comparison of the damage for various types of fibre reinforced composites due to different lightning test standards (MIL-STD-1757A, German military VG-standard 96903) p 2642 N93-24891
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
In-situ ultrasonic C-scanner
|AD-A261113| p 2638 N93-25768
Damage detection and mitigation of composite structures using smart materials
|AD-A261121| p 2639 N93-25945
Guide for conducting convective windstorm surveys
|PB93-148427| p 2787 N93-26570

DAMPING
Application of finite-state inflow to flap-lag-torsion damping in hover p 2587 N93-25486

DATA ACQUISITION
The Telecommunications and Data Acquisition Report
|NASA-CR-192887| p 2671 N93-24659
Failure monitoring in dynamic systems: Model construction without fault training data p 2672 N93-24666
A functional description of the Buffered Telemetry Demodulator (BTD) p 2614 N93-24667
Ice thickness measurement system for the icing research tunnel calibration
|NASA-TM-106095| p 2708 N93-24737
Analysis of large system black box verification test data
|NASA-CR-192885| p 2815 N93-24748
A prototype system for forest fire prevention and control p 2749 N93-24844
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
Lightning data acquisition p 2778 N93-24883
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Data availability and data archeology from the former Soviet Union p 2735 N93-24932
Visual approach data collection at St. Louis Lambert Field (STL)
|DOT/FAA/CT-TN93/2| p 2584 N93-24948
An analysis of file migration in a UNIX supercomputing environment
|NASA-CR-192908| p 2809 N93-25131
How to help intelligent systems with different uncertainty representations cooperate with each other
|NASA-CR-192947| p 2818 N93-25196
An advanced data-acquisition system for wind energy projects
|DE93-000079| p 2874 N93-25254
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
|DE93-007893| p 2848 N93-25368
The North Dakota thunderstorm project
|PB93-153039| p 2785 N93-25776
Development of a tool-set for simultaneous, multi-site observations of astronomical objects p 2878 N93-25795
The Telecommunications and Data Acquisition Report
|NASA-CR-192804| p 2676 N93-26105
DSN acquisition of Magellan high-rate telemetry data p 2614 N93-26124
Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125
Goldstone solar system radar signal processing p 2680 N93-26130
ROSAT investigation of flaring and activity on Prox Cen
|NASA-CR-192972| p 2891 N93-26139
Rain rate instrument for deployment at sea, phase 2
|NASA-CR-192442| p 2786 N93-26156
VETA x ray data acquisition and control system p 2854 N93-26186
Correcting x ray spectra obtained from the AXAF VETA-I mirror calibration for pileup, continuum, background and deadtime p 2854 N93-26187
Monaural and binaural processing of complex waveforms
|AD-A261659| p 2846 N93-26358
CALS-HSC data element dictionary
|AD-A261560| p 2813 N93-26461
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
|AD-A261105| p 2591 N93-26572

DATA BASE MANAGEMENT SYSTEMS
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
|DE93-002943| p 2760 N93-24955
AQUIS: A PC-based air inventory and permit manager
|DE93-003006| p 2761 N93-25143
Concurrency control in real-time database systems p 2874 N93-25271
Optimization of knowledge-based systems and expert system building tools
|NASA-CR-192763| p 2874 N93-25288
A distributed heterogeneous client-server environment
|DE93-007496| p 2875 N93-25319
A logic-based approach to federated databases p 2876 N93-25466
Performance studies of cache consistency and concurrency control algorithms in a distributed client/server DBMS architecture p 2876 N93-25554
VIEWCACHE: An incremental pointer-based access method for autonomous interoperable databases p 2880 N93-25809
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
Intelligent access to multiple relational database systems
|AD-A261198| p 2881 N93-25824
The SWORD multilevel secure DBMS
|RSRE-92005| p 2811 N93-25942
OSSA Information Systems Program
|NASA-TM-108774| p 2882 N93-26231
FY92 contributions to the Database Management System Interface Standards Working Group of the Navy Next Generation Computer Resources Program
|AD-A261348| p 2883 N93-26313
A coastal hazards data base for the US East Coast
|NASA-TM-108265| p 2791 N93-26586

DATA BASES
Lightning data acquisition p 2778 N93-24883
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
Improving information search at the user interface: The impact of graphical innovation on query formulation and expression p 2873 N93-24905
The role of ocean climate data in operational Naval oceanography p 2732 N93-24916
Data archaeology at ICES p 2734 N93-24931
Data management for community research projects: A JGOFS case study p 2736 N93-24936
Propagation velocity and space-time correlation of perturbations in turbulent channel flow
|NASA-TM-103932| p 2695 N93-25082
Efficient inspection of network pollution data
|DE93-003810| p 2761 N93-25126
A longitudinal examination of applicants to the air traffic control supervisory identification and development program
|DOT/FAA/AM-92/16| p 2796 N93-25213
Concurrency control in real-time database systems p 2874 N93-25271
Earth observing system. Output data products and input requirements, version 2.0. Volume 3: Algorithm summary tables and non-EOS data products
|NASA-TM-108769| p 2756 N93-25462
A logic-based approach to federated databases p 2876 N93-25466
Space transfer vehicle concepts and requirements study. Volume 1: Executive summary
|NASA-CR-192524| p 2610 N93-25479
Design and analysis of algorithms for processing queries in database systems p 2876 N93-25482
Climate data bases of the People's Republic of China, 1841-1988
|DE93-007907| p 2764 N93-25517
Performance studies of cache consistency and concurrency control algorithms in a distributed client/server DBMS architecture p 2876 N93-25554
The database Query Support Processor (QSP) p 2807 N93-25577
ASTROS-ID: Software for system identification using mathematical programming
|AD-A260867| p 2810 N93-25627
Proceedings of Workshop 1: The Human Brainmap Database
|AD-A260720| p 2796 N93-25654
Digital Nautical Chart
|AD-A260810| p 2756 N93-25694
Multivariate statistical analysis software technologies for astrophysical research involving large data bases p 2878 N93-25796
Knowledge-based assistance for science visualization and analysis using large distributed databases p 2879 N93-25801
VIEWCACHE: An incremental pointer-based access method for autonomous interoperabie databases p 2880 N93-25809
SAVS: A Space Analysis and Visualization System p 2881 N93-25812
Intelligent access to multiple relational database systems
|AD-A261198| p 2881 N93-25824
Advanced life support study. Modification 10: ECLSS logistical support analysis for Space Station Freedom
|NASA-CR-192481| p 2801 N93-25888
The SWORD multilevel secure DBMS
|RSRE-92005| p 2811 N93-25942
Visualizing the semantic content of large text databases using text maps p 2826 N93-25982
The StarView intelligent query mechanism p 2826 N93-25984
Bibliography on propulsion airframe integration technologies for high-speed civil transport applications, 1980-1991
|NASA-TM-105602| p 2573 N93-26136
Department of Defense technical architecture framework for information management. Volume 3: Reference model and standards profile, version 1.3
|AD-A261913| p 2882 N93-26230
A geological and geophysical information system for Eurasia
|AD-A261789| p 2883 N93-26442
A database for propagation models p 2684 N93-26472
Department of Defense technical architecture framework for information management. Volume 1: Implementation concept, version 1.1
|AD-A261911| p 2884 N93-26531
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
|AD-A261912| p 2884 N93-26532
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
|PB93-152478| p 2768 N93-26533
Development of a concept for a national construction industry health and safety data base
|PB93-159325| p 2884 N93-26568
A coastal hazards data base for the US East Coast
|NASA-TM-108265| p 2791 N93-26586
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
|DE93-007737| p 2658 N93-26588

DATA COMPRESSION
Image coding by way of wavelets p 2671 N93-24665
High resolution stereo imaging and data compression p 2753 N93-24867
Applications of wavelet-based compression to multidimensional earth science data
|DE93-007348| p 2762 N93-25166

Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448
High performance compression of science data
p 2881 N93-25811
The Space and Earth Science Data Compression Workshop
| NASA-CP-3183 | p 2803 N93-25921
Adjustable lossless image compression based on a natural splitting of an image into drawing, shading, and fine-grained components p 2804 N93-25923
Compression of spectral meteorological imagery
p 2804 N93-25925
Methods of evaluating the effects of coding on SAR data p 2804 N93-25926
Fractal image compression: A resolution independent representation for imagery p 2804 N93-25927
The implementation of a lossless data compression module in an advanced orbiting system: Analysis and development p 2804 N93-25928
Lossless compression of image data products on th e FIFE CD-ROM series p 2804 N93-25929
The effects of video compression on acceptability of images for monitoring life sciences' experiments
p 2805 N93-25930
High-performance compression of astronomical images p 2805 N93-25931
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120

DATA CONVERSION ROUTINES
Federal Communications Commission (FCC) Transponder Loading Data Conversion Software. User's guide and software maintenance manual, version 1.2
| NASA-CR-191067 | p 2808 N93-24947

DATA CORRELATION
Propagation velocity and space-time correlation of perturbations in turbulent channel flow
| NASA-TM-103932 | p 2695 N93-25082
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 2
| NASA-CR-192833 | p 2770 N93-25088

DATA FLOW ANALYSIS
CAD data exchange development
| DE93-008085 | p 2809 N93-25307
Data systems dynamic simulator p 2814 N93-25602

DATA INTEGRATION
A logic-based approach to federated databases
p 2876 N93-25466
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
Data fusion with artificial neural networks (ANN) for classification of earth surface from microwave satellite measurements p 2824 N93-25974
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
| AD-A261105 | p 2591 N93-26572

DATA LINKS
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit
p 2601 N93-24704
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
Frequency generation and synthesis in the DRSS
p 2693 N93-25054
Piloted simulation of an air-ground profile negotiation process in a time-based Air Traffic Control environment
| NASA-TM-107748 | p 2585 N93-26087
ETS-5, ETS-6, and COMETS projects in Japan
p 2683 N93-26470

DATA MANAGEMENT
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
Proceedings of the Ocean Climate Data Workshop
| NASA-TM-108711 | p 2732 N93-24915
Global Temperature and Salinity Pilot Project
p 2733 N93-24924
Indian Ocean analyses p 2733 N93-24925
Data archaeology at ICES p 2734 N93-24931
The JGOFS North Atlantic Bloom Experiment: An overview p 2735 N93-24934
Data management for JGOFS: Theory and design
p 2735 N93-24935
Data management for community research projects: A JGOFS case study p 2736 N93-24936
Automated in situ observations of upper ocean biogeochemistry, bio-optics, and physics and their potential use for global studies p 2736 N93-24939
Wrap-up session p 2737 N93-24940
International ocean services: Is it time - will it ever be time? p 2737 N93-24941
An analysis of file migration in a UNIX supercomputing environment
| NASA-CR-192908 | p 2809 N93-25131
RAID-2: Design and implementation of a large scale disk array controller
| NASA-CR-192911 | p 2806 N93-25233
The database Query Support Processor (QSP)
p 2807 N93-25577
An interactive environment for the analysis of large Earth observation and model data sets p 2878 N93-25793
Multivariate statistical analysis software technologies for astrophysical research involving large data bases
p 2878 N93-25796
System of Experts for Intelligent Data Management (SEIDAM) p 2879 N93-25800
Knowledge-based assistance for science visualization and analysis using large distributed databases
p 2879 N93-25801
Development of an expert data reduction assistant
p 2880 N93-25808
Climate Monitoring and Diagnostics Laboratory
| PB93-156388 | p 2785 N93-25871
In search of meta-knowledge p 2826 N93-25983
Department of Defense technical architecture framework for information management. Volume 3: Reference model and standards profile, version 1.3
| AD-A261913 | p 2882 N93-26230
OSSA Information Systems Program
| NASA-TM-108774 | p 2882 N93-26231
FY92 contributions to the Database Management System Interface Standards Working Group of the Navy Next Generation Computer Resources Program
| AD-A261348 | p 2883 N93-26313
OSSA Information Systems Program
| NASA-TM-108758 | p 2883 N93-26491
Department of Defense technical architecture framework for information management. Volume 1: Implementation concept, version 1.1
| AD-A261911 | p 2884 N93-26531
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
| AD-A261912 | p 2884 N93-26532

DATA PROCESSING
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit
p 2601 N93-24704
Land cover, an essential component of the CORINE information system on the environment: GIS implications
p 2740 N93-24787
Agroclimatological zonation by AVHRR data for vegetation monitoring p 2741 N93-24795
The need for spaceborne observations for meteorology and climatology p 2744 N93-24813
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
Data management for community research projects: A JGOFS case study p 2736 N93-24936
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study
p 2736 N93-24938
Efficient inspection of network pollution data
| DE93-003810 | p 2761 N93-25126
Applications of wavelet-based compression to multidimensional earth science data
| DE93-007348 | p 2762 N93-25166
The ALEXIS data processing package: An update
| DE93-007374 | p 2899 N93-25185
An advanced data-acquisition system for wind energy projects
| DE93-000079 | p 2874 N93-25254
A distributed heterogeneous client-server environment
| DE93-007496 | p 2875 N93-25319
Hierarchical dynamics in distributed information processing p 2875 N93-25350
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368
Earth observing system. Output data products and input requirements, version 2.0. Volume 3: Algorithm summary tables and non-EOS data products
| NASA-TM-108769 | p 2756 N93-25462
The database Query Support Processor (QSP)
p 2807 N93-25577
A novel optical/digital processing system for pattern recognition p 2814 N93-25603
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
A land-surface testbed for EOSDIS
p 2878 N93-25797
System of Experts for Intelligent Data Management (SEIDAM) p 2879 N93-25800
A distributed system for visualizing and analyzing multivariate and multidisciplinary data
p 2880 N93-25804
The Grid Analysis and Display System (GRADS): A practical tool for Earth science visualization
p 2880 N93-25805
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
Development of an expert data reduction assistant
p 2880 N93-25808
SAVS: A Space Analysis and Visualization System
p 2881 N93-25812
A distributed analysis and visualization system for model and observational data p 2881 N93-25814
Subband coding for image data archiving
p 2803 N93-25922
Adjustable lossless image compression based on a natural splitting of an image into drawing, shading, and fine-grained components p 2804 N93-25923
Entropy reduction via simplified image contourization
p 2804 N93-25924
Compression of spectral meteorological imagery
p 2804 N93-25925
Fractal image compression: A resolution independent representation for imagery p 2804 N93-25927
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight
| AD-A261646 | p 2618 N93-26232
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358
IDEF6: A design rationale capture method concept paper
| AD-A261594 | p 2884 N93-26523
A hypertext framework for group support systems
| AD-A261731 | p 2885 N93-26582

DATA PROCESSING EQUIPMENT
Fast mutual exclusion for uniprocessors
| AD-A261663 | p 2883 N93-26389

DATA RECORDERS
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369

DATA RECORDING
Ice thickness measurement system for the icing research tunnel calibration
| NASA-TM-106095 | p 2708 N93-24737
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
| AD-A261105 | p 2591 N93-26572

DATA REDUCTION
A distributed system for visualizing and analyzing multivariate and multidisciplinary data
p 2880 N93-25804
Multi-layer holographic bifurcative neural network system for real-time adaptive EOS data analysis
p 2880 N93-25807
Development of an expert data reduction assistant
p 2880 N93-25808
High performance compression of science data
p 2881 N93-25811
The implementation of a lossless data compression module in an advanced orbiting system: Analysis and development p 2804 N93-25928
AXAF VETA-I mirror encircled energy measurements and data reduction p 2855 N93-26188
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight
| AD-A261646 | p 2618 N93-26232
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279

DATA RETRIEVAL
Earth observing system. Output data products and input requirements, version 2.0. Volume 2: Analysis of IDS input requirements
| NASA-TM-108771 | p 2755 N93-25461

DATA SAMPLING
The Grid Analysis and Display System (GRADS): A practical tool for Earth science visualization
p 2880 N93-25805

DATA STORAGE
RAID-2: Design and implementation of a large scale disk array controller
| NASA-CR-192911 | p 2806 N93-25233
Striped tape arrays
| NASA-CR-192914 | p 2806 N93-25267
Distributed information storage p 2877 N93-25722
High performance compression of science data p 2881 N93-25811
Lossless compression of image data products on th e FIFE CD-ROM series p 2804 N93-25929
DATA STRUCTURES
Towards a formalism for program generation
| AD-A261689 | p 2812 N93-26368
DATA SYSTEMS
OCEAN-PC and a distributed network for ocean data p 2734 N93-24928
Ocean climate data for user community in West and Central Africa: Needs, opportunities, and challenges p 2735 N93-24933
Computer systems p 2737 N93-24942
Summary information and data sets for NREL's Solar Radiation Research Laboratory, 1981 - 1991
| DE93-000052 | p 2898 N93-25101
The database Query Support Processor (QSP) p 2807 N93-25577
Data systems dynamic simulator p 2814 N93-25602
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618
A land-surface testbed for EOSDIS p 2878 N93-25797
A distributed system for visualizing and analyzing multivariate and multidisciplinary data p 2880 N93-25804
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
Subband coding for image data archiving p 2803 N93-25922
Adjustable lossless image compression based on a natural splitting of an image into drawing, shading, and fine-grained components p 2804 N93-25923
The implementation of a lossless data compression module in an advanced orbiting system: Analysis and development p 2804 N93-25928
DATA TRANSFER (COMPUTERS)
RAID-2: Design and implementation of a large scale disk array controller
| NASA-CR-192911 | p 2806 N93-25233
Interfacing a high performance disk array file server to a Gigabit LAN
| NASA-CR-192898 | p 2816 N93-25458
DATA TRANSMISSION
A functional description of the Buffered Telemetry Demodulator (BTD) p 2614 N93-24667
Symbol signal-to-noise ratio loss in square-wave subcarrier downconversion p 2672 N93-24668
Crossing the frontier between publishing and information service
| DE93-002894 | p 2873 N93-24677
CAD data exchange development
| DE93-008085 | p 2809 N93-25307
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767
Spacelab, Spacehab, and Space Station Freedom payload interface projects p 2620 N93-26080
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120
DSN acquisition of Magellan high-rate telemetry data p 2614 N93-26124
Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125
Admission control in integrated voice/data multihop radio networks
| AD-A261055 | p 2680 N93-26227
Information transmission using CHAOS
| AD-A261519 | p 2883 N93-26377
DAYGLOW
The Venus 130-nm dayglow as a diagnostic of thermospheric structure and dynamics p 2896 N93-25285
DEACTIVATION
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
| AD-A260915 | p 2661 N93-25914
DEBONDING (MATERIALS)
Damage and failure analysis on continuous fiber-reinforced polymer composites p 2637 N93-25716
DEBRIS
The initial flight anomalies of Skylab 1 p 2619 N93-24692
Model for transport of floating debris in the ocean
| PB93-172997 | p 2768 N93-26559
DECELERATION
Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem p 2603 N93-24718
DECIDUOUS TREES
Scale dependence in the reflectance of deciduous woodland: Evidence from a helicopter-mounted spectroradiometer p 2752 N93-24865
DECISION MAKING
An introductory guide to uncertainty analysis in environmental and health risk assessment
| DE93-002873 | p 2760 N93-24676
Using neural networks and Dyna algorithm for integrated planning, reacting and learning in systems
| NASA-CR-193018 | p 2817 N93-24743
How to help intelligent systems with different uncertainty representations cooperate with each other
| NASA-CR-192947 | p 2818 N93-25196
Organizational politics, participation in decision-making, and job satisfaction
| DOT/FAA/AM-92/17 | p 2796 N93-25203
The evaluation of technical models used for major-accident hazard installations. Report to Commission of the European Communities Directorate General 12
| CUED/A-AERO/TR-19 | p 2668 N93-25238
Design of a cooperative problem-solving system for enroute flight planning: An empirical study of its use by airline dispatchers
| NASA-CR-192709 | p 2585 N93-25330
Adaptive process control with fuzzy logic and genetic algorithms p 2827 N93-25612
Knowledge-based decision support for Space Station assembly sequence planning
| NASA-CR-193048 | p 2599 N93-26095
A hypertext framework for group support systems
| AD-A261731 | p 2885 N93-26582
DECISION THEORY
Adaptive decision support systems: Concepts, characterization, and an application p 2876 N93-25475
Real-time value-driven monitoring and repair
| AD-A260959 | p 2811 N93-26221
DECODING
Soft decoding a self-dual (48, 24; 12) code p 2671 N93-24662
A (72, 36; 15) box code p 2671 N93-24663
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications
| NASA-CR-192715 | p 2673 N93-25198
DECOMPOSITION
Polar decomposition for attitude determination from vector observations p 2602 N93-24711
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363
Application of non-thermal plasmas to pollution control
| DE93-007515 | p 2763 N93-25385
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448
Environmental test program for superconducting materials and devices
| DE93-003646 | p 2864 N93-25506
Mechanisms of decomposition and oxidation of borane compounds
| AD-A261137 | p 2645 N93-26045
Model reduction for Space Station Freedom p 2620 N93-26081
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces
| AD-A261265 | p 2657 N93-26303
Methods of optimization under uncertainty
| AD-A261487 | p 2873 N93-26342
Position sensitive atom probe study of the decomposition of a Cu-2.6 at. percent Co alloy
| DE93-006737 | p 2653 N93-26500
DEEP SPACE
The advances in F and T technology: Their benefits of and for space science and technology p 2831 N93-24979
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109
DEEP SPACE NETWORK
The Telecommunications and Data Acquisition Report
| NASA-CR-192887 | p 2671 N93-24659
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660
A technique for computation of noise temperature due to a beam waveguide shroud p 2671 N93-24661
Failure monitoring in dynamic systems: Model construction without fault training data p 2672 N93-24666
A functional description of the Buffered Telemetry Demodulator (BTD) p 2614 N93-24667
Design of the reduced LQG compensator for the DSS-13 antenna p 2672 N93-24669
Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670
Management of space networks p 2672 N93-24671
The Telecommunications and Data Acquisition Report
| NASA-CR-192804 | p 2676 N93-26105
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109
Applications of inertial-sensor high-inheritance instruments to DSN precision antenna pointing p 2621 N93-26112
Dynamic modeling of fluid transmission lines of the DSN 70-meter antennas by using a lumped parameter model p 2678 N93-26119
An OSI architecture for the Deep Space Network p 2679 N93-26121
Sequential design of a linear quadratic controller for the Deep Space Network antennas p 2679 N93-26123
DSN acquisition of Magellan high-rate telemetry data p 2614 N93-26124
Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125
Deep Space Network information system architecture study p 2679 N93-26126
Generalized probability model for calculation of interference to the Deep Space Network due to circularly Earth-orbiting satellites p 2679 N93-26127
DSN observations of Titan p 2680 N93-26129
DEFECTS
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques
| DE93-008074 | p 2721 N93-25518
Automated inspection of solder joints for surface mount technology
| NASA-TM-104580 | p 2721 N93-26137
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
| AD-A261808 | p 2793 N93-26259
DEFENSE PROGRAM
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597
Special tooling disposition for aircraft entering post production support
| AD-A261614 | p 2573 N93-26168
Department of Defense technical architecture framework for information management. Volume 3: Reference model and standards profile, version 1.3
| AD-A261913 | p 2882 N93-26230
AFOSR technical report summaries
| AD-A261551 | p 2918 N93-26380
Department of Defense technical architecture framework for information management. Volume 1: Implementation concept, version 1.1
| AD-A261911 | p 2884 N93-26531
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
| AD-A261912 | p 2884 N93-26532
DEFLAGRATION
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037
Flame response in oscillatory solid propellant combustion p 2630 N93-26041
DEFLECTION
Method and apparatus for deflection measurements using eddy current effects
| NASA-CASE-GSC-13506-1 | p 2710 N93-26103
A nanoradian differential VLBI tracking demonstration p 2677 N93-26108
DEFOLIATION
Forest decline monitoring using Landsat TM, digital stand data and DEMs p 2749 N93-24846
DEFORESTATION
World Forest Watch: A global forest monitoring test p 2748 N93-24836
Interpretation and segmentation of changed forest stands from difference imagery based on regression functions p 2748 N93-24839
DEFORMATION
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912
Dynamic deformations and analysis of a metal matrix composite p 2634 N93-25234
On existence of solutions and duality for a model of non-linear elastic plates with transverse shear deformations p 2726 N93-25437
An integrated finite-state model for rotor deformation, nonlinear airloads, inflow, and trim p 2588 N93-25538

Crustal deformation studies in subaerial parts of the world oceanic rift system: Iceland and Afar
p 2789 N93-25558
Damage and failure analysis on continuous fiber-reinforced polymer composites
p 2637 N93-25716
Models of crack growth along polymer interfaces
p 2728 N93-25750
Computer modelling of cyclic deformation of high-temperature materials
| AD-A260978 | p 2639 N93-25936
Deformations of active flexible rods with embedded line actuators
| AD-A261207 | p 2729 N93-25950
Repair, evaluation, maintenance, and rehabilitation research program. Continuous Deformation Monitoring System (CDMS)
| AD-A261833 | p 2586 N93-26274
On the stability of finite plastic deformations
| AD-A261526 | p 2730 N93-26361
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522

DEGRADATION
Application of remote sensing data for the investigation of environmental degradation sites in East Germany
p 2739 N93-24785
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
Detecting damaged cables using a preionized gas technique
| DE93-007588 | p 2689 N93-25429
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261

DEGREES OF FREEDOM
A nanoradian differential VLBI tracking demonstration
p 2677 N93-26108

DEHYDRATION
Design of a high activity and selectivity alcohol catalyst
| DE93-008101 | p 2659 N93-25111
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133

DEHYDROGENATION
The surface characterization of a series of hydroxybenzenes on Ag(111): An EELS and TDS study
| DE93-007541 | p 2647 N93-26595

DELAMINATING
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
| DE93-007504 | p 2635 N93-25383
The damage, repair and design of fiber composite structural materials p 2635 N93-25532
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill
p 2659 N93-25585
Damage-survivable and damage-tolerant laminated composites with optimally placed piezoelectric layers
| AD-A260879 | p 2636 N93-25631
Investigation and modeling of penetration process for composite laminates impacted by a blunt-ended projectile p 2637 N93-25675
Low-velocity impact of composite sandwich plate
p 2637 N93-25695
Damage and failure analysis on continuous fiber-reinforced polymer composites
p 2637 N93-25716

DELAY
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites
p 2686 N93-24999

DELAY CIRCUITS
Variable pulse rate circuit
| AD-D015675 | p 2691 N93-26233

DELTA WINGS
Computational study of the aerodynamics and control by blowing of asymmetric vortical flows over delta wings
p 2574 N93-24772
The transient development of vortices over delta wings p 2576 N93-25269
Experimental effects of wing location on wing-body pressures at supersonic speeds
| NASA-TM-4434 | p 2581 N93-26085
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134

DELTAS
Monitoring and evaluation of morphohydrographical changes in the Danube Delta by remote-sensing
p 2747 N93-24834

DEMODULATION
Synchronisation, acquisition and tracking for telemetry and data reception p 2614 N93-25000

DEMODULATORS
A functional description of the Buffered Telemetry Demodulator (BTD) p 2614 N93-24667

DEMOGRAPHY
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988
| AD-A260869 | p 2800 N93-25628

DENDRITIC CRYSTALS
High temperature fracture toughness of Ni3Al alloy IC-396M
| DE93-008564 | p 2650 N93-25492
Flow and morphological conditions associated with the directional solidification of aqueous ammonium chloride
| DE93-008886 | p 2644 N93-25495
Computation of complex solidification morphologies using a phase-field model
| PB93-156743 | p 2869 N93-26547

DENSIFICATION
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
Densification of ceramics by gas overpressure sintering
| MTL-TR-92-45 | p 2657 N93-26432

DENSITY (NUMBER/VOLUME)
The structure of the nearby universe traced by theIRAS galaxies
| NASA-CR-192809 | p 2889 N93-25331

DENSITY DISTRIBUTION
A study of vibrationally excited N2(+) ions in the daytime thermosphere p 2770 N93-25179

DENSITY MEASUREMENT
Measurements of density, temperature, and their fluctuations in turbulent supersonic flow using UV laser spectroscopy
| NASA-TM-103943 | p 2708 N93-25076

DEOXYRIBONUCLEIC ACID
Measuring the metastatic potential of cancer cells
p 2794 N93-25566
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
| DE93-007815 | p 2793 N93-26587

DEPOSITION
A study of mass size distributions and particle deposition velocities in ambient air p 2763 N93-25263
Sputter deposition of yttrium-oxides
| DE93-007499 | p 2654 N93-25382
Theoretical studies of surface reactions on metals and electronic materials
| DE93-009761 | p 2650 N93-25502
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams
p 2658 N93-25564

DEPTH
Algorithms for the analysis of penetration by shaped charge jets
| UCRL-LR-109887 | p 2730 N93-26178

DESERTIFICATION
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812

DESIGN ANALYSIS
Optimization in the systems engineering process
p 2666 N93-24691
A procedure for defining lightning risk to air vehicles
p 2583 N93-24885
Miniaturization and stability: A new generation of ovenised oscillators p 2693 N93-25004
A state-of-the-art crystal filter design package using Windows 3.0 techniques p 2693 N93-25010
Surface Transverse Wave (STW) quartz resonators in the GHz range p 2836 N93-25012
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026
Rotor design optimization using a free wake analysis
| NASA-CR-177612 | p 2575 N93-25075
Design concepts for the development of cooperative problem-solving systems
| NASA-CR-192708 | p 2585 N93-25261
Poly-coil design for a 60 tesla quasi-stationary magnet
| DE93-007353 | p 2688 N93-25313
A numerical and experimental studies of flow characteristics in centrifugal fans p 2577 N93-25339
Human factors engineering: A key element of instrumentation and control system design
| DE93-006731 | p 2800 N93-25415
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
A computational aerodynamic design optimization method using sensitivity analysis p 2589 N93-25552
Application of an on-machine gage for diameter measurements p 2711 N93-25578
Variable-speed generators with flux weakening
p 2694 N93-25599
Integration of design, thermal, structural, and optical analysis, including thermal animation
p 2814 N93-25601
The effects of reaction on axial compressor performance p 2594 N93-25882
Advanced life support study. Modification 10: ECLSS logistical support analysis for Space Station Freedom
| NASA-CR-192481 | p 2801 N93-25888
A new approach to cooled combustion chambers: The 40K formed platelet chamber p 2626 N93-26018
ASRM design philosophy and modelling challenges
p 2627 N93-26022
Techniques for designing rotorcraft control systems
| NASA-CR-192960 | p 2597 N93-26046
SRB environment evaluation and analysis. Volume 1: Redesigned SRB flight heating evaluation
| NASA-CR-192517 | p 2631 N93-26053
External tank aerothermal design criteria verification
| NASA-CR-192514 | p 2618 N93-26055
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs
p 2670 N93-26063
Model reduction for Space Station Freedom
p 2620 N93-26081
Task 5: Architecture sensitivity to STME performance
| MCR-92-5010 | p 2609 N93-26176
Develop margin philosophy to attain robustness
| MCR-92-5005 | p 2610 N93-26182
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
Configuration optimization of space structures
p 2670 N93-26415

DESIGN TO COST
Space transfer vehicle concepts and requirements study. Volume 3, book 1: Program cost estimates
| NASA-CR-192529 | p 2611 N93-25514

DESORPTION
Laser desorption in an ion trap mass spectrometer
| DE93-007330 | p 2712 N93-25150
Theoretical studies of surface reactions on metals and electronic materials
| DE93-009761 | p 2650 N93-25502
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287
The surface characterization of a series of hydroxybenzenes on Ag(111): An EELS and TDS study
| DE93-007541 | p 2647 N93-26595

DESULFURIZING
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534

DETACHMENT
Dynamics of collision processes
| DE93-007143 | p 2849 N93-25509
Penning detachment: A new frontier
| AD-A261447 | p 2850 N93-26346

DETECTION
Detecting damaged cables using a preionized gas technique
| DE93-007588 | p 2689 N93-25429
Automated system for early breast cancer detection in mammograms p 2796 N93-25568
Automatic detection of seizures with applications
p 2796 N93-25592
Vision-aided monitoring and control of thermal spray, spray forming, and welding processes
p 2670 N93-25604
Detection of bearing failure in mechanical devices using neural networks p 2822 N93-25965
Model-based reasoning for system and software engineering: The Knowledge From Pictures (KFP) environment p 2825 N93-25978
Pseudomonas screening assay
| NASA-CASE-NPO-17653-1-CU | p 2793 N93-25994
VETA x ray data acquisition and control system
p 2854 N93-26186

DETONABLE GAS MIXTURES
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886

DETONATION
DSD Technology: A detonation reactive Huygens code
| LA-12235-MS | p 2706 N93-25987
Molecular composition, structure, and sensitivity of explosives
| DE93-003850 | p 2662 N93-26493

DETONATION WAVES
DSD Technology: A detonation reactive Huygens code
| LA-12235-MS | p 2706 N93-25987
DEUTERIUM
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR
| AD-A261224 | p 2645 N93-26300
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
| AD-A261804 | p 2662 N93-26387
DEUTERIUM COMPOUNDS
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR
| AD-A261224 | p 2645 N93-26300
Laser damage to production- and research-grade KDP crystals
| DE93-007517 | p 2870 N93-26594
DEVELOPING NATIONS
The General Information Programme (PGI) and developing countries: A case study of Iraq
p 2874 N93-25209
The PACSAT Communications Experiment (PCE)
| DE93-008185 | p 2674 N93-25308
DEWATERING
Low cost dewatering of waste slurries
p 2769 N93-25573
DIAGNOSIS
Summary of progress in inertial confinement fusion
| DE93-007350 | p 2858 N93-25187
Fast diagnostics of laser ablation used for pulsed laser deposition
| DE93-005155 | p 2713 N93-25508
A fiber optic probe for the detection of cataracts
p 2796 N93-25593
Machine learning techniques for fault isolation and sensor placement p 2823 N93-25966
The use of multiple models in case-based diagnosis
p 2823 N93-25969
Anomalous event diagnosis for environmental satellite systems p 2619 N93-25971
Measurement of droplet vaporization rate enhancement caused by acoustic disturbances p 2626 N93-26015
Flame structure studies of a lean, 20 torr H2/N2O/AR flame employing molecular beam mass spectrometry
p 2627 N93-26025
Infrared fiber optic diagnostic for solid propellant combustion p 2628 N93-26031
ADN propellant diffusion flame structure
p 2629 N93-26036
DIAMETERS
Application of an on-machine gage for diameter measurements p 2711 N93-25578
DIAMOND FILMS
Diagnostics of diamond film deposition plasmas
| AD-A260866 | p 2860 N93-25626
Control of crystallite size in diamond film chemical vapor deposition
| AD-D015660 | p 2867 N93-26090
Workshop on Diamond and Diamond-Like-Carbon Films for the Transportation Industry
| DE93-007491 | p 2658 N93-26506
DIAMONDS
Electrodeposition in low gravity p 2663 N93-24774
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams
p 2658 N93-25564
Method of joining diamond structures
| AD-D015671 | p 2867 N93-26140
DIATOMIC MOLECULES
Modeling of atom-diatom scattering
| AD-A261645 | p 2849 N93-26173
Application of the Saha equation to high temperature (greater than or equal to) rocket exhaust
| AD-A261648 | p 2632 N93-26174
DICARBOXYLIC ACIDS
Energetic materials from cubane
| AD-A261317 | p 2662 N93-26308
DICHROISM
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660
DICTIONARIES
The database Query Support Processor (QSP)
p 2807 N93-25577
Glossary of environmental terms and acronym list
| PB93-158004 | p 2765 N93-25851
CALS-HSC data element dictionary
| AD-A261560 | p 2813 N93-26461
DIELECTRIC PROPERTIES
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
| DE93-007601 | p 2689 N93-25417
Extruded films from modified polypropylene resin: Dielectric and breakdown studies
| AD-A261382 | p 2657 N93-26341
DIELECTRICS
Design of a low phase noise UHF oscillator using a partly metallized dielectric resonator p 2693 N93-25003
Liquid filled variable capacitor
| AD-D015639 | p 2687 N93-25212
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy
| DE93-007509 | p 2654 N93-25384
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
| DE93-007601 | p 2689 N93-25417
Microwave absorption measurements and interference: Effects for a liquid fuel between 2.5 and 18 GHz
| AD-A260607 | p 2675 N93-25635
Enhanced backscattering from rough surfaces
| AD-A261000 | p 2676 N93-25855
Electrorheological fluids: A structural approach to mechanisms
| AD-A260563 | p 2645 N93-25879
Extruded films from modified polypropylene resin: Dielectric and breakdown studies
| AD-A261382 | p 2657 N93-26341
Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings
| DE93-007513 | p 2857 N93-26593
DIESEL ENGINES
Center for Advanced Propulsion Systems (fellowship)
| AD-A260571 | p 2632 N93-26216
DIFFERENTIAL AMPLIFIERS
Investigation into the common mode rejection ratio of the physiological signal conditioner circuit
p 2794 N93-26073
DIFFERENTIAL CALCULUS
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
DIFFERENTIAL EQUATIONS
Stability of nonlinear phase motion from the study of oscillator mappings p 2693 N93-25034
On the effect of acoustic coupling on random and harmonic plate vibrations
| NASA-TM-107740 | p 2844 N93-25189
Numerically dissipative time integration algorithms for structural dynamics p 2725 N93-25394
Multilevel techniques in large scale computation
| AD-A261082 | p 2828 N93-25762
A basic research model of natural gas combustion in turbulent flow, phase 2
| PB93-158509 | p 2644 N93-25819
A hybrid multigrid technique for computing steady-state solutions to supersonic flows p 2582 N93-26078
NSWC library of mathematics subroutines
| AD-A261511 | p 2884 N93-26575
DIFFERENTIAL GEOMETRY
Elastic curves on the sphere
| AD-A261057 | p 2829 N93-26228
DIFFRACTION
Surface diffusion studies by optical diffraction techniques
| DE93-007707 | p 2853 N93-25550
DIFFUSION
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151
Oblique MHD cosmic-ray modified shocks: Two-fluid numerical simulations
| NASA-CR-192930 | p 2900 N93-26132
Ir-Zr alloys as diffusion barriers between Cu and Si(100)
| AD-A261919 | p 2652 N93-26197
DIFFUSION COEFFICIENT
Direct measurement of velocity space transport in a plasma p 2861 N93-25831
Numerical simulation of permeation from deposited droplets: Model expansion
| MTL-TR-92-23 | p 2706 N93-25953
DIFFUSION FLAMES
ADN propellant diffusion flame structure
p 2629 N93-26036
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533
DIFFUSION THEORY
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151
DIGITAL DATA
Crossing the frontier between publishing and information service
| DE93-002894 | p 2873 N93-24677
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448
Digital Nautical Chart
| AD-A260810 | p 2756 N93-25694
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369
Implementation of custom colors in the DECwindows environment
| AD-A261456 | p 2757 N93-26574
DIGITAL ELECTRONICS
High resolution digital synthesizer for a Rb frequency standard p 2694 N93-25057
A digital hardware test system analysis with test vector translation
| AD-A260849 | p 2810 N93-25786
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588
DIGITAL FILTERS
Digital filter control of remotely operated flexible robotic structures
| DE93-007587 | p 2827 N93-26596
DIGITAL SIMULATION
Forest decline monitoring using Landsat TM, digital stand data and DEMs p 2749 N93-24846
A digital hardware test system analysis with test vector translation
| AD-A260849 | p 2810 N93-25786
DIGITAL SYSTEMS
A digital hardware test system analysis with test vector translation
| AD-A260849 | p 2810 N93-25786
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430
DIGITAL TECHNIQUES
Swedish forest information atlas p 2749 N93-24847
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
Synopsis of timing measurement techniques used in telecommunications p 2687 N93-25064
DIGITAL TRANSDUCERS
An advanced data-acquisition system for wind energy projects
| DE93-000079 | p 2874 N93-25254
DIMENSIONAL MEASUREMENT
Application of an on-machine gage for diameter measurements p 2711 N93-25578
On machine capacitance dimensional and surface profile measurement system p 2670 N93-25579
A novel method for characterization of superconductors: Physical measurements and modeling of thin films
p 2871 N93-25584
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526
DIMENSIONAL STABILITY
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311
DIODES
Electric field effects on quantum-confined semiconductor structures p 2865 N93-25703
DIRAC EQUATION
Multilevel techniques in large scale computation
| AD-A261082 | p 2828 N93-25762
DIRECT BROADCAST SATELLITES
Analytical techniques for improved time transfer using common view of direct broadcasting satellites
p 2835 N93-25008
DIRECTION FINDING
Lightning characteristics in the north-east part of Japan observed by a magnetic direction-finder network
p 2779 N93-24892
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Flow and morphological conditions associated with the directional solidification of aqueous ammonium chloride
| DE93-008886 | p 2644 N93-25495
DIRECTORIES
A trace-driven analysis of name and attribute caching in a distributed system
| NASA-CR-192899 | p 2815 N93-25251
Directory of US Government software for mainframes and microcomputers, 1993
| PB93-111565 | p 2807 N93-26569
DIRICHLET PROBLEM
The steady Navier-Stokes problem for low Reynolds number viscous jets p 2698 N93-25264

DISASTERS
Natural disasters and their mitigation using space technology p 2742 N93-24804
Alternative strategies for the use of satellite data analysis systems for hazard monitoring and disaster mitigation p 2743 N93-24805
Satellite borne remote sensing data: A tool for natural disaster reduction p 2743 N93-24806
Use of remote sensing spacecrafts in real time support to disaster management: Interfaces with ground segment facilities and services p 2743 N93-24809
The use of SPOT data in natural disaster prevention and damage assessment p 2743 N93-24811
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812
DISCHARGE COEFFICIENT
Flow conditioner location effects in orifice flowmeters | PB93-159457 | p 2708 N93-26535
DISCONTINUITY
The modeling of complex continua: Fundamental obstacles and grand challenges | DE93-006507 | p 2696 N93-25193
Tracking sharp interface of two fluids by the CIP (Cubic-Interpolated Propagation) scheme | NIFS-206 | p 2698 N93-25277
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
DISCOVERY (ORBITER)
STS-39 Space Shuttle mission report | NASA-CR-193063 | p 2611 N93-25955
STS-42 Space Shuttle mission report | NASA-CR-193059 | p 2613 N93-25989
STS-48 Space Shuttle mission report | NASA-CR-193060 | p 2613 N93-25990
DISK GALAXIES
Starburst Galaxies: Hard X-ray spectra and contribution to the diffuse background | NASA-CR-192790 | p 2892 N93-25211
DISK OPERATING SYSTEM (DOS)
OCEAN-PC and a distributed network for ocean data p 2734 N93-24928
DISPERSING
The AFTAC model integration project | DE93-003334 | p 2761 N93-25122
On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276
DISPERSION
Hazards of explosives dusts: Particle size effects | DE93-009380 | p 2668 N93-25498
DISPLACEMENT
Equilibrium constrained assumed natural coordinate strain finite elements for shell analysis p 2724 N93-25273
TSC plasma halo simulation of a D3-D vertical displacement episode | DE93-008688 | p 2860 N93-25493
Positive displacement rotary pump | AD-D015678 | p 2719 N93-26144
DISPLAY DEVICES
A comparison of the WIND System atmospheric models and MATS data | DE93-002687 | p 2760 N93-24673
Evaluation of advanced displays for engine monitoring and control | NASA-CR-191418 | p 2591 N93-24764
Improving information search at the user interface: The impact of graphical innovation on query formulation and expression p 2873 N93-24905
The Grid Analysis and Display System (GRADS): A practical tool for Earth science visualization p 2880 N93-25805
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
SAVS: A Space Analysis and Visualization System p 2881 N93-25812
A distributed analysis and visualization system for model and observational data p 2881 N93-25814
Inflight evaluation of an acoustic orientation instrument | AD-A260752 | p 2591 N93-25909
Perceptual factors that influence use of computer enhanced visual displays | NASA-CR-192961 | p 2811 N93-26150
Experimental and theoretical studies of proximity effect and Coulomb blockade phenomena in Josephson junctions | AD-A261652 | p 2867 N93-26194
Emerging large-screen display technology | AD-A261066 | p 2681 N93-26241
Advanced technology for portable personal visualization | AD-A261294 | p 2807 N93-26293
Effect of image update rate on moving-target identification range | AD-A261562 | p 2591 N93-26462
Implementation of custom colors in the DECwindows environment | AD-A261456 | p 2757 N93-26574
DISSOLVING
Anisotropic etching of silicon in KOH solutions p 2647 N93-25037
Controlled dissolution of a piezoelectric material berlinite (AlPO4) p 2840 N93-25043
DISTANCE
Analytical techniques for improved time transfer using common view of direct broadcasting satellites p 2835 N93-25008
DISTILLATION
Design and synthesis of reactive separation systems | DE93-008764 | p 2642 N93-25115
DISTILLATION EQUIPMENT
Design and synthesis of reactive separation systems | DE93-008764 | p 2642 N93-25115
DISTORTION
An example of a phase-segregated enhanced PAL broadcasting system | BBC-RD-1992/6 | p 2674 N93-25239
Equilibrium constrained assumed natural coordinate strain finite elements for shell analysis p 2724 N93-25273
Tracking sharp interface of two fluids by the CIP (Cubic-Interpolated Propagation) scheme | NIFS-206 | p 2698 N93-25277
Distortion measurements on bandpass filters with powdered iron toroidal inductors | AD-A260790 | p 2675 N93-25689
Evaluation of lens distortion errors in video-based motion analysis | NASA-TP-3266 | p 2797 N93-25736
Geometric distortion analysis of a wide-field astrograph p 2621 N93-26111
Surface finish quality of the outer AXAF mirror pair based on x ray measurements of the VETA-I p 2855 N93-26191
DISTRIBUTED PROCESSING
Optimal message log reclamation for independent checkpointing | NASA-CR-192886 | p 2815 N93-24749
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
A comparison using APPL and PVM for a parallel implementation of an unstructured grid generation program | NASA-CR-191425 | p 2808 N93-25073
On the robustness of Herlihy's hierarchy | NASA-CR-193002 | p 2808 N93-25107
Using a Cray Y-MP as an array processor for a RISC Workstation | NASA-TM-103961 | p 2809 N93-25246
A trace-driven analysis of name and attribute caching in a distributed system | NASA-CR-192899 | p 2815 N93-25251
Proceedings of the Second SISAL Users' Conference | DE93-008019 | p 2815 N93-25304
Hierarchical dynamics in distributed information processing p 2875 N93-25350
Implicit multigrid solution of the compressible Navier-Stokes equations with application to distributed parallel processing p 2702 N93-25546
Object-oriented tools for distributed computing p 2817 N93-25576
Distributed information storage p 2877 N93-25722
Knowledge-based assistance for science visualization and analysis using large distributed databases p 2879 N93-25801
A distributed analysis and visualization system for model and observational data p 2881 N93-25814
The WorkPlace distributed processing environment p 2825 N93-25977
Signed vector timestamps: A secure protocol for partial order time | AD-A261371 | p 2817 N93-26338
DISTRIBUTION FUNCTIONS
Pseudo Wigner-Ville distribution, computer program, and its applications to time-frequency domain problems | AD-A261839 | p 2813 N93-26431
Liquid and solid ion plasmas | AD-A261888 | p 2862 N93-26528
DIURNAL VARIATIONS
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706
Summary information and data sets for NREL's Solar Radiation Research Laboratory, 1981 - 1991 | DE93-000052 | p 2898 N93-25101
The role of multiple scattering in twilight zenith sky observations of atmospheric absorbers: Diurnal photochemistry and airmass factors p 2772 N93-25535
DIVERTERS
Boundary plasma modelling for ITER | DE93-007963 | p 2859 N93-25302
DOCUMENT STORAGE
Zebra: A striped network file system | NASA-CR-192912 | p 2809 N93-25250
DOLOMITE (MINERAL)
Low cost dewatering of waste slurries p 2769 N93-25573
DOMAINS
Intelligent, real-time problem solving, phase 3 | AD-A261441 | p 2829 N93-26345
DOPED CRYSTALS
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD) | DE92-010560 | p 2862 N93-24953
Radiation effects in germanium doped quartz p 2837 N93-25021
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition | DE93-007908 | p 2654 N93-25372
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures | AD-A261170 | p 2714 N93-25774
Experimental studies of stress management by optical fluorescence | AD-A261539 | p 2730 N93-26362
Optical characterization of Ga(1-x)In(x)As(y)Sb(1-y)/GaSb alloy and device application | AD-A261713 | p 2870 N93-26581
DOPPLER EFFECT
An introduction to Doppler effect and fading in mobile communications | AD-A260976 | p 2676 N93-25866
Imaging the magnetosphere in the extreme ultraviolet | NASA-CR-192218 | p 2775 N93-26151
Trailing vortex/free-surface interaction | AD-A261654 | p 2581 N93-26195
DOPPLER NAVIGATION
The advances in F and T technology: Their benefits of and for space science and technology p 2831 N93-24979
DOPPLER RADAR
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
Setting values for TDWR/LLWAS 3 integration parameters | AD-A260740 | p 2783 N93-25645
The North Dakota thunderstorm project | PB93-153039 | p 2785 N93-25776
DOSAGE
Radiation-hardened control system | DE93-007248 | p 2688 N93-25377
Utilization of an electronic circuit simulator in CMOS latch-up studies | AD-A260877 | p 2690 N93-25935
DOSIMETERS
Measuring hearing protection device performance using the metrosonics db-3100 sound level analyzer (dosimeter) | AD-A260852 | p 2801 N93-25787
Detailed component design for a Compact Environmental Anomaly Sensor (CEASE) | AD-A261729 | p 2620 N93-26248
DOUBLE BASE PROPELLANTS
Modeling of H2/N2O flames p 2627 N93-26026
Dark zone modeling of solid propellant flames p 2628 N93-26028
DOWN-CONVERTERS
Symbol signal-to-noise ratio loss in square-wave subcarrier downconversion p 2672 N93-24668
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120
DOWNLINKING
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660
Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670
DRAG REDUCTION
Computation of transonic flow over a porous surface projectile p 2577 N93-25409
Structural and aerodynamic optimization of joined-wing aircraft p 2588 N93-25526
An experimental study of passive drag reduction in a turbulent boundary layer by a riblet surface p 2705 N93-25746
Modified point mass trajectory simulation for base-burn projectiles | BRL-TR-3321 | p 2609 N93-25985

DRIFT RATE
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706
Mixed constellation synchronization of GPS time p 2836 N93-25015
Use of the TV-signal in stabilizing a local rubidium oscillator p 2693 N93-25029
Space radiation susceptibility of ultra stable crystal oscillators p 2693 N93-25053
DRILLING
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
DRINKING
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133
DROP SIZE
Liquid surface breakup of nonturbulent and turbulent liquids p 2700 N93-25473
DROP TOWERS
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
DROPS (LIQUIDS)
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
The modeling of complex continua: Fundamental obstacles and grand challenges
| DE93-006507 | p 2696 N93-25193
The structure of particle cloud premixed flames
| NASA-CR-192827 | p 2643 N93-25229
Modeling of bubble and drop formation in flowing liquids in terrestrial and microgravity environments p 2664 N93-25390
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948
Numerical simulation of permeation from deposited droplets: Model expansion
| MTL-TR-92-23 | p 2706 N93-25953
Particle size as a factor in agglomeration in slurry fuels p 2625 N93-26013
A summary of the JANNAF workshop on liquid rocket atomization p 2625 N93-26014
Measurement of droplet vaporization rate enhancement caused by acoustic disturbances p 2626 N93-26015
DROUGHT
Global drought monitoring from NOAA polar orbiting satellites p 2750 N93-24852
DRUGS
Immunoconjugates: Magic bullets for cancer therapy? p 2796 N93-25567
DRYING
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill p 2659 N93-25585
DUCTED FLOW
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Computational modelling of 3D flow in complex ducts and passages p 2704 N93-25698
DUCTED ROCKET ENGINES
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets p 2625 N93-26012
DUCTILITY
Numerical investigations on fracture behavior of ductile materials p 2725 N93-25411
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632
Development and application of an advanced ductile fracture mechanics methodology p 2727 N93-25718
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
DUCTS
Experimental investigation of flow turning losses in unstable rocket motors p 2630 N93-26040
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278
DURABILITY
Damage-survivable and damage-tolerant laminated composites with optimally placed piezoelectric layers
| AD-A260879 | p 2636 N93-25631
DUST
Structure and star forming activities of the cold massive molecular cloud G216-2.5 p 2893 N93-25477
Hazards of explosives dusts: Particle size effects
| DE93-009380 | p 2668 N93-25498
DUST STORMS
The Martian lower atmosphere p 2897 N93-26394
DYE LASERS
Simultaneous determination of gain parameters in steady state lasers
| DE93-007389 | p 2713 N93-25381
DYES
Flow and morphological conditions associated with the directional solidification of aqueous ammonium chloride
| DE93-008886 | p 2644 N93-25495
DYNAMIC CHARACTERISTICS
Global dynamic modeling of a transmission system
| NASA-CR-191117 | p 2716 N93-24751
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Trapped energy quartz crystal resonator on wedge-shaped plate p 2837 N93-25022
Dynamic test apparatus for electro-rheological fluids
| AD-D015632 | p 2643 N93-25284
Computational gearing mechanics
| NASA-CR-191127 | p 2719 N93-25884
Dynamic behavior of helix interaction circuits
| AD-A261362 | p 2692 N93-26334
1992 technical digest series volume 16. Conference edition: Summaries of papers presented at the Nonlinear Dynamics in Optical Systems Topical Meeting
| AD-A261915 | p 2857 N93-26544
DYNAMIC CONTROL
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Nonholonomic geometry, mechanics and control p 2724 N93-25270
Identification and control of lightly damped, large space structures: An experimental evaluation p 2616 N93-25351
Analytical and experimental study of control effort associated with model reference adaptive control p 2820 N93-25468
The dynamics and control of large flexible asymmetric spacecraft p 2617 N93-25525
Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system
| AD-A260793 | p 2599 N93-25693
Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Dynamics of on-orbit construction process p 2669 N93-26406
Interaction dynamics and control for orbital assembly p 2669 N93-26407
DYNAMIC MODELS
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation p 2574 N93-24756
A simple, approximate model of parachute inflation
| DE93-002465 | p 2576 N93-25121
The 32nd CDC: System identification using interval dynamic models
| NASA-CR-192895 | p 2818 N93-25155
Dynamic hardness tester and cure meter p 2711 N93-25608
DYNAMIC PRESSURE
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533
DYNAMIC RANGE
Log-ratio signal-processing technique for beam position monitors
| DE93-007356 | p 2851 N93-25314
A compact neutron counter telescope with thick radiator (Cotetra) for fusion experiment
| NIFS-205 | p 2860 N93-25347
DYNAMIC RESPONSE
Surface Transverse Wave (STW) quartz resonators in the GHz range p 2836 N93-25012
Very wide bandwidth HF crystal filters p 2693 N93-25039
Stochastic and seismic design response of linear and nonlinear structures p 2726 N93-25484
Experimental modal survey of the probe mass mock-up
| DE93-008846 | p 2617 N93-25494
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
Applications of parallel and vector algorithms in nonlinear structural dynamics using the finite element method
| AD-A260716 | p 2811 N93-25845
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938
DYNAMIC STABILITY
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Nonlinear stability analysis of the attitude motion of spin-stabilized thrusting spacecraft p 2617 N93-25527
Biped control via nonlinear dynamics p 2718 N93-25697
Structural dynamic analysis of bearingless rotor blade p 2590 N93-25719
Supersonic aeroelastic instability results for a NASP-like wing model
| NASA-TM-107739 | p 2591 N93-26553
DYNAMIC STRUCTURAL ANALYSIS
On the effective reflection properties of the randomly segmented elastic bar p 2724 N93-25328
Optimal control of large space structures p 2819 N93-25343
Numerically dissipative time integration algorithms for structural dynamics p 2725 N93-25394
Numerical and experimental analyses of large composite skeletal satellite systems p 2616 N93-25463
Stochastic and seismic design response of linear and nonlinear structures p 2726 N93-25484
Structural dynamic analysis of bearingless rotor blade p 2590 N93-25719
Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Nonlinear vibrations, stability, and dynamics of structures and mechanisms
| AD-A260871 | p 2728 N93-25838
Dynamics of deformable multibody systems using recursive projection methods
| AD-A260698 | p 2728 N93-25842
Applications of parallel and vector algorithms in nonlinear structural dynamics using the finite element method
| AD-A260716 | p 2811 N93-25845
Computational gearing mechanics
| NASA-CR-191127 | p 2719 N93-25884
Helicopter forced response vibration analysis method RTVIB20
| AD-A261809 | p 2597 N93-26260
Structural load control during construction p 2669 N93-26409
Mechanics and control of multibody structural systems
| AD-A261576 | p 2619 N93-26456
DYNAMIC TESTS
Dynamic test apparatus for electro-rheological fluids
| AD-D015632 | p 2643 N93-25284
SRB environment evaluation and analysis. Volume 2: RSRB joint filling test/analysis improvements
| NASA-CR-192518 | p 2631 N93-26057
DYNAMICAL SYSTEMS
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
Control and stabilization of nonholonomic dynamic systems p 2596 N93-25729
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773
Using modular neural networks with local representations to control dynamic systems
| AD-A261597 | p 2826 N93-26162
Introduction of chaotic dynamical systems
| AD-A261747 | p 2872 N93-26250
Power iterations and the dominant eigenvalue problem
| AD-A261695 | p 2829 N93-26370
Information transmission using CHAOS
| AD-A261519 | p 2883 N93-26377
The Earth's climate as a dynamical system
| DE93-004666 | p 2767 N93-26496
DYNAMO THEORY
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356

E

E REGION
The formation and characteristics of E-region thin ionization layers at high latitudes p 2861 N93-25829
E-2 AIRCRAFT
AEW aircraft design
| AD-A261800 | p 2590 N93-26444
EAR PROTECTORS
Measuring hearing protection device performance using the metrosonics db-3100 sound level analyzer (dosimeter)
| AD-A260852 | p 2801 N93-25787
EARPHONES
Inflight evaluation of an acoustic orientation instrument
| AD-A260752 | p 2591 N93-25909

EARTH (PLANET)
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
| ESA-ISY-1-VOL-2 | p 2737 N93-24775

EARTH ATMOSPHERE
A correlated K-distribution model of the heating rates for H2O and a molecular mixture in the 0-2500 cm(exp -1) wavelength region in the atmosphere between 0 and 60 km
| DE93-005741 | p 2762 N93-25147
ATMOS: Long term atmospheric measurements for mission to planet Earth
| NASA-TM-108720 | p 2757 N93-26429
Long term modeling of the links between economics, technical progress, and environment: Evolution of approaches and new trends
| DE93-005035 | p 2767 N93-26497

EARTH CRUST
Intraplate deformation, stress in the lithosphere and the driving mechanism for plate motions
| NASA-CR-192782 | p 2772 N93-25529

EARTH ENVIRONMENT
Land cover, an essential component of the CORINE information system on the environment: GIS implications p 2740 N93-24787
Demonstration of seasonal changes in the territory of Finland using multitemporal NOAA-AVHRR data p 2742 N93-24801

EARTH IONOSPHERE
Magnetotail processes associated with auroral surge formation
| ATR-90(7186)-1 | p 2895 N93-26147
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280

EARTH MAGNETOSPHERE
A statistical study of field-aligned currents in the Earth's inner magnetosphere p 2773 N93-25709
Sounding rocket observations of precipitating ions in the morning auroral region p 2773 N93-25732

EARTH MANTLE
Intraplate deformation, stress in the lithosphere and the driving mechanism for plate motions
| NASA-CR-192782 | p 2772 N93-25529

EARTH OBSERVATIONS (FROM SPACE)
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
| ESA-ISY-1-VOL-2 | p 2737 N93-24775
The scope of DLR's SAR calibration program p 2738 N93-24778
Verification of a climate convention: Role and limitations of a space based remote sensing system p 2738 N93-24781
Application of remote sensing data for the investigation of environmental degradation sites in East Germany p 2739 N93-24785
Natural disasters and their mitigation using space technology p 2742 N93-24804
The need for spaceborne observations for meteorology and climatology p 2744 N93-24813
Operational use of MOMS-02 (P2) data p 2752 N93-24866
An interactive environment for the analysis of large Earth observation and model data sets p 2878 N93-25793
Geographic information system for fusion and analysis of high-resolution remote sensing and ground truth data p 2878 N93-25798

EARTH OBSERVING SYSTEM (EOS)
TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
Earth observing system. Output data products and input requirements, version 2.0. Volume 1: Instrument data product characteristics
| NASA-TM-108770 | p 2755 N93-25460
Earth observing system. Output data products and input requirements, version 2.0. Volume 2: Analysis of IDS input requirements
| NASA-TM-108771 | p 2755 N93-25461
Earth observing system. Output data products and input requirements, version 2.0. Volume 3: Algorithm summary tables and non-EOS data products
| NASA-TM-108769 | p 2756 N93-25462
In search of meta-knowledge p 2826 N93-25983

EARTH ORBITAL ENVIRONMENTS
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
Bit hit/solar activity correlation study
| AD-A261381 | p 2896 N93-26340

EARTH ORBITS
Near Earth object fuels (neo-fuels): Discovery, prospecting and use
| DE93-005185 | p 2892 N93-25164
United States Army space experiment 601
| AD-A261460 | p 2798 N93-26353
Lageos laser ranging earth rotation
| AD-A261471 | p 2757 N93-26354

EARTH ORIENTATION
A determination of the radio-planetary frame tie from comparison of Earth orientation parameters p 2676 N93-26106
Lageos laser ranging earth rotation
| AD-A261471 | p 2757 N93-26354

EARTH RESOURCES
Remote sensing of non-renewable resources p 2744 N93-24814

EARTH ROTATION
Lageos laser ranging earth rotation
| AD-A261471 | p 2757 N93-26354

EARTH SCIENCES
Applications of wavelet-based compression to multidimensional earth science data
| DE93-007348 | p 2762 N93-25166
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-003 | p 2737 N93-25398
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-93-001 | p 2599 N93-25400
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-005 | p 2737 N93-25401
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-002 | p 2737 N93-25426
Scientific visualization using the Flow Analysis Software Toolkit (FAST) p 2814 N93-25600
Applied Information Systems Research Program (AISRP). Workshop 2: Meeting Proceedings
| NASA-CR-193096 | p 2877 N93-25792
An interactive environment for the analysis of large Earth observation and model data sets p 2878 N93-25793
The Grid Analysis and Display System (GRADS): A practical tool for Earth science visualization p 2880 N93-25805
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
A distributed analysis and visualization system for model and observational data p 2881 N93-25814
The Space and Earth Science Data Compression Workshop
| NASA-CP-3183 | p 2803 N93-25921

EARTH SURFACE
Use of airborne imaging spectrometry to the definition of optimised specifications for land applications with future spaceborne imaging spectrometers p 2738 N93-24776
A land-surface testbed for EOSDIS p 2878 N93-25797
Data fusion with artificial neural networks (ANN) for classification of earth surface from microwave satellite measurements p 2824 N93-25974

EARTH-VENUS TRAJECTORIES
Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125

EARTHQUAKE DAMAGE
Expedient repair of structural facilities
| AD-A260727 | p 2598 N93-25656

EARTHQUAKES
Earthquake vulnerability map of the Lake Constance area p 2753 N93-24872
Anomalous bioelectric potentials of silk trees in Naples zoo (Italy) prior to an earthquake in May, 1991 p 2753 N93-24873
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
Low-frequency source parameters of twelve large earthquakes
| NASA-CR-192806 | p 2771 N93-25202

ECCENTRIC ORBITS
Origin and evolution of cataclysmic variables p 2893 N93-25245

ECLIPTIC
Occultation of a compact radio source by Venus p 2676 N93-26107

ECOLOGY
Aerospace techniques in radiation and ecological monitoring of the Republic Belarus p 2741 N93-24793
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-003 | p 2737 N93-25398
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-93-001 | p 2599 N93-25400
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-005 | p 2737 N93-25401
Planetary Biology and Microbial Ecology: Molecular Ecology and the Global Nitrogen cycle
| NASA-CR-4497 | p 2803 N93-26157
Bibliography of remote sensing techniques used in wetland research
| AD-A261704 | p 2757 N93-26440

ECONOMIC ANALYSIS
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
Space business indicators p 2886 N93-26158
Functional Economic Analysis Guidebook, version 1.1
| AD-A261390 | p 2886 N93-26305
AEW aircraft design
| AD-A261800 | p 2590 N93-26444
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534

ECONOMIC DEVELOPMENT
Designing and implementing a state quality award
| PB93-154458 | p 2722 N93-26546

ECONOMIC FACTORS
Applied aerodynamics: Challenges and expectations
| NASA-TM-103963 | p 2575 N93-25091

ECONOMIC IMPACT
Regulatory impact analysis of the Part 503 sewage sludge regulation
| PB93-110625 | p 2768 N93-26567

ECONOMICS
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
Technology for America's economic growth: A new direction to build economic strength
| AD-A261553 | p 2887 N93-26458

ECOSYSTEMS
Biodiversity indication by Earth observation data p 2751 N93-24858
The Global Ocean Observing System p 2733 N93-24923
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-93-002 | p 2737 N93-25399
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-020 | p 2793 N93-25406
Response and feedbacks of forest ecosystems to global climate change
| PB93-167252 | p 2767 N93-26510

EDDY CURRENTS
Method and apparatus for deflection measurements using eddy current effects
| NASA-CASE-GSC-13506-1 | p 2710 N93-26103
Wind-driven coastal generation of annual mesoscale eddy activity in the California current
| AD-A261355 | p 2790 N93-26331

EDDY VISCOSITY
Gasp 1.3 results for the transverse hydrogen reacting jet p 2625 N93-26011

EDGES
Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing p 2751 N93-24859
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347

EDUCATION
A software package for neural network applications development p 2827 N93-25610
Fidelity and validity in distributed interactive simulation: Questions and answers
| AD-A260971 | p 2810 N93-25711
Aircraft electrical and environmental systems, AFSCs 452x5, 454x5, and 454x6
| AD-A261213 | p 2590 N93-25733

MIT Space Engineering Research Center
| NASA-CR-192879 | p 2821 N93-25833
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933
The 1993/1994 NASA Graduate Student Researchers Program
| NASA-EP-283 | p 2872 N93-26051
National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, volume 1
| NASA-CR-188242-VOL-1 | p 2911 N93-26058
National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, volume 2
| NASA-CR-188242-VOL-2 | p 2914 N93-26070
The adult literacy evaluator: An intelligent computer-aided training system for diagnosing adult illiterates p 2799 N93-26082
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138
Design and implementation of a pilot orientation program for new NASA engineering employees
| NASA-TM-105907 | p 2872 N93-26205
Spontaneous discovery and use of categorical structure
| AD-A261658 | p 2798 N93-26364

EFFICIENCY
Non-H2Se, ultra-thin CIS devices
| DE93-000078 | p 2759 N93-25253
Role of polycrystallinity in CdTe and CuInSe2 photovoltaic cells
| DE93-000045 | p 2759 N93-25504
Variable-speed generators with flux weakening p 2694 N93-25599
FALCON nuclear-reactor-pumped laser program and wireless power transmission
| DE93-007607 | p 2715 N93-26597

EFFLUENTS
Metabolic response of environmentally isolated microorganisms to industrial effluents: Use of a newly described cell culture assay p 2794 N93-26066

EIGENVALUES
Parallel matrix computations
| AD-A260783 | p 2828 N93-25687
Power iterations and the dominant eigenvalue problem
| AD-A261695 | p 2829 N93-26370

EIGENVECTORS
Demonstration for novel self-organization theory by three-dimensional magnetohydrodynamic simulation
| NIFS-212 | p 2859 N93-25227

EL NINO
On the vertical structure of seasonal, interannual and intraseasonal flows p 2782 N93-25557
An observational study of the local and remote response of the equatorial Pacific to westerly wind events during the 1991-92 El Nino
| AD-A261777 | p 2787 N93-26286

ELASTIC BARS
On the effective reflection properties of the randomly segmented elastic bar p 2724 N93-25328

ELASTIC BODIES
Dynamics of deformable multibody systems using recursive projection methods
| AD-A260698 | p 2728 N93-25842

ELASTIC DEFORMATION
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
Dynamics of deformable multibody systems using recursive projection methods
| AD-A260698 | p 2728 N93-25842
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438

ELASTIC MEDIA
Numerical investigations on fracture behavior of ductile materials p 2725 N93-25411
The rate form of equilibrium equation for problems of steady-state, elastic, viscous flows p 2704 N93-25708

ELASTIC PLATES
On existence of solutions and duality for a model of non-linear elastic plates with transverse shear deformations p 2726 N93-25437

ELASTIC PROPERTIES
Fracture of an elliptical inclusion and its implications for the properties of short fiber composites p 2634 N93-25333
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements p 2635 N93-25544
Inelastic behavior of thermoplastic composites p 2636 N93-25674
The induction of elastic fine motion in robotic grasps p 2718 N93-25727
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764
Variational theory of motion of curved, twisted and extensible elastic rods
| AD-A261028 | p 2729 N93-25941
On the stability of finite plastic deformations
| AD-A261526 | p 2730 N93-26361
Analysis of longitudinal impact on semi-infinite circular bars and tubes. Appendix no. 2
| AD-A261556 | p 2731 N93-26459
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522
The influence of primary and secondary orientations on the elastic response of a nickel-base single-crystal superalloy
| NASA-TM-106125 | p 2731 N93-26550

ELASTIC SCATTERING
High-energy pion-nucleus scattering at LAMPF
| DE93-007364 | p 2852 N93-25380

ELASTIC WAVES
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009
Elastic modeling and migration in Earth models p 2771 N93-25433

ELASTODYNAMICS
Numerically dissipative time integration algorithms for structural dynamics p 2725 N93-25394
Analysis of longitudinal impact on semi-infinite circular bars and tubes. Appendix no. 2
| AD-A261556 | p 2731 N93-26459

ELASTOMERS
Elastomer compound developed for high wear applications p 2659 N93-25607
Process for bonding elastomers to metals
| NASA-CASE-LAR-13645-1 | p 2656 N93-25995
Positive displacement rotary pump
| AD-D015678 | p 2719 N93-26144

ELASTOPLASTICITY
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522

ELECTRIC ARCS
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE93-009707 | p 2644 N93-25500
Space environmental interactions for the space exploration initiative p 2897 N93-26396

ELECTRIC BATTERIES
Characterization of electrochemical systems and batteries: Materials and systems
| DE93-003472 | p 2687 N93-24964
Improved performance and safety for high energy batteries through use of hazard anticipation and capacity prediction p 2694 N93-25582
Thin rechargeable batteries for CMOS SRAM memory protection p 2694 N93-25583
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597
Electrochemical and spectroscopic studies of molten halides
| AD-A261687 | p 2646 N93-26439

ELECTRIC CHARGE
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
The charge and size of precipitation particles inside thunderstorms and mesoscale convective systems on the Great Plains p 2781 N93-25275
Single electron charging effects in mesoscopic systems
| AD-A261228 | p 2868 N93-26302

ELECTRIC CONDUCTORS
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642

ELECTRIC CONNECTORS
Two- and three-dimensional high performance, patterned overlay multi-chip module technology p 2694 N93-25581

ELECTRIC CORONA
Comparative performance of lightning air terminals under natural storm conditions p 2781 N93-24902
Treatment of hazardous organic wastes using silent discharge plasmas
| DE93-003789 | p 2768 N93-26592

ELECTRIC CURRENT
Kinetic studies of interfacial photocurrents in platinized chloroplasts
| DE93-002344 | p 2792 N93-25104
Pressure dependence of conductivity
| DE93-008466 | p 2687 N93-25113
Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641
Internal current probing of integrated circuits using magnetic force microscopy
| DE93-006752 | p 2692 N93-26501

ELECTRIC DISCHARGES
An integrated approach to 300 kV electrostatic discharge application during component testing that will satisfy MIL-STD-331B Appendix F p 2693 N93-24882
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
Space environmental interactions for the space exploration initiative p 2897 N93-26396
Treatment of hazardous organic wastes using silent discharge plasmas
| DE93-003789 | p 2768 N93-26592

ELECTRIC FIELDS
Launch pad lightning protection enhancement by induced streamers p 2609 N93-24876
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Zoning of aircraft by electric field modelling p 2583 N93-24894
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
Dynamic test apparatus for electro-rheological fluids
| AD-D015632 | p 2643 N93-25284
Thermal and electric oscillation driven by orbit loss in helical systems
| NIFS-213 | p 2860 N93-25346
Dynamics of collision processes
| DE93-007143 | p 2849 N93-25509
Electric field effects on quantum-confined semiconductor structures p 2865 N93-25703
The initiation of lightning and the growth of electric fields in thunderstorms
| AD-A261455 | p 2787 N93-26352
Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings
| DE93-007513 | p 2857 N93-26593

ELECTRIC FILTERS
Comparison of energy trapping resonators and filters using the AT cut of quartz, berlinite and gallium phosphate p 2836 N93-25013

ELECTRIC IGNITION
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886

ELECTRIC MOTOR VEHICLES
Magnitude and value of electric vehicle emissions reductions for six driving cycles in four US cities with varying air quality problems
| DE93-006417 | p 2660 N93-25298

ELECTRIC POTENTIAL
Equipment testing with damped sinewaves between 1 and 50 MHz p 2692 N93-24881
Alternative equipment test procedures for simultaneous current injection on multiple cable bundles p 2693 N93-24903
The constant current loop: A new paradigm for resistance signal conditioning
| NASA-TM-108744 | p 2673 N93-25181
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
| DE93-007601 | p 2689 N93-25417
Detecting damaged cables using a preionized gas technique
| DE93-007588 | p 2689 N93-25429
Noise-optimal control of HEMT LNA's for compensation of temperature deviations p 2678 N93-26115
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight
| AD-A261646 | p 2618 N93-26232
Single electron charging effects in mesoscopic systems
| AD-A261228 | p 2868 N93-26302

ELECTRIC POWER PLANTS
An evaluation of thermal energy storage options for precooling gas turbine inlet air
| DE93-005980 | p 2758 N93-24975

Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588

ELECTRIC POWER SUPPLIES
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588

ELECTRIC PROPULSION
Stationary plasma thruster evaluation in Russia
| NASA-CR-192823 | p 2859 N93-25206
Anode power deposition in coaxial MPD thrusters
p 2623 N93-25665
Minimum-fuel power-limited transfers between coplanar elliptic orbits p 2608 N93-25684
Measurement and analysis of a small nozzle plume in vacuum
| NASA-TM-106066 | p 2633 N93-26561

ELECTRICAL ENGINEERING
Investigations of the frequency instability of CH1-75 hydrogen masers p 2716 N93-25049
Engineering: Research development and technology
| UCRL-53868-91 | p 2917 N93-26326
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530

ELECTRICAL FAULTS
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392

ELECTRICAL IMPEDANCE
Inverse problems in nondestructive evaluations
| AD-A261370 | p 2722 N93-26337

ELECTRICAL INSULATION
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
Detecting damaged cables using a preionized gas technique
| DE93-007588 | p 2689 N93-25429

ELECTRICAL MEASUREMENT
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
Improved PI-network measurement of all quartz crystal parameters by appropriate modelling of the test fixture
p 2833 N93-24995
Thermionic current measurement in quartz
p 2840 N93-25045
The 0.3 mm diameter flexible amperometric lactate probe
| AD-A260826 | p 2690 N93-25782
Internal current probing of integrated circuits using magnetic force microscopy
| DE93-006752 | p 2692 N93-26501
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530

ELECTRICAL PROPERTIES
FNAS computational modeling
| NASA-CR-192512 | p 2863 N93-25225
Electrochemical processing of electrically conductive polymer fibers
| AD-A261793 | p 2657 N93-26386
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392

ELECTRICAL RESISTIVITY
Pressure dependence of conductivity
| DE93-008466 | p 2687 N93-25113
FNAS computational modeling
| NASA-CR-192512 | p 2863 N93-25225
Temperature-dependent electrical conductivity of soda-lime glass
| DE93-007872 | p 2654 N93-25359
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
Ir-Zr alloys as diffusion barriers between Cu and Si(100)
| AD-A261919 | p 2652 N93-26197
Electrochemical processing of electrically conductive polymer fibers
| AD-A261793 | p 2657 N93-26386
Electrical conductivity of ion implanted ladder and semi-ladder polymers
| AD-A261401 | p 2657 N93-26401

ELECTRIFICATION
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Remote sensing of precipitation and electrification with a dual-polarization, coherent, wideband radar system
| AD-A260779 | p 2756 N93-25679

ELECTRO-OPTICAL PHOTOGRAPHY
Photographic industry and electronic imaging: The emergence of electronic still photography
| PB93-169399 | p 2711 N93-26324

ELECTRO-OPTICS
Ultrafast measurements of 200 gigahertz Schottky photodiodes p 2688 N93-25392
Adaptive liquid crystal TV based joint transform correlator as applied to real-time pattern recognition
| AD-A260724 | p 2864 N93-25655
Advanced technology for portable personal visualization
| AD-A261294 | p 2807 N93-26293
Multichip module high speed testing
| AD-A261391 | p 2856 N93-26306

ELECTROCARDIOGRAPHY
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594
Investigation into the common mode rejection ratio of the physiological signal conditioner circuit
p 2794 N93-26073

ELECTROCHEMICAL CELLS
Composite nanostructured material fabrication by electrochemical scanning probe microscopy
| AD-A261017 | p 2639 N93-25862

ELECTROCHEMICAL CORROSION
Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques
| DE93-008074 | p 2721 N93-25518
Adhesion and corrosion behavior of Al-Zn and TiN/Ti/TiN coatings on a DU-0.75 wt. percent Ti alloy
| MTL-TR-92-56 | p 2658 N93-26433

ELECTROCHEMICAL MACHINING
Anisotropic etching of silicon in KOH solutions
p 2647 N93-25037

ELECTROCHEMISTRY
Characterization of electrochemical systems and batteries: Materials and systems
| DE93-003472 | p 2687 N93-24964
Electrochemical processing of electrically conductive polymer fibers
| AD-A261793 | p 2657 N93-26386
Electrochemical and spectroscopic studies of molten halides
| AD-A261687 | p 2646 N93-26439

ELECTRODEPOSITION
Electrodeposition in low gravity p 2663 N93-24774
Composite nanostructured material fabrication by electrochemical scanning probe microscopy
| AD-A261017 | p 2639 N93-25862

ELECTRODES
Characterization of electrochemical systems and batteries: Materials and systems
| DE93-003472 | p 2687 N93-24964
Electroelastic equations for electroded thin plates subject to large driving voltages
| AD-A261123 | p 2675 N93-25772
The 0.3 mm diameter flexible amperometric lactate probe
| AD-A260826 | p 2690 N93-25782
Preliminary investigation of power flow and electrode phenomena in a multi-megawatt coaxial plasma thruster
| NASA-CR-191084 | p 2633 N93-26555

ELECTROENCEPHALOGRAPHY
Biomagnetic localization from transient quasi-static events
| DE93-007328 | p 2794 N93-25186
Automatic detection of seizures with applications
p 2796 N93-25592
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391
Duration of alpha suppression increases with angle in a mental rotation task
| AD-A261592 | p 2798 N93-26435

ELECTROLYSIS
Integrated oxygen recovery system
| NASA-CR-192982 | p 2801 N93-26088

ELECTROLYTE METABOLISM
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133

ELECTROLYTES
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642

ELECTROLYTIC CELLS
The 0.3 mm diameter flexible amperometric lactate probe
| AD-A260826 | p 2690 N93-25782

ELECTROMAGNETIC ABSORPTION
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490

ELECTROMAGNETIC COUPLING
BBU code development for high-power microwave generators
| DE93-007111 | p 2688 N93-25397

ELECTROMAGNETIC FIELDS
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. B: Sloping-vee beams
| AD-A261866 | p 2682 N93-26388
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528

ELECTROMAGNETIC INTERFERENCE
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Signal processing in impulsive electromagnetic interference
| AD-A260755 | p 2676 N93-25847

ELECTROMAGNETIC NOISE
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
Microwave interrogation frequency noise and clock frequency stability: Experimental results
p 2842 N93-25056
Noise measurements in single-mode GaAlAs diode lasers p 2716 N93-25067

ELECTROMAGNETIC PROPERTIES
High-performance visualization applied to computational electromagnetics: Method-of-moments on a silicon graphics workstation
| AD-A260820 | p 2675 N93-25700

ELECTROMAGNETIC PULSES
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898
Signal processing in impulsive electromagnetic interference
| AD-A260755 | p 2676 N93-25847
Interferometric measurement with squeezed light
| AD-A260910 | p 2856 N93-26457

ELECTROMAGNETIC RADIATION
Very low frequency signals and whistler-mode amplification in the magnetosphere and limit-cycle behavior in the CECAF infrared free electronic laser
| AD-A261776 | p 2716 N93-26601

ELECTROMAGNETIC SCATTERING
A proposed study of multiple scattering through clouds up to 1 THz p 2684 N93-26474

ELECTROMAGNETIC SHIELDING
Method for providing EMI/EMP hardening and breakdown protection in composite materials
| AD-D015638 | p 2634 N93-25283

ELECTROMAGNETISM
Energy and Technology Review, October - December 1992
| DE93-007784 | p 2674 N93-25299
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. B: Sloping-vee beams
| AD-A261866 | p 2682 N93-26388

ELECTROMECHANICS
X ray computed tomography for failure analysis
| AD-A261884 | p 2722 N93-26527

ELECTROMIGRATION
Thermionic current measurement in quartz
p 2840 N93-25045

ELECTRON ACCELERATORS
Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation
| AD-A261117 | p 2609 N93-25770

ELECTRON BEAMS
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092
The generation of Langmuir waves by thick target electron beams in solar flares p 2861 N93-25730

Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation
| AD-A261117 | p 2609 N93-25770
Magnetic field source for bi-chambered electron beam devices
| AD-A261316 | p 2691 N93-26299

ELECTRON CYCLOTRON HEATING
R and D of transmission lines for ECH system
| NIFS-210 | p 2687 N93-24951

ELECTRON DENSITY (CONCENTRATION)
Density dependence of line intensities and application to plasma diagnostics
| NIFS-209 | p 2857 N93-24950
Developing and improving numerical algorithms to study intrinsically correlated electron systems
| AD-A261214 | p 2849 N93-25734
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283
IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source
| AD-A261399 | p 2862 N93-26520

ELECTRON DENSITY PROFILES
Particle simulation for 10.6 micron picosecond laser-induced breakdown in gases p 2712 N93-25280
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283

ELECTRON DISTRIBUTION
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287

ELECTRON EMISSION
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774

ELECTRON ENERGY
Theoretical calculations on the electron absorption spectra of selected Polycyclic Aromatic Hydrocarbons (PAH) and derivatives
| NASA-CR-192762 | p 2892 N93-25200
High resolution interface nanochemistry and structure
| DE93-009750 | p 2635 N93-25501
Diagnostics of diamond film deposition plasmas
| AD-A260866 | p 2860 N93-25626
The surface characterization of a series of hydroxybenzenes on Ag(111): An EELS and TDS study
| DE93-007541 | p 2647 N93-26595

ELECTRON GUNS
Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation
| AD-A261117 | p 2609 N93-25770

ELECTRON IMPACT
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646

ELECTRON IRRADIATION
Radiation-induced disordering and defect production in CuAu and NiAl studied by molecular dynamics simulation
| DE93-007506 | p 2649 N93-25336

ELECTRON MICROSCOPES
Resonant tunneling through chemisorbed halogen atoms on Ag(111)
| AD-A261794 | p 2868 N93-26254

ELECTRON MOBILITY
Low temperature Hall and Shubnikov-de Haas effects
| AD-A261871 | p 2869 N93-26540

ELECTRON PHONON INTERACTIONS
Developing and improving numerical algorithms to study intrinsically correlated electron systems
| AD-A261214 | p 2849 N93-25734

ELECTRON PLASMA
The generation of Langmuir waves by thick target electron beams in solar flares p 2861 N93-25730

ELECTRON PRECIPITATION
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159

ELECTRON PUMPING
Electron-beam-pumped recombination lasers p 2712 N93-25344

ELECTRON RECOMBINATION
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646

ELECTRON SCATTERING
Developing and improving numerical algorithms to study intrinsically correlated electron systems
| AD-A261214 | p 2849 N93-25734
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287
Dynamics of gas-surface interactions
| AD-A261402 | p 2646 N93-26402

ELECTRON SPECTROSCOPY
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258

ELECTRON STATES
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525

ELECTRON TRANSFER
Measuring the metastatic potential of cancer cells p 2794 N93-25566
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642
Inorganic and biological electron transfer across an electronically conductive composite polymer membrane
| AD-A261642 | p 2656 N93-26172
Single electron charging effects in mesoscopic systems
| AD-A261228 | p 2868 N93-26302

ELECTRON TRANSITIONS
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287

ELECTRON TUNNELING
Resonant tunneling through chemisorbed halogen atoms on Ag(111)
| AD-A261794 | p 2868 N93-26254
Single electron charging effects in mesoscopic systems
| AD-A261228 | p 2868 N93-26302

ELECTRON-ION RECOMBINATION
Electron-beam-pumped recombination lasers p 2712 N93-25344

ELECTRONIC AIRCRAFT
AEW aircraft design
| AD-A261800 | p 2590 N93-26444

ELECTRONIC EQUIPMENT
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
| AD-A260901 | p 2727 N93-25658
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
Experimental and theoretical studies of proximity effect and Coulomb blockade phenomena in Josephson junctions
| AD-A261652 | p 2867 N93-26194
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
Joint services electronics program
| AD-A261801 | p 2692 N93-26539

ELECTRONIC EQUIPMENT TESTS
Equipment testing with damped sinewaves between 1 and 50 MHz p 2692 N93-24881
An integrated approach to 300 kV electrostatic discharge application during component testing that will satisfy MIL-STD-331B Appendix F p 2693 N93-24882
Alternative equipment test procedures for simultaneous current injection on multiple cable bundles p 2693 N93-24903
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279

ELECTRONIC MODULES
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368
Two- and three-dimensional high performance, patterned overlay multi-chip module technology p 2694 N93-25581

ELECTRONIC PACKAGING
Two- and three-dimensional high performance, patterned overlay multi-chip module technology p 2694 N93-25581
Special technology area review on microwave packaging technology
| AD-A261852 | p 2681 N93-26276

ELECTRONICS
Technology 2002: The Third National Technology Transfer Conference and Exposition, volume 1
| NASA-CP-3189-VOL-1 | p 2901 N93-25561

ELECTRONS
Notes on radial drift for dalitz detection
| DE93-006971 | p 2846 N93-24959
The interaction of swift electrons with surface excitations
| DE93-007245 | p 2848 N93-25376
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646
Particle simulation of auroral double layers p 2774 N93-25830
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171
Single electron charging effects in mesoscopic systems
| AD-A261228 | p 2868 N93-26302
Penning detachment: A new frontier
| AD-A261447 | p 2850 N93-26346

ELECTROPHORESIS
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
| DE93-007815 | p 2793 N93-26587

ELECTROPHYSIOLOGY
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391

ELECTROPOLISHING
Laser initiated corrosion pits on aluminum p 2650 N93-25464

ELECTRORHEOLOGICAL FLUIDS
Coarsening of a quiescent electrorheological fluid I: Experiment
| DE93-006776 | p 2642 N93-24972
Dynamic test apparatus for electro-rheological fluids
| AD-D015632 | p 2643 N93-25284
Electrorheological fluids: A structural approach to mechanisms
| AD-A260563 | p 2645 N93-25879

ELECTROSTATIC CHARGE
Improved composite fabrication process
| AD-D015679 | p 2640 N93-26145

ELECTROSTATICS
An integrated approach to 300 kV electrostatic discharge application during component testing that will satisfy MIL-STD-331B Appendix F p 2693 N93-24882
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Electroelastic equations for electroded thin plates subject to large driving voltages
| AD-A261123 | p 2675 N93-25772
Electrostatic fiber spreader
| AD-D015677 | p 2640 N93-26143

ELECTROSTRICTION
Investigation of coupled analysis techniques for adaptive material structural systems
| AD-A261359 | p 2868 N93-26332

ELEMENTARY EXCITATIONS
Consequences of spontaneous and anomalous symmetry breaking for the orbital and mass flow hydrodynamics of He-3 - A p 2698 N93-25295

ELEVATION
Visual perception of elevation
| AD-A261394 | p 2797 N93-26307

ELLIPSOMETRY
Study of surface behavior in function of temperature of the quaternary system (Hg, Cd, Zn)Te
| AD-A260968 | p 2867 N93-26223

ELLIPTIC DIFFERENTIAL EQUATIONS
Transformation of two and three-dimensional regions by elliptic systems
| NASA-CR-192955 | p 2810 N93-25669

ELLIPTICAL GALAXIES
Prograde anomalous orbits in triaxial gravitational potentials that rotate about the long axis: VLA neutral hydrogen observations and modeling of the inclined rings around the galaxies NGC 2685 and NGC 660 p 2607 N93-25396

ELLIPTICAL ORBITS
An approach for finding long period elliptical orbits for precursor SEI missions p 2604 N93-24720
Minimum-fuel power-limited transfers between coplanar elliptic orbits p 2608 N93-25684

EMBEDDING
Deformations of active flexible rods with embedded line actuators
| AD-A261207 | p 2729 N93-25950

EMBRITTLEMENT
Mechanical properties of martensitic alloy AISI 422
| DE93-006563 | p 2649 N93-25255

EMERGENCY BREATHING TECHNIQUES
Inward contaminant leakage tests of the S-Tron Corporation emergency escape breathing device. Phase 1: Tests of the original design. Phase 2: Tests with the redesigned neck seal
| DOT/FAA/AM-92/18 | p 2582 N93-25205

EMISSION SPECTRA
Compression of spectral meteorological imagery p 2804 N93-25925
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
| NASA-CR-191711 | p 2787 N93-26492

EMISSIVITY
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
| NASA-CR-191711 | p 2787 N93-26492

EMITTANCE
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers
p 2892 N93-24949

EMITTERS
RF vacuum microelectronics
| AD-A261784 | p 2692 N93-26565

EMPLOYEE RELATIONS
Organizational politics, participation in decision-making, and job satisfaction
| DOT/FAA/AM-92/17 | p 2796 N93-25203

ENCAPSULATING
Numerical simulation of time-dependent thermocapillary convection in layered fluid systems
p 2700 N93-25472

END EFFECTORS
The induction of elastic fine motion in robotic grasps
p 2718 N93-25727
Analysis and design of a novel robotic finger-tip sensor for adaptive grasping p 2719 N93-25745

ENDURANCE
Combined strength and endurance training: Functional and morphological adaptations to ten weeks of training
| AD-A261059 | p 2802 N93-26229

ENERGY ABSORPTION
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524
New directions in phthalocyanine pigments
| NASA-CR-192443 | p 2656 N93-26155

ENERGY BUDGETS
WCRP surface radiation budget shortwave data product description, version 1.1
| NASA-TM-107747 | p 2777 N93-24742
Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment
| NASA-CR-192826 | p 2769 N93-24945
Selected translated abstracts of Russian-language climate-change publications: 1. Surface energy budget
| DE93-003189 | p 2760 N93-24952
An investigation of the role of flux divergence in the turbulent kinetic energy balance of the atmospheric surface layer p 2773 N93-25756

ENERGY CONSERVATION
Technology for America's economic growth: A new direction to build economic strength
| AD-A261553 | p 2887 N93-26458
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585

ENERGY CONSUMPTION
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096

ENERGY CONVERSION EFFICIENCY
New concepts for high efficiency energy conversion: The avalanche heterostructure and superlattice solar cells
| DE92-010592 | p 2758 N93-25098
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136

ENERGY DISSIPATION
Spacecraft detumbling through energy dissipation
p 2600 N93-24696
Notes on radial drift for dalitz detection
| DE93-006971 | p 2846 N93-24959
Demonstration for novel self-organization theory by three-dimensional magnetohydrodynamic simulation
| NIFS-212 | p 2859 N93-25227
High-energy pion-nucleus scattering at LAMPF
| DE93-007364 | p 2852 N93-25380
High resolution interface nanochemistry and structure
| DE93-009750 | p 2635 N93-25501
Energy dissipation in inelastic flow of cohesionless granular media p 2703 N93-25662
The interaction of HCN/DCN with Si(100)-2x1
| AD-A260837 | p 2645 N93-25920
Proton Monte Carlo transport program PTRAN
| PB93-158673 | p 2850 N93-26314
Defect initiation/growth and energy dissipation induced by deformation and fracture
| AD-A261703 | p 2869 N93-26385
The surface characterization of a series of hydroxybenzenes on Ag(111): An EELS and TDS study
| DE93-007541 | p 2647 N93-26595

ENERGY GAPS (SOLID STATE)
Analysis of the gap in high-temperature superconductors using photoemission spectroscopy p 2865 N93-25744
Measurement of optical properties of infrared bandgap superlattices
| AD-A260859 | p 2866 N93-25789
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193

ENERGY METHODS
Converting environmental wastes into valuable resources p 2759 N93-25572

ENERGY OF FORMATION
Energetic materials from cubane
| AD-A261317 | p 2662 N93-26308

ENERGY POLICY
SIHTI: The research and development program of energy and environmental technology
| DE93-769925 | p 2763 N93-25360
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534

ENERGY REQUIREMENTS
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659

ENERGY SPECTRA
Proton Monte Carlo transport program PTRAN
| PB93-158673 | p 2850 N93-26314

ENERGY STORAGE
Advanced energy systems and technologies - National R and D programme
| DE93-769943 | p 2758 N93-25097
Aquifer thermal energy (heat and chill) storage
| DE93-006446 | p 2759 N93-25183

ENERGY TECHNOLOGY
Energy and Technology Review, August-September 1992
| DE93-005882 | p 2901 N93-24974
Advanced energy systems and technologies - National R and D programme
| DE93-769943 | p 2758 N93-25097
Energy and Technology Review, October - December 1992
| DE93-007784 | p 2674 N93-25299
The PACSAT Communications Experiment (PCE)
| DE93-008185 | p 2674 N93-25308
SIHTI: The research and development program of energy and environmental technology
| DE93-769925 | p 2763 N93-25360
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588

ENERGY TRANSFER
Time dependent simulation of cosmic-ray shocks including Alfven transport
| NASA-CR-192931 | p 2899 N93-24752
Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment
| NASA-CR-192826 | p 2769 N93-24945
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659
Thermal infrared radiation transfer in the planetary boundary layer p 2772 N93-25688
Oblique MHD cosmic-ray modified shocks: Two-fluid numerical simulations
| NASA-CR-192930 | p 2900 N93-26132
FALCON nuclear-reactor-pumped laser program and wireless power transmission
| DE93-007607 | p 2715 N93-26597

ENGINE ANALYZERS
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
| NASA-CR-191095 | p 2694 N93-24759

ENGINE CONTROL
Evaluation of advanced displays for engine monitoring and control
| NASA-CR-191418 | p 2591 N93-24764
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079

ENGINE DESIGN
A preliminary sizing method for unmanned aircraft using multi-variate optimisation p 2587 N93-25408
Design and performance of nozzle-less volute casings for inward flow radial turbines p 2593 N93-25471
Optimized scramjet engine integration on a waverider airframe p 2593 N93-25480
Evaluation of the Migrating Combustion Chamber (MCC) engine
| AD-A260780 | p 2718 N93-25682
Task 5: Architecture sensitivity to STME performance
| MCR-92-5010 | p 2609 N93-26176
Center for Advanced Propulsion Systems (fellowship)
| AD-A260571 | p 2632 N93-26216

ENGINE MONITORING INSTRUMENTS
Evaluation of advanced displays for engine monitoring and control
| NASA-CR-191418 | p 2591 N93-24764

ENGINE PARTS
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
| JPRS-UEQ-92-003 | p 2668 N93-25427
Design and performance of nozzle-less volute casings for inward flow radial turbines p 2593 N93-25471
Advanced bristle seals for gas turbine engines
| AD-A261296 | p 2720 N93-26564

ENGINE TESTING LABORATORIES
A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems
| NASA-TM-106015 | p 2846 N93-26551

ENGINE TESTS
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136
Stationary plasma thruster evaluation in Russia
| NASA-CR-192823 | p 2859 N93-25206
SRB environment evaluation and analysis. Volume 3: ASRB plume induced environments
| NASA-CR-192519 | p 2631 N93-26054
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201
Development and use of hydrogen-air torches in an altitude facility
| NASA-TM-106047 | p 2598 N93-26214
Development and demonstration of a new filter system to control emissions during jet engine testing
| AD-A261203 | p 2766 N93-26243
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373
A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems
| NASA-TM-106015 | p 2846 N93-26551

ENGINEERING MANAGEMENT
The systems engineering overview and process (from the Systems Engineering Management Guide, 1990)
p 2665 N93-24679
Spacecraft systems engineering: An introduction to the process at GSFC p 2665 N93-24683
The importance of cost considerations in the systems engineering process p 2666 N93-24686
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952

ENRICHMENT
National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, volume 2
| NASA-CR-188242-VOL-2 | p 2914 N93-26070

ENTRAINMENT
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534

ENTROPY
Bayesian cross-entropy reconstruction of complex images
| AD-A261812 | p 2812 N93-26257

ENVIRONMENT EFFECTS
Application of remote sensing data for the investigation of environmental degradation sites in East Germany
p 2739 N93-24785
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
Oil pollution and water quality mapping of Augusta Bay, Italy using remote sensing techniques
p 2746 N93-24823
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
SIHTI: The research and development program of energy and environmental technology
| DE93-769925 | p 2763 N93-25360
Incorporating biodiversity considerations into environmental impact analysis under the National Environmental Policy Act
| PB93-139806 | p 2766 N93-25878
Aerospace-plane flights and stratospheric ozone: Review and preliminary assessment of the National Aerospace Plane (NASP) operations
| RAND/N-3464-AF | p 2767 N93-26327
Response and feedbacks of forest ecosystems to global climate change
| PB93-167252 | p 2767 N93-26510

ENVIRONMENT MANAGEMENT
Use of remote sensing and GIS for the environmental planning proposal of the Sarno River Valley (Campania, southern Italy) p 2741 N93-24797
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
| DE93-002943 | p 2760 N93-24955
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
An environmental audit management plan for the Royal Australian Air Force
| AD-A261092 | p 2765 N93-25765
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
Human factors in environmental management: New directions from the Hanford site
| DE93-004337 | p 2767 N93-26495
ENVIRONMENT MODELS
EnviroNET p 2886 N93-26398
ENVIRONMENT POLLUTION
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 1: Workshop objectives and summary
| NASA-RP-1292-VOL-1 | p 2762 N93-25157
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 2: Comparisons with global atmospheric measurements
| NASA-RP-1292-VOL-2 | p 2762 N93-25158
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 3: Special diagnostic studies
| NASA-RP-1292-VOL-3 | p 2762 N93-25159
Converting environmental wastes into valuable resources p 2759 N93-25572
Space life support technology applications to terrestrial environmental problems p 2803 N93-25617
ENVIRONMENT PROTECTION
An introductory guide to uncertainty analysis in environmental and health risk assessment
| DE93-002873 | p 2760 N93-24676
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
Appliction of remote sensing to forestry mapping: Experience from the European collaborative programme for the less favoured areas p 2751 N93-24857
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
An environmental audit management plan for the Royal Australian Air Force
| AD-A261092 | p 2765 N93-25765
Glossary of environmental terms and acronym list
| PB93-158004 | p 2765 N93-25851
Development of a heuristic knowledge base for the selection of applicable or relevant and appropriate environmental requirements
| AD-A261038 | p 2765 N93-25864
Incorporating biodiversity considerations into environmental impact analysis under the National Environmental Policy Act
| PB93-139806 | p 2766 N93-25878
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315
ENVIRONMENT SIMULATORS
SRB environment evaluation and analysis. Volume 2: RSRB joint filling test/analysis improvements
| NASA-CR-192518 | p 2631 N93-26057
ENVIRONMENTAL CHEMISTRY
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 1: Workshop objectives and summary
| NASA-RP-1292-VOL-1 | p 2762 N93-25157
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 2: Comparisons with global atmospheric measurements
| NASA-RP-1292-VOL-2 | p 2762 N93-25158
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 3: Special diagnostic studies
| NASA-RP-1292-VOL-3 | p 2762 N93-25159
ENVIRONMENTAL CONTROL
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085
Converting environmental wastes into valuable resources p 2759 N93-25572
Advanced life support study. Modification 10: ECLSS logistical support analysis for Space Station Freedom
| NASA-CR-192481 | p 2801 N93-25888
ENVIRONMENTAL ENGINEERING
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007
Quartz oscillators, frequency synthesizers, and timing systems for geodesy and radio science applications p 2693 N93-25052
Trends '91: A compendium of data on global change. Highlights
| DE93-003112 | p 2761 N93-25144
ENVIRONMENTAL MONITORING
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
| ESA-ISY-1-VOL-2 | p 2737 N93-24775
Satellite remote sensing for environmental geology: The Bandung (West Java) experience p 2739 N93-24784
Application of remote sensing data for the investigation of environmental degradation sites in East Germany p 2739 N93-24785
Application of remote sensing to environmental monitoring in Poland p 2739 N93-24786
Land cover, an essential component of the CORINE information system on the environment: GIS implications p 2740 N93-24787
Aerospace techniques in radiation and ecological monitoring of the Republic Belarus p 2741 N93-24793
Determination of environmental dynamics using NOAA satellite data and a water balance model for the Mediterranean landscape p 2741 N93-24794
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
Demonstration of seasonal changes in the territory of Finland using multitemporal NOAA-AVHRR data p 2742 N93-24801
Alternative strategies for the use of satellite data analysis systems for hazard monitoring and disaster mitigation p 2743 N93-24805
Sustainable remote sensing: A major improvement for realtime resource management and disaster early warning in developing countries p 2743 N93-24808
Use of remote sensing spacecrafts in real time support to disaster management: Interfaces with ground segment facilities and services p 2743 N93-24809
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812
Remote sensing geology p 2744 N93-24815
NORSMAP 1989: Norwegian remote sensing spectrometry for mapping and monitoring of algal blooms and pollution p 2746 N93-24824
SEOMAR: An Italian approach to the observation of the Mediterranean area p 2746 N93-24825
The extent and status of mangroves in Mombasa district, Kenya: A case study based on remote sensing p 2746 N93-24826
Multi-date algorithms for predicting surface water quality parameters in estuarine and coastal waters using Landsat TM data
| ED-659-CP | p 2746 N93-24829
Algal blooms and gel production in Adriatic Sea observed by remote sensing techniques p 2747 N93-24831
Hel's peninsula coastal zone changes in the last 40 years on a base of remote sensing methods p 2747 N93-24832
Monitoring and evaluation of morphohydrographical changes in the Danube Delta by remote-sensing p 2747 N93-24834
Coastal environmental mapping using Landsat data
| ED-658-CP | p 2747 N93-24835
World Forest Watch: A global forest monitoring test p 2748 N93-24836
Tropical forest monitoring with high resolution satellite data p 2748 N93-24841
Assessment of storm damage in forests using SPOT imagery p 2748 N93-24842
Forest decline monitoring using Landsat TM, digital stand data and DEMs p 2749 N93-24846
Observation of forest damages in the Harz mountains by means of satellite remote sensing p 2749 N93-24848
Global drought monitoring from NOAA polar orbiting satellites p 2750 N93-24852
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855
Appliction of remote sensing to forestry mapping: Experience from the European collaborative programme for the less favoured areas p 2751 N93-24857
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
Current trends in satellite data supply for environmental monitoring p 2754 N93-24874
Lightning characteristics in the north-east part of Japan observed by a magnetic direction-finder network p 2779 N93-24892
AQUIS: A PC-based air inventory and permit manager
| DE93-003006 | p 2761 N93-25143
Emissions from ethanol and LPG fueled vehicles
| DE93-006410 | p 2660 N93-25192
Commercial applications multispectral sensor system p 2758 N93-25615
Glossary of environmental terms and acronym list
| PB93-158004 | p 2765 N93-25851
Quality control: Variability in protocols
| PB93-157790 | p 2766 N93-25876
Using terrestrial plants in biomonitoring
| PB93-158780 | p 2766 N93-26316
ENVIRONMENTAL QUALITY
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
ENVIRONMENTAL SURVEYS
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
Incorporating biodiversity considerations into environmental impact analysis under the National Environmental Policy Act
| PB93-139806 | p 2766 N93-25878
Mars exploration planning p 2898 N93-26399
ENVIRONMENTAL TESTS
Star tracker operation in a high density proton field p 2600 N93-24699
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
Environmental test program for superconducting materials and devices
| DE93-003646 | p 2864 N93-25506
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940
Thermal coatings for titanium-aluminum alloys
| NASA-TM-107760 | p 2651 N93-26048
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278
Using terrestrial plants in biomonitoring
| PB93-158780 | p 2766 N93-26316
ENZYMES
Kinetic studies of interfacial photocurrents in platinized chloroplasts
| DE93-002344 | p 2792 N93-25104
Measuring the metastatic potential of cancer cells p 2794 N93-25566
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818
Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900
Inorganic and biological electron transfer across an electronically conductive composite polymer membrane
| AD-A261642 | p 2656 N93-26172
EPHEMERIDES
Application of GPS tracking techniques to orbit determination for TDRS p 2601 N93-24702
TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703
A determination of the radio-planetary frame tie from comparison of Earth orientation parameters p 2676 N93-26106
EPIDEMIOLOGY
The prevalence of artificial lens implants in the civil airman population
| DOT/FAA/AM-92/14 | p 2794 N93-25214
EPILEPSY
Automatic detection of seizures with applications p 2796 N93-25592

EPITAXY
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
Method of joining diamond structures
| AD-D015671 | p 2867 N93-26140
EPOXY MATRIX COMPOSITES
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
In-process cure monitoring of composites via fiber-optic fluorescence
| AD-A261712 | p 2641 N93-26580
EPOXY RESINS
The 0.3 mm diameter flexible amperometric lactate probe
| AD-A260826 | p 2690 N93-25782
Characterization of aerospace grade resins and composites through pressurized volumetric dilatometry
| AD-A260794 | p 2639 N93-25918
Thermal expansion measurements of polymer matrix composites and syntactics
| MTL-TR-92-27 | p 2640 N93-25954
EQUATIONS OF MOTION
Position and force control of a vehicle with two or more steerable drive wheels
| DE92-041301 | p 2717 N93-25100
Diabaticity of nuclear motion: Problems and perspectives
| DE93-007252 | p 2847 N93-25148
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
The dynamics and control of large flexible asymmetric spacecraft p 2617 N93-25525
EQUILIBRIUM EQUATIONS
The rate form of equilibrium equation for problems of steady-state, elastic, viscous flows p 2704 N93-25708
EQUILIBRIUM FLOW
Development of a second generation spray combustion code p 2626 N93-26016
EQUIPMENT SPECIFICATIONS
Military standardization handbook: Aircraft refueling handbook
| AD-A261755 | p 2662 N93-26600
EQUIVALENCE
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame
| NASA-CR-191099 | p 2642 N93-25116
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
EQUIVALENT CIRCUITS
Method for providing EMI/EMP hardening and breakdown protection in composite materials
| AD-D015638 | p 2634 N93-25283
ERGODIC PROCESS
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255
EROSION
Modeling and analysis tools p 2897 N93-26397
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586
ERROR ANALYSIS
Star tracker operation in a high density proton field p 2600 N93-24699
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
Improvements in ERBS attitude determination without gyros p 2602 N93-24710
Practical aspects of transfer from GTO to lunar orbit p 2604 N93-24719
Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode p 2605 N93-24724
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
The use of multiple models in case-based diagnosis p 2823 N93-25969
A study of mapping exogenous knowledge representations into CONFIG p 2827 N93-26072
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution
| NASA-CR-192832 | p 2775 N93-26084
Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289
Bit hit/solar activity correlation study
| AD-A261381 | p 2896 N93-26340
ERROR CORRECTING CODES
Soft decoding a self-dual (48, 24; 12) code p 2671 N93-24662
A (72, 36; 15) box code p 2671 N93-24663
The analysis of convolutional codes via the extended Smith algorithm p 2671 N93-24664
Golay and other box codes p 2678 N93-26116
ERROR SIGNALS
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
ERRORS
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018
Timing and time signal distribution in digital communications networks p 2686 N93-25061
Synopsis of timing measurement techniques used in telecommunications p 2687 N93-25064
Aerial photographic sampling for statewide resource inventory p 2755 N93-25441
Evaluation of lens distortion errors in video-based motion analysis
| NASA-TP-3266 | p 2797 N93-25736
Model-based reasoning for system and software engineering: The Knowledge From Pictures (KFP) environment p 2825 N93-25978
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109
ERS-1 (ESA SATELLITE)
Land cover monitoring in the Netherlands applying satellite remote sensing p 2740 N93-24789
Satellite borne remote sensing data: A tool for natural disaster reduction p 2743 N93-24806
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856
ERYTHROCYTES
Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900
ESCAPE VELOCITY
Propagation of finite amplitude sound in a waveguide with a parabolic sound velocity profile
| ARL-TR-92-11 | p 2846 N93-26179
ESTIMATES
Local and regional estimates of sensible and latent heat flux densities from a patch-work surface
| ISBN-0-315-70882-4 | p 2772 N93-25556
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255
On the estimation of risk associated with an attenuation prediction p 2683 N93-26469
ESTIMATING
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Analysis of the Command and Control Segment (CCS) attitude estimation algorithm p 2604 N93-24722
Estimating spares requirements for Space Station Freedom using the M-SPARE model
| AD-A260878 | p 2617 N93-25630
Orbital parameter estimation using an extended Kalman filter
| AD-A260618 | p 2608 N93-25636
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773
Estimating turbine limit load
| NASA-CR-191105 | p 2580 N93-25883
ESTUARIES
Multi-date algorithms for predicting surface water quality parameters in estuarine and coastal waters using Landsat TM data
| ED-659-CP | p 2746 N93-24829
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164
ETCHING
Monolithic quartz vibrating beam accelerometer p 2711 N93-25011
Anisotropic etching of silicon in KOH solutions p 2647 N93-25037
Controlled dissolution of a piezoelectric material berlinite (AlPO4) p 2840 N93-25043
ETHANE
Activation of methane by clean and chemically modified single crystal oxide surfaces
| PB93-157295 | p 2644 N93-25817
Tables for the thermophysical properties of ethane
| PB93-160786 | p 2646 N93-26319
ETHERS
Determination of the thermal stability of perfluoropolyalkyl ethers by tensimetry
| NASA-TM-106081 | p 2654 N93-25093
ETHYL ALCOHOL
Emissions from ethanol and LPG fueled vehicles
| DE93-006410 | p 2660 N93-25192
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818
ETHYLENE
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame
| NASA-CR-191099 | p 2642 N93-25116
ETHYLENE COMPOUNDS
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
EUCLIDEAN GEOMETRY
Attitude analysis in Flatland: The plane truth p 2603 N93-24712
EULER EQUATIONS OF MOTION
A contribution to the great Riemann solver debate
| NASA-CR-191409 | p 2575 N93-25083
A compact high-order Euler solver for unstructured grids p 2699 N93-25341
Dynamics of deformable multibody systems using recursive projection methods
| AD-A260698 | p 2728 N93-25842
A brief description of a new numerical framework for solving conservation laws: The method of space-time conservation element and solution element
| NASA-TM-105757 | p 2829 N93-26560
EURECA (ESA)
The Columbus Metrology Science Team: Report on activities p 2670 N93-24987
STS-46 Space Shuttle mission report
| NASA-CR-193058 | p 2613 N93-25991
EUROPE
Land cover, an essential component of the CORINE information system on the environment: GIS implications p 2740 N93-24787
A geological and geophysical information system for Eurasia
| AD-A261789 | p 2883 N93-26442
EUROPEAN COMMUNICATIONS SATELLITE
ESA's planning and coordination of the OLYMPUS propagation experiment p 2684 N93-26477
EUROPEAN SPACE PROGRAMS
Appliction of remote sensing to forestry mapping: Experience from the European collaborative programme for the less favoured areas p 2751 N93-24857
The Columbus Metrology Science Team: Report on activities p 2670 N93-24987
EUTECTICS
Electrochemical and spectroscopic studies of molten halides
| AD-A261687 | p 2646 N93-26439
EVALUATION
Methods of evaluating the effects of coding on SAR data p 2804 N93-25926
EVAPORATION
Computation of moisture flux from ocean to atmosphere using a synergy of SSM/I-derived precipitable water and ECMWF analyses p 2774 N93-25757
Measurement of droplet vaporization rate enhancement caused by acoustic disturbances p 2626 N93-26015
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine p 2626 N93-26017
EVAPORATION RATE
Measurement of droplet vaporization rate enhancement caused by acoustic disturbances p 2626 N93-26015

EVAPORATORS
Two-phase/two-phase heat exchanger analysis
|NASA-CR-192783| p 2697 N93-25221
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Comparative analytical study of evoked and event related potentials as correlates of cognitive processes
|AD-A261388| p 2799 N93-26446
EVOLUTION (DEVELOPMENT)
Archaeological, historical and geoelectrical data as ground truth for Landsat TM imagery application to coastal plain evolution studies p 2742 N93-24799
EXCIMER LASERS
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition
|DE93-007908| p 2654 N93-25372
Simultaneous determination of gain parameters in steady state lasers
|DE93-007389| p 2713 N93-25381
EXCITATION
Monolithic quartz vibrating beam accelerometer p 2711 N93-25011
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
|DE93-007894| p 2863 N93-25369
The interaction of swift electrons with surface excitations
|DE93-007245| p 2848 N93-25376
The effects of large-amplitude, low-frequency excitation on a three-dimensional jet p 2702 N93-25553
EXCLUSION
Fast mutual exclusion for uniprocessors
|AD-A261663| p 2883 N93-26389
EXERCISE PHYSIOLOGY
Combined strength and endurance training: Functional and morphological adaptations to ten weeks of training
|AD-A261059| p 2802 N93-26229
EXHAUST EMISSION
Emissions from ethanol and LPG fueled vehicles
|DE93-006410| p 2660 N93-25192
Magnitude and value of electric vehicle emissions reductions for six driving cycles in four US cities with varying air quality problems
|DE93-006417| p 2660 N93-25298
Theoretical predictions of platinum-rhodium bimetallic catalysts
|DE93-007540| p 2649 N93-25428
National air pollutant emission estimates
|PB93-157808| p 2765 N93-25850
Development and demonstration of a new filter system to control emissions during jet engine testing
|AD-A261203| p 2766 N93-26243
Particulate emissions from gas turbine engines
|AD-A261374| p 2595 N93-26339
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
|NASA-CR-192937| p 2767 N93-26427
EXHAUST FLOW SIMULATION
Measurement and analysis of a small nozzle plume in vacuum
|NASA-TM-106066| p 2633 N93-26561
EXHAUST GASES
Emissions from ethanol and LPG fueled vehicles
|DE93-006410| p 2660 N93-25192
An experimental study of under-expanded jets p 2577 N93-25467
Development and demonstration of a new filter system to control emissions during jet engine testing
|AD-A261203| p 2766 N93-26243
Molecular interactions and properties with many-body methods
|AD-A261688| p 2850 N93-26367
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
|AD-A261749| p 2632 N93-26373
Improved selective catalytic NOx control technology for compressor station reciprocating engines
|PB93-158566| p 2768 N93-26529
EXHAUST NOZZLES
Particle behavior in solid propellant rocket motors and plumes
|AD-A260900| p 2624 N93-25913
EXHAUST SYSTEMS
Development and use of hydrogen-air torches in an altitude facility
|NASA-TM-106047| p 2598 N93-26214
EXOBIOLOGY
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
Digest of Russian Space Life Sciences, issue 33
|NASA-CR-3922(39)| p 2792 N93-25195
Space biology research development
|NASA-CR-192830| p 2792 N93-25242
EXOSPHERE
Data analysis and interpretation of lunar dust exosphere p 2898 N93-26059
EXPERIMENT DESIGN
Laser ignition application in a space experiment
|NASA-TM-106133| p 2664 N93-25337
Temperature-dependent electrical conductivity of soda-lime glass
|DE93-007872| p 2654 N93-25359
Design and validation of optimal experiments for estimating thermal properties of composite materials p 2635 N93-25541
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs p 2670 N93-26063
Task 5: Architecture sensitivity to STME performance
|MCR-92-5010| p 2609 N93-26176
EXPERIMENTATION
Microwave interrogation frequency noise and clock frequency stability: Experimental results p 2842 N93-25056
EXPERT SYSTEMS
Weather forecasting expert system study
|NASA-CR-192929| p 2777 N93-24747
A knowledge-based approach to waste disposal sites detection through integration of Landsat-TM imagery and geographical context information p 2741 N93-24796
How to combine probabilistic and fuzzy uncertainties in fuzzy control
|NASA-TM-108746| p 2818 N93-25138
How to control if even experts are not sure: Robust fuzzy control
|NASA-TM-108745| p 2818 N93-25142
An expert system shell for inferring vegetation characteristics: Inrerface for the addition of techniques (Task H)
|NASA-CR-192897| p 2754 N93-25154
How to help intelligent systems with different uncertainty representations cooperate with each other
|NASA-CR-192947| p 2818 N93-25196
Optimization of knowledge-based systems and expert system building tools
|NASA-CR-192763| p 2874 N93-25288
Min and max are the only continuous ampersand-, V-operations for finite logics
|NASA-CR-192952| p 2820 N93-25452
What procedure to choose while designing a fuzzy control? Towards mathematical foundations of fuzzy control
|NASA-TM-108719| p 2820 N93-25459
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems p 2814 N93-25589
TARGET: Rapid capture of process knowledge p 2814 N93-25590
Tree classification software p 2814 N93-25591
The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
Software lifecycle support environment (SLCSE) knowledge-based enhancements
|AD-A261042| p 2811 N93-25791
System of Experts for Intelligent Data Management (SEIDAM) p 2879 N93-25800
Knowledge-based assistance for science visualization and analysis using large distributed databases p 2879 N93-25801
Development of an expert data reduction assistant p 2880 N93-25808
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
A methodology and software environment for testing process model's sequential predictions with protocols
|AD-A260980| p 2882 N93-25844
Development of a heuristic knowledge base for the selection of applicable or relevant and appropriate environmental requirements
|AD-A261038| p 2765 N93-25864
Using AI/expert system technology to automate planning and replanning for the HST servicing missions p 2822 N93-25962
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967
The WorkPlace distributed processing environment p 2825 N93-25977
Inferring heuristic classification hierarchies from natural language input p 2825 N93-25979
Multi-viewpoint clustering analysis p 2825 N93-25980
Expert systems for assembly sequence evaluation p 2669 N93-26411
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
|NASA-CR-191711| p 2787 N93-26492
EXPLOITATION
Exploitation of cyclostationarity for signal-parameter estimation and system identification
|AD-A260833| p 2728 N93-25784
EXPLOSIVES
Pyroshock: Bibliography
|DE93-007605| p 2726 N93-25489
Hazards of explosives dusts: Particle size effects
|DE93-009380| p 2668 N93-25498
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
|AD-A261116| p 2660 N93-25769
DSD Technology: A detonation reactive Huygens code
|LA-12235-MS| p 2706 N93-25987
Molecular composition, structure, and sensitivity of explosives
|DE93-003850| p 2662 N93-26493
EXPOSURE
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
|AD-A261808| p 2793 N93-26259
EXTERNAL TANKS
An in-depth probabilistic study of external tank attach ring
|NASA-TM-108403| p 2624 N93-25671
External tank aerothermal design criteria verification
|NASA-CR-192514| p 2618 N93-26055
EXTRACTION
Biological production of ethanol from coal
|DE93-008947| p 2660 N93-25496
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571
Vision-aided monitoring and control of thermal spray, spray forming, and welding processes p 2670 N93-25604
EXTRATERRESTRIAL LIFE
Space biology research development
|NASA-CR-192830| p 2792 N93-25242
EXTRATERRESTRIAL RADIATION
Space radiation susceptibility of ultra stable crystal oscillators p 2693 N93-25053
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
|AD-A261808| p 2793 N93-26259
EXTRATERRESTRIAL RESOURCES
Near Earth object fuels (neo-fuels): Discovery, prospecting and use
|DE93-005185| p 2892 N93-25164
Representative systems for space exploration p 2897 N93-26395
EXTRAVEHICULAR ACTIVITY
Composite materials for the extravehicular mobility unit p 2642 N93-26060
Investigation of the effects of Extra Vehicular Activity (EVA) and Launch and Entry (LES) gloves on performance p 2803 N93-26061
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
A vision architecture for the extravehicular activity retriever p 2827 N93-26071
EXTRAVEHICULAR MOBILITY UNITS
The properties of and analytical methods for detection of LiOH and Li2CO3
|NASA-CR-192771| p 2643 N93-25240
Composite materials for the extravehicular mobility unit p 2642 N93-26060
EXTREME ULTRAVIOLET EXPLORER SATELLITE
Real-time attitude determination and gyro calibration p 2602 N93-24708
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
EXTREME ULTRAVIOLET RADIATION
Further analysis of ECOM-721 data
|AD-A260863| p 2774 N93-25790
Imaging the magnetosphere in the extreme ultraviolet
|NASA-CR-192218| p 2775 N93-26151
EXTREMELY HIGH FREQUENCIES
A technique for computation of noise temperature due to a beam waveguide shroud p 2671 N93-24661
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview p 2680 N93-26128
L- and K-band LMSS propagation measurements using MARECS-B, OLYMPUS, and ACTS p 2683 N93-26467
EXTRUDING
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
EYE (ANATOMY)
The prevalence of artificial lens implants in the civil airman population
|DOT/FAA/AM-92/14| p 2794 N93-25214
A fiber optic probe for the detection of cataracts p 2796 N93-25593

Visual perception of elevation
| AD-A261394 | p 2797 N93-26307

EYE MOVEMENTS
Visual perception of elevation
| AD-A261394 | p 2797 N93-26307
Coordinated action in 3-D space
| AD-A261418 | p 2799 N93-26449

F

F REGION
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159

FABRICATION
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
| DE93-000073 | p 2759 N93-25102
Environmental test program for superconducting materials and devices
| DE93-003646 | p 2864 N93-25506
INEL spray-forming research p 2658 N93-25562
Film fabrication technologies at NREL p 2658 N93-25563
Mullite whiskers and mullite-whisker felt p 2642 N93-25586
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
Composite nanostructured material fabrication by electrochemical scanning probe microscopy
| AD-A261017 | p 2639 N93-25862
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940
A new approach to cooled combustion chambers: The 40K formed platelet chamber p 2626 N93-26018
Investigation into the common mode rejection ratio of the physiological signal conditioner circuit p 2794 N93-26073
Improved composite fabrication process
| AD-D015679 | p 2640 N93-26145
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202
Development of organic nonlinear optical materials
| AD-A261332 | p 2856 N93-26309
Research support for the Laboratory for Lightwave Technology
| AD-A261488 | p 2856 N93-26343

FABRY-PEROT INTERFEROMETERS
Fibre optic sensors for heat transfer studies p 2853 N93-25748

FAILURE
Failure monitoring in dynamic systems: Model construction without fault training data p 2672 N93-24666
Report of the Seasat Failure Review Board p 2619 N93-24693
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
Improved performance and safety for high energy batteries through use of hazard anticipation and capacity prediction p 2694 N93-25582
Numerical simulation of damage and progressive failures in composite laminates using the layerwise plate theory p 2636 N93-25661
Detection of bearing failure in mechanical devices using neural networks p 2822 N93-25965
Virtually-synchronous communication based on a weak failure suspector
| NASA-CR-193003 | p 2721 N93-26135
European tri-service advanced materials workshop on compressive strength in rigid-rod polymers
| AD-A261517 | p 2658 N93-26576

FAILURE ANALYSIS
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Tethered Satellite System Contingency Investigation Board
| NASA-TM-108704 | p 2616 N93-25231
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672
Damage and failure analysis on continuous fiber-reinforced polymer composites p 2637 N93-25716
High strain rate damage development and failure mechanisms in tungsten heavy alloys
| AD-A260856 | p 2651 N93-25788
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201
Advanced engineering analysis
| KCP-613-4967 | p 2669 N93-26212
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371
X ray computed tomography for failure analysis
| AD-A261884 | p 2722 N93-26527

FAILURE MODES
Monitoring damage growth in titanium matrix composites using acoustic emission
| NASA-TM-107742 | p 2634 N93-25072
Analysis of matrix damage in unidirectional composites p 2634 N93-25338
The damage, repair and design of fiber composite structural materials p 2635 N93-25532
Damage and failure analysis on continuous fiber-reinforced polymer composites p 2637 N93-25716
NLS operations concepts: Failure modes scenario simulation model analysis
| MCR-92-5013 | p 2609 N93-26175
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235

FAN BLADES
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

FAR FIELDS
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Far field rotor noise
| AD-A260703 | p 2845 N93-25651
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355

FAR INFRARED RADIATION
Far-infrared emission, gas, and ultraluminous HII regions in M101
| NASA-CR-192791 | p 2890 N93-25755

FARM CROPS
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
Combining spectral information with crop rotation knowledge for crop classifications p 2752 N93-24861
Multi-temporal satellite image analysis for crop inventories in the Po River Valley (Italy) p 2755 N93-25434
Analysis of the lettuce data from the variable pressure growth chamber at NASA Johnson Space Center: A three-stage nested design model p 2794 N93-26069

FARMLANDS
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856

FAST FOURIER TRANSFORMATIONS
Implementation of cyclic spectral analysis methods
| AD-A261715 | p 2681 N93-26372

FASTENERS
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569

FATIGUE (BIOLOGY)
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859

FATIGUE (MATERIALS)
Fatigue resistance of orthotropic plates with trapezoidal stiffeners
| TRL-TRANS-T3908 | p 2726 N93-25419
Reliable stress and fracture mechanics analysis of complex aircraft components using a h-p version of FEM
| AD-A260628 | p 2726 N93-25638
Micromechanics of fatigue
| AD-A260577 | p 2729 N93-25901
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320

FATIGUE LIFE
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320

FATIGUE TESTS
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768
Micromechanics of fatigue
| AD-A260577 | p 2729 N93-25901
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320

FAULT TOLERANCE
Failure monitoring in dynamic systems: Model construction without fault training data p 2672 N93-24666
Optimal message log reclamation for independent checkpointing
| NASA-CR-192886 | p 2815 N93-24749
On the robustness of Herlihy's hierarchy
| NASA-CR-193002 | p 2808 N93-25107
A control structure for fault-tolerant operation of robotic manipulators
| DE93-005783 | p 2717 N93-25413
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588
Machine learning techniques for fault isolation and sensor placement p 2823 N93-25966
Virtually-synchronous communication based on a weak failure suspector
| NASA-CR-193003 | p 2721 N93-26135

FAULTS
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems p 2814 N93-25589
Machine learning techniques for fault isolation and sensor placement p 2823 N93-25966

FEASIBILITY
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087

FEASIBILITY ANALYSIS
TDRSS orbit determination using short baseline differenced carrier phase p 2601 N93-24701
Weather forecasting expert system study
| NASA-CR-192929 | p 2777 N93-24747
Feasibility study of a long duration balloon flight with NASA/GSFC and Soviet Space Agency Gamma Ray Spectrometers
| NASA-CR-192934 | p 2573 N93-25077
Development of laser guide stars and adaptive optics for large astronomical telescopes
| DE93-007511 | p 2888 N93-25320

FECES
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674

FEED SYSTEMS
A technique for computation of noise temperature due to a beam waveguide shroud p 2671 N93-24661

FEEDBACK
Coordinated action in 3-D space
| AD-A261418 | p 2799 N93-26449

FEEDBACK CONTROL
Fundamental characteristics of a laser-diode-pumped rubidium maser with an external feedback loop p 2716 N93-25068
A neural network-based estimator for the mixture ratio of the Space Shuttle Main Engine
| NASA-TM-106070 | p 2622 N93-25089
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
Aerospace vehicle model simplification for feedback control p 2596 N93-25292
Optimal control of large space structures p 2819 N93-25343
Control of nonlinear systems under input constraints with applications to flight control p 2596 N93-25353
Detailed solution to a complex kinematics chain manipulator
| DE93-004619 | p 2725 N93-25357
Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system
| AD-A260793 | p 2599 N93-25693

Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Passivity motivated controller design for flexible structures
| AD-A261122 | p 2719 N93-25771
Recommendations for a Kalman filter to estimate and control freeze and sublime rates of gaseous diffusion plant freezer/sublimer systems
| ORNL/TM-12183 | p 2668 N93-25937
Nonlinear system design: Adaptive feedback linearization with unmodeled dynamics
| AD-A261360 | p 2826 N93-26333
Adaptive control of nonlinear flexible systems
| AD-A261676 | p 2826 N93-26365
Interaction dynamics and control for orbital assembly p 2669 N93-26407

FEEDFORWARD CONTROL
Adaptive control of nonlinear flexible systems
| AD-A261676 | p 2826 N93-26365

FEET (ANATOMY)
Anthropometry of the foot and lower leg of U.S. Army soldiers: Fort Jackson, SC
| AD-A261405 | p 2802 N93-26404

FEMALES
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988
| AD-A260869 | p 2800 N93-25628

FERMENTATION
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496

FERMIONS
New ground states in unconventional superconductors p 2688 N93-25282

FERRITES
Nondestructive evaluation of ferrite c-cores
| KCP-613-4677 | p 2721 N93-25939
Cross-switched MICRAD seeker
| AD-D015676 | p 2691 N93-26142

FERROELECTRICITY
Electroelastic equations for electroded thin plates subject to large driving voltages
| AD-A261123 | p 2675 N93-25772
Considerations for space and naval aviation applications of ferroelectric memory
| AD-A261300 | p 2807 N93-26294
Investigation of coupled analysis techniques for adaptive material structural systems
| AD-A261359 | p 2868 N93-26332

FERROMAGNETIC MATERIALS
Molecular/polymeric magnetism
| DE93-008635 | p 2847 N93-25114
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369
Magnetic multilayer strain gage
| AD-D015672 | p 2710 N93-26141

FERROMAGNETISM
Molecular/polymeric magnetism
| DE93-008635 | p 2847 N93-25114
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369

FERROUS METALS
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278

FERTILIZERS
ANOVA method to estimate vegetation indices sensitivity assessing nitrogen fertilizing influence on spectral reflectance coefficients p 2739 N93-24782
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850
Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing p 2751 N93-24859

FIBER COMPOSITES
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Comparison of the damage for various types of fibre reinforced composites due to different lightning test standards (MIL-STD-1757A, German military VG-standard 96903) p 2642 N93-24891
Zoning of aircraft by electric field modelling p 2583 N93-24894
High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
| NASA-TM-106001 | p 2723 N93-24913
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
Fracture of an elliptical inclusion and its implications for the properties of short fiber composites p 2634 N93-25333
Analysis of matrix damage in unidirectional composites p 2634 N93-25338
Internal stresses and the cyclic deformation of an aluminum matrix composite p 2650 N93-25436
The damage, repair and design of fiber composite structural materials p 2635 N93-25532
Effect of water immersion on fiber/matrix adhesion
| AD-A260704 | p 2636 N93-25652
Inelastic behavior of thermoplastic composites p 2636 N93-25674
Finite element micromechanics modeling of inelastic deformation of unidirectionally fiber-reinforced composites p 2637 N93-25680
Damage and failure analysis on continuous fiber-reinforced polymer composites p 2637 N93-25716
The corrosion of metal matrix composites p 2638 N93-25723
International Workshop on Advances in Inorganic Fibre Technology
| AD-A260719 | p 2639 N93-25908
Thermomechanical response of shape memory composites
| AD-A260828 | p 2639 N93-25919
Composite materials for the extravehicular mobility unit p 2642 N93-26060
Electrostatic fiber spreader
| AD-D015677 | p 2640 N93-26143
Smart structural composites with piezoelectric micro-constituents
| AD-A260970 | p 2640 N93-26225
Effects of moisture and other contaminants in friction composites
| AD-A261226 | p 2640 N93-26301
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355
Failure considerations in composite systems based on 3D micromechanical stress fields, part A
| AD-A261698 | p 2641 N93-26382
METal matrix composite ANalyzer (METCAN): Theoretical manual
| NASA-TM-106025 | p 2641 N93-26552

FIBER OPTICS
Interferometric fiber-optic radiation sensor
| DE93-003841 | p 2852 N93-25127
Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications
| DE93-005485 | p 2852 N93-25182
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570
A fiber optic probe for the detection of cataracts p 2796 N93-25593
Fibre optic sensors for heat transfer studies p 2853 N93-25748
Infrared fiber optic diagnostic for solid propellant combustion p 2628 N93-26031
Performance of a 12-GHz fiber-optic system for beam-waveguide antenna stability testing p 2677 N93-26113
Rain rate instrument for deployment at sea, phase 2
| NASA-CR-192442 | p 2786 N93-26156
Proof of fault coverage for a formal protocol test procedure
| AD-A261612 | p 2680 N93-26166
Advanced optical fiber communication systems
| AD-A261802 | p 2856 N93-26256
Research support for the Laboratory for Lightwave Technology
| AD-A261488 | p 2856 N93-26343
Optical fiber for acoustic sensor applications
| AD-A261580 | p 2857 N93-26515
In-process cure monitoring of composites via fiber-optic fluorescence
| AD-A261712 | p 2641 N93-26580

FIBER ORIENTATION
Methods of determining loads and fiber orientations in anisotropic non-crystalline materials using energy flux deviation
| NASA-CASE-LAR-14399-1 | p 2729 N93-26102

FIBER STRENGTH
Interface engineering in oxide fiber/oxide matrix composites
| AD-A261705 | p 2641 N93-26579

FIBER VOLUME FRACTION
Failure considerations in composite systems based on 3D micromechanical stress fields, part A
| AD-A261698 | p 2641 N93-26382

FIBRILLATION
Electrorheological fluids: A structural approach to mechanisms
| AD-A260563 | p 2645 N93-25879

FIELD ALIGNED CURRENTS
A statistical study of field-aligned currents in the Earth's inner magnetosphere p 2773 N93-25709

FIELD EFFECT TRANSISTORS
Quantum conductance fluctuations in self-aligned, pinch-narrowed MOSFETs p 2863 N93-25265
Microwave and millimeter wave monolithic integrated circuits (MIMIC) program. MIMIC briefs: Summaries of phase 3 technology support programs
| AD-A260914 | p 2690 N93-25660
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
Noise-optimal control of HEMT LNA's for compensation of temperature deviations p 2678 N93-26115
Large area, low capacitance Si(Li) detectors for high rate x ray applications
| DE93-007661 | p 2692 N93-26598

FIELD OF VIEW
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728
Evaluation of lens distortion errors in video-based motion analysis
| NASA-TP-3266 | p 2797 N93-25736
Interpupillary and vertex distance effects on field-of-view and acuity with ANVIS
| AD-A261259 | p 2802 N93-26265

FIELD THEORY (PHYSICS)
Topics in CP violation
| DE93-007615 | p 2847 N93-25323
Twistor diagrams and a quantum field theory p 2871 N93-25423

FIGHTER AIRCRAFT
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079
ASTOVL combat aircraft design synthesis and optimization p 2589 N93-25704
An analysis of the reliability and maintainability of the Jian 6 and Jian 7 aircraft and ways to improve them
| AD-A261060 | p 2574 N93-26238
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391

FIGURE OF MERIT
Figure of merit for direct-detection optical channels p 2678 N93-26117

FILAMENT WINDING
Improved composite fabrication process
| AD-D015679 | p 2640 N93-26145

FILE MAINTENANCE (COMPUTERS)
An analysis of file migration in a UNIX supercomputing environment
| NASA-CR-192908 | p 2809 N93-25131
A trace-driven analysis of name and attribute caching in a distributed system
| NASA-CR-192899 | p 2815 N93-25251
RAMA: A file system for massively parallel computers
| NASA-CR-192906 | p 2815 N93-25297
Test, Control and Monitor System maintenance plan
| NASA-CR-193099 | p 2873 N93-26420

FILM COOLING
Measurements and computations of external heat transfer and film cooking in turbines
| RAE-TM-P-1223 | p 2592 N93-25455

FILTRATION
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818

FINANCE
Small business access to equity capital
| PB93-144582 | p 2872 N93-25735
Gordon Conference on Point Defects, Line Defects and Interfaces in Semiconductors
| AD-A261485 | p 2868 N93-26357

FINITE DIFFERENCE THEORY
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
A convergent finite difference scheme for the Navier-Stokes equations of nonisentropic compressible fluid flow p 2695 N93-24906
High-order cyclo-difference techniques: An alternative to finite differences
| NASA-TM-107745 | p 2575 N93-25074
A hybrid multigrid technique for computing steady-state solutions to supersonic flows p 2582 N93-26078

FINITE ELEMENT METHOD
Evaluation of MARC for the analysis of rotating composite blades
| NASA-TM-4423 | p 2723 N93-24909

High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
| NASA-TM-106001 | p 2723 N93-24913
Rapid exploration of curvilinear grids using direct volume rendering
| NASA-CR-192765 | p 2808 N93-24944
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
Quartz crystal twinning under mechanical stress: Finite element analysis p 2839 N93-25032
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
Stress distribution in composite flatwise tension test specimens
| NASA-TM-106074 | p 2634 N93-25071
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
Using a multifrontal sparse solver in a high performance, finite element code
| NASA-CR-192718 | p 2828 N93-25223
Equilibrium constrained assumed natural coordinate strain finite elements for shell analysis p 2724 N93-25273
Data parallel finite element techniques for large-scale computational fluid dynamics p 2699 N93-25334
Formulation and treatment of frictional contact problems using finite elements p 2717 N93-25412
Experimental modal survey of the probe mass mock-up
| DE93-008846 | p 2617 N93-25494
Numerical study of cavity natural convection flow with augmenting and counteracting effects by projection finite element method p 2701 N93-25540
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
Stabilized finite element methods for incompressible flows with emphasis on moving boundaries and interfaces p 2703 N93-25663
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671
Finite element micromechanics modeling of inelastic deformation of unidirectionally fiber-reinforced composites p 2637 N93-25680
An efficient technique for structural reliability with applications p 2727 N93-25681
Low-velocity impact of composite sandwich plate p 2637 N93-25695
The rate form of equilibrium equation for problems of steady-state, elastic, viscous flows p 2704 N93-25708
Active control of NiTINOL-reinforced structural composites
| AD-A261062 | p 2638 N93-25780
Applications of parallel and vector algorithms in nonlinear structural dynamics using the finite element method
| AD-A260716 | p 2811 N93-25845
Optimization techniques for contact stress analysis
| AD-A260846 | p 2729 N93-25911
Modeling of the WSTF frictional heating apparatus in high pressure systems p 2648 N93-26079
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164
Finite element modeling of the hydroforming press
| KCP-613-4999 | p 2668 N93-26206
Advanced engineering analysis
| KCP-613-4967 | p 2669 N93-26212
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
Configuration optimization of space structures p 2670 N93-26415
Approximate techniques for predicting size effects on cleavage fracture toughness (J(sub c))
| AD-A261591 | p 2731 N93-26516
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522
The influence of primary and secondary orientations on the elastic response of a nickel-base single-crystal superalloy
| NASA-TM-106125 | p 2731 N93-26550

FINITE VOLUME METHOD
Computation of hypersonic viscous flowfields using the parabolized Navier-Stokes equations p 2694 N93-24766
Computational modelling of 3D flow in complex ducts and passages p 2704 N93-25698

FINLAND
SIHTI: The research and development program of energy and environmental technology
| DE93-769925 | p 2763 N93-25360

FINS
Two-dimensional fin analysis p 2705 N93-25737

FIRE CONTROL
Narrow-body aircraft water spray optimization study
| DOT/FAA/CT-TN93/3 | p 2582 N93-25224

FIRE DAMAGE
A prototype system for forest fire prevention and control p 2749 N93-24844

FIRE EXTINGUISHERS
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629

FIRE FIGHTING
Narrow-body aircraft water spray optimization study
| DOT/FAA/CT-TN93/3 | p 2582 N93-25224

FIRE PREVENTION
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
A prototype system for forest fire prevention and control p 2749 N93-24844

FIRES
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371

FIRMWARE
Firmware development improves system efficiency p 2807 N93-25606

FISHERIES
Supporting the Portuguese fisheries with satellites p 2745 N93-24821
Application of satellite imageries data to fisheries in Japan p 2745 N93-24822
The use of remotely sensed data for operational fisheries oceanography p 2734 N93-24927
The continuous plankton recorder survey: A long-term, basin-scale oceanic time series p 2736 N93-24937

FISHES
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea
| AD-A261205 | p 2757 N93-25868

FISHING
The continuous plankton recorder survey: A long-term, basin-scale oceanic time series p 2736 N93-24937

FISSIONABLE MATERIALS
Human factors in environmental management: New directions from the Hanford site
| DE93-004337 | p 2767 N93-26495

FITTINGS
Dynamic modeling of fluid transmission lines of the DSN 70-meter antennas by using a lumped parameter model p 2678 N93-26119

FIXED WINGS
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198

FLAME PROPAGATION
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946
The structure of particle cloud premixed flames
| NASA-CR-192827 | p 2643 N93-25229
Modelling of microgravity ignition phenomena p 2664 N93-25465
Interactions of acoustic waves and combustion of homogeneous solid propellants in rocket motors p 2630 N93-26039
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

FLAME STABILITY
Atomization and combustion of a gelled, metallized slurry fuel
| AD-A261778 | p 2647 N93-26602

FLAME TEMPERATURE
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037

FLAMEOUT
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946

FLAMES
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
Modelling of microgravity ignition phenomena p 2664 N93-25465
Flame structure studies of a lean, 20 torr H2/N2O/AR flame employing molecular beam mass spectrometry p 2627 N93-26025
Modeling of H2/N2O flames p 2627 N93-26026
Dark zone modeling of solid propellant flames p 2628 N93-26028
Detection of atomic oxygen and hydrogen in solid propellant flames and pyrolysis gases using multiphoton laser-induced fluorescence p 2628 N93-26029
Tomographic analysis of sight infrared spectra of low pressure flames p 2628 N93-26030
ADN propellant diffusion flame structure p 2629 N93-26036
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037
Interactions of acoustic waves and combustion of homogeneous solid propellants in rocket motors p 2630 N93-26039
Flame response in oscillatory solid propellant combustion p 2630 N93-26041

FLAMMABILITY
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755

FLANGES
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701

FLARE STARS
ROSAT investigation of flaring and activity on Prox Cen
| NASA-CR-192972 | p 2891 N93-26139

FLAT PLATES
Shock tube application to the study of compressible turbulent boundary layer with mass injection p 2697 N93-25252

FLEXIBILITY
Scientific visualization using the Flow Analysis Software Toolkit (FAST) p 2814 N93-25600
The MODE family of on-orbit experiments: The Middeck Active Control Experiment (MACE) p 2599 N93-25835
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938

FLEXIBLE BODIES
Direct solutions of the Navier-Stokes equations with application to static aeroelasticity p 2697 N93-25259
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
Passivity motivated controller design for flexible structures
| AD-A261122 | p 2719 N93-25771
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834
The MODE family of on-orbit experiments: The Middeck Active Control Experiment (MACE) p 2599 N93-25835
Sequential design of a linear quadratic controller for the Deep Space Network antennas p 2679 N93-26123
Controls for orbital assembly of large space structures p 2620 N93-26408

FLEXIBLE SPACECRAFT
Optimal control of large space structures p 2819 N93-25343
The dynamics and control of large flexible asymmetric spacecraft p 2617 N93-25525
Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Model reduction for Space Station Freedom p 2620 N93-26081

FLEXIBLE WINGS
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation p 2574 N93-24756

FLEXING
Damage and failure analysis on continuous fiber-reinforced polymer composites p 2637 N93-25716

FLIGHT CHARACTERISTICS
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898
Nonlinear stability analysis of the attitude motion of spin-stabilized thrusting spacecraft p 2617 N93-25527

FLIGHT CONDITIONS
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530

FLIGHT CONTROL
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
Prediction of forces and moments for hypersonic flight vehicle control effectors
| NASA-CR-193033 | p 2595 N93-24762

Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199
Aerodynamic foundations for use of unsteady aerodynamic effects in flight control
p 2576 N93-25274
Control of nonlinear systems under input constraints with applications to flight control p 2596 N93-25353
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574

FLIGHT CREWS
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859

FLIGHT HAZARDS
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263

FLIGHT INSTRUMENTS
Development of a flight instrument package
| AD-A260830 | p 2591 N93-25783
Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915
SRB environment evaluation and analysis. Volume 1: Redesigned SRB flight heating evaluation
| NASA-CR-192517 | p 2631 N93-26053

FLIGHT MANAGEMENT SYSTEMS
Piloted simulation of an air-ground profile negotiation process in a time-based Air Traffic Control environment
| NASA-TM-107748 | p 2585 N93-26087

FLIGHT MECHANICS
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694

FLIGHT OPERATIONS
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems
p 2814 N93-25589
Expedient repair of structural facilities
| AD-A260727 | p 2598 N93-25656
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859
Design of an air traffic computer simulation system to support investigation of civil tiltrotor aircraft operations
| NASA-CR-192920 | p 2585 N93-26052

FLIGHT OPTIMIZATION
Optimal thrust magnitude on a singular arc in atmospheric flight p 2819 N93-25410

FLIGHT PATHS
Design concepts for the development of cooperative problem-solving systems
| NASA-CR-192708 | p 2585 N93-25261
Control and optimization of aircraft trajectories
p 2596 N93-25543

FLIGHT PLANS
Design of a cooperative problem-solving system for enroute flight planning: An empirical study of its use by airline dispatchers
| NASA-CR-192709 | p 2585 N93-25330

FLIGHT RULES
Systems engineering and integration processes involved with manned mission operations p 2666 N93-24688

FLIGHT SAFETY
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
The ATC evaluation of the prototype Airport Surveillance Radar Wind Shear Processor (ASR-WSP) at Orlando International Airport
| DOT/FAA/CT-TN92/48 | p 2673 N93-25210
Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263

FLIGHT SIMULATION
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation
p 2574 N93-24756
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574
Piloted simulation of an air-ground profile negotiation process in a time-based Air Traffic Control environment
| NASA-TM-107748 | p 2585 N93-26087
Effect of image update rate on moving-target identification range
| AD-A261562 | p 2591 N93-26462

FLIGHT SIMULATORS
Autonomic physiological data associated with simulator discomfort
| NASA-CR-177609 | p 2794 N93-24738
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation
p 2574 N93-24756
Evaluation of advanced displays for engine monitoring and control
| NASA-CR-191418 | p 2591 N93-24764
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574

FLIGHT TESTS
Summary and recommendations on nuclear electric propulsion technology for the space exploration initiative
| NASA-TM-105707 | p 2622 N93-24744
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation
p 2574 N93-24756
In-flight evaluation of noise levels and assessment of active noise reduction systems in the Seahawk S-70B-2 helicopter
| AD-A260689 | p 2845 N93-25649
Development of a flight instrument package
| AD-A260830 | p 2591 N93-25783
SRB environment evaluation and analysis. Volume 1: Redesigned SRB flight heating evaluation
| NASA-CR-192517 | p 2631 N93-26053

FLIGHT TIME
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739

FLIGHT TRAINING
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933

FLOODS
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map
p 2743 N93-24807

FLOORS
A modular wideband sound absorber
| BBC-RD-1992/11 | p 2673 N93-25171

FLORIDA
Comparative performance of lightning air terminals under natural storm conditions p 2781 N93-24902

FLOW CHARACTERISTICS
A numerical and experimental studies of flow characteristics in centrifugal fans p 2577 N93-25339

FLOW CHARTS
A systematic satellite approach for estimating central pressures of mid-lattitude oceanic storms
| NOAA-TR-NESDIS-63 | p 2781 N93-25220

FLOW COEFFICIENTS
Experimental effects of wing location on wing-body pressures at supersonic speeds
| NASA-TM-4434 | p 2581 N93-26085
Another look at the driven cavity problem
| AD-A261903 | p 2708 N93-26543

FLOW DISTORTION
Flow conditioner location effects in orifice flowmeters
| PB93-159457 | p 2708 N93-26535

FLOW DISTRIBUTION
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
| NASA-CR-191095 | p 2694 N93-24759
Computation of hypersonic viscous flowfields using the parabolized Navier-Stokes equations
p 2694 N93-24766
Computational study of the aerodynamics and control by blowing of asymmetric vortical flows over delta wings
p 2574 N93-24772
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176
An experimental study of the sources of fluctuating pressure loads beneath swept shock/boundary-layer interactions
| NASA-CR-192918 | p 2698 N93-25266
A numerical and experimental studies of flow characteristics in centrifugal fans p 2577 N93-25339
Optimized scramjet engine integration on a waverider airframe p 2593 N93-25480
The interaction of modulated vortex pairs with a free surface p 2701 N93-25485
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds
p 2577 N93-25487
A computational method for the analysis of acoustic radiation from turbofan inlets p 2845 N93-25717
An experimental study of passive drag reduction in a turbulent boundary layer by a riblet surface
p 2705 N93-25746
A new LU-SGS flow solver for calculating reentry flows p 2579 N93-25759
Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF)
p 2598 N93-26006
External tank aerothermal design criteria verification
| NASA-CR-192514 | p 2618 N93-26055
The blade curving effects in a turbine stator cascade with low aspect ratio
| AD-A261063 | p 2595 N93-26239
Another look at the driven cavity problem
| AD-A261903 | p 2708 N93-26543
Measurement and analysis of a small nozzle plume in vacuum
| NASA-TM-106066 | p 2633 N93-26561

FLOW EQUATIONS
Parallelizing the spectral transform method: A comparison of alternative parallel algorithms
| DE93-008664 | p 2816 N93-25521
A computational method for the analysis of acoustic radiation from turbofan inlets p 2845 N93-25717

FLOW MEASUREMENT
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954
An investigation of laser velocimetry measurements within high speed, complex flows p 2697 N93-25237
An investigation on planar velocimetry by spatial cross-correlation p 2578 N93-25664
Method of measuring cross-flow vortices by use of an array of hot-film sensors
| NASA-CASE-LAR-14824-1-SB | p 2706 N93-26000
Pulsed laser Rayleigh scattering diagnostic for hydrogen/oxygen rocket exit plane flowfield velocimetry
| NASA-TM-106098 | p 2631 N93-26149
Trailing vortex/free-surface interaction
| AD-A261654 | p 2581 N93-26195
Flow conditioner location effects in orifice flowmeters
| PB93-159457 | p 2708 N93-26535
Optically smart surfaces survivability testing at Mach 3
| AD-A261785 | p 2857 N93-26566

FLOW STABILITY
Instability of flow in a streamwise corner
| NASA-CR-191410 | p 2576 N93-25153
Vortex shedding in oscillatory flow
p 2700 N93-25438
Spatial simulation of transition in wall-bounded shear flows: Active control and effects of surface roughness
p 2701 N93-25483
The instability of a liquid jet in a compressible airstream p 2703 N93-25560
Flow between finite rotating disks and its linear stability p 2705 N93-25747
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865
Development of an expendable particle sensor
| AD-A261127 | p 2710 N93-26044
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164
Active stabilization of aeromechanical systems
| AD-A261366 | p 2595 N93-26335

FLOW VELOCITY
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954
The interaction of modulated vortex pairs with a free surface p 2701 N93-25485

Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641
Experiments on the physics of turbulent mixing in stably stratified ocean layers
| AD-A261312 | p 2790 N93-26298

FLOW VISUALIZATION
Flow visualizations of perpendicular blade vortex interactions
| NASA-CR-192725 | p 2696 N93-25208
Scientific visualization using the Flow Analysis Software Toolkit (FAST) p 2814 N93-25600
An investigation of photothermal velocimetry for application to transient, high-speed gas flows p 2579 N93-25720
Image correlation velocimetry
| AD-A261599 | p 2707 N93-26163

FLOWMETERS
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954
Flow conditioner location effects in orifice flowmeters
| PB93-159457 | p 2708 N93-26535

FLUE GASES
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534
Treatment of hazardous organic wastes using silent discharge plasmas
| DE93-003789 | p 2768 N93-26592

FLUID DYNAMICS
Combining particles and waves for fluid animation p 2699 N93-25348
Scientific visualization using the Flow Analysis Software Toolkit (FAST) p 2814 N93-25600
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209

FLUID FLOW
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
Studies of the analyte-carrier interface in flow injection analysis
| DE93-008374 | p 2644 N93-25311
Combining particles and waves for fluid animation p 2699 N93-25348
Advanced engineering analysis
| KCP-613-4967 | p 2669 N93-26212

FLUID INJECTION
Shock tube application to the study of compressible turbulent boundary layer with mass injection p 2697 N93-25252
Studies of the analyte-carrier interface in flow injection analysis
| DE93-008374 | p 2644 N93-25311

FLUID JETS
The steady Navier-Stokes problem for low Reynolds number viscous jets p 2698 N93-25264
Liquid surface breakup of nonturbulent and turbulent liquids p 2700 N93-25473
The instability of a liquid jet in a compressible airstream p 2703 N93-25560

FLUID MECHANICS
Development and application of computational aerothermodynamics flowfield computer codes
| NASA-CR-192940 | p 2574 N93-24736
Current research activities: Applied and numerical mathematics, fluid mechanics, experiments in transition and turbulence and aerodynamics, and computer science
| NASA-CR-191408 | p 2803 N93-25084

FLUID TRANSMISSION LINES
Dynamic modeling of fluid transmission lines of the DSN 70-meter antennas by using a lumped parameter model p 2678 N93-26119

FLUORESCENCE
Actual limits of fluorescence S/N ratio in an optically-pumped cesium beam resonator p 2833 N93-24991
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570
Experimental studies of stress management by optical fluorescence
| AD-A261539 | p 2730 N93-26362
In-process cure monitoring of composites via fiber-optic fluorescence
| AD-A261712 | p 2641 N93-26580

FLUOROHYDROCARBONS
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629

FLUOROPOLYMERS
Determination of the thermal stability of perfluoropolyalkyl ethers by tensimetry
| NASA-TM-106081 | p 2654 N93-25093

FLUTTER
ASTROS-ID: Software for system identification using mathematical programming
| AD-A260867 | p 2810 N93-25627

FLUX DENSITY
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967
An outgoing energy flux boundary condition for finite difference ICRP antenna models
| DE93-007788 | p 2674 N93-25300
Local and regional estimates of sensible and latent heat flux densities from a patch-work surface
| ISBN-0-315-70882-4 | p 2772 N93-25556
Variable-speed generators with flux weakening p 2694 N93-25599

FLUX PINNING
Studying the kinetics of magnetization in high Tc superconductors
| NASA-CR-192916 | p 2862 N93-25108

FLUX VECTOR SPLITTING
An extended Lagrangian method
| NASA-TM-106129 | p 2707 N93-26203

FOCUSING
Feasibility experiment for sodium-layer laser guide stars at the Lawrence Livermore National Laboratory
| DE93-007115 | p 2715 N93-26503

FORBIDDEN TRANSITIONS
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525

FORCED VIBRATION
Helicopter forced response vibration analysis method RTVIB20
| AD-A261809 | p 2597 N93-26260

FORECASTING
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
Nonlinear techniques for forecasting solar activity directly from its time series p 2603 N93-24716
Supporting the Portuguese fisheries with satellites p 2745 N93-24821
Assessment and forecasting of crop yield in Niger through NOAA NDVI data p 2750 N93-24851
Anomalous bioelectric potentials of silk trees in Naples zoo (Italy) prior to an earthquake in May, 1991 p 2753 N93-24873

FOREST FIRES
A prototype system for forest fire prevention and control p 2749 N93-24844

FOREST MANAGEMENT
Potential operational use of remote sensing from space in forestry p 2745 N93-24817
The national parks of Bavarian Forest and Sumava: A Landsat TM perspective on the structure and dynamics of the largest woodland of Central Europe p 2748 N93-24837
Application of photographic remote sensing data from space for information about forests p 2748 N93-24838
The ESA ISY initiatives for forest inventory in Europe p 2748 N93-24840
Assessment of storm damage in forests using SPOT imagery p 2748 N93-24842
The use of polarimetric radar remote sensing data for application in forestry p 2749 N93-24845
Forest decline monitoring using Landsat TM, digital stand data and DEMs p 2749 N93-24846
Swedish forest information atlas p 2749 N93-24847
Observation of forest damages in the Harz mountains by means of satellite remote sensing p 2749 N93-24848
Appliction of remote sensing to forestry mapping: Experience from the European collaborative programme for the less favoured areas p 2751 N93-24857
Atmospheric correction of Landsat/TM data over mountainous terrain for forestry applications p 2752 N93-24862
Standwise forest inventory and mapping for operational management planning p 2752 N93-24863

FORESTS
The extent and status of mangroves in Mombasa district, Kenya: A case study based on remote sensing p 2746 N93-24826
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864
Scale dependence in the reflectance of deciduous woodland: Evidence from a helicopter-mounted spectroradiometer p 2752 N93-24865
Response and feedbacks of forest ecosystems to global climate change
| PB93-167252 | p 2767 N93-26510

FORMALISM
How far we are from the complete knowledge: Complexity of knowledge acquisition in Dempster-Shafer approach
| NASA-CR-192944 | p 2874 N93-25139
Monte-Carlo methods make Dempster-Shafer formalism feasible
| NASA-CR-192945 | p 2828 N93-25140
Neural networks: What non-linearity to choose
| NASA-CR-192948 | p 2819 N93-25197

FORMING TECHNIQUES
INEL spray-forming research p 2658 N93-25562
Advanced engineering analysis
| KCP-613-4967 | p 2669 N93-26212

FORTRAN
FORTRAN M as a language for building earth system models
| DE93-007897 | p 2763 N93-25370
Deterministic parallel FORTRAN
| DE93-008665 | p 2816 N93-25522
EnviroNET p 2886 N93-26398
NSWC library of mathematics subroutines
| AD-A261511 | p 2884 N93-26575

FOURIER ANALYSIS
A frequency generating source: Frequency synthesizers p 2693 N93-25041

FOURIER TRANSFORMATION
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533
Implementation of cyclic spectral analysis methods
| AD-A261715 | p 2681 N93-26372

FRACTALS
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Detecting the scale and resolution effects in remote sensing and GIS p 2756 N93-25707
From fractals to wormholes via string theory p 2871 N93-25742
The rapid solution of the Laplace equation on regions with fractal boundaries
| AD-A260585 | p 2828 N93-25905
Fractal image compression: A resolution independent representation for imagery p 2804 N93-25927

FRACTOGRAPHY
Defect initiation/growth and energy dissipation induced by deformation and fracture
| AD-A261703 | p 2869 N93-26385

FRACTURE MECHANICS
Analysis of matrix damage in unidirectional composites p 2634 N93-25338
Numerical investigations on fracture behavior of ductile materials p 2725 N93-25411
Internal strain analysis of ceramics using scanning laser acoustic microscopy
| NASA-CR-191118 | p 2721 N93-25451
Reliable stress and fracture mechanics analysis of complex aircraft components using a h-p version of FEM
| AD-A260628 | p 2726 N93-25638
Low-velocity impact of composite sandwich plate p 2637 N93-25695
Development and application of an advanced ductile fracture mechanics methodology p 2727 N93-25718
Approximate analysis on strain rate effects and behavior of stress and strain fields at the crack tip in Mode 2 in metallic materials, appendix no. 1
| AD-A260836 | p 2728 N93-25785
Micromechanics of fatigue
| AD-A260577 | p 2729 N93-25901
Fatigue in single crystal nickel superalloys
| AD-A261742 | p 2652 N93-26282
Failure considerations in composite systems based on 3D micromechanical stress fields, part A
| AD-A261698 | p 2641 N93-26382
Defect initiation/growth and energy dissipation induced by deformation and fracture
| AD-A261703 | p 2869 N93-26385
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522

FRACTURE STRENGTH
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
| DE93-007504 | p 2635 N93-25383
High temperature fracture toughness of Ni3Al alloy IC-396M
| DE93-008564 | p 2650 N93-25492
Continuum and micromechanics treatment of constraint in fracture
| AD-A260927 | p 2727 N93-25647
Development and application of an advanced ductile fracture mechanics methodology p 2727 N93-25718
Models of crack growth along polymer interfaces p 2728 N93-25750
Approximate analysis on strain rate effects and behavior of stress and strain fields at the crack tip in Mode 2 in metallic materials, appendix no. 1
| AD-A260836 | p 2728 N93-25785
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
Effects of moisture and other contaminants in friction composites
| AD-A261226 | p 2640 N93-26301
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
Approximate techniques for predicting size effects on cleavage fracture toughness (J(sub c))
| AD-A261591 | p 2731 N93-26516
FRACTURES (MATERIALS)
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355
FRACTURING
Fracture of an elliptical inclusion and its implications for the properties of short fiber composites p 2634 N93-25333
Three-dimensional boundary element analysis of contact and fracture problems p 2725 N93-25335
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519
Continuum and micromechanics treatment of constraint in fracture
| AD-A260927 | p 2727 N93-25647
Development and application of an advanced ductile fracture mechanics methodology p 2727 N93-25718
Crack tip fields in ductile crystals and bicrystals p 2866 N93-25749
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355
Defect initiation/growth and energy dissipation induced by deformation and fracture
| AD-A261703 | p 2869 N93-26385
FRAGMENTATION
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions
| DE93-007725 | p 2848 N93-25366
Photoexcitation of carbon fullerenes
| AD-A260739 | p 2849 N93-25644
FRAGMENTS
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions
| DE93-007725 | p 2848 N93-25366
FREE ELECTRON LASERS
Particle simulation for 10.6 micron picosecond laser-induced breakdown in gases p 2712 N93-25280
Electron-beam-pumped recombination lasers p 2712 N93-25344
Laser field assisted photoemission using femtosecond laser pulses
| DE93-007277 | p 2712 N93-25378
FREE ENERGY
Phase-field models for anisotropic interfaces
| PB93-164564 | p 2646 N93-26323
FREE JETS
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
FREE VIBRATION
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
FREQUENCIES
Occultation of a compact radio source by Venus p 2676 N93-26107
Pseudo Wigner-Ville distribution, computer program, and its applications to time-frequency domain problems
| AD-A261839 | p 2813 N93-26431
FREQUENCY CONTROL
Experimental results of the performance of the new phase and frequency controller p 2839 N93-25035
Controlling an optical frequency by a single ion p 2841 N93-25051
FREQUENCY CONVERTERS
Frequency generation and synthesis in the DRSS p 2693 N93-25054
FREQUENCY DISCRIMINATORS
Microwave frequency discriminator with a cryogenic sapphire resonator for ultra-low phase noise p 2693 N93-24982
A compact and high-performance reference cell for laser frequency stabilization p 2716 N93-25065
FREQUENCY DISTRIBUTION
Time and frequency reference for a trajectory measurement system p 2837 N93-25023
Inverse sequential procedures for the monitoring of time series
| NASA-CR-192959 | p 2765 N93-25666
Rainfall frequency atlas of the Midwest
| PB93-164606 | p 2785 N93-25872
FREQUENCY MEASUREMENT
Hydrogen masers for space p 2716 N93-24980
The measurement of the resonant frequency of quartz crystal units: An ongoing saga p 2833 N93-24996
The accuracy of SYLT- and RNS-based time scales at MTI and SNT during 1990-1991 p 2835 N93-25006
Dedicated oscillator for immersed crystal sensor p 2837 N93-25020
Time stability: An improvement of the multi-variance method for the oscillator noise analysis p 2839 N93-25036
Very wide bandwidth HF crystal filters p 2693 N93-25039
Investigations of the frequency instability of CH1-75 hydrogen masers p 2716 N93-25049
Designing for frequency and time metrology at the 10 to the minus 18 power level p 2842 N93-25059
Time generation and distribution system for a military national synchronization p 2842 N93-25060
Progress towards laboratory frequency standards for the optical communication bands p 2687 N93-25069
FREQUENCY MODULATION
High resolution digital synthesizer for a Rb frequency standard p 2694 N93-25057
FREQUENCY MULTIPLIERS
Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation
| AD-A261117 | p 2609 N93-25770
FREQUENCY RANGES
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation p 2574 N93-24756
The design of a modular sound absorber for very low frequencies
| BBC-RD-1992/10 | p 2673 N93-25170
Pyroshock: Bibliography
| DE93-007605 | p 2726 N93-25489
Microwave absorption measurements and interference: Effects for a liquid fuel between 2.5 and 18 GHz
| AD-A260607 | p 2675 N93-25635
FREQUENCY RESPONSE
Stability of nonlinear phase motion from the study of oscillator mappings p 2693 N93-25034
Low-frequency room responses. Part 1: Background and qualitative considerations
| BBC-RD-1992/8-PT-1 | p 2673 N93-25168
Low-frequency room responses. Part 2: Calculation methods and experimental results
| BBC-RD-1992/9-PT-2 | p 2673 N93-25169
Flame response in oscillatory solid propellant combustion p 2630 N93-26041
FREQUENCY SHIFT
Preliminary results on an optically-pumped Cs beam frequency standard p 2832 N93-24989
Space radiation susceptibility of ultra stable crystal oscillators p 2693 N93-25053
Line inhomogeneity effects and power shift in miniaturized rubidium frequency standards p 2694 N93-25066
Frequency diversity sidelobe canceller
| AD-D015647 | p 2674 N93-25332
Trellis coded CPFSK
| AD-A261788 | p 2682 N93-26441
FREQUENCY SHIFT KEYING
An introduction to Doppler effect and fading in mobile communications
| AD-A260976 | p 2676 N93-25866
Trellis coded CPFSK
| AD-A261788 | p 2682 N93-26441
FREQUENCY STABILITY
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
Hydrogen masers for space p 2716 N93-24980
Preliminary results on an optically-pumped Cs beam frequency standard p 2832 N93-24989
Miniature optically-pumped cesium beam resonator p 2833 N93-24990
DORIS precise orbit determination and location system performances of ultra stable oscillators p 2608 N93-24997
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
OSCCAR: Oscillator-compensated with a capacitance array p 2693 N93-25002
Design of a low phase noise UHF oscillator using a partly metallized dielectric resonator p 2693 N93-25003
Miniaturization and stability: A new generation of ovenised oscillators p 2693 N93-25004
Collaboration in the UK on time transfer using the GLONASS system p 2837 N93-25019
Dedicated oscillator for immersed crystal sensor p 2837 N93-25020
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026
Ultra stable oscillators for satellite applications p 2621 N93-25027
Preliminary results of a newly designed mini-OCXO oscillator especially dedicated to space applications p 2621 N93-25028
Experiments on a diode-laser-pumped Rb-87 maser p 2716 N93-25030
Stability of nonlinear phase motion from the study of oscillator mappings p 2693 N93-25034
Time stability: An improvement of the multi-variance method for the oscillator noise analysis p 2839 N93-25036
Microwave synthesizers in space p 2693 N93-25038
Investigations of the frequency instability of CH1-75 hydrogen masers p 2716 N93-25049
Space radiation susceptibility of ultra stable crystal oscillators p 2693 N93-25053
Oscillators for mobile GPS receivers p 2694 N93-25055
Microwave interrogation frequency noise and clock frequency stability: Experimental results p 2842 N93-25056
High resolution digital synthesizer for a Rb frequency standard p 2694 N93-25057
Designing for frequency and time metrology at the 10 to the minus 18 power level p 2842 N93-25059
A compact and high-performance reference cell for laser frequency stabilization p 2716 N93-25065
Performance of a 12-GHz fiber-optic system for beam-waveguide antenna stability testing p 2677 N93-26113
Improvements in X-band transmitter phase stability through Klystron body temperature regulation p 2678 N93-26114
FREQUENCY STANDARDS
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
The advances in F and T technology: Their benefits of and for space science and technology p 2831 N93-24979
Hydrogen masers for space p 2716 N93-24980
A simple and compact source of cold atoms for cesium fountains and microgravity clocks p 2831 N93-24981
Preliminary results on an optically-pumped Cs beam frequency standard p 2832 N93-24989
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007
Rubidium atomic frequency standards for GPS block 2R p 2836 N93-25014
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026
Ultra stable oscillators for satellite applications p 2621 N93-25027
Preliminary results of a newly designed mini-OCXO oscillator especially dedicated to space applications p 2621 N93-25028
Use of the TV-signal in stabilizing a local rubidium oscillator p 2693 N93-25029
Microwave synthesizers in space p 2693 N93-25038
Phase differences of the fields in a Ramsey resonator for submillimetric frequency standards p 2840 N93-25042
Ion trap frequency standard research at PTB p 2841 N93-25050
Quartz oscillators, frequency synthesizers, and timing systems for geodesy and radio science applications p 2693 N93-25052
Microwave interrogation frequency noise and clock frequency stability: Experimental results p 2842 N93-25056
High resolution digital synthesizer for a Rb frequency standard p 2694 N93-25057

Solid state frequency synthesis up to 600 GHz: An application to the Mg frequency standard
p 2842 N93-25058
Designing for frequency and time metrology at the 10 to the minus 18 power level p 2842 N93-25059
Time generation and distribution system for a military national synchronization p 2842 N93-25060
Line inhomogeneity effects and power shift in miniaturized rubidium frequency standards
p 2694 N93-25066
Progress towards laboratory frequency standards for the optical communication bands p 2687 N93-25069

FREQUENCY SYNCHRONIZATION
Hydrogen masers for space p 2716 N93-24980

FREQUENCY SYNTHESIZERS
Selected results from LLNL-Hughes RAR for West Coast Scotland Experiment 1991
| DE93-006972 | p 2788 N93-24960
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
Microwave synthesizers in space
p 2693 N93-25038
A frequency generating source: Frequency synthesizers p 2693 N93-25041
Quartz oscillators, frequency synthesizers, and timing systems for geodesy and radio science applications
p 2693 N93-25052
Frequency generation and synthesis in the DRSS
p 2693 N93-25054
High resolution digital synthesizer for a Rb frequency standard p 2694 N93-25057
Solid state frequency synthesis up to 600 GHz: An application to the Mg frequency standard
p 2842 N93-25058

FRICTION
Effects of moisture and other contaminants in friction composites
| AD-A261226 | p 2640 N93-26301

FRICTION FACTOR
Formulation and treatment of frictional contact problems using finite elements p 2717 N93-25412
Modeling of the WSTF frictional heating apparatus in high pressure systems p 2648 N93-26079
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355

FRONTS (METEOROLOGY)
Boundary layer coupling between an explosive cyclone and the Gulf Stream during ERICA
| AD-A261577 | p 2787 N93-26513

FROSTBITE
Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900

FUEL CELLS
DC-DC power converter research for Orbiter/Station power exchange
| NASA-CR-192939 | p 2633 N93-26425

FUEL COMBUSTION
A procedure for defining lightning risk to air vehicles
p 2583 N93-24885
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
Emissions from ethanol and LPG fueled vehicles
| DE93-006410 | p 2660 N93-25192
The structure of particle cloud premixed flames
| NASA-CR-192827 | p 2643 N93-25229
Solid fuel supersonic combustion
p 2625 N93-26010
Hybrid rocket fuel combustion study
p 2626 N93-26019
Military standardization handbook: Aircraft refueling handbook
| AD-A261755 | p 2662 N93-26600
Atomization and combustion of a gelled, metallized slurry fuel
| AD-A261778 | p 2647 N93-26602

FUEL CONTAMINATION
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
| AD-A260915 | p 2661 N93-25914

FUEL CONTROL
A neural network-based estimator for the mixture ratio of the Space Shuttle Main Engine
| NASA-TM-106070 | p 2622 N93-25089

FUEL INJECTION
Fuel injector: Air swirl characterization aerothermal modeling, phase 2, volume 1
| NASA-CR-189193 | p 2592 N93-24754
A summary of the JANNAF workshop on liquid rocket atomization p 2625 N93-26014
Space transportation booster engine thrust chamber technology, large scale injector
| NASA-CR-192531 | p 2633 N93-26557

FUEL PRODUCTION
Near Earth object fuels (neo-fuels): Discovery, prospecting and use
| DE93-005185 | p 2892 N93-25164

FUEL SPRAYS
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
The structure of particle cloud premixed flames
| NASA-CR-192827 | p 2643 N93-25229
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948

FUEL SYSTEMS
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534

FUELS
Development of a method to determine the autoxidation of turbine fuels
| AD-A260578 | p 2661 N93-25902
Particle size as a factor in agglomeration in slurry fuels p 2625 N93-26013

FULL SCALE TESTS
Narrow-body aircraft water spray optimization study
| DOT/FAA/CT-TN93/3 | p 2582 N93-25224

FULLERENES
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524
Photoexcitation of carbon fullerenes
| AD-A260739 | p 2849 N93-25644
Transition metal chelate-fulleride compounds: Electrocrystallization of semiconducting (Ru(bpy)s)(C60)2
| AD-A261549 | p 2869 N93-26577

FUMES
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956

FUNCTION GENERATORS
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618

FUNCTIONAL ANALYSIS
Functional Economic Analysis Guidebook, version 1.1
| AD-A261390 | p 2886 N93-26305

FUNCTIONAL DESIGN SPECIFICATIONS
Gas-Grain Simulation Facility (GGSF). Volume 1: Stage 1 facility definition studies
| NASA-CR-177606 | p 2887 N93-25442
Determination of burn rate requirements from ASRM performance specifications p 2627 N93-26023
Human computer interface style guide, version 2.0
| AD-A261280 | p 2807 N93-26291

FUNCTIONS (MATHEMATICS)
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
NSWC library of mathematics subroutines
| AD-A261511 | p 2884 N93-26575

FUSELAGES
Alternative equipment test procedures for simultaneous current injection on multiple cable bundles
p 2693 N93-24903
Tangential fuselage blowing on an ogive cylinder
p 2578 N93-25545
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701

FUZZY SETS
How to control if even experts are not sure: Robust fuzzy control
| NASA-TM-108745 | p 2818 N93-25142

FUZZY SYSTEMS
Probabilistic analysis of manipulation tasks: A research agenda
| DE93-000713 | p 2827 N93-25103
Using fuzzy behaviors for the outdoor navigation of a car with low-resolution sensors
| DE93-002428 | p 2584 N93-25120
How to combine probabilistic and fuzzy uncertainties in fuzzy control
| NASA-TM-108746 | p 2818 N93-25138
Maximum entropy approach to fuzzy control
| NASA-CR-192949 | p 2818 N93-25141
Fast parallel algorithms that compute transitive closure of a fuzzy relation
| NASA-CR-192950 | p 2818 N93-25190
Use of fuzzy relational information retrieval technique for generating control strategies in resolution-based automated reasoning p 2874 N93-25258
Strongly transitive fuzzy relations: A more adequate way to describe similarity
| NASA-CR-192951 | p 2820 N93-25425
What procedure to choose while designing a fuzzy control? Towards mathematical foundations of fuzzy control
| NASA-TM-108719 | p 2820 N93-25459
Adaptive process control with fuzzy logic and genetic algorithms p 2827 N93-25612

G

GALACTIC COSMIC RAYS
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717

GALACTIC EVOLUTION
Optical and infrared studies of distant galaxies
p 2890 N93-25712
The physical properties of low surface brightness galaxies p 2895 N93-25832

GALACTIC ROTATION
Prograde anomalous orbits in triaxial gravitational potentials that rotate about the long axis: VLA neutral hydrogen observations and modeling of the inclined rings around the galaxies NGC 2685 and NGC 660
p 2607 N93-25396

GALACTIC STRUCTURE
Prograde anomalous orbits in triaxial gravitational potentials that rotate about the long axis: VLA neutral hydrogen observations and modeling of the inclined rings around the galaxies NGC 2685 and NGC 660
p 2607 N93-25396
Numerical modeling of barred spiral galaxies
p 2893 N93-25537
The physical properties of low surface brightness galaxies p 2895 N93-25832

GALAXIES
The structure of the nearby universe traced by theIRAS galaxies
| NASA-CR-192809 | p 2889 N93-25331
Tully-Fisher distances and motions in the northern sky
p 2889 N93-25621
Optical and infrared studies of distant galaxies
p 2890 N93-25712
The physical properties of low surface brightness galaxies p 2895 N93-25832

GALERKIN METHOD
Stabilized finite element methods for incompressible flows with emphasis on moving boundaries and interfaces p 2703 N93-25663

GALILEO SPACECRAFT
Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125

GALLIUM ARSENIDES
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634
Transmission electron microscopy investigation of ion implantation damage in GaAs and other semiconductors
p 2865 N93-25715
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
Short-period superlattice materials for heterojunction bipolar transistors
| AD-A260701 | p 2866 N93-25897
Fundamental and applied aspects of defect engineering in GaAs
| AD-A260573 | p 2867 N93-25899
Analysis of transient photoluminescence measurements on GaAs and AlGaAs double heterostructures
| AD-A261154 | p 2867 N93-25947

GALLIUM COMPOUNDS
Comparison of energy trapping resonators and filters using the AT cut of quartz, berlinite and gallium phosphate p 2836 N93-25013

GALLIUM PHOSPHIDES
Transmission electron microscopy investigation of ion implantation damage in GaAs and other semiconductors
p 2865 N93-25715

GAMMA RAY ASTRONOMY
Interferometric fiber-optic radiation sensor
| DE93-003841 | p 2852 N93-25127
Correlative studies of astrophysical sources of very high and ultra high energy gamma-rays
| NASA-CR-192781 | p 2888 N93-25172

GAMMA RAY BURSTS
Gravitational lensing and gamma ray bursts
p 2900 N93-25828

GAMMA RAY OBSERVATORY
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory p 2600 N93-24697
Real-time attitude determination and gyro calibration p 2602 N93-24708
STS-37 Space Shuttle mission report
|NASA-CR-193062| p 2612 N93-25956
GAMMA RAY SPECTROMETERS
Feasibility study of a long duration balloon flight with NASA/GSFC and Soviet Space Agency Gamma Ray Spectrometers
|NASA-CR-192934| p 2573 N93-25077
Neutron energy determination with a high-purity germanium detector
|NASA-CR-192773| p 2900 N93-25890
GAMMA RAYS
Long term drift and gamma-irradiation effect p 2833 N93-24992
Correlative studies of astrophysical sources of very high and ultra high energy gamma-rays
|NASA-CR-192781| p 2888 N93-25172
Radiation-hardened control system
|DE93-007248| p 2688 N93-25377
Inelastic scattering in condensed matter with high intensity Moessbauer radiation
|DE93-008763| p 2864 N93-25503
Environmental test program for superconducting materials and devices
|DE93-003646| p 2864 N93-25506
GANTRY CRANES
Digital filter control of remotely operated flexible robotic structures
|DE93-007587| p 2827 N93-26596
GAS ANALYSIS
Redistribution of trace chemical species by a small convective cloud
|PB93-156164| p 2765 N93-25873
GAS ATOMIZATION
Atomizing-gas temperature effect on cryogenic spray dropsize
|NASA-TM-106106| p 2709 N93-25191
GAS DETECTORS
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009
Tank issues: Design and placement of vapor monitoring wells
|PB93-161131| p 2768 N93-26536
GAS DYNAMICS
Generic hypersonic vehicle performance model
|NASA-CR-192953| p 2587 N93-25162
Supersonic shock wave/vortex interaction
|NASA-CR-192917| p 2576 N93-25249
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
|JPRS-UPM-92-004| p 2844 N93-25402
GAS FLOW
A new method for infrared imaging of air currents in and around critical hazard fume hoods
|DE93-003009| p 2761 N93-24956
Predictive modeling of particle-laden, turbulent flows
|DE93-008208| p 2698 N93-25309
Mechanistic studies of the CVD of silicon nitride from SiF4 and NH3
|DE93-004500| p 2644 N93-25312
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534
The instability of a liquid jet in a compressible airstream p 2703 N93-25560
Instrumentation for measurement of gas permeability of polymeric membranes p 2720 N93-25609
An investigation of photothermal velocimetry for application to transient, high-speed gas flows p 2579 N93-25720
A basic research model of natural gas combustion in turbulent flow, phase 2
|PB93-158509| p 2644 N93-25819
SRB environment evaluation and analysis. Volume 2: RSRB joint filling test/analysis improvements
|NASA-CR-192518| p 2631 N93-26057
Flow conditioner location effects in orifice flowmeters
|PB93-159457| p 2708 N93-26535
GAS INJECTION
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds p 2577 N93-25487
Workshop Report: A validation study of Navier-Stokes codes for transverse injection into a Mach 2 flow p 2624 N93-26008
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
|PB93-152478| p 2768 N93-26533
GAS IONIZATION
Optical detection of laser-cooled ions in a Penning trap p 2838 N93-25031
GAS JETS
Atomizing-gas temperature effect on cryogenic spray dropsize
|NASA-TM-106106| p 2709 N93-25191
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds p 2577 N93-25487
Gasp 1.3 results for the transverse hydrogen reacting jet p 2625 N93-26011
GAS LASERS
FALCON nuclear-reactor-pumped laser program and wireless power transmission
|DE93-007607| p 2715 N93-26597
GAS MIXTURES
The structure of particle cloud premixed flames
|NASA-CR-192827| p 2643 N93-25229
Development and use of hydrogen-air torches in an altitude facility
|NASA-TM-106047| p 2598 N93-26214
Thermodynamic properties of natural gas mixtures
|PB93-167112| p 2872 N93-26509
Thermodynamic properties of natural gas mixtures
|PB93-156818| p 2872 N93-26558
GAS PRESSURE
Modified point mass trajectory simulation for base-burn projectiles
|BRL-TR-3321| p 2609 N93-25985
Densification of ceramics by gas overpressure sintering
|MTL-TR-92-45| p 2657 N93-26432
GAS TEMPERATURE
A premixed laminar flame interacting with a vortex resulting in flame stretch and quenching p 2642 N93-24771
An evaluation of thermal energy storage options for precooling gas turbine inlet air
|DE93-005980| p 2758 N93-24975
GAS TURBINE ENGINES
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
|NASA-CR-191095| p 2694 N93-24759
Screening studies of advanced control concepts for airbreathing engines
|NASA-TM-106042| p 2592 N93-25079
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
|JPRS-UEQ-92-003| p 2668 N93-25427
Gas turbine system simulation: An object-oriented approach
|NASA-TM-106044| p 2593 N93-25673
Simulation of aircraft gas turbine engine p 2594 N93-25751
Active stabilization of aeromechanical systems
|AD-A261366| p 2595 N93-26335
Particulate emissions from gas turbine engines
|AD-A261374| p 2595 N93-26339
Advanced bristle seals for gas turbine engines
|AD-A261296| p 2720 N93-26564
GAS TURBINES
An evaluation of thermal energy storage options for precooling gas turbine inlet air
|DE93-005980| p 2758 N93-24975
Flow and heat transfer experiments in the turbine airfoil/endwall region p 2704 N93-25725
Radial inflow turbine study
|AD-A260767| p 2594 N93-25917
Fatigue in single crystal nickel superalloys
|AD-A261742| p 2652 N93-26282
GAS-SOLID INTERACTIONS
Condensation on cooled surfaces of optical devices at the cosmic conditions p 2753 N93-24869
Gas-Grain Simulation Facility (GGSF). Volume 1: Stage 1 facility definition studies
|NASA-CR-177606| p 2887 N93-25442
Dynamics of gas-surface interactions
|AD-A261402| p 2646 N93-26402
GASEOUS DIFFUSION
Recommendations for a Kalman filter to estimate and control freeze and sublime rates of gaseous diffusion plant freezer/sublimer systems
|ORNL/TM-12183| p 2668 N93-25937
GASEOUS FUELS
The structure of particle cloud premixed flames
|NASA-CR-192827| p 2643 N93-25229
GASES
Instrumentation for measurement of gas permeability of polymeric membranes p 2720 N93-25609
GASOLINE
Emissions from ethanol and LPG fueled vehicles
|DE93-006410| p 2660 N93-25192
GATES (CIRCUITS)
Splash 2 p 2814 N93-25575
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
|NASA-TM-4449| p 2689 N93-25618
RF vacuum microelectronics
|AD-A261343| p 2691 N93-26311
GEAR TEETH
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
|NASA-TM-106103| p 2718 N93-25672
Computational gearing mechanics
|NASA-CR-191127| p 2719 N93-25884
GEARS
Global dynamic modeling of a transmission system
|NASA-CR-191117| p 2716 N93-24751
Computational gearing mechanics
|NASA-CR-191127| p 2719 N93-25884
GELLED PROPELLANTS
Atomization and combustion of a gelled, metallized slurry fuel
|AD-A261778| p 2647 N93-26602
GELS
Algal blooms and gel production in Adriatic Sea observed by remote sensing techniques p 2747 N93-24831
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
|DE93-007815| p 2793 N93-26587
GENERAL AVIATION AIRCRAFT
General aviation aircraft: Normal acceleration data analysis and collection project
|DOT/FAA/CT-91/20| p 2586 N93-24739
Lightning data acquisition p 2778 N93-24883
GENETIC ALGORITHMS
Algorithms for optimal redundancy allocation
|DE93-005709| p 2827 N93-24973
Adaptive process control with fuzzy logic and genetic algorithms p 2827 N93-25612
A genetic algorithm tool (splicer) for complex scheduling problems and the Space Station Freedom resupply problem p 2814 N93-25613
GENETIC CODE
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
|DE93-007815| p 2793 N93-26587
GENETICS
A genetic algorithm tool (splicer) for complex scheduling problems and the Space Station Freedom resupply problem p 2814 N93-25613
Primary events in olfactory reception
|AD-A260562| p 2795 N93-25944
Planetary Biology and Microbial Ecology: Molecular Ecology and the Global Nitrogen cycle
|NASA-CR-4497| p 2803 N93-26157
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
|DE93-007815| p 2793 N93-26587
GEOBOTANY
Integrating satellite imagery and digital elevation data for geobotanical mapping in Quetico Provincial Park, Ontario, Canada p 2754 N93-25430
GEOCHEMISTRY
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
The JGOFS North Atlantic Bloom Experiment: An overview p 2735 N93-24934
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study p 2736 N93-24938
Aquifer thermal energy (heat and chill) storage
|DE93-006446| p 2759 N93-25183
Geochemistry and petrology of primitive achondrite meteorites LEW 88280, MAC 88177, ALHA 81187, EET 84302, and LEW 88663 p 2896 N93-26067
GEODESY
Repair, evaluation, maintenance, and rehabilitation research program. Continuous Deformation Monitoring System (CDMS)
|AD-A261833| p 2586 N93-26274
GEODETIC SATELLITES
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
GEODETIC SURVEYS
Intraplate deformation, stress in the lithosphere and the driving mechanism for plate motions
|NASA-CR-192782| p 2772 N93-25529
GEOGRAPHIC INFORMATION SYSTEMS
Land cover, an essential component of the CORINE information system on the environment: GIS implications p 2740 N93-24787
Detection of land use/land cover changes using remote sensing and GIS in Vietnam p 2740 N93-24791
A knowledge-based approach to waste disposal sites detection through integration of Landsat-TM imagery and geographical context information p 2741 N93-24796

Use of remote sensing and GIS for the environmental planning proposal of the Sarno River Valley (Campania, southern Italy) p 2741 N93-24797
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
The use of SPOT data in natural disaster prevention and damage assessment p 2743 N93-24811
European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820
Mapping of windfall damage in the Hunsrueck plateau with Landsat TM-data p 2749 N93-24843
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855
Standwise forest inventory and mapping for operational management planning p 2752 N93-24863
EUROSTARS: A system for thematic analysis of remote sensed data p 2753 N93-24871
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
| DE93-002943 | p 2760 N93-24955
Multi-temporal satellite image analysis for crop inventories in the Po River Valley (Italy) p 2755 N93-25434
Commercial applications multispectral sensor system p 2758 N93-25615
Detecting the scale and resolution effects in remote sensing and GIS p 2756 N93-25707
Geographic information system for fusion and analysis of high-resolution remote sensing and ground truth data p 2878 N93-25798
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586

GEOLOGICAL FAULTS
Low-frequency source parameters of twelve large earthquakes
| NASA-CR-192806 | p 2771 N93-25202

GEOLOGICAL SURVEYS
A geological and geophysical information system for Eurasia
| AD-A261789 | p 2883 N93-26442

GEOLOGY
Satellite remote sensing for environmental geology: The Bandung (West Java) experience p 2739 N93-24784
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
Remote sensing of non-renewable resources p 2744 N93-24814
Remote sensing geology p 2744 N93-24815
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-93-001 | p 2599 N93-25400
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-005 | p 2737 N93-25401
Isolation and analysis of key components of seafloor relief
| AD-A261635 | p 2790 N93-26170
A geological and geophysical information system for Eurasia
| AD-A261789 | p 2883 N93-26442
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586

GEOMAGNETIC TAIL
Magnetotail processes associated with auroral surge formation
| ATR-90(7186)-1 | p 2895 N93-26147

GEOMAGNETISM
SCATHA mission termination report p 2605 N93-24725
A statistical study of field-aligned currents in the Earth's inner magnetosphere p 2773 N93-25709
JARE data reports. No. 171 (upper atmosphere physics 9). Data, Syowa and Asuka Stations, 1989 p 2774 N93-25889
A predicted geomagnetic field model for epoch 1990.0
| AD-A260669 | p 2775 N93-25891
Steady induction effects in geomagnetism. Part 1B: Geomagnetic estimation of steady surficial core motions: A non-linear inverse problem
| NASA-TP-3272-PT-1B | p 2776 N93-26421

GEOMORPHOLOGY
A method for sequential image analysis of hazard areas p 2743 N93-24810
Hypervelocity impact study: The effect of impact angle on crater morphology
| NASA-CR-192711 | p 2724 N93-25260

GEOPHYSICS
Archaeological, historical and geoelectrical data as ground truth for Landsat TM imagery application to coastal plain evolution studies p 2742 N93-24799
The role of the World Data Centers in handling ocean climate data p 2732 N93-24919
Satellite altimetry p 2734 N93-24930
Low-frequency source parameters of twelve large earthquakes
| NASA-CR-192806 | p 2771 N93-25202
A geological and geophysical information system for Eurasia
| AD-A261789 | p 2883 N93-26442
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538
Proceedings of the Government Users Workshop on Ground Penetrating Radar Applications and Equipment
| AD-A261873 | p 2686 N93-26541

GEOPOTENTIAL
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706

GEOSAT SATELLITES
Satellite monitoring of the global ocean surface during 1987-1989 p 2734 N93-24926
Satellite altimetry p 2734 N93-24930

GEOSYNCHRONOUS ORBITS
Practical aspects of transfer from GTO to lunar orbit p 2604 N93-24719

GEOTECHNICAL ENGINEERING
Lunar regolith and structure mechanics p 2670 N93-26412

GERMANIUM
Radiation effects in germanium doped quartz p 2837 N93-25021

GERMANIUM ALLOYS
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387

GET AWAY SPECIALS (STS)
STS-45 Space Shuttle mission report
| NASA-CR-193054 | p 2612 N93-25959
STS-47 Space Shuttle mission report
| NASA-CR-193056 | p 2612 N93-25960
STS-42 Space Shuttle mission report
| NASA-CR-193059 | p 2613 N93-25989

GIMBALS
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733

GIRDERS
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414

GLACIOLOGY
Sea level variation p 2734 N93-24929

GLASS
Temperature-dependent electrical conductivity of soda-lime glass
| DE93-007872 | p 2654 N93-25359
The nature of the glass transition and its determination by thermal analysis
| DE93-006746 | p 2654 N93-25374
Second-harmonic generation in optical fibers and glass
| AD-A260592 | p 2853 N93-25839
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355

GLASS FIBER REINFORCED PLASTICS
Damage and failure analysis on continuous fiber-reinforced polymer composites p 2637 N93-25716

GLASS FIBERS
Second-harmonic generation in optical fibers and glass
| AD-A260592 | p 2853 N93-25839
International Workshop on Advances in Inorganic Fibre Technology
| AD-A260719 | p 2639 N93-25908
Ceramic fiber reinforced glass-ceramic matrix composite
| NASA-CASE-LEW-15262-1 | p 2640 N93-26100

GLASS LASERS
High speed x ray gating cameras for ICF imaging applications
| DE93-007500 | p 2709 N93-25515

GLASS TRANSITION TEMPERATURE
Polyimides containing the cyclobutene-3,4-dione moiety
| NASA-CASE-LAR-14753-1 | p 2656 N93-25999

GLIDE PATHS
ILS mathematical modeling study of an ILS glide slope proposed for runway 19L at the Meridian Naval Air Station, Mississippi
| DOT/FAA/CT-TN93/8 | p 2584 N93-24741

GLOBAL AIR SAMPLING PROGRAM
Gasp 1.3 results for the transverse hydrogen reacting jet p 2625 N93-26011

GLOBAL ATMOSPHERIC RESEARCH PROGRAM
Data management for JGOFS: Theory and design p 2735 N93-24935

GLOBAL POSITIONING SYSTEM
Application of GPS tracking techniques to orbit determination for TDRS p 2601 N93-24702
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
Rubidium atomic frequency standards for GPS block 2R p 2836 N93-25014
Mixed constellation synchronization of GPS time p 2836 N93-25015
GPS standardization for the needs of time transfer p 2836 N93-25016
Comparison of GLONASS and GPS time transfers p 2836 N93-25017
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018
Oscillators for mobile GPS receivers p 2694 N93-25055
Timing a national telecommunications network using GPS p 2687 N93-25062
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument p 2711 N93-25614
Knowledge-based control for robot self-localization p 2822 N93-25963
Methodology investigation: Global Positioning System integration (GPS)
| AD-A261054 | p 2586 N93-26237
Repair, evaluation, maintenance, and rehabilitation research program. Continuous Deformation Monitoring System (CDMS)
| AD-A261833 | p 2586 N93-26274
Bit hit/solar activity correlation study
| AD-A261381 | p 2896 N93-26340

GLOBAL WARMING
Sea level variation p 2734 N93-24929
Analysis of LARI sensor system
| DE93-006334 | p 2761 N93-24977
Global warming potential for CF4
| DE93-005740 | p 2762 N93-25146

GLOVES
Investigation of the effects of Extra Vehicular Activity (EVA) and Launch and Entry (LES) gloves on performance p 2803 N93-26061

GLOW DISCHARGES
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171

GLUCOSE
Inorganic and biological electron transfer across an electronically conductive composite polymer membrane
| AD-A261642 | p 2656 N93-26172

GODDARD TRAJECTORY DETERMINATION SYSTEM
TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703

GOGGLES
Interpupillary and vertex distance effects on field-of-view and acuity with ANVIS
| AD-A261259 | p 2802 N93-26265

GOLD
Low cost dewatering of waste slurries p 2769 N93-25573

GONIOMETERS
Measurement results of the crystallographic orientation of the SC cut round plates p 2840 N93-25040

GOVERNMENT/INDUSTRY RELATIONS
Energy and Technology Review, August-September 1992
| DE93-005882 | p 2901 N93-24974
Achieving the promise of the bioscience revolution: The role of the Federal Government
| PB93-139970 | p 2793 N93-25457
Designing and implementing a state quality award
| PB93-154458 | p 2722 N93-26546

GOVERNMENTS
Technology Transfer 92/93
| DE93-003623 | p 2887 N93-24965
Achieving the promise of the bioscience revolution: The role of the Federal Government
| PB93-139970 | p 2793 N93-25457

GRAIN BOUNDARIES
A micromechanical viscoplastic stress-strain model with grain boundary sliding
| DE93-009109 | p 2649 N93-25095
Studying the kinetics of magnetization in high Tc superconductors
| NASA-CR-192916 | p 2862 N93-25108
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519
Ir-Zr alloys as diffusion barriers between Cu and Si(100)
| AD-A261919 | p 2652 N93-26197
GRAIN SIZE
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149
GRANTS
The 1993/1994 NASA Graduate Student Researchers Program
| NASA-EP-283 | p 2872 N93-26051
GRANULAR MATERIALS
Energy dissipation in inelastic flow of cohesionless granular media p 2703 N93-25662
GRAPH THEORY
Design and analysis of algorithms for processing queries in database systems p 2876 N93-25482
GRAPHITE
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287
GRAPHITE-EPOXY COMPOSITES
Stress distribution in composite flatwise tension test specimens
| NASA-TM-106074 | p 2634 N93-25071
Graphite/epoxy composite laminates with co-cured interlaminar damping layers p 2642 N93-25587
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
A three-dimensional model for the residual stresses in a unidirectional composite plate p 2728 N93-25825
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| N/ SA-TM-105270 | p 2730 N93-26202
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371
GRAPHS (CHARTS)
Model-based reasoning for system and software engineering: The Knowledge From Pictures (KFP) environment p 2825 N93-25978
GRASSLANDS
Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing p 2751 N93-24859
GRAUPEL
The initiation of lightning and the growth of electric fields in thunderstorms
| AD-A261455 | p 2787 N93-26352
GRAVITATIONAL EFFECTS
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
Modeling of bubble and drop formation in flowing liquids in terrestrial and microgravity environments p 2664 N93-25390
Numerical study of cavity natural convection flow with augmenting and counteracting effects by projection finite element method p 2701 N93-25540
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740
GRAVITATIONAL FIELDS
Optimal cooperative power-limited rendezvous p 2607 N93-24904
Prograde anomalous orbits in triaxial gravitational potentials that rotate about the long axis: VLA neutral hydrogen observations and modeling of the inclined rings around the galaxies NGC 2685 and NGC 660 p 2607 N93-25396
Mars: The dynamics of orbiting satellites and gravity model development p 2896 N93-25439
GRAVITATIONAL LENSES
Gravitational lensing and gamma ray bursts p 2900 N93-25828
GRAVITATIONAL PHYSIOLOGY
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-022 | p 2795 N93-25407
GRAVITATIONAL WAVES
Cosmic string cosmology p 2891 N93-24907
Gravitational radiation from coalescing binary star systems p 2900 N93-25625
GRAVITY PROBE B
The design of a propulsion system using vent gas from a liquid helium cryogenic system p 2623 N93-25539
GRAVITY WAVES
Rossby-gravity waves in tropical total ozone data
| NASA-CR-192983 | p 2764 N93-25432
Gravity waves from O2 airglow p 2772 N93-25547
GRAZING INCIDENCE
VETA-I x ray test analysis
| NASA-CR-192321 | p 2854 N93-26183
The x ray reflectivity of the AXAF VETA-I optics p 2855 N93-26192
GREASES
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
GREAT PLAINS CORRIDOR (NORTH AMERICA)
The charge and size of precipitation particles inside thunderstorms and mesoscale convective systems on the Great Plains p 2781 N93-25275
GREEN'S FUNCTIONS
Structural acoustics: A general form of reciprocity principles in acoustics
| AD-A261515 | p 2846 N93-26376
GREENHOUSE EFFECT
Sea level variation p 2734 N93-24929
Selected translated abstracts of Russian-language climate-change publications: 1. Surface energy budget
| DE93-003189 | p 2760 N93-24952
Analysis of LARI sensor system
| DE93-006334 | p 2761 N93-24977
Trends '91: A compendium of data on global change. Highlights
| DE93-003112 | p 2761 N93-25144
CHAMMP
| DE93-007290 | p 2762 N93-25184
Climate data bases of the People's Republic of China, 1841-1988
| DE93-007907 | p 2764 N93-25517
Long term modeling of the links between economics, technical progress, and environment: Evolution of approaches and new trends
| DE93-005035 | p 2767 N93-26497
GRID GENERATION (MATHEMATICS)
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
| NASA-CR-191095 | p 2694 N93-24759
Rapid exploration of curvilinear grids using direct volume rendering
| NASA-CR-192765 | p 2808 N93-24944
A comparison using APPL and PVM for a parallel implementation of an unstructured grid generation program
| NASA-CR-191425 | p 2808 N93-25073
A contribution to the great Riemann solver debate
| NASA-CR-191409 | p 2575 N93-25083
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276
Structured adaptive mesh refinement on the connection machine
| DE93-007368 | p 2816 N93-25316
Transformation of two and three-dimensional regions by elliptic systems
| NASA-CR-192955 | p 2810 N93-25669
An extended Lagrangian method
| NASA-TM-106129 | p 2707 N93-26203
GRINDING (COMMINUTION)
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill p 2659 N93-25585
GROOVES
Experimental study of the effect of helical grooves on an infinite cylinder
| AD-A260890 | p 2676 N93-25912
GROUND BASED CONTROL
Piloted simulation of an air-ground profile negotiation process in a time-based Air Traffic Control environment
| NASA-TM-107748 | p 2585 N93-26087
GROUND OPERATIONAL SUPPORT SYSTEM
Weather forecasting expert system study
| NASA-CR-192929 | p 2777 N93-24747
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Develop margin philosophy to attain robustness
| MCR-92-5005 | p 2610 N93-26182
TCMS operations and maintenance philosophy
| NASA-TM-108756 | p 2873 N93-26418
Test, Control and Monitor System (TCMS) operations plan
| NASA-CR-193098 | p 2873 N93-26419
Test, Control and Monitor System maintenance plan
| NASA-CR-193099 | p 2873 N93-26420
GROUND STATE
Theoretical calculations on the electron absorption spectra of selected Polycyclic Aromatic Hydrocarbons (PAH) and derivatives
| NASA-CR-192762 | p 2892 N93-25200
New ground states in unconventional superconductors p 2688 N93-25282
GROUND STATIONS
Precise Doppler tracking from the Medicina VLBI station p 2608 N93-24998
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
GROUND SUPPORT EQUIPMENT
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
GROUND SUPPORT SYSTEMS
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
The scope of DLR's SAR calibration program p 2738 N93-24778
Use of remote sensing spacecrafts in real time support to disaster management: Interfaces with ground segment facilities and services p 2743 N93-24809
GROUND TESTS
HERO resistant semiconductor bridge igniter p 2627 N93-26024
Study of plate-fin heat exchanger and cold plate for the active thermal control system of Space Station p 2619 N93-26064
GROUND TRACKS
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
GROUND TRUTH
Use of airborne imaging spectrometry to the definition of optimised specifications for land applications with future spaceborne imaging spectrometers p 2738 N93-24776
Archaeological, historical and geoelectrical data as ground truth for Landsat TM imagery application to coastal plain evolution studies p 2742 N93-24799
Geographic information system for fusion and analysis of high-resolution remote sensing and ground truth data p 2878 N93-25798
GROUND WATER
Aquifer thermal energy (heat and chill) storage
| DE93-006446 | p 2759 N93-25183
GROUND WIND
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657
GROUP VELOCITY
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements p 2635 N93-25544
GUIDANCE SENSORS
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
GULF STREAM
Observations of an intrathermocline vortex p 2788 N93-24769
Dynamics of Gulf Stream meanders and frontal eddies in the South Atlantic Bight p 2788 N93-25354
Boundary layer coupling between an explosive cyclone and the Gulf Stream during ERICA
| AD-A261577 | p 2787 N93-26513
GUN PROPELLANTS
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
| AD-A261116 | p 2660 N93-25769
The burning rate behavior of pure nitrocellulose propellant samples
| AD-A261009 | p 2661 N93-25857
Infrared fiber optic diagnostic for solid propellant combustion p 2628 N93-26031
GUSTS
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739
GYROSCOPES
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory p 2600 N93-24697
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
GYROTROPISM
Microstrip antennas on/in anisotropic material layers
| AD-A261700 | p 2681 N93-26383

H

H II REGIONS
Far-infrared emission, gas, and ultraluminous HII regions in M101
| NASA-CR-192791 | p 2890 N93-25755

HABITABILITY
The reuse of logistics carriers for the first lunar outpost alternative habitat study p 2671 N93-26083

HABITATS
Biodiversity indication by Earth observation data p 2751 N93-24858
The effects of video compression on acceptability of images for monitoring life sciences' experiments p 2805 N93-25930
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs p 2670 N93-26063
Metabolic response of environmentally isolated microorganisms to industrial effluents: Use of a newly described cell culture assay p 2794 N93-26066
Analysis of the lettuce data from the variable pressure growth chamber at NASA Johnson Space Center: A three-stage nested design model p 2794 N93-26069
Development of a pyrolysis waste recovery model with designs, test plans, and applications for space-based habitats p 2803 N93-26076
The reuse of logistics carriers for the first lunar outpost alternative habitat study p 2671 N93-26083

HAIL
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896

HAILSTORMS
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896

HALIDES
Halogen adlayers on Ag(111)
| AD-A261792 | p 2850 N93-26443

HALL EFFECT
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
Low temperature Hall and Shubnikov-de Haas effects
| AD-A261871 | p 2869 N93-26540

HALLEY'S COMET
Near Earth object fuels (neo-fuels): Discovery, prospecting and use
| DE93-005185 | p 2892 N93-25164

HALOGENS
Resonant tunneling through chemisorbed halogen atoms on Ag(111)
| AD-A261794 | p 2868 N93-26254
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces
| AD-A261265 | p 2657 N93-26303
Halogen adlayers on Ag(111)
| AD-A261792 | p 2850 N93-26443

HALOS
TSC plasma halo simulation of a D3-D vertical displacement episode
| DE93-008688 | p 2860 N93-25493

HANDBOOKS
Handbook of actuators and edge alignment sensors
| NASA-CR-193203 | p 2620 N93-25317
Human computer interface style guide, version 2.0
| AD-A261280 | p 2807 N93-26291
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315
Particulate emissions from gas turbine engines
| AD-A261374 | p 2595 N93-26339

HANDLING EQUIPMENT
Transmission system for a transfer device gripping a double wheel
| CA-PATENT-APPL-SN-2024585 | p 2597 N93-25178

HARDNESS
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149
Dynamic hardness tester and cure meter p 2711 N93-25608

HARDWARE
The implementation of a lossless data compression module in an advanced orbiting system: Analysis and development p 2804 N93-25928
Test, Control and Monitor System (TCMS) operations plan
| NASA-CR-193098 | p 2873 N93-26419

HARMONIC EXCITATION
On the effect of acoustic coupling on random and harmonic plate vibrations
| NASA-TM-107740 | p 2844 N93-25189

HARMONIC GENERATIONS
A frequency generating source: Frequency synthesizers p 2693 N93-25041
Advances in nonlinear optical materials and devices
| NASA-CR-192681 | p 2852 N93-25281
Second-harmonic generation in optical fibers and glass
| AD-A260592 | p 2853 N93-25839

HARMONIC GENERATORS
Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation
| AD-A261117 | p 2609 N93-25770

HARMONICS
Synchrotron radiation X ray topography study of lateral field resonators p 2833 N93-24994
Comparison of energy trapping resonators and filters using the AT cut of quartz, berlinite and gallium phosphate p 2836 N93-25013
On the effect of acoustic coupling on random and harmonic plate vibrations
| NASA-TM-107740 | p 2844 N93-25189

HASTELLOY (TRADEMARK)
A micromechanical viscoplastic stress-strain model with grain boundary sliding
| DE93-009109 | p 2649 N93-25095

HAZARDS
An introductory guide to uncertainty analysis in environmental and health risk assessment
| DE93-002873 | p 2760 N93-24676
Alternative strategies for the use of satellite data analysis systems for hazard monitoring and disaster mitigation p 2743 N93-24805
A method for sequential image analysis of hazard areas p 2743 N93-24810
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956
The evaluation of technical models used for major-accident hazard installations. Report to Commission of the European Communities Directorate General 12
| CUED/A-AERO/TR-19 | p 2668 N93-25238
Hazards of explosives dusts: Particle size effects
| DE93-009380 | p 2668 N93-25498
Improved performance and safety for high energy batteries through use of hazard anticipation and capacity prediction p 2694 N93-25582
A review of civil aviation propeller-to-person accidents: 1980-1989
| AD-A260695 | p 2583 N93-25896
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586

HEALTH
An introductory guide to uncertainty analysis in environmental and health risk assessment
| DE93-002873 | p 2760 N93-24676
Achieving the promise of the bioscience revolution: The role of the Federal Government
| PB93-139970 | p 2793 N93-25457
The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
Development of a concept for a national construction industry health and safety data base
| PB93-159325 | p 2884 N93-26568

HEALTH PHYSICS
AFRRI research, fiscal year 1991
| AD-A260933 | p 2911 N93-25710

HEARING
In-flight evaluation of noise levels and assessment of active noise reduction systems in the Seahawk S-70B-2 helicopter
| AD-A260689 | p 2845 N93-25649
Measuring hearing protection device performance using the metrosonics db-3100 sound level analyzer (dosimeter)
| AD-A260852 | p 2801 N93-25787
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915

HEART
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764

HEART RATE
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594

HEAT ENGINES
Development of ASTM standards in support of advanced ceramics development
| DE93-003024 | p 2654 N93-25361

HEAT EXCHANGERS
Compressor calorimeter performance of refrigerant blends: Comparative methods and results for a refrigerator/freezer application
| DE93-006734 | p 2667 N93-24970
An evaluation of thermal energy storage options for precooling gas turbine inlet air
| DE93-005980 | p 2758 N93-24975
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221
Malone refrigeration
| DE93-005439 | p 2668 N93-25447
Annular flow enhanced two-phase evaporative heat exchanger for space-based systems p 2700 N93-25478
Study of plate-fin heat exchanger and cold plate for the active thermal control system of Space Station p 2619 N93-26064

HEAT FLUX
Development of dispersion-strengthened XD (trademark) Cu alloys for high heat-flux applications
| NASA-CR-191124 | p 2653 N93-24761
Application of optical remote sensing to the study of surface fluxes related to cloud formation
| DE93-003783 | p 2781 N93-25125
A correlated K-distribution model of the heating rates for H2O and a molecular mixture in the 0-2500 cm(exp -1) wavelength region in the atmosphere between 0 and 60 km
| DE93-005741 | p 2762 N93-25147
Effect of continuous eigenvalue spectrum on plasma transport in toroidal systems
| NIFS-214 | p 2859 N93-25215
Simulation and prediction of tropical SST with a coupled ocean-atmosphere model p 2789 N93-25469
Local and regional estimates of sensible and latent heat flux densities from a patch-work surface
| ISBN-0-315-70882-4 | p 2772 N93-25556
The effect of entrance radius and film injection on wall heating in scramjet nozzles p 2625 N93-26009
Flame response in oscillatory solid propellant combustion p 2630 N93-26041
Modeling of the WSTF frictional heating apparatus in high pressure systems p 2648 N93-26079

HEAT MEASUREMENT
Compressor calorimeter performance of refrigerant blends: Comparative methods and results for a refrigerator/freezer application
| DE93-006734 | p 2667 N93-24970
The nature of the glass transition and its determination by thermal analysis
| DE93-006746 | p 2654 N93-25374
Fibre optic sensors for heat transfer studies p 2853 N93-25748

HEAT OF FORMATION
Energetic materials from cubane
| AD-A261317 | p 2662 N93-26308

HEAT PIPES
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136

HEAT RESISTANT ALLOYS
Fatigue in single crystal nickel superalloys
| AD-A260709 | p 2651 N93-25843
Fatigue in single crystal nickel superalloys
| AD-A261742 | p 2652 N93-26282
Solidification processing and phase transformations in ordered high temperature alloys
| AD-A261751 | p 2652 N93-26284
The influence of primary and secondary orientations on the elastic response of a nickel-base single-crystal superalloy
| NASA-TM-106125 | p 2731 N93-26550

HEAT SHIELDING
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078

HEAT STORAGE
An evaluation of thermal energy storage options for precooling gas turbine inlet air
| DE93-005980 | p 2758 N93-24975
Aquifer thermal energy (heat and chill) storage
| DE93-006446 | p 2759 N93-25183

HEAT TRANSFER
Minimization of heat slab nodes with higher order boundary conditions
| DE93-004238 | p 2695 N93-24966
Heat transfer in rotating serpentine passages with selected model orientation for smooth or skewed trip walls
| NASA-TM-106126 | p 2667 N93-25177
Shock tube application to the study of compressible turbulent boundary layer with mass injection p 2697 N93-25252
Turbine turbobrake systems p 2717 N93-25268
Boundary plasma modelling for ITER
| DE93-007963 | p 2859 N93-25302
Measurements and computations of external heat transfer and film cooking in turbines
| RAE-TM-P-1223 | p 2592 N93-25455

Annular flow enhanced two-phase evaporative heat exchanger for space-based systems p 2700 N93-25478
Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551
Heat transfer measurements in swept shock wave/turbulent boundary-layer interactions p 2704 N93-25705
Flow and heat transfer experiments in the turbine airfoil/endwall region p 2704 N93-25725
Two-dimensional fin analysis p 2705 N93-25737
Fibre optic sensors for heat transfer studies p 2853 N93-25748
Uniform roughness studies | WL-TR-92-3041 | p 2706 N93-25951
A new approach to cooled combustion chambers: The 40K formed platelet chamber p 2626 N93-26018
Advanced engineering analysis | KCP-613-4967 | p 2669 N93-26212
Flow control of low heat load turbine airfoils | AD-A260941 | p 2595 N93-26219
Influence of supercritical conditions on pre-combustion chemistry and transport behavior of jet fuels | AD-A261813 | p 2661 N93-26268
AMPHIB: A users manual | AD-A261769 | p 2669 N93-26285
Basic research thermoacoustic heat transport | AD-A261334 | p 2759 N93-26310
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications | AD-A261596 | p 2851 N93-26525

HEAT TRANSFER COEFFICIENTS
Evaluation of a candidate material for a coal-fired magnetohydrodynamic (MHD) high temperature recuperative air heater | DE93-006630 | p 2858 N93-24968

HEAT TRANSMISSION
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Integration of design, thermal, structural, and optical analysis, including thermal animation p 2814 N93-25601

HEAT TREATMENT
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass | DE93-007504 | p 2635 N93-25383
Control of crystallite size in diamond film chemical vapor deposition | AD-D015660 | p 2867 N93-26090
Solidification processing and phase transformations in ordered high temperature alloys | AD-A261751 | p 2652 N93-26284

HEATING
Winter warming from large volcanic eruptions | NASA-CR-192848 | p 2763 N93-25244
Modeling of the WSTF frictional heating apparatus in high pressure systems p 2648 N93-26079

HEATING EQUIPMENT
Evaluation of a candidate material for a coal-fired magnetohydrodynamic (MHD) high temperature recuperative air heater | DE93-006630 | p 2858 N93-24968

HEAVY IONS
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Summary of progress in inertial confinement fusion | DE93-007350 | p 2858 N93-25187
Beam position and total current monitor for heavy ion fusion beams | DE93-007653 | p 2851 N93-25325
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions | DE93-007711 | p 2848 N93-25364
The sub 60 ps timing resolution using large area silicon avalanche diodes | DE93-007723 | p 2688 N93-25365

HELICAL WINDINGS
Assessment of torsatrons as reactors | DE93-006721 | p 2858 N93-24969

HELICOPTER CONTROL
Discrete range clustering using Monte Carlo methods | NASA-TM-104004 | p 2584 N93-24914
Helicopter low-speed yaw control | NASA-CASE-LAR-14219-1 | p 2597 N93-25998
Image-based ranging and guidance for rotorcraft | NASA-CR-177608 | p 2586 N93-26549

HELICOPTER DESIGN
Rotor design optimization using a free wake analysis | NASA-CR-177612 | p 2575 N93-25075

HELICOPTERS
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
Structural dynamic analysis of bearingless rotor blade p 2590 N93-25719
Computational gearing mechanics | NASA-CR-191127 | p 2719 N93-25884
Helicopter low-speed yaw control | NASA-CASE-LAR-14219-1 | p 2597 N93-25998
Helicopter forced response vibration analysis method RTVIB20 | AD-A261809 | p 2597 N93-26260
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation | AD-A261233 | p 2583 N93-26263

HELIOSEISMOLOGY
Inverse problem with continuous parameters for solar oscillations p 2895 N93-25728

HELIUM
Detecting damaged cables using a preionized gas technique | DE93-007588 | p 2689 N93-25429
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds p 2577 N93-25487

HELIUM IONS
Photoluminescence of silicon nanostructures formed by ion beam implantation | DE93-006777 | p 2862 N93-24958

HELIUM-NEON LASERS
Progress towards laboratory frequency standards for the optical communication bands p 2687 N93-25069

HELMET MOUNTED DISPLAYS
Perceptual factors that influence use of computer enhanced visual displays | NASA-CR-192961 | p 2811 N93-26150

HELMETS
Helmeted head and neck dynamics under whole-body vibration p 2800 N93-25531
In-flight evaluation of noise levels and assessment of active noise reduction systems in the Seahawk S-70B-2 helicopter | AD-A260689 | p 2845 N93-25649

HEMATOLOGY
JPRS report: Science and technology. Central Eurasia: Life sciences | JPRS-ULS-92-022 | p 2795 N93-25407

HERBIG-HARO OBJECTS
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770

HERMITIAN POLYNOMIAL
Polar decomposition for attitude determination from vector observations p 2602 N93-24711

HERTZSPRUNG-RUSSELL DIAGRAM
30 Doradus in the Large Magellanic Cloud: The stellar content and initial mass function p 2894 N93-25559

HETEROCYCLIC COMPOUNDS
Electrical conductivity of ion implanted ladder and semi-ladder polymers | AD-A261401 | p 2657 N93-26401

HETERODYNING
Advanced technology development multi-color holography | NASA-CR-192451 | p 2711 N93-26154

HETEROGENEITY
Luminescence probe studies of ionomers. 3: Distribution of decay rate constants for tris bipyridyl ruthenium(2) in Nafion membranes | AD-A260764 | p 2645 N93-25916
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces | AD-A261265 | p 2657 N93-26303

HETEROJUNCTIONS
New concepts for high efficiency energy conversion: The avalanche heterostructure and superlattice solar cells | DE92-010592 | p 2758 N93-25098
Short-period superlattice materials for heterojunction bipolar transistors | AD-A260701 | p 2866 N93-25897

HEURISTIC METHODS
Algorithms for optimal redundancy allocation | DE93-005709 | p 2827 N93-24973
Using a multifrontal sparse solver in a high performance, finite element code | NASA-CR-192718 | p 2828 N93-25223
Design and analysis of algorithms for processing queries in database systems p 2876 N93-25482
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967
Inferring heuristic classification hierarchies from natural language input p 2825 N93-25979
Complexity of connectionist and constraint-satisfaction networks | AD-A261617 | p 2817 N93-26169

HF LASERS
Experimental and theoretical study of cw HF chemical laser overtone performance p 2713 N93-25420
Experimental and theoretical study of CW HF chemical laser residual fundamental gain p 2714 N93-25721

HIERARCHIES
Management of space networks p 2672 N93-24671
On the robustness of Herlihy's hierarchy | NASA-CR-193002 | p 2808 N93-25107
Hierarchical dynamics in distributed information processing p 2875 N93-25350
TARGET: Rapid capture of process knowledge p 2814 N93-25590
Inferring heuristic classification hierarchies from natural language input p 2825 N93-25979
Multi-viewpoint clustering analysis p 2825 N93-25980

HIGH CURRENT
BBU code development for high-power microwave generators | DE93-007111 | p 2688 N93-25397
Characterization of ceramic capacitors for high-voltage pulse-discharge applications | DE93-007601 | p 2689 N93-25417

HIGH DEFINITION TELEVISION
Experiments with the HIVITS HDTV contribution CODED | BBC-RD-1992/12 | p 2674 N93-25391

HIGH ELECTRON MOBILITY TRANSISTORS
Noise-optimal control of HEMT LNA's for compensation of temperature deviations p 2678 N93-26115

HIGH ENERGY ELECTRONS
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions | DE93-007725 | p 2848 N93-25366

HIGH ENERGY INTERACTIONS
Recent experiments on spin physics in high energy hadron interactions | DE93-007900 | p 2851 N93-25301
Topics in CP violation | DE93-007615 | p 2847 N93-25323
The sub 60 ps timing resolution using large area silicon avalanche diodes | DE93-007723 | p 2688 N93-25365

HIGH FREQUENCIES
An SPW software simulation model of a dispersive fading multipath narrowband HF channel | AD-A261101 | p 2675 N93-25767
High Frequency (HF) radiowave propagation | AD-A261726 | p 2681 N93-26280
A comparison of ionospheric propagation mode delay predictions from ADVANCED PROPHET 4.3 with measured data | AD-A261782 | p 2686 N93-26604

HIGH POLYMERS
Vacuum powder injector and method of impregnating fiber with powder | NASA-CASE-LAR-14179-1 | p 2668 N93-26101

HIGH POWER LASERS
A compact and versatile pulse generation and shaping subsystem for high energy laser systems | DE93-007114 | p 2711 N93-24961
Start-up imprinting and shock dynamics in laser-target interaction | AD-A261384 | p 2715 N93-26445
FALCON nuclear-reactor-pumped laser program and wireless power transmission | DE93-007607 | p 2715 N93-26597

HIGH PRESSURE
Modeling of the WSTF frictional heating apparatus in high pressure systems p 2648 N93-26079

HIGH RESOLUTION
High resolution stereo imaging and data compression p 2753 N93-24867
Comparison of high-resolution solar irradiance spectra and the solar luminosity in the period 1980-1989 | NASA-CR-192776 | p 2898 N93-25222
High resolution interface nanochemistry and structure | DE93-009750 | p 2635 N93-25501
Inelastic scattering in condensed matter with high intensity Moessbauer radiation | DE93-008763 | p 2864 N93-25503
Prediction of global cloud cover with a very high resolution global spectral model | AD-A261047 | p 2785 N93-25777
Geographic information system for fusion and analysis of high-resolution remote sensing and ground truth data p 2878 N93-25798
VETA-1 x ray detection system p 2854 N93-26185
The x ray reflectivity of the AXAF VETA-I optics p 2855 N93-26192

HIGH SPEED
High speed x ray gating cameras for ICF imaging applications | DE93-007500 | p 2709 N93-25515

High speed solid state circuit breaker
p 2694 N93-25598
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
An investigation of photothermal velocimetry for application to transient, high-speed gas flows
p 2579 N93-25720

HIGH STRENGTH
Metal alloy and method of preparation thereof
| AD-D015670 | p 2652 N93-26234

HIGH TEMPERATURE
High temperature fracture toughness of Ni3Al alloy IC-396M
| DE93-008564 | p 2650 N93-25492
Application of the Saha equation to high temperature (greater than or equal to) rocket exhaust
| AD-A261648 | p 2632 N93-26174
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
SiC microsensor with piezoresistive diamond sensing elements
| AD-A261346 | p 2868 N93-26312

HIGH TEMPERATURE AIR
Evaluation of a candidate material for a coal-fired magnetohydrodynamic (MHD) high temperature recuperative air heater
| DE93-006630 | p 2858 N93-24968

HIGH TEMPERATURE ENVIRONMENTS
Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project
| NASA-TM-106096 | p 2687 N93-24746
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
| DE93-007601 | p 2689 N93-25417
Smart microsensors for high temperature applications
| AD-A260747 | p 2710 N93-25677

HIGH TEMPERATURE GASES
SRB environment evaluation and analysis. Volume 2: RSRB joint filling test/analysis improvements
| NASA-CR-192518 | p 2631 N93-26057

HIGH TEMPERATURE PLASMAS
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE93-009707 | p 2644 N93-25500
Very low frequency signals and whistler-mode amplification in the magnetosphere and limit-cycle behavior in the CECAF infrared free electronic laser
| AD-A261776 | p 2716 N93-26601

HIGH TEMPERATURE SUPERCONDUCTORS
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
| NASA-CR-192344 | p 2863 N93-25219
New ground states in unconventional superconductors
p 2688 N93-25282
Inelastic scattering in condensed matter with high intensity Moessbauer radiation
| DE93-008763 | p 2864 N93-25503
Analysis of the gap in high-temperature superconductors using photoemission spectroscopy p 2865 N93-25744
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588

HIGH TEMPERATURE TESTS
Development of thin film thermocouples on ceramic materials for advanced propulsion system applications
| NASA-TM-106017 | p 2709 N93-25173

HIGH VOLTAGES
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
| DE93-007601 | p 2689 N93-25417
The interaction of high voltage systems with the environments of the Moon and Mars
| NASA-TM-106107 | p 2618 N93-26148

HILSCH TUBES
The interaction of modulated vortex pairs with a free surface p 2701 N93-25485

HISTOGRAMS
Scene segmentation of natural images using texture measures and back-propagation
| NASA-TM-104003 | p 2803 N93-25235

HISTORIES
Archaeological, historical and geoelectrical data as ground truth for Landsat TM imagery application to coastal plain evolution studies p 2742 N93-24799
Aeronautics in NACA and NASA
| NASA-NP-156 | p 2574 N93-26422

HMX
ADN propellant diffusion flame structure
p 2629 N93-26036
Flame response in oscillatory solid propellant combustion p 2630 N93-26041

HOLES (MECHANICS)
High speed x ray gating cameras for ICF imaging applications
| DE93-007500 | p 2709 N93-25515

HOLLOW CATHODES
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171

HOLOGRAPHIC INTERFEROMETRY
Advanced technology development multi-color holography
| NASA-CR-192451 | p 2711 N93-26154

HOLOGRAPHY
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728
Multi-layer holographic bifurcative neural network system for real-time adaptive EOS data analysis
p 2880 N93-25807
Advanced technology development multi-color holography
| NASA-CR-192451 | p 2711 N93-26154
Optically smart surfaces survivability testing at Mach 3
| AD-A261785 | p 2857 N93-26566

HOMING DEVICES
Cross-switched MICRAD seeker
| AD-D015676 | p 2691 N93-26142

HORIZONTAL FLIGHT
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196

HORMONE METABOLISMS
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133

HOT CORROSION
Hot corrosion of the B2 nickel aluminides
| NASA-CR-191082 | p 2649 N93-25128

HOT ISOSTATIC PRESSING
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149
Mechanical alloying processing and application to development of structural materials
| AD-A261251 | p 2652 N93-26264

HOT STARS
The effects of rotation on the winds from hot stars
p 2894 N93-25620

HOT-WIRE FLOWMETERS
An experimental study of passive drag reduction in a turbulent boundary layer by a riblet surface
p 2705 N93-25746

HOVERING
Application of finite-state inflow to flap-lag-torsion damping in hover p 2587 N93-25486
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
Jet-induced ground effects on a parametric flat-plate model in hover
| NASA-TM-104001 | p 2581 N93-26099

HTPB PROPELLANTS
ADN propellant diffusion flame structure
p 2629 N93-26036

HUBBLE SPACE TELESCOPE
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors
p 2604 N93-24723
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode
p 2605 N93-24724
Hubble Space Telescope: The archived exposures catalog, version 2.0
| NASA-CR-192896 | p 2883 N93-26423

HUMAN BEINGS
The adult literacy evaluator: An intelligent computer-aided training system for diagnosing adult illiterates p 2799 N93-26082
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138

HUMAN BODY
Initial experiments with a myoelectric-based muscle sensor
| DE92-016034 | p 2799 N93-25099
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988
| AD-A260869 | p 2800 N93-25628
Visual perception of elevation
| AD-A261394 | p 2797 N93-26307

HUMAN FACTORS ENGINEERING
Crashworthiness of composite seats for civil aircraft
p 2582 N93-24773
Initial experiments with a myoelectric-based muscle sensor
| DE92-016034 | p 2799 N93-25099
A heat transfer analysis of a mobile vehicle radiation-shielded operator compartment
| DE93-007428 | p 2800 N93-25318
Human factors engineering: A key element of instrumentation and control system design
| DE93-006731 | p 2800 N93-25415
Helmeted head and neck dynamics under whole-body vibration p 2800 N93-25531
A framework for the design of usable electronic text
p 2877 N93-25754
Measures of user-system interface effectiveness: An encoding scheme and indicators for assessing the usability of graphical, direct-manipulation style user interfaces
| AD-A260606 | p 2801 N93-25840
Human Factors in Aviation Maintenance, phase 2
| DOT/FAA/AM-93/5 | p 2802 N93-26089
CALS-HSC data element dictionary
| AD-A261560 | p 2813 N93-26461
Human factors in environmental management: New directions from the Hanford site
| DE93-004337 | p 2767 N93-26495

HUMAN PERFORMANCE
A longitudinal examination of applicants to the air traffic control supervisory identification and development program
| DOT/FAA/AM-92/16 | p 2796 N93-25213
A cognitive architecture for human performance process model research
| AD-A261040 | p 2797 N93-25815
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933
Investigation of the effects of Extra Vehicular Activity (EVA) and Launch and Entry (LES) gloves on performance p 2803 N93-26061
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138
Automation and robotics human performance
| NASA-CR-193049 | p 2802 N93-26153

HUMAN WASTES
Development of a pyrolysis waste recovery model with designs, test plans, and applications for space-based habitats p 2803 N93-26076

HUMIDITY
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
Observed annual and interannual variations in tropospheric water vapor p 2782 N93-25549

HURRICANES
A dynamical theory for hurricane spiral bands
p 2782 N93-25352
Typhoon prediction (recurvature - 1990 experiment)
| AD-A260673 | p 2786 N93-25892

HUYGENS PRINCIPLE
DSD Technology: A detonation reactive Huygens code
| LA-12235-MS | p 2706 N93-25987

HYBRID PROPELLANT ROCKET ENGINES
Hybrid rocket fuel combustion study
p 2626 N93-26019

HYDRATES
Far infrared spectra of amorphous and crystalline water ice and changes in these phases as the result of proton irradiation
| NASA-CR-192849 | p 2892 N93-25230

HYDRAULIC CONTROL
Pneumatic actuator with hydraulic control
| AD-D015652 | p 2719 N93-26244

HYDRAULIC EQUIPMENT
Dynamic modeling of fluid transmission lines of the DSN 70-meter antennas by using a lumped parameter model
p 2678 N93-26119

HYDROCARBON COMBUSTION
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame
| NASA-CR-191099 | p 2642 N93-25116

HYDROCARBON FUELS
Catalytic conversion of light alkanes
| DE93-009646 | p 2644 N93-25499
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE93-009707 | p 2644 N93-25500
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948

HYDROCARBONS
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation p 2760 N93-24908
Tank issues: Design and placement of vapor monitoring wells
| PB93-161131 | p 2768 N93-26536
HYDROCYANIC ACID
The interaction of HCN/DCN with Si(100)-2x1
| AD-A260837 | p 2645 N93-25920
HYDRODYNAMIC EQUATIONS
Implementation of the Turn Function Method in a three-dimensional, parallelized hydrodynamics code
| DE93-003744 | p 2696 N93-25124
HYDRODYNAMICS
Applications of wavelet-based compression to multidimensional earth science data
| DE93-007348 | p 2762 N93-25166
Consequences of spontaneous and anomalous symmetry breaking for the orbital and mass flow hydrodynamics of He-3 - A p 2698 N93-25295
Development of an expendable particle sensor
| AD-A261127 | p 2710 N93-26044
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164
Algorithms for the analysis of penetration by shaped charge jets
| UCRL-LR-109887 | p 2730 N93-26178
HYDROFORMING
Finite element modeling of the hydroforming press
| KCP-613-4999 | p 2668 N93-26206
HYDROGEN
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218
Detection of atomic oxygen and hydrogen in solid propellant flames and pyrolysis gases using multiphoton laser-induced fluorescence p 2628 N93-26029
Development and use of hydrogen-air torches in an altitude facility
| NASA-TM-106047 | p 2598 N93-26214
HYDROGEN BONDS
Femtosecond dynamics in hydrogen-bonding solvents: Formamides
| DE93-003476 | p 2643 N93-25123
HYDROGEN EMBRITTLEMENT
Hydrogen-induced stress corrosion cracking susceptibility analysis of pitch links from the AH-64 Apache helicopter
| AD-A260692 | p 2651 N93-25895
HYDROGEN IONS
Dynamics of collision processes
| DE93-007143 | p 2849 N93-25509
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903
HYDROGEN MASERS
Hydrogen masers for space p 2716 N93-24980
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks p 2832 N93-24983
Basic design of a spaceborne hydrogen maser p 2716 N93-25024
The development progresses of hydrogen masers at Shanghai Observatory p 2716 N93-25048
Investigations of the frequency instability of CH1-75 hydrogen masers p 2716 N93-25049
Quartz oscillators, frequency synthesizers, and timing systems for geodesy and radio science applications p 2693 N93-25052
HYDROGEN OXYGEN ENGINES
Pulsed laser Rayleigh scattering diagnostic for hydrogen/oxygen rocket exit plane flowfield velocimetry
| NASA-TM-106098 | p 2631 N93-26149
HYDROGEN PRODUCTION
Production of low-cost hydrogen
| DE93-008070 | p 2643 N93-25305
Biological conversion of synthesis gas
| DE93-009092 | p 2660 N93-25523
HYDROGEN SULFIDE
Biological conversion of synthesis gas
| DE93-009092 | p 2660 N93-25523
HYDROGENATION
Design of a high activity and selectivity alcohol catalyst
| DE93-008103 | p 2659 N93-25112
HYDROGENOLYSIS
A novel process for methanol synthesis
| DE93-008037 | p 2659 N93-25118
HYDROGEOLOGY
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
HYDROGRAPHY
Observations of an intrathermocline vortex p 2788 N93-24769
Data availability and data archeology from the former Soviet Union p 2735 N93-24932
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study p 2736 N93-24938
HYDROLOGICAL CYCLE
Remote sensing in hydrology and water management p 2744 N93-24816
World Ocean Circulation Experiment p 2733 N93-24922
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351
HYDROLOGY
Monitoring and evaluation of morphohydrographical changes in the Danube Delta by remote-sensing p 2747 N93-24834
Aquifer thermal energy (heat and chill) storage
| DE93-006446 | p 2759 N93-25183
Non-local description of pollution transport in random medium p 2763 N93-25329
Local and regional estimates of sensible and latent heat flux densities from a patch-work surface
| ISBN-0-315-70882-4 | p 2772 N93-25556
Interactive forecasting with the National Weather Service River Forecast System p 2788 N93-25616
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351
HYDROLOGY MODELS
Remote sensing in hydrology and water management p 2744 N93-24816
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351
HYDROSTATIC PRESSURE
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
HYDROSTATICS
A three-dimensional study of the influence of mountains on a front
| AD-A261927 | p 2787 N93-26545
HYDROTHERMAL CRYSTAL GROWTH
Crystal growth of berlinite: Methods for growing longer crystals and improving the quality p 2838 N93-25025
HYDROXYL RADICALS
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame
| NASA-CR-191099 | p 2642 N93-25116
HYPERBOLIC TRAJECTORIES
Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem p 2603 N93-24718
HYPERCUBE MULTIPROCESSORS
Hierarchical dynamics in distributed information processing p 2875 N93-25350
An improved spectral load balancing method
| DE93-007582 | p 2810 N93-25386
Massively-parallel computational fluid dynamics
| AD-A261815 | p 2707 N93-26269
HYPERFINE STRUCTURE
Ion trap frequency standard research at PTB p 2841 N93-25050
HYPERSONIC FLIGHT
Trajectory optimization for the National aerospace plane
| NASA-CR-192954 | p 2589 N93-25670
Information requirements analyses for transatmospheric vehicles
| AD-A261189 | p 2590 N93-25949
HYPERSONIC FLOW
Development and application of computational aerothermodynamics flowfield computer codes
| NASA-CR-192940 | p 2574 N93-24736
Prediction of forces and moments for hypersonic flight vehicle control effectors
| NASA-CR-193033 | p 2595 N93-24762
Computation of hypersonic viscous flowfields using the parabolized Navier-Stokes equations p 2694 N93-24766
An investigation of laser velocimetry measurements within high speed, complex flows p 2697 N93-25237
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds p 2577 N93-25487
HYPERSONIC REENTRY
A hybrid multigrid technique for computing steady-state solutions to supersonic flows p 2582 N93-26078
HYPERSONIC SPEED
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176
HYPERSONIC VEHICLES
Prediction of forces and moments for hypersonic flight vehicle control effectors
| NASA-CR-193033 | p 2595 N93-24762
Generic hypersonic vehicle performance model
| NASA-CR-192953 | p 2587 N93-25162
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176
Optimized scramjet engine integration on a waverider airframe p 2593 N93-25480
Thermal coatings for titanium-aluminum alloys
| NASA-TM-107760 | p 2651 N93-26048
Supersonic aeroelastic instability results for a NASP-like wing model
| NASA-TM-107739 | p 2591 N93-26553
HYPERSONICS
Numerical simulation of hypersonic aerodynamics and the computational needs for the design of an aerospace plane
| AD-A260681 | p 2580 N93-25894
HYPERVELOCITY GUNS
Energy and Technology Review, October - December 1992
| DE93-007784 | p 2674 N93-25299
HYPERVELOCITY IMPACT
Hypervelocity impact study: The effect of impact angle on crater morphology
| NASA-CR-192711 | p 2724 N93-25260
HYPERVELOCITY PROJECTILES
Hypervelocity impact study: The effect of impact angle on crater morphology
| NASA-CR-192711 | p 2724 N93-25260

I

IBM PERSONAL COMPUTERS
DSS-13 26-meter antenna upgraded radiometer system p 2679 N93-26122
ICE
Ice thickness measurement system for the icing research tunnel calibration
| NASA-TM-106095 | p 2708 N93-24737
An evaluation of thermal energy storage options for precooling gas turbine inlet air
| DE93-005980 | p 2758 N93-24975
ICE CLOUDS
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874
ICE FORMATION
Ice thickness measurement system for the icing research tunnel calibration
| NASA-TM-106095 | p 2708 N93-24737
The initiation of lightning and the growth of electric fields in thunderstorms
| AD-A261455 | p 2787 N93-26352
ICELAND
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
Crustal deformation studies in subaerial parts of the world oceanic rift system: Iceland and Afar p 2789 N93-25558
IDEAL GAS
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176
IDENTIFYING
A longitudinal examination of applicants to the air traffic control supervisory identification and development program
| DOT/FAA/AM-92/16 | p 2796 N93-25213
IGNITERS
HERO resistant semiconductor bridge igniter p 2627 N93-26024
IGNITION
Ignition and combustion of lunar propellants
| NASA-CR-192814 | p 2659 N93-24745
Modelling of microgravity ignition phenomena p 2664 N93-25465
HERO resistant semiconductor bridge igniter p 2627 N93-26024
Condensed-phase processes during solid propellant combustion. Part 4: Chemical and microscopic examination of laser-irradiated propellant samples p 2628 N93-26032
ADN propellant diffusion flame structure p 2629 N93-26036

Dynamic burning rate measurements of metalized composite propellants using the laser-recoil technique
p 2631 N93-26043
Development and use of hydrogen-air torches in an altitude facility
| NASA-TM-106047 | p 2598 N93-26214

IGNITION SYSTEMS
Laser ignition application in a space experiment
| NASA-TM-106133 | p 2664 N93-25337

IMAGE ANALYSIS
Remote sensed spectral signatures classification and recognition by neural networks: An approach to unsupervised techniques p 2738 N93-24779
Spectral remote sensing of anomalous mineralogy induced by hydrocarbon migration and uranium mineralization, San Rafael Swell, Utah, USA
p 2739 N93-24783
The regional planning and control using the satellite data p 2740 N93-24788
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
A method for sequential image analysis of hazard areas p 2743 N93-24810
Potential operational use of remote sensing from space in forestry p 2745 N93-24817
EUROSTARS: A system for thematic analysis of remote sensed data p 2753 N93-24871
Earthquake vulnerability map of the Lake Constance area p 2753 N93-24872
Multi-temporal satellite image analysis for crop inventories in the Po River Valley (Italy)
p 2755 N93-25434
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672
Evaluation of lens distortion errors in video-based motion analysis
| NASA-TP-3266 | p 2797 N93-25736
Center for intelligent control systems
| AD-A260995 | p 2821 N93-25853
Image analysis by integration of disparate information
p 2824 N93-25973
Image analysis of the AXAF VETA-I x ray mirror
p 2855 N93-26190
Uncertainty in object pose determination with three light-stripe range measurements
| AD-A261435 | p 2857 N93-26488
Image-based ranging and guidance for rotorcraft
| NASA-CR-177608 | p 2586 N93-26549

IMAGE CORRELATORS
Image correlation velocimetry
| AD-A261599 | p 2707 N93-26163

IMAGE ENHANCEMENT
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map
p 2743 N93-24807

IMAGE PROCESSING
Image coding by way of wavelets
p 2671 N93-24665
Spectral remote sensing of anomalous mineralogy induced by hydrocarbon migration and uranium mineralization, San Rafael Swell, Utah, USA
p 2739 N93-24783
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
A knowledgc-based approach to waste disposal sites detection through integration of Landsat-TM imagery and geographical context information p 2741 N93-24796
Lithologic mapping with LANDSAT Thematic Mapper guided by laboratory spectral measurements, Air, Niger (Africa) p 2742 N93-24803
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map
p 2743 N93-24807
A method for sequential image analysis of hazard areas p 2743 N93-24810
Remote sensing geology p 2744 N93-24815
Tropical forest monitoring with high resolution satellite data p 2748 N93-24841
Mapping of windfall damage in the Hunsrueck plateau with Landsat TM-data p 2749 N93-24843
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
Scene segmentation of natural images using texture measures and back-propagation
| NASA-TM-104003 | p 2803 N93-25235
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363
Multi-temporal satellite image analysis for crop inventories in the Po River Valley (Italy)
p 2755 N93-25434
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516
Automated system for early breast cancer detection in mammograms p 2796 N93-25568
A novel optical/digital processing system for pattern recognition p 2814 N93-25603
Vision-aided monitoring and control of thermal spray, spray forming, and welding processes
p 2670 N93-25604
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
Efficient generation of synthetic terrain imagery for automatic target recognition
| AD-A260705 | p 2756 N93-25653
Geographic information system for fusion and analysis of high-resolution remote sensing and ground truth data
p 2878 N93-25798
A distributed system for visualizing and analyzing multivariate and multidisciplinary data
p 2880 N93-25804
SAVS: A Space Analysis and Visualization System
p 2881 N93-25812
A Hierarchical Target Extraction, Recognition, and Tracking (HiTert) system
| AD-A260567 | p 2854 N93-25898
Adjustable lossless image compression based on a natural splitting of an image into drawing, shading, and fine-grained components p 2804 N93-25923
Entropy reduction via simplified image contourization
p 2804 N93-25924
Methods of evaluating the effects of coding on SAR data p 2804 N93-25926
Fractal image compression: A resolution independent representation for imagery p 2804 N93-25927
Lossless compression of image data products on th e FIFE CD-ROM series p 2804 N93-25929
The effects of video compression on acceptability of images for monitoring life sciences' experiments
p 2805 N93-25930
High-performance compression of astronomical images p 2805 N93-25931
Multi-rate, real time image compression for images dominated by point sources p 2805 N93-25932
Data fusion with artificial neural networks (ANN) for classification of earth surface from microwave satellite measurements p 2824 N93-25974
A vision architecture for the extravehicular activity retriever p 2827 N93-26071
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369
Experiments in multiple-baseline stereo
| AD-A261415 | p 2757 N93-26448

IMAGERY
A novel optical/digital processing system for pattern recognition p 2814 N93-25603
Efficient generation of synthetic terrain imagery for automatic target recognition
| AD-A260705 | p 2756 N93-25653
Topography from shading and stereo
p 2879 N93-25803
Compression of spectral meteorological imagery
p 2804 N93-25925
Fractal image compression: A resolution independent representation for imagery p 2804 N93-25927
The probabilistic neural network architecture for high speed classification of remotely sensed imagery
p 2824 N93-25972
Image analysis by integration of disparate information
p 2824 N93-25973
Arc Digital Raster Imagery (ADRI) development
| AD-A261850 | p 2812 N93-26275

IMAGES
An example of a phase-segregated enhanced PAL broadcasting system
| BBC-RD-1992/6 | p 2674 N93-25239
Facilitation and interference in identification of pictures and words
| AD-A261484 | p 2798 N93-26356

IMAGING SPECTROMETERS
Use of airborne imaging spectrometry to the definition of optimised specifications for land applications with future spaceborne imaging spectrometers
p 2738 N93-24776
Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing
p 2751 N93-24859

IMAGING TECHNIQUES
Accurate attitude determination of the LACE satellite
p 2605 N93-24726
Scene segmentation of natural images using texture measures and back-propagation
| NASA-TM-104003 | p 2803 N93-25235
Apparatus for imaging an object in or through a scattering medium using coherent anti-Stokes Raman scattering
| AD-D015642 | p 2852 N93-25358
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363
High speed x ray gating cameras for ICF imaging applications
| DE93-007500 | p 2709 N93-25515
Firmware development improves system efficiency
p 2807 N93-25606
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634
Proceedings of Workshop 1: The Human Brainmap Database
| AD-A260720 | p 2796 N93-25654
An investigation of photothermal velocimetry for application to transient, high-speed gas flows
p 2579 N93-25720
Small satellites and RPA's in global-change research
| AD-A260762 | p 2765 N93-25837
A Hierarchical Target Extraction, Recognition, and Tracking (HiTert) system
| AD-A260567 | p 2854 N93-25898
ADN propellant diffusion flame structure
p 2629 N93-26036
Imaging the magnetosphere in the extreme ultraviolet
| NASA-CR-192218 | p 2775 N93-26151
Image correlation velocimetry
| AD-A261599 | p 2707 N93-26163
Intensity distribution of the x ray source for the AXAF VETA-I mirror test p 2854 N93-26184
New pyro-optic techniques for imaging of long wavelength IR-Radiation (pyro-optic initiation program)
| AD-A260969 | p 2856 N93-26224
Advanced technology for portable personal visualization
| AD-A261294 | p 2807 N93-26293
Photographic industry and electronic imaging: The emergence of electronic still photography
| PB93-169399 | p 2711 N93-26324
Imaging regional changes in the spontaneous activity of the brain: An extension of the minimum-norm least-squares estimate
| AD-A261593 | p 2798 N93-26436
Experiments in multiple-baseline stereo
| AD-A261415 | p 2757 N93-26448
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521

IMMUNE SYSTEMS
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
| AD-A261808 | p 2793 N93-26259

IMMUNOLOGY
Immunoconjugates: Magic bullets for cancer therapy?
p 2796 N93-25567
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
| AD-A261808 | p 2793 N93-26259

IMPACT DAMAGE
Expedient repair of structural facilities
| AD-A260727 | p 2598 N93-25656
Investigation and modeling of penetration process for composite laminates impacted by a blunt-ended projectile p 2637 N93-25675

IMPACT FUSION
Computational modeling of MAGO and other magnetized target fusion concepts
| DE93-007354 | p 2861 N93-26504

IMPACT LOADS
Analysis of longitudinal impact on semi-infinite circular bars and tubes. Appendix no. 2
| AD-A261556 | p 2731 N93-26459

IMPACT RESISTANCE
Low-velocity impact of composite sandwich plate
p 2637 N93-25695
Shear band formation in a W-Ni-Fe alloy under plate impact
| AD-A260702 | p 2651 N93-25907

IMPACT TESTS
Investigation and modeling of penetration process for composite laminates impacted by a blunt-ended projectile p 2637 N93-25675

IMPACT TOLERANCES
Low-velocity impact of composite sandwich plate
p 2637 N93-25695

IMPEDANCE MATCHING
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967

IMPELLERS
Numerical modelling of viscous turbomachinery flows with a pressure correction method p 2594 N93-25702

IMPINGEMENT
Three-dimensional analysis and verification of fracture growth mechanisms in fiber-reinforced ceramic composites
| AD-A261483 | p 2641 N93-26355
IMPLANTATION
The prevalence of artificial lens implants in the civil airman population
| DOT/FAA/AM-92/14 | p 2794 N93-25214
Analysis of pull-tests for determining the effects of ion implantation on the adhesion of iron films to sapphire substrates
| DE93-006732 | p 2725 N93-25373
IMPLOSIONS
High speed x ray gating cameras for ICF imaging applications
| DE93-007500 | p 2709 N93-25515
Sensitivity of magnetic flux compression in cylindrical implosions to model parameters
| DE93-003819 | p 2861 N93-26512
IMPREGNATING
Vacuum powder injector and method of impregnating fiber with powder
| NASA-CASE-LAR-14179-1 | p 2668 N93-26101
IMPULSES
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834
Modeling of atom-diatom scattering
| AD-A261645 | p 2849 N93-26173
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281
IMPURITIES
Thermionic current measurement in quartz p 2840 N93-25045
Surface diffusion studies by optical diffraction techniques
| DE93-007707 | p 2853 N93-25550
IN SITU MEASUREMENT
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570
IN-FLIGHT MONITORING
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887
INCLINATION
Space Station Freedom assembly and operation at a 51.6 degree inclination orbit
| NASA-TM-107731 | p 2615 N93-25174
INCLUSIONS
Fracture of an elliptical inclusion and its implications for the properties of short fiber composites p 2634 N93-25333
INCOHERENT SCATTER RADAR
Theoretical study of topside ionospheric clutter
| AD-A260982 | p 2774 N93-25852
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159
INCOMPRESSIBLE FLOW
Instability of flow in a streamwise corner
| NASA-CR-191410 | p 2576 N93-25153
Incompressible spectral-element method: Derivation of equations
| NASA-TM-106109 | p 2708 N93-26554
INCOMPRESSIBLE FLUIDS
Stabilized finite element methods for incompressible flows with emphasis on moving boundaries and interfaces p 2703 N93-25663
INDENTATION
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204
INDEPENDENT VARIABLES
Spontaneous discovery and use of categorical structure
| AD-A261658 | p 2798 N93-26364
INDIAN OCEAN
Indian Ocean analyses p 2733 N93-24925
INDIUM ARSENIDES
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634
Short-period superlattice materials for heterojunction bipolar transistors
| AD-A260701 | p 2866 N93-25897
INDIUM COMPOUNDS
Non-H2Se, ultra-thin CIS devices
| DE93-000078 | p 2759 N93-25253
Role of polycrystallinity in CdTe and CuInSe2 photovoltaic cells
| DE93-000045 | p 2759 N93-25504
INDUCTION HEATING
Chemistry during the induction time in heated nitramines p 2629 N93-26035
Steady induction effects in geomagnetism. Part 1B: Geomagnetic estimation of steady surficial core motions: A non-linear inverse problem
| NASA-TP-3272-PT-1B | p 2776 N93-26421
INDUCTORS
Distortion measurements on bandpass filters with powdered iron toroidal inductors
| AD-A260790 | p 2675 N93-25689
INDUSTRIAL MANAGEMENT
Technology for America's economic growth: A new direction to build economic strength
| AD-A261553 | p 2887 N93-26458
Designing and implementing a state quality award
| PB93-154458 | p 2722 N93-26546
INDUSTRIAL PLANTS
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
Pollution prevention 1991: Progress on reducing industrial pollutants
| PB93-157725 | p 2766 N93-25875
X ray computed tomography for failure analysis
| AD-A261884 | p 2722 N93-26527
INDUSTRIAL SAFETY
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315
Development of a concept for a national construction industry health and safety data base
| PB93-159325 | p 2884 N93-26568
INDUSTRIAL WASTES
Converting environmental wastes into valuable resources p 2759 N93-25572
Pollution prevention 1991: Progress on reducing industrial pollutants
| PB93-157725 | p 2766 N93-25875
Treatment of hazardous organic wastes using silent discharge plasmas
| DE93-003789 | p 2768 N93-26592
INDUSTRIES
Technology Transfer 92/93
| DE93-003623 | p 2887 N93-24965
An advanced data-acquisition system for wind energy projects
| DE93-000079 | p 2874 N93-25254
Converting environmental wastes into valuable resources p 2759 N93-25572
Space business indicators p 2886 N93-26158
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315
Science, Technology, and Industrial Policy in the Former Soviet Union
| DE93-006528 | p 2887 N93-26499
INELASTIC COLLISIONS
Dynamics of collision processes
| DE93-007143 | p 2849 N93-25509
INELASTIC SCATTERING
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions
| DE93-007725 | p 2848 N93-25366
Inelastic scattering in condensed matter with high intensity Moessbauer radiation
| DE93-008763 | p 2864 N93-25503
Measurement of optical properties of infrared bandgap superlattices
| AD-A260859 | p 2866 N93-25789
Modeling of atom-diatom scattering
| AD-A261645 | p 2849 N93-26173
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287
INERTIA
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
INERTIAL CONFINEMENT FUSION
Summary of progress in inertial confinement fusion
| DE93-007350 | p 2858 N93-25187
Two-stream instability for a light ion beam-plasma system with external magnetic field
| NIFS-204 | p 2859 N93-25248
INERTIAL NAVIGATION
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument p 2711 N93-25614
INERTIAL REFERENCE SYSTEMS
Apparatus for determining the attitude of a vehicle
| AD-D015667 | p 2710 N93-26092
INFINITE SPAN WINGS
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865
INFLATING
A simple, approximate model of parachute inflation
| DE93-002465 | p 2576 N93-25121
INFORMATION
Information requirements analyses for transatmospheric vehicles
| AD-A261189 | p 2590 N93-25949
INFORMATION DISSEMINATION
Technology Transfer 92/93
| DE93-003623 | p 2887 N93-24965
The General Information Programme (PGI) and developing countries: A case study of Iraq p 2874 N93-25209
INFORMATION MANAGEMENT
Management of space networks p 2672 N93-24671
The role of the World Data Centers in handling ocean climate data p 2732 N93-24919
Distributed information storage p 2877 N93-25722
Department of Energy: Better information resources management needed to accomplish missions. Report to the Secretary of Energy

| AD-A261911 | p 2884 N93-26531
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
| AD-A261912 | p 2884 N93-26532
Development of a concept for a national construction industry health and safety data base
| PB93-159325 | p 2884 N93-26568
Task Type E report for National Launch Demonstration Center (NLDC) (Task 32)
| MCR-91-5010 | p 2610 N93-26591

INFORMATION THEORY

Information transmission using CHAOS
| AD-A261519 | p 2883 N93-26377

INFRARED ASTRONOMY

An atlas of selected calibrated stellar spectra
| NASA-CR-177604 | p 2888 N93-25135
A study of the large-scale infrared emission from a selected dark cloud
| NASA-CR-192775 | p 2888 N93-25289
Optical and infrared studies of distant galaxies p 2890 N93-25712

INFRARED ASTRONOMY SATELLITE

A study of the large-scale infrared emission from a selected dark cloud
| NASA-CR-192775 | p 2888 N93-25289
The structure of the nearby universe traced by theIRAS galaxies
| NASA-CR-192809 | p 2889 N93-25331

INFRARED DETECTORS

Introduction to lead salt infrared detectors
| AD-A260781 | p 2710 N93-25686
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823
Small satellites and RPA's in global-change research
| AD-A260762 | p 2765 N93-25837
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
New pyro-optic techniques for imaging of long wavelength IR-Radiation (pyro-optic initiation program)
| AD-A260969 | p 2856 N93-26224
Investigation of a background suppression transimpedance amplifier for photovoltaic detectors
| AD-A261828 | p 2691 N93-26272
Algorithms for space-based infrared surveillance
| AD-A261891 | p 2857 N93-26542

INFRARED IMAGERY

A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956
Small satellites and RPA's in global-change research
| AD-A260762 | p 2765 N93-25837
Algorithms for space-based infrared surveillance
| AD-A261891 | p 2857 N93-26542

INFRARED LASERS

IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source
| AD-A261399 | p 2862 N93-26520
Laser physics and laser techniques
| AD-A261595 | p 2715 N93-26524

INFRARED PHOTOMETRY

Optical and infrared studies of distant galaxies p 2890 N93-25712
Far-infrared emission, gas, and ultraluminous HII regions in M101
| NASA-CR-192791 | p 2890 N93-25755

INFRARED RADIATION

A correlated K-distribution model of the heating rates for H2O and a molecular mixture in the 0-2500 cm(exp -1) wavelength region in the atmosphere between 0 and 60 km
| DE93-005741 | p 2762 N93-25147
A study of the large-scale infrared emission from a selected dark cloud
| NASA-CR-192775 | p 2888 N93-25289
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646
Thermal infrared radiation transfer in the planetary boundary layer p 2772 N93-25688
Generation of acoustic waves by focused infrared neodymium-laser radiation p 2714 N93-25761
IR materials producibility
| AD-A261099 | p 2853 N93-25766
Measurement of optical properties of infrared bandgap superlattices
| AD-A260859 | p 2866 N93-25789
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
Infrared fiber optic diagnostic for solid propellant combustion p 2628 N93-26031
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373
Algorithms for space-based infrared surveillance
| AD-A261891 | p 2857 N93-26542

INFRARED RADIOMETERS

Aspects of the design of a satellite borne infra-red radiometer p 2620 N93-25474

INFRARED SIGNATURES

Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373

INFRARED SPECTRA

An atlas of selected calibrated stellar spectra
| NASA-CR-177604 | p 2888 N93-25135
Far infrared spectra of amorphous and crystalline water ice and changes in these phases as the result of proton irradiation
| NASA-CR-192849 | p 2892 N93-25230
Commercial applications multispectral sensor system p 2758 N93-25615
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646
Tomographic analysis of sight infrared spectra of low pressure flames p 2628 N93-26030
Condensed-phase processes during solid propellant combustion. Part 4: Chemical and microscopic examination of laser-irradiated propellant samples p 2628 N93-26032

INFRARED SPECTROSCOPY

Crystal growth and physical characterizations of GaPO4 p 2840 N93-25044
Modeling of atom-diatom scattering
| AD-A261645 | p 2849 N93-26173

INGESTION (ENGINES)

Transient performance of fan engine with water ingestion
| NASA-CR-190778 | p 2573 N93-25134

INHOMOGENEITY

Line inhomogeneity effects and power shift in miniaturized rubidium frequency standards p 2694 N93-25066
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522

INITIATION

Chemistry during the induction time in heated nitramines p 2629 N93-26035

INJECTION

Tracking sharp interface of two fluids by the CIP (Cubic-Interpolated Propagation) scheme
| NIFS-206 | p 2698 N93-25277

INJECTION MOLDING

A model for the filling of cold cavities with solidifying, semi-crystalline polymers
| DE93-003817 | p 2655 N93-25507

INJECTORS

A summary of the JANNAF workshop on liquid rocket atomization p 2625 N93-26014
Experimental investigation of flow turning losses in unstable rocket motors p 2630 N93-26040

INJURIES

Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900
Using terrestrial plants in biomonitoring
| PB93-158780 | p 2766 N93-26316

INLAND WATERS

Applications of remote sensing for tidal waters, coastal areas and inland waters p 2745 N93-24819

INLET FLOW

Nozzle diffuser for use with an open test section of a wind tunnel
| NASA-CASE-LAR-14424-1-SB | p 2598 N93-25996

INLET NOZZLES

Nozzle diffuser for use with an open test section of a wind tunnel
| NASA-CASE-LAR-14424-1-SB | p 2598 N93-25996

INLET TEMPERATURE

Measurements and computations of external heat transfer and film cooking in turbines
| RAE-TM-P-1223 | p 2592 N93-25455

INORGANIC CHEMISTRY

Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518

INORGANIC COMPOUNDS

Inorganic nitrogen and phosphorus dynamics in the water column of the Patuxent River
| PB93-172955 | p 2767 N93-26511

INORGANIC NITRATES

Inorganic nitrogen and phosphorus dynamics in the water column of the Patuxent River
| PB93-172955 | p 2767 N93-26511

INSPECTION

Reliability assessment at airline inspection facilities. Volume 1: A generic protocol for inspection reliability experiments
| DOT/FAA/CT-92/12-VOL-1 | p 2582 N93-25110
Nondestructive evaluation of ferrite c-cores
| KCP-613-4677 | p 2721 N93-25939
Automated inspection of solder joints for surface mount technology
| NASA-TM-104580 | p 2721 N93-26137
NDT standards from the perspective of the Department of Defense
| MTL-TR-92-68 | p 2722 N93-26434

INSTRUMENT APPROACH

The dependent converging instrument approach procedure: An analysis of its safety and applicability
| DOE/FAA/RD-93/6 | p 2585 N93-25456

INSTRUMENT ERRORS

Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827

Applications of inertial-sensor high-inheritance instruments to DSN precision antenna pointing p 2621 N93-26112

INSTRUMENT LANDING SYSTEMS
ILS mathematical modeling study of an ILS glide slope proposed for runway 19L at the Meridian Naval Air Station, Mississippi
| DOT/FAA/CT-TN93/8 | p 2584 N93-24741

INSTRUMENT PACKAGES
Development of a flight instrument package
| AD-A260830 | p 2591 N93-25783

INSULATION
Detecting damaged cables using a preionized gas technique
| DE93-007588 | p 2689 N93-25429

INTEGERS
Linear-programming tools in integer programming: The traveling salesman
| AD-A261398 | p 2812 N93-26290

INTEGRAL EQUATIONS
Multilevel techniques in large scale computation
| AD-A261082 | p 2828 N93-25762
A surface integral algorithm for the motion planning of nonholonomic mechanical systems
| AD-A261746 | p 2720 N93-26249

INTEGRAL TRANSFORMATIONS
Multilevel techniques in large scale computation
| AD-A261082 | p 2828 N93-25762

INTEGRATED CIRCUITS
Design of a low phase noise UHF oscillator using a partly metallized dielectric resonator p 2693 N93-25003
A state-of-the-art crystal filter design package using Windows 3.0 techniques p 2693 N93-25010
Monolithic quartz vibrating beam accelerometer p 2711 N93-25011
Two- and three-dimensional high performance, patterned overlay multi-chip module technology p 2694 N93-25581
Solid-state isotopic power source for computer memory chips p 2694 N93-25596
Microwave and millimeter wave monolithic integrated circuits (MIMIC) program. MIMIC briefs: Summaries of phase 3 technology support programs
| AD-A260914 | p 2690 N93-25660
VLSI for high-speed digital signal processing
| AD-A260754 | p 2690 N93-25678
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
Multichip module high speed testing
| AD-A261391 | p 2856 N93-26306
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366
Advanced HTS S-N-S devices
| AD-A261552 | p 2869 N93-26381
Internal current probing of integrated circuits using magnetic force microscopy
| DE93-006752 | p 2692 N93-26501
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530

INTEGRATED GLOBAL OCEAN STATION SYSTEMS
International ocean services: Is it time - will it ever be time? p 2737 N93-24941

INTEGRITY
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018

INTELLIGENCE
Science, technology, and national security p 2886 N93-25232

INTELSAT SATELLITES
Prospects of two-way international time scale comparisons p 2832 N93-24988

INTERACTIVE CONTROL
Architecture of autonomous systems
| NASA-CR-192974 | p 2801 N93-26047
Interaction dynamics and control for orbital assembly p 2669 N93-26407

INTERCEPTION
Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272

INTERDIGITAL TRANSDUCERS
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009

INTERFACIAL ENERGY
Analysis of pull-tests for determining the effects of ion implantation on the adhesion of iron films to sapphire substrates
| DE93-006732 | p 2725 N93-25373

INTERFACIAL TENSION
Experimental and theoretical studies of dense fluid mixtures
| DE93-006070 | p 2695 N93-24976
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764
Interaction of vorticity with a free surface
| AD-A261524 | p 2707 N93-26360

INTERFERENCE
Generalized probability model for calculation of interference to the Deep Space Network due to circularly Earth-orbiting satellites p 2679 N93-26127

INTERFEROMETERS
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode p 2605 N93-24724
MIT's interferometer CST testbed p 2609 N93-25836

INTERFEROMETRY
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
Interferometric fiber-optic radiation sensor
| DE93-003841 | p 2852 N93-25127
Temperature dependent sensor response caused by polymer-solvent interactions
| DE93-005368 | p 2655 N93-25444
Polarizing Michelson interferometer for measuring thermospheric winds
| ISBN-0-315-70442-X | p 2784 N93-25731
Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110
Interferometric measurement with squeezed light
| AD-A260910 | p 2856 N93-26457

INTERLAMINAR STRESS
Numerical simulation of damage and progressive failures in composite laminates using the layerwise plate theory p 2636 N93-25661

INTERMETALLICS
Pressure dependence of conductivity
| DE93-008466 | p 2687 N93-25113
Radiation-induced disordering and defect production in CuAu and NiAl studied by molecular dynamics simulation
| DE93-007506 | p 2649 N93-25336
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
Solidification processing and phase transformations in ordered high temperature alloys
| AD-A261751 | p 2652 N93-26284

INTERNAL COMBUSTION ENGINES
Evaluation of the Migrating Combustion Chamber (MCC) engine
| AD-A260780 | p 2718 N93-25682
Center for Advanced Propulsion Systems (fellowship)
| AD-A260571 | p 2632 N93-26216
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529

INTERNAL WAVES
Selected results from LLNL-Hughes RAR for West Coast Scotland Experiment 1991
| DE93-006972 | p 2788 N93-24960

INTERNATIONAL COOPERATION
CEOS Committee on Earth Observations Satellites consolidated report, 1992
| NASA-TM-108776 | p 2615 N93-25217
Former Soviet Republic capabilities in space and science
| DE93-007613 | p 2598 N93-25322
Space research in Sweden, 1990-1991 p 2888 N93-25887
AGARD membership, 1993
| AGARD-MEMB-93 | p 2873 N93-26428

INTERNATIONAL GEOPHYSICAL YEAR
Data archaeology at ICES p 2734 N93-24931

INTERNATIONAL RELATIONS
Science, technology, and national security p 2886 N93-25232

INTERNATIONAL SUN EARTH EXPLORER 1
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081

INTERNATIONAL SUN EARTH EXPLORER 2
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081

INTERNATIONAL TRADE
Space business indicators p 2886 N93-26158
Technology for America's economic growth: A new direction to build economic strength
| AD-A261553 | p 2887 N93-26458

INTERPLANETARY DUST
Volatiles in interplanetary dust particles: A comparison with CI and CM chondrites p 2896 N93-26062

INTERPLANETARY MAGNETIC FIELDS
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081

INTERPLANETARY SPACECRAFT
A determination of the radio-planetary frame tie from comparison of Earth orientation parameters p 2676 N93-26106

INTERPOLATION
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198

INTERPROCESSOR COMMUNICATION
Splash 2 p 2814 N93-25575
Anomalous event diagnosis for environmental satellite systems p 2619 N93-25971
An OSI architecture for the Deep Space Network p 2679 N93-26121

INTERSTELLAR GAS
Far-infrared emission, gas, and ultraluminous HII regions in M101
| NASA-CR-192791 | p 2890 N93-25755

INTERVALS
Timing and time signal distribution in digital communications networks p 2686 N93-25061
Synopsis of timing measurement techniques used in telecommunications p 2687 N93-25064

INTRAVEHICULAR ACTIVITY
Automation and robotics human performance
| NASA-CR-193049 | p 2802 N93-26153

INVENTIONS
Polyimides containing the cyclobutene-3,4-dione moiety
| NASA-CASE-LAR-14753-1 | p 2656 N93-25999

INVENTORIES
The ESA ISY initiatives for forest inventory in Europe p 2748 N93-24840
Estimating spares requirements for Space Station Freedom using the M-SPARE model
| AD-A260878 | p 2617 N93-25630
The state of computing at Los Alamos National Laboratory, FY 1991
| LA-12326-MS | p 2811 N93-25943

INVERSE KINEMATICS
Detailed solution to a complex kinematics chain manipulator
| DE93-004619 | p 2725 N93-25357
Numerical kinematic transformation calculations for a parallel link manipulator
| DE93-005778 | p 2718 N93-25449

INVERSE SCATTERING
Activity report
| AD-A261933 | p 2829 N93-26199

INVERSIONS
Elastic modeling and migration in Earth models p 2771 N93-25433

INVERTERS
Utilization of an electronic circuit simulator in CMOS latch-up studies
| AD-A260877 | p 2690 N93-25935

INVESTMENT CASTING
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526

INVISCID FLOW
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls
| NASA-TM-106087 | p 2696 N93-25175
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542

IODINE
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967

IODINE LASERS
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967

ION ACCELERATORS
Summary of progress in inertial confinement fusion
| DE93-007350 | p 2858 N93-25187

ION BEAMS
Two-stream instability for a light ion beam-plasma system with external magnetic field
| NIFS-204 | p 2859 N93-25248
Metal ion implantation for large scale surface modification
| DE93-007649 | p 2859 N93-25324
Beam position and total current monitor for heavy ion fusion beams
| DE93-007653 | p 2851 N93-25325

Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams
p 2658 N93-25564
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171

ION CURRENTS
Thermionic current measurement in quartz
p 2840 N93-25045
Plasma sheath effects on ion collection by a pinhole
| NASA-TM-106098 | p 2615 N93-25090

ION CYCLOTRON RADIATION
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092
An outgoing energy flux boundary condition for finite difference ICRP antenna models
| DE93-007788 | p 2674 N93-25300

ION DENSITY (CONCENTRATION)
A study of vibrationally excited N2(+) ions in the daytime thermosphere p 2770 N93-25179
Diagnostics of diamond film deposition plasmas
| AD-A260866 | p 2860 N93-25626

ION IMPLANTATION
Photoluminescence of silicon nanostructures formed by ion beam implantation
| DE93-006777 | p 2862 N93-24958
Colloid formation in implanted glasses
| DE93-006763 | p 2653 N93-24971
Metal ion implantation for large scale surface modification
| DE93-007649 | p 2859 N93-25324
Analysis of pull-tests for determining the effects of ion implantation on the adhesion of iron films to sapphire substrates
| DE93-006732 | p 2725 N93-25373
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
Transmission electron microscopy investigation of ion implantation damage in GaAs and other semiconductors
p 2865 N93-25715
Electrical conductivity of ion implanted ladder and semi-ladder polymers
| AD-A261401 | p 2657 N93-26401

ION IRRADIATION
Aerospace devices for magnetic replicas
| NASA-CR-192958 | p 2865 N93-25667
State-selected studies of atoms and molecules ejected from ion bombarded surfaces
| AD-A261275 | p 2850 N93-26267

ION PROPULSION
Nuclear electric propulsion for planetary science missions: NASA technology program planning
| NASA-TM-106139 | p 2632 N93-26210

ION SOURCES
Penning detachment: A new frontier
| AD-A261447 | p 2850 N93-26346

ION STORAGE
Ion trap frequency standard research at PTB
p 2841 N93-25050
Controlling an optical frequency by a single ion
p 2841 N93-25051

ION TEMPERATURE
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092
Ion temperature measurements in the Maryland Spheromak p 2859 N93-25290

ION TRAPS (INSTRUMENTATION)
Laser desorption in an ion trap mass spectrometer
| DE93-007330 | p 2712 N93-25150

IONIC COLLISIONS
Strangeness production in S + Pb and p + Pb collisions at 200 GeV/c per nucleon nucleon
| DE93-007654 | p 2847 N93-25326

IONIC REACTIONS
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525

IONIZATION
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646
The formation and characteristics of E-region thin ionization layers at high latitudes p 2861 N93-25829
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
| DE93-007815 | p 2793 N93-26587

IONOGRAMS
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283

IONOSPHERIC COMPOSITION
The formation and characteristics of E-region thin ionization layers at high latitudes p 2861 N93-25829

IONOSPHERIC ION DENSITY
The formation and characteristics of E-region thin ionization layers at high latitudes p 2861 N93-25829

IONOSPHERIC PROPAGATION
Theoretical study of topside ionospheric clutter
| AD-A260982 | p 2774 N93-25852
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289
Nonlinear wave phenomena related to interactions in the ionosphere
| AD-A261450 | p 2776 N93-26348
The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. B: Sloping-vee beams
| AD-A261866 | p 2682 N93-26388
A comparison of ionospheric propagation mode delay predictions from ADVANCED PROPHET 4.3 with measured data
| AD-A261782 | p 2686 N93-26604

IONOSPHERIC SOUNDING
Sounding rocket observations of precipitating ions in the morning auroral region p 2773 N93-25732

IONOSPHERIC TEMPERATURE
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159

IONS
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659
Sounding rocket observations of precipitating ions in the morning auroral region p 2773 N93-25732
Particle simulation of auroral double layers
p 2774 N93-25830
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4 +) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528

IRAQ
The General Information Programme (PGI) and developing countries: A case study of Iraq
p 2874 N93-25209

IRON
Analysis of pull-tests for determining the effects of ion implantation on the adhesion of iron films to sapphire substrates
| DE93-006732 | p 2725 N93-25373
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903

IRON ALLOYS
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519
Shear band formation in a W-Ni-Fe alloy under plate impact
| AD-A260702 | p 2651 N93-25907

IRRADIANCE
Comparison of high-resolution solar irradiance spectra and the solar luminosity in the period 1980-1989
| NASA-CR-192776 | p 2898 N93-25222

IRRADIATION
Long term drift and gamma-irradiation effect
p 2833 N93-24992
Radiation effects in germanium doped quartz
p 2837 N93-25021

IRRIGATION
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS
p 2751 N93-24855

ISOLATION
Isolation and analysis of key components of seafloor relief
| AD-A261635 | p 2790 N93-26170

ISOPARAMETRIC FINITE ELEMENTS
Applications of parallel and vector algorithms in nonlinear structural dynamics using the finite element method
| AD-A260716 | p 2811 N93-25845

ISOPROPYL ALCOHOL
Development of a replacement for trichloroethylene in the two-stage cleaning process
| KCP-613-4941 | p 2669 N93-26207

ISOTOPE EFFECT
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
| AD-A261804 | p 2662 N93-26387

ISOTOPE SEPARATION
Development of laser guide stars and adaptive optics for large astronomical telescopes
| DE93-007511 | p 2888 N93-25320

ISOTOPIC LABELING
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
| DE93-007815 | p 2793 N93-26587

ITERATION
Monte Carlo approach to the approximation of invariant measures
| PB93-159069 | p 2830 N93-26317
Power iterations and the dominant eigenvalue problem
| AD-A261695 | p 2829 N93-26370
Boundedness and asymptotics of the generalized theodorus iteration
| AD-A261427 | p 2829 N93-26452

ITERATIVE SOLUTION
PCG: A software package for the iterative solution of linear systems on scalar, vector and parallel computers
| DE93-007366 | p 2809 N93-25315
The rapid solution of the Laplace equation on regions with fractal boundaries
| AD-A260585 | p 2828 N93-25905
Power iterations and the dominant eigenvalue problem
| AD-A261695 | p 2829 N93-26370

J

J INTEGRAL
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390

JAPAN
Application of satellite imageries data to fisheries in Japan p 2745 N93-24822
Lightning characteristics in the north-east part of Japan observed by a magnetic direction-finder network
p 2779 N93-24892
Japanese Technology Evaluation Center Workshop on Advanced Manufacturing Technology for Polymer Composite Structures in Japan
| PB93-165249 | p 2641 N93-26589

JET BOUNDARIES
Liquid surface breakup of nonturbulent and turbulent liquids p 2700 N93-25473

JET ENGINE FUELS
Development of a method to determine the autoxidation of turbine fuels
| AD-A260578 | p 2661 N93-25902
Influence of supercritical conditions on pre-combustion chemistry and transport behavior of jet fuels
| AD-A261813 | p 2661 N93-26268
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

JET ENGINES
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201
Development and demonstration of a new filter system to control emissions during jet engine testing
| AD-A261203 | p 2766 N93-26243

JET FLOW
The steady Navier-Stokes problem for low Reynolds number viscous jets p 2698 N93-25264
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds
p 2577 N93-25487
The instability of a liquid jet in a compressible airstream p 2703 N93-25560
Algorithms for the analysis of penetration by shaped charge jets
| UCRL-LR-109887 | p 2730 N93-26178
Measurements of scalar power spectra in high Schmidt number turbulent jets
| AD-A261542 | p 2707 N93-26379
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

JET IMPINGEMENT
Reduction in size and unsteadiness of a VTOL ground vortex by ground fences
| NASA-CR-192997 | p 2580 N93-26049

JET MIXING FLOW
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds p 2577 N93-25487
Measurements of scalar power spectra in high Schmidt number turbulent jets
| AD-A261542 | p 2707 N93-26379
JOINED WINGS
Structural and aerodynamic optimization of joined-wing aircraft p 2588 N93-25526
JOINTS (JUNCTIONS)
SRB environment evaluation and analysis. Volume 2: RSRB joint filling test/analysis improvements
| NASA-CR-192518 | p 2631 N93-26057
JOSEPHSON JUNCTIONS
A superconducting tunnel junction receiver for submillimeter astronomy, and analysis of observations of post-AGB star molecular envelopes p 2889 N93-25440
Experimental and theoretical studies of proximity effect and Coulomb blockade phenomena in Josephson junctions
| AD-A261652 | p 2867 N93-26194
Advanced HTS S-N-S devices
| AD-A261552 | p 2869 N93-26381
JP-5 JET FUEL
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
| AD-A260915 | p 2661 N93-25914

K

K-EPSILON TURBULENCE MODEL
Fuel injector: Air swirl characterization aerothermal modeling, phase 2, volume 1
| NASA-CR-189193 | p 2592 N93-24754
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
Predictive modeling of particle-laden, turbulent flows
| DE93-008208 | p 2698 N93-25309
Studies in air/air supersonic mixing layers p 2582 N93-26007
Interactions of acoustic waves and combustion of homogeneous solid propellants in rocket motors p 2630 N93-26039
KALMAN FILTERS
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Improvements in ERBS attitude determination without gyros p 2602 N93-24710
Rate determination from vector observations p 2603 N93-24713
Scalar gain interpretation of large order filters p 2606 N93-24729
Quaternion normalization in spacecraft attitude determination p 2606 N93-24730
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Orbital parameter estimation using an extended Kalman filter
| AD-A260618 | p 2608 N93-25636
Recommendations for a Kalman filter to estimate and control freeze and sublime rates of gaseous diffusion plant freezer/sublimer systems
| ORNL/TM-12183 | p 2668 N93-25937
System for calibrating a gyro navigator
| AD-D015668 | p 2586 N93-26093
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine
| NASA-TM-106097 | p 2632 N93-26211
PDE: Differential, geometric and algebraic methods in nonlinear filtering
| AD-A260967 | p 2829 N93-26222
More rain compensation results p 2686 N93-26486
KAONS
Topics in CP violation
| DE93-007615 | p 2847 N93-25323
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364
KENYA
The extent and status of mangroves in Mombasa district, Kenya: A case study based on remote sensing p 2746 N93-24826
KERNEL FUNCTIONS
Fast mutual exclusion for uniprocessors
| AD-A261663 | p 2883 N93-26389
KERR MAGNETOOPTICAL EFFECT
Femtosecond dynamics in hydrogen-bonding solvents: Formamides
| DE93-003476 | p 2643 N93-25123
KINEMATIC EQUATIONS
Numerical kinematic transformation calculations for a parallel link manipulator
| DE93-005778 | p 2718 N93-25449
KINEMATICS
Rate determination from vector observations p 2603 N93-24713
Position and force control of a vehicle with two or more steerable drive wheels
| DE92-041301 | p 2717 N93-25100
Equilibrium constrained assumed natural coordinate strain finite elements for shell analysis p 2724 N93-25273
On the vertical structure of seasonal, interannual and intraseasonal flows p 2782 N93-25557
Studies in air/air supersonic mixing layers p 2582 N93-26007
KINETIC ENERGY
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659
An investigation of the role of flux divergence in the turbulent kinetic energy balance of the atmospheric surface layer p 2773 N93-25756
KINETICS
Thermal decomposition of HMX, mononitroso-RDX, TNCHP and K6 in the liquid phase: Results from simultaneous thermogravimetry modulated beam mass spectrometry measurements p 2628 N93-26033
Phase-field models for anisotropic interfaces
| PB93-164564 | p 2646 N93-26323
KLYSTRONS
Transverse instabilities in a relativistic klystron two-beam accelerator
| DE93-007110 | p 2852 N93-25375
BBU code development for high-power microwave generators
| DE93-007111 | p 2688 N93-25397
Improvements in X-band transmitter phase stability through Klystron body temperature regulation p 2678 N93-26114
KNOWLEDGE BASED SYSTEMS
How far we are from the complete knowledge: Complexity of knowledge acquisition in Dempster-Shafer approach
| NASA-CR-192944 | p 2874 N93-25139
How to help intelligent systems with different uncertainty representations cooperate with each other
| NASA-CR-192947 | p 2818 N93-25196
Min and max are the only continuous ampersand-, V-operations for finite logics
| NASA-CR-192952 | p 2820 N93-25452
Multi-viewpoint clustering analysis p 2825 N93-25980
Knowledge-based decision support for Space Station assembly sequence planning
| NASA-CR-193048 | p 2599 N93-26095
Design Knowledge Management System (DKMS) Beta Test Report
| AD-A261453 | p 2883 N93-26350
KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
How far we are from the complete knowledge: Complexity of knowledge acquisition in Dempster-Shafer approach
| NASA-CR-192944 | p 2874 N93-25139
Optimization of knowledge-based systems and expert system building tools
| NASA-CR-192763 | p 2874 N93-25288
Development of a heuristic knowledge base for the selection of applicable or relevant and appropriate environmental requirements
| AD-A261038 | p 2765 N93-25864
KNOWLEDGE REPRESENTATION
A knowledge-based approach to waste disposal sites detection through integration of Landsat-TM imagery and geographical context information p 2741 N93-24796
Min and max are the only continuous ampersand-, V-operations for finite logics
| NASA-CR-192952 | p 2820 N93-25452
TARGET: Rapid capture of process knowledge p 2814 N93-25590
A study of mapping exogenous knowledge representations into CONFIG p 2827 N93-26072
Design Knowledge Management System (DKMS) Beta Test Report
| AD-A261453 | p 2883 N93-26350
KOLMOGOROFF THEORY
PDE: Differential, geometric and algebraic methods in nonlinear filtering
| AD-A260967 | p 2829 N93-26222
KRYPTON FLUORIDE LASERS
Mercury: The Los Alamos ICF KrF laser system
| DE93-007363 | p 2713 N93-25379
KURTOSIS
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672

L

LACTATES
The 0.3 mm diameter flexible amperometric lactate probe
| AD-A260826 | p 2690 N93-25782
LAGEOS (SATELLITE)
STS-52 Space Shuttle mission report
| NASA-CR-193061 | p 2613 N93-25993
LAGRANGIAN FUNCTION
Formulation and treatment of frictional contact problems using finite elements p 2717 N93-25412
Image correlation velocimetry
| AD-A261599 | p 2707 N93-26163
An extended Lagrangian method
| NASA-TM-106129 | p 2707 N93-26203
Chaos metrics for testing lagrangian particle models
| AD-A261429 | p 2776 N93-26454
LAKES
Inherent optical properties of lakes as measured by Landsat 5 Thematic Mapper p 2746 N93-24828
Earthquake vulnerability map of the Lake Constance area p 2753 N93-24872
LAMB WAVES
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009
LAMINAR FLOW
A premixed laminar flame interacting with a vortex resulting in flame stretch and quenching p 2642 N93-24771
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176
Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865
On the cross-stream spectral method for the Orr-Sommerfeld equation
| NASA-TM-107737 | p 2845 N93-26086
Solution of nonlinear boundary value problem on successively refined grids
| AD-A261395 | p 2829 N93-26519
LAMINATES
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912
High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
| NASA-TM-106001 | p 2723 N93-24913
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
Stress distribution in composite flatwise tension test specimens
| NASA-TM-106074 | p 2634 N93-25071
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
| DE93-007504 | p 2635 N93-25383
Graphite/epoxy composite laminates with co-cured interlaminar damping layers p 2642 N93-25587
Damage-survivable and damage-tolerant laminated composites with optimally placed piezoelectric layers
| AD-A260879 | p 2636 N93-25631
Numerical simulation of damage and progressive failures in composite laminates using the layerwise plate theory p 2636 N93-25661
Inelastic behavior of thermoplastic composites p 2636 N93-25674
Investigation and modeling of penetration process for composite laminates impacted by a blunt-ended projectile p 2637 N93-25675
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
Low-velocity impact of composite sandwich plate p 2637 N93-25695
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701
Thermal expansion measurements of polymer matrix composites and syntactics
| MTL-TR-92-27 | p 2640 N93-25954
LAND MANAGEMENT
European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820

Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850

LAND MOBILE SATELLITE SERVICE

Numerical and experimental analyses of large composite skeletal satellite systems p 2616 N93-25463

L- and K-band LMSS propagation measurements using MARECS-B, OLYMPUS, and ACTS p 2683 N93-26467

LAND SURFACE TEMPERATURE

Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment | NASA-CR-192826 | p 2769 N93-24945

Evaluating climate-vegetation interactions at climate model sub-grid scales p 2764 N93-25476

LAND USE

Application of remote sensing data for the investigation of environmental degradation sites in East Germany p 2739 N93-24785

Land cover monitoring in the Netherlands applying satellite remote sensing p 2740 N93-24789

Detection of land use/land cover changes using remote sensing and GIS in Vietnam p 2740 N93-24791

The photointerpretation of the area taken over from agriculture by intense urbanization at Villabate (Palermo, Italy) p 2742 N93-24800

European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820

Aerial photographic sampling for statewide resource inventory p 2755 N93-25441

LANDSAT SATELLITES

Bibliography of remote sensing techniques used in wetland research | AD-A261704 | p 2757 N93-26440

LANDSAT 4

Classifying multispectral data by neural networks p 2825 N93-25976

LANGMUIR-BLODGETT FILMS

Molecular devices based on new monolayer-forming systems | AD-A260996 | p 2866 N93-25854

LANGUAGES

Languages for requirements specifications | RSRE-MEMO-4585 | p 2810 N93-25453

LAP JOINTS

Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques | DE93-008074 | p 2721 N93-25518

LAPLACE EQUATION

The rapid solution of the Laplace equation on regions with fractal boundaries | AD-A260585 | p 2828 N93-25905

LAPLACE TRANSFORMATION

Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533

LARGE DEPLOYABLE REFLECTOR

Numerical and experimental analyses of large composite skeletal satellite systems p 2616 N93-25463

LARGE SPACE STRUCTURES

Optimal control of large space structures p 2819 N93-25343

Identification and control of lightly damped, large space structures: An experimental evaluation p 2616 N93-25351

Analytical and experimental study of control effort associated with model reference adaptive control p 2820 N93-25468

The dynamics and control of large flexible asymmetric spacecraft p 2617 N93-25525

Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system | AD-A260793 | p 2599 N93-25693

Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726

Center for Space Construction Third Annual Symposium | NASA-CR-192688 | p 2669 N93-26405

Dynamics of on-orbit construction process p 2669 N93-26406

Interaction dynamics and control for orbital assembly p 2669 N93-26407

Controls for orbital assembly of large space structures p 2620 N93-26408

Structural load control during construction p 2669 N93-26409

LASER ABLATION

Structure and properties of a-C: N films prepared by pulsed excimer laser deposition | DE93-007908 | p 2654 N93-25372

Fast diagnostics of laser ablation used for pulsed laser deposition | DE93-005155 | p 2713 N93-25508

LASER ALTIMETERS

A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707

LASER APPLICATIONS

A compact and high-performance reference cell for laser frequency stabilization p 2716 N93-25065

Laser desorption in an ion trap mass spectrometer | DE93-007330 | p 2712 N93-25150

Laser ignition application in a space experiment | NASA-TM-106133 | p 2664 N93-25337

JPRS report: Science and technology. Central Eurasia: Physics and mathematics | JPRS-UPM-92-004 | p 2844 N93-25402

JPRS report: Science and technology. Central Eurasia: Physics and mathematics | JPRS-UPM-92-003 | p 2844 N93-25403

JPRS report: Science and technology. Central Eurasia: Physics and mathematics | JPRS-UPM-93-001 | p 2844 N93-25404

Laser Induced Phonons (LIPs) in MBE grown ZnSe | RSRE-MEMO-4544 | p 2864 N93-25454

Laser initiated corrosion pits on aluminum p 2650 N93-25464

Application of an on-machine gage for diameter measurements p 2711 N93-25578

Liquid crystals for laser applications | AD-A261209 | p 2714 N93-25869

Method of joining diamond structures | AD-D015671 | p 2867 N93-26140

Research support for the Laboratory for Lightwave Technology | AD-A261488 | p 2856 N93-26343

Molecular interactions and properties with many-body methods | AD-A261688 | p 2850 N93-26367

LASER ARRAYS

Ultraviolet waveguide lasers for phased array lidar | AD-A261657 | p 2715 N93-26363

LASER BEAMS

Laser beamed power: Satellite demonstration applications | NASA-CR-190793 | p 2623 N93-25132

Summary of progress in inertial confinement fusion | DE93-007350 | p 2858 N93-25187

Laser field assisted photoemission using femtosecond laser pulses | DE93-007277 | p 2712 N93-25378

Laser propagation through turbulence | AD-A260712 | p 2714 N93-26217

Loss of temporal coherence of laser light propagated through simulated coastal waters | AD-A261303 | p 2715 N93-26296

Efficient nonlinear optical conversion of 1.319-micron laser radiation | AD-A261309 | p 2715 N93-26297

Laser physics and laser techniques | AD-A261595 | p 2715 N93-26524

Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings | DE93-007513 | p 2857 N93-26593

LASER CAVITIES

Fundamental characteristics of a laser-diode-pumped rubidium maser with an external feedback loop p 2716 N93-25068

LASER DAMAGE

Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications | DE93-005485 | p 2852 N93-25182

Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy | DE93-007509 | p 2654 N93-25384

Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings | DE93-007513 | p 2857 N93-26593

Laser damage to production- and research-grade KDP crystals | DE93-007517 | p 2870 N93-26594

LASER DOPPLER VELOCIMETERS

An investigation of laser velocimetry measurements within high speed, complex flows p 2697 N93-25237

Measurement of velocities in gas-liquid two-phase flow using laser Doppler velocimetry | DE93-008083 | p 2698 N93-25306

Pulsed laser Rayleigh scattering diagnostic for hydrogen/oxygen rocket exit plane flowfield velocimetry | NASA-TM-106098 | p 2631 N93-26149

Trailing vortex/free-surface interaction | AD-A261654 | p 2581 N93-26195

LASER FUSION

Start-up imprinting and shock dynamics in laser-target interaction | AD-A261384 | p 2715 N93-26445

Laser damage to production- and research-grade KDP crystals | DE93-007517 | p 2870 N93-26594

LASER GUIDANCE

Feasibility experiment for sodium-layer laser guide stars at the Lawrence Livermore National Laboratory | DE93-007115 | p 2715 N93-26503

LASER GYROSCOPES

An active solid state ring laser gyroscope p 2709 N93-25291

Applications of inertial-sensor high-inheritance instruments to DSN precision antenna pointing p 2621 N93-26112

LASER INDUCED FLUORESCENCE

Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame | NASA-CR-191099 | p 2642 N93-25116

Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570

Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF) p 2598 N93-26006

LASER MATERIALS

Laser damage to production- and research-grade KDP crystals | DE93-007517 | p 2870 N93-26594

LASER MODE LOCKING

Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures | AD-A261170 | p 2714 N93-25774

Laser physics and laser techniques | AD-A261595 | p 2715 N93-26524

LASER MODES

Fundamental characteristics of a laser-diode-pumped rubidium maser with an external feedback loop p 2716 N93-25068

Laser physics and laser techniques | AD-A261595 | p 2715 N93-26524

LASER OUTPUTS

An active solid state ring laser gyroscope p 2709 N93-25291

Laser field assisted photoemission using femtosecond laser pulses | DE93-007277 | p 2712 N93-25378

Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389

Experimental and theoretical study of cw HF chemical laser overtone performance p 2713 N93-25420

Experimental and theoretical study of CW HF chemical laser residual fundamental gain p 2714 N93-25721

Start-up imprinting and shock dynamics in laser-target interaction | AD-A261384 | p 2715 N93-26445

Laser physics and laser techniques | AD-A261595 | p 2715 N93-26524

Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings | DE93-007513 | p 2857 N93-26593

FALCON nuclear-reactor-pumped laser program and wireless power transmission | DE93-007607 | p 2715 N93-26597

LASER PLASMA INTERACTIONS

Surface discharge photoinitiation of pulsed chemical lasers | DE93-006337 | p 2712 N93-24967

LASER PLASMAS

IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source | AD-A261399 | p 2862 N93-26520

LASER POWER BEAMING

Laser beamed power: Satellite demonstration applications | NASA-CR-190793 | p 2623 N93-25132

Handbook of actuators and edge alignment sensors | NASA-CR-193203 | p 2620 N93-25317

Space transfer concepts and analyses for exploration missions. Technical directive 12: Beamed power systems study | NASA-CR-192532 | p 2599 N93-26146

FALCON nuclear-reactor-pumped laser program and wireless power transmission | DE93-007607 | p 2715 N93-26597

LASER PUMPING

Experiments on a diode-laser-pumped Rb-87 maser p 2716 N93-25030

Fundamental characteristics of a laser-diode-pumped rubidium maser with an external feedback loop p 2716 N93-25068

Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389

1992 technical digest series volume 16. Conference edition: Summaries of papers presented at the Nonlinear Dynamics in Optical Systems Topical Meeting
| AD-A261915 | p 2857 N93-26544

LASER RANGE FINDERS
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument p 2711 N93-25614
A determination of the radio-planetary frame tie from comparison of Earth orientation parameters p 2676 N93-26106
Lageos laser ranging earth rotation
| AD-A261471 | p 2757 N93-26354

LASER TARGET INTERACTIONS
Start-up imprinting and shock dynamics in laser-target interaction
| AD-A261384 | p 2715 N93-26445

LASER WELDING
Laser welding of selected aerospace alloys p 2718 N93-25435

LASERS
Mercury: The Los Alamos ICF KrF laser system
| DE93-007363 | p 2713 N93-25379
Robotic Variable Polarity Plasma Arc (VPPA) welding p 2720 N93-25605
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967
Efficient nonlinear optical conversion of 1.319-micron laser radiation
| AD-A261309 | p 2715 N93-26297

LASING
FALCON nuclear-reactor-pumped laser program and wireless power transmission
| DE93-007607 | p 2715 N93-26597

LATENT HEAT
Local and regional estimates of sensible and latent heat flux densities from a patch-work surface
| ISBN-0-315-70882-4 | p 2772 N93-25556

LATERAL CONTROL
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358

LATTICE VIBRATIONS
Spectroscopic effects of disorder and vibrational localization in mixed-halide metal-halide chain solids
| DE93-007361 | p 2646 N93-26505

LAUNCH VEHICLE CONFIGURATIONS
National Launch System. Task 4: System architecture options analysis
| MCR-92-5011 | p 2609 N93-26098

LAUNCH VEHICLES
What is the relationship between altitude and weight in a model rocket? p 2603 N93-24715
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
Space transfer vehicle concepts and requirements study. Volume 1: Executive summary
| NASA-CR-192524 | p 2610 N93-25479
Space transfer vehicle concepts and requirements study. Volume 2, book 2: System and program requirements trade studies
| NASA-CR-192526 | p 2611 N93-25511
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513

LAUNCH WINDOWS
Practical aspects of transfer from GTO to lunar orbit p 2604 N93-24719

LAUNCHING
Systems engineering considerations for operational support systems p 2666 N93-24689
Investigation of the effects of Extra Vehicular Activity (EVA) and Launch and Entry (LES) gloves on performance p 2803 N93-26061
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs p 2670 N93-26063
Task 2A: UNIS requirements and concepts
| MCR-92-5006-PT-A | p 2610 N93-26180
Develop margin philosophy to attain robustness
| MCR-92-5005 | p 2610 N93-26182
Task Type E report for National Launch Demonstration Center (NLDC) (Task 32)
| MCR-91-5010 | p 2610 N93-26591

LAUNCHING BASES
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889

LAUNCHING SITES
Launch pad lightning protection enhancement by induced streamers p 2609 N93-24876

LEACHING
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill p 2659 N93-25585

LEAD (METAL)
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364

LEAD SELENIDES
Introduction to lead salt infrared detectors
| AD-A260781 | p 2710 N93-25686

LEAD SULFIDES
Introduction to lead salt infrared detectors
| AD-A260781 | p 2710 N93-25686

LEAD TITANATES
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823

LEADING EDGE FLAPS
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134

LEADING EDGES
The transient development of vortices over delta wings p 2576 N93-25269
Numerical simulation of leading-edge receptivity to freestream vorticity p 2577 N93-25388

LEAKAGE
Inward contaminant leakage tests of the S-Tron Corporation emergency escape breathing device. Phase 1: Tests of the original design. Phase 2: Tests with the redesigned neck seal
| DOT/FAA/AM-92/18 | p 2582 N93-25205
Tank issues: Design and placement of vapor monitoring wells
| PB93-161131 | p 2768 N93-26536

LEAST SQUARES METHOD
TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703
Stabilized finite element methods for incompressible flows with emphasis on moving boundaries and interfaces p 2703 N93-25663
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773

LEG (ANATOMY)
Anthropometry of the foot and lower leg of U.S. Army soldiers: Fort Jackson, SC
| AD-A261405 | p 2802 N93-26404

LENNARD-JONES POTENTIAL
Experimental and theoretical studies of dense fluid mixtures
| DE93-006070 | p 2695 N93-24976

LENSES
The prevalence of artificial lens implants in the civil airman population
| DOT/FAA/AM-92/14 | p 2794 N93-25214
A fiber optic probe for the detection of cataracts p 2796 N93-25593

LESIONS
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347

LEVITATION
Tuned circuit electric levitation bearings for microactuators p 2689 N93-25619

LEWIS NUMBERS
A premixed laminar flame interacting with a vortex resulting in flame stretch and quenching p 2642 N93-24771
Modelling of microgravity ignition phenomena p 2664 N93-25465

LIAPUNOV FUNCTIONS
Control of nonlinear systems under input constraints with applications to flight control p 2596 N93-25353

LIBRARIES
Crossing the frontier between publishing and information service
| DE93-002894 | p 2873 N93-24677
Interactive interface for National Center for Atmospheric Research (NCAR) Graphics p 2878 N93-25794
Proceedings of the 33rd Annual Military LibrariansWorkshop
| AD-A261071 | p 2882 N93-26242

LIBRATION
Optimal transfers between libration-point orbits in the elliptic restricted three-body problem p 2608 N93-25758

LIBRATIONAL MOTION
Femtosecond dynamics in hydrogen-bonding solvents: Formamides
| DE93-003476 | p 2643 N93-25123

LIBYA
Remote sensing of coastal zone Sabkha deposits, Gulf of Sirt, Libya p 2746 N93-24827

LIFE (DURABILITY)
A new approach to cooled combustion chambers: The 40K formed platelet chamber p 2626 N93-26018

LIFE CYCLE COSTS
Space transfer concepts and analyses for exploration missions. Technical directive 12: Beamed power systems study
| NASA-CR-192532 | p 2599 N93-26146
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585

LIFE SCIENCES
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-93-002 | p 2737 N93-25399
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-025 | p 2793 N93-25405
The effects of video compression on acceptability of images for monitoring life sciences' experiments p 2805 N93-25930

LIFE SUPPORT SYSTEMS
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085
Near Earth object fuels (neo-fuels): Discovery, prospecting and use
| DE93-005185 | p 2892 N93-25164
Space life support technology applications to terrestrial environmental problems p 2803 N93-25617
Advanced life support study. Modification 10: ECLSS logistical support analysis for Space Station Freedom
| NASA-CR-192481 | p 2801 N93-25888
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
Integrated oxygen recovery system
| NASA-CR-192982 | p 2801 N93-26088

LIFT
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow
| DE93-003362 | p 2695 N93-24963
Aerodynamic foundations for use of unsteady aerodynamic effects in flight control p 2576 N93-25274

LIGANDS
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518

LIGHT BEAMS
A fiber optic probe for the detection of cataracts p 2796 N93-25593
Analysis and design of a novel robotic finger-tip sensor for adaptive grasping p 2719 N93-25745

LIGHT EMISSION
Visible light emission from porous silicon examined by photoluminescence and Raman spectroscopy
| DE93-006780 | p 2646 N93-26502

LIGHT EMITTING DIODES
Emerging large-screen display technology
| AD-A261066 | p 2681 N93-26241

LIGHT IONS
Summary of progress in inertial confinement fusion
| DE93-007350 | p 2858 N93-25187

LIGHT SCATTERING
Coarsening of a quiescent electrorheological fluid I: Experiment
| DE93-006776 | p 2642 N93-24972
Analysis of LARI sensor system
| DE93-006334 | p 2761 N93-24977
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369
The role of multiple scattering in twilight zenith sky observations of atmospheric absorbers: Diurnal photochemistry and airmass factors p 2772 N93-25535
A fiber optic probe for the detection of cataracts p 2796 N93-25593
Measurement of optical properties of infrared bandgap superlattices
| AD-A260859 | p 2866 N93-25789
Experimental studies of fundamental problems in quantum optics
| AD-A261183 | p 2853 N93-25822
Development of an expendable particle sensor
| AD-A261127 | p 2710 N93-26044
Pulsed laser Rayleigh scattering diagnostic for hydrogen/oxygen rocket exit plane flowfield velocimetry
| NASA-TM-106098 | p 2631 N93-26149
Loss of temporal coherence of laser light propagated through simulated coastal waters
| AD-A261303 | p 2715 N93-26296

LIGHT TRANSMISSION
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
LIGHTING EQUIPMENT
Launch pad lightning protection enhancement by induced streamers p 2609 N93-24876
LIGHTNING
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Launch pad lightning protection enhancement by induced streamers p 2609 N93-24876
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
Zoning of aircraft: A review of the definitions p 2583 N93-24880
Equipment testing with damped sinewaves between 1 and 50 MHz p 2692 N93-24881
Lightning data acquisition p 2778 N93-24883
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Comparison of the damage for various types of fibre reinforced composites due to different lightning test standards (MIL-STD-1757A, German military VG-standard 96903) p 2642 N93-24891
Lightning characteristics in the north-east part of Japan observed by a magnetic direction-finder network p 2779 N93-24892
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Zoning of aircraft by electric field modelling p 2583 N93-24894
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
Comparative performance of lightning air terminals under natural storm conditions p 2781 N93-24902
Remote sensing of precipitation and electrification with a dual-polarization, coherent, wideband radar system
| AD-A260779 | p 2756 N93-25679
The initiation of lightning and the growth of electric fields in thunderstorms
| AD-A261455 | p 2787 N93-26352
LIGHTNING SUPPRESSION
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
Equipment testing with damped sinewaves between 1 and 50 MHz p 2692 N93-24881
Comparative performance of lightning air terminals under natural storm conditions p 2781 N93-24902
LINE OF SIGHT
Tomographic analysis of sight infrared spectra of low pressure flames p 2628 N93-26030
LINE SHAPE
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258
LINE SPECTRA
Density dependence of line intensities and application to plasma diagnostics
| NIFS-209 | p 2857 N93-24950
Line formation and the Poynting-Robertson effect in accretion discs p 2847 N93-25355
Exploitation of cyclostationarity for signal-parameter estimation and system identification
| AD-A260833 | p 2728 N93-25784
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258
LINEAR ARRAYS
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823
LINEAR EQUATIONS
Some new results for solving linear systems arising from computational fluid dynamics problems p 2699 N93-25349
LINEAR FILTERS
Scalar gain interpretation of large order filters p 2606 N93-24729
LINEAR PREDICTION
Rain compensation algorithm using adaptive linear prediction p 2685 N93-26485
LINEAR PROGRAMMING
Linear-programming tools in integer programming: The traveling salesman
| AD-A261398 | p 2812 N93-26290
Methods of optimization under uncertainty
| AD-A261487 | p 2873 N93-26342
Integrated approaches to parallelism in optimization and the solution of inverse problems
| AD-A261490 | p 2829 N93-26344
LINEAR QUADRATIC GAUSSIAN CONTROL
Design of the reduced LQG compensator for the DSS-13 antenna p 2672 N93-24669
Identification and control of lightly damped, large space structures: An experimental evaluation p 2616 N93-25351
Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system
| AD-A260793 | p 2599 N93-25693
LINEAR SYSTEMS
Robust controls with structured perturbations
| NASA-CR-192956 | p 2817 N93-24757
Stability margins for multilinear interval systems by way of phase conditions: A unified approach
| NASA-CR-192893 | p 2819 N93-25226
Parametric stability margin for multilinear interval control systems
| NASA-CR-192892 | p 2819 N93-25296
PCG: A software package for the iterative solution of linear systems on scalar, vector and parallel computers
| DE93-007366 | p 2809 N93-25315
Some new results for solving linear systems arising from computational fluid dynamics problems p 2699 N93-25349
Stochastic and seismic design response of linear and nonlinear structures p 2726 N93-25484
The rapid solution of the Laplace equation on regions with fractal boundaries
| AD-A260585 | p 2828 N93-25905
LINEARITY
Log-ratio signal-processing technique for beam position monitors
| DE93-007356 | p 2851 N93-25314
LINEARIZATION
Prediction of unsteady flows in turbomachinery using the linearized Euler equations on deforming grids
| NASA-CR-192919 | p 2696 N93-25109
Line formation and the Poynting-Robertson effect in accretion discs p 2847 N93-25355
LINGUISTICS
Speech research
| AD-A260643 | p 2675 N93-25639
LININGS
A new approach to cooled combustion chambers: The 40K formed platelet chamber p 2626 N93-26018
Behavior of a steel-liner-and-bolts system under very high thermal and mechanical loading: The CONVEX Liner Add-On to DIAMOND FORTUNE
| DE93-007512 | p 2731 N93-26507
LINKAGES
Nonholonomic geometry, mechanics and control p 2724 N93-25270
LIPIDS
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764
LIQUEFIED GASES
Emissions from ethanol and LPG fueled vehicles
| DE93-006410 | p 2660 N93-25192
LIQUID ALLOYS
FNAS computational modeling
| NASA-CR-192512 | p 2863 N93-25225
LIQUID CRYSTALS
Adaptive liquid crystal TV based joint transform correlator as applied to real-time pattern recognition
| AD-A260724 | p 2864 N93-25655
Liquid crystals for laser applications
| AD-A261209 | p 2714 N93-25869
LIQUID FLOW
The instability of a liquid jet in a compressible airstream p 2703 N93-25560
LIQUID FUELS
Catalytic conversion of light alkanes
| DE93-009646 | p 2644 N93-25499
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE93-009707 | p 2644 N93-25500
Microwave absorption measurements and interference: Effects for a liquid fuel between 2.5 and 18 GHz
| AD-A260607 | p 2675 N93-25635
LIQUID HELIUM
The design of a propulsion system using vent gas from a liquid helium cryogenic system p 2623 N93-25539
LIQUID INJECTION
Liquid surface breakup of nonturbulent and turbulent liquids p 2700 N93-25473
The instability of a liquid jet in a compressible airstream p 2703 N93-25560
LIQUID METALS
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779
LIQUID NITROGEN
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
LIQUID PHASE EPITAXY
Optical characterization of Ga(1-x)In(x)As(y)Sb(1-y)/GaSb alloy and device application
| AD-A261713 | p 2870 N93-26581
LIQUID PHASES
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760
The nature of the glass transition and its determination by thermal analysis
| DE93-006746 | p 2654 N93-25374
Thermal decomposition of HMX, mononitroso-RDX, TNCHP and K6 in the liquid phase: Results from simultaneous thermogravimetry modulated beam mass spectrometry measurements p 2628 N93-26033
LIQUID PROPELLANT ROCKET ENGINES
A neural network-based estimator for the mixture ratio of the Space Shuttle Main Engine
| NASA-TM-106070 | p 2622 N93-25089
The 29th JANNAF Combustion Subcommittee Meeting, volume 2
| CPIA-PUBL-593-VOL-2 | p 2624 N93-26005
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine p 2626 N93-26017
Liquid Rocket Booster (LRB) for the Space Transportation System (STS) Systems Study. Amendment 13: Orientation meeting
| NASA-CR-192515 | p 2614 N93-26152
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373
LIQUID ROCKET PROPELLANTS
The 29th JANNAF Combustion Subcommittee Meeting, volume 2
| CPIA-PUBL-593-VOL-2 | p 2624 N93-26005
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine p 2626 N93-26017
LIQUID SLOSHING
Stabilized finite element methods for incompressible flows with emphasis on moving boundaries and interfaces p 2703 N93-25663
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438
LIQUID SURFACES
Liquid surface breakup of nonturbulent and turbulent liquids p 2700 N93-25473
LIQUID-GAS MIXTURES
Parameters influencing the hot-spot ignition of aviation fuel/air and ethylene/air mixtures p 2583 N93-24886
Flow visualizations of perpendicular blade vortex interactions
| NASA-CR-192725 | p 2696 N93-25208
Measurement of velocities in gas-liquid two-phase flow using laser Doppler velocimetry
| DE93-008083 | p 2698 N93-25306
LIQUID-LIQUID INTERFACES
Tracking sharp interface of two fluids by the CIP (Cubic-Interpolated Propagation) scheme
| NIFS-206 | p 2698 N93-25277
LIQUID-SOLID INTERFACES
Computation of complex solidification morphologies using a phase-field model
| PB93-156743 | p 2869 N93-26547
LIQUID-VAPOR INTERFACES
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760
Experimental and theoretical studies of dense fluid mixtures
| DE93-006070 | p 2695 N93-24976

LIQUIDS
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528
LITHIUM
Dynamics of collision processes
| DE93-007143 | p 2849 N93-25509
LITHIUM HYDROXIDES
The properties of and analytical methods for detection of LiOH and Li2CO3
| NASA-CR-192771 | p 2643 N93-25240
LITHIUM NIOBATES
Efficient nonlinear optical conversion of 1.319-micron laser radiation
| AD-A261309 | p 2715 N93-26297
LITHOGRAPHY
VETA-I x ray test analysis
| NASA-CR-192321 | p 2854 N93-26183
LITHOLOGY
Lithologic mapping with LANDSAT Thematic Mapper guided by laboratory spectral measurements, Air, Niger (Africa) p 2742 N93-24803
LITHOSPHERE
Improved determination of vector lithospheric magnetic anomalies from MAGSAT data
| NASA-CR-192784 | p 2771 N93-25201
LOAD DISTRIBUTION (FORCES)
Energy dissipation in inelastic flow of cohesionless granular media p 2703 N93-25662
Radial spline assembly for antifriction bearings
| NASA-CASE-MFS-28629-1 | p 2719 N93-26001
LOAD TESTS
Stress distribution in composite flatwise tension test specimens
| NASA-TM-106074 | p 2634 N93-25071
LOADS (FORCES)
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009
Apparatus and methods for determining balance of a cylindrical vehicle
| AD-D015637 | p 2717 N93-25228
Helmeted head and neck dynamics under whole-body vibration p 2800 N93-25531
Estimating turbine limit load
| NASA-CR-191105 | p 2580 N93-25883
Methods of determining loads and fiber orientations in anisotropic non-crystalline materials using energy flux deviation
| NASA-CASE-LAR-14399-1 | p 2729 N93-26102
LOCAL AREA NETWORKS
Time and frequency reference for a trajectory measurement system p 2837 N93-25023
RAID-2: Design and implementation of a large scale disk array controller
| NASA-CR-192911 | p 2806 N93-25233
Interfacing a high performance disk array file server to a Gigabit LAN
| NASA-CR-192898 | p 2816 N93-25458
Gigabit network communications research
| AD-A260644 | p 2675 N93-25640
Proof of fault coverage for a formal protocol test procedure
| AD-A261612 | p 2680 N93-26166
FY92 contributions to the Database Management System Interface Standards Working Group of the Navy Next Generation Computer Resources Program
| AD-A261348 | p 2883 N93-26313
LOCOMOTION
Biped control via nonlinear dynamics p 2718 N93-25697
LOGIC CIRCUITS
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618
A digital hardware test system analysis with test vector translation
| AD-A260849 | p 2810 N93-25786
LOGIC DESIGN
A design of a fast and area efficient multi-input Muller C-element
| AD-A261002 | p 2690 N93-25856
IDEF6: A design rationale capture method concept paper
| AD-A261594 | p 2884 N93-26523
LOGIC PROGRAMMING
A logic-based approach to federated databases p 2876 N93-25466
LOGISTICS
Estimating spares requirements for Space Station Freedom using the M-SPARE model
| AD-A260878 | p 2617 N93-25630
The reuse of logistics carriers for the first lunar outpost alternative habitat study p 2671 N93-26083
LOGISTICS MANAGEMENT
Estimating spares requirements for Space Station Freedom using the M-SPARE model
| AD-A260878 | p 2617 N93-25630
LONG DURATION EXPOSURE FACILITY
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
LONG DURATION SPACE FLIGHT
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-022 | p 2795 N93-25407
The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
Analysis of the lettuce data from the variable pressure growth chamber at NASA Johnson Space Center: A three-stage nested design model p 2794 N93-26069
LONGITUDINAL CONTROL
Control of nonlinear systems under input constraints with applications to flight control p 2596 N93-25353
LORAN C
The accuracy of SYLT- and RNS-based time scales at MTI and SNT during 1990-1991 p 2835 N93-25006
Experimental results of the performance of the new phase and frequency controller p 2839 N93-25035
LOSSES
Symbol signal-to-noise ratio loss in square-wave subcarrier downconversion p 2672 N93-24668
Report of the Seasat Failure Review Board p 2619 N93-24693
The implementation of a lossless data compression module in an advanced orbiting system: Analysis and development p 2804 N93-25928
Lossless compression of image data products on th e FIFE CD-ROM series p 2804 N93-25929
High-performance compression of astronomical images p 2805 N93-25931
Experimental investigation of flow turning losses in unstable rocket motors p 2630 N93-26040
Loss of temporal coherence of laser light propagated through simulated coastal waters
| AD-A261303 | p 2715 N93-26296
LOUDNESS
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521
LOUDSPEAKERS
Low-frequency room responses. Part 1: Background and qualitative considerations
| BBC-RD-1992/8-PT-1 | p 2673 N93-25168
LOW ASPECT RATIO
The blade curving effects in a turbine stator cascade with low aspect ratio
| AD-A261063 | p 2595 N93-26239
LOW ASPECT RATIO WINGS
Supersonic aeroelastic instability results for a NASP-like wing model
| NASA-TM-107739 | p 2591 N93-26553
LOW CARBON STEELS
INEL spray-forming research p 2658 N93-25562
LOW CONCENTRATIONS
Fundamental and applied aspects of defect engineering in GaAs
| AD-A260573 | p 2867 N93-25899
LOW COST
Robo-line storage: Low latency, high capacity storage systems over geographically distributed networks
| NASA-CR-192910 | p 2805 N93-25130
Low cost dewatering of waste slurries p 2769 N93-25573
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
LOW FREQUENCIES
Low-frequency room responses. Part 1: Background and qualitative considerations
| BBC-RD-1992/8-PT-1 | p 2673 N93-25168
Low-frequency room responses. Part 2: Calculation methods and experimental results
| BBC-RD-1992/9-PT-2 | p 2673 N93-25169
The effects of large-amplitude, low-frequency excitation on a three-dimensional jet p 2702 N93-25553
LOW NOISE
A technique for computation of noise temperature due to a beam waveguide shroud p 2671 N93-24661
LOW PRESSURE
Tomographic analysis of sight infrared spectra of low pressure flames p 2628 N93-26030
LOW REYNOLDS NUMBER
The steady Navier-Stokes problem for low Reynolds number viscous jets p 2698 N93-25264
LOW SPEED
Helicopter low-speed yaw control
| NASA-CASE-LAR-14219-1 | p 2597 N93-25998
LOW VOLTAGE
Thin rechargeable batteries for CMOS SRAM memory protection p 2694 N93-25583
LOW WEIGHT
Metal alloy and method of preparation thereof
| AD-D015670 | p 2652 N93-26234
LOWER BODY NEGATIVE PRESSURE
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594
LUBRICANTS
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
LUBRICATION
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204
LUMINAIRES
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026
LUMINESCENCE
Luminescence probe studies of ionomers. 3: Distribution of decay rate constants for tris bipyridyl ruthenium(2) in Nafion membranes
| AD-A260764 | p 2645 N93-25916
LUMINOSITY
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers p 2892 N93-24949
Structure and star forming activities of the cold massive molecular cloud G216-2.5 p 2893 N93-25477
LUMPED PARAMETER SYSTEMS
Dynamic modeling of fluid transmission lines of the DSN 70-meter antennas by using a lumped parameter model p 2678 N93-26119
LUNAR BASED EQUIPMENT
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
Configuration optimization of space structures p 2670 N93-26415
Lunar surface structural concepts and construction studies p 2670 N93-26417
LUNAR BASES
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105
The reuse of logistics carriers for the first lunar outpost alternative habitat study p 2671 N93-26083
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410
Lunar regolith and structure mechanics p 2670 N93-26412
Indigenous lunar construction materials p 2670 N93-26413
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
Configuration optimization of space structures p 2670 N93-26415
Lunar surface structural concepts and construction studies p 2670 N93-26417
LUNAR CONSTRUCTION EQUIPMENT
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410
Indigenous lunar construction materials p 2670 N93-26413
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
Configuration optimization of space structures p 2670 N93-26415
Telerobotic rovers for extraterrestrial construction p 2670 N93-26416
Lunar surface structural concepts and construction studies p 2670 N93-26417
LUNAR DUST
Data analysis and interpretation of lunar dust exosphere p 2898 N93-26059
LUNAR ENVIRONMENT
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs p 2670 N93-26063
The reuse of logistics carriers for the first lunar outpost alternative habitat study p 2671 N93-26083
The interaction of high voltage systems with the environments of the Moon and Mars
| NASA-TM-106107 | p 2618 N93-26148
LUNAR EXPLORATION
A mission concept for near term Lunar exploration
| DE93-007598 | p 2896 N93-25321

LUNAR LANDING
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105
LUNAR ORBITS
Practical aspects of transfer from GTO to lunar orbit p 2604 N93-24719
LUNAR RESOURCES
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Indigenous lunar construction materials p 2670 N93-26413
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
LUNAR ROCKS
Lunar regolith and structure mechanics p 2670 N93-26412
Indigenous lunar construction materials p 2670 N93-26413
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
LUNAR ROVING VEHICLES
A mission concept for near term Lunar exploration
| DE93-007598 | p 2896 N93-25321
Telerobotic rovers for extraterrestrial construction p 2670 N93-26416
LUNAR SHELTERS
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
LUNAR SOIL
Lunar regolith and structure mechanics p 2670 N93-26412
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
LUNAR SPACECRAFT
Space transfer vehicle concepts and requirements study. Volume 2, book 4: Integrated advanced technology development
| NASA-CR-192528 | p 2611 N93-25512
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
LUNAR SURFACE
Data analysis and interpretation of lunar dust exosphere p 2898 N93-26059
LUNGS
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629

M

MACH NUMBER
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134
MACH-ZEHNDER INTERFEROMETERS
Generation of acoustic waves by focused infrared neodymium-laser radiation p 2714 N93-25761
MACHINE LEARNING
Using neural networks and Dyna algorithm for integrated planning, reacting and learning in systems
| NASA-CR-193018 | p 2817 N93-24743
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137
Adaptive decision support systems: Concepts, characterization, and an application p 2876 N93-25475
Tree classification software p 2814 N93-25591
Computation and learning in neural networks with binary weights
| AD-A261182 | p 2821 N93-25821
Center for intelligent control systems
| AD-A260995 | p 2821 N93-25853
Machine learning techniques for fault isolation and sensor placement p 2823 N93-25966
An application of machine learning to the organization of institutional software repositories p 2825 N93-25981
Using modular neural networks with local representations to control dynamic systems
| AD-A261597 | p 2826 N93-26162
Reinforcement learning for robots using neural networks
| AD-A261434 | p 2827 N93-26487
MACHINE TOOLS
Application of an on-machine gage for diameter measurements p 2711 N93-25578
On machine capacitance dimensional and surface profile measurement system p 2670 N93-25579
MAGELLAN PROJECT (NASA)
DSN acquisition of Magellan high-rate telemetry data p 2614 N93-26124
V-GRAM: Magellan bulletin about Venus and the radar mapping mission
| NASA-CR-192923 | p 2898 N93-26424
Revealing the face of Venus: Magellan
| NASA-CR-192922 | p 2898 N93-26517
MAGELLAN SPACECRAFT (NASA)
V-GRAM: Magellan bulletin about Venus and the radar mapping mission
| NASA-CR-192923 | p 2898 N93-26424
Revealing the face of Venus: Magellan
| NASA-CR-192922 | p 2898 N93-26517
MAGELLANIC CLOUDS
30 Doradus in the Large Magellanic Cloud: The stellar content and initial mass function p 2894 N93-25559
MAGNESIUM
Solid state frequency synthesis up to 600 GHz: An application to the Mg frequency standard p 2842 N93-25058
MAGNESIUM ALLOYS
Ignition and combustion of lunar propellants
| NASA-CR-192814 | p 2659 N93-24745
MAGNESIUM OXIDES
Activation of methane by clean and chemically modified single crystal oxide surfaces
| PB93-157295 | p 2644 N93-25817
MAGNETIC ANOMALIES
Improved determination of vector lithospheric magnetic anomalies from MAGSAT data
| NASA-CR-192784 | p 2771 N93-25201
MAGNETIC BEARINGS
Tuned circuit electric levitation bearings for microactuators p 2689 N93-25619
MAGNETIC COILS
Poly-coil design for a 60 tesla quasi-stationary magnet
| DE93-007353 | p 2688 N93-25313
MAGNETIC EFFECTS
Steady induction effects in geomagnetism. Part 1B: Geomagnetic estimation of steady surficial core motions: A non-linear inverse problem
| NASA-TP-3272-PT-1B | p 2776 N93-26421
MAGNETIC FIELD CONFIGURATIONS
Some features of particle orbit behavior in LHD configurations
| NIFS-211 | p 2859 N93-25216
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
MAGNETIC FIELD RECONNECTION
Particle simulation of auroral double layers p 2774 N93-25830
MAGNETIC FIELDS
Lightning characteristics in the north-east part of Japan observed by a magnetic direction-finder network p 2779 N93-24892
Weak magnetic field sensitivity of quartz crystal oscillators p 2833 N93-24993
Improved determination of vector lithospheric magnetic anomalies from MAGSAT data
| NASA-CR-192784 | p 2771 N93-25201
Two-stream instability for a light ion beam-plasma system with external magnetic field
| NIFS-204 | p 2859 N93-25248
New ground states in unconventional superconductors p 2688 N93-25282
Boundary plasma modelling for ITER
| DE93-007963 | p 2859 N93-25302
Poly-coil design for a 60 tesla quasi-stationary magnet
| DE93-007353 | p 2688 N93-25313
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369
Environmental test program for superconducting materials and devices
| DE93-003646 | p 2864 N93-25506
Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171
Magnetic field source for bi-chambered electron beam devices
| AD-A261316 | p 2691 N93-26299
Imaging regional changes in the spontaneous activity of the brain: An extension of the minimum-norm least-squares estimate
| AD-A261593 | p 2798 N93-26436
Sensitivity of magnetic flux compression in cylindrical implosions to model parameters
| DE93-003819 | p 2861 N93-26512
Low temperature Hall and Shubnikov-de Haas effects
| AD-A261871 | p 2869 N93-26540
MAGNETIC FLUX
Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641
Sensitivity of magnetic flux compression in cylindrical implosions to model parameters
| DE93-003819 | p 2861 N93-26512
MAGNETIC INDUCTION
Studying the kinetics of magnetization in high Tc superconductors
| NASA-CR-192916 | p 2862 N93-25108
MAGNETIC MATERIALS
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530
MAGNETIC MEASUREMENT
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530
MAGNETIC MOMENTS
Magnetic multilayer strain gage
| AD-D015672 | p 2710 N93-26141
MAGNETIC PROPERTIES
Molecular/polymeric magnetism
| DE93-008635 | p 2847 N93-25114
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369
MAGNETIC RESONANCE
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521
MAGNETIC SHIELDING
Basic design of a spaceborne hydrogen maser p 2716 N93-25024
MAGNETIC STORMS
Magnetotail processes associated with auroral surge formation
| ATR-90(7186)-1 | p 2895 N93-26147
MAGNETIC TAPES
Striped tape arrays
| NASA-CR-192914 | p 2806 N93-25267
MAGNETIC VARIATIONS
JARE data reports. No. 171 (upper atmosphere physics 9). Data, Syowa and Asuka Stations, 1989 p 2774 N93-25889
A predicted geomagnetic field model for epoch 1990.0
| AD-A260669 | p 2775 N93-25891
MAGNETICALLY TRAPPED PARTICLES
Some features of particle orbit behavior in LHD configurations
| NIFS-211 | p 2859 N93-25216
Thermal and electric oscillation driven by orbit loss in helical systems
| NIFS-213 | p 2860 N93-25346
MAGNETIZATION
Studying the kinetics of magnetization in high Tc superconductors
| NASA-CR-192916 | p 2862 N93-25108
Molecular/polymeric magnetism
| DE93-008635 | p 2847 N93-25114
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369
Computational modeling of MAGO and other magnetized target fusion concepts
| DE93-007354 | p 2861 N93-26504
MAGNETO-OPTICS
A simple and compact source of cold atoms for cesium fountains and microgravity clocks p 2831 N93-24981
MAGNETOHYDRODYNAMIC FLOW
Modeling of plasma flow switches at low, intermediate and high energies
| DE93-007359 | p 2858 N93-25167
Maneuvering a reentry body via magneto-gasdynamic forces p 2615 N93-25207
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356
Particle simulation of auroral double layers p 2774 N93-25830
Magnetotail processes associated with auroral surge formation
| ATR-90(7186)-1 | p 2895 N93-26147

MAGNETOHYDRODYNAMIC STABILITY
Modeling of plasma flow switches at low, intermediate and high energies
| DE93-007359 | p 2858 N93-25167
MAGNETOHYDRODYNAMIC WAVES
Time dependent simulation of cosmic-ray shocks including Alfven transport
| NASA-CR-192931 | p 2899 N93-24752
R and D of transmission lines for ECH system
| NIFS-210 | p 2687 N93-24951
Alfven wave transport effects in the time evolution of parallel cosmic-ray modified shocks
| NASA-CR-192932 | p 2899 N93-25161
MAGNETOHYDRODYNAMICS
Evaluation of a candidate material for a coal-fired magnetohydrodynamic (MHD) high temperature recuperative air heater
| DE93-006630 | p 2858 N93-24968
Modeling of plasma flow switches at low, intermediate and high energies
| DE93-007359 | p 2858 N93-25167
Demonstration for novel self-organization theory by three-dimensional magnetohydrodynamic simulation
| NIFS-212 | p 2859 N93-25227
Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641
Oblique MHD cosmic-ray modified shocks: Two-fluid numerical simulations
| NASA-CR-192930 | p 2900 N93-26132
MAGNETOMETERS
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Upper Atmosphere Research Satellite (UARS) attitude accuracy using coarse attitude sensors p 2607 N93-24735
MAGNETOPAUSE
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081
MAGNETOSHEATH
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159
MAGNETOSPHERE-IONOSPHERE COUPLING
A statistical study of field-aligned currents in the Earth's inner magnetosphere p 2773 N93-25709
MAGNETOSPHERIC ION DENSITY
Imaging the magnetosphere in the extreme ultraviolet
| NASA-CR-192218 | p 2775 N93-26151
MAGNETOSTRICTION
Magnetic multilayer strain gage
| AD-D015672 | p 2710 N93-26141
MAGNETRONS
Optical detection of laser-cooled ions in a Penning trap p 2838 N93-25031
MAGNETS
Molecular/polymeric magnetism
| DE93-008635 | p 2847 N93-25114
Poly-coil design for a 60 tesla quasi-stationary magnet
| DE93-007353 | p 2688 N93-25313
MAINTAINABILITY
An analysis of the reliability and maintainability of the Jian 6 and Jian 7 aircraft and ways to improve them
| AD-A261060 | p 2574 N93-26238
MAINTENANCE
The damage, repair and design of fiber composite structural materials p 2635 N93-25532
Expedient repair of structural facilities
| AD-A260727 | p 2598 N93-25656
Anomalous event diagnosis for environmental satellite systems p 2619 N93-25971
AEGIS measures definition
| AD-A261494 | p 2812 N93-26375
TCMS operations and maintenance philosophy
| NASA-TM-108756 | p 2873 N93-26418
MAINTENANCE TRAINING
Human Factors in Aviation Maintenance, phase 2
| DOT/FAA/AM-93/5 | p 2802 N93-26089
TCMS operations and maintenance philosophy
| NASA-TM-108756 | p 2873 N93-26418
MALES
Vascular uptake of rehydration fluids in hypohydrated men at rest and exercise
| NASA-TM-103942 | p 2795 N93-26133
MAMMARY GLANDS
Energy and Technology Review, October - December 1992
| DE93-007784 | p 2674 N93-25299
Automated system for early breast cancer detection in mammograms p 2796 N93-25568
MAN ENVIRONMENT INTERACTIONS
Application of remote sensing data for the investigation of environmental degradation sites in East Germany p 2739 N93-24785
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
MAN MACHINE SYSTEMS
Human factors engineering: A key element of instrumentation and control system design
| DE93-006731 | p 2800 N93-25415
Automation and robotics human performance
| NASA-CR-193049 | p 2802 N93-26153
Assured crew return vehicle man-systems integration standards
| NASA-CR-193065 | p 2614 N93-26329
MAN-COMPUTER INTERFACE
Improving information search at the user interface: The impact of graphical innovation on query formulation and expression p 2873 N93-24905
Prototype PC user interface
| DE93-008008 | p 2809 N93-25303
TARGET: Rapid capture of process knowledge p 2814 N93-25590
Experimenter's laboratory for visualized interactive science p 2879 N93-25802
Measures of user-system interface effectiveness: An encoding scheme and indicators for assessing the usability of graphical, direct-manipulation style user interfaces
| AD-A260606 | p 2801 N93-25840
Department of Defense technical architecture framework for information management. Volume 3: Reference model and standards profile, version 1.3
| AD-A261913 | p 2882 N93-26230
Human computer interface style guide, version 2.0
| AD-A261280 | p 2807 N93-26291
Implementation of custom colors in the DECwindows environment
| AD-A261456 | p 2757 N93-26574
MANAGEMENT ANALYSIS
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
| DE93-002943 | p 2760 N93-24955
MANAGEMENT INFORMATION SYSTEMS
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
Design Knowledge Management System (DKMS) Beta Test Report
| AD-A261453 | p 2883 N93-26350
OSSA Information Systems Program
| NASA-TM-108758 | p 2883 N93-26491
MANAGEMENT METHODS
Organizational politics, participation in decision-making, and job satisfaction
| DOT/FAA/AM-92/17 | p 2796 N93-25203
Procedural justice, occupational identification, and organizational commitment
| DOT/FAA/AM-92/21 | p 2872 N93-25204
Design of a cooperative problem-solving system for enroute flight planning: An empirical study of its use by airline dispatchers
| NASA-CR-192709 | p 2585 N93-25330
Department of Energy: Better information resources management needed to accomplish missions. Report to the Secretary of Energy
| GAO/IMTEC-92-53 | p 2882 N93-26096
Bibliography of remote sensing techniques used in wetland research
| AD-A261704 | p 2757 N93-26440
MANAGEMENT PLANNING
Viewgraph description of Penn State's Propulsion Engineering Research Center: Activity highlights and future plans
| NASA-CR-192317 | p 2622 N93-24943
JSC research and technology
| NASA-TM-104763 | p 2901 N93-25188
Improving performance through concept formation and conceptual clustering
| NASA-CR-192726 | p 2828 N93-25262
Aircraft electrical and environmental systems, AFSCs 452x5, 454x5, and 454x6
| AD-A261213 | p 2590 N93-25733
An environmental audit management plan for the Royal Australian Air Force
| AD-A261092 | p 2765 N93-25765
Climate Monitoring and Diagnostics Laboratory
| PB93-156388 | p 2785 N93-25871
Knowledge-based decision support for Space Station assembly sequence planning
| NASA-CR-193048 | p 2599 N93-26095
Department of Energy: Better information resources management needed to accomplish missions. Report to the Secretary of Energy
| GAO/IMTEC-92-53 | p 2882 N93-26096
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315
Observations on the NASA Propagation Program p 2685 N93-26482
MANAGEMENT SYSTEMS
Systems engineering for very large systems p 2665 N93-24680
Intelligent access to multiple relational database systems
| AD-A261198 | p 2881 N93-25824
Task 2A: UNIS requirements and concepts
| MCR-92-5006-PT-A | p 2610 N93-26180
Design Knowledge Management System (DKMS) Beta Test Report
| AD-A261453 | p 2883 N93-26350
MANDRELS
Improved composite fabrication process
| AD-D015679 | p 2640 N93-26145
MANEUVERABILITY
Experimental modal survey of the probe mass mock-up
| DE93-008846 | p 2617 N93-25494
MANEUVERABLE REENTRY BODIES
Maneuvering a reentry body via magneto-gasdynamic forces p 2615 N93-25207
MANEUVERS
A Hierarchical Target Extraction, Recognition, and Tracking (HiTert) system
| AD-A260567 | p 2854 N93-25898
MANIPULATORS
Initial experiments with a myoelectric-based muscle sensor
| DE92-016034 | p 2799 N93-25099
Probabilistic analysis of manipulation tasks: A research agenda
| DE93-000713 | p 2827 N93-25103
Detailed solution to a complex kinematics chain manipulator
| DE93-004619 | p 2725 N93-25357
A control structure for fault-tolerant operation of robotic manipulators
| DE93-005783 | p 2717 N93-25413
Numerical kinematic transformation calculations for a parallel link manipulator
| DE93-005778 | p 2718 N93-25449
The induction of elastic fine motion in robotic grasps p 2718 N93-25727
Modeling of a full vision system using combined Visual/Haptic search for remote object identification
| AD-A260977 | p 2801 N93-25867
Parametric motion control of robotic arms: A biologically based approach using neural networks p 2822 N93-25964
Controls for orbital assembly of large space structures p 2620 N93-26408
Telerobotic rovers for extraterrestrial construction p 2670 N93-26416
MANNED MARS MISSIONS
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105
MANNED SPACE FLIGHT
Systems engineering and integration and management for manned space flight programs p 2666 N93-24684
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
MANNED SPACECRAFT
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085
MANUAL CONTROL
Architecture of autonomous systems
| NASA-CR-192974 | p 2801 N93-26047
MANUALS
The systems engineering overview and process (from the Systems Engineering Management Guide, 1990) p 2665 N93-24679
NASA Lewis 8- by 6-foot supersonic wind tunnel user manual
| NASA-TM-105771 | p 2597 N93-25080
Distributed project scheduling at NASA: Requirements for manual protocols and computer-based support p 2815 N93-26075

Arc Digital Raster Imagery (ADRI) development
| AD-A261850 | p 2812 N93-26275
Guide for conducting convective windstorm surveys
| PB93-148427 | p 2787 N93-26570

MANUFACTURING
Technology 2002: The Third National Technology Transfer Conference and Exposition, volume 1
| NASA-CP-3189-VOL-1 | p 2901 N93-25561
On machine capacitance dimensional and surface profile measurement system p 2670 N93-25579
Vision-aided monitoring and control of thermal spray, spray forming, and welding processes
p 2670 N93-25604
Firmware development improves system efficiency
p 2807 N93-25606
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834
Special tooling disposition for aircraft entering post production support
| AD-A261614 | p 2573 N93-26168
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366
Japanese Technology Evaluation Center Workshop on Advanced Manufacturing Technology for Polymer Composite Structures in Japan
| PB93-165249 | p 2641 N93-26589

MANY BODY PROBLEM
Diabaticity of nuclear motion: Problems and perspectives
| DE93-007252 | p 2847 N93-25148
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
Mechanics and control of multibody structural systems
| AD-A261576 | p 2619 N93-26456

MAPPING
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
Agroclimatological zonation by AVHRR data for vegetation monitoring p 2741 N93-24795
European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820
Oil pollution and water quality mapping of Augusta Bay, Italy using remote sensing techniques
p 2746 N93-24823
NORSMAP 1989: Norwegian remote sensing spectrometry for mapping and monitoring of algal blooms and pollution p 2746 N93-24824
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS
p 2751 N93-24855
Appliction of remote sensing to forestry mapping: Experience from the European collaborative programme for the less favoured areas p 2751 N93-24857
Standwise forest inventory and mapping for operational management planning p 2752 N93-24863
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument
p 2711 N93-25614

MAPS
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map
p 2743 N93-24807
Supporting the Portuguese fisheries with satellites
p 2745 N93-24821
Application of satellite imageries data to fisheries in Japan p 2745 N93-24822
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369
Implementation of custom colors in the DECwindows environment
| AD-A261456 | p 2757 N93-26574

MARANGONI CONVECTION
Numerical simulation of time-dependent thermocapillary convection in layered fluid systems
p 2700 N93-25472

MARINE CHEMISTRY
The JGOFS North Atlantic Bloom Experiment: An overview p 2735 N93-24934

MARINE ENVIRONMENTS
Data availability and data archeology from the former Soviet Union p 2735 N93-24932
Summary by the cloud and aerosol research group for ASTEX
| AD-A261292 | p 2766 N93-26292

MARINE METEOROLOGY
Proceedings of the Ocean Climate Data Workshop
| NASA-TM-108711 | p 2732 N93-24915
The role of ocean climate data in operational Naval oceanography p 2732 N93-24916
Role of the ocean in climate changes
p 2732 N93-24918
The role of the World Data Centers in handling ocean climate data p 2732 N93-24919
Operational seasonal and interannual predictions of ocean conditions p 2733 N93-24921
Ocean climate data for user community in West and Central Africa: Needs, opportunities, and challenges
p 2735 N93-24933
Computer systems p 2737 N93-24942
A systematic satellite approach for estimating central pressures of mid-lattitude oceanic storms
| NOAA-TR-NESDIS-63 | p 2781 N93-25220
Tropical cyclogenesis in the western North Pacific
p 2783 N93-25714
An investigation into the causative mechanisms for explosive cyclone development over the Atlantic
| AD-A261831 | p 2786 N93-26273

MARINE TECHNOLOGY
High-performance visualization applied to computational electromagnetics: Method-of-moments on a silicon graphics workstation
| AD-A260820 | p 2675 N93-25700

MARKET RESEARCH
Space business indicators p 2886 N93-26158

MARKETING
Energy and Technology Review, August-September 1992
| DE93-005882 | p 2901 N93-24974

MARKOV CHAINS
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-020 | p 2793 N93-25406

MARKOV PROCESSES
Failure monitoring in dynamic systems: Model construction without fault training data
p 2672 N93-24666

MARS (PLANET)
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
The upper atmosphere and ionosphere of Mars
p 2897 N93-26393
The Martian lower atmosphere p 2897 N93-26394
Representative systems for space exploration
p 2897 N93-26395
Mars exploration planning p 2898 N93-26399
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410

MARS ATMOSPHERE
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
The upper atmosphere and ionosphere of Mars
p 2897 N93-26393
The Martian lower atmosphere p 2897 N93-26394

MARS ENVIRONMENT
The interaction of high voltage systems with the environments of the Moon and Mars
| NASA-TM-106107 | p 2618 N93-26148
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392
Modeling and analysis tools p 2897 N93-26397
Mars exploration planning p 2898 N93-26399

MARS LANDING
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105

MARS OBSERVER
Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110
Mars exploration planning p 2898 N93-26399

MARS SAMPLE RETURN MISSIONS
Knowledge-based control for robot self-localization
p 2822 N93-25963
Mars exploration planning p 2898 N93-26399

MARS SATELLITES
Mars: The dynamics of orbiting satellites and gravity model development p 2896 N93-25439

MARS SURFACE
Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix
| NASA-CP-10093-PT-2 | p 2897 N93-26392

MARSHLANDS
Bibliography of remote sensing techniques used in wetland research
| AD-A261704 | p 2757 N93-26440

MARTENSITIC STAINLESS STEELS
Mechanical properties of martensitic alloy AISI 422
| DE93-006563 | p 2649 N93-25255

MASERS
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers
p 2892 N93-24949
Experiments on a diode-laser-pumped Rb-87 maser
p 2716 N93-25030
Fundamental characteristics of a laser-diode-pumped rubidium maser with an external feedback loop
p 2716 N93-25068
Optimizing the G/T ratio of the DSS-13 34-meter beam-waveguide antenna p 2678 N93-26118
Efficient nonlinear optical conversion of 1.319-micron laser radiation
| AD-A261309 | p 2715 N93-26297

MASKING
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358

MASS
What is the relationship between altitude and weight in a model rocket? p 2603 N93-24715

MASS BALANCE
Apparatus and methods for determining balance of a cylindrical vehicle
| AD-D015637 | p 2717 N93-25228

MASS DISTRIBUTION
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009
A study of mass size distributions and particle deposition velocities in ambient air p 2763 N93-25263

MASS FLOW
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087
Consequences of spontaneous and anomalous symmetry breaking for the orbital and mass flow hydrodynamics of He-3 - A p 2698 N93-25295

MASS FLOW RATE
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087
Modified point mass trajectory simulation for base-burn projectiles
| BRL-TR-3321 | p 2609 N93-25985

MASS SPECTRA
Volatiles in interplanetary dust particles: A comparison with CI and CM chondrites p 2896 N93-26062

MASS SPECTROMETERS
Laser desorption in an ion trap mass spectrometer
| DE93-007330 | p 2712 N93-25150

MASS SPECTROSCOPY
Laser desorption in an ion trap mass spectrometer
| DE93-007330 | p 2712 N93-25150
The properties of and analytical methods for detection of LiOH and Li2CO3
| NASA-CR-192771 | p 2643 N93-25240
Flame structure studies of a lean, 20 torr H2/N2O/AR flame employing molecular beam mass spectrometry
p 2627 N93-26025
Thermal decomposition of HMX, mononitroso-RDX, TNCHP and K6 in the liquid phase: Results from simultaneous thermogravimetry modulated beam mass spectrometry measurements p 2628 N93-26033
Development of rate expressions for the thermal decomposition of RDX p 2629 N93-26034

MASS TRANSFER
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760
Numerical simulation of permeation from deposited droplets: Model expansion
| MTL-TR-92-23 | p 2706 N93-25953

MASSIVE STARS
Starburst Galaxies: Hard X-ray spectra and contribution to the diffuse background
| NASA-CR-192790 | p 2892 N93-25211
Structure and star forming activities of the cold massive molecular cloud G216-2.5 p 2893 N93-25477

MASSIVELY PARALLEL PROCESSORS
RAMA: A file system for massively parallel computers
| NASA-CR-192906 | p 2815 N93-25297

FORTRAN M as a language for building earth system models
| DE93-007897 | p 2763 N93-25370
Image analysis by integration of disparate information p 2824 N93-25973
Massively-parallel computational fluid dynamics
| AD-A261815 | p 2707 N93-26269

MATERIALS HANDLING
Handbook of chemical hazard analysis procedures
| PB93-158756 | p 2766 N93-26315

MATERIALS RECOVERY
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571

MATERIALS SCIENCE
Technology 2002: The Third National Technology Transfer Conference and Exposition, volume 1
| NASA-CP-3189-VOL-1 | p 2901 N93-25561

MATHEMATICAL LOGIC
Algorithms for optimal redundancy allocation
| DE93-005709 | p 2827 N93-24973

MATHEMATICAL MODELS
Rate determination from vector observations p 2603 N93-24713
ILS mathematical modeling study of an ILS glide slope proposed for runway 19L at the Meridian Naval Air Station, Mississippi
| DOT/FAA/CT-TN93/8 | p 2584 N93-24741
Ignition and combustion of lunar propellants
| NASA-CR-192814 | p 2659 N93-24745
Global dynamic modeling of a transmission system
| NASA-CR-191117 | p 2716 N93-24751
Crashworthiness of composite seats for civil aircraft p 2582 N93-24773
Remote sensing monitoring and hindcasting of the accident occurred to the tanker Haven in the Gulf of Genoa (Italy) p 2747 N93-24830
Atmospheric correction of Landsat/TM data over mountainous terrain for forestry applications p 2752 N93-24862
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Zoning of aircraft by electric field modelling p 2583 N93-24894
Lightning phenomenology bases for full threat return stroke occurrence following extended leader sweep at flight altitudes p 2780 N93-24895
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946
Improved PI-network measurement of all quartz crystal parameters by appropriate modelling of the test fixture p 2833 N93-24995
Surface Transverse Wave (STW) quartz resonators in the GHz range p 2836 N93-25012
Time stability: An improvement of the multi-variance method for the oscillator noise analysis p 2839 N93-25036
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
A micromechanical viscoplastic stress-strain model with grain boundary sliding
| DE93-009109 | p 2649 N93-25095
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096
Probabilistic analysis of manipulation tasks: A research agenda
| DE93-000713 | p 2827 N93-25103
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
A simple, approximate model of parachute inflation
| DE93-002465 | p 2576 N93-25121
The AFTAC model integration project
| DE93-003334 | p 2761 N93-25122
The effects of sampling frequency on the climate statistics of the ECMWF general circulation model
| DE93-003338 | p 2761 N93-25145
Global warming potential for CF4
| DE93-005740 | p 2762 N93-25146
A correlated K-distribution model of the heating rates for H2O and a molecular mixture in the 0-2500 cm(exp -1) wavelength region in the atmosphere between 0 and 60 km
| DE93-005741 | p 2762 N93-25147
Empirical wind model for the middle and lower atmosphere. Part 1: Local time average
| NASA-TM-104581 | p 2770 N93-25160
Generic hypersonic vehicle performance model
| NASA-CR-192953 | p 2587 N93-25162
Modeling of plasma flow switches at low, intermediate and high energies
| DE93-007359 | p 2858 N93-25167
Summary of progress in inertial confinement fusion
| DE93-007350 | p 2858 N93-25187
Maneuvering a reentry body via magneto-gasdynamic forces p 2615 N93-25207
FNAS computational modeling
| NASA-CR-192512 | p 2863 N93-25225
The evaluation of technical models used for major-accident hazard installations. Report to Commission of the European Communities Directorate General 12
| CUED/A-AERO/TR-19 | p 2668 N93-25238
A method for transient, three-dimensional neutron transport calculations
| DE93-007243 | p 2847 N93-25256
Integrated aerodynamic-structural wing design optimization p 2587 N93-25279
Particle simulation for 10.6 micron picosecond laser-induced breakdown in gases p 2712 N93-25280
An outgoing energy flux boundary condition for finite difference ICRP antenna models
| DE93-007788 | p 2674 N93-25300
Mechanistic studies of the CVD of silicon nitride from SiF4 and NH3
| DE93-004500 | p 2644 N93-25312
The Sudbury Neutrino Observatory
| DE93-007697 | p 2899 N93-25327
A numerical and experimental studies of flow characteristics in centrifugal fans p 2577 N93-25339
Combining particles and waves for fluid animation p 2699 N93-25348
Detailed solution to a complex kinematics chain manipulator
| DE93-004619 | p 2725 N93-25357
A preliminary sizing method for unmanned aircraft using multi-variate optimisation p 2587 N93-25408
Elastic modeling and migration in Earth models p 2771 N93-25433
Aerial photographic sampling for statewide resource inventory p 2755 N93-25441
Numerical and experimental analyses of large composite skeletal satellite systems p 2616 N93-25463
Spatial simulation of transition in wall-bounded shear flows: Active control and effects of surface roughness p 2701 N93-25483
Experimental modal survey of the probe mass mock-up
| DE93-008846 | p 2617 N93-25494
Intraplate deformation, stress in the lithosphere and the driving mechanism for plate motions
| NASA-CR-192782 | p 2772 N93-25529
Numerical modeling of barred spiral galaxies p 2893 N93-25537
On the vertical structure of seasonal, interannual and intraseasonal flows p 2782 N93-25557
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574
Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641
Numerical modelling of viscous turbomachinery flows with a pressure correction method p 2594 N93-25702
Vector radiative transfer model: Application to rainfall retrieval with microwave radiometric data p 2784 N93-25743
A distributed analysis and visualization system for model and observational data p 2881 N93-25814
Anatomy and physiology of plant conductive systems
| PB93-156032 | p 2793 N93-25877
The rapid solution of the Laplace equation on regions with fractal boundaries
| AD-A260585 | p 2828 N93-25905
On the cross-stream spectral method for the Orr-Sommerfeld equation
| NASA-TM-107737 | p 2845 N93-26086
Goldstone solar system radar signal processing p 2680 N93-26130
Finite element modeling of the hydroforming press
| KCP-613-4999 | p 2668 N93-26206
Substantiation of a stochastic model of rhythmic phenomena
| AD-A261232 | p 2830 N93-26262
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281
Phase-field models for anisotropic interfaces
| PB93-164564 | p 2646 N93-26323
Investigation of coupled analysis techniques for adaptive material structural systems
| AD-A261359 | p 2868 N93-26332
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371
Modeling and analysis tools p 2897 N93-26397
EnviroNET p 2886 N93-26398
Computational methods for flow problems: Parallel algorithms, flow control, and novel approaches
| AD-A261400 | p 2707 N93-26400
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
| NASA-CR-192937 | p 2767 N93-26427
Rain rate and modeled fade distributions at 20 GHz and 30 GHz derived from five years of network rain gauge measurements p 2683 N93-26468
Computational modeling of MAGO and other magnetized target fusion concepts
| DE93-007354 | p 2861 N93-26504
Approximate techniques for predicting size effects on cleavage fracture toughness (J(sub c))
| AD-A261591 | p 2731 N93-26516
A three-dimensional study of the influence of mountains on a front
| AD-A261927 | p 2787 N93-26545
Computation of complex solidification morphologies using a phase-field model
| PB93-156743 | p 2869 N93-26547
Effects of surface thermal forcing on stratified flow past an isolated obstacle
| PB93-156776 | p 2776 N93-26548
METal matrix composite ANalyzer (METCAN): Theoretical manual
| NASA-TM-106025 | p 2641 N93-26552
Interaction of an eddy with a continental slope
| AD-A261550 | p 2791 N93-26578
Very low frequency signals and whistler-mode amplification in the magnetosphere and limit-cycle behavior in the CECAF infrared free electronic laser
| AD-A261776 | p 2716 N93-26601
A comparison of ionospheric propagation mode delay predictions from ADVANCED PROPHET 4.3 with measured data
| AD-A261782 | p 2686 N93-26604

MATHEMATICAL PROGRAMMING
ASTROS-ID: Software for system identification using mathematical programming
| AD-A260867 | p 2810 N93-25627
Computation and theory in large-scale optimization
| AD-A261419 | p 2813 N93-26450

MATRICES (MATHEMATICS)
The analysis of convolutional codes via the extended Smith algorithm p 2671 N93-24664
Polar decomposition for attitude determination from vector observations p 2602 N93-24711
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
Combining spectral information with crop rotation knowledge for crop classifications p 2752 N93-24861
Equilibrium constrained assumed natural coordinate strain finite elements for shell analysis p 2724 N93-25273
Parallel matrix computations
| AD-A260783 | p 2828 N93-25687
Golay and other box codes p 2678 N93-26116
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281

MATRIX MATERIALS
Analysis of matrix damage in unidirectional composites p 2634 N93-25338
Thermomechanical response of shape memory composites
| AD-A260828 | p 2639 N93-25919
Thermal expansion measurements of polymer matrix composites and syntactics
| MTL-TR-92-27 | p 2640 N93-25954

MAXIMUM ENTROPY METHOD
Experimental results of the performance of the new phase and frequency controller p 2839 N93-25035
Maximum entropy approach to fuzzy control
| NASA-CR-192949 | p 2818 N93-25141
Bayesian cross-entropy reconstruction of complex images
| AD-A261812 | p 2812 N93-26257

MEAN
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739

MEAN SQUARE VALUES
Methods of evaluating the effects of coding on SAR data p 2804 N93-25926

MEANDERS
Dynamics of Gulf Stream meanders and frontal eddies in the South Atlantic Bight p 2788 N93-25354
MEASURE AND INTEGRATION
A comparative assessment of R. M. Young and tipping bucket rain gauges p 2685 N93-26483
MEASURING INSTRUMENTS
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 4
| NASA-CR-192834 | p 2769 N93-24910
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 2
| NASA-CR-192833 | p 2770 N93-25088
Apparatus and methods for determining balance of a cylindrical vehicle
| AD-D015637 | p 2717 N93-25228
Application of an on-machine gage for diameter measurements p 2711 N93-25578
Method of measuring cross-flow vortices by use of an array of hot-film sensors
| NASA-CASE-LAR-14824-1-SB | p 2706 N93-26000
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution
| NASA-CR-192832 | p 2775 N93-26084
MECHANICAL DEVICES
Detection of bearing failure in mechanical devices using neural networks p 2822 N93-25965
MECHANICAL ENGINEERING
Turbine turbobrake systems p 2717 N93-25268
Nonlinear vibrations, stability, and dynamics of structures and mechanisms
| AD-A260871 | p 2728 N93-25838
Engineering: Research development and technology
| UCRL-53868-91 | p 2917 N93-26326
Configuration optimization of space structures p 2670 N93-26415
MECHANICAL PROPERTIES
High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
| NASA-TM-106001 | p 2723 N93-24913
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149
Dynamic test apparatus for electro-rheological fluids
| AD-D015632 | p 2643 N93-25284
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
| DE93-007504 | p 2635 N93-25383
MEDICAL EQUIPMENT
Automated system for early breast cancer detection in mammograms p 2796 N93-25568
MEDICAL SCIENCE
Achieving the promise of the bioscience revolution: The role of the Federal Government
| PB93-139970 | p 2793 N93-25457
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
MEDICAL SERVICES
Automated system for early breast cancer detection in mammograms p 2796 N93-25568
MEDITERRANEAN SEA
Determination of environmental dynamics using NOAA satellite data and a water balance model for the Mediterranean landscape p 2741 N93-24794
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
MELTING POINTS
Electrochemical and spectroscopic studies of molten halides
| AD-A261687 | p 2646 N93-26439
MELTS (CRYSTAL GROWTH)
Fundamental and applied aspects of defect engineering in GaAs
| AD-A260573 | p 2867 N93-25899
MEMBRANE STRUCTURES
INEL spray-forming research p 2658 N93-25562
MEMBRANES
Kinetic studies of interfacial photocurrents in platinized chloroplasts
| DE93-002344 | p 2792 N93-25104
Direct methane conversion to methanol
| DE93-009183 | p 2660 N93-25497
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
Luminescence probe studies of ionomers. 3: Distribution of decay rate constants for tris bipyridyl ruthenium(2) in Nafion membranes
| AD-A260764 | p 2645 N93-25916
Inorganic and biological electron transfer across an electronically conductive composite polymer membrane
| AD-A261642 | p 2656 N93-26172
Template synthesis of electronically conductive polymers: A new route for achieving higher electronic conductivities
| AD-A261616 | p 2658 N93-26437
MEMORY
A cognitive architecture for human performance process model research
| AD-A261040 | p 2797 N93-25815
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521
MEMORY (COMPUTERS)
Performance studies of cache consistency and concurrency control algorithms in a distributed client/server DBMS architecture p 2876 N93-25554
Thin rechargeable batteries for CMOS SRAM memory protection p 2694 N93-25583
Solid-state isotopic power source for computer memory chips p 2694 N93-25596
An investigation of memory latency reduction using an address prediction buffer
| AD-A261010 | p 2806 N93-25858
The design and implementation of a read prediction buffer
| AD-A260902 | p 2806 N93-25934
Considerations for space and naval aviation applications of ferroelectric memory
| AD-A261300 | p 2807 N93-26294
MENTAL PERFORMANCE
A cognitive architecture for human performance process model research
| AD-A261040 | p 2797 N93-25815
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859
Facilitation and interference in identification of pictures and words
| AD-A261484 | p 2798 N93-26356
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391
Duration of alpha suppression increases with angle in a mental rotation task
| AD-A261592 | p 2798 N93-26435
MERCURY CADMIUM TELLURIDES
IR materials producibility
| AD-A261099 | p 2853 N93-25766
Study of surface behavior in function of temperature of the quaternary system (Hg, Cd, Zn)Te
| AD-A260968 | p 2867 N93-26223
MERCURY ISOTOPES
Feeding and decay of superdeformed states
| DE93-007899 | p 2848 N93-25371
MERCURY TELLURIDES
IR materials producibility
| AD-A261099 | p 2853 N93-25766
MESH
Reduction in size and unsteadiness of a VTOL ground vortex by ground fences
| NASA-CR-192997 | p 2580 N93-26049
MESOMETEOROLOGY
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
Synoptic and Mesoscale Meteorology Instruction Workshop
| PB93-156347 | p 2785 N93-25870
SAR-related stress variability in the marine atmospheric boundary layer
| AD-A261129 | p 2775 N93-25946
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351
MESON-NUCLEON INTERACTIONS
High-energy pion-nucleus scattering at LAMPF
| DE93-007364 | p 2852 N93-25380
MESOSCALE PHENOMENA
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896
Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment
| NASA-CR-192826 | p 2769 N93-24945
The charge and size of precipitation particles inside thunderstorms and mesoscale convective systems on the Great Plains p 2781 N93-25275
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
| AD-A260889 | p 2783 N93-25633
Synoptic and Mesoscale Meteorology Instruction Workshop
| PB93-156347 | p 2785 N93-25870
SAR-related stress variability in the marine atmospheric boundary layer
| AD-A261129 | p 2775 N93-25946
Wind-driven coastal generation of annual mesoscale eddy activity in the California current
| AD-A261355 | p 2790 N93-26331
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351
MESOSPHERE
Empirical wind model for the middle and lower atmosphere. Part 1: Local time average
| NASA-TM-104581 | p 2770 N93-25160
The pressure modulation system in the Improved Stratospheric and Mesospheric Sounder p 2773 N93-25739
MESSAGE PROCESSING
Deterministic parallel FORTRAN
| DE93-008665 | p 2816 N93-25522
MESSAGES
An improved spectral load balancing method
| DE93-007582 | p 2810 N93-25386
Deterministic parallel FORTRAN
| DE93-008665 | p 2816 N93-25522
Virtually-synchronous communication based on a weak failure suspector
| NASA-CR-193003 | p 2721 N93-26135
METABOLIC DISEASES
Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900
METABOLISM
Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900
Metabolic response of environmentally isolated microorganisms to industrial effluents: Use of a newly described cell culture assay p 2794 N93-26066
METAL BONDING
Process for bonding elastomers to metals
| NASA-CASE-LAR-13645-1 | p 2656 N93-25995
Fundamental aspects of metal joining: The study of strong interfaces
| AD-A261293 | p 2653 N93-26304
METAL COATINGS
Electrodeposition in low gravity p 2663 N93-24774
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278
METAL CRYSTALS
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218
Crack tip fields in ductile crystals and bicrystals p 2866 N93-25749
METAL FATIGUE
Fatigue in single crystal nickel superalloys
| AD-A260709 | p 2651 N93-25843
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
METAL FIBERS
Interface engineering in oxide fiber/oxide matrix composites
| AD-A261705 | p 2641 N93-26579
METAL FILMS
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD)
| DE92-010560 | p 2862 N93-24953
Metal ion implantation for large scale surface modification
| DE93-007649 | p 2859 N93-25324
Analysis of pull-tests for determining the effects of ion implantation on the adhesion of iron films to sapphire substrates
| DE93-006732 | p 2725 N93-25373
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823
METAL FINISHING
Ultrasonic polishing p 2670 N93-25580

METAL FOILS
Shear band formation in a W-Ni-Fe alloy under plate impact
| AD-A260702 | p 2651 N93-25907
METAL FUELS
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
| AD-A260915 | p 2661 N93-25914
METAL HALIDES
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218
Spectroscopic effects of disorder and vibrational localization in mixed-halide metal-halide chain solids
| DE93-007361 | p 2646 N93-26505
METAL IONS
Metal ion implantation for large scale surface modification
| DE93-007649 | p 2859 N93-25324
The formation and characteristics of E-region thin ionization layers at high latitudes p 2861 N93-25829
METAL MATRIX COMPOSITES
High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
| NASA-TM-106001 | p 2723 N93-24913
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
Monitoring damage growth in titanium matrix composites using acoustic emission
| NASA-TM-107742 | p 2634 N93-25072
Dynamic deformations and analysis of a metal matrix composite p 2634 N93-25234
Internal stresses and the cyclic deformation of an aluminum matrix composite p 2650 N93-25436
The corrosion of metal matrix composites p 2638 N93-25723
Electrostatic fiber spreader
| AD-D015677 | p 2640 N93-26143
METal matrix composite ANalyzer (METCAN): Theoretical manual
| NASA-TM-106025 | p 2641 N93-26552
METAL OXIDE SEMICONDUCTORS
Quantum conductance fluctuations in self-aligned, pinch-narrowed MOSFETs p 2863 N93-25265
Smart microsensors for high temperature applications
| AD-A260747 | p 2710 N93-25677
METAL OXIDES
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
| NASA-CR-192344 | p 2863 N93-25219
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces
| AD-A261265 | p 2657 N93-26303
METAL PARTICLES
A study of mass size distributions and particle deposition velocities in ambient air p 2763 N93-25263
METAL PLATES
Behavior of a steel-liner-and-bolts system under very high thermal and mechanical loading: The CONVEX Liner Add-On to DIAMOND FORTUNE
| DE93-007512 | p 2731 N93-26507
METAL PROPELLANTS
Particle behavior in solid propellant rocket motors and plumes
| AD-A260900 | p 2624 N93-25913
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
| AD-A260915 | p 2661 N93-25914
Dynamic burning rate measurements of metalized composite propellants using the laser-recoil technique p 2631 N93-26043
METAL SHEETS
Finite element modeling of the hydroforming press
| KCP-613-4999 | p 2668 N93-26206
METAL SPRAYING
INEL spray-forming research p 2658 N93-25562
METAL STRIPS
INEL spray-forming research p 2658 N93-25562
METAL SURFACES
Hot corrosion of the B2 nickel aluminides
| NASA-CR-191082 | p 2649 N93-25128
Laser welding of selected aerospace alloys p 2718 N93-25435
Theoretical studies of surface reactions on metals and electronic materials
| DE93-009761 | p 2650 N93-25502
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
Enhanced backscattering from rough surfaces
| AD-A261000 | p 2676 N93-25855
In situ surface studies of conversion coatings for steel and aluminum
| AD-A261016 | p 2655 N93-25861
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903
Process for bonding elastomers to metals
| NASA-CASE-LAR-13645-1 | p 2656 N93-25995
Interaction of O2 with the Fe(.84)Cr(.16) (001) surface studied by photoelectron spectroscopy
| AD-A261065 | p 2645 N93-26251
Dynamics of gas-surface interactions
| AD-A261402 | p 2646 N93-26402
METAL VAPOR LASERS
Electron-beam-pumped recombination lasers p 2712 N93-25344
Collisional recombination lasers p 2713 N93-25393
Feasibility experiment for sodium-layer laser guide stars at the Lawrence Livermore National Laboratory
| DE93-007115 | p 2715 N93-26503
METAL VAPORS
The physics of spin polarized gases
| AD-A261396 | p 2850 N93-26288
METAL WORKING
Converting environmental wastes into valuable resources p 2759 N93-25572
Advanced engineering analysis
| KCP-613-4967 | p 2669 N93-26212
METALLIC GLASSES
Colloid formation in implanted glasses
| DE93-006763 | p 2653 N93-24971
METALLICITY
Photospheric abundance analysis of low-mass pre-main sequence stars p 2894 N93-25623
METALLOGRAPHY
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201
METALORGANIC CHEMICAL VAPOR DEPOSITION
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
METALS
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522
METAMORPHISM (GEOLOGY)
Geochemistry and petrology of primitive achondrite meteorites LEW 88280, MAC 88177, ALHA 81187, EET 84302, and LEW 88663 p 2896 N93-26067
METASTABLE STATE
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
METEORITES
Volatiles in interplanetary dust particles: A comparison with CI and CM chondrites p 2896 N93-26062
Geochemistry and petrology of primitive achondrite meteorites LEW 88280, MAC 88177, ALHA 81187, EET 84302, and LEW 88663 p 2896 N93-26067
METEORITIC COMPOSITION
Geochemistry and petrology of primitive achondrite meteorites LEW 88280, MAC 88177, ALHA 81187, EET 84302, and LEW 88663 p 2896 N93-26067
METEOROIDS
The initial flight anomalies of Skylab 1 p 2619 N93-24692
METEOROLOGICAL INSTRUMENTS
A comparison of the WIND System atmospheric models and MATS data
| DE93-002687 | p 2760 N93-24673
METEOROLOGICAL PARAMETERS
The Global Ocean Observing System: One perspective p 2733 N93-24920
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
Summary information and data sets for NREL's Solar Radiation Research Laboratory, 1981 - 1991
| DE93-000052 | p 2898 N93-25101
Propagation at microwave frequencies in the presence of tropospheric stratified layers p 2674 N93-25340
Climate data bases of the People's Republic of China, 1841-1988
| DE93-007907 | p 2764 N93-25517
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351
The ACTS propagation program p 2683 N93-26465
METEOROLOGICAL RADAR
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896
The ATC evaluation of the prototype Airport Surveillance Radar Wind Shear Processor (ASR-WSP) at Orlando International Airport
| DOT/FAA/CT-TN92/48 | p 2673 N93-25210
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
Setting values for TDWR/LLWAS 3 integration parameters
| AD-A260740 | p 2783 N93-25645
Remote sensing of precipitation and electrification with a dual-polarization, coherent, wideband radar system
| AD-A260779 | p 2756 N93-25679
Status of the Olympus experiment at CRC p 2685 N93-26480
METEOROLOGICAL SATELLITES
A land-surface testbed for EOSDIS p 2878 N93-25797
METEOROLOGICAL SERVICES
Interactive forecasting with the National Weather Service River Forecast System p 2788 N93-25616
National Weather Service Winter Weather Workshop
| PB93-146785 | p 2785 N93-25775
Experimenter's laboratory for visualized interactive science p 2879 N93-25802
Synoptic and Mesoscale Meteorology Instruction Workshop
| PB93-156347 | p 2785 N93-25870
Rainfall frequency atlas of the Midwest
| PB93-164606 | p 2785 N93-25872
METEOROLOGY
The need for spaceborne observations for meteorology and climatology p 2744 N93-24813
Global Temperature and Salinity Pilot Project p 2733 N93-24924
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
Summary information and data sets for NREL's Solar Radiation Research Laboratory, 1981 - 1991
| DE93-000052 | p 2898 N93-25101
Winter warming from large volcanic eruptions
| NASA-CR-192848 | p 2763 N93-25244
On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
Compression of spectral meteorological imagery p 2804 N93-25925
Coastal ocean processes: A science prospectus
| AD-A261702 | p 2790 N93-26384
METEOSAT SATELLITE
Sustainable remote sensing: A major improvement for realtime resource management and disaster early warning in developing countries p 2743 N93-24808
METHANE
Direct methane conversion to methanol
| DE93-009183 | p 2660 N93-25497
Activation of methane by clean and chemically modified single crystal oxide surfaces
| PB93-157295 | p 2644 N93-25817
METHOD OF MOMENTS
High-performance visualization applied to computational electromagnetics: Method-of-moments on a silicon graphics workstation
| AD-A260820 | p 2675 N93-25700
METHYL ALCOHOL
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
A novel process for methanol synthesis
| DE93-008037 | p 2659 N93-25118
Probe molecule studies: Active species in alcohol synthesis
| DE93-008097 | p 2659 N93-25119
Direct methane conversion to methanol
| DE93-009183 | p 2660 N93-25497
Deuteron and oxygen-17 NMR studies of molecular motion in methanol-saturated Nafion membranes
| AD-A261579 | p 2851 N93-26514
METROLOGY
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
The Columbus Metrology Science Team: Report on activities p 2670 N93-24987
Designing for frequency and time metrology at the 10 to the minus 18 power level p 2842 N93-25059

MEXICO
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854
MICHELSON INTERFEROMETERS
Polarizing Michelson interferometer for measuring thermospheric winds
|ISBN-0-315-70442-X| p 2784 N93-25731
MICROANALYSIS
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037
MICROBIOLOGY
Planetary Biology and Microbial Ecology: Molecular Ecology and the Global Nitrogen cycle
|NASA-CR-4497| p 2803 N93-26157
MICROCHANNEL PLATES
Intensity distribution of the x ray source for the AXAF VETA-I mirror test p 2854 N93-26184
MICROCOMPUTERS
Object-oriented tools for distributed computing p 2817 N93-25576
MICROCRACKS
Processing and properties of Ti5Si3
|DE93-007284| p 2649 N93-25149
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
Defect initiation/growth and energy dissipation induced by deformation and fracture
|AD-A261703| p 2869 N93-26385
MICROELECTRONICS
Microwave and millimeter wave monolithic integrated circuits (MIMIC) program. MIMIC briefs: Summaries of phase 3 technology support programs
|AD-A260914| p 2690 N93-25660
RF vacuum microelectronics
|AD-A261343| p 2691 N93-26311
SiC microsensor with piezoresistive diamond sensing elements
|AD-A261346| p 2868 N93-26312
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
|PB93-158632| p 2884 N93-26530
RF vacuum microelectronics
|AD-A261784| p 2692 N93-26565
MICROGRAVITY APPLICATIONS
NASA Microgravity Science and Applications Program
|NASA-TM-108775| p 2663 N93-25194
Whisker growth studies under conditions which resemble those available on an orbiting space station
|NASA-CR-192701| p 2664 N93-25218
Laser ignition application in a space experiment
|NASA-TM-106133| p 2664 N93-25337
MICROHARDNESS
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
|NASA-TM-105959| p 2633 N93-26204
MICROMECHANICS
High Temperature Composite Analyzer (HITCAN) theoretical manual, version 1.0
|NASA-TM-106001| p 2723 N93-24913
A micromechanical viscoplastic stress-strain model with grain boundary sliding
|DE93-009109| p 2649 N93-25095
Continuum and micromechanics treatment of constraint in fracture
|AD-A260927| p 2727 N93-25647
Energy dissipation in inelastic flow of cohesionless granular media p 2703 N93-25662
Finite element micromechanics modeling of inelastic deformation of unidirectionally fiber-reinforced composites p 2637 N93-25680
A three-dimensional model for the residual stresses in a unidirectional composite plate p 2728 N93-25825
Micromechanics of fatigue
|AD-A260577| p 2729 N93-25901
Thermomechanical response of shape memory composites
|AD-A260828| p 2639 N93-25919
Failure considerations in composite systems based on 3D micromechanical stress fields, part A
|AD-A261698| p 2641 N93-26382
METal matrix composite ANalyzer (METCAN): Theoretical manual
|NASA-TM-106025| p 2641 N93-26552
MICROMETEOROIDS
Hypervelocity impact study: The effect of impact angle on crater morphology
|NASA-CR-192711| p 2724 N93-25260
MICROMOTORS
Tuned circuit electric levitation bearings for microactuators p 2689 N93-25619
MICROORGANISMS
Metabolic response of environmentally isolated microorganisms to industrial effluents: Use of a newly described cell culture assay p 2794 N93-26066
MICROPOROSITY
Template synthesis of electronically conductive polymers: A new route for achieving higher electronic conductivities
|AD-A261616| p 2658 N93-26437
MICROPROCESSORS
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
MICROSCOPY
Progress in imaging microscopy with x ray lasers at LLNL
|DE93-007508| p 2712 N93-25363
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy
|DE93-007509| p 2654 N93-25384
Internal current probing of integrated circuits using magnetic force microscopy
|DE93-006752| p 2692 N93-26501
MICROSTRIP ANTENNAS
Microstrip antennas on/in anisotropic material layers
|AD-A261700| p 2681 N93-26383
MICROSTRUCTURE
Development of dispersion-strengthened XD (trademark) Cu alloys for high heat-flux applications
|NASA-CR-191124| p 2653 N93-24761
Processing and properties of Ti5Si3
|DE93-007284| p 2649 N93-25149
Laser welding of selected aerospace alloys p 2718 N93-25435
Internal strain analysis of ceramics using scanning laser acoustic microscopy
|NASA-CR-191118| p 2721 N93-25451
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
Mullite whiskers and mullite-whisker felt p 2642 N93-25586
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760
High strain rate damage development and failure mechanisms in tungsten heavy alloys
|AD-A260856| p 2651 N93-25788
Research on lead titanate films for radiation detection
|AD-A261187| p 2849 N93-25823
Experimental and theoretical studies of proximity effect and Coulomb blockade phenomena in Josephson junctions
|AD-A261652| p 2867 N93-26194
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
|NASA-TP-3190| p 2652 N93-26201
Solidification processing and phase transformations in ordered high temperature alloys
|AD-A261751| p 2652 N93-26284
NIST reactor: Summary of activities, July 1991 through September 1992
|PB93-162873| p 2852 N93-26322
Position sensitive atom probe study of the decomposition of a Cu-2.6 at. percent Co alloy
|DE93-006737| p 2653 N93-26500
Interface engineering in oxide fiber/oxide matrix composites
|AD-A261705| p 2641 N93-26579
MICROWAVE ABSORPTION
Microwave absorption measurements and interference: Effects for a liquid fuel between 2.5 and 18 GHz
|AD-A260607| p 2675 N93-25635
MICROWAVE ANTENNAS
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview p 2680 N93-26128
MICROWAVE ATTENUATION
Rain rate and modeled fade distributions at 20 GHz and 30 GHz derived from five years of network rain gauge measurements p 2683 N93-26468
More rain compensation results p 2686 N93-26486
MICROWAVE CIRCUITS
Microwave and millimeter wave monolithic integrated circuits (MIMIC) program. MIMIC briefs: Summaries of phase 3 technology support programs
|AD-A260914| p 2690 N93-25660
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
|AD-A261178| p 2690 N93-25820
Special technology area review on microwave packaging technology
|AD-A261852| p 2681 N93-26276
MICROWAVE EMISSION
Propagation at microwave frequencies in the presence of tropospheric stratified layers p 2674 N93-25340
MICROWAVE IMAGERY
Remote sensing of non-renewable resources p 2744 N93-24814
Passive microwave remote sensing of snow-covered floating ice during spring conditions in the Arctic and Antarctic
|ISBN-0-315-70444-6| p 2754 N93-25422
Computation of moisture flux from ocean to atmosphere using a synergy of SSM/I-derived precipitable water and ECMWF analyses p 2774 N93-25757
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
MICROWAVE OSCILLATORS
Microwave frequency discriminator with a cryogenic sapphire resonator for ultra-low phase noise p 2693 N93-24982
Design of a low phase noise UHF oscillator using a partly metallized dielectric resonator p 2693 N93-25003
MICROWAVE POWER BEAMING
Preliminary results on an optically-pumped Cs beam frequency standard p 2832 N93-24989
MICROWAVE RADIOMETERS
Influence due to antenna pattern change in brightness temperature estimation for a space-based microwave radiometer p 2753 N93-24868
Vector radiative transfer model: Application to rainfall retrieval with microwave radiometric data p 2784 N93-25743
Cross-switched MICRAD seeker
|AD-D015676| p 2691 N93-26142
Brightness temperature and attenuation diversity statistics at 20.6 and 31.65 GHz for the Colorado Research Network p 2684 N93-26473
MICROWAVE RESONANCE
Basic design of a spaceborne hydrogen maser p 2716 N93-25024
Microwave synthesizers in space p 2693 N93-25038
Line inhomogeneity effects and power shift in miniaturized rubidium frequency standards p 2694 N93-25066
MICROWAVE SPECTRA
The Telecommunications and Data Acquisition Report
|NASA-CR-192804| p 2676 N93-26105
MICROWAVES
BBU code development for high-power microwave generators
|DE93-007111| p 2688 N93-25397
Microwave and millimeter wave monolithic integrated circuits (MIMIC) program. MIMIC briefs: Summaries of phase 3 technology support programs
|AD-A260914| p 2690 N93-25660
MIDDLE ATMOSPHERE
The Venus 130-nm dayglow as a diagnostic of thermospheric structure and dynamics p 2896 N93-25285
MIGRATION
Elastic modeling and migration in Earth models p 2771 N93-25433
MILITARY AIRCRAFT
Thermally induced stresses in a composite exposed to fire
|AD-A261714| p 2641 N93-26371
MILITARY AVIATION
Considerations for space and naval aviation applications of ferroelectric memory
|AD-A261300| p 2807 N93-26294
MILITARY OPERATIONS
Science, technology, and national security p 2886 N93-25232
Fidelity and validity in distributed interactive simulation: Questions and answers
|AD-A260971| p 2810 N93-25711
MILITARY SPACECRAFT
A Biphase Shift Keying (BPSK), direct sequence, spread spectrum modem for Petite Amateur Navy Satellite (PANSAT)
|AD-A261301| p 2618 N93-26295
MILITARY TECHNOLOGY
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026
Science, technology, and national security p 2886 N93-25232
Summary report of the Defense Sciences Research Council Summer Conference
|AD-A261375| p 2917 N93-26359
Department of Defense technical architecture framework for information management. Volume 1: Implementation concept, version 1.1
|AD-A261911| p 2884 N93-26531
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
|AD-A261912| p 2884 N93-26532

MILKY WAY GALAXY
Cape Photographic Durchmusterung, volume 1
| NASA-RP-1300-VOL-1 | p 2890 N93-26002
Cape Photographic Durchmusterung, volume 2
| NASA-RP-1300-VOL-2 | p 2890 N93-26003
Cape Photographic Durchmusterung, volume 3
| NASA-RP-1300-VOL-3 | p 2890 N93-26004
MILLIMETER WAVES
A superconducting tunnel junction receiver for submillimeter astronomy, and analysis of observations of post-AGB star molecular envelopes
p 2889 N93-25440
Microwave and millimeter wave monolithic integrated circuits (MIMIC) program. MIMIC briefs: Summaries of phase 3 technology support programs
| AD-A260914 | p 2690 N93-25660
MIMD (COMPUTERS)
Synthetic-perturbation tuning of MIMD programs
| PB93-161339 | p 2812 N93-26321
MIMO (CONTROL SYSTEMS)
Scalar gain interpretation of large order filters
p 2606 N93-24729
Identification and control of lightly damped, large space structures: An experimental evaluation
p 2616 N93-25351
Analytical and experimental study of control effort associated with model reference adaptive control
p 2820 N93-25468
MINERALOGY
Spectral remote sensing of anomalous mineralogy induced by hydrocarbon migration and uranium mineralization, San Rafael Swell, Utah, USA
p 2739 N93-24783
Remote sensing of non-renewable resources
p 2744 N93-24814
MINERALS
Remote sensing of non-renewable resources
p 2744 N93-24814
Low cost dewatering of waste slurries
p 2769 N93-25573
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill
p 2659 N93-25585
MINIATURIZATION
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728
Miniaturization and stability: A new generation of ovenised oscillators p 2693 N93-25004
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
MINICOMPUTERS
Interactive forecasting with the National Weather Service River Forecast System p 2788 N93-25616
MINING
Low cost dewatering of waste slurries
p 2769 N93-25573
MINORITIES
The 1993/1994 NASA Graduate Student Researchers Program
| NASA-EP-283 | p 2872 N93-26051
MIR SPACE STATION
Operational use of MOMS-02 (P2) data
p 2752 N93-24866
MIRRORS
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
Precision of the calibration of the AXAF engineering test article (VETA) mirrors p 2855 N93-26189
Image analysis of the AXAF VETA-I x ray mirror
p 2855 N93-26190
Surface finish quality of the outer AXAF mirror pair based on x ray measurements of the VETA-I
p 2855 N93-26191
The x ray reflectivity of the AXAF VETA-I optics
p 2855 N93-26192
Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings
| DE93-007513 | p 2857 N93-26593
MIS (SEMICONDUCTORS)
Study of surface behavior in function of temperature of the quaternary system (Hg, Cd, Zn)Te
| AD-A260968 | p 2867 N93-26223
MISSILE CONFIGURATIONS
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202
MISSILE DESIGN
The systems engineering overview and process (from the Systems Engineering Management Guide, 1990)
p 2665 N93-24679
ASTROS-ID: Software for system identification using mathematical programming
| AD-A260867 | p 2810 N93-25627
MISSILE RANGES
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
Flight termination receiver catalog
| AD-A261558 | p 2682 N93-26460
MISSILE TRACKING
Time and frequency reference for a trajectory measurement system p 2837 N93-25023
MISSILES
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584
MISSION PLANNING
The systems engineering overview and process (from the Systems Engineering Management Guide, 1990)
p 2665 N93-24679
What is a system? NASA's phased project description
p 2665 N93-24681
Systems engineering and integration processes involved with manned mission operations p 2666 N93-24688
Systems engineering considerations for operational support systems p 2666 N93-24689
Summary and recommendations on nuclear electric propulsion technology for the space exploration initiative
| NASA-TM-105707 | p 2622 N93-24744
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
JSC research and technology
| NASA-TM-104763 | p 2901 N93-25188
A mission concept for near term Lunar exploration
| DE93-007598 | p 2896 N93-25321
Space transfer vehicle concepts and requirements study. Volume 1: Executive summary
| NASA-CR-192524 | p 2610 N93-25479
Space transfer vehicle concepts and requirements study. Volume 2, book 1: STV concept definition and evaluation
| NASA-CR-192525 | p 2611 N93-25510
Space transfer vehicle concepts and requirements study. Volume 2, book 2: System and program requirements trade studies
| NASA-CR-192526 | p 2611 N93-25511
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
Space transfer vehicle concepts and requirements study. Volume 3, book 1: Program cost estimates
| NASA-CR-192529 | p 2611 N93-25514
Using AI/expert system technology to automate planning and replanning for the HST servicing missions
p 2822 N93-25962
Evaluating science return in space exploration initiative architectures
| NASA-TP-3339 | p 2897 N93-26094
Knowledge-based decision support for Space Station assembly sequence planning
| NASA-CR-193048 | p 2599 N93-26095
NLS operations concepts: Failure modes scenario simulation model analysis
| MCR-92-5013 | p 2609 N93-26175
Nuclear safety policy working group recommendations on nuclear propulsion safety for the space exploration initiative
| NASA-TM-105705 | p 2632 N93-26200
Representative systems for space exploration
p 2897 N93-26395
Mars exploration planning p 2898 N93-26399
Department of Defense technical architecture framework for information management. Volume 2: Architecture guidance and design concepts, version 1.1
| AD-A261912 | p 2884 N93-26532
MIXERS
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915
MIXING
A basic research model of natural gas combustion in turbulent flow, phase 2
| PB93-158509 | p 2644 N93-25819
MIXING LAYERS (FLUIDS)
Initial streamwise vorticity formation in a two-stream mixing layer p 2579 N93-25752
MOBILE COMMUNICATION SYSTEMS
An introduction to Doppler effect and fading in mobile communications
| AD-A260976 | p 2676 N93-25866
ETS-5, ETS-6, and COMETS projects in Japan
p 2683 N93-26470
WARC 92 and some thoughts as to its impact on the NASA propagation program p 2684 N93-26475
Allocations by the 1992 World Administrative Radio Conference p 2684 N93-26476
MOBILITY
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642
MODAL RESPONSE
Global dynamic modeling of a transmission system
| NASA-CR-191117 | p 2716 N93-24751
Trapped energy quartz crystal resonator on wedge-shaped plate p 2837 N93-25022
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938
MODEL REFERENCE ADAPTIVE CONTROL
Analytical and experimental study of control effort associated with model reference adaptive control
p 2820 N93-25468
MODELS
The evaluation of technical models used for major-accident hazard installations. Report to Commission of the European Communities Directorate General 12
| CUED/A-AERO/TR-19 | p 2668 N93-25238
ASRM design philosophy and modelling challenges
p 2627 N93-26022
Model reduction for Space Station Freedom
p 2620 N93-26081
MODEMS
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites
p 2686 N93-24999
MODULARITY
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
| DE93-002943 | p 2760 N93-24955
MODULATION
Synchronisation, acquisition and tracking for telemetry and data reception p 2614 N93-25000
A frequency generating source: Frequency synthesizers p 2693 N93-25041
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358
MODULATORS
Performance results of a 300-degree linear phase modulator for spaceborne communications applications
p 2672 N93-24670
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774
MODULES
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136
Multichip module high speed testing
| AD-A261391 | p 2856 N93-26306
MODULUS OF ELASTICITY
Dynamic hardness tester and cure meter
p 2711 N93-25608
MOIRE FRINGES
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768
MOISTURE
Effects of moisture and other contaminants in friction composites
| AD-A261226 | p 2640 N93-26301
MOISTURE CONTENT
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874
MOISTURE RESISTANCE
A comparison of moisture resistance with different types of end-terminations in ceramic capacitors
| DE93-007600 | p 2689 N93-25416
MOLECULAR BEAM EPITAXY
Laser Induced Phonons (LIPs) in MBE grown ZnSe
| RSRE-MEMO-4544 | p 2864 N93-25454
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC
| AD-A261178 | p 2690 N93-25820
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
MOLECULAR BEAMS
Mechanistic studies of the CVD of silicon nitride from SiF4 and NH3
| DE93-004500 | p 2644 N93-25312
Flame structure studies of a lean, 20 torr H2/N2O/AR flame employing molecular beam mass spectrometry
p 2627 N93-26025
Modeling of atom-diatom scattering
| AD-A261645 | p 2849 N93-26173
MOLECULAR CLOUDS
Structure and star forming activities of the cold massive molecular cloud G216-2.5 p 2893 N93-25477
Shells, outflows and star formation in the giant molecular cloud Monoceros R2 p 2893 N93-25555

Photospheric abundance analysis of low-mass pre-main sequence stars p 2894 N93-25623

MOLECULAR COLLISIONS
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281

MOLECULAR DIFFUSION
Deuteron and oxygen-17 NMR studies of molecular motion in methanol-saturated Nafion membranes
| AD-A261579 | p 2851 N93-26514

MOLECULAR EXCITATION
The structure and energetics of Cr(CO)6 and Cr(CO)5
| NASA-CR-192889 | p 2848 N93-25450
Theoretical and experimental research in infrared technology
| AD-A260926 | p 2853 N93-25646
State-selected studies of atoms and molecules ejected from ion bombarded surfaces
| AD-A261275 | p 2850 N93-26267

MOLECULAR INTERACTIONS
Radiation-induced disordering and defect production in CuAu and NiAl studied by molecular dynamics simulation
| DE93-007506 | p 2649 N93-25336
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525

MOLECULAR STRUCTURE
Ionization probes of molecular structure and chemistry
| DE93-008211 | p 2847 N93-25310
The structure and energetics of Cr(CO)6 and Cr(CO)5
| NASA-CR-192889 | p 2848 N93-25450
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR
| AD-A261224 | p 2645 N93-26300
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
| AD-A261804 | p 2662 N93-26387
Molecular composition, structure, and sensitivity of explosives
| DE93-003850 | p 2662 N93-26493
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518

MOLECULAR WEIGHT
Polyimides containing the cyclobutene-3,4-dione moiety
| NASA-CASE-LAR-14753-1 | p 2656 N93-25999

MOLECULES
Experimental and theoretical studies of dense fluid mixtures
| DE93-006070 | p 2695 N93-24976
Application of non-thermal plasmas to pollution control
| DE93-007515 | p 2763 N93-25385
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces
| AD-A261265 | p 2657 N93-26303
Penning detachment: A new frontier
| AD-A261447 | p 2850 N93-26346
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions
| DE93-007669 | p 2647 N93-26599

MOLTEN SALTS
Rheology of YBa2Cu3O(7-x) precursors
| DE93-007285 | p 2863 N93-25362

MOLYBDENUM
Fundamental aspects of metal joining: The study of strong interfaces
| AD-A261293 | p 2653 N93-26304
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518

MOMENTUM
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Implementation of the Turn Function Method in a three-dimensional, parallelized hydrodynamics code
| DE93-003744 | p 2696 N93-25124

MOMENTUM TRANSFER
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
High-energy pion-nucleus scattering at LAMPF
| DE93-007364 | p 2852 N93-25380

MONITORS
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018
Measuring hearing protection device performance using the metrosonics db-3100 sound level analyzer (dosimeter)
| AD-A260852 | p 2801 N93-25787

MONKEYS
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
| AD-A261808 | p 2793 N93-26259

MONOMERS
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997

MONTE CARLO METHOD
An introductory guide to uncertainty analysis in environmental and health risk assessment
| DE93-002873 | p 2760 N93-24676
Development and application of computational aerothermodynamics flowfield computer codes
| NASA-CR-192940 | p 2574 N93-24736
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
Monte-Carlo methods make Dempster-Shafer formalism feasible
| NASA-CR-192945 | p 2828 N93-25140
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
The role of multiple scattering in twilight zenith sky observations of atmospheric absorbers: Diurnal photochemistry and airmass factors p 2772 N93-25535
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671
Developing and improving numerical algorithms to study intrinsically correlated electron systems
| AD-A261214 | p 2849 N93-25734
A numerical simulation of adsorption onto a crystalline surface
| AD-A261079 | p 2866 N93-25781
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255
Proton Monte Carlo transport program PTRAN
| PB93-158673 | p 2850 N93-26314
Monte Carlo approach to the approximation of invariant measures
| PB93-159069 | p 2830 N93-26317

MOORING
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320

MORNING
Sounding rocket observations of precipitating ions in the morning auroral region p 2773 N93-25732

MORPHOLOGY
Monitoring and evaluation of morphohydrographical changes in the Danube Delta by remote-sensing p 2747 N93-24834
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
Flow and morphological conditions associated with the directional solidification of aqueous ammonium chloride
| DE93-008886 | p 2644 N93-25495
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524
Luminescence probe studies of ionomers. 3: Distribution of decay rate constants for tris bipyridyl ruthenium(2) in Nafion membranes
| AD-A260764 | p 2645 N93-25916

MOSSBAUER EFFECT
Inelastic scattering in condensed matter with high intensity Moessbauer radiation
| DE93-008763 | p 2864 N93-25503

MOTION PERCEPTION
Visual processing of object velocity and acceleration
| AD-A261048 | p 2800 N93-25778
Neural basis of motion perception
| AD-A261452 | p 2798 N93-26349
Effect of image update rate on moving-target identification range
| AD-A261562 | p 2591 N93-26462

MOTION SICKNESS
Autonomic physiological data associated with simulator discomfort
| NASA-CR-177609 | p 2794 N93-24738

MOTION STABILITY
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438

MOTIVATION
Exploring the link between intrinsic motivation and quality
| AD-A261722 | p 2722 N93-26246

MOTOR VEHICLES
A heat transfer analysis of a mobile vehicle radiation-shielded operator compartment
| DE93-007428 | p 2800 N93-25318
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585

MOUNTAINS
Atmospheric correction of Landsat/TM data over mountainous terrain for forestry applications p 2752 N93-24862
A three-dimensional study of the influence of mountains on a front
| AD-A261927 | p 2787 N93-26545

MOVING TARGET INDICATORS
Effect of image update rate on moving-target identification range
| AD-A261562 | p 2591 N93-26462

MTBF
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279

MULLITES
Mullite whiskers and mullite-whisker felt p 2642 N93-25586

MULTIGRID METHODS
Implicit multigrid solution of the compressible Navier-Stokes equations with application to distributed parallel processing p 2702 N93-25546
Multilevel techniques in large scale computation
| AD-A261082 | p 2828 N93-25762

MULTIMEDIA
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369

MULTIPATH TRANSMISSION
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767

MULTIPHASE FLOW
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954
Numerical simulation of time-dependent thermocapillary convection in layered fluid systems p 2700 N93-25472

MULTIPHOTON ABSORPTION
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Photoexcitation of carbon fullerenes
| AD-A260739 | p 2849 N93-25644

MULTIPLEXING
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728
Cross-switched MICRAD seeker
| AD-D015676 | p 2691 N93-26142
The Data Multiplexing Network (DMN) phase 3 Extended Distance Data Cable (EDDC) test and evaluation
| DOT/FAA/CT-TN93/11 | p 2680 N93-26160

MULTIPROCESSING (COMPUTERS)
Supercomputer Debugging Workshop 1992
| DE93-007322 | p 2805 N93-25165
Proceedings of the Second SISAL Users' Conference
| DE93-008019 | p 2815 N93-25304
Toward a parallel recursive spectral bisection mapping tool
| DE93-006632 | p 2816 N93-25414
Gigabit network communications research
| AD-A260644 | p 2675 N93-25640

MULTISENSOR APPLICATIONS
Remote sensed spectral signatures classification and recognition by neural networks: An approach to unsupervised techniques p 2738 N93-24779
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
Operational use of MOMS-02 (P2) data p 2752 N93-24866
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
Method of measuring cross-flow vortices by use of an array of hot-film sensors
| NASA-CASE-LAR-14824-1-SB | p 2706 N93-26000

Phase discriminating capacitive array sensor system
| NASA-CASE-GSC-13460-1 | p 2691 N93-26104
MULTISPECTRAL BAND SCANNERS
SEOMAR: An Italian approach to the observation of the Mediterranean area p 2746 N93-24825
Operational use of MOMS-02 (P2) data p 2752 N93-24866
MULTISPECTRAL PHOTOGRAPHY
Cloud properties as inferred from HIRS/2 multi-spectral data p 2782 N93-25293
MULTIVARIABLE CONTROL
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366
MULTIVARIATE STATISTICAL ANALYSIS
Time stability: An improvement of the multi-variance method for the oscillator noise analysis p 2839 N93-25036
Multivariate statistical analysis software technologies for astrophysical research involving large data bases p 2878 N93-25796
Time series analysis and multivariate analysis
| AD-A261014 | p 2830 N93-25860
MUSCLES
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763
Initial experiments with a myoelectric-based muscle sensor
| DE92-016034 | p 2799 N93-25099
Helmeted head and neck dynamics under whole-body vibration p 2800 N93-25531
MUSCULAR FUNCTION
Initial experiments with a myoelectric-based muscle sensor
| DE92-016034 | p 2799 N93-25099
MUSCULOSKELETAL SYSTEM
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763

N

N-TYPE SEMICONDUCTORS
Research on stable, high-efficiency amorphous silicon multijunction modules
| DE93-000072 | p 2862 N93-25163
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
NAMING
Agreement in naming objects and concepts for information retrieval p 2881 N93-25826
NAP-OF-THE-EARTH NAVIGATION
Methodology investigation: Global Positioning System integration (GPS)
| AD-A261054 | p 2586 N93-26237
Image-based ranging and guidance for rotorcraft
| NASA-CR-177608 | p 2586 N93-26549
NAPHTHALENE
Theoretical calculations on the electron absorption spectra of selected Polycyclic Aromatic Hydrocarbons (PAH) and derivatives
| NASA-CR-192762 | p 2892 N93-25200
NARROWBAND
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261
NASA PROGRAMS
Space transfer vehicle concepts and requirements study. Volume 1: Executive summary
| NASA-CR-192524 | p 2610 N93-25479
The 1993/1994 NASA Graduate Student Researchers Program
| NASA-EP-283 | p 2872 N93-26051
National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, volume 1
| NASA-CR-188242-VOL-1 | p 2911 N93-26058
National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, volume 2
| NASA-CR-188242-VOL-2 | p 2914 N93-26070
High performance computing and communications panel report p 2807 N93-26131
Design and implementation of a pilot orientation program for new NASA engineering employees
| NASA-TM-105907 | p 2872 N93-26205
OSSA Information Systems Program
| NASA-TM-108758 | p 2883 N93-26491
NASA SPACE PROGRAMS
Former Soviet Republic capabilities in space and science
| DE93-007613 | p 2598 N93-25322
Aeronautics in NACA and NASA
| NASA-NP-156 | p 2574 N93-26422
NATIONAL AEROSPACE PLANE PROGRAM
Trajectory optimization for the National aerospace plane
| NASA-CR-192954 | p 2589 N93-25670
Numerical simulation of hypersonic aerodynamics and the computational needs for the design of an aerospace plane
| AD-A260681 | p 2580 N93-25894
Aerospace-plane flights and stratospheric ozone: Review and preliminary assessment of the National Aerospace Plane (NASP) operations
| RAND/N-3464-AF | p 2767 N93-26327
NATIONAL AIRSPACE SYSTEM
Runway Visual Range (RVR) Operational Test and Evaluation (OT&E) integration and OT&E operational test report
| DOT/FAA/CT-TN93/37 | p 2584 N93-25243
NATIONAL LAUNCH VEHICLE PROGRAM
National Launch System. Task 4: System architecture options analysis
| MCR-92-5011 | p 2609 N93-26098
NATURAL GAS
Catalytic conversion of light alkanes
| DE93-009646 | p 2644 N93-25499
A basic research model of natural gas combustion in turbulent flow, phase 2
| PB93-158509 | p 2644 N93-25819
Thermodynamic properties of natural gas mixtures
| PB93-167112 | p 2872 N93-26509
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2
| PB93-159432 | p 2720 N93-26534
Thermodynamic properties of natural gas mixtures
| PB93-156818 | p 2872 N93-26558
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1
| PB93-165603 | p 2720 N93-26585
NATURAL LANGUAGE (COMPUTERS)
Inferring heuristic classification hierarchies from natural language input p 2825 N93-25979
NAUTICAL CHARTS
Digital Nautical Chart
| AD-A260810 | p 2756 N93-25694
NAVIER-STOKES EQUATION
Computation of hypersonic viscous flowfields using the parabolized Navier-Stokes equations p 2694 N93-24766
Computational study of the aerodynamics and control by blowing of asymmetric vortical flows over delta wings p 2574 N93-24772
A convergent finite difference scheme for the Navier-Stokes equations of nonisentropic compressible fluid flow p 2695 N93-24906
Direct solutions of the Navier-Stokes equations with application to static aeroelasticity p 2697 N93-25259
The steady Navier-Stokes problem for low Reynolds number viscous jets p 2698 N93-25264
Data parallel finite element techniques for large-scale computational fluid dynamics p 2699 N93-25334
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Numerical simulation of leading-edge receptivity to freestream vorticity p 2577 N93-25388
Numerical simulation of time-dependent thermocapillary convection in layered fluid systems p 2700 N93-25472
Spatial simulation of transition in wall-bounded shear flows: Active control and effects of surface roughness p 2701 N93-25483
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542
Tangential fuselage blowing on an ogive cylinder p 2578 N93-25545
Implicit multigrid solution of the compressible Navier-Stokes equations with application to distributed parallel processing p 2702 N93-25546
Numerical modelling of viscous turbomachinery flows with a pressure correction method p 2594 N93-25702
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865
Simulation of vortex bursting p 2580 N93-25881
Workshop Report: A validation study of Navier-Stokes codes for transverse injection into a Mach 2 flow p 2624 N93-26008
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198
Incompressible spectral-element method: Derivation of equations
| NASA-TM-106109 | p 2708 N93-26554
NAVIGATION
The role of ocean climate data in operational Naval oceanography p 2732 N93-24916
Mixed constellation synchronization of GPS time p 2836 N93-25015
Collaboration in the UK on time transfer using the GLONASS system p 2837 N93-25019
NAVIGATION AIDS
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
Digital Nautical Chart
| AD-A260810 | p 2756 N93-25694
NAVIGATION INSTRUMENTS
System for calibrating a gyro navigator
| AD-D015668 | p 2586 N93-26093
NAVIGATION SATELLITES
Application of GPS tracking techniques to orbit determination for TDRS p 2601 N93-24702
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018
NAVSTAR SATELLITES
Rubidium atomic frequency standards for GPS block 2R p 2836 N93-25014
NAVY
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597
NEAR INFRARED RADIATION
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634
NEBULAE
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770
NEGATIVE IONS
Dynamics of collision processes
| DE93-007143 | p 2849 N93-25509
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171
Penning detachment: A new frontier
| AD-A261447 | p 2850 N93-26346
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions
| DE93-007669 | p 2647 N93-26599
NEODYMIUM LASERS
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389
NERVES
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-025 | p 2793 N93-25405
Primary events in olfactory reception
| AD-A260562 | p 2795 N93-25944
NERVOUS SYSTEM
Biomagnetic localization from transient quasi-static events
| DE93-007328 | p 2794 N93-25186
Computation and learning in neural networks with binary weights
| AD-A261182 | p 2821 N93-25821
NETWORK CONTROL
An OSI architecture for the Deep Space Network p 2679 N93-26121
Admission control in integrated voice/data multihop radio networks
| AD-A261055 | p 2680 N93-26227
NETWORKS
Lightning characteristics in the north-east part of Japan observed by a magnetic direction-finder network p 2779 N93-24892
NEURAL NETS
Using neural networks and Dyna algorithm for integrated planning, reacting and learning in systems
| NASA-CR-193018 | p 2817 N93-24743
Remote sensed spectral signatures classification and recognition by neural networks: An approach to unsupervised techniques p 2738 N93-24779
EUROSTARS: A system for thematic analysis of remote sensed data p 2753 N93-24871
A neural network-based estimator for the mixture ratio of the Space Shuttle Main Engine
| NASA-TM-106070 | p 2622 N93-25089
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137
Neural networks: What non-linearity to choose
| NASA-CR-192948 | p 2819 N93-25197

Scene segmentation of natural images using texture measures and back-propagation
| NASA-TM-104003 | p 2803 N93-25235
Energy and Technology Review, October - December 1992
| DE93-007784 | p 2674 N93-25299
A software package for neural network applications development p 2827 N93-25610
Control of complex dynamic systems by neural networks p 2827 N93-25611
Construction of a connectionist network supercomputer
| AD-A260929 | p 2820 N93-25648
Multi-layer holographic bifurcative neural network system for real-time adaptive EOS data analysis p 2880 N93-25807
Computation and learning in neural networks with binary weights
| AD-A261182 | p 2821 N93-25821
An optimal scheduling of pick-place operations of a robot-vision-tracking system by using neural networks and rule-based systems p 2821 N93-25880
Parametric motion control of robotic arms: A biologically based approach using neural networks p 2822 N93-25964
Detection of bearing failure in mechanical devices using neural networks p 2822 N93-25965
The probabilistic neural network architecture for high speed classification of remotely sensed imagery p 2824 N93-25972
Data fusion with artificial neural networks (ANN) for classification of earth surface from microwave satellite measurements p 2824 N93-25974
Neural networks for atmospheric retrievals p 2824 N93-25975
Classifying multispectral data by neural networks p 2825 N93-25976
Using modular neural networks with local representations to control dynamic systems
| AD-A261597 | p 2826 N93-26162
Complexity of connectionist and constraint-satisfaction networks
| AD-A261617 | p 2817 N93-26169
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391
Reinforcement learning for robots using neural networks
| AD-A261434 | p 2827 N93-26487
Joint services electronics program
| AD-A261801 | p 2692 N93-26539

NEUROLOGY
Proceedings of Workshop 1: The Human Brainmap Database
| AD-A260720 | p 2796 N93-25654
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347

NEUROPHYSIOLOGY
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347
Neural basis of motion perception
| AD-A261452 | p 2798 N93-26349
Imaging regional changes in the spontaneous activity of the brain: An extension of the minimum-norm least-squares estimate
| AD-A261593 | p 2798 N93-26436
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521

NEUTRAL BEAMS
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092
Dynamics of gas-surface interactions
| AD-A261402 | p 2646 N93-26402

NEUTRINOS
An investigation of neutrino properties through study of the sun, supernovae, the early universe and lab data p 2898 N93-25180

NEUTRON BEAMS
NIST reactor: Summary of activities, July 1991 through September 1992
| PB93-162873 | p 2852 N93-26322

NEUTRON COUNTERS
Feasibility study of a long duration balloon flight with NASA/GSFC and Soviet Space Agency Gamma Ray Spectrometers
| NASA-CR-192934 | p 2573 N93-25077
A compact neutron counter telescope with thick radiator (Cotetra) for fusion experiment
| NIFS-205 | p 2860 N93-25347

NEUTRON DIFFRACTION
NIST reactor: Summary of activities, July 1991 through September 1992
| PB93-162873 | p 2852 N93-26322

NEUTRON IRRADIATION
NIST reactor: Summary of activities, July 1991 through September 1992
| PB93-162873 | p 2852 N93-26322

NEUTRON RADIOGRAPHY
NIST reactor: Summary of activities, July 1991 through September 1992
| PB93-162873 | p 2852 N93-26322

NEUTRON SPECTROMETERS
A compact neutron counter telescope with thick radiator (Cotetra) for fusion experiment
| NIFS-205 | p 2860 N93-25347

NEUTRON STARS
Diskoseismology: Probing relativistic accretion disks p 2894 N93-25622
Steady-state numerical models of accreting neutron stars: The effect of atmospheric CNO depletion and diffusion p 2889 N93-25624
Gravitational radiation from coalescing binary star systems p 2900 N93-25625

NEUTRONS
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151
A method for transient, three-dimensional neutron transport calculations
| DE93-007243 | p 2847 N93-25256
Neutron energy determination with a high-purity germanium detector
| NASA-CR-192773 | p 2900 N93-25890

NEWTON METHODS
Direct solutions of the Navier-Stokes equations with application to static aeroelasticity p 2697 N93-25259
Dynamics of deformable multibody systems using recursive projection methods
| AD-A260698 | p 2728 N93-25842

NEWTONIAN FLUIDS
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779

NICKEL ALLOYS
Hot corrosion of the B2 nickel aluminides
| NASA-CR-191082 | p 2649 N93-25128
High temperature fracture toughness of Ni3Al alloy IC-396M
| DE93-008564 | p 2650 N93-25492
Fatigue in single crystal nickel superalloys
| AD-A260709 | p 2651 N93-25843
Shear band formation in a W-Ni-Fe alloy under plate impact
| AD-A260702 | p 2651 N93-25907
Fatigue in single crystal nickel superalloys
| AD-A261742 | p 2652 N93-26282
Solidification processing and phase transformations in ordered high temperature alloys
| AD-A261751 | p 2652 N93-26284
The influence of primary and secondary orientations on the elastic response of a nickel-base single-crystal superalloy
| NASA-TM-106125 | p 2731 N93-26550

NIGER
Lithologic mapping with LANDSAT Thematic Mapper guided by laboratory spectral measurements, Air, Niger (Africa) p 2742 N93-24803

NIGHT VISION
Interpupillary and vertex distance effects on field-of-view and acuity with ANVIS
| AD-A261259 | p 2802 N93-26265

NITINOL ALLOYS
Active control of NiTINOL-reinforced structural composites
| AD-A261062 | p 2638 N93-25780

NITRAMINE PROPELLANTS
Modeling of H2/N2O flames p 2627 N93-26026
Dark zone modeling of solid propellant flames p 2628 N93-26028
Chemistry during the induction time in heated nitramines p 2629 N93-26035
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
| AD-A261804 | p 2662 N93-26387

NITRATES
Rheology of YBa2Cu3O(7-x) precursors
| DE93-007285 | p 2863 N93-25362

NITRIC ACID
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation p 2760 N93-24908
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287

NITRIDES
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition
| DE93-007908 | p 2654 N93-25372

NITROGEN
ANOVA method to estimate vegetation indices sensitivity assessing nitrogen fertilizing influence on spectral reflectance coefficients p 2739 N93-24782
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850
Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing p 2751 N93-24859
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition
| DE93-007908 | p 2654 N93-25372
Planetary Biology and Microbial Ecology: Molecular Ecology and the Global Nitrogen cycle
| NASA-CR-4497 | p 2803 N93-26157
Inorganic nitrogen and phosphorus dynamics in the water column of the Patuxent River
| PB93-172955 | p 2767 N93-26511

NITROGEN OXIDES
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation p 2760 N93-24908
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

NITROUS OXIDES
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956

NOAA SATELLITES
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706
Correlation between NDVI values derived from NOAA AVHRR HRPT data and ground measurements of precipitation in the EFEDA study area (Spain) p 2738 N93-24780
Demonstration of seasonal changes in the territory of Finland using multitemporal NOAA-AVHRR data p 2742 N93-24801
Sustainable remote sensing: A major improvement for realtime resource management and disaster early warning in developing countries p 2743 N93-24808
Assessment and forecasting of crop yield in Niger through NOAA NDVI data p 2750 N93-24851
Global drought monitoring from NOAA polar orbiting satellites p 2750 N93-24852
Interest of complementary data of coarse and high spatial resolution for agro-climatic crop monitoring p 2750 N93-24853
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854

NOBLE METALS
Theoretical predictions of platinum-rhodium bimetallic catalysts
| DE93-007540 | p 2649 N93-25428

NODULES
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy
| DE93-007509 | p 2654 N93-25384

NOISE (SOUND)
A computational method for the analysis of acoustic radiation from turbofan inlets p 2845 N93-25717
Measuring hearing protection device performance using the metrosonics db-3100 sound level analyzer (dosimeter)
| AD-A260852 | p 2801 N93-25787

NOISE GENERATORS
A computational method for the analysis of acoustic radiation from turbofan inlets p 2845 N93-25717

NOISE INTENSITY
Noise measurements in single-mode GaAlAs diode lasers p 2716 N93-25067
In-flight evaluation of noise levels and assessment of active noise reduction systems in the Seahawk S-70B-2 helicopter
| AD-A260689 | p 2845 N93-25649
Aerospace-plane flights and stratospheric ozone: Review and preliminary assessment of the National Aerospace Plane (NASP) operations
| RAND/N-3464-AF | p 2767 N93-26327

NOISE MEASUREMENT
Noise measurements in single-mode GaAlAs diode lasers p 2716 N93-25067
Noise-optimal control of HEMT LNA's for compensation of temperature deviations p 2678 N93-26115
NOISE PREDICTION (AIRCRAFT)
Theory for noise of propellers in angular inflow with parametric studies and experimental verification
| NASA-CR-4499 | p 2844 N93-25094
NOISE PROPAGATION
Far field rotor noise
| AD-A260703 | p 2845 N93-25651
Rotating rake design for unique measurement of fan-generated spinning acoustic modes
| NASA-TM-105946 | p 2595 N93-26161
NOISE REDUCTION
A numerical and experimental studies of flow characteristics in centrifugal fans p 2577 N93-25339
Graphite/epoxy composite laminates with co-cured interlaminar damping layers p 2642 N93-25587
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618
In-flight evaluation of noise levels and assessment of active noise reduction systems in the Seahawk S-70B-2 helicopter
| AD-A260689 | p 2845 N93-25649
Rotating rake design for unique measurement of fan-generated spinning acoustic modes
| NASA-TM-105946 | p 2595 N93-26161
A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems
| NASA-TM-106015 | p 2846 N93-26551
NOISE SPECTRA
Time stability: An improvement of the multi-variance method for the oscillator noise analysis p 2839 N93-25036
NOISE TEMPERATURE
A technique for computation of noise temperature due to a beam waveguide shroud p 2671 N93-24661
Noise-optimal control of HEMT LNA's for compensation of temperature deviations p 2678 N93-26115
Figure of merit for direct-detection optical channels p 2678 N93-26117
NOISE TOLERANCE
Machine learning techniques for fault isolation and sensor placement p 2823 N93-25966
NONADIABATIC CONDITIONS
Chemical dynamics studies of high energy species
| AD-A260743 | p 2852 N93-25676
NONDESTRUCTIVE TESTS
Monitoring damage growth in titanium matrix composites using acoustic emission
| NASA-TM-107742 | p 2634 N93-25072
Reliability assessment at airline inspection facilities. Volume 1: A generic protocol for inspection reliability experiments
| DOT/FAA/CT-92/12-VOL-1 | p 2582 N93-25110
Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques
| DE93-008074 | p 2721 N93-25518
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements p 2635 N93-25544
Fundamental and applied aspects of defect engineering in GaAs
| AD-A260573 | p 2867 N93-25899
Nondestructive evaluation of ferrite c-cores
| KCP-613-4677 | p 2721 N93-25939
Automated inspection of solder joints for surface mount technology
| NASA-TM-104580 | p 2721 N93-26137
NIST reactor: Summary of activities, July 1991 through September 1992
| PB93-162873 | p 2852 N93-26322
Inverse problems in nondestructive evaluations
| AD-A261370 | p 2722 N93-26337
NDT standards from the perspective of the Department of Defense
| MTL-TR-92-68 | p 2722 N93-26434
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526
X ray computed tomography for failure analysis
| AD-A261884 | p 2722 N93-26527
NONEQUILIBRIUM FLOW
A new LU-SGS flow solver for calculating reentry flows p 2579 N93-25759
NONISENTROPICITY
A convergent finite difference scheme for the Navier-Stokes equations of nonisentropic compressible fluid flow p 2695 N93-24906
NONLINEAR EQUATIONS
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls
| NASA-TM-106087 | p 2696 N93-25175
On the effect of acoustic coupling on random and harmonic plate vibrations
| NASA-TM-107740 | p 2844 N93-25189
Parallelizing the spectral transform method: A comparison of alternative parallel algorithms
| DE93-008664 | p 2816 N93-25521
Dynamics of deformable multibody systems using recursive projection methods
| AD-A260698 | p 2728 N93-25842
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438
NONLINEAR FEEDBACK
Nonlinear system design: Adaptive feedback linearization with unmodeled dynamics
| AD-A261360 | p 2826 N93-26333
NONLINEAR FILTERS
PDE: Differential, geometric and algebraic methods in nonlinear filtering
| AD-A260967 | p 2829 N93-26222
Realtime control of multiple sensor systems
| AD-A261037 | p 2680 N93-26226
NONLINEAR OPTICS
IR materials producibility
| AD-A261099 | p 2853 N93-25766
Second-harmonic generation in optical fibers and glass
| AD-A260592 | p 2853 N93-25839
Advanced optical fiber communication systems
| AD-A261802 | p 2856 N93-26256
Efficient nonlinear optical conversion of 1.319-micron laser radiation
| AD-A261309 | p 2715 N93-26297
Development of organic nonlinear optical materials
| AD-A261332 | p 2856 N93-26309
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
Interferometric measurement with squeezed light
| AD-A260910 | p 2856 N93-26457
Laser physics and laser techniques
| AD-A261595 | p 2715 N93-26524
NONLINEAR PROGRAMMING
Optimal cooperative power-limited rendezvous p 2607 N93-24904
NONLINEAR SYSTEMS
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137
Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
Control of nonlinear systems under input constraints with applications to flight control p 2596 N93-25353
On existence of solutions and duality for a model of non-linear elastic plates with transverse shear deformations p 2726 N93-25437
Stochastic and seismic design response of linear and nonlinear structures p 2726 N93-25484
Nonlinear stability analysis of the attitude motion of spin-stabilized thrusting spacecraft p 2617 N93-25527
Biped control via nonlinear dynamics p 2718 N93-25697
Nonlinear dynamics and attitude control of articulated flexible space structures p 2617 N93-25726
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834
The MODE family of on-orbit experiments: The Middeck Active Control Experiment (MACE) p 2599 N93-25835
Nonlinear vibrations, stability, and dynamics of structures and mechanisms
| AD-A260871 | p 2728 N93-25838
Applications of parallel and vector algorithms in nonlinear structural dynamics using the finite element method
| AD-A260716 | p 2811 N93-25845
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine
| NASA-TM-106097 | p 2632 N93-26211
Nonlinear system design: Adaptive feedback linearization with unmodeled dynamics
| AD-A261360 | p 2826 N93-26333
Adaptive control of nonlinear flexible systems
| AD-A261676 | p 2826 N93-26365
Solution of nonlinear boundary value problem on successively refined grids
| AD-A261395 | p 2829 N93-26519
NONLINEARITY
Nonlinear techniques for forecasting solar activity directly from its time series p 2603 N93-24716
The third-order permittivity of quartz obtained by different methods p 2840 N93-25046
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls
| NASA-TM-106087 | p 2696 N93-25175
On the effect of acoustic coupling on random and harmonic plate vibrations
| NASA-TM-107740 | p 2844 N93-25189
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
Damage-survivable and damage-tolerant laminated composites with optimally placed piezoelectric layers
| AD-A260879 | p 2636 N93-25631
Far field rotor noise
| AD-A260703 | p 2845 N93-25651
Thermal expansion measurements of polymer matrix composites and syntactics
| MTL-TR-92-27 | p 2640 N93-25954
Nonlinear wave phenomena related to interactions in the ionosphere
| AD-A261450 | p 2776 N93-26348
NONUNIFORM MAGNETIC FIELDS
Maneuvering a reentry body via magneto-gasdynamic forces p 2615 N93-25207
NONUNIFORMITY
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
| AD-A260901 | p 2727 N93-25658
NORMAL SHOCK WAVES
Supersonic shock wave/vortex interaction
| NASA-CR-192917 | p 2576 N93-25249
An investigation of photothermal velocimetry for application to transient, high-speed gas flows p 2579 N93-25720
NORMALIZING (STATISTICS)
Quaternion normalization in spacecraft attitude determination p 2606 N93-24730
NORTH ATLANTIC TREATY ORGANIZATION (NATO)
AGARD membership, 1993
| AGARD-MEMB-93 | p 2873 N93-26428
NORTH DAKOTA
The North Dakota thunderstorm project
| PB93-153039 | p 2785 N93-25776
NORTHERN HEMISPHERE
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
NORTHERN SKY
Tully-Fisher distances and motions in the northern sky p 2889 N93-25621
NOTCH STRENGTH
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
NOTCHES
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
NOZZLE DESIGN
Remtech SSME nozzle design TPS
| NASA-CR-192516 | p 2631 N93-26056
NOZZLE EFFICIENCY
The effect of entrance radius and film injection on wall heating in scramjet nozzles p 2625 N93-26009
NOZZLE FLOW
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758
Solid fuel supersonic combustion p 2625 N93-26010
Measurement and analysis of a small nozzle plume in vacuum
| NASA-TM-106066 | p 2633 N93-26561
NOZZLE WALLS
Particle behavior in solid propellant rocket motors and plumes
| AD-A260900 | p 2624 N93-25913
NUCLEAR BINDING ENERGY
The structure and energetics of Cr(CO)6 and Cr(CO)5
| NASA-CR-192889 | p 2848 N93-25450
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258
NUCLEAR DEFORMATION
Feeding and decay of superdeformed states
| DE93-007899 | p 2848 N93-25371

NUCLEAR ELECTRIC PROPULSION
Nuclear thermal propulsion technology: Results of an interagency panel in FY 1991
| NASA-TM-105711 | p 2621 N93-24740
Summary and recommendations on nuclear electric propulsion technology for the space exploration initiative
| NASA-TM-105707 | p 2622 N93-24744
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105
Nuclear safety policy working group recommendations on nuclear propulsion safety for the space exploration initiative
| NASA-TM-105705 | p 2632 N93-26200
Nuclear electric propulsion for planetary science missions: NASA technology program planning
| NASA-TM-106139 | p 2632 N93-26210

NUCLEAR EXPLOSIONS
Behavior of a steel-liner-and-bolts system under very high thermal and mechanical loading: The CONVEX Liner Add-On to DIAMOND FORTUNE
| DE93-007512 | p 2731 N93-26507

NUCLEAR FUSION
Cosmic string cosmology p 2891 N93-24907

NUCLEAR INTERACTIONS
Proton Monte Carlo transport program PTRAN
| PB93-158673 | p 2850 N93-26314

NUCLEAR MAGNETIC RESONANCE
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR
| AD-A261224 | p 2645 N93-26300
Deuteron and oxygen-17 NMR studies of molecular motion in methanol-saturated Nafion membranes
| AD-A261579 | p 2851 N93-26514

NUCLEAR MODELS
Diabaticity of nuclear motion: Problems and perspectives
| DE93-007252 | p 2847 N93-25148

NUCLEAR PHYSICS
Diabaticity of nuclear motion: Problems and perspectives
| DE93-007252 | p 2847 N93-25148
The sub 60 ps timing resolution using large area silicon avalanche diodes
| DE93-007723 | p 2688 N93-25365

NUCLEAR POWER PLANTS
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
Human factors engineering: A key element of instrumentation and control system design
| DE93-006731 | p 2800 N93-25415

NUCLEAR PROPULSION
Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project
| NASA-TM-106096 | p 2687 N93-24746
Space exploration initiative candidate nuclear propulsion test facilities
| NASA-TM-105710 | p 2622 N93-24753
Nuclear safety policy working group recommendations on nuclear propulsion safety for the space exploration initiative
| NASA-TM-105705 | p 2632 N93-26200

NUCLEAR RADIATION
Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project
| NASA-TM-106096 | p 2687 N93-24746
Aerospace techniques in radiation and ecological monitoring of the Republic Belarus
p 2741 N93-24793
AFRRI research, fiscal year 1991
| AD-A260933 | p 2911 N93-25710

NUCLEAR REACTORS
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957

NUCLEAR SPIN
The physics of spin polarized gases
| AD-A261396 | p 2850 N93-26288

NUCLEAR STRUCTURE
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions
| DE93-007725 | p 2848 N93-25366

NUCLEATION
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632
Position sensitive atom probe study of the decomposition of a Cu-2.6 at. percent Co alloy
| DE93-006737 | p 2653 N93-26500

NUCLEI (NUCLEAR PHYSICS)
Feeding and decay of superdeformed states
| DE93-007899 | p 2848 N93-25371

NUCLEONS
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions
| DE93-007725 | p 2848 N93-25366

NUMERICAL ANALYSIS
Minimization of heat slab nodes with higher order boundary conditions
| DE93-004238 | p 2695 N93-24966
Analytical techniques for improved time transfer using common view of direct broadcasting satellites
p 2835 N93-25008
Current research activities: Applied and numerical mathematics, fluid mechanics, experiments in transition and turbulence and aerodynamics, and computer science
| NASA-CR-191408 | p 2803 N93-25084
Developing and improving numerical algorithms to study intrinsically correlated electron systems
| AD-A261214 | p 2849 N93-25734
Activity report
| AD-A261933 | p 2829 N93-26199

NUMERICAL CONTROL
Position and force control of a vehicle with two or more steerable drive wheels
| DE92-041301 | p 2717 N93-25100
Using fuzzy behaviors for the outdoor navigation of a car with low-resolution sensors
| DE93-002428 | p 2584 N93-25120
Spacelab, Spacehab, and Space Station Freedom payload interface projects p 2620 N93-26080

NUMERICAL FLOW VISUALIZATION
Combining particles and waves for fluid animation
p 2699 N93-25348

NUMERICAL INTEGRATION
Numerically dissipative time integration algorithms for structural dynamics p 2725 N93-25394

NUMERICAL STABILITY
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164

NUMERICAL WEATHER FORECASTING
Prediction of global cloud cover with a very high resolution global spectral model
| AD-A261047 | p 2785 N93-25777

NUTATION
SCATHA mission termination report
p 2605 N93-24725
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438

O

OBJECT-ORIENTED PROGRAMMING
Prototype PC user interface
| DE93-008008 | p 2809 N93-25303
Proceedings of the Second SISAL Users' Conference
| DE93-008019 | p 2815 N93-25304
A software development approach for parallel processing systems integrating object-oriented and functional paradigms p 2816 N93-25481
Object-oriented tools for distributed computing
p 2817 N93-25576
Gas turbine system simulation: An object-oriented approach
| NASA-TM-106044 | p 2593 N93-25673
High level design for distributed application instrumentation
| AD-A260812 | p 2710 N93-25696

OBLIQUE SHOCK WAVES
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls
| NASA-TM-106087 | p 2696 N93-25175
Supersonic shock wave/vortex interaction
| NASA-CR-192917 | p 2576 N93-25249
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct
p 2699 N93-25342

OBLIQUE WINGS
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768

OBSERVATION
The Global Ocean Observing System: One perspective p 2733 N93-24920
The development progresses of hydrogen masers at Shanghai Observatory p 2716 N93-25048
Development of a tool-set for simultaneous, multi-site observations of astronomical objects
p 2878 N93-25795

OBSERVATORIES
The Sudbury Neutrino Observatory
| DE93-007697 | p 2899 N93-25327

OBSTACLE AVOIDANCE
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263

OCCULTATION
Occultation of a compact radio source by Venus
p 2676 N93-26107

OCCUPATION
Aircraft electrical and environmental systems, AFSCs 452x5, 454x5, and 454x6
| AD-A261213 | p 2590 N93-25733

OCEAN BOTTOM
Isolation and analysis of key components of seafloor relief
| AD-A261635 | p 2790 N93-26170

OCEAN CURRENTS
Observations of an intrathermocline vortex
p 2788 N93-24769
World Ocean Circulation Experiment
p 2733 N93-24922
The Global Ocean Observing System
p 2733 N93-24923
Indian Ocean analyses p 2733 N93-24925
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657
Wind-driven coastal generation of annual mesoscale eddy activity in the California current
| AD-A261355 | p 2790 N93-26331

OCEAN DYNAMICS
The Global Ocean Observing System
p 2733 N93-24923

OCEAN MODELS
World Ocean Circulation Experiment
p 2733 N93-24922
Applications of wavelet-based compression to multidimensional earth science data
| DE93-007348 | p 2762 N93-25166
CHAMMP
| DE93-007290 | p 2762 N93-25184
Dynamics of Gulf Stream meanders and frontal eddies in the South Atlantic Bight p 2788 N93-25354
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-003 | p 2737 N93-25398
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448
Simulation and prediction of tropical SST with a coupled ocean-atmosphere model p 2789 N93-25469
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657
Boundary layer coupling between an explosive cyclone and the Gulf Stream during ERICA
| AD-A261577 | p 2787 N93-26513

OCEAN SURFACE
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit
p 2601 N93-24704
Satellite monitoring of the global ocean surface during 1987-1989 p 2734 N93-24926
Computation of moisture flux from ocean to atmosphere using a synergy of SSM/I-derived precipitable water and ECMWF analyses p 2774 N93-25757
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea
| AD-A261205 | p 2757 N93-25868
Experiments on the physics of turbulent mixing in stably stratified ocean layers
| AD-A261312 | p 2790 N93-26298
Model for transport of floating debris in the ocean
| PB93-172997 | p 2768 N93-26559

OCEAN TEMPERATURE
Observations of an intrathermocline vortex
p 2788 N93-24769
An observational study of the local and remote response of the equatorial Pacific to westerly wind events during the 1991-92 El Nino
| AD-A261777 | p 2787 N93-26286

OCEANOGRAPHIC PARAMETERS
International organisation of ocean programs: Making a virtue of necessity p 2732 N93-24917

OCEANOGRAPHY
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704
Supporting the Portuguese fisheries with satellites p 2745 N93-24821
Proceedings of the Ocean Climate Data Workshop | NASA-TM-108711 | p 2732 N93-24915
The role of ocean climate data in operational Naval oceanography p 2732 N93-24916
Role of the ocean in climate changes p 2732 N93-24918
The Global Ocean Observing System: One perspective p 2733 N93-24920
World Ocean Circulation Experiment p 2733 N93-24922
The Global Ocean Observing System p 2733 N93-24923
Global Temperature and Salinity Pilot Project p 2733 N93-24924
The use of remotely sensed data for operational fisheries oceanography p 2734 N93-24927
OCEAN-PC and a distributed network for ocean data p 2734 N93-24928
Satellite altimetry p 2734 N93-24930
Data archaeology at ICES p 2734 N93-24931
Data availability and data archeology from the former Soviet Union p 2735 N93-24932
Data management for community research projects: A JGOFS case study p 2736 N93-24936
On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276
JPRS report: Science and technology. Central Eurasia: Earth sciences | JPRS-UES-92-003 | p 2737 N93-25398
JPRS report: Science and technology. Central Eurasia: Earth sciences | JPRS-UES-93-001 | p 2599 N93-25400
JPRS report: Science and technology. Central Eurasia: Earth sciences | JPRS-UES-92-005 | p 2737 N93-25401
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea | AD-A261205 | p 2757 N93-25868
Development of an expendable particle sensor | AD-A261127 | p 2710 N93-26044
Coastal ocean processes: A science prospectus | AD-A261702 | p 2790 N93-26384

OCEANS
International organisation of ocean programs: Making a virtue of necessity p 2732 N93-24917
The Global Ocean Observing System: One perspective p 2733 N93-24920
Operational seasonal and interannual predictions of ocean conditions p 2733 N93-24921
The Global Ocean Observing System p 2733 N93-24923
OCEAN-PC and a distributed network for ocean data p 2734 N93-24928
Data availability and data archeology from the former Soviet Union p 2735 N93-24932
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study p 2736 N93-24938
Automated in situ observations of upper ocean biogeochemistry, bio-optics, and physics and their potential use for global studies p 2736 N93-24939
Wrap-up session p 2737 N93-24940
International ocean services: Is it time - will it ever be time? p 2737 N93-24941
Coastal ocean processes: A science prospectus | AD-A261702 | p 2790 N93-26384

OFF-ON CONTROL
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278

OGIVES
Tangential fuselage blowing on an ogive cylinder p 2578 N93-25545

OIL EXPLORATION
Radar sensing of petroleum seepage gases | AD-A261431 | p 2682 N93-26455

OIL FIELDS
Radar sensing of petroleum seepage gases | AD-A261431 | p 2682 N93-26455

OIL POLLUTION
Oil pollution and water quality mapping of Augusta Bay, Italy using remote sensing techniques p 2746 N93-24823
Remote sensing monitoring and hindcasting of the accident occurred to the tanker Haven in the Gulf of Genoa (Italy) p 2747 N93-24830

OILS
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570

OLFACTORY PERCEPTION
Primary events in olfactory reception | AD-A260562 | p 2795 N93-25944

ON-LINE SYSTEMS
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588
Fidelity and validity in distributed interactive simulation: Questions and answers | AD-A260971 | p 2810 N93-25711
A framework for the design of usable electronic text p 2877 N93-25754
A land-surface testbed for EOSDIS p 2878 N93-25797
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine | NASA-TM-106097 | p 2632 N93-26211
EnviroNET p 2886 N93-26398

ONBOARD DATA PROCESSING
The implementation of a lossless data compression module in an advanced orbiting system: Analysis and development p 2804 N93-25928

ONBOARD EQUIPMENT
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
Rate determination from vector observations p 2603 N93-24713

ONTARIO
Integrating satellite imagery and digital elevation data for geobotanical mapping in Quetico Provincial Park, Ontario, Canada p 2754 N93-25430

OPERATING COSTS
Application of non-thermal plasmas to pollution control | DE93-007515 | p 2763 N93-25385
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 2 | PB93-159432 | p 2720 N93-26534
Cost-effectiveness analysis of TxDOT CNG fleet conversion, volume 1 | PB93-165603 | p 2720 N93-26585

OPERATING SYSTEMS (COMPUTERS)
Experimenter's laboratory for visualized interactive science p 2879 N93-25802
Fast mutual exclusion for uniprocessors | AD-A261663 | p 2883 N93-26389

OPERATIONAL AMPLIFIERS
Investigation into the common mode rejection ratio of the physiological signal conditioner circuit p 2794 N93-26073

OPERATIONS RESEARCH
JPRS report: Science and technology. Central Eurasia: Physics and mathematics | JPRS-UPM-93-001 | p 2844 N93-25404

OPHIUCHI CLOUDS
A study of the large-scale infrared emission from a selected dark cloud | NASA-CR-192775 | p 2888 N93-25289

OPTICAL ACTIVITY
ROSAT x ray survey observations of active chromospheric binary systems and other selected sources | NASA-CR-192933 | p 2891 N93-26426

OPTICAL COMMUNICATION
Progress towards laboratory frequency standards for the optical communication bands p 2687 N93-25069
Adaptive laser link reconfiguration using constraint propagation p 2823 N93-25967
Figure of merit for direct-detection optical channels p 2678 N93-26117
Advanced optical fiber communication systems | AD-A261802 | p 2856 N93-26256
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar | PB93-158632 | p 2884 N93-26530

OPTICAL COMPUTERS
A novel optical/digital processing system for pattern recognition p 2814 N93-25603
Computer-aided design package for designers of digital optical computers | AD-A260757 | p 2806 N93-25848
Optical computing, Volume 6: Organization of the Optical Society of America photonic science topical meeting series | AD-A261267 | p 2856 N93-26266

OPTICAL DATA PROCESSING
Multi-layer holographic bifurcative neural network system for real-time adaptive EOS data analysis p 2880 N93-25807
Optical computing, Volume 6: Organization of the Optical Society of America photonic science topical meeting series | AD-A261267 | p 2856 N93-26266

OPTICAL DENSITY
Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications | DE93-005485 | p 2852 N93-25182

OPTICAL DISKS
Lossless compression of image data products on th e FIFE CD-ROM series p 2804 N93-25929

OPTICAL EMISSION SPECTROSCOPY
Fast diagnostics of laser ablation used for pulsed laser deposition | DE93-005155 | p 2713 N93-25508

OPTICAL EQUIPMENT
Advances in nonlinear optical materials and devices | NASA-CR-192681 | p 2852 N93-25281
United States Army space experiment 601 | AD-A261460 | p 2798 N93-26353
1992 technical digest series volume 16. Conference edition: Summaries of papers presented at the Nonlinear Dynamics in Optical Systems Topical Meeting | AD-A261915 | p 2857 N93-26544

OPTICAL FIBERS
Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications | DE93-005485 | p 2852 N93-25182
Novel approaches to the construction of miniaturized analytical instrumentation | NASA-CR-191988 | p 2709 N93-25345
Temperature dependent sensor response caused by polymer-solvent interactions | DE93-005368 | p 2655 N93-25444
A fiber optic probe for the detection of cataracts p 2796 N93-25593
Second-harmonic generation in optical fibers and glass | AD-A260592 | p 2853 N93-25839
Advanced optical fiber communication systems | AD-A261802 | p 2856 N93-26256
Research support for the Laboratory for Lightwave Technology | AD-A261488 | p 2856 N93-26343
Optical fiber for acoustic sensor applications | AD-A261580 | p 2857 N93-26515

OPTICAL MATERIALS
Advances in nonlinear optical materials and devices | NASA-CR-192681 | p 2852 N93-25281
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy | DE93-007509 | p 2654 N93-25384
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams p 2658 N93-25564
IR materials producibility | AD-A261099 | p 2853 N93-25766
Efficient nonlinear optical conversion of 1.319-micron laser radiation | AD-A261309 | p 2715 N93-26297
Development of organic nonlinear optical materials | AD-A261332 | p 2856 N93-26309
Experimental studies of stress management by optical fluorescence | AD-A261539 | p 2730 N93-26362
Optically smart surfaces survivability testing at Mach 3 | AD-A261785 | p 2857 N93-26566

OPTICAL MEASUREMENT
Monitoring damage growth in titanium matrix composites using acoustic emission | NASA-TM-107742 | p 2634 N93-25072
Polarizing Michelson interferometer for measuring thermospheric winds | ISBN-0-315-70442-X | p 2784 N93-25731
Measurement of optical properties of infrared bandgap superlattices | AD-A260859 | p 2866 N93-25789
Summary by the cloud and aerosol research group for ASTEX | AD-A261292 | p 2766 N93-26292
Laser physics and laser techniques | AD-A261595 | p 2715 N93-26524

OPTICAL MEASURING INSTRUMENTS
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856
Application of optical remote sensing to the study of surface fluxes related to cloud formation | DE93-003783 | p 2781 N93-25125
Analysis and design of a novel robotic finger-tip sensor for adaptive grasping p 2719 N93-25745
Fibre optic sensors for heat transfer studies p 2853 N93-25748

MIT's interferometer CST testbed
p 2609 N93-25836

OPTICAL MEMORY (DATA STORAGE)
Experimental studies of fundamental problems in quantum optics
| AD-A261183 | p 2853 N93-25822

OPTICAL PATHS
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728

OPTICAL PROPERTIES
Inherent optical properties of lakes as measured by Landsat 5 Thematic Mapper p 2746 N93-24828
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams
p 2658 N93-25564
Measurement of optical properties of infrared bandgap superlattices
| AD-A260859 | p 2866 N93-25789
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
Electrochemical processing of electrically conductive polymer fibers
| AD-A261793 | p 2657 N93-26386
Optical characterization of Ga(1-x)In(x)As(y)Sb(1-y)/GaSb alloy and device application
| AD-A261713 | p 2870 N93-26581

OPTICAL PUMPING
Preliminary results on an optically-pumped Cs beam frequency standard p 2832 N93-24989
Miniature optically-pumped cesium beam resonator
p 2833 N93-24990
Actual limits of fluorescence S/N ratio in an optically-pumped cesium beam resonator
p 2833 N93-24991
FALCON nuclear-reactor-pumped laser program and wireless power transmission
| DE93-007607 | p 2715 N93-26597

OPTICAL PYROMETERS
New pyro-optic techniques for imaging of long wavelength IR-Radiation (pyro-optic initiation program)
| AD-A260969 | p 2856 N93-26224

OPTICAL RADAR
Remote sensing of non-renewable resources
p 2744 N93-24814
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging
p 2713 N93-25389
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument
p 2711 N93-25614
Ultraviolet waveguide lasers for phased array lidar
| AD-A261657 | p 2715 N93-26363

OPTICAL RESONATORS
Phase differences of the fields in a Ramsey resonator for submillimetric frequency standards
p 2840 N93-25042
Temperature dependent sensor response caused by polymer-solvent interactions
| DE93-005368 | p 2655 N93-25444
Laser physics and laser techniques
| AD-A261595 | p 2715 N93-26524

OPTICAL SCANNERS
Video scan rate conversion method and apparatus for achieving same
| AD-D015661 | p 2854 N93-26091
Photographic industry and electronic imaging: The emergence of electronic still photography
| PB93-169399 | p 2711 N93-26324
Large area, low capacitance Si(Li) detectors for high rate x ray applications
| DE93-007661 | p 2692 N93-26598

OPTICAL TRACKING
An optimal scheduling of pick-place operations of a robot-vision-tracking system by using neural networks and rule-based systems p 2821 N93-25880
A Hierarchical Target Extraction, Recognition, and Tracking (HiTert) system
| AD-A260567 | p 2854 N93-25898
Geometric distortion analysis of a wide-field astrograph p 2621 N93-26111

OPTIMAL CONTROL
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Optimal cooperative power-limited rendezvous
p 2607 N93-24904
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137
Nonholonomic geometry, mechanics and control
p 2724 N93-25270
Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272
Optimal control of large space structures
p 2819 N93-25343
Optimal thrust magnitude on a singular arc in atmospheric flight p 2819 N93-25410
What procedure to choose while designing a fuzzy control? Towards mathematical foundations of fuzzy control
| NASA-TM-108719 | p 2820 N93-25459
Control and optimization of aircraft trajectories
p 2596 N93-25543
Realtime control of multiple sensor systems
| AD-A261037 | p 2680 N93-26226

OPTIMIZATION
Minimization of heat slab nodes with higher order boundary conditions
| DE93-004238 | p 2695 N93-24966
A state-of-the-art crystal filter design package using Windows 3.0 techniques p 2693 N93-25010
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
Neural networks: What non-linearity to choose
| NASA-CR-192948 | p 2819 N93-25197
Integrated aerodynamic-structural wing design optimization p 2587 N93-25279
A preliminary sizing method for unmanned aircraft using multi-variate optimisation p 2587 N93-25408
A computational aerodynamic design optimization method using sensitivity analysis p 2589 N93-25552
An optimal scheduling of pick-place operations of a robot-vision-tracking system by using neural networks and rule-based systems p 2821 N93-25880
Techniques for designing rotorcraft control systems
| NASA-CR-192960 | p 2597 N93-26046
Monte Carlo approach to the approximation of invariant measures
| PB93-159069 | p 2830 N93-26317
Integrated approaches to parallelism in optimization and the solution of inverse problems
| AD-A261490 | p 2829 N93-26344
Configuration optimization of space structures
p 2670 N93-26415
Computation and theory in large-scale optimization
| AD-A261419 | p 2813 N93-26450

OPTOELECTRONIC DEVICES
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
Ultrafast measurements of 200 gigahertz Schottky photodiodes p 2688 N93-25392
Investigation of a background suppression transimpedance amplifier for photovoltaic detectors
| AD-A261828 | p 2691 N93-26272

ORBIT CALCULATION
TDRSS orbit determination using short baseline differenced carrier phase p 2601 N93-24701
Application of GPS tracking techniques to orbit determination for TDRS p 2601 N93-24702
TDRSS-user orbit determination using batch least-squares and sequential methods
p 2601 N93-24703
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit
p 2601 N93-24704
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft
p 2601 N93-24705
Attitude analysis in Flatland: The plane truth
p 2603 N93-24712
Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem
p 2603 N93-24718
Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721
The advances in F and T technology: Their benefits of and for space science and technology
p 2831 N93-24979
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks
p 2832 N93-24983
DORIS precise orbit determination and location system performances of ultra stable oscillators
p 2608 N93-24997
A determination of the radio-planetary frame tie from comparison of Earth orientation parameters
p 2676 N93-26106
Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110

ORBIT DECAY
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707

ORBIT SPECTRUM UTILIZATION
Federal Communications Commission (FCC) Transponder Loading Data Conversion Software. User's guide and software maintenance manual, version 1.2
| NASA-CR-191067 | p 2808 N93-24947

ORBIT TRANSFER VEHICLES
Space transfer vehicle concepts and requirements study. Volume 2, book 1: STV concept definition and evaluation
| NASA-CR-192525 | p 2611 N93-25510
Space transfer vehicle concepts and requirements study. Volume 2, book 2: System and program requirements trade studies
| NASA-CR-192526 | p 2611 N93-25511
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
Space transfer vehicle concepts and requirements study. Volume 3, book 1: Program cost estimates
| NASA-CR-192529 | p 2611 N93-25514
Space transfer concepts and analyses for exploration missions. Technical directive 12: Beamed power systems study
| NASA-CR-192532 | p 2599 N93-26146
Representative systems for space exploration
p 2897 N93-26395

ORBITAL ASSEMBLY
Space Station Freedom assembly and operation at a 51.6 degree inclination orbit
| NASA-TM-107731 | p 2615 N93-25174
A prototype for simulation of the space-to-ground assembly/contingency system of Space Station Freedom p 2619 N93-26065
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Dynamics of on-orbit construction process
p 2669 N93-26406
Interaction dynamics and control for orbital assembly
p 2669 N93-26407
Controls for orbital assembly of large space structures
p 2620 N93-26408
Structural load control during construction
p 2669 N93-26409
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410
Expert systems for assembly sequence evaluation
p 2669 N93-26411

ORBITAL MANEUVERS
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952

ORBITAL MECHANICS
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694
Minimum-fuel power-limited transfers between coplanar elliptic orbits p 2608 N93-25684
Optimal transfers between libration-point orbits in the elliptic restricted three-body problem
p 2608 N93-25758

ORBITAL WORKSHOPS
The initial flight anomalies of Skylab 1
p 2619 N93-24692

ORDER-DISORDER TRANSFORMATIONS
Radiation-induced disordering and defect production in CuAu and NiAl studied by molecular dynamics simulation
| DE93-007506 | p 2649 N93-25336
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519

ORGANIC COMPOUNDS
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
Femtosecond dynamics in hydrogen-bonding solvents: Formamides
| DE93-003476 | p 2643 N93-25123

ORGANISMS
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
Planetary Biology and Microbial Ecology: Molecular Ecology and the Global Nitrogen cycle
| NASA-CR-4497 | p 2803 N93-26157

ORGANIZATIONS
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952
Functional Economic Analysis Guidebook, version 1.1
| AD-A261390 | p 2886 N93-26305

ORGANOMETALLIC COMPOUNDS
Design of a high activity and selectivity alcohol catalyst
| DE93-008103 | p 2659 N93-25112

ORIENTATION
Uncertainty in object pose determination with three light-stripe range measurements
| AD-A261435 | p 2857 N93-26488

ORIFICE FLOW
Flow conditioner location effects in orifice flowmeters
| PB93-159457 | p 2708 N93-26535

ORIFICES
Flow conditioner location effects in orifice flowmeters
| PB93-159457 | p 2708 N93-26535
OROGRAPHY
Effects of Taiwan orography on the motion and structure of typhoons
| AD-A261819 | p 2786 N93-26270
ORR-SOMMERFELD EQUATIONS
On the cross-stream spectral method for the Orr-Sommerfeld equation
| NASA-TM-107737 | p 2845 N93-26086
ORTHOTROPIC CYLINDERS
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads
p 2726 N93-25533
ORTHOTROPIC PLATES
Fatigue resistance of orthotropic plates with trapezoidal stiffeners
| TRL-TRANS-T3908 | p 2726 N93-25419
OSCILLATIONS
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers
p 2892 N93-24949
Experiments on a diode-laser-pumped Rb-87 maser
p 2716 N93-25030
Controlling an optical frequency by a single ion
p 2841 N93-25051
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
| JPRS-UEQ-92-003 | p 2668 N93-25427
Vortex shedding in oscillatory flow
p 2700 N93-25438
Flame response in oscillatory solid propellant combustion p 2630 N93-26041
Substantiation of a stochastic model of rhythmic phenomena
| AD-A261232 | p 2830 N93-26262
OSCILLATORS
DORIS precise orbit determination and location system performances of ultra stable oscillators
p 2608 N93-24997
Miniaturization and stability: A new generation of ovenised oscillators p 2693 N93-25004
Stability of nonlinear phase motion from the study of oscillator mappings p 2693 N93-25034
Solid state frequency synthesis up to 600 GHz: An application to the Mg frequency standard
p 2842 N93-25058
Information transmission using CHAOS
| AD-A261519 | p 2883 N93-26377
OVER-THE-HORIZON RADAR
OTH-B radar system: System summary
| AD-A261727 | p 2681 N93-26247
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283
OXIDASE
Inorganic and biological electron transfer across an electronically conductive composite polymer membrane
| AD-A261642 | p 2656 N93-26172
OXIDATION
The structure of particle cloud premixed flames
| NASA-CR-192827 | p 2643 N93-25229
Direct methane conversion to methanol
| DE93-009183 | p 2660 N93-25497
Mechanisms of decomposition and oxidation of borane compounds
| AD-A261137 | p 2645 N93-26045
Thermal coatings for titanium-aluminum alloys
| NASA-TM-107760 | p 2651 N93-26048
Interaction of O2 with the Fe(.84)Cr(.16) (001) surface studied by photoelectron spectroscopy
| AD-A261065 | p 2645 N93-26251
Dynamics of gas-surface interactions
| AD-A261402 | p 2646 N93-26402
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4 +) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518
OXIDATION RESISTANCE
Hot corrosion of the B2 nickel aluminides
| NASA-CR-191082 | p 2649 N93-25128
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149
Thermal coatings for titanium-aluminum alloys
| NASA-TM-107760 | p 2651 N93-26048
Metal alloy and method of preparation thereof
| AD-D015670 | p 2652 N93-26234
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
OXIDATION-REDUCTION REACTIONS
Integrated oxygen recovery system
| NASA-CR-192982 | p 2801 N93-26088
OXIDE FILMS
Interaction of O2 with the Fe(.84)Cr(.16) (001) surface studied by photoelectron spectroscopy
| AD-A261065 | p 2645 N93-26251
OXIDES
Converting environmental wastes into valuable resources p 2759 N93-25572
Activation of methane by clean and chemically modified single crystal oxide surfaces
| PB93-157295 | p 2644 N93-25817
Research support for the Laboratory for Lightwave Technology
| AD-A261488 | p 2856 N93-26343
OXYGEN
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4 +) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518
OXYGEN ATOMS
Detection of atomic oxygen and hydrogen in solid propellant flames and pyrolysis gases using multiphoton laser-induced fluorescence p 2628 N93-26029
Mechanisms of decomposition and oxidation of borane compounds
| AD-A261137 | p 2645 N93-26045
Space environmental interactions for the space exploration initiative p 2897 N93-26396
OXYGEN SPECTRA
Gravity waves from O2 airglow p 2772 N93-25547
OXYGEN SUPPLY EQUIPMENT
Integrated oxygen recovery system
| NASA-CR-192982 | p 2801 N93-26088
OZONE
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation
p 2760 N93-24908
Kelvin waves in total column ozone
| NASA-CR-192984 | p 2764 N93-25431
Tropical cyclone/upper-atmospheric interaction as inferred from satellite total ozone observations
p 2784 N93-25741
Treatment of hazardous organic wastes using silent discharge plasmas
| DE93-003789 | p 2768 N93-26592
OZONE DEPLETION
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
| DE93-002862 | p 2760 N93-24675
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
Aerospace-plane flights and stratospheric ozone: Review and preliminary assessment of the National Aerospace Plane (NASP) operations
| RAND/N-3464-AF | p 2767 N93-26327
OZONOSPHERE
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
| DE93-002862 | p 2760 N93-24675
Rossby-gravity waves in tropical total ozone data
| NASA-CR-192983 | p 2764 N93-25432

P

P-I-N JUNCTIONS
Research on stable, high-efficiency amorphous silicon multijunction modules
| DE93-000072 | p 2862 N93-25163
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774
P-TYPE SEMICONDUCTORS
Research on stable, high-efficiency amorphous silicon multijunction modules
| DE93-000072 | p 2862 N93-25163
PACIFIC OCEAN
Measurements of nitric acid, carboxylic acids, and selected aerosol species for the NASA/GTE Pacific Mission - West (PEM-WEST)
| NASA-CR-192976 | p 2763 N93-25287
Tropical cyclogenesis in the western North Pacific
p 2783 N93-25714
An observational study of the local and remote response of the equatorial Pacific to westerly wind events during the 1991-92 El Nino
| AD-A261777 | p 2787 N93-26286
PACKAGING
Instrumentation for measurement of gas permeability of polymeric membranes p 2720 N93-25609
PAINTS
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
PANELS
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
PARABOLIC DIFFERENTIAL EQUATIONS
Computation of hypersonic viscous flowfields using the parabolized Navier-Stokes equations
p 2694 N93-24766
PARACHUTE DESCENT
A simple, approximate model of parachute inflation
| DE93-002465 | p 2576 N93-25121
PARALLEL COMPUTERS
Fast parallel algorithms that compute transitive closure of a fuzzy relation
| NASA-CR-192950 | p 2818 N93-25190
A software development approach for parallel processing systems integrating object-oriented and functional paradigms p 2816 N93-25481
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516
PARALLEL PROCESSING (COMPUTERS)
Optimal message log reclamation for independent checkpointing
| NASA-CR-192886 | p 2815 N93-24749
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
A comparison using APPL and PVM for a parallel implementation of an unstructured grid generation program
| NASA-CR-191425 | p 2808 N93-25073
Monte-Carlo methods make Dempster-Shafer formalism feasible
| NASA-CR-192945 | p 2828 N93-25140
Supercomputer Debugging Workshop 1992
| DE93-007322 | p 2805 N93-25165
Fast parallel algorithms that compute transitive closure of a fuzzy relation
| NASA-CR-192950 | p 2818 N93-25190
RAMA: A file system for massively parallel computers
| NASA-CR-192906 | p 2815 N93-25297
PCG: A software package for the iterative solution of linear systems on scalar, vector and parallel computers
| DE93-007366 | p 2809 N93-25315
Structured adaptive mesh refinement on the connection machine
| DE93-007368 | p 2816 N93-25316
Data parallel finite element techniques for large-scale computational fluid dynamics p 2699 N93-25334
Hierarchical dynamics in distributed information processing p 2875 N93-25350
FORTRAN M as a language for building earth system models
| DE93-007897 | p 2763 N93-25370
An improved spectral load balancing method
| DE93-007582 | p 2810 N93-25386
Experiments with the HIVITS HDTV contribution CODED
| BBC-RD-1992/12 | p 2674 N93-25391
Toward a parallel recursive spectral bisection mapping tool
| DE93-006632 | p 2816 N93-25414
A software development approach for parallel processing systems integrating object-oriented and functional paradigms p 2816 N93-25481
Real-time construction of three-dimensional occupancy maps
| DE93-001645 | p 2756 N93-25505
Deterministic parallel FORTRAN
| DE93-008665 | p 2816 N93-25522
Implicit multigrid solution of the compressible Navier-Stokes equations with application to distributed parallel processing p 2702 N93-25546
Splash 2 p 2814 N93-25575
A novel method for characterization of superconductors: Physical measurements and modeling of thin films
p 2871 N93-25584
Adaptive liquid crystal TV based joint transform correlator as applied to real-time pattern recognition
| AD-A260724 | p 2864 N93-25655
Parallel matrix computations
| AD-A260783 | p 2828 N93-25687
Massively-parallel computational fluid dynamics
| AD-A261815 | p 2707 N93-26269

Integrated approaches to parallelism in optimization and the solution of inverse problems
| AD-A261490 | p 2829 N93-26344
Source-level debugging of automatically parallelized programs
| AD-A261520 | p 2813 N93-26378
Joint services electronics program
| AD-A261801 | p 2692 N93-26539

PARALLEL PROGRAMMING
Synthetic-perturbation tuning of MIMD programs
| PB93-161339 | p 2812 N93-26321
Source-level debugging of automatically parallelized programs
| AD-A261520 | p 2813 N93-26378

PARAMETERIZATION
Improved PI-network measurement of all quartz crystal parameters by appropriate modelling of the test fixture p 2833 N93-24995

PARAMETRIC AMPLIFIERS
Advances in nonlinear optical materials and devices
| NASA-CR-192681 | p 2852 N93-25281

PARITY
A (72, 36; 15) box code p 2671 N93-24663
Golay and other box codes p 2678 N93-26116

PARTIAL DIFFERENTIAL EQUATIONS
Some new results for solving linear systems arising from computational fluid dynamics problems p 2699 N93-25349
PDE: Differential, geometric and algebraic methods in nonlinear filtering
| AD-A260967 | p 2829 N93-26222

PARTIAL PRESSURE
Biological conversion of synthesis gas
| DE93-009092 | p 2660 N93-25523
Development of a method to determine the autoxidation of turbine fuels
| AD-A260578 | p 2661 N93-25902

PARTICLE CHARGING
Comparison of the electrical charging and discharging environments of multiple aircraft-borne electric-field measurement systems p 2583 N93-24887

PARTICLE COLLISIONS
Particle simulation for 10.6 micron picosecond laser-induced breakdown in gases p 2712 N93-25280
Strangeness production in S + Pb and p + Pb collisions at 200 GeV/c per nucleon nucleon
| DE93-007654 | p 2847 N93-25326
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions
| DE93-007725 | p 2848 N93-25366
Collisional energy transfer in biomolecular ion-molecule dynamics
| AD-A260911 | p 2849 N93-25659
The physics of spin polarized gases
| AD-A261396 | p 2850 N93-26288

PARTICLE DIFFUSION
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151
A method for transient, three-dimensional neutron transport calculations
| DE93-007243 | p 2847 N93-25256
Direct measurement of velocity space transport in a plasma p 2861 N93-25831

PARTICLE INTERACTIONS
Notes on radial drift for dalitz detection
| DE93-006971 | p 2846 N93-24959
Twistor diagrams and a quantum field theory p 2871 N93-25423
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534

PARTICLE LADEN JETS
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534

PARTICLE MOTION
Diabaticity of nuclear motion: Problems and perspectives
| DE93-007252 | p 2847 N93-25148
An investigation of laser velocimetry measurements within high speed, complex flows p 2697 N93-25237
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738

PARTICLE PRECIPITATION
Sounding rocket observations of precipitating ions in the morning auroral region p 2773 N93-25732

PARTICLE PRODUCTION
Recent experiments on spin physics in high energy hadron interactions
| DE93-007900 | p 2851 N93-25301
Strangeness production in S + Pb and p + Pb collisions at 200 GeV/c per nucleon nucleon
| DE93-007654 | p 2847 N93-25326
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364

PARTICLE SIZE DISTRIBUTION
A study of mass size distributions and particle deposition velocities in ambient air p 2763 N93-25263
The charge and size of precipitation particles inside thunderstorms and mesoscale convective systems on the Great Plains p 2781 N93-25275
Liquid surface breakup of nonturbulent and turbulent liquids p 2700 N93-25473
Hazards of explosives dusts: Particle size effects
| DE93-009380 | p 2668 N93-25498
Particle behavior in solid propellant rocket motors and plumes
| AD-A260900 | p 2624 N93-25913
Rain rate instrument for deployment at sea, phase 2
| NASA-CR-192442 | p 2786 N93-26156
Summary by the cloud and aerosol research group for ASTEX
| AD-A261292 | p 2766 N93-26292
Atomization and combustion of a gelled, metallized slurry fuel
| AD-A261778 | p 2647 N93-26602

PARTICLE SPIN
Recent experiments on spin physics in high energy hadron interactions
| DE93-007900 | p 2851 N93-25301

PARTICLE THEORY
An investigation of neutrino properties through study of the sun, supernovae, the early universe and lab data p 2898 N93-25180

PARTICLE TRAJECTORIES
Plasma sheath effects on ion collection by a pinhole
| NASA-TM-106098 | p 2615 N93-25090
Some features of particle orbit behavior in LHD configurations
| NIFS-211 | p 2859 N93-25216

PARTICULATE REINFORCED COMPOSITES
Dynamic deformations and analysis of a metal matrix composite p 2634 N93-25234

PARTICULATES
Development of dispersion-strengthened XD (trademark) Cu alloys for high heat-flux applications
| NASA-CR-191124 | p 2653 N93-24761
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738
Electrorheological fluids: A structural approach to mechanisms
| AD-A260563 | p 2645 N93-25879
Particulate emissions from gas turbine engines
| AD-A261374 | p 2595 N93-26339

PASSIVITY
Chromate-free corrosion resistant talc coatings for aluminum alloys
| DE93-005370 | p 2655 N93-25446
Passivity motivated controller design for flexible structures
| AD-A261122 | p 2719 N93-25771

PATHOLOGY
The prevalence of artificial lens implants in the civil airman population
| DOT/FAA/AM-92/14 | p 2794 N93-25214

PATIENTS
Automatic detection of seizures with applications p 2796 N93-25592
A fiber optic probe for the detection of cataracts p 2796 N93-25593
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347

PATTERN METHOD (FORECASTING)
A systematic satellite approach for estimating central pressures of mid-lattitude oceanic storms
| NOAA-TR-NESDIS-63 | p 2781 N93-25220

PATTERN RECOGNITION
Failure monitoring in dynamic systems: Model construction without fault training data p 2672 N93-24666
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777
Remote sensed spectral signatures classification and recognition by neural networks: An approach to unsupervised techniques p 2738 N93-24779
EUROSTARS: A system for thematic analysis of remote sensed data p 2753 N93-24871
A novel optical/digital processing system for pattern recognition p 2814 N93-25603
Adaptive liquid crystal TV based joint transform correlator as applied to real-time pattern recognition
| AD-A260724 | p 2864 N93-25655
A vision architecture for the extravehicular activity retriever p 2827 N93-26071
Facilitation and interference in identification of pictures and words
| AD-A261484 | p 2798 N93-26356
Spontaneous discovery and use of categorical structure
| AD-A261658 | p 2798 N93-26364

PAYLOAD INTEGRATION
Assured crew return vehicle man-systems integration standards
| NASA-CR-193065 | p 2614 N93-26329

PAYLOAD STATIONS
STS-43 Space Shuttle mission report
| NASA-CR-193064 | p 2612 N93-25957

PAYLOADS
What is the relationship between altitude and weight in a model rocket? p 2603 N93-24715
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
STS-39 Space Shuttle mission report
| NASA-CR-193063 | p 2611 N93-25955
STS-37 Space Shuttle mission report
| NASA-CR-193062 | p 2612 N93-25956
STS-47 Space Shuttle mission report
| NASA-CR-193056 | p 2612 N93-25960
STS-42 Space Shuttle mission report
| NASA-CR-193059 | p 2613 N93-25989
STS-48 Space Shuttle mission report
| NASA-CR-193060 | p 2613 N93-25990
STS-46 Space Shuttle mission report
| NASA-CR-193058 | p 2613 N93-25991
STS-50 Space Shuttle mission report
| NASA-CR-193057 | p 2613 N93-25992
STS-52 Space Shuttle mission report
| NASA-CR-193061 | p 2613 N93-25993
Spacelab, Spacehab, and Space Station Freedom payload interface projects p 2620 N93-26080

PECULIAR GALAXIES
Prograde anomalous orbits in triaxial gravitational potentials that rotate about the long axis: VLA neutral hydrogen observations and modeling of the inclined rings around the galaxies NGC 2685 and NGC 660 p 2607 N93-25396

PEEK
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569

PEELING
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
| AD-A260901 | p 2727 N93-25658

PENDULUMS
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
| JPRS-UEQ-92-003 | p 2668 N93-25427
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438

PENETRATION
Method for providing EMI/EMP hardening and breakdown protection in composite materials
| AD-D015638 | p 2634 N93-25283
Investigation and modeling of penetration process for composite laminates impacted by a blunt-ended projectile p 2637 N93-25675
Analysis of shaped charge jet penetration experiments with Pen
| UCRL-LR-110773 | p 2730 N93-26177
Algorithms for the analysis of penetration by shaped charge jets
| UCRL-LR-109887 | p 2730 N93-26178

PENETROMETERS
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570

PENNING EFFECT
Optical detection of laser-cooled ions in a Penning trap p 2838 N93-25031

PERFLUORO COMPOUNDS
Determination of the thermal stability of perfluoropolyalkyl ethers by tensimetry
| NASA-TM-106081 | p 2654 N93-25093

PERFORMANCE
Task 5: Architecture sensitivity to STME performance
| MCR-92-5010 | p 2609 N93-26176

PERFORMANCE PREDICTION
Rotor design optimization using a free wake analysis
| NASA-CR-177612 | p 2575 N93-25075
Transient performance of fan engine with water ingestion
| NASA-CR-190778 | p 2573 N93-25134
Statistical modelling of software reliability
| NASA-CR-192985 | p 2809 N93-25257
A cognitive architecture for human performance process model research
| AD-A261040 | p 2797 N93-25815
The effects of reaction on axial compressor performance p 2594 N93-25882
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine
| NASA-TM-106097 | p 2632 N93-26211
Intelligent, real-time problem solving, phase 3
| AD-A261441 | p 2829 N93-26345

PERFORMANCE TESTS
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Precise Doppler tracking from the Medicina VLBI station p 2608 N93-24998
Miniaturization and stability: A new generation of ovenised oscillators p 2693 N93-25004
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136
Measuring hearing protection device performance using the metrosonics db-3100 sound level analyzer (dosimeter)
| AD-A260852 | p 2801 N93-25787
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933
The Data Multiplexing Network (DMN) phase 3 Extended Distance Data Cable (EDDC) test and evaluation
| DOT/FAA/CT-TN93/11 | p 2680 N93-26160
Synthetic-perturbation tuning of MIMD programs
| PB93-161339 | p 2812 N93-26321
Tank issues: Design and placement of vapor monitoring wells
| PB93-161131 | p 2768 N93-26536
PERIODIC FUNCTIONS
Properties of readings of periodically correlated random processes
| AD-A261225 | p 2686 N93-26573
PERIODIC VARIATIONS
Climate data bases of the People's Republic of China, 1841-1988
| DE93-007907 | p 2764 N93-25517
Substantiation of a stochastic model of rhythmic phenomena
| AD-A261232 | p 2830 N93-26262
PERMANENT MAGNETS
Variable-speed generators with flux weakening p 2694 N93-25599
PERMEABILITY
Instrumentation for measurement of gas permeability of polymeric membranes p 2720 N93-25609
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
PERMEATING
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903
Numerical simulation of permeation from deposited droplets: Model expansion
| MTL-TR-92-23 | p 2706 N93-25953
PERMITTIVITY
The third-order permittivity of quartz obtained by different methods p 2840 N93-25046
Liquid filled variable capacitor
| AD-D015639 | p 2687 N93-25212
Electrorheological fluids: A structural approach to mechanisms
| AD-A260563 | p 2645 N93-25879
Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings
| DE93-007513 | p 2857 N93-26593
PERMUTATIONS
Soft decoding a self-dual (48, 24; 12) code p 2671 N93-24662
PEROXIDES
Development of a method to determine the autoxidation of turbine fuels
| AD-A260578 | p 2661 N93-25902
PERSONAL COMPUTERS
A distributed heterogeneous client-server environment
| DE93-007496 | p 2875 N93-25319
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672
The state of computing at Los Alamos National Laboratory, FY 1991
| LA-12326-MS | p 2811 N93-25943
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196
PERSONALITY
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138
PERSONNEL
JSC research and technology
| NASA-TM-104763 | p 2901 N93-25188
Organizational politics, participation in decision-making, and job satisfaction
| DOT/FAA/AM-92/17 | p 2796 N93-25203
Procedural justice, occupational identification, and organizational commitment
| DOT/FAA/AM-92/21 | p 2872 N93-25204
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988
| AD-A260869 | p 2800 N93-25628
Aircraft electrical and environmental systems, AFSCs 452x5, 454x5, and 454x6
| AD-A261213 | p 2590 N93-25733
PERSONNEL DEVELOPMENT
Design and implementation of a pilot orientation program for new NASA engineering employees
| NASA-TM-105907 | p 2872 N93-26205
PERSONNEL MANAGEMENT
A longitudinal examination of applicants to the air traffic control supervisory identification and development program
| DOT/FAA/AM-92/16 | p 2796 N93-25213
Exploring the link between intrinsic motivation and quality
| AD-A261722 | p 2722 N93-26246
PERSONNEL SELECTION
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138
PERTURBATION
Robust controls with structured perturbations
| NASA-CR-192956 | p 2817 N93-24757
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
Boundary plasma modelling for ITER
| DE93-007963 | p 2859 N93-25302
Cellular and tissue injury during nonfreezing cold injury and frostbite
| AD-A260574 | p 2795 N93-25900
Synthetic-perturbation tuning of MIMD programs
| PB93-161339 | p 2812 N93-26321
PERTURBATION THEORY
Biped control via nonlinear dynamics p 2718 N93-25697
PETROGRAPHY
Geochemistry and petrology of primitive achondrite meteorites LEW 88280, MAC 88177, ALHA 81187, EET 84302, and LEW 88663 p 2896 N93-26067
PETROLOGY
Geochemistry and petrology of primitive achondrite meteorites LEW 88280, MAC 88177, ALHA 81187, EET 84302, and LEW 88663 p 2896 N93-26067
PHASE CHANGE MATERIALS
Far infrared spectra of amorphous and crystalline water ice and changes in these phases as the result of proton irradiation
| NASA-CR-192849 | p 2892 N93-25230
PHASE CONJUGATION
1992 technical digest series volume 16. Conference edition: Summaries of papers presented at the Nonlinear Dynamics in Optical Systems Topical Meeting
| AD-A261915 | p 2857 N93-26544
PHASE CONTROL
Experimental results of the performance of the new phase and frequency controller p 2839 N93-25035
Phase discriminating capacitive array sensor system
| NASA-CASE-GSC-13460-1 | p 2691 N93-26104
Improvements in X-band transmitter phase stability through Klystron body temperature regulation p 2678 N93-26114
PHASE DEVIATION
Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670
PHASE DIAGRAMS
New ground states in unconventional superconductors p 2688 N93-25282
Sputter deposition of yttrium-oxides
| DE93-007499 | p 2654 N93-25382
PHASE LOCKED SYSTEMS
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
Experimental results of the performance of the new phase and frequency controller p 2839 N93-25035
PHASE MODULATION
Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670
Advanced optical fiber communication systems
| AD-A261802 | p 2856 N93-26256
PHASE SHIFT
Stability of nonlinear phase motion from the study of oscillator mappings p 2693 N93-25034
Microwave interrogation frequency noise and clock frequency stability: Experimental results p 2842 N93-25056
Advanced technology development multi-color holography
| NASA-CR-192451 | p 2711 N93-26154
PHASE SHIFT KEYING
Implementation of cyclic spectral analysis methods
| AD-A261715 | p 2681 N93-26372
Trellis coded CPFSK
| AD-A261788 | p 2682 N93-26441
PHASE TRANSFORMATIONS
Coarsening of a quiescent electrorheological fluid I: Experiment
| DE93-006776 | p 2642 N93-24972
Far infrared spectra of amorphous and crystalline water ice and changes in these phases as the result of proton irradiation
| NASA-CR-192849 | p 2892 N93-25230
The nature of the glass transition and its determination by thermal analysis
| DE93-006746 | p 2654 N93-25374
Solidification processing and phase transformations in ordered high temperature alloys
| AD-A261751 | p 2652 N93-26284
Position sensitive atom probe study of the decomposition of a Cu-2.6 at. percent Co alloy
| DE93-006737 | p 2653 N93-26500
Computation of complex solidification morphologies using a phase-field model
| PB93-156743 | p 2869 N93-26547
PHASE VELOCITY
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534
PHASED ARRAYS
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview p 2680 N93-26128
Ultraviolet waveguide lasers for phased array lidar
| AD-A261657 | p 2715 N93-26363
Microstrip antennas on/in anisotropic material layers
| AD-A261700 | p 2681 N93-26383
PHENOLS
The surface characterization of a series of hydroxybenzenes on Ag(111): An EELS and TDS study
| DE93-007541 | p 2647 N93-26595
PHENOMENOLOGY
Efficient generation of synthetic terrain imagery for automatic target recognition
| AD-A260705 | p 2756 N93-25653
PHENYLS
Intramolecular bridge/terminal oxo exchange within (MoV2O3) (4+) complexes containing linear oxo bridges
| AD-A261230 | p 2851 N93-26518
PHONEMES
Perception and the temporal properties of speech
| AD-A261439 | p 2686 N93-26490
PHONEMICS
Perception and the temporal properties of speech
| AD-A261439 | p 2686 N93-26490
PHONETICS
Speech research
| AD-A260643 | p 2675 N93-25639
PHOSPHATES
Comparison of energy trapping resonators and filters using the AT cut of quartz, berlinite and gallium phosphate p 2836 N93-25013
Crystal growth of berlinite: Methods for growing longer crystals and improving the quality p 2838 N93-25025
Controlled dissolution of a piezoelectric material berlinite (AlPO4) p 2840 N93-25043
In situ surface studies of conversion coatings for steel and aluminum
| AD-A261016 | p 2655 N93-25861
PHOSPHORUS
Inorganic nitrogen and phosphorus dynamics in the water column of the Patuxent River
| PB93-172955 | p 2767 N93-26511
PHOTOCHEMICAL REACTIONS
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation p 2760 N93-24908
A study of vibrationally excited N2(+) ions in the daytime thermosphere p 2770 N93-25179
The role of multiple scattering in twilight zenith sky observations of atmospheric absorbers: Diurnal photochemistry and airmass factors p 2772 N93-25535
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571
The Martian lower atmosphere p 2897 N93-26394
PHOTOCONDUCTIVITY
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524
PHOTODETACHMENT
Dynamics of collision processes
| DE93-007143 | p 2849 N93-25509
Penning detachment: A new frontier
| AD-A261447 | p 2850 N93-26346

PHOTODIODES
Ultrafast measurements of 200 gigahertz Schottky photodiodes p 2688 N93-25392
Studies of avalanche photodiodes for scintillating fibre tracking readout
| DE93-008370 | p 2689 N93-25491
Optical characterization of Ga(1-x)In(x)As(y)Sb(1-y)/GaSb alloy and device application
| AD-A261713 | p 2870 N93-26581
PHOTODISSOCIATION
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967
Ionization probes of molecular structure and chemistry
| DE93-008211 | p 2847 N93-25310
PHOTOELECTRIC EMISSION
Kinetic studies of interfacial photocurrents in platinized chloroplasts
| DE93-002344 | p 2792 N93-25104
Laser field assisted photoemission using femtosecond laser pulses
| DE93-007277 | p 2712 N93-25378
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258
PHOTOELECTRON SPECTROSCOPY
Ionization probes of molecular structure and chemistry
| DE93-008211 | p 2847 N93-25310
Analysis of the gap in high-temperature superconductors using photoemission spectroscopy p 2865 N93-25744
The interaction of HCN/DCN with Si(100)-2x1
| AD-A260837 | p 2645 N93-25920
Interaction of O2 with the Fe(.84)Cr(.16) (001) surface studied by photoelectron spectroscopy
| AD-A261065 | p 2645 N93-26251
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions
| DE93-007669 | p 2647 N93-26599
PHOTOELECTRONS
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions
| DE93-007669 | p 2647 N93-26599
PHOTOEXCITATION
Photoexcitation of carbon fullerenes
| AD-A260739 | p 2849 N93-25644
PHOTOGRAPHIC EQUIPMENT
Photographic industry and electronic imaging: The emergence of electronic still photography
| PB93-169399 | p 2711 N93-26324
PHOTOGRAPHS
Cape Photographic Durchmusterung, volume 1
| NASA-RP-1300-VOL-1 | p 2890 N93-26002
Cape Photographic Durchmusterung, volume 2
| NASA-RP-1300-VOL-2 | p 2890 N93-26003
Cape Photographic Durchmusterung, volume 3
| NASA-RP-1300-VOL-3 | p 2890 N93-26004
Photographic industry and electronic imaging: The emergence of electronic still photography
| PB93-169399 | p 2711 N93-26324
PHOTOGRAPHY
Fast diagnostics of laser ablation used for pulsed laser deposition
| DE93-005155 | p 2713 N93-25508
The Taurid meteoroid complex p 2889 N93-25536
Photographic industry and electronic imaging: The emergence of electronic still photography
| PB93-169399 | p 2711 N93-26324
PHOTOINTERPRETATION
The photointerpretation of the area taken over from agriculture by intense urbanization at Villabate (Palermo, Italy) p 2742 N93-24800
Hel's peninsula coastal zone changes in the last 40 years on a base of remote sensing methods p 2747 N93-24832
Interpretation and segmentation of changed forest stands from difference imagery based on regression functions p 2748 N93-24839
Tropical forest monitoring with high resolution satellite data p 2748 N93-24841
Aerial photographic sampling for statewide resource inventory p 2755 N93-25441
PHOTOIONIZATION
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Photoexcitation of carbon fullerenes
| AD-A260739 | p 2849 N93-25644
PHOTOLUMINESCENCE
Photoluminescence of silicon nanostructures formed by ion beam implantation
| DE93-006777 | p 2862 N93-24958
Analysis of transient photoluminescence measurements on GaAs and AlGaAs double heterostructures
| AD-A261154 | p 2867 N93-25947
Visible light emission from porous silicon examined by photoluminescence and Raman spectroscopy
| DE93-006780 | p 2646 N93-26502
PHOTOLUMINESCENT BANDS
Optical characterization of Ga(1-x)In(x)As(y)Sb(1-y)/GaSb alloy and device application
| AD-A261713 | p 2870 N93-26581
PHOTOMAPPING
US Army evaluation of the Electronic Map Data (EMD) prototype
| AD-A261693 | p 2757 N93-26369
PHOTOMETERS
Apparatus for imaging an object in or through a scattering medium using coherent anti-Stokes Raman scattering
| AD-D015642 | p 2852 N93-25358
Laser physics and laser techniques
| AD-A261595 | p 2715 N93-26524
PHOTOMETRY
Topography from shading and stereo p 2879 N93-25803
PHOTON BEAMS
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368
Poster session: Fifth Users Meeting for the Advanced Photon Source
| DE93-006019 | p 2598 N93-26498
PHOTONICS
Optical computing, Volume 6: Organization of the Optical Society of America photonic science topical meeting series
| AD-A261267 | p 2856 N93-26266
PHOTONS
Correlative studies of astrophysical sources of very high and ultra high energy gamma-rays
| NASA-CR-192781 | p 2888 N93-25172
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368
PHOTOSPHERE
Photospheric abundance analysis of low-mass pre-main sequence stars p 2894 N93-25623
PHOTOSYNTHESIS
Kinetic studies of interfacial photocurrents in platinized chloroplasts
| DE93-002344 | p 2792 N93-25104
PHOTOTUBES
The sub 60 ps timing resolution using large area silicon avalanche diodes
| DE93-007723 | p 2688 N93-25365
PHOTOVOLTAIC CELLS
Research on stable, high-efficiency amorphous silicon multijunction modules
| DE93-000072 | p 2862 N93-25163
Role of polycrystallinity in CdTe and CuInSe2 photovoltaic cells
| DE93-000045 | p 2759 N93-25504
PHOTOVOLTAIC CONVERSION
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
| DE93-000073 | p 2759 N93-25102
Laser beamed power: Satellite demonstration applications
| NASA-CR-190793 | p 2623 N93-25132
Film fabrication technologies at NREL p 2658 N93-25563
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597
PHTHALOCYANIN
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
New directions in phthalocyanine pigments
| NASA-CR-192443 | p 2656 N93-26155
PHYSICAL EXERCISE
Utilization of the graded universal testing system to increase the efficiency for assessing aerobic and anaerobic capacity p 2794 N93-26077
Combined strength and endurance training: Functional and morphological adaptations to ten weeks of training
| AD-A261059 | p 2802 N93-26229
PHYSICAL FITNESS
Combined strength and endurance training: Functional and morphological adaptations to ten weeks of training
| AD-A261059 | p 2802 N93-26229
PHYSICAL OPTICS
ILS mathematical modeling study of an ILS glide slope proposed for runway 19L at the Meridian Naval Air Station, Mississippi
| DOT/FAA/CT-TN93/8 | p 2584 N93-24741
Optimizing the G/T ratio of the DSS-13 34-meter beam-waveguide antenna p 2678 N93-26118
PHYSIOLOGICAL EFFECTS
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629
AFRRI research, fiscal year 1991
| AD-A260933 | p 2911 N93-25710
PHYSIOLOGICAL RESPONSES
Autonomic physiological data associated with simulator discomfort
| NASA-CR-177609 | p 2794 N93-24738
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-022 | p 2795 N93-25407
AFRRI research, fiscal year 1991
| AD-A260933 | p 2911 N93-25710
Metabolic response of environmentally isolated microorganisms to industrial effluents: Use of a newly described cell culture assay p 2794 N93-26066
PHYSIOLOGY
Autonomic physiological data associated with simulator discomfort
| NASA-CR-177609 | p 2794 N93-24738
Anatomy and physiology of plant conductive systems
| PB93-156032 | p 2793 N93-25877
Entropy reduction via simplified image contourization p 2804 N93-25924
Investigation into the common mode rejection ratio of the physiological signal conditioner circuit p 2794 N93-26073
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391
PHYTOPLANKTON
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea
| AD-A261205 | p 2757 N93-25868
PICOSECOND PULSES
Spectra of stable sonoluminescence
| AD-A260621 | p 2844 N93-25637
Laser physics and laser techniques
| AD-A261595 | p 2715 N93-26524
PIEZOELECTRIC CERAMICS
Passive vibration damping materials: Piezoelectric ceramics composites for vibration damping applications
| AD-A260792 | p 2727 N93-25690
Damage detection and mitigation of composite structures using smart materials
| AD-A261121 | p 2639 N93-25945
PIEZOELECTRIC CRYSTALS
The measurement of the resonant frequency of quartz crystal units: An ongoing saga p 2833 N93-24996
Crystal growth of berlinite: Methods for growing longer crystals and improving the quality p 2838 N93-25025
Controlled dissolution of a piezoelectric material berlinite (AlPO4) p 2840 N93-25043
Crystal growth and physical characterizations of GaPO4 p 2840 N93-25044
IR materials producibility
| AD-A261099 | p 2853 N93-25766
PIEZOELECTRICITY
Monolithic quartz vibrating beam accelerometer p 2711 N93-25011
The third-order permittivity of quartz obtained by different methods p 2840 N93-25046
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
Damage-survivable and damage-tolerant laminated composites with optimally placed piezoelectric layers
| AD-A260879 | p 2636 N93-25631
Damage detection and mitigation of composite structures using smart materials
| AD-A261121 | p 2639 N93-25945
Smart structural composites with piezoelectric micro-constituents
| AD-A260970 | p 2640 N93-26225
Investigation of coupled analysis techniques for adaptive material structural systems
| AD-A261359 | p 2868 N93-26332
PIGMENTS
New directions in phthalocyanine pigments
| NASA-CR-192443 | p 2656 N93-26155
PILOT ERROR
Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827
PILOT PERFORMANCE
Perceptual factors that influence use of computer enhanced visual displays
| NASA-CR-192961 | p 2811 N93-26150
PILOT SELECTION
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933

PILOTLESS AIRCRAFT
A preliminary sizing method for unmanned aircraft using multi-variate optimisation p 2587 N93-25408
PILOTS
Aircraft accident report: Tomy International, Inc., d/b/a Scenic Air Tours flight 22, Beech Model E18S, N342E in-flight collision with terrain, Mount Haleakala, Maui, Hawaii, 22 April 1992
| PB93-910401 | p 2583 N93-25827
PINHOLE CAMERAS
Intensity distribution of the x ray source for the AXAF VETA-I mirror test p 2854 N93-26184
PINHOLES
Plasma sheath effects on ion collection by a pinhole
| NASA-TM-106098 | p 2615 N93-25090
PIONS
Notes on radial drift for dalitz detection
| DE93-006971 | p 2846 N93-24959
High-energy pion-nucleus scattering at LAMPF
| DE93-007364 | p 2852 N93-25380
PIPE FLOW
Predictive modeling of particle-laden, turbulent flows
| DE93-008208 | p 2698 N93-25309
Modeling of bubble and drop formation in flowing liquids in terrestrial and microgravity environments p 2664 N93-25390
Dynamics of turbulent slugging in transitional pipe flow p 2702 N93-25548
Flow conditioner location effects in orifice flowmeters
| PB93-159457 | p 2708 N93-26535
PIPELINES
Tank issues: Design and placement of vapor monitoring wells
| PB93-161131 | p 2768 N93-26536
PIPES (TUBES)
Detecting damaged cables using a preionized gas technique
| DE93-007588 | p 2689 N93-25429
PISTON ENGINES
A preliminary sizing method for unmanned aircraft using multi-variate optimisation p 2587 N93-25408
Evaluation of the Migrating Combustion Chamber (MCC) engine
| AD-A260780 | p 2718 N93-25682
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529
PITTING
Laser initiated corrosion pits on aluminum p 2650 N93-25464
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672
PIXELS
The sub 60 ps timing resolution using large area silicon avalanche diodes
| DE93-007723 | p 2688 N93-25365
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
High-performance compression of astronomical images p 2805 N93-25931
Multi-rate, real time image compression for images dominated by point sources p 2805 N93-25932
PLANAR STRUCTURES
Multichip module high speed testing
| AD-A261391 | p 2856 N93-26306
PLANE STRAIN
Continuum and micromechanics treatment of constraint in fracture
| AD-A260927 | p 2727 N93-25647
PLANETARY ATMOSPHERES
Construction of an advanced software tool for planetary atmospheric modeling p 2815 N93-25799
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
PLANETARY BOUNDARY LAYER
Atmospheric reactive nitrogen oxides and their relationship with urban and rural ozone formation p 2760 N93-24908
Thermal infrared radiation transfer in the planetary boundary layer p 2772 N93-25688
Boundary layer coupling between an explosive cyclone and the Gulf Stream during ERICA
| AD-A261577 | p 2787 N93-26513
PLANETARY COMPOSITION
The Martian lower atmosphere p 2897 N93-26394
PLANETARY GRAVITATION
V-GRAM: Magellan bulletin about Venus and the radar mapping mission
| NASA-CR-192923 | p 2898 N93-26424
PLANETARY IONOSPHERES
Occultation of a compact radio source by Venus p 2676 N93-26107
The upper atmosphere and ionosphere of Mars p 2897 N93-26393
PLANETARY MASS
The Martian lower atmosphere p 2897 N93-26394
PLANETARY RADIATION
The Venus 130-nm dayglow as a diagnostic of thermospheric structure and dynamics p 2896 N93-25285
PLANETARY SURFACES
Neutron energy determination with a high-purity germanium detector
| NASA-CR-192773 | p 2900 N93-25890
PLANETARY WAVES
Interaction of an eddy with a continental slope
| AD-A261550 | p 2791 N93-26578
PLANKTON
The continuous plankton recorder survey: A long-term, basin-scale oceanic time series p 2736 N93-24937
PLANNING
Using neural networks and Dyna algorithm for integrated planning, reacting and learning in systems
| NASA-CR-193018 | p 2817 N93-24743
PLASMA ARC WELDING
Robotic Variable Polarity Plasma Arc (VPPA) welding p 2720 N93-25605
PLASMA CONTROL
Density dependence of line intensities and application to plasma diagnostics
| NIFS-209 | p 2857 N93-24950
Assessment of torsatrons as reactors
| DE93-006721 | p 2858 N93-24969
Boundary plasma modelling for ITER
| DE93-007963 | p 2859 N93-25302
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356
PLASMA COOLING
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528
PLASMA CURRENTS
TSC plasma halo simulation of a D3-D vertical displacement episode
| DE93-008688 | p 2860 N93-25493
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
PLASMA DENSITY
Density dependence of line intensities and application to plasma diagnostics
| NIFS-209 | p 2857 N93-24950
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528
PLASMA DIAGNOSTICS
Density dependence of line intensities and application to plasma diagnostics
| NIFS-209 | p 2857 N93-24950
Diagnostics of diamond film deposition plasmas
| AD-A260866 | p 2860 N93-25626
Direct measurement of velocity space transport in a plasma p 2861 N93-25831
IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source
| AD-A261399 | p 2862 N93-26520
PLASMA DISPLAY DEVICES
Emerging large-screen display technology
| AD-A261066 | p 2681 N93-26241
PLASMA DRIFT
Direct measurement of velocity space transport in a plasma p 2861 N93-25831
PLASMA DYNAMICS
IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source
| AD-A261399 | p 2862 N93-26520
PLASMA ENGINES
Stationary plasma thruster evaluation in Russia
| NASA-CR-192823 | p 2859 N93-25206
Anode power deposition in coaxial MPD thrusters p 2623 N93-25665
IR and FIR laser diagnostics for plasma thrusters using a CW CO2 radiation source
| AD-A261399 | p 2862 N93-26520
Preliminary investigation of power flow and electrode phenomena in a multi-megawatt coaxial plasma thruster
| NASA-CR-191084 | p 2633 N93-26555
PLASMA HEATING
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092
An outgoing energy flux boundary condition for finite difference ICRP antenna models
| DE93-007788 | p 2674 N93-25300
Thermal and electric oscillation driven by orbit loss in helical systems
| NIFS-213 | p 2860 N93-25346
PLASMA INTERACTIONS
The interaction of high voltage systems with the environments of the Moon and Mars
| NASA-TM-106107 | p 2618 N93-26148
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
The upper atmosphere and ionosphere of Mars p 2897 N93-26393
PLASMA JETS
Metal ion implantation for large scale surface modification
| DE93-007649 | p 2859 N93-25324
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171
PLASMA LAYERS
Modeling of plasma flow switches at low, intermediate and high energies
| DE93-007359 | p 2858 N93-25167
PLASMA OSCILLATIONS
Thermal and electric oscillation driven by orbit loss in helical systems
| NIFS-213 | p 2860 N93-25346
PLASMA PHYSICS
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
| JPRS-UPM-92-004 | p 2844 N93-25402
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
| JPRS-UPM-92-003 | p 2844 N93-25403
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
| JPRS-UPM-93-001 | p 2844 N93-25404
PLASMA PROPULSION
Preliminary investigation of power flow and electrode phenomena in a multi-megawatt coaxial plasma thruster
| NASA-CR-191084 | p 2633 N93-26555
PLASMA SHEATHS
Plasma sheath effects on ion collection by a pinhole
| NASA-TM-106098 | p 2615 N93-25090
PLASMA TEMPERATURE
Ion temperature measurements in the Maryland Spheromak p 2859 N93-25290
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159
PLASMA WAVES
The generation of Langmuir waves by thick target electron beams in solar flares p 2861 N93-25730
PLASMA-PARTICLE INTERACTIONS
Alfven wave transport effects in the time evolution of parallel cosmic-ray modified shocks
| NASA-CR-192932 | p 2899 N93-25161
Two-stream instability for a light ion beam-plasma system with external magnetic field
| NIFS-204 | p 2859 N93-25248
PLASMAS (PHYSICS)
Time dependent simulation of cosmic-ray shocks including Alfven transport
| NASA-CR-192931 | p 2899 N93-24752
Modeling of plasma flow switches at low, intermediate and high energies
| DE93-007359 | p 2858 N93-25167
A compact neutron counter telescope with thick radiator (Cotetra) for fusion experiment
| NIFS-205 | p 2860 N93-25347
Application of non-thermal plasmas to pollution control
| DE93-007515 | p 2763 N93-25385
TSC plasma halo simulation of a D3-D vertical displacement episode
| DE93-008688 | p 2860 N93-25493
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528
Treatment of hazardous organic wastes using silent discharge plasmas
| DE93-003789 | p 2768 N93-26592
PLASMONS
The interaction of swift electrons with surface excitations
| DE93-007245 | p 2848 N93-25376
PLASTIC DEFORMATION
Internal stresses and the cyclic deformation of an aluminum matrix composite p 2650 N93-25436
Finite element micromechanics modeling of inelastic deformation of unidirectionally fiber-reinforced composites p 2637 N93-25680
On the stability of finite plastic deformations
| AD-A261526 | p 2730 N93-26361
Defect initiation/growth and energy dissipation induced by deformation and fracture
| AD-A261703 | p 2869 N93-26385

PLASTIC PROPERTIES
A micromechanical viscoplastic stress-strain model with grain boundary sliding
| DE93-009109 | p 2649 N93-25095
Inelastic behavior of thermoplastic composites
p 2636 N93-25674
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997

PLASTICS
New directions in phthalocyanine pigments
| NASA-CR-192443 | p 2656 N93-26155
Extruded films from modified polypropylene resin: Dielectric and breakdown studies
| AD-A261382 | p 2657 N93-26341

PLATE THEORY
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
On existence of solutions and duality for a model of non-linear elastic plates with transverse shear deformations p 2726 N93-25437
Numerical simulation of damage and progressive failures in composite laminates using the layerwise plate theory
p 2636 N93-25661

PLATELETS
A new approach to cooled combustion chambers: The 40K formed platelet chamber p 2626 N93-26018

PLATES (STRUCTURAL MEMBERS)
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
Damage-survivable and damage-tolerant laminated composites with optimally placed piezoelectric layers
| AD-A260879 | p 2636 N93-25631
A three-dimensional model for the residual stresses in a unidirectional composite plate p 2728 N93-25825

PLOWING
Registration of the use of agricultural fields and soil erosion using satellite remote sensing
p 2751 N93-24856

PLUMES
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758
The AFTAC model integration project
| DE93-003334 | p 2761 N93-25122
Particle behavior in solid propellant rocket motors and plumes
| AD-A260900 | p 2624 N93-25913
SRB environment evaluation and analysis. Volume 3: ASRB plume induced environments
| NASA-CR-192519 | p 2631 N93-26054
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
Measurement and analysis of a small nozzle plume in vacuum
| NASA-TM-106066 | p 2633 N93-26561

PNEUMATIC EQUIPMENT
Pneumatic actuator with hydraulic control
| AD-D015652 | p 2719 N93-26244

POINT DEFECTS
Surface diffusion studies by optical diffraction techniques
| DE93-007707 | p 2853 N93-25550
IR materials producibility
| AD-A261099 | p 2853 N93-25766
Gordon Conference on Point Defects, Line Defects and Interfaces in Semiconductors
| AD-A261485 | p 2868 N93-26357

POINT SOURCES
Shells, outflows and star formation in the giant molecular cloud Monoceros R2 p 2893 N93-25555
Multi-rate, real time image compression for images dominated by point sources p 2805 N93-25932

POINTING CONTROL SYSTEMS
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode
p 2605 N93-24724
Applications of inertial-sensor high-inheritance instruments to DSN precision antenna pointing
p 2621 N93-26112

POINTS (MATHEMATICS)
Integrated approaches to parallelism in optimization and the solution of inverse problems
| AD-A261490 | p 2829 N93-26344

POLAND
Application of remote sensing to environmental monitoring in Poland p 2739 N93-24786

POLAR COORDINATES
Polar decomposition for attitude determination from vector observations p 2602 N93-24711

POLAR REGIONS
A climatology of polar low occurrences in the Nordic Seas and an examination of katabatic winds as a triggering mechanism
| AD-A261719 | p 2786 N93-26245

POLARIMETRY
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777
The scope of DLR's SAR calibration program
p 2738 N93-24778
The use of polarimetric radar remote sensing data for application in forestry p 2749 N93-24845
Selected results from LLNL-Hughes RAR for West Coast Scotland Experiment 1991
| DE93-006972 | p 2788 N93-24960

POLARIZATION (WAVES)
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777

POLARIZATION CHARACTERISTICS
Polarizing Michelson interferometer for measuring thermospheric winds
| ISBN-0-315-70442-X | p 2784 N93-25731

POLARIZED ELECTROMAGNETIC RADIATION
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Recent experiments on spin physics in high energy hadron interactions
| DE93-007900 | p 2851 N93-25301

POLICIES
Political and institutional factors affecting systems engineering p 2666 N93-24690
Science, technology, and national security
p 2886 N93-25232
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
Functional Economic Analysis Guidebook, version 1.1
| AD-A261390 | p 2886 N93-26305
Guidelines for evaluating and expressing the uncertainty of NIST measurements results
| PB93-159465 | p 2830 N93-26318

POLISHING
Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications
| DE93-005485 | p 2852 N93-25182
Ultrasonic polishing p 2670 N93-25580

POLITICS
Political and institutional factors affecting systems engineering p 2666 N93-24690
Organizational politics, participation in decision-making, and job satisfaction
| DOT/FAA/AM-92/17 | p 2796 N93-25203

POLLUTION CONTROL
SIHTI: The research and development program of energy and environmental technology
| DE93-769925 | p 2763 N93-25360
Application of non-thermal plasmas to pollution control
| DE93-007515 | p 2763 N93-25385
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534
Converting environmental wastes into valuable resources p 2759 N93-25572
Space life support technology applications to terrestrial environmental problems p 2803 N93-25617
Pollution prevention 1991: Progress on reducing industrial pollutants
| PB93-157725 | p 2766 N93-25875
Development and demonstration of a new filter system to control emissions during jet engine testing
| AD-A261203 | p 2766 N93-26243
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529

POLLUTION MONITORING
Remote sensing monitoring and hindcasting of the accident occurred to the tanker Haven in the Gulf of Genoa (Italy) p 2747 N93-24830
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
Efficient inspection of network pollution data
| DE93-003810 | p 2761 N93-25126
Using terrestrial plants in biomonitoring
| PB93-158780 | p 2766 N93-26316

POLLUTION TRANSPORT
Remote sensing monitoring and hindcasting of the accident occurred to the tanker Haven in the Gulf of Genoa (Italy) p 2747 N93-24830
Non-local description of pollution transport in random medium p 2763 N93-25329
Model for transport of floating debris in the ocean
| PB93-172997 | p 2768 N93-26559

POLYACETYLENE
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524

POLYAMIDE RESINS
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997

POLYATOMIC MOLECULES
Chemical dynamics studies of high energy species
| AD-A260743 | p 2852 N93-25676

POLYCRYSTALS
Laser Induced Phonons (LIPs) in MBE grown ZnSe
| RSRE-MEMO-4544 | p 2864 N93-25454
Method of joining diamond structures
| AD-D015671 | p 2867 N93-26140
Ir-Zr alloys as diffusion barriers between Cu and Si(100)
| AD-A261919 | p 2652 N93-26197

POLYESTERS
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642

POLYETHYLENES
A model for the filling of cold cavities with solidifying, semi-crystalline polymers
| DE93-003817 | p 2655 N93-25507
Thermodynamic, kinetic, and structural properties of linear polyethylene crystallized from polymer-diluent mixture p 2864 N93-25528

POLYIMIDES
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997
Polyimides containing the cyclobutene-3,4-dione moiety
| NASA-CASE-LAR-14753-1 | p 2656 N93-25999

POLYMER CHEMISTRY
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997
Characterization of the synthesis of M-61, a random equilibrium silicone terpolymer, using dry starting materials
| KCP-613-4985 | p 2657 N93-26213

POLYMER MATRIX COMPOSITES
Damage and failure analysis on continuous fiber-reinforced polymer composites
p 2637 N93-25716
Thermal expansion measurements of polymer matrix composites and syntactics
| MTL-TR-92-27 | p 2640 N93-25954
Japanese Technology Evaluation Center Workshop on Advanced Manufacturing Technology for Polymer Composite Structures in Japan
| PB93-165249 | p 2641 N93-26589

POLYMERIC FILMS
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
INEL spray-forming research p 2658 N93-25562
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278
Extruded films from modified polypropylene resin: Dielectric and breakdown studies
| AD-A261382 | p 2657 N93-26341

POLYMERIZATION
Polymers by non-redox processes: Synthesis, physical studies, and application
| AD-A261064 | p 2657 N93-26240

POLYMERS
Temperature dependent sensor response caused by polymer-solvent interactions
| DE93-005368 | p 2655 N93-25444
Thermodynamic, kinetic, and structural properties of linear polyethylene crystallized from polymer-diluent mixture p 2864 N93-25528
Models of crack growth along polymer interfaces
p 2728 N93-25750
Characterization of the synthesis of M-61, a random equilibrium silicone terpolymer, using dry starting materials
| KCP-613-4985 | p 2657 N93-26213
European tri-service advanced materials workshop on compressive strength in rigid-rod polymers
| AD-A261517 | p 2658 N93-26576

POLYNOMIALS
The analysis of convolutional codes via the extended Smith algorithm p 2671 N93-24664
Stability margins for multilinear interval systems by way of phase conditions: A unified approach
| NASA-CR-192893 | p 2819 N93-25226

POLYPROPYLENE
Extruded films from modified polypropylene resin: Dielectric and breakdown studies
| AD-A261382 | p 2657 N93-26341

POLYSILANES
Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers
| DE93-010140 | p 2655 N93-25524
POLYSTATION DOPPLER TRACKING SYSTEM
Precise Doppler tracking from the Medicina VLBI station p 2608 N93-24998
POPULATIONS
Biodiversity indication by Earth observation data p 2751 N93-24858
POROSITY
The modeling of complex continua: Fundamental obstacles and grand challenges
| DE93-006507 | p 2696 N93-25193
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
Computation of transonic flow over a porous surface projectile p 2577 N93-25409
POROUS MATERIALS
The modeling of complex continua: Fundamental obstacles and grand challenges
| DE93-006507 | p 2696 N93-25193
Visible light emission from porous silicon examined by photoluminescence and Raman spectroscopy
| DE93-006780 | p 2646 N93-26502
PORTABLE EQUIPMENT
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
PORTABLE LIFE SUPPORT SYSTEMS
The properties of and analytical methods for detection of LiOH and Li2CO3
| NASA-CR-192771 | p 2643 N93-25240
Composite materials for the extravehicular mobility unit p 2642 N93-26060
POSEIDON SATELLITE
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704
POSITION (LOCATION)
DORIS precise orbit determination and location system performances of ultra stable oscillators p 2608 N93-24997
Analytical techniques for improved time transfer using common view of direct broadcasting satellites p 2835 N93-25008
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018
Collaboration in the UK on time transfer using the GLONASS system p 2837 N93-25019
Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272
Firmware development improves system efficiency p 2807 N93-25606
Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF) p 2598 N93-26006
Flow conditioner location effects in orifice flowmeters
| PB93-159457 | p 2708 N93-26535
POSITION ERRORS
Star tracker operation in a high density proton field p 2600 N93-24699
TDRSS orbit determination using short baseline differenced carrier phase p 2601 N93-24701
First experience with the ASN-16 GLONASS receiver p 2693 N93-25033
POSITION INDICATORS
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888
Log-ratio signal-processing technique for beam position monitors
| DE93-007356 | p 2851 N93-25314
System for calibrating a gyro navigator
| AD-D015668 | p 2586 N93-26093
POSITION SENSING
Method and apparatus for deflection measurements using eddy current effects
| NASA-CASE-GSC-13506-1 | p 2710 N93-26103
POSITIONING
Firmware development improves system efficiency p 2807 N93-25606
POSITIONING DEVICES (MACHINERY)
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368
Telerobotic rovers for extraterrestrial construction p 2670 N93-26416
POTASSIUM HYDRIDES
Laser damage to production- and research-grade KDP crystals
| DE93-007517 | p 2870 N93-26594
POTASSIUM HYDROXIDES
Temperature-dependent electrical conductivity of soda-lime glass
| DE93-007872 | p 2654 N93-25359
POTASSIUM PHOSPHATES
Laser damage to production- and research-grade KDP crystals
| DE93-007517 | p 2870 N93-26594
POTENTIAL ENERGY
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions
| DE93-007669 | p 2647 N93-26599
POWDER (PARTICLES)
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill p 2659 N93-25585
Ceramic fiber reinforced glass-ceramic matrix composite
| NASA-CASE-LEW-15262-1 | p 2640 N93-26100
Vacuum powder injector and method of impregnating fiber with powder
| NASA-CASE-LAR-14179-1 | p 2668 N93-26101
Template synthesis of electronically conductive polymers: A new route for achieving higher electronic conductivities
| AD-A261616 | p 2658 N93-26437
POWDER METALLURGY
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
Mechanical alloying processing and application to development of structural materials
| AD-A261251 | p 2652 N93-26264
POWER AMPLIFIERS
A compact and versatile pulse generation and shaping subsystem for high energy laser systems
| DE93-007114 | p 2711 N93-24961
POWER CONVERTERS
DC-DC power converter research for Orbiter/Station power exchange
| NASA-CR-192939 | p 2633 N93-26425
POWER EFFICIENCY
Preliminary investigation of power flow and electrode phenomena in a multi-megawatt coaxial plasma thruster
| NASA-CR-191084 | p 2633 N93-26555
POWER GAIN
Experimental and theoretical study of CW HF chemical laser residual fundamental gain p 2714 N93-25721
POWER LIMITED SPACECRAFT
Optimal cooperative power-limited rendezvous p 2607 N93-24904
POWER LINES
Detecting damaged cables using a preionized gas technique
| DE93-007588 | p 2689 N93-25429
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263
POWER SPECTRA
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 2
| NASA-CR-192833 | p 2770 N93-25088
DSN observations of Titan p 2680 N93-26129
Measurements of scalar power spectra in high Schmidt number turbulent jets
| AD-A261542 | p 2707 N93-26379
POWERED LIFT AIRCRAFT
Experimental performance of a ventral nozzle with pitch and yaw vectoring capability for SSTOVL aircraft
| NASA-TM-106054 | p 2592 N93-25129
POYNTING-ROBERTSON EFFECT
Line formation and the Poynting-Robertson effect in accretion discs p 2847 N93-25355
PRE-MAIN SEQUENCE STARS
Photospheric abundance analysis of low-mass pre-main sequence stars p 2894 N93-25623
PRECESSION
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706
SCATHA mission termination report p 2605 N93-24725
PRECIPITATION (METEOROLOGY)
Correlation between NDVI values derived from NOAA AVHRR HRPT data and ground measurements of precipitation in the EFEDA study area (Spain) p 2738 N93-24780
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
Remote sensing of precipitation and electrification with a dual-polarization, coherent, wideband radar system
| AD-A260779 | p 2756 N93-25679
Vector radiative transfer model: Application to rainfall retrieval with microwave radiometric data p 2784 N93-25743
Computation of moisture flux from ocean to atmosphere using a synergy of SSM/I-derived precipitable water and ECMWF analyses p 2774 N93-25757
Rainfall frequency atlas of the Midwest
| PB93-164606 | p 2785 N93-25872
Large scale rainfall diversity and satellite propagation p 2683 N93-26466
PRECIPITATION HARDENING
Development of dispersion-strengthened XD (trademark) Cu alloys for high heat-flux applications
| NASA-CR-191124 | p 2653 N93-24761
Computer modelling of cyclic deformation of high-temperature materials
| AD-A260978 | p 2639 N93-25936
PRECISION
Precision of the calibration of the AXAF engineering test article (VETA) mirrors p 2855 N93-26189
PRECOOLING
An evaluation of thermal energy storage options for precooling gas turbine inlet air
| DE93-005980 | p 2758 N93-24975
PREDATORS
The continuous plankton recorder survey: A long-term, basin-scale oceanic time series p 2736 N93-24937
PREDICTION ANALYSIS TECHNIQUES
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694
What is the relationship between altitude and weight in a model rocket? p 2603 N93-24715
Nonlinear techniques for forecasting solar activity directly from its time series p 2603 N93-24716
Anomalous bioelectric potentials of silk trees in Naples zoo (Italy) prior to an earthquake in May, 1991 p 2753 N93-24873
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
A computational approach to predicting the extent of arc root damage in CFC panels p 2642 N93-24890
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
Operational seasonal and interannual predictions of ocean conditions p 2733 N93-24921
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
Low-frequency room responses. Part 1: Background and qualitative considerations
| BBC-RD-1992/8-PT-1 | p 2673 N93-25168
Low-frequency room responses. Part 2: Calculation methods and experimental results
| BBC-RD-1992/9-PT-2 | p 2673 N93-25169
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671
Computer modelling of cyclic deformation of high-temperature materials
| AD-A260978 | p 2639 N93-25936
PREDICTIONS
Natural disasters and their mitigation using space technology p 2742 N93-24804
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812
International organisation of ocean programs: Making a virtue of necessity p 2732 N93-24917
World Ocean Circulation Experiment p 2733 N93-24922
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138
PREFORMS
Mullite whiskers and mullite-whisker felt p 2642 N93-25586
PREMIXED FLAMES
A premixed laminar flame interacting with a vortex resulting in flame stretch and quenching p 2642 N93-24771
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame
| NASA-CR-191099 | p 2642 N93-25116
The structure of particle cloud premixed flames
| NASA-CR-192827 | p 2643 N93-25229
Flame-turbulence interactions
| AD-A260957 | p 2645 N93-26220
Solution of nonlinear boundary value problem on successively refined grids
| AD-A261395 | p 2829 N93-26519
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
| PB93-152478 | p 2768 N93-26533

PREPREGS
Graphite/epoxy composite laminates with co-cured interlaminar damping layers p 2642 N93-25587
Characterization of aerospace grade resins and composites through pressurized volumetric dilatometry
| AD-A260794 | p 2639 N93-25918
Vacuum powder injector and method of impregnating fiber with powder
| NASA-CASE-LAR-14179-1 | p 2668 N93-26101

PRESIDENTIAL REPORTS
Science, technology, and national security p 2886 N93-25232
High performance computing and communications panel report p 2807 N93-26131

PRESSING (FORMING)
Method of joining diamond structures
| AD-D015671 | p 2867 N93-26140

PRESSURE CHAMBERS
Analysis of the lettuce data from the variable pressure growth chamber at NASA Johnson Space Center: A three-stage nested design model p 2794 N93-26069

PRESSURE DEPENDENCE
Pressure dependence of conductivity
| DE93-008466 | p 2687 N93-25113

PRESSURE DISTRIBUTION
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
Generic hypersonic vehicle performance model
| NASA-CR-192953 | p 2587 N93-25162
An experimental study of the sources of fluctuating pressure loads beneath swept shock/boundary-layer interactions
| NASA-CR-192918 | p 2698 N93-25266
The transient development of vortices over delta wings p 2576 N93-25269
Generation of acoustic waves by focused infrared neodymium-laser radiation p 2714 N93-25761
Experimental effects of wing location on wing-body pressures at supersonic speeds
| NASA-TM-4434 | p 2581 N93-26085
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

PRESSURE DRAG
Pressure torques and circulation changes in Rocky Mountain lee cyclones p 2783 N93-25724

PRESSURE EFFECTS
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584

PRESSURE GRADIENTS
The effect of entrance radius and film injection on wall heating in scramjet nozzles p 2625 N93-26009

PRESSURE MEASUREMENT
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
A systematic satellite approach for estimating central pressures of mid-lattitude oceanic storms
| NOAA-TR-NESDIS-63 | p 2781 N93-25220
An experimental study of the sources of fluctuating pressure loads beneath swept shock/boundary-layer interactions
| NASA-CR-192918 | p 2698 N93-25266
The transient development of vortices over delta wings p 2576 N93-25269
The pressure modulation system in the Improved Stratospheric and Mesospheric Sounder p 2773 N93-25739
Experimental effects of wing location on wing-body pressures at supersonic speeds
| NASA-TM-4434 | p 2581 N93-26085
Jet-induced ground effects on a parametric flat-plate model in hover
| NASA-TM-104001 | p 2581 N93-26099
Measurement and analysis of a small nozzle plume in vacuum
| NASA-TM-106066 | p 2633 N93-26561

PRESSURE OSCILLATIONS
Calculations of combustion response profiles and oscillations
| NASA-TM-106135 | p 2623 N93-25236
An experimental study of the sources of fluctuating pressure loads beneath swept shock/boundary-layer interactions
| NASA-CR-192918 | p 2698 N93-25266
Correlations between organized turbulent structures and wall pressure fluctuations
| PB93-156479 | p 2706 N93-25885

PRESSURE RATIO
Experimental performance of a ventral nozzle with pitch and yaw vectoring capability for SSTOVL aircraft
| NASA-TM-106054 | p 2592 N93-25129
Estimating turbine limit load
| NASA-CR-191105 | p 2580 N93-25883

PRESSURE REDUCTION
Crustal deformation studies in subaerial parts of the world oceanic rift system: Iceland and Afar p 2789 N93-25558

PRESSURE SENSORS
Smart microsensors for high temperature applications
| AD-A260747 | p 2710 N93-25677
SiC microsensor with piezoresistive diamond sensing elements
| AD-A261346 | p 2868 N93-26312

PRESTRESSING
Axisymmetric deformations and stresses of unsymmetrically laminated composite cylinders in axial compression with thermally-induced preloading effects
| NASA-CR-192788 | p 2723 N93-24912

PREVENTION
The use of SPOT data in natural disaster prevention and damage assessment p 2743 N93-24811

PROBABILITY DENSITY FUNCTIONS
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938

PROBABILITY DISTRIBUTION FUNCTIONS
Equilibrium constrained assumed natural coordinate strain finite elements for shell analysis p 2724 N93-25273
Generalized probability model for calculation of interference to the Deep Space Network due to circularly Earth-orbiting satellites p 2679 N93-26127

PROBABILITY THEORY
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
How to combine probabilistic and fuzzy uncertainties in fuzzy control
| NASA-TM-108746 | p 2818 N93-25138
How far we are from the complete knowledge: Complexity of knowledge acquisition in Dempster-Shafer approach
| NASA-CR-192944 | p 2874 N93-25139
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671
Probability and statistics applied to the theory of algorithms
| AD-A261019 | p 2830 N93-25863
Generalized probability model for calculation of interference to the Deep Space Network due to circularly Earth-orbiting satellites p 2679 N93-26127
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281
Penning detachment: A new frontier
| AD-A261447 | p 2850 N93-26346

PROBLEM SOLVING
Design concepts for the development of cooperative problem-solving systems
| NASA-CR-192708 | p 2585 N93-25261
Improving performance through concept formation and conceptual clustering
| NASA-CR-192726 | p 2828 N93-25262
Design of a cooperative problem-solving system for enroute flight planning: An empirical study of its use by airline dispatchers
| NASA-CR-192709 | p 2585 N93-25330
An experimental examination of the effects of expertise and problem-solving cues on the identification of ideas for strategic information systems p 2875 N93-25395
Linear-programming tools in integer programming: The traveling salesman
| AD-A261398 | p 2812 N93-26290
Intelligent, real-time problem solving, phase 3
| AD-A261441 | p 2829 N93-26345
Power iterations and the dominant eigenvalue problem
| AD-A261695 | p 2829 N93-26370
Computation and theory in large-scale optimization
| AD-A261419 | p 2813 N93-26450

PROCESS CONTROL (INDUSTRY)
Vision-aided monitoring and control of thermal spray, spray forming, and welding processes p 2670 N93-25604
Adaptive process control with fuzzy logic and genetic algorithms p 2827 N93-25612
Recommendations for a Kalman filter to estimate and control freeze and sublime rates of gaseous diffusion plant freezer/sublimer systems
| ORNL/TM-12183 | p 2668 N93-25937
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997

PRODUCT DEVELOPMENT
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952
Engineering: Research development and technology
| UCRL-53868-91 | p 2917 N93-26326

PRODUCTION COSTS
Emerging technologies in ethanol production
| PB93-157014 | p 2661 N93-25818

PRODUCTION ENGINEERING
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366

PRODUCTION MANAGEMENT
Managing real-time software projects: Problems and issues
| AD-A261428 | p 2813 N93-26453

PRODUCTION PLANNING
Special tooling disposition for aircraft entering post production support
| AD-A261614 | p 2573 N93-26168

PRODUCTIVITY
Factors associated with perceptions of productivity and usage of information technology in a service organization p 2875 N93-25421
Implementation of quality improvement techniques for management and technical processes in the ACRV project p 2723 N93-26074

PROFILES
On machine capacitance dimensional and surface profile measurement system p 2670 N93-25579

PROGRAM VERIFICATION (COMPUTERS)
Putting time into proof outlines
| NASA-CR-192978 | p 2809 N93-25152
Supercomputer Debugging Workshop 1992
| DE93-007322 | p 2805 N93-25165
High level design for distributed application instrumentation
| AD-A260812 | p 2710 N93-25696
Set based program analysis
| AD-A260979 | p 2806 N93-25841
Analysis of symbolic parameter models
| AD-A261930 | p 2811 N93-26253
Software testing initiative for strategic defense systems
| AD-A261350 | p 2831 N93-26330
Research directions in software analysis, synthesis and certification
| AD-A261367 | p 2812 N93-26336
AEGIS measures definition
| AD-A261494 | p 2812 N93-26375
Source-level debugging of automatically parallelized programs
| AD-A261520 | p 2813 N93-26378

PROGRAMMABLE LOGIC DEVICES
Radiation-hardened control system
| DE93-007248 | p 2688 N93-25377
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618

PROGRAMMING ENVIRONMENTS
Proceedings of the Second SISAL Users' Conference
| DE93-008019 | p 2815 N93-25304
A methodology and software environment for testing process model's sequential predictions with protocols
| AD-A260980 | p 2882 N93-25844

PROGRAMMING LANGUAGES
Prototype PC user interface
| DE93-008008 | p 2809 N93-25303
Proceedings of the Second SISAL Users' Conference
| DE93-008019 | p 2815 N93-25304
Towards a formalism for program generation
| AD-A261689 | p 2812 N93-26368

PROJECT MANAGEMENT
Management issues in systems engineering p 2665 N93-24682
The importance of cost considerations in the systems engineering process p 2666 N93-24686
Systems engineering and integration processes involved with manned mission operations p 2666 N93-24688
Nuclear thermal propulsion technology: Results of an interagency panel in FY 1991
| NASA-TM-105711 | p 2621 N93-24740
Wrap-up session p 2737 N93-24940
Energy and Technology Review, August-September 1992
| DE93-005882 | p 2901 N93-24974
JSC research and technology
| NASA-TM-104763 | p 2901 N93-25188
Tree classification software p 2814 N93-25591
Climate Monitoring and Diagnostics Laboratory
| PB93-156388 | p 2785 N93-25871
Liquid Rocket Booster (LRB) for the Space Transportation System (STS) Systems Study. Amendment 13: Orientation meeting
| NASA-CR-192515 | p 2614 N93-26152

PROJECT PLANNING
Nuclear thermal propulsion technology: Results of an interagency panel in FY 1991
| NASA-TM-105711 | p 2621 N93-24740
Viewgraph description of Penn State's Propulsion Engineering Research Center: Activity highlights and future plans
| NASA-CR-192317 | p 2622 N93-24943
Space transfer vehicle concepts and requirements study. Volume 3, book 1: Program cost estimates
| NASA-CR-192529 | p 2611 N93-25514
Nuclear electric propulsion for planetary science missions: NASA technology program planning
| NASA-TM-106139 | p 2632 N93-26210
PROJECT SETI
Space biology research development
| NASA-CR-192830 | p 2792 N93-25242
The Telecommunications and Data Acquisition Report
| NASA-CR-192804 | p 2676 N93-26105
PROJECTILES
Computation of transonic flow over a porous surface projectile p 2577 N93-25409
Modified point mass trajectory simulation for base-burn projectiles
| BRL-TR-3321 | p 2609 N93-25985
PROLOG (PROGRAMMING LANGUAGE)
Analysis of symbolic parameter models
| AD-A261930 | p 2811 N93-26253
PROP-FAN TECHNOLOGY
Evaluation of MARC for the analysis of rotating composite blades
| NASA-TM-4423 | p 2723 N93-24909
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202
PROPAGATION MODES
A comparison of ionospheric propagation mode delay predictions from ADVANCED PROPHET 4.3 with measured data
| AD-A261782 | p 2686 N93-26604
PROPAGATION VELOCITY
Observations of an intrathermocline vortex p 2788 N93-24769
Propagation velocity and space-time correlation of perturbations in turbulent channel flow
| NASA-TM-103932 | p 2695 N93-25082
PROPANE
Emissions from ethanol and LPG fueled vehicles
| DE93-006410 | p 2660 N93-25192
Documentation for propane fleet conversion cost-effectiveness model
| PB93-165611 | p 2720 N93-26590
PROPELLANT ADDITIVES
Dynamic burning rate measurements of metalized composite propellants using the laser-recoil technique p 2631 N93-26043
PROPELLANT COMBUSTION
Ignition and combustion of lunar propellants
| NASA-CR-192814 | p 2659 N93-24745
Dynamic burning rate measurements of metalized composite propellants using the laser-recoil technique p 2631 N93-26043
PROPELLANT GRAINS
Particle behavior in solid propellant rocket motors and plumes
| AD-A260900 | p 2624 N93-25913
PROPELLANT SENSITIVITY
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
| AD-A261116 | p 2660 N93-25769
Molecular composition, structure, and sensitivity of explosives
| DE93-003850 | p 2662 N93-26493
PROPELLANT TESTS
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
| AD-A261116 | p 2660 N93-25769
The burning rate behavior of pure nitrocellulose propellant samples
| AD-A261009 | p 2661 N93-25857
PROPELLANTS
An experimental and analytical study of the unsteady combustion of homogeneous energetic solids using the laser-recoil method p 2630 N93-26042
PROPELLER BLADES
Evaluation of MARC for the analysis of rotating composite blades
| NASA-TM-4423 | p 2723 N93-24909
A review of civil aviation propeller-to-person accidents: 1980-1989
| AD-A260695 | p 2583 N93-25896
PROPELLER FANS
Evaluation of MARC for the analysis of rotating composite blades
| NASA-TM-4423 | p 2723 N93-24909
Theory for noise of propellers in angular inflow with parametric studies and experimental verification
| NASA-CR-4499 | p 2844 N93-25094
A numerical and experimental studies of flow characteristics in centrifugal fans p 2577 N93-25339
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202
PROPELLER NOISE
Theory for noise of propellers in angular inflow with parametric studies and experimental verification
| NASA-CR-4499 | p 2844 N93-25094
PROPORTIONAL COUNTERS
VETA-1 x ray detection system p 2854 N93-26185
Correcting x ray spectra obtained from the AXAF VETA-I mirror calibration for pileup, continuum, background and deadtime p 2854 N93-26187
AXAF VETA-I mirror encircled energy measurements and data reduction p 2855 N93-26188
PROPOSALS
Air Force Office of Scientific Research
| AD-A260675 | p 2911 N93-25893
PROPULSION SYSTEM CONFIGURATIONS
Nuclear thermal propulsion technology: Results of an interagency panel in FY 1991
| NASA-TM-105711 | p 2621 N93-24740
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
PROPULSION SYSTEM PERFORMANCE
Nuclear thermal propulsion technology: Results of an interagency panel in FY 1991
| NASA-TM-105711 | p 2621 N93-24740
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136
Liquid Rocket Booster (LRB) for the Space Transportation System (STS) Systems Study. Amendment 13: Orientation meeting
| NASA-CR-192515 | p 2614 N93-26152
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine
| NASA-TM-106097 | p 2632 N93-26211
Development and use of hydrogen-air torches in an altitude facility
| NASA-TM-106047 | p 2598 N93-26214
PROPYLENE
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
PROSTAGLANDINS
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763
PROSTHETIC DEVICES
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
PROTECTION
Method for providing EMI/EMP hardening and breakdown protection in composite materials
| AD-D015638 | p 2634 N93-25283
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940
PROTECTIVE COATINGS
Mechanistic studies of the CVD of silicon nitride from SiF4 and NH3
| DE93-004500 | p 2644 N93-25312
Chromate-free corrosion resistant talc coatings for aluminum alloys
| DE93-005370 | p 2655 N93-25446
In situ surface studies of conversion coatings for steel and aluminum
| AD-A261016 | p 2655 N93-25861
Duct protection coating concept development and test. Appendix D, volume 1: Test specimen fabrication, conditioning, and testing documentation
| AD-A261005 | p 2656 N93-25940
Thermal coatings for titanium-aluminum alloys
| NASA-TM-107760 | p 2651 N93-26048
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278
Workshop on Diamond and Diamond-Like-Carbon Films for the Transportation Industry
| DE93-007491 | p 2658 N93-26506
PROTEIN SYNTHESIS
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763
PROTEINS
Primary events in olfactory reception
| AD-A260562 | p 2795 N93-25944
Pseudomonas screening assay
| NASA-CASE-NPO-17653-1-CU | p 2793 N93-25994
PROTOCOL (COMPUTERS)
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767
A methodology and software environment for testing process model's sequential predictions with protocols
| AD-A260980 | p 2882 N93-25844
Distributed project scheduling at NASA: Requirements for manual protocols and computer-based support p 2815 N93-26075
An OSI architecture for the Deep Space Network p 2679 N93-26121
Proof of fault coverage for a formal protocol test procedure
| AD-A261612 | p 2680 N93-26166
Signed vector timestamps: A secure protocol for partial order time
| AD-A261371 | p 2817 N93-26338
PROTON BEAMS
Proton Monte Carlo transport program PTRAN
| PB93-158673 | p 2850 N93-26314
PROTON IRRADIATION
Far infrared spectra of amorphous and crystalline water ice and changes in these phases as the result of proton irradiation
| NASA-CR-192849 | p 2892 N93-25230
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
| AD-A261808 | p 2793 N93-26259
PROTONS
Star tracker operation in a high density proton field p 2600 N93-24699
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903
Proton Monte Carlo transport program PTRAN
| PB93-158673 | p 2850 N93-26314
PROTOTYPES
Prototype PC user interface
| DE93-008008 | p 2809 N93-25303
Data systems dynamic simulator p 2814 N93-25602
Knowledge-based assistance for science visualization and analysis using large distributed databases p 2879 N93-25801
Development of an expert data reduction assistant p 2880 N93-25808
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
A distributed analysis and visualization system for model and observational data p 2881 N93-25814
A prototype for simulation of the space-to-ground assembly/contingency system of Space Station Freedom p 2619 N93-26065
A study of mapping exogenous knowledge representations into CONFIG p 2827 N93-26072
A Biphase Shift Keying (BPSK), direct sequence, spread spectrum modem for Petite Amateur Navy Satellite (PANSAT)
| AD-A261301 | p 2618 N93-26295
PROVING
Analysis of large system black box verification test data
| NASA-CR-192885 | p 2815 N93-24748
Verification of a climate convention: Role and limitations of a space based remote sensing system p 2738 N93-24781
The evaluation of technical models used for major-accident hazard installations. Report to Commission of the European Communities Directorate General 12
| CUED/A-AERO/TR-19 | p 2668 N93-25238
Proof of fault coverage for a formal protocol test procedure
| AD-A261612 | p 2680 N93-26166
PROXIMITY
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952
PSEUDOMONAS
Pseudomonas screening assay
| NASA-CASE-NPO-17653-1-CU | p 2793 N93-25994

PSEUDORANDOM SEQUENCES
Efficient generation of synthetic terrain imagery for automatic target recognition
| AD-A260705 | p 2756 N93-25653
PSYCHOLOGICAL TESTS
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933
Spontaneous discovery and use of categorical structure
| AD-A261658 | p 2798 N93-26364
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521
PSYCHOLOGY
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347
PSYCHOMOTOR PERFORMANCE
Proceedings of Workshop 1: The Human Brainmap Database
| AD-A260720 | p 2796 N93-25654
PSYCHOPHYSIOLOGY
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-025 | p 2793 N93-25405
Comparative analytical study of evoked and event related potentials as correlates of cognitive processes
| AD-A261388 | p 2799 N93-26446
PULSARS
Cosmic string cosmology p 2891 N93-24907
How can millisecond pulsars improve the long term stability of atomic time scales? p 2832 N93-24985
PULSE AMPLITUDE
Correcting x ray spectra obtained from the AXAF VETA-I mirror calibration for pileup, continuum, background and deadtime p 2854 N93-26187
PULSE COMMUNICATION
Timing and time signal distribution in digital communications networks p 2686 N93-25061
Timing a national telecommunications network using GPS p 2687 N93-25062
Strategies for synchronisation in an evolving telecommunications network p 2687 N93-25063
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430
A proposed study of multiple scattering through clouds up to 1 THz p 2684 N93-26474
PULSE DURATION MODULATION
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196
PULSE GENERATORS
A compact and versatile pulse generation and shaping subsystem for high energy laser systems
| DE93-007114 | p 2711 N93-24961
Variable pulse rate circuit
| AD-D015675 | p 2691 N93-26233
PULSE RADAR
Frequency diversity sidelobe canceller
| AD-D015647 | p 2674 N93-25332
PULSE RATE
Variable pulse rate circuit
| AD-D015675 | p 2691 N93-26233
PULSED LASER DEPOSITION
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition
| DE93-007908 | p 2654 N93-25372
Fast diagnostics of laser ablation used for pulsed laser deposition
| DE93-005155 | p 2713 N93-25508
PULSED LASERS
Surface discharge photoinitiation of pulsed chemical lasers
| DE93-006337 | p 2712 N93-24967
Apparatus for imaging an object in or through a scattering medium using coherent anti-Stokes Raman scattering
| AD-D015642 | p 2852 N93-25358
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363
Structure and properties of a-C: N films prepared by pulsed excimer laser deposition
| DE93-007908 | p 2654 N93-25372
Laser field assisted photoemission using femtosecond laser pulses
| DE93-007277 | p 2712 N93-25378
Simultaneous determination of gain parameters in steady state lasers
| DE93-007389 | p 2713 N93-25381
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy
| DE93-007509 | p 2654 N93-25384
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389
Laser physics and laser techniques
| AD-A261595 | p 2715 N93-26524
PULTRUSION
Asymptotic studies of gravity-driven reacting coating flows and pultrusion processes p 2704 N93-25683
PUMPS
Positive displacement rotary pump
| AD-D015678 | p 2719 N93-26144
PYRIDOXINE
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
PYROELECTRICITY
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823
PYROLYSIS
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629
Detection of atomic oxygen and hydrogen in solid propellant flames and pyrolysis gases using multiphoton laser-induced fluorescence p 2628 N93-26029
Development of a pyrolysis waste recovery model with designs, test plans, and applications for space-based habitats p 2803 N93-26076
PYROTECHNICS
Pyroshock: Bibliography
| DE93-007605 | p 2726 N93-25489
Molecular composition, structure, and sensitivity of explosives
| DE93-003850 | p 2662 N93-26493

Q

Q FACTORS
Long term drift and gamma-irradiation effect p 2833 N93-24992
Q SWITCHED LASERS
Generation of acoustic waves by focused infrared neodymium-laser radiation p 2714 N93-25761
QUADRATIC PROGRAMMING
Methods of optimization under uncertainty
| AD-A261487 | p 2873 N93-26342
QUADRUPOLES
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR
| AD-A261224 | p 2645 N93-26300
QUALITATIVE ANALYSIS
A study of mapping exogenous knowledge representations into CONFIG p 2827 N93-26072
QUALITY CONTROL
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
What procedure to choose while designing a fuzzy control? Towards mathematical foundations of fuzzy control
| NASA-TM-108719 | p 2820 N93-25459
Quality control: Variability in protocols
| PB93-157790 | p 2766 N93-25876
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952
Implementation of quality improvement techniques for management and technical processes in the ACRV project p 2723 N93-26074
Exploring the link between intrinsic motivation and quality
| AD-A261722 | p 2722 N93-26246
NDT standards from the perspective of the Department of Defense
| MTL-TR-92-68 | p 2722 N93-26434
Designing and implementing a state quality award
| PB93-154458 | p 2722 N93-26546
QUANTUM EFFICIENCY
Studies of avalanche photodiodes for scintillating fibre tracking readout
| DE93-008370 | p 2689 N93-25491
QUANTUM ELECTRODYNAMICS
Notes on radial drift for dalitz detection
| DE93-006971 | p 2846 N93-24959
QUANTUM ELECTRONICS
Joint services electronics program
| AD-A261801 | p 2692 N93-26539
QUANTUM MECHANICS
Theoretical calculations on the electron absorption spectra of selected Polycyclic Aromatic Hydrocarbons (PAH) and derivatives
| NASA-CR-192762 | p 2892 N93-25200
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions
| DE93-007669 | p 2647 N93-26599
QUANTUM OPTICS
Experimental studies of fundamental problems in quantum optics
| AD-A261183 | p 2853 N93-25822
QUANTUM THEORY
Twistor diagrams and a quantum field theory p 2871 N93-25423
Fundamental aspects of metal joining: The study of strong interfaces
| AD-A261293 | p 2653 N93-26304
Interferometric measurement with squeezed light
| AD-A260910 | p 2856 N93-26457
Low temperature Hall and Shubnikov-de Haas effects
| AD-A261871 | p 2869 N93-26540
QUANTUM WELLS
Electric field effects on quantum-confined semiconductor structures p 2865 N93-25703
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774
Resonant tunneling through chemisorbed halogen atoms on Ag(111)
| AD-A261794 | p 2868 N93-26254
QUARK MODELS
High-energy pion-nucleus scattering at LAMPF
| DE93-007364 | p 2852 N93-25380
QUARKS
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364
Detection of fragments arising from greater than 10 GeV electron-nucleus collisions
| DE93-007725 | p 2848 N93-25366
QUARTZ
Comparison of energy trapping resonators and filters using the AT cut of quartz, berlinite and gallium phosphate p 2836 N93-25013
QUARTZ CRYSTALS
Long term drift and gamma-irradiation effect p 2833 N93-24992
Weak magnetic field sensitivity of quartz crystal oscillators p 2833 N93-24993
Improved PI-network measurement of all quartz crystal parameters by appropriate modelling of the test fixture p 2833 N93-24995
The measurement of the resonant frequency of quartz crystal units: An ongoing saga p 2833 N93-24996
Monolithic quartz vibrating beam accelerometer p 2711 N93-25011
Surface Transverse Wave (STW) quartz resonators in the GHz range p 2836 N93-25012
Dedicated oscillator for immersed crystal sensor p 2837 N93-25020
Radiation effects in germanium doped quartz p 2837 N93-25021
Trapped energy quartz crystal resonator on wedge-shaped plate p 2837 N93-25022
Quartz crystal twinning under mechanical stress: Finite element analysis p 2839 N93-25032
Very wide bandwidth HF crystal filters p 2693 N93-25039
Thermionic current measurement in quartz p 2840 N93-25045
The third-order permittivity of quartz obtained by different methods p 2840 N93-25046
Thermoelasticity in quartz p 2841 N93-25047
Quartz oscillators, frequency synthesizers, and timing systems for geodesy and radio science applications p 2693 N93-25052
Space radiation susceptibility of ultra stable crystal oscillators p 2693 N93-25053
QUASARS
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers p 2892 N93-24949
QUASI-STEADY STATES
Flame response in oscillatory solid propellant combustion p 2630 N93-26041
QUATERNIONS
Attitude analysis in Flatland: The plane truth p 2603 N93-24712
Quaternion normalization in spacecraft attitude determination p 2606 N93-24730

QUERY LANGUAGES
The StarView intelligent query mechanism
p 2826 N93-25984

R

RADAR
Selected results from LLNL-Hughes RAR for West Coast Scotland Experiment 1991
| DE93-006972 | p 2788 N93-24960
RADAR ASTRONOMY
Goldstone solar system radar signal processing
p 2680 N93-26130
RADAR BEAMS
Orbital parameter estimation using an extended Kalman filter
| AD-A260618 | p 2608 N93-25636
RADAR CROSS SECTIONS
DSN observations of Titan p 2680 N93-26129
RADAR DATA
DSN acquisition of Magellan high-rate telemetry data
p 2614 N93-26124
Goldstone solar system radar signal processing
p 2680 N93-26130
Study of auroral dynamics with combined spacecraft and incoherent-scatter radar data
| NASA-CR-192224 | p 2775 N93-26159
Status of the Olympus experiment at CRC
p 2685 N93-26480
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
| AD-A261105 | p 2591 N93-26572
RADAR DETECTION
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
RADAR EQUIPMENT
OTH-B radar system: System summary
| AD-A261727 | p 2681 N93-26247
RADAR GEOLOGY
Revealing the face of Venus: Magellan
| NASA-CR-192922 | p 2898 N93-26517
Proceedings of the Government Users Workshop on Ground Penetrating Radar Applications and Equipment
| AD-A261873 | p 2686 N93-26541
RADAR IMAGERY
Land cover monitoring in the Netherlands applying satellite remote sensing p 2740 N93-24789
The use of polarimetric radar remote sensing data for application in forestry p 2749 N93-24845
DSN observations of Titan p 2680 N93-26129
V-GRAM: Magellan bulletin about Venus and the radar mapping mission
| NASA-CR-192923 | p 2898 N93-26424
RADAR MAPS
V-GRAM: Magellan bulletin about Venus and the radar mapping mission
| NASA-CR-192923 | p 2898 N93-26424
Proceedings of the Government Users Workshop on Ground Penetrating Radar Applications and Equipment
| AD-A261873 | p 2686 N93-26541
RADAR MEASUREMENT
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Radar backscatter measurements from Arctic sea ice during the fall freeze-up
| NASA-CR-193100 | p 2790 N93-26050
Radar sensing of petroleum seepage gases
| AD-A261431 | p 2682 N93-26455
RADAR NAVIGATION
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
RADAR RANGE
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
RADAR RECEIVERS
Frequency diversity sidelobe canceller
| AD-D015647 | p 2674 N93-25332
Distortion measurements on bandpass filters with powdered iron toroidal inductors
| AD-A260790 | p 2675 N93-25689
RADAR SCATTERING
Theoretical study of topside ionospheric clutter
| AD-A260982 | p 2774 N93-25852
RADAR TRACKING
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
OTH-B radar system: System summary
| AD-A261727 | p 2681 N93-26247
RADAR TRANSMISSION
Frequency diversity sidelobe canceller
| AD-D015647 | p 2674 N93-25332
RADIAL DISTRIBUTION
Proton Monte Carlo transport program PTRAN
| PB93-158673 | p 2850 N93-26314
RADIAL FLOW
Design and performance of nozzle-less volute casings for inward flow radial turbines p 2593 N93-25471
RADIAL VELOCITY
Origin and evolution of cataclysmic variables
p 2893 N93-25245
Radial velocity studies of the secondary in cataclysmic variables p 2888 N93-25286
Radial velocity measurements of carbon stars
p 2895 N93-25713
RADIANCE
Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing
p 2751 N93-24859
Neural networks for atmospheric retrievals
p 2824 N93-25975
RADIANT HEATING
An experimental and analytical study of the unsteady combustion of homogeneous energetic solids using the laser-recoil method p 2630 N93-26042
RADIATION BELTS
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
RADIATION DAMAGE
AFRRI research, fiscal year 1991
| AD-A260933 | p 2911 N93-25710
Temperature dependence of radiation damage and its annealing in silicon detectors
| DE93-003854 | p 2869 N93-26494
RADIATION DETECTORS
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
Interferometric fiber-optic radiation sensor
| DE93-003841 | p 2852 N93-25127
Cosmic ray composition investigations using ICE/ISEE-3
| NASA-CR-192808 | p 2900 N93-25241
RADIATION DISTRIBUTION
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Spectra of stable sonoluminescence
| AD-A260621 | p 2844 N93-25637
RADIATION DOSAGE
Radiation effects in germanium doped quartz
p 2837 N93-25021
Detailed component design for a Compact Environmental Anomaly Sensor (CEASE)
| AD-A261729 | p 2620 N93-26248
Effects of space radiation on humoral and cellular immunity in rhesus monkeys
| AD-A261808 | p 2793 N93-26259
RADIATION EFFECTS
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization
p 2600 N93-24695
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project
| NASA-TM-106096 | p 2687 N93-24746
Long term drift and gamma-irradiation effect
p 2833 N93-24992
Radiation effects in germanium doped quartz
p 2837 N93-25021
Mechanical properties of martensitic alloy AISI 422
| DE93-006563 | p 2649 N93-25255
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363
Environmental test program for superconducting materials and devices
| DE93-003646 | p 2864 N93-25506
CRRES: Combined release and radiation effects satellite program summary
| NASA-CR-192469 | p 2774 N93-25886
Utilization of an electronic circuit simulator in CMOS latch-up studies
| AD-A260877 | p 2690 N93-25935
Thermal radiation in non-metalized solid rocket motors: Effect on burning rate and temperature sensitivity
p 2626 N93-26020
Composite materials for the extravehicular mobility unit p 2642 N93-26060
Modeling and analysis tools p 2897 N93-26397
RADIATION HARDENING
Radiation-hardened control system
| DE93-007248 | p 2688 N93-25377
Utilization of an electronic circuit simulator in CMOS latch-up studies
| AD-A260877 | p 2690 N93-25935
RADIATION HAZARDS
HERO resistant semiconductor bridge igniter
p 2627 N93-26024
RADIATION MEASUREMENT
Aerospace techniques in radiation and ecological monitoring of the Republic Belarus
p 2741 N93-24793
SRB environment evaluation and analysis. Volume 3: ASRB plume induced environments
| NASA-CR-192519 | p 2631 N93-26054
RADIATION PRESSURE
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization
p 2600 N93-24695
Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721
RADIATION PROTECTION
AFRRI research, fiscal year 1991
| AD-A260933 | p 2911 N93-25710
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs
p 2670 N93-26063
Nuclear safety policy working group recommendations on nuclear propulsion safety for the space exploration initiative
| NASA-TM-105705 | p 2632 N93-26200
RADIATION SHIELDING
A heat transfer analysis of a mobile vehicle radiation-shielded operator compartment
| DE93-007428 | p 2800 N93-25318
RADIATION THERAPY
Measuring the metastatic potential of cancer cells
p 2794 N93-25566
RADIATION TOLERANCE
Quartz oscillators, frequency synthesizers, and timing systems for geodesy and radio science applications
p 2693 N93-25052
Space radiation susceptibility of ultra stable crystal oscillators p 2693 N93-25053
RADIATIVE HEAT TRANSFER
A correlated K-distribution model of the heating rates for H2O and a molecular mixture in the 0-2500 cm(exp -1) wavelength region in the atmosphere between 0 and 60 km
| DE93-005741 | p 2762 N93-25147
A heat transfer analysis of a mobile vehicle radiation-shielded operator compartment
| DE93-007428 | p 2800 N93-25318
RADIATIVE TRANSFER
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers
p 2892 N93-24949
The role of multiple scattering in twilight zenith sky observations of atmospheric absorbers: Diurnal photochemistry and airmass factors
p 2772 N93-25535
Thermal infrared radiation transfer in the planetary boundary layer p 2772 N93-25688
Vector radiative transfer model: Application to rainfall retrieval with microwave radiometric data
p 2784 N93-25743
Further analysis of ECOM-721 data
| AD-A260863 | p 2774 N93-25790
RADII
A nanoradian differential VLBI tracking demonstration
p 2677 N93-26108
RADIO ANTENNAS
Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110
RADIO ASTRONOMY
The Telecommunications and Data Acquisition Report
| NASA-CR-192804 | p 2676 N93-26105
DSS-13 26-meter antenna upgraded radiometer system p 2679 N93-26122
RADIO BEACONS
The Virginia Tech OLYMPUS propagation experiment
p 2685 N93-26479
Status of the Olympus experiment at CRC
p 2685 N93-26480
RADIO COMMUNICATION
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289
WARC 92 and some thoughts as to its impact on the NASA propagation program p 2684 N93-26475
Allocations by the 1992 World Administrative Radio Conference p 2684 N93-26476
ESA's planning and coordination of the OLYMPUS propagation experiment p 2684 N93-26477
Observations on the NASA Propagation Program
p 2685 N93-26482
ACTS propagation terminal update
p 2685 N93-26484
RADIO DIRECTION FINDERS
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914

Geolocation of an electromagnetic emitter using a cyclostationary time difference of arrival technique
| AD-A261781 | p 2686 N93-26603

RADIO EQUIPMENT
A Biphase Shift Keying (BPSK), direct sequence, spread spectrum modem for Petite Amateur Navy Satellite (PANSAT)
| AD-A261301 | p 2618 N93-26295
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430

RADIO FREQUENCIES
HERO resistant semiconductor bridge igniter
p 2627 N93-26024
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311
Allocations by the 1992 World Administrative Radio Conference p 2684 N93-26476

RADIO FREQUENCY HEATING
Plasma heating in toroidal systems
| NIFS-208 | p 2858 N93-25092
An outgoing energy flux boundary condition for finite difference ICRP antenna models
| DE93-007788 | p 2674 N93-25300

RADIO FREQUENCY INTERFERENCE
Geolocation of an electromagnetic emitter using a cyclostationary time difference of arrival technique
| AD-A261781 | p 2686 N93-26603

RADIO NAVIGATION
The accuracy of SYLT- and RNS-based time scales at MTI and SNT during 1990-1991 p 2835 N93-25006

RADIO RECEIVERS
First experience with the ASN-16 GLONASS receiver
p 2693 N93-25033
Oscillators for mobile GPS receivers
p 2694 N93-25055
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279
Flight termination receiver catalog
| AD-A261558 | p 2682 N93-26460
The ACTS propagation program p 2683 N93-26465

RADIO TRANSMISSION
The accuracy of SYLT- and RNS-based time scales at MTI and SNT during 1990-1991 p 2835 N93-25006
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289
Proceedings of the 16th NASA Propagation Experimenters Meeting (NAPEX 16) and the Advanced Communications Technology Satellite (ACTS) Propagation Studies Miniworkshop
| NASA-CR-192800 | p 2682 N93-26463
Opening remarks p 2682 N93-26464
The ACTS propagation program p 2683 N93-26465
A database for propagation models
p 2684 N93-26472
ACTS propagation terminal update
p 2685 N93-26484

RADIO TRANSMITTERS
Improvements in X-band transmitter phase stability through Klystron body temperature regulation
p 2678 N93-26114
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279

RADIO WAVES
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280
Proceedings of the 16th NASA Propagation Experimenters Meeting (NAPEX 16) and the Advanced Communications Technology Satellite (ACTS) Propagation Studies Miniworkshop
| NASA-CR-192800 | p 2682 N93-26463

RADIOACTIVE DECAY
Topics in CP violation
| DE93-007615 | p 2847 N93-25323

RADIOACTIVE ISOTOPES
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674
Cosmic ray composition investigations using ICE/ISEE-3
| NASA-CR-192808 | p 2900 N93-25241
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes
p 2769 N93-25571
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
| DE93-007815 | p 2793 N93-26587

RADIOACTIVE MATERIALS
A comparison of the WIND System atmospheric models and MATS data
| DE93-002687 | p 2760 N93-24673
Aerospace techniques in radiation and ecological monitoring of the Republic Belarus
p 2741 N93-24793

RADIOACTIVE WASTES
Human factors in environmental management: New directions from the Hanford site
| DE93-004337 | p 2767 N93-26495

RADIOBIOLOGY
AFRRI research, fiscal year 1991
| AD-A260933 | p 2911 N93-25710

RADIOCHEMISTRY
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674

RADIOGRAPHY
Analysis of shaped charge jet penetration experiments with Pen
| UCRL-LR-110773 | p 2730 N93-26177

RADIOISOTOPE BATTERIES
Solid-state isotopic power source for computer memory chips p 2694 N93-25596

RADIOLOGY
Automated system for early breast cancer detection in mammograms p 2796 N93-25568

RADIOMETERS
Analysis of LARI sensor system
| DE93-006334 | p 2761 N93-24977
Commercial applications multispectral sensor system
p 2758 N93-25615
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618
The pressure modulation system in the Improved Stratospheric and Mesospheric Sounder
p 2773 N93-25739
DSS-13 26-meter antenna upgraded radiometer system p 2679 N93-26122
Opening remarks p 2682 N93-26464
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
| NASA-CR-191711 | p 2787 N93-26492

RAILGUN ACCELERATORS
Energy and Technology Review, October - December 1992
| DE93-007784 | p 2674 N93-25299

RAIN
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854
Rainfall frequency atlas of the Midwest
| PB93-164606 | p 2785 N93-25872
Satellite communications application to Pacific countries above Ku band p 2683 N93-26471
Rain compensation algorithm using adaptive linear prediction p 2685 N93-26485
More rain compensation results p 2686 N93-26486

RAIN FORESTS
World Forest Watch: A global forest monitoring test
p 2748 N93-24836
Tropical forest monitoring with high resolution satellite data p 2748 N93-24841

RAIN GAGES
Rain rate instrument for deployment at sea, phase 2
| NASA-CR-192442 | p 2786 N93-26156
Rain rate and modeled fade distributions at 20 GHz and 30 GHz derived from five years of network rain gauge measurements p 2683 N93-26468
A comparative assessment of R. M. Young and tipping bucket rain gauges p 2685 N93-26483

RAINDROPS
Rain rate instrument for deployment at sea, phase 2
| NASA-CR-192442 | p 2786 N93-26156

RAINSTORMS
Rainfall frequency atlas of the Midwest
| PB93-164606 | p 2785 N93-25872

RAMAN SPECTRA
Apparatus for imaging an object in or through a scattering medium using coherent anti-Stokes Raman scattering
| AD-D015642 | p 2852 N93-25358
Experimental studies of fundamental problems in quantum optics
| AD-A261183 | p 2853 N93-25822

RAMAN SPECTROSCOPY
Experimental studies of fundamental problems in quantum optics
| AD-A261183 | p 2853 N93-25822
Visible light emission from porous silicon examined by photoluminescence and Raman spectroscopy
| DE93-006780 | p 2646 N93-26502
Spectroscopic effects of disorder and vibrational localization in mixed-halide metal-halide chain solids
| DE93-007361 | p 2646 N93-26505

RANDOM ACCESS
Considerations for space and naval aviation applications of ferroelectric memory
| AD-A261300 | p 2807 N93-26294

RANDOM NOISE
Figure of merit for direct-detection optical channels
p 2678 N93-26117
New results in signal design for the AWGN channel
| AD-A261424 | p 2682 N93-26451

RANDOM PROCESSES
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 4
| NASA-CR-192834 | p 2769 N93-24910
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255
Properties of readings of periodically correlated random processes
| AD-A261225 | p 2686 N93-26573

RANDOM VIBRATION
On the effect of acoustic coupling on random and harmonic plate vibrations
| NASA-TM-107740 | p 2844 N93-25189

RANGE AND RANGE RATE TRACKING
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks
p 2832 N93-24983

RANGE FINDERS
Real-time construction of three-dimensional occupancy maps
| DE93-001645 | p 2756 N93-25505
Uncertainty in object pose determination with three light-stripe range measurements
| AD-A261435 | p 2857 N93-26488

RANGEFINDING
Application of GPS tracking techniques to orbit determination for TDRS p 2601 N93-24702
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
The advances in F and T technology: Their benefits of and for space science and technology
p 2831 N93-24979
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks
p 2832 N93-24983
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites
p 2686 N93-24999
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109
Image-based ranging and guidance for rotorcraft
| NASA-CR-177608 | p 2586 N93-26549

RANGELANDS
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854

RAPID QUENCHING (METALLURGY)
Solidification processing and phase transformations in ordered high temperature alloys
| AD-A261751 | p 2652 N93-26284

RARE GAS-HALIDE LASERS
Electron-beam-pumped recombination lasers
p 2712 N93-25344

RARE GASES
The physics of spin polarized gases
| AD-A261396 | p 2850 N93-26288
FALCON nuclear-reactor-pumped laser program and wireless power transmission
| DE93-007607 | p 2715 N93-26597

RATES (PER TIME)
A comparative assessment of R. M. Young and tipping bucket rain gauges p 2685 N93-26483

RATIONAL FUNCTIONS
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773

RATS
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629

RAY TRACING
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283

RAYLEIGH SCATTERING
Data analysis and interpretation of lunar dust exosphere p 2898 N93-26059
Pulsed laser Rayleigh scattering diagnostic for hydrogen/oxygen rocket exit plane flowfield velocimetry
| NASA-TM-106098 | p 2631 N93-26149

RAYLEIGH WAVES
Structural acoustics: A general form of reciprocity principles in acoustics
| AD-A261515 | p 2846 N93-26376

RAYLEIGH-RITZ METHOD
Optimization techniques for contact stress analysis
| AD-A260846 | p 2729 N93-25911
RDX
Development of rate expressions for the thermal decomposition of RDX p 2629 N93-26034
Chemistry during the induction time in heated nitramines p 2629 N93-26035
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
| AD-A261804 | p 2662 N93-26387
REACTING FLOW
Asymptotic studies of gravity-driven reacting coating flows and pultrusion processes p 2704 N93-25683
A new LU-SGS flow solver for calculating reentry flows p 2579 N93-25759
Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF) p 2598 N93-26006
Gasp 1.3 results for the transverse hydrogen reacting jet p 2625 N93-26011
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets p 2625 N93-26012
REACTION KINETICS
Coarsening of a quiescent electrorheological fluid I: Experiment
| DE93-006776 | p 2642 N93-24972
Studying the kinetics of magnetization in high Tc superconductors
| NASA-CR-192916 | p 2862 N93-25108
Design of a high activity and selectivity alcohol catalyst
| DE93-008103 | p 2659 N93-25112
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame
| NASA-CR-191099 | p 2642 N93-25116
A novel process for methanol synthesis
| DE93-008037 | p 2659 N93-25118
Probe molecule studies: Active species in alcohol synthesis
| DE93-008097 | p 2659 N93-25119
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149
The structure of particle cloud premixed flames
| NASA-CR-192827 | p 2643 N93-25229
Electron-beam-pumped recombination lasers p 2712 N93-25344
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364
Temperature dependent sensor response caused by polymer-solvent interactions
| DE93-005368 | p 2655 N93-25444
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Chemical dynamics studies of high energy species
| AD-A260743 | p 2852 N93-25676
Luminescence probe studies of ionomers. 3: Distribution of decay rate constants for tris bipyridyl ruthenium(2) in Nafion membranes
| AD-A260764 | p 2645 N93-25916
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets p 2625 N93-26012
Hybrid rocket fuel combustion study p 2626 N93-26019
Flame structure studies of a lean, 20 torr H2/N2O/AR flame employing molecular beam mass spectrometry p 2627 N93-26025
Kinetic studies in gas-phase reaction mechanisms important to the combustion process of high energy density materials: The H2/NO2 reaction p 2628 N93-26027
Dark zone modeling of solid propellant flames p 2628 N93-26028
Condensed-phase processes during solid propellant combustion. Part 4: Chemical and microscopic examination of laser-irradiated propellant samples p 2628 N93-26032
Development of rate expressions for the thermal decomposition of RDX p 2629 N93-26034
Interactions of acoustic waves and combustion of homogeneous solid propellants in rocket motors p 2630 N93-26039
Mechanisms of decomposition and oxidation of borane compounds
| AD-A261137 | p 2645 N93-26045
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces
| AD-A261265 | p 2657 N93-26303
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
| AD-A261804 | p 2662 N93-26387
In-process cure monitoring of composites via fiber-optic fluorescence
| AD-A261712 | p 2641 N93-26580
REACTION PRODUCTS
Treatment of hazardous organic wastes using silent discharge plasmas
| DE93-003789 | p 2768 N93-26592
REACTION WHEELS
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Attitude control of the LACE satellite: A gravity gradient stabilized spacecraft p 2605 N93-24727
REACTIVITY
Design and synthesis of reactive separation systems
| DE93-008764 | p 2642 N93-25115
Hazards of explosives dusts: Particle size effects
| DE93-009380 | p 2668 N93-25498
REACTOR DESIGN
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
REACTOR SAFETY
Human factors engineering: A key element of instrumentation and control system design
| DE93-006731 | p 2800 N93-25415
READ-ONLY MEMORY DEVICES
Lossless compression of image data products on th e FIFE CD-ROM series p 2804 N93-25929
READING
A framework for the design of usable electronic text p 2877 N93-25754
The adult literacy evaluator: An intelligent computer-aided training system for diagnosing adult illiterates p 2799 N93-26082
REAGENTS
Studies of the analyte-carrier interface in flow injection analysis
| DE93-008374 | p 2644 N93-25311
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764
REAL TIME OPERATION
A comparison of the WIND System atmospheric models and MATS data
| DE93-002687 | p 2760 N93-24673
TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703
Real-time attitude determination and gyro calibration p 2602 N93-24708
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Use of remote sensing spacecrafts in real time support to disaster management: Interfaces with ground segment facilities and services p 2743 N93-24809
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
The role of ocean climate data in operational Naval oceanography p 2732 N93-24916
Global Temperature and Salinity Pilot Project p 2733 N93-24924
The use of remotely sensed data for operational fisheries oceanography p 2734 N93-24927
Automated in situ observations of upper ocean biogeochemistry, bio-optics, and physics and their potential use for global studies p 2736 N93-24939
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956
Coarsening of a quiescent electrorheological fluid I: Experiment
| DE93-006776 | p 2642 N93-24972
Putting time into proof outlines
| NASA-CR-192978 | p 2809 N93-25152
An advanced data-acquisition system for wind energy projects
| DE93-000079 | p 2874 N93-25254
Concurrency control in real-time database systems p 2874 N93-25271
Dynamic error analysis of numerical methods for simulation of state-variable derivatives with discontinuities p 2819 N93-25278
Log-ratio signal-processing technique for beam position monitors
| DE93-007356 | p 2851 N93-25314
Numerical kinematic transformation calculations for a parallel link manipulator
| DE93-005778 | p 2718 N93-25449
Real-time construction of three-dimensional occupancy maps
| DE93-001645 | p 2756 N93-25505
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574
Improved performance and safety for high energy batteries through use of hazard anticipation and capacity prediction p 2694 N93-25582
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems p 2814 N93-25589
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594
Adaptive liquid crystal TV based joint transform correlator as applied to real-time pattern recognition
| AD-A260724 | p 2864 N93-25655
Active control of NiTiNOL-reinforced structural composites
| AD-A261062 | p 2638 N93-25780
The Grid Analysis and Display System (GRADS): A practical tool for Earth science visualization p 2880 N93-25805
Multi-layer holographic bifurcative neural network system for real-time adaptive EOS data analysis p 2880 N93-25807
An optimal scheduling of pick-place operations of a robot-vision-tracking system by using neural networks and rule-based systems p 2821 N93-25880
Multi-rate, real time image compression for images dominated by point sources p 2805 N93-25932
The WorkPlace distributed processing environment p 2825 N93-25977
VETA x ray data acquisition and control system p 2854 N93-26186
Real-time value-driven monitoring and repair
| AD-A260959 | p 2811 N93-26221
Realtime control of multiple sensor systems
| AD-A261037 | p 2680 N93-26226
Advanced technology for portable personal visualization
| AD-A261294 | p 2807 N93-26293
Intelligent, real-time problem solving, phase 3
| AD-A261441 | p 2829 N93-26345
United States Army space experiment 601
| AD-A261460 | p 2798 N93-26353
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366
Managing real-time software projects: Problems and issues
| AD-A261428 | p 2813 N93-26453
RECEIVERS
GPS standardization for the needs of time transfer p 2836 N93-25016
Osciliators for mobile GPS receivers p 2694 N93-25055
Low-frequency room responses. Part 2: Calculation methods and experimental results
| BBC-RD-1992/9-PT-2 | p 2673 N93-25169
A superconducting tunnel junction receiver for submillimeter astronomy, and analysis of observations of post-AGB star molecular envelopes p 2889 N93-25440
Figure of merit for direct-detection optical channels p 2678 N93-26117
Cross-switched MICRAD seeker
| AD-D015676 | p 2691 N93-26142
Trellis coded CPFSK
| AD-A261788 | p 2682 N93-26441
RECESSES
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903
RECIPROCATION
Prospects of two-way international time scale comparisons p 2832 N93-24988
RECIPROCITY THEOREM
Structural acoustics: A general form of reciprocity principles in acoustics
| AD-A261515 | p 2846 N93-26376
RECIRCULATIVE FLUID FLOW
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
| NASA-CR-192937 | p 2767 N93-26427
RECOIL ATOMS
Modeling of atom-diatom scattering
| AD-A261645 | p 2849 N93-26173

Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281

RECOMMENDATIONS
Atomic time scales for dynamical astronomy
p 2832 N93-24984
The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
Automation and robotics human performance
| NASA-CR-193049 | p 2802 N93-26153

RECONSTRUCTION
Bayesian cross-entropy reconstruction of complex images
| AD-A261812 | p 2812 N93-26257

RECTANGULAR PLATES
Uniform roughness studies
| WL-TR-92-3041 | p 2706 N93-25951

RECTANGULAR WAVEGUIDES
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660

RECYCLING
Application of remote sensing data for the investigation of environmental degradation sites in East Germany
p 2739 N93-24785
Low cost dewatering of waste slurries
p 2769 N93-25573

REDUCED GRAVITY
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755
Electrodeposition in low gravity p 2663 N93-24774
A model of concurrent flow flame spread over a thin solid fuel
| NASA-CR-191111 | p 2663 N93-24946
A simple and compact source of cold atoms for cesium fountains and microgravity clocks p 2831 N93-24981
The Columbus Metrology Science Team: Report on activities p 2670 N93-24987
NASA Microgravity Science and Applications Program
| NASA-TM-108775 | p 2663 N93-25194
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218
On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276
Modeling of bubble and drop formation in flowing liquids in terrestrial and microgravity environments
p 2664 N93-25390
Gas-Grain Simulation Facility (GGSF). Volume 1: Stage 1 facility definition studies
| NASA-CR-177606 | p 2887 N93-25442
Modelling of microgravity ignition phenomena
p 2664 N93-25465
Annular flow enhanced two-phase evaporative heat exchanger for space-based systems
p 2700 N93-25478
Numerical study of cavity natural convection flow with augmenting and counteracting effects by projection finite element method p 2701 N93-25540
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740
Investigation of the effects of Extra Vehicular Activity (EVA) and Launch and Entry (LES) gloves on performance p 2803 N93-26061
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209

REDUCTION (CHEMISTRY)
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903

REDUNDANCY
Algorithms for optimal redundancy allocation
| DE93-005709 | p 2827 N93-24973
Time and frequency reference for a trajectory measurement system p 2837 N93-25023

REDUNDANCY ENCODING
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709

REED-SOLOMON CODES
A (72, 36; 15) box code p 2671 N93-24663
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications
| NASA-CR-192715 | p 2673 N93-25198

REENTRY VEHICLES
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176
A new LU-SGS flow solver for calculating reentry flows p 2579 N93-25759

REFINING
INEL spray-forming research p 2658 N93-25562

REFLECTANCE
Analysis of LARI sensor system
| DE93-006334 | p 2761 N93-24977
Temperature dependent sensor response caused by polymer-solvent interactions
| DE93-005368 | p 2655 N93-25444
The x ray reflectivity of the AXAF VETA-I optics
p 2855 N93-26192

REFLECTION NEBULAE
Shells, outflows and star formation in the giant molecular cloud Monoceros R2 p 2893 N93-25555

REFLECTOR ANTENNAS
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview
p 2680 N93-26128

REFLECTORS
DSN observations of Titan p 2680 N93-26129

REFRACTED WAVES
Proceedings of the 5th International Symposium on Long Range Sound Propagation
| AD-A260666 | p 2845 N93-25643

REFRACTIVITY
Condensation on cooled surfaces of optical devices at the cosmic conditions p 2753 N93-24869
Interferometric fiber-optic radiation sensor
| DE93-003841 | p 2852 N93-25127
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams
p 2658 N93-25564

REFRACTORY COATINGS
Control of crystallite size in diamond film chemical vapor deposition
| AD-D015660 | p 2867 N93-26090

REFRACTORY MATERIALS
Evaluation of a candidate material for a coal-fired magnetohydrodynamic (MHD) high temperature recuperative air heater
| DE93-006630 | p 2858 N93-24968
Development of thin film thermocouples on ceramic materials for advanced propulsion system applications
| NASA-TM-106017 | p 2709 N93-25173
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
Computer modelling of cyclic deformation of high-temperature materials
| AD-A260978 | p 2639 N93-25936

REFRIGERANTS
An assessment of alternatives and technologies for replacing ozone-depleting substances at DOE facilities
| DE93-002862 | p 2760 N93-24675
Compressor calorimeter performance of refrigerant blends: Comparative methods and results for a refrigerator/freezer application
| DE93-006734 | p 2667 N93-24970
Experimental and theoretical studies of dense fluid mixtures
| DE93-006070 | p 2695 N93-24976
Malone refrigeration
| DE93-005439 | p 2668 N93-25447

REFRIGERATING
Malone refrigeration
| DE93-005439 | p 2668 N93-25447

REFRIGERATORS
Compressor calorimeter performance of refrigerant blends: Comparative methods and results for a refrigerator/freezer application
| DE93-006734 | p 2667 N93-24970
Malone refrigeration
| DE93-005439 | p 2668 N93-25447
Basic research thermoacoustic heat transport
| AD-A261334 | p 2759 N93-26310
Low temperature Hall and Shubnikov-de Haas effects
| AD-A261871 | p 2869 N93-26540

REFUELING
Military standardization handbook: Aircraft refueling handbook
| AD-A261755 | p 2662 N93-26600

REGENERATION (ENGINEERING)
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085

REGIONAL PLANNING
The regional planning and control using the satellite data p 2740 N93-24788
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
Use of remote sensing and GIS for the environmental planning proposal of the Sarno River Valley (Campania, southern Italy) p 2741 N93-24797

REGOLITH
Lunar regolith and structure mechanics
p 2670 N93-26412
Indigenous lunar construction materials
p 2670 N93-26413

REGRESSION ANALYSIS
Interpretation and segmentation of changed forest stands from difference imagery based on regression functions p 2748 N93-24839

REGULATIONS
Regulatory impact analysis of the Part 503 sewage sludge regulation
| PB93-110625 | p 2768 N93-26567

REINFORCING FIBERS
International Workshop on Advances in Inorganic Fibre Technology
| AD-A260719 | p 2639 N93-25908
Electrostatic fiber spreader
| AD-D015677 | p 2640 N93-26143
Effects of moisture and other contaminants in friction composites
| AD-A261226 | p 2640 N93-26301

RELATIVISTIC EFFECTS
The advances in F and T technology: Their benefits of and for space science and technology
p 2831 N93-24979
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
Prospects of two-way international time scale comparisons p 2832 N93-24988

RELATIVITY
Atomic time scales for dynamical astronomy
p 2832 N93-24984
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986

RELAY SATELLITES
Frequency generation and synthesis in the DRSS
p 2693 N93-25054

RELIABILITY
Time and frequency reference for a trajectory measurement system p 2837 N93-25023
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588

RELIABILITY ANALYSIS
Statistical modelling of software reliability
| NASA-CR-192985 | p 2809 N93-25257
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads
p 2726 N93-25533

RELIABILITY ENGINEERING
Reliability assessment at airline inspection facilities. Volume 1: A generic protocol for inspection reliability experiments
| DOT/FAA/CT-92/12-VOL-1 | p 2582 N93-25110

RELIEF MAPS
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707

REMOTE CONTROL
Experimental modal survey of the probe mass mock-up
| DE93-008846 | p 2617 N93-25494
Digital filter control of remotely operated flexible robotic structures
| DE93-007587 | p 2827 N93-26596

REMOTE HANDLING
Initial experiments with a myoelectric-based muscle sensor
| DE92-016034 | p 2799 N93-25099
Detailed solution to a complex kinematics chain manipulator
| DE93-004619 | p 2725 N93-25357

REMOTE MANIPULATOR SYSTEM
Dynamics of on-orbit construction process
p 2669 N93-26406

REMOTE SENSING
Resolution of the COBE Earth sensor anomaly
p 2600 N93-24700
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit
p 2601 N93-24704
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
| ESA-ISY-1-VOL-2 | p 2737 N93-24775
Use of airborne imaging spectrometry to the definition of optimised specifications for land applications with future spaceborne imaging spectrometers
p 2738 N93-24776
Remote sensed spectral signatures classification and recognition by neural networks: An approach to unsupervised techniques p 2738 N93-24779
Verification of a climate convention: Role and limitations of a space based remote sensing system
p 2738 N93-24781

Spectral remote sensing of anomalous mineralogy induced by hydrocarbon migration and uranium mineralization, San Rafael Swell, Utah, USA p 2739 N93-24783
Satellite remote sensing for environmental geology: The Bandung (West Java) experience p 2739 N93-24784
Application of remote sensing data for the investigation of environmental degradation sites in East Germany p 2739 N93-24785
Application of remote sensing to environmental monitoring in Poland p 2739 N93-24786
The regional planning and control using the satellite data p 2740 N93-24788
Land cover monitoring in the Netherlands applying satellite remote sensing p 2740 N93-24789
Detection of land use/land cover changes using remote sensing and GIS in Vietnam p 2740 N93-24791
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
Aerospace techniques in radiation and ecological monitoring of the Republic Belarus p 2741 N93-24793
Determination of environmental dynamics using NOAA satellite data and a water balance model for the Mediterranean landscape p 2741 N93-24794
Agroclimatological zonation by AVHRR data for vegetation monitoring p 2741 N93-24795
A knowledge-based approach to waste disposal sites detection through integration of Landsat-TM imagery and geographical context information p 2741 N93-24796
Use of remote sensing and GIS for the environmental planning proposal of the Sarno River Valley (Campania, southern Italy) p 2741 N93-24797
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
Archaeological, historical and geoelectrical data as ground truth for Landsat TM imagery application to coastal plain evolution studies p 2742 N93-24799
Demonstration of seasonal changes in the territory of Finland using multitemporal NOAA-AVHRR data p 2742 N93-24801
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
Lithologic mapping with LANDSAT Thematic Mapper guided by laboratory spectral measurements, Air, Niger (Africa) p 2742 N93-24803
Natural disasters and their mitigation using space technology p 2742 N93-24804
Alternative strategies for the use of satellite data analysis systems for hazard monitoring and disaster mitigation p 2743 N93-24805
Satellite borne remote sensing data: A tool for natural disaster reduction p 2743 N93-24806
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map p 2743 N93-24807
Sustainable remote sensing: A major improvement for realtime resource management and disaster early warning in developing countries p 2743 N93-24808
Use of remote sensing spacecrafts in real time support to disaster management: Interfaces with ground segment facilities and services p 2743 N93-24809
A method for sequential image analysis of hazard areas p 2743 N93-24810
The use of SPOT data in natural disaster prevention and damage assessment p 2743 N93-24811
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812
The need for spaceborne observations for meteorology and climatology p 2744 N93-24813
Remote sensing of non-renewable resources p 2744 N93-24814
Remote sensing geology p 2744 N93-24815
Remote sensing in hydrology and water management p 2744 N93-24816
Potential operational use of remote sensing from space in forestry p 2745 N93-24817
Remote sensing applied to agriculture state of the art and new trends p 2745 N93-24818
Applications of remote sensing for tidal waters, coastal areas and inland waters p 2745 N93-24819
Supporting the Portuguese fisheries with satellites p 2745 N93-24821
Application of satellite imageries data to fisheries in Japan p 2745 N93-24822
Oil pollution and water quality mapping of Augusta Bay, Italy using remote sensing techniques p 2746 N93-24823
NORSMAP 1989: Norwegian remote sensing spectrometry for mapping and monitoring of algal blooms and pollution p 2746 N93-24824
SEOMAR: An Italian approach to the observation of the Mediterranean area p 2746 N93-24825
The extent and status of mangroves in Mombasa district, Kenya: A case study based on remote sensing p 2746 N93-24826
Remote sensing of coastal zone Sabkha deposits, Gulf of Sirt, Libya p 2746 N93-24827
Inherent optical properties of lakes as measured by Landsat 5 Thematic Mapper p 2746 N93-24828
Multi-date algorithms for predicting surface water quality parameters in estuarine and coastal waters using Landsat TM data
| ED-659-CP | p 2746 N93-24829
Remote sensing monitoring and hindcasting of the accident occurred to the tanker Haven in the Gulf of Genoa (Italy) p 2747 N93-24830
Algal blooms and gel production in Adriatic Sea observed by remote sensing techniques p 2747 N93-24831
Hel's peninsula coastal zone changes in the last 40 years on a base of remote sensing methods p 2747 N93-24832
Evaluation of nearshore suspended sediment concentration through Landsat TM data: First results p 2747 N93-24833
Monitoring and evaluation of morphohydrographical changes in the Danube Delta by remote-sensing p 2747 N93-24834
Coastal environmental mapping using Landsat data
| ED-658-CP | p 2747 N93-24835
World Forest Watch: A global forest monitoring test p 2748 N93-24836
The national parks of Bavarian Forest and Sumava: A Landsat TM perspective on the structure and dynamics of the largest woodland of Central Europe p 2748 N93-24837
Application of photographic remote sensing data from space for information about forests p 2748 N93-24838
Interpretation and segmentation of changed forest stands from difference imagery based on regression functions p 2748 N93-24839
The ESA ISY initiatives for forest inventory in Europe p 2748 N93-24840
Assessment of storm damage in forests using SPOT imagery p 2748 N93-24842
Mapping of windfall damage in the Hunsrueck plateau with Landsat TM-data p 2749 N93-24843
A prototype system for forest fire prevention and control p 2749 N93-24844
The use of polarimetric radar remote sensing data for application in forestry p 2749 N93-24845
Forest decline monitoring using Landsat TM, digital stand data and DEMs p 2749 N93-24846
Swedish forest information atlas p 2749 N93-24847
Observation of forest damages in the Harz mountains by means of satellite remote sensing p 2749 N93-24848
Toward a satellite based crop information system in Hungary p 2750 N93-24849
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850
Assessment and forecasting of crop yield in Niger through NOAA NDVI data p 2750 N93-24851
Global drought monitoring from NOAA polar orbiting satellites p 2750 N93-24852
Interest of complementary data of coarse and high spatial resolution for agro-climatic crop monitoring p 2750 N93-24853
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856
Appliction of remote sensing to forestry mapping: Experience from the European collaborative programme for the less favoured areas p 2751 N93-24857
Biodiversity indication by Earth observation data p 2751 N93-24858
Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing p 2751 N93-24859
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
Combining spectral information with crop rotation knowledge for crop classifications p 2752 N93-24861
Atmospheric correction of Landsat/TM data over mountainous terrain for forestry applications p 2752 N93-24862
Standwise forest inventory and mapping for operational management planning p 2752 N93-24863
Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864
Scale dependence in the reflectance of deciduous woodland: Evidence from a helicopter-mounted spectroradiometer p 2752 N93-24865
Operational use of MOMS-02 (P2) data p 2752 N93-24866
Influence due to antenna pattern change in brightness temperature estimation for a space-based microwave radiometer p 2753 N93-24868
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
EUROSTARS: A system for thematic analysis of remote sensed data p 2753 N93-24871
Earthquake vulnerability map of the Lake Constance area p 2753 N93-24872
Current trends in satellite data supply for environmental monitoring p 2754 N93-24874
The Global Ocean Observing System p 2733 N93-24923
The use of remotely sensed data for operational fisheries oceanography p 2734 N93-24927
Feasibility study of a long duration balloon flight with NASA/GSFC and Soviet Space Agency Gamma Ray Spectrometers
| NASA-CR-192934 | p 2573 N93-25077
Application of optical remote sensing to the study of surface fluxes related to cloud formation
| DE93-003783 | p 2781 N93-25125
An expert system shell for inferring vegetation characteristics: Inrerface for the addition of techniques (Task H)
| NASA-CR-192897 | p 2754 N93-25154
CEOS Committee on Earth Observations Satellites consolidated report, 1992
| NASA-TM-108776 | p 2615 N93-25217
Cloud properties as inferred from HIRS/2 multi-spectral data p 2782 N93-25293
Former Soviet Republic capabilities in space and science
| DE93-007613 | p 2598 N93-25322
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-020 | p 2793 N93-25406
Passive microwave remote sensing of snow-covered floating ice during spring conditions in the Arctic and Antarctic
| ISBN-0-315-70444-6 | p 2754 N93-25422
Integrating satellite imagery and digital elevation data for geobotanical mapping in Quetico Provincial Park, Ontario, Canada p 2754 N93-25430
Multi-temporal satellite image analysis for crop inventories in the Po River Valley (Italy) p 2755 N93-25434
Commercial applications multispectral sensor system p 2758 N93-25615
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634
Remote sensing of precipitation and electrification with a dual-polarization, coherent, wideband radar system
| AD-A260779 | p 2756 N93-25679
Detecting the scale and resolution effects in remote sensing and GIS p 2756 N93-25707
Geographic information system for fusion and analysis of high-resolution remote sensing and ground truth data p 2878 N93-25798
System of Experts for Intelligent Data Management (SEIDAM) p 2879 N93-25800
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
The probabilistic neural network architecture for high speed classification of remotely sensed imagery p 2824 N93-25972
Image analysis by integration of disparate information p 2824 N93-25973
Method and apparatus for deflection measurements using eddy current effects
| NASA-CASE-GSC-13506-1 | p 2710 N93-26103
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283
Coastal ocean processes: A science prospectus
| AD-A261702 | p 2790 N93-26384
Bibliography of remote sensing techniques used in wetland research
| AD-A261704 | p 2757 N93-26440
Radar sensing of petroleum seepage gases
| AD-A261431 | p 2682 N93-26455

REMOTE SENSORS
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
The constant current loop: A new paradigm for resistance signal conditioning
| NASA-TM-108744 | p 2673 N93-25181
Handbook of actuators and edge alignment sensors
| NASA-CR-193203 | p 2620 N93-25317

Rain rate instrument for deployment at sea, phase 2
| NASA-CR-192442 | p 2786 N93-26156

REMOTELY PILOTED VEHICLES
A mission concept for near term Lunar exploration
| DE93-007598 | p 2896 N93-25321

RENDEZVOUS SPACECRAFT
Optimal cooperative power-limited rendezvous
p 2607 N93-24904

REPLACING
AEW aircraft design
| AD-A261800 | p 2590 N93-26444

REPORTS
NASA Microgravity Science and Applications Program
| NASA-TM-108775 | p 2663 N93-25194
AFOSR technical report summaries
| AD-A261551 | p 2918 N93-26380

REQUIREMENTS
The SE role in establishing, verifying and controlling top-level program requirements p 2666 N93-24685
Optimization in the systems engineering process
p 2666 N93-24691
GPS standardization for the needs of time transfer
p 2836 N93-25016
Languages for requirements specifications
| RSRE-MEMO-4585 | p 2810 N93-25453
Determination of burn rate requirements from ASRM performance specifications p 2627 N93-26023
Distributed project scheduling at NASA: Requirements for manual protocols and computer-based support
p 2815 N93-26075
Advanced Launch System (ALS) test requirements
| MCR-91-5004 | p 2610 N93-26181

RESEARCH AND DEVELOPMENT
Remote sensing applied to agriculture state of the art and new trends p 2745 N93-24818
Viewgraph description of Penn State's Propulsion Engineering Research Center: Activity highlights and future plans
| NASA-CR-192317 | p 2622 N93-24943
R and D of transmission lines for ECH system
| NIFS-210 | p 2687 N93-24951
Technology Transfer 92/93
| DE93-003623 | p 2887 N93-24965
The development progresses of hydrogen masers at Shanghai Observatory p 2716 N93-25048
Current research activities: Applied and numerical mathematics, fluid mechanics, experiments in transition and turbulence and aerodynamics, and computer science
| NASA-CR-191408 | p 2803 N93-25084
Applied aerodynamics: Challenges and expectations
| NASA-TM-103963 | p 2575 N93-25091
Advanced energy systems and technologies - National R and D programme
| DE93-769943 | p 2758 N93-25097
JSC research and technology

CRRES: Combined release and radiation effects satellite program summary
| NASA-CR-192469 | p 2774 N93-25886

RESIDUAL STRESS
Internal stresses and the cyclic deformation of an aluminum matrix composite p 2650 N93-25436
A three-dimensional model for the residual stresses in a unidirectional composite plate p 2728 N93-25825
Experimental studies of stress management by optical fluorescence
| AD-A261539 | p 2730 N93-26362
Failure considerations in composite systems based on 3D micromechanical stress fields, part A
| AD-A261698 | p 2641 N93-26382

RESIN MATRIX COMPOSITES
Inelastic behavior of thermoplastic composites
p 2636 N93-25674
Damage and failure analysis on continuous fiber-reinforced polymer composites
p 2637 N93-25716

RESINS
Improved composite fabrication process
| AD-D015679 | p 2640 N93-26145
Effects of moisture and other contaminants in friction composites
| AD-A261226 | p 2640 N93-26301

RESISTOJET ENGINES
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758

RESISTORS
Investigation into the common mode rejection ratio of the physiological signal conditioner circuit
p 2794 N93-26073

RESONANCE
Pressure dependence of conductivity
| DE93-008466 | p 2687 N93-25113
Nonlinear wave phenomena related to interactions in the ionosphere
| AD-A261450 | p 2776 N93-26348
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
| DE93-007815 | p 2793 N93-26587

RESONANCE SCATTERING
Resonance electron scattering by O2 monolayers on graphites: Reinterpreted
| AD-A261851 | p 2850 N93-26287

RESONANT FREQUENCIES
The measurement of the resonant frequency of quartz crystal units: An ongoing saga p 2833 N93-24996
Surface Transverse Wave (STW) quartz resonators in the GHz range p 2836 N93-25012
Dedicated oscillator for immersed crystal sensor
p 2837 N93-25020
Trapped energy quartz crystal resonator on wedge-shaped plate p 2837 N93-25022
Stability of nonlinear phase motion from the study of oscillator mappings p 2693 N93-25034
Controlling an optical frequency by a single ion
p 2841 N93-25051
Identification and control of lightly damped, large space structures: An experimental evaluation
p 2616 N93-25351
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834

RESONANT TUNNELING
Resonant tunneling through chemisorbed halogen atoms on Ag(111)
| AD-A261794 | p 2868 N93-26254

RESONATORS
Microwave frequency discriminator with a cryogenic sapphire resonator for ultra-low phase noise
p 2693 N93-24982
Miniature optically-pumped cesium beam resonator
p 2833 N93-24990
Actual limits of fluorescence S/N ratio in an optically-pumped cesium beam resonator
p 2833 N93-24991
Long term drift and gamma-irradiation effect
p 2833 N93-24992
Weak magnetic field sensitivity of quartz crystal oscillators p 2833 N93-24993
Synchrotron radiation X ray topography study of lateral field resonators p 2833 N93-24994
Design of a low phase noise UHF oscillator using a partly metallized dielectric resonator p 2693 N93-25003
Surface Transverse Wave (STW) quartz resonators in the GHz range p 2836 N93-25012
Comparison of energy trapping resonators and filters using the AT cut of quartz, berlinite and gallium phosphate p 2836 N93-25013
Dedicated oscillator for immersed crystal sensor
p 2837 N93-25020
Controlled dissolution of a piezoelectric material berlinite (AlPO4) p 2840 N93-25043
Oscillators for mobile GPS receivers
p 2694 N93-25055
Microwave interrogation frequency noise and clock frequency stability: Experimental results
p 2842 N93-25056
Line inhomogeneity effects and power shift in miniaturized rubidium frequency standards
p 2694 N93-25066

RESOURCE ALLOCATION
Estimating spares requirements for Space Station Freedom using the M-SPARE model
| AD-A260878 | p 2617 N93-25630

RESOURCES MANAGEMENT
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
| ESA-ISY-1-VOL-2 | p 2737 N93-24775
Sustainable remote sensing: A major improvement for realtime resource management and disaster early warning in developing countries p 2743 N93-24808
Use of remote sensing spacecrafts in real time support to disaster management: Interfaces with ground segment facilities and services p 2743 N93-24809
Remote sensing in hydrology and water management
p 2744 N93-24816
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
| DE93-002943 | p 2760 N93-24955

Aerial photographic sampling for statewide resource inventory p 2755 N93-25441
Department of Energy: Better information resources management needed to accomplish missions. Report to the Secretary of Energy
| GAO/IMTEC-92-53 | p 2882 N93-26096

RESPIRATION
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629

RESPIRATORY SYSTEM
The acute inhalation toxicity of pyrolysis products of halon 1301
| AD-A260874 | p 2795 N93-25629

RETINA
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-025 | p 2793 N93-25405
Receptoral and neural aliasing
| AD-A261438 | p 2799 N93-26489

REVERBERATION
The design of a modular sound absorber for very low frequencies
| BBC-RD-1992/10 | p 2673 N93-25170
A modular wideband sound absorber
| BBC-RD-1992/11 | p 2673 N93-25171

RHENIUM
Fundamental aspects of metal joining: The study of strong interfaces
| AD-A261293 | p 2653 N93-26304

RHEOLOGY
Dynamic test apparatus for electro-rheological fluids
| AD-D015632 | p 2643 N93-25284
Rheology of YBa2Cu3O(7-x) precursors
| DE93-007285 | p 2863 N93-25362
Crustal deformation studies in subaerial parts of the world oceanic rift system: Iceland and Afar p 2789 N93-25558

RIBLETS
An experimental study of passive drag reduction in a turbulent boundary layer by a riblet surface p 2705 N93-25746
Flow control of low heat load turbine airfoils
| AD-A260941 | p 2595 N93-26219

RIGID STRUCTURES
Position and force control of a vehicle with two or more steerable drive wheels
| DE92-041301 | p 2717 N93-25100
Nonholonomic geometry, mechanics and control p 2724 N93-25270
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
Mullite whiskers and mullite-whisker felt p 2642 N93-25586
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438

RING LASERS
An active solid state ring laser gyroscope p 2709 N93-25291
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389
Applications of inertial-sensor high-inheritance instruments to DSN precision antenna pointing p 2621 N93-26112

RING STRUCTURES
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671

RISK
An introductory guide to uncertainty analysis in environmental and health risk assessment
| DE93-002873 | p 2760 N93-24676
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map p 2743 N93-24807
A prototype system for forest fire prevention and control p 2749 N93-24844
A procedure for defining lightning risk to air vehicles p 2583 N93-24885
Environmental risks and future generations: Criteria for public policy
| DE93-004691 | p 2764 N93-25443
The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595
On the estimation of risk associated with an attenuation prediction p 2683 N93-26469

RIVERS
Use of remote sensing and GIS for the environmental planning proposal of the Sarno River Valley (Campania, southern Italy) p 2741 N93-24797
Interactive forecasting with the National Weather Service River Forecast System p 2788 N93-25616
Inorganic nitrogen and phosphorus dynamics in the water column of the Patuxent River
| PB93-172955 | p 2767 N93-26511

ROASTING
Production of ultrafine, high-purity ceramic powders using the US Bureau of Mines developed turbomill p 2659 N93-25585

ROBOT ARMS
A control structure for fault-tolerant operation of robotic manipulators
| DE93-005783 | p 2717 N93-25413
Parametric motion control of robotic arms: A biologically based approach using neural networks p 2822 N93-25964
Interaction dynamics and control for orbital assembly p 2669 N93-26407
Controls for orbital assembly of large space structures p 2620 N93-26408

ROBOT CONTROL
Using fuzzy behaviors for the outdoor navigation of a car with low-resolution sensors
| DE93-002428 | p 2584 N93-25120
A control structure for fault-tolerant operation of robotic manipulators
| DE93-005783 | p 2717 N93-25413
Numerical kinematic transformation calculations for a parallel link manipulator
| DE93-005778 | p 2718 N93-25449
Real-time construction and rendering of three-dimensional occupancy maps
| DE93-007818 | p 2756 N93-25516
Robotic Variable Polarity Plasma Arc (VPPA) welding p 2720 N93-25605
Biped control via nonlinear dynamics p 2718 N93-25697
Passivity motivated controller design for flexible structures
| AD-A261122 | p 2719 N93-25771
Parametric motion control of robotic arms: A biologically based approach using neural networks p 2822 N93-25964
Interaction dynamics and control for orbital assembly p 2669 N93-26407
Controls for orbital assembly of large space structures p 2620 N93-26408
Reinforcement learning for robots using neural networks
| AD-A261434 | p 2827 N93-26487

ROBOT DYNAMICS
Biped control via nonlinear dynamics p 2718 N93-25697
The induction of elastic fine motion in robotic grasps p 2718 N93-25727
A surface integral algorithm for the motion planning of nonholonomic mechanical systems
| AD-A261746 | p 2720 N93-26249

ROBOT SENSORS
Using fuzzy behaviors for the outdoor navigation of a car with low-resolution sensors
| DE93-002428 | p 2584 N93-25120

ROBOTICS
Probabilistic analysis of manipulation tasks: A research agenda
| DE93-000713 | p 2827 N93-25103
Nonholonomic geometry, mechanics and control p 2724 N93-25270
Prototype PC user interface
| DE93-008008 | p 2809 N93-25303
A control structure for fault-tolerant operation of robotic manipulators
| DE93-005783 | p 2717 N93-25413
Numerical kinematic transformation calculations for a parallel link manipulator
| DE93-005778 | p 2718 N93-25449
Robotic Variable Polarity Plasma Arc (VPPA) welding p 2720 N93-25605
A virtual environment for manufacturing systems
| AD-A260813 | p 2810 N93-25699
Analysis and design of a novel robotic finger-tip sensor for adaptive grasping p 2719 N93-25745
Passivity motivated controller design for flexible structures
| AD-A261122 | p 2719 N93-25771
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834
Knowledge-based control for robot self-localization p 2822 N93-25963
An autonomous satellite architecture integrating deliberative reasoning and behavioural intelligence p 2823 N93-25970
NASA Center for Intelligent Robotic Systems for Space Exploration
| NASA-CR-193208 | p 2826 N93-25986
Architecture of autonomous systems
| NASA-CR-192974 | p 2801 N93-26047
A vision architecture for the extravehicular activity retriever p 2827 N93-26071
Automation and robotics human performance
| NASA-CR-193049 | p 2802 N93-26153
Digital filter control of remotely operated flexible robotic structures
| DE93-007587 | p 2827 N93-26596

ROBOTS
Using neural networks and Dyna algorithm for integrated planning, reacting and learning in systems
| NASA-CR-193018 | p 2817 N93-24743
Initial experiments with a myoelectric-based muscle sensor
| DE92-016034 | p 2799 N93-25099
Position and force control of a vehicle with two or more steerable drive wheels
| DE92-041301 | p 2717 N93-25100
Probabilistic analysis of manipulation tasks: A research agenda
| DE93-000713 | p 2827 N93-25103
Real-time construction of three-dimensional occupancy maps
| DE93-001645 | p 2756 N93-25505
Robotic Variable Polarity Plasma Arc (VPPA) welding p 2720 N93-25605
An optimal scheduling of pick-place operations of a robot-vision-tracking system by using neural networks and rule-based systems p 2821 N93-25880
Knowledge-based control for robot self-localization p 2822 N93-25963
Parametric motion control of robotic arms: A biologically based approach using neural networks p 2822 N93-25964
Telerobotic rovers for extraterrestrial construction p 2670 N93-26416
Digital filter control of remotely operated flexible robotic structures
| DE93-007587 | p 2827 N93-26596

ROBUSTNESS (MATHEMATICS)
Robust controls with structured perturbations
| NASA-CR-192956 | p 2817 N93-24757
On the robustness of Herlihy's hierarchy
| NASA-CR-193002 | p 2808 N93-25107
How to control if even experts are not sure: Robust fuzzy control
| NASA-TM-108745 | p 2818 N93-25142
Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199
Parametric stability margin for multilinear interval control systems
| NASA-CR-192892 | p 2819 N93-25296
The WorkPlace distributed processing environment p 2825 N93-25977
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs p 2670 N93-26063
Develop margin philosophy to attain robustness
| MCR-92-5005 | p 2610 N93-26182

ROCKET ENGINE CONTROL
A neural network-based estimator for the mixture ratio of the Space Shuttle Main Engine
| NASA-TM-106070 | p 2622 N93-25089

ROCKET ENGINE DESIGN
Nuclear thermal propulsion technology: Results of an interagency panel in FY 1991
| NASA-TM-105711 | p 2621 N93-24740
Liquid Rocket Booster (LRB) for the Space Transportation System (STS) Systems Study. Amendment 13: Orientation meeting
| NASA-CR-192515 | p 2614 N93-26152

ROCKET ENGINES
Measurement of droplet vaporization rate enhancement caused by acoustic disturbances p 2626 N93-26015
Development and use of hydrogen-air torches in an altitude facility
| NASA-TM-106047 | p 2598 N93-26214

ROCKET EXHAUST
Generic hypersonic vehicle performance model
| NASA-CR-192953 | p 2587 N93-25162
An experimental study of under-expanded jets p 2577 N93-25467
Pulsed laser Rayleigh scattering diagnostic for hydrogen/oxygen rocket exit plane flowfield velocimetry
| NASA-TM-106098 | p 2631 N93-26149
Application of the Saha equation to high temperature (greater than or equal to) rocket exhaust
| AD-A261648 | p 2632 N93-26174
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367

Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373

ROCKET NOZZLES
Remtech SSME nozzle design TPS
| NASA-CR-192516 | p 2631 N93-26056

ROCKET OXIDIZERS
A neural network-based estimator for the mixture ratio of the Space Shuttle Main Engine
| NASA-TM-106070 | p 2622 N93-25089

ROCKET PROPELLANTS
Near Earth object fuels (neo-fuels): Discovery, prospecting and use
| DE93-005185 | p 2892 N93-25164
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
| AD-A261116 | p 2660 N93-25769
Application of the Saha equation to high temperature (greater than or equal to) rocket exhaust
| AD-A261648 | p 2632 N93-26174

ROCKY MOUNTAINS (NORTH AMERICA)
Pressure torques and circulation changes in Rocky Mountain lee cyclones p 2783 N93-25724

RODS
Comparative performance of lightning air terminals under natural storm conditions p 2781 N93-24902
Design of flexible rods with embedded SMA actuators
| AD-A260742 | p 2729 N93-25846
Variational theory of motion of curved, twisted and extensible elastic rods
| AD-A261028 | p 2729 N93-25941
Deformations of active flexible rods with embedded line actuators
| AD-A261207 | p 2729 N93-25950

ROLL
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134

ROLLER BEARINGS
Detection of bearing failure in mechanical devices using neural networks p 2822 N93-25965

ROOM TEMPERATURE
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519
A high performance room-temperature near-infrared camera
| AD-A260602 | p 2709 N93-25634

ROOMS
Low-frequency room responses. Part 1: Background and qualitative considerations
| BBC-RD-1992/8-PT-1 | p 2673 N93-25168
Low-frequency room responses. Part 2: Calculation methods and experimental results
| BBC-RD-1992/9-PT-2 | p 2673 N93-25169

ROSAT MISSION
ROSAT investigation of flaring and activity on Prox Cen
| NASA-CR-192972 | p 2891 N93-26139

ROSIN
Aqueous cleaning of flux residue from solder joints
| KCP-613-4803 | p 2652 N93-26208

ROTARY WING AIRCRAFT
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation p 2574 N93-24756
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701
Image-based ranging and guidance for rotorcraft
| NASA-CR-177608 | p 2586 N93-26549

ROTARY WINGS
An aeroelastic model structure investigation for a manned real-time rotorcraft simulation p 2574 N93-24756
Rotor design optimization using a free wake analysis
| NASA-CR-177612 | p 2575 N93-25075
Application of finite-state inflow to flap-lag-torsion damping in hover p 2587 N93-25486
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
An integrated finite-state model for rotor deformation, nonlinear airloads, inflow, and trim p 2588 N93-25538
Structural dynamic analysis of bearingless rotor blade p 2590 N93-25719
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198
Helicopter forced response vibration analysis method RTVIB20
| AD-A261809 | p 2597 N93-26260

ROTATING BODIES
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356

ROTATING DISKS
Flow between finite rotating disks and its linear stability p 2705 N93-25747

ROTATING FLUIDS
Heat transfer in rotating serpentine passages with selected model orientation for smooth or skewed trip walls
| NASA-TM-106126 | p 2667 N93-25177

ROTATING STALLS
Active stabilization of aeromechanical systems
| AD-A261366 | p 2595 N93-26335

ROTATION
Turbine turbobrake systems p 2717 N93-25268
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
Variational theory of motion of curved, twisted and extensible elastic rods
| AD-A261028 | p 2729 N93-25941
Rotating rake design for unique measurement of fan-generated spinning acoustic modes
| NASA-TM-105946 | p 2595 N93-26161

ROTOR AERODYNAMICS
Rotor design optimization using a free wake analysis
| NASA-CR-177612 | p 2575 N93-25075
Far field rotor noise
| AD-A260703 | p 2845 N93-25651
Flow control of low heat load turbine airfoils
| AD-A260941 | p 2595 N93-26219
The blade curving effects in a turbine stator cascade with low aspect ratio
| AD-A261063 | p 2595 N93-26239

ROTOR BODY INTERACTIONS
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530

ROTOR DYNAMICS
Application of finite-state inflow to flap-lag-torsion damping in hover p 2587 N93-25486

ROTORS
Variable-speed generators with flux weakening p 2694 N93-25599
Far field rotor noise
| AD-A260703 | p 2845 N93-25651
Radial inflow turbine study
| AD-A260767 | p 2594 N93-25917
Helicopter forced response vibration analysis method RTVIB20
| AD-A261809 | p 2597 N93-26260

RUBBER
Elastomer compound developed for high wear applications p 2659 N93-25607
Dynamic hardness tester and cure meter p 2711 N93-25608

RUBIDIUM
Rubidium atomic frequency standards for GPS block 2R p 2836 N93-25014
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026
Use of the TV-signal in stabilizing a local rubidium oscillator p 2693 N93-25029
Experiments on a diode-laser-pumped Rb-87 maser p 2716 N93-25030
High resolution digital synthesizer for a Rb frequency standard p 2694 N93-25057
Line inhomogeneity effects and power shift in miniaturized rubidium frequency standards p 2694 N93-25066
Fundamental characteristics of a laser-diode-pumped rubidium maser with an external feedback loop p 2716 N93-25068

RUN TIME (COMPUTERS)
Set based program analysis
| AD-A260979 | p 2806 N93-25841

RUNWAYS
ILS mathematical modeling study of an ILS glide slope proposed for runway 19L at the Meridian Naval Air Station, Mississippi
| DOT/FAA/CT-TN93/8 | p 2584 N93-24741
Runway Visual Range (RVR) Operational Test and Evaluation (OT&E) integration and OT&E operational test report
| DOT/FAA/CT-TN93/37 | p 2584 N93-25243
The dependent converging instrument approach procedure: An analysis of its safety and applicability
| DOE/FAA/RD-93/6 | p 2585 N93-25456
Expedient repair of structural facilities
| AD-A260727 | p 2598 N93-25656

RUTILE
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204

S

SAFETY
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
Improved performance and safety for high energy batteries through use of hazard anticipation and capacity prediction p 2694 N93-25582
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
| AD-A261116 | p 2660 N93-25769
Development of a concept for a national construction industry health and safety data base
| PB93-159325 | p 2884 N93-26568

SAFETY DEVICES
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Launch pad lightning protection enhancement by induced streamers p 2609 N93-24876
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
Zoning of aircraft: A review of the definitions p 2583 N93-24880
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Comparison of the damage for various types of fibre reinforced composites due to different lightning test standards (MIL-STD-1757A, German military VG-standard 96903) p 2642 N93-24891
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900

SAFETY FACTORS
The dependent converging instrument approach procedure: An analysis of its safety and applicability
| DOE/FAA/RD-93/6 | p 2585 N93-25456

SAGNAC EFFECT
Prospects of two-way international time scale comparisons p 2832 N93-24988

SAHA EQUATIONS
Application of the Saha equation to high temperature (greater than or equal to) rocket exhaust
| AD-A261648 | p 2632 N93-26174

SALINITY
Global Temperature and Salinity Pilot Project p 2733 N93-24924
Wrap-up session p 2737 N93-24940

SALT BEDS
Remote sensing of coastal zone Sabkha deposits, Gulf of Sirt, Libya p 2746 N93-24827

SAMPLED DATA SYSTEMS
Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system
| AD-A260793 | p 2599 N93-25693

SAMPLING
Indian Ocean analyses p 2733 N93-24925
Automated in situ observations of upper ocean biogeochemistry, bio-optics, and physics and their potential use for global studies p 2736 N93-24939
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289

SAND CASTING
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526

SANDS
Energy dissipation in inelastic flow of cohesionless granular media p 2703 N93-25662

SANDWICH STRUCTURES
Low-velocity impact of composite sandwich plate p 2637 N93-25695

SAPPHIRE
Microwave frequency discriminator with a cryogenic sapphire resonator for ultra-low phase noise p 2693 N93-24982

SATELLITE ALTIMETRY
Satellite altimetry p 2734 N93-24930
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389

SATELLITE ATMOSPHERES
Residual mean meridional circulation in titan's middle atmosphere
| PB93-162931 | p 2898 N93-26571

SATELLITE ATTITUDE CONTROL
Flight Mechanics/Estimation Theory Symposium, 1992 | NASA-CP-3186 | p 2599 N93-24694
Spacecraft detumbling through energy dissipation p 2600 N93-24696
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory p 2600 N93-24697
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
Real-time attitude determination and gyro calibration p 2602 N93-24708
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Improvements in ERBS attitude determination without gyros p 2602 N93-24710
Rate determination from vector observations p 2603 N93-24713
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Attitude control of the LACE satellite: A gravity gradient stabilized spacecraft p 2605 N93-24727
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Upper Atmosphere Research Satellite (UARS) attitude accuracy using coarse attitude sensors p 2607 N93-24735

SATELLITE COMMUNICATION
Federal Communications Commission (FCC) Transponder Loading Data Conversion Software. User's guide and software maintenance manual, version 1.2 | NASA-CR-191067 | p 2808 N93-24947
Prospects of two-way international time scale comparisons p 2832 N93-24988
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications | NASA-CR-192715 | p 2673 N93-25198
An introduction to Doppler effect and fading in mobile communications | AD-A260976 | p 2676 N93-25866
Anomalous event diagnosis for environmental satellite systems p 2619 N93-25971
Trellis coded CPFSK | AD-A261788 | p 2682 N93-26441
Opening remarks p 2682 N93-26464
Large scale rainfall diversity and satellite propagation p 2683 N93-26466
ETS-5, ETS-6, and COMETS projects in Japan p 2683 N93-26470
Satellite communications application to Pacific countries above Ku band p 2683 N93-26471
Allocations by the 1992 World Administrative Radio Conference p 2684 N93-26476
ESA's planning and coordination of the OLYMPUS propagation experiment p 2684 N93-26477
Observations on the NASA Propagation Program p 2685 N93-26482
ACTS propagation terminal update p 2685 N93-26484
Rain compensation algorithm using adaptive linear prediction p 2685 N93-26485

SATELLITE CONTROL
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems p 2814 N93-25589

SATELLITE DESIGN
Aspects of the design of a satellite borne infra-red radiometer p 2620 N93-25474

SATELLITE DOPPLER POSITIONING
Precise Doppler tracking from the Medicina VLBI station p 2608 N93-24998

SATELLITE IMAGERY
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
Agroclimatological zonation by AVHRR data for vegetation monitoring p 2741 N93-24795
Remote sensing geology p 2744 N93-24815
Potential operational use of remote sensing from space in forestry p 2745 N93-24817
Application of satellite imageries data to fisheries in Japan p 2745 N93-24822
Remote sensing of coastal zone Sabkha deposits, Gulf of Sirt, Libya p 2746 N93-24827
Remote sensing monitoring and hindcasting of the accident occurred to the tanker Haven in the Gulf of Genoa (Italy) p 2747 N93-24830
Evaluation of nearshore suspended sediment concentration through Landsat TM data: First results p 2747 N93-24833
Interpretation and segmentation of changed forest stands from difference imagery based on regression functions p 2748 N93-24839
Tropical forest monitoring with high resolution satellite data p 2748 N93-24841
Assessment of storm damage in forests using SPOT imagery p 2748 N93-24842
A prototype system for forest fire prevention and control p 2749 N93-24844
Toward a satellite based crop information system in Hungary p 2750 N93-24849
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856
Standwise forest inventory and mapping for operational management planning p 2752 N93-24863
EUROSTARS: A system for thematic analysis of remote sensed data p 2753 N93-24871
Earthquake vulnerability map of the Lake Constance area p 2753 N93-24872
The use of remotely sensed data for operational fisheries oceanography p 2734 N93-24927
Applications of wavelet-based compression to multidimensional earth science data | DE93-007348 | p 2762 N93-25166
Integrating satellite imagery and digital elevation data for geobotanical mapping in Quetico Provincial Park, Ontario, Canada p 2754 N93-25430
Multi-temporal satellite image analysis for crop inventories in the Po River Valley (Italy) p 2755 N93-25434
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment | AD-A260889 | p 2783 N93-25633
Detecting the scale and resolution effects in remote sensing and GIS p 2756 N93-25707
A land-surface testbed for EOSDIS p 2878 N93-25797
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea | AD-A261205 | p 2757 N93-25868
United States Army space experiment 601 | AD-A261460 | p 2798 N93-26353

SATELLITE INSTRUMENTS
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Rate determination from vector observations p 2603 N93-24713
DORIS precise orbit determination and location system performances of ultra stable oscillators p 2608 N93-24997
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
CEOS Committee on Earth Observations Satellites consolidated report, 1992 | NASA-TM-108776 | p 2615 N93-25217
Lageos laser ranging earth rotation | AD-A261471 | p 2757 N93-26354

SATELLITE NAVIGATION SYSTEMS
Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
Mixed constellation synchronization of GPS time p 2836 N93-25015
Comparison of GLONASS and GPS time transfers p 2836 N93-25017
An experimental health monitoring unit for GPS and GLONASS p 2586 N93-25018
Collaboration in the UK on time transfer using the GLONASS system p 2837 N93-25019
First experience with the ASN-16 GLONASS receiver p 2693 N93-25033

SATELLITE NETWORKS
Mixed constellation synchronization of GPS time p 2836 N93-25015

SATELLITE OBSERVATION
WCRP surface radiation budget shortwave data product description, version 1.1 | NASA-TM-107747 | p 2777 N93-24742
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management | ESA-ISY-1-VOL-2 | p 2737 N93-24775
Satellite remote sensing for environmental geology: The Bandung (West Java) experience p 2739 N93-24784
The regional planning and control using the satellite data p 2740 N93-24788
Land cover monitoring in the Netherlands applying satellite remote sensing p 2740 N93-24789
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
Aerospace techniques in radiation and ecological monitoring of the Republic Belarus p 2741 N93-24793
Alternative strategies for the use of satellite data analysis systems for hazard monitoring and disaster mitigation p 2743 N93-24805
Satellite borne remote sensing data: A tool for natural disaster reduction p 2743 N93-24806
Sustainable remote sensing: A major improvement for realtime resource management and disaster early warning in developing countries p 2743 N93-24808
Use of remote sensing spacecrafts in real time support to disaster management: Interfaces with ground segment facilities and services p 2743 N93-24809
Potential operational use of remote sensing from space in forestry p 2745 N93-24817
Remote sensing applied to agriculture state of the art and new trends p 2745 N93-24818
Applications of remote sensing for tidal waters, coastal areas and inland waters p 2745 N93-24819
European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820
Supporting the Portuguese fisheries with satellites p 2745 N93-24821
Oil pollution and water quality mapping of Augusta Bay, Italy using remote sensing techniques p 2746 N93-24823
SEOMAR: An Italian approach to the observation of the Mediterranean area p 2746 N93-24825
Algal blooms and gel production in Adriatic Sea observed by remote sensing techniques p 2747 N93-24831
World Forest Watch: A global forest monitoring test p 2748 N93-24836
Biodiversity indication by Earth observation data p 2751 N93-24858
Current trends in satellite data supply for environmental monitoring p 2754 N93-24874
The Global Ocean Observing System p 2733 N93-24923
Satellite monitoring of the global ocean surface during 1987-1989 p 2734 N93-24926
The use of remotely sensed data for operational fisheries oceanography p 2734 N93-24927
Satellite altimetry p 2734 N93-24930
Data management for JGOFS: Theory and design p 2735 N93-24935
Automated in situ observations of upper ocean biogeochemistry, bio-optics, and physics and their potential use for global studies p 2736 N93-24939
CEOS Committee on Earth Observations Satellites consolidated report, 1992 | NASA-TM-108776 | p 2615 N93-25217
JPRS report: Science and technology. Central Eurasia: Life sciences | JPRS-ULS-92-020 | p 2793 N93-25406
A high performance room-temperature near-infrared camera | AD-A260602 | p 2709 N93-25634
Tropical cyclone/upper-atmospheric interaction as inferred from satellite total ozone observations p 2784 N93-25741
Data fusion with artificial neural networks (ANN) for classification of earth surface from microwave satellite measurements p 2824 N93-25974

SATELLITE ORBITS
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
Generalized probability model for calculation of interference to the Deep Space Network due to circularly Earth-orbiting satellites p 2679 N93-26127

SATELLITE ORIENTATION
Space Station Freedom assembly and operation at a 51.6 degree inclination orbit | NASA-TM-107731 | p 2615 N93-25174

SATELLITE PERTURBATION
Mars: The dynamics of orbiting satellites and gravity model development p 2896 N93-25439

SATELLITE POWER TRANSMISSION
Laser beamed power: Satellite demonstration applications
| NASA-CR-190793 | p 2623 N93-25132
SATELLITE SOUNDING
The pressure modulation system in the Improved Stratospheric and Mesospheric Sounder
p 2773 N93-25739
SATELLITE TRACKING
TDRSS orbit determination using short baseline differenced carrier phase p 2601 N93-24701
The advances in F and T technology: Their benefits of and for space science and technology
p 2831 N93-24979
Precise Doppler tracking from the Medicina VLBI station p 2608 N93-24998
Synchronisation, acquisition and tracking for telemetry and data reception p 2614 N93-25000
SATELLITE TRANSMISSION
Large scale rainfall diversity and satellite propagation
p 2683 N93-26466
OLYMPUS/ACTS scintillation experiment at the Lewis Research Center p 2685 N93-26481
SATELLITE-BORNE INSTRUMENTS
SEOMAR: An Italian approach to the observation of the Mediterranean area p 2746 N93-24825
Commercial applications multispectral sensor system
p 2758 N93-25615
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution
| NASA-CR-192832 | p 2775 N93-26084
SATELLITE-BORNE PHOTOGRAPHY
Application of photographic remote sensing data from space for information about forests
p 2748 N93-24838
SATURN 5 LAUNCH VEHICLES
The initial flight anomalies of Skylab 1
p 2619 N93-24692
SCALARS
Scalar gain interpretation of large order filters
p 2606 N93-24729
Measurements of scalar power spectra in high Schmidt number turbulent jets
| AD-A261542 | p 2707 N93-26379
SCANNERS
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview
p 2680 N93-26128
SCANNING ELECTRON MICROSCOPY
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632
Condensed-phase processes during solid propellant combustion. Part 4: Chemical and microscopic examination of laser-irradiated propellant samples
p 2628 N93-26032
Single electron charging effects in mesoscopic systems
| AD-A261228 | p 2868 N93-26302
SCANNING TUNNELING MICROSCOPY
Prediction of hydrogen entry and permeation in metals and alloys
| AD-A260580 | p 2651 N93-25903
SCATHA SATELLITE
SCATHA mission termination report
p 2605 N93-24725
SCATTERING
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281
Dynamics of gas-surface interactions
| AD-A261402 | p 2646 N93-26402
SCATTERING CROSS SECTIONS
Strangeness production in S + Pb and p + Pb collisions at 200 GeV/c per nucleon nucleon
| DE93-007654 | p 2847 N93-25326
Progress in impulse approach research
| AD-A261728 | p 2850 N93-26281
SCENE ANALYSIS
Scene segmentation of natural images using texture measures and back-propagation
| NASA-TM-104003 | p 2803 N93-25235
Image-based ranging and guidance for rotorcraft
| NASA-CR-177608 | p 2586 N93-26549
SCHEDULES
Management issues in systems engineering
p 2665 N93-24682
The reuse of logistics carriers for the first lunar outpost alternative habitat study p 2671 N93-26083
SCHEDULING
Supercomputer Debugging Workshop 1992
| DE93-007322 | p 2805 N93-25165
Concurrency control in real-time database systems
p 2874 N93-25271
A genetic algorithm tool (splicer) for complex scheduling problems and the Space Station Freedom resupply problem p 2814 N93-25613
An optimal scheduling of pick-place operations of a robot-vision-tracking system by using neural networks and rule-based systems p 2821 N93-25880
Using AI/expert system technology to automate planning and replanning for the HST servicing missions
p 2822 N93-25962
Distributed project scheduling at NASA: Requirements for manual protocols and computer-based support
p 2815 N93-26075
Intelligent, real-time problem solving, phase 3
| AD-A261441 | p 2829 N93-26345
SCHMIDT NUMBER
Measurements of scalar power spectra in high Schmidt number turbulent jets
| AD-A261542 | p 2707 N93-26379
SCHOTTKY DIODES
Ultrafast measurements of 200 gigahertz Schottky photodiodes p 2688 N93-25392
SCHROEDINGER EQUATION
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
SCIENCE
Science, Technology, and Industrial Policy in the Former Soviet Union
| DE93-006528 | p 2887 N93-26499
SCIENTIFIC SATELLITES
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
CRRES: Combined release and radiation effects satellite program summary
| NASA-CR-192469 | p 2774 N93-25886
Bibliography of remote sensing techniques used in wetland research
| AD-A261704 | p 2757 N93-26440
SCINTILLATING FIBERS
Studies of avalanche photodiodes for scintillating fibre tracking readout
| DE93-008370 | p 2689 N93-25491
SCINTILLATION
Laser propagation through turbulence
| AD-A260712 | p 2714 N93-26217
OLYMPUS/ACTS scintillation experiment at the Lewis Research Center p 2685 N93-26481
SCINTILLATION COUNTERS
The sub 60 ps timing resolution using large area silicon avalanche diodes
| DE93-007723 | p 2688 N93-25365
Studies of avalanche photodiodes for scintillating fibre tracking readout
| DE93-008370 | p 2689 N93-25491
SCREWS
The design of mechanically compatible fasteners for human mandible reconstruction p 2796 N93-25569
SEA ICE
Passive microwave remote sensing of snow-covered floating ice during spring conditions in the Arctic and Antarctic
| ISBN-0-315-70444-6 | p 2754 N93-25422
Radar backscatter measurements from Arctic sea ice during the fall freeze-up
| NASA-CR-193100 | p 2790 N93-26050
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
| NASA-CR-191711 | p 2787 N93-26492
SEA LEVEL
Sea level variation p 2734 N93-24929
Satellite altimetry p 2734 N93-24930
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586
SEA SURFACE TEMPERATURE
Satellite monitoring of the global ocean surface during 1987-1989 p 2734 N93-24926
Simulation and prediction of tropical SST with a coupled ocean-atmosphere model p 2789 N93-25469
Relations between blue whiting biomass and satellite derived phytoplankton and temperature in the Norwegian Sea
| AD-A261205 | p 2757 N93-25868
An observational study of the local and remote response of the equatorial Pacific to westerly wind events during the 1991-92 El Nino
| AD-A261777 | p 2787 N93-26286
SEA WATER
Loss of temporal coherence of laser light propagated through simulated coastal waters
| AD-A261303 | p 2715 N93-26296
SEALS (STOPPERS)
Advanced bristle seals for gas turbine engines
| AD-A261296 | p 2720 N93-26564
SEASAT SATELLITES
Report of the Seasat Failure Review Board
p 2619 N93-24693
SEATS
Crashworthiness of composite seats for civil aircraft
p 2582 N93-24773
SECONDARY FLOW
Flow and heat transfer experiments in the turbine airfoil/endwall region p 2704 N93-25725
SECONDARY ION MASS SPECTROMETRY
State-selected studies of atoms and molecules ejected from ion bombarded surfaces
| AD-A261275 | p 2850 N93-26267
SECULAR VARIATIONS
Steady induction effects in geomagnetism. Part 1B: Geomagnetic estimation of steady surficial core motions: A non-linear inverse problem
| NASA-TP-3272-PT-1B | p 2776 N93-26421
SEDIMENTS
Evaluation of nearshore suspended sediment concentration through Landsat TM data: First results
p 2747 N93-24833
SEEPAGE
Radar sensing of petroleum seepage gases
| AD-A261431 | p 2682 N93-26455
SEISMOLOGY
A geological and geophysical information system for Eurasia
| AD-A261789 | p 2883 N93-26442
SEIZURES
Automatic detection of seizures with applications
p 2796 N93-25592
SELECTIVE DISSEMINATION OF INFORMATION
The SWORD multilevel secure DBMS
| RSRE-92005 | p 2811 N93-25942
SELECTIVITY
GPS standardization for the needs of time transfer
p 2836 N93-25016
SELENIDES
Laser Induced Phonons (LIPs) in MBE grown ZnSe
| RSRE-MEMO-4544 | p 2864 N93-25454
SELF CONSISTENT FIELDS
Implementation of cyclic spectral analysis methods
| AD-A261715 | p 2681 N93-26372
SELF LUBRICATING MATERIALS
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
SELF ORGANIZING SYSTEMS
Demonstration for novel self-organization theory by three-dimensional magnetohydrodynamic simulation
| NIFS-212 | p 2859 N93-25227
SELF OSCILLATION
Basic research thermoacoustic heat transport
| AD-A261334 | p 2759 N93-26310
SEMANTICS
Visualizing the semantic content of large text databases using text maps p 2826 N93-25982
Virtually-synchronous communication based on a weak failure suspector
| NASA-CR-193003 | p 2721 N93-26135
Towards a formalism for program generation
| AD-A261689 | p 2812 N93-26368
SEMICONDUCTOR DEVICES
Correlated wavefunction quantum Monte Carlo approach to solids
| DE93-007730 | p 2863 N93-25367
Electric field effects on quantum-confined semiconductor structures p 2865 N93-25703
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774
Experimental and theoretical studies of proximity effect and Coulomb blockade phenomena in Josephson junctions
| AD-A261652 | p 2867 N93-26194
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311
1992 technical digest series volume 16. Conference edition: Summaries of papers presented at the Nonlinear Dynamics in Optical Systems Topical Meeting
| AD-A261915 | p 2857 N93-26544
Transition metal chelate-fulleride compounds: Electrocrystallization of semiconducting (Ru(bpy)s)(C60)2
| AD-A261549 | p 2869 N93-26577
SEMICONDUCTOR JUNCTIONS
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
| DE93-000073 | p 2759 N93-25102

SEMICONDUCTOR LASERS
Noise measurements in single-mode GaAlAs diode lasers p 2716 N93-25067
An active solid state ring laser gyroscope p 2709 N93-25291
Studies of avalanche photodiodes for scintillating fibre tracking readout
| DE93-008370 | p 2689 N93-25491
SEMICONDUCTORS (MATERIALS)
Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project
| NASA-TM-106096 | p 2687 N93-24746
FNAS computational modeling
| NASA-CR-192512 | p 2863 N93-25225
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-93-002 | p 2737 N93-25399
The DX centers in three to five semiconductors under hydrostatic pressure
| DE93-007701 | p 2864 N93-25490
High speed solid state circuit breaker p 2694 N93-25598
Transmission electron microscopy investigation of ion implantation damage in GaAs and other semiconductors p 2865 N93-25715
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
HERO resistant semiconductor bridge igniter p 2627 N93-26024
Gordon Conference on Point Defects, Line Defects and Interfaces in Semiconductors
| AD-A261485 | p 2868 N93-26357
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530
Joint services electronics program
| AD-A261801 | p 2692 N93-26539
Optical characterization of Ga(1-x)In(x)As(y)Sb(1-y)/GaSb alloy and device application
| AD-A261713 | p 2870 N93-26581
SENSITIVITY
Autonomic physiological data associated with simulator discomfort
| NASA-CR-177609 | p 2794 N93-24738
ANOVA method to estimate vegetation indices sensitivity assessing nitrogen fertilizing influence on spectral reflectance coefficients p 2739 N93-24782
Weak magnetic field sensitivity of quartz crystal oscillators p 2833 N93-24993
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009
A computational aerodynamic design optimization method using sensitivity analysis p 2589 N93-25552
Neural networks for atmospheric retrievals p 2824 N93-25975
Thermal radiation in non-metalized solid rocket motors: Effect on burning rate and temperature sensitivity p 2626 N93-26020
Task 5: Architecture sensitivity to STME performance
| MCR-92-5010 | p 2609 N93-26176
Molecular composition, structure, and sensitivity of explosives
| DE93-003850 | p 2662 N93-26493
SENSORIMOTOR PERFORMANCE
Coordinated action in 3-D space
| AD-A261418 | p 2799 N93-26449
SENSORS
Digitization of analog data from in-flight lightning strikes p 2778 N93-24884
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085
Realtime control of multiple sensor systems
| AD-A261037 | p 2680 N93-26226
SENSORY FEEDBACK
Modeling of a full vision system using combined Visual/Haptic search for remote object identification
| AD-A260977 | p 2801 N93-25867
SENSORY PERCEPTION
Biomagnetic localization from transient quasi-static events
| DE93-007328 | p 2794 N93-25186
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347
SEPARATED FLOW
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Computational modelling of 3D flow in complex ducts and passages p 2704 N93-25698
SEPARATORS
Design and synthesis of reactive separation systems
| DE93-008764 | p 2642 N93-25115
Pyroshock: Bibliography
| DE93-007605 | p 2726 N93-25489
SEQUENCING
Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels
| DE93-007815 | p 2793 N93-26587
SEQUENTIAL ANALYSIS
A method for sequential image analysis of hazard areas p 2743 N93-24810
SERIES EXPANSION
Asymptotic derivation of the simplified P(sub N) equations
| DE93-007342 | p 2828 N93-25151
SERVICE LIFE
Elastomer compound developed for high wear applications p 2659 N93-25607
Improved fatigue life for moorings
| PB93-161198 | p 2730 N93-26320
SERVICES
Factors associated with perceptions of productivity and usage of information technology in a service organization p 2875 N93-25421
SERVOMECHANISMS
Dynamic modeling of fluid transmission lines of the DSN 70-meter antennas by using a lumped parameter model p 2678 N93-26119
SERVOMOTORS
Development and testing of the digital control system for the Archytas unmanned air vehicle
| AD-A261656 | p 2597 N93-26196
SETTLING
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740
SEWAGE
Regulatory impact analysis of the Part 503 sewage sludge regulation
| PB93-110625 | p 2768 N93-26567
SEWAGE TREATMENT
Regulatory impact analysis of the Part 503 sewage sludge regulation
| PB93-110625 | p 2768 N93-26567
SH WAVES
Elastic plate mode sensitivities to mass loading applications to gas sensors p 2711 N93-25009
SHADOWGRAPH PHOTOGRAPHY
Generation of acoustic waves by focused infrared neodymium-laser radiation p 2714 N93-25761
SHAFTS (MACHINE ELEMENTS)
Radial spline assembly for antifriction bearings
| NASA-CASE-MFS-28629-1 | p 2719 N93-26001
SHAPE CONTROL
Design of flexible rods with embedded SMA actuators
| AD-A260742 | p 2729 N93-25846
SHAPE MEMORY ALLOYS
Design of flexible rods with embedded SMA actuators
| AD-A260742 | p 2729 N93-25846
Deformations of active flexible rods with embedded line actuators
| AD-A261207 | p 2729 N93-25950
SHAPED CHARGES
Analysis of shaped charge jet penetration experiments with Pen
| UCRL-LR-110773 | p 2730 N93-26177
Algorithms for the analysis of penetration by shaped charge jets
| UCRL-LR-109887 | p 2730 N93-26178
SHAPES
Hypervelocity impact study: The effect of impact angle on crater morphology
| NASA-CR-192711 | p 2724 N93-25260
Topography from shading and stereo p 2879 N93-25803
Thermomechanical response of shape memory composites
| AD-A260828 | p 2639 N93-25919
Deformations of active flexible rods with embedded line actuators
| AD-A261207 | p 2729 N93-25950
SHARP LEADING EDGES
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134
SHEAR FLOW
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow
| DE93-003362 | p 2695 N93-24963
Spatial simulation of transition in wall-bounded shear flows: Active control and effects of surface roughness p 2701 N93-25483
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738
Proceedings of the NUWC Division Newport Seminar Series on Turbulence and its Control
| NUWC-NPT-TM-922089 | p 2707 N93-26328
SHEAR LAYERS
Studies in air/air supersonic mixing layers p 2582 N93-26007
SHEAR PROPERTIES
On the stability of finite plastic deformations
| AD-A261526 | p 2730 N93-26361
European tri-service advanced materials workshop on compressive strength in rigid-rod polymers
| AD-A261517 | p 2658 N93-26576
SHEAR STRAIN
On existence of solutions and duality for a model of non-linear elastic plates with transverse shear deformations p 2726 N93-25437
High strain rate damage development and failure mechanisms in tungsten heavy alloys
| AD-A260856 | p 2651 N93-25788
Shear band formation in a W-Ni-Fe alloy under plate impact
| AD-A260702 | p 2651 N93-25907
SHEAR STRENGTH
Dynamic hardness tester and cure meter p 2711 N93-25608
SHEAR STRESS
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
| AD-A260901 | p 2727 N93-25658
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740
An experimental study of passive drag reduction in a turbulent boundary layer by a riblet surface p 2705 N93-25746
Optimization techniques for contact stress analysis
| AD-A260846 | p 2729 N93-25911
Proceedings of the NUWC Division Newport Seminar Series on Turbulence and its Control
| NUWC-NPT-TM-922089 | p 2707 N93-26328
SHIPS
High-performance visualization applied to computational electromagnetics: Method-of-moments on a silicon graphics workstation
| AD-A260820 | p 2675 N93-25700
SHOCK LAYERS
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
An experimental study of under-expanded jets p 2577 N93-25467
SHOCK SPECTRA
Pyroshock: Bibliography
| DE93-007605 | p 2726 N93-25489
SHOCK TUBES
Ignition and combustion of lunar propellants
| NASA-CR-192814 | p 2659 N93-24745
Shock tube application to the study of compressible turbulent boundary layer with mass injection p 2697 N93-25252
SHOCK WAVE INTERACTION
An experimental study of the sources of fluctuating pressure loads beneath swept shock/boundary-layer interactions
| NASA-CR-192918 | p 2698 N93-25266
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542
Heat transfer measurements in swept shock wave/turbulent boundary-layer interactions p 2704 N93-25705
SHOCK WAVE PROPAGATION
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
SHOCK WAVES
Development and application of computational aerothermodynamics flowfield computer codes
| NASA-CR-192940 | p 2574 N93-24736
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770

Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
Alfven wave transport effects in the time evolution of parallel cosmic-ray modified shocks
| NASA-CR-192932 | p 2899 N93-25161
The modeling of complex continua: Fundamental obstacles and grand challenges
| DE93-006507 | p 2696 N93-25193
Shock tube application to the study of compressible turbulent boundary layer with mass injection
p 2697 N93-25252
Computation of transonic flow over a porous surface projectile p 2577 N93-25409
Pyroshock: Bibliography
| DE93-007605 | p 2726 N93-25489
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets
p 2625 N93-26012

SHORELINES
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586

SHORT WAVE RADIO TRANSMISSION
WARC 92 and some thoughts as to its impact on the NASA propagation program p 2684 N93-26475

SHROUDED PROPELLERS
Rotating rake design for unique measurement of fan-generated spinning acoustic modes
| NASA-TM-105946 | p 2595 N93-26161

SIDELOBE REDUCTION
Frequency diversity sidelobe canceller
| AD-D015647 | p 2674 N93-25332

SIDEREAL TIME
The advances in F and T technology: Their benefits of and for space science and technology
p 2831 N93-24979

SIERRA NEVADA MOUNTAINS (CA)
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874

SIGNAL ANALYSIS
Use of the TV-signal in stabilizing a local rubidium oscillator p 2693 N93-25029
Center for intelligent control systems
| AD-A260995 | p 2821 N93-25853
Recommendations for a Kalman filter to estimate and control freeze and sublime rates of gaseous diffusion plant freezer/sublimer systems
| ORNL/TM-12183 | p 2668 N93-25937

SIGNAL ANALYZERS
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430

SIGNAL DETECTION
Implementation of cyclic spectral analysis methods
| AD-A261715 | p 2681 N93-26372
Geolocation of an electromagnetic emitter using a cyclostationary time difference of arrival technique
| AD-A261781 | p 2686 N93-26603

SIGNAL DETECTORS
Optical fiber for acoustic sensor applications
| AD-A261580 | p 2857 N93-26515

SIGNAL DISTORTION
Symbol signal-to-noise ratio loss in square-wave subcarrier downconversion p 2672 N93-24668

SIGNAL ENCODING
Experiments with the HIVITS HDTV contribution CODED
| BBC-RD-1992/12 | p 2674 N93-25391
Golay and other box codes p 2678 N93-26116

SIGNAL FADING
Propagation at microwave frequencies in the presence of tropospheric stratified layers p 2674 N93-25340
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767
An introduction to Doppler effect and fading in mobile communications
| AD-A260976 | p 2676 N93-25866
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289
L- and K-band LMSS propagation measurements using MARECS-B, OLYMPUS, and ACTS
p 2683 N93-26467
Rain rate and modeled fade distributions at 20 GHz and 30 GHz derived from five years of network rain gauge measurements p 2683 N93-26468
Effect-specific analysis of propagation parameters
p 2684 N93-26478

SIGNAL GENERATORS
Adaptive control of nonlinear flexible systems
| AD-A261676 | p 2826 N93-26365
New results in signal design for the AWGN channel
| AD-A261424 | p 2682 N93-26451

SIGNAL PROCESSING
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 4
| NASA-CR-192834 | p 2769 N93-24910
Synchronisation, acquisition and tracking for telemetry and data reception p 2614 N93-25000
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 2
| NASA-CR-192833 | p 2770 N93-25088
The constant current loop: A new paradigm for resistance signal conditioning
| NASA-TM-108744 | p 2673 N93-25181
An example of a phase-segregated enhanced PAL broadcasting system
| BBC-RD-1992/6 | p 2674 N93-25239
Proceedings of the Second SISAL Users' Conference
| DE93-008019 | p 2815 N93-25304
Log-ratio signal-processing technique for beam position monitors
| DE93-007356 | p 2851 N93-25314
Beam position and total current monitor for heavy ion fusion beams
| DE93-007653 | p 2851 N93-25325
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
VLSI for high-speed digital signal processing
| AD-A260754 | p 2690 N93-25678
An SPW software simulation model of a dispersive fading multipath narrowband HF channel
| AD-A261101 | p 2675 N93-25767
Exploitation of cyclostationarity for signal-parameter estimation and system identification
| AD-A260833 | p 2728 N93-25784
Signal processing in impulsive electromagnetic interference
| AD-A260755 | p 2676 N93-25847
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915
Phase discriminating capacitive array sensor system
| NASA-CASE-GSC-13460-1 | p 2691 N93-26104
Goldstone solar system radar signal processing
p 2680 N93-26130
Realtime control of multiple sensor systems
| AD-A261037 | p 2680 N93-26226
OTH-B radar system: System summary
| AD-A261727 | p 2681 N93-26247
Bayesian cross-entropy reconstruction of complex images
| AD-A261812 | p 2812 N93-26257
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430
Pseudo Wigner-Ville distribution, computer program, and its applications to time-frequency domain problems
| AD-A261839 | p 2813 N93-26431
New results in signal design for the AWGN channel
| AD-A261424 | p 2682 N93-26451
More rain compensation results p 2686 N93-26486
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530
Geolocation of an electromagnetic emitter using a cyclostationary time difference of arrival technique
| AD-A261781 | p 2686 N93-26603

SIGNAL RECEPTION
Synchronisation, acquisition and tracking for telemetry and data reception p 2614 N93-25000
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120
DSN acquisition of Magellan high-rate telemetry data
p 2614 N93-26124

SIGNAL TO NOISE RATIOS
A functional description of the Buffered Telemetry Demodulator (BTD) p 2614 N93-24667
Symbol signal-to-noise ratio loss in square-wave subcarrier downconversion p 2672 N93-24668
Microwave frequency discriminator with a cryogenic sapphire resonator for ultra-low phase noise
p 2693 N93-24982
Actual limits of fluorescence S/N ratio in an optically-pumped cesium beam resonator
p 2833 N93-24991
Optimizing the G/T ratio of the DSS-13 34-meter beam-waveguide antenna p 2678 N93-26118
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120

SIGNAL TRANSMISSION
Timing and time signal distribution in digital communications networks p 2686 N93-25061
Statistics of sampled Rician fading
| AD-A261397 | p 2681 N93-26289

SIGNATURE ANALYSIS
The use of polarimetric radar remote sensing data for application in forestry p 2749 N93-24845

SIGNATURES
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Pseudo Wigner-Ville distribution, computer program, and its applications to time-frequency domain problems
| AD-A261839 | p 2813 N93-26431

SIGNS AND SYMPTOMS
Anomalous event diagnosis for environmental satellite systems p 2619 N93-25971

SILICA GLASS
Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications
| DE93-005485 | p 2852 N93-25182

SILICIDES
Processing and properties of Ti5Si3
| DE93-007284 | p 2649 N93-25149

SILICON
Photoluminescence of silicon nanostructures formed by ion beam implantation
| DE93-006777 | p 2862 N93-24958
Anisotropic etching of silicon in KOH solutions
p 2647 N93-25037
The sub 60 ps timing resolution using large area silicon avalanche diodes
| DE93-007723 | p 2688 N93-25365
Smart microsensors for high temperature applications
| AD-A260747 | p 2710 N93-25677
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
Visible light emission from porous silicon examined by photoluminescence and Raman spectroscopy
| DE93-006780 | p 2646 N93-26502

SILICON ALLOYS
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD)
| DE92-010560 | p 2862 N93-24953
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387

SILICON CARBIDES
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy
| DE93-007594 | p 2863 N93-25387
Processing and properties of silicon carbide reinforced reaction bonded silicon nitride composites
| AD-A260570 | p 2640 N93-26236
SiC microsensor with piezoresistive diamond sensing elements
| AD-A261346 | p 2868 N93-26312

SILICON NITRIDES
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823
Processing and properties of silicon carbide reinforced reaction bonded silicon nitride composites
| AD-A260570 | p 2640 N93-26236

SILICON RADIATION DETECTORS
Temperature dependence of radiation damage and its annealing in silicon detectors
| DE93-003854 | p 2869 N93-26494
Large area, low capacitance Si(Li) detectors for high rate x ray applications
| DE93-007661 | p 2692 N93-26598

SILICONES
Characterization of the synthesis of M-61, a random equilibrium silicone terpolymer, using dry starting materials
| KCP-613-4985 | p 2657 N93-26213

SILOXANES
Characterization of the synthesis of M-61, a random equilibrium silicone terpolymer, using dry starting materials
| KCP-613-4985 | p 2657 N93-26213

SILVER COMPOUNDS
Colloid formation in implanted glasses
| DE93-006763 | p 2653 N93-24971

SILVER IODIDES
Investigation of winter mountain storms in Utah during the 1989 Utah/NOAA field program
| PB93-153021 | p 2785 N93-25849

Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874

SIMD (COMPUTERS)
Construction of a connectionist network supercomputer
| AD-A260929 | p 2820 N93-25648

SIMPLEX METHOD
New results in signal design for the AWGN channel
| AD-A261424 | p 2682 N93-26451

SIMULATED ANNEALING
Discrete range clustering using Monte Carlo methods
| NASA-TM-104004 | p 2584 N93-24914
New ground states in unconventional superconductors
p 2688 N93-25282
Digital Oblique Remote Ionospheric Sensing (DORIS) program development
| AD-A261750 | p 2776 N93-26283

SIMULATION
Optimal message log reclamation for independent checkpointing
| NASA-CR-192886 | p 2815 N93-24749
Striped tape arrays
| NASA-CR-192914 | p 2806 N93-25267
Multi-rate, real time image compression for images dominated by point sources p 2805 N93-25932
Studies in air/air supersonic mixing layers
p 2582 N93-26007
Imaging the magnetosphere in the extreme ultraviolet
| NASA-CR-192218 | p 2775 N93-26151
NLS operations concepts: Failure modes scenario simulation model analysis
| MCR-92-5013 | p 2609 N93-26175

SIMULATORS
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
Data systems dynamic simulator p 2814 N93-25602
Utilization of an electronic circuit simulator in CMOS latch-up studies
| AD-A260877 | p 2690 N93-25935

SINE WAVES
Performance results of a 300-degree linear phase modulator for spaceborne communications applications
p 2672 N93-24670
Equipment testing with damped sinewaves between 1 and 50 MHz p 2692 N93-24881
New algorithms for the detection and elimination of sine waves and other narrow-band signals in the presence of broadband signals and noise
| AD-A261811 | p 2681 N93-26261
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358

SINGLE CRYSTALS
Crack tip fields in ductile crystals and bicrystals
p 2866 N93-25749
Activation of methane by clean and chemically modified single crystal oxide surfaces
| PB93-157295 | p 2644 N93-25817
Fatigue in single crystal nickel superalloys
| AD-A260709 | p 2651 N93-25843
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204
Fatigue in single crystal nickel superalloys
| AD-A261742 | p 2652 N93-26282
Dynamics of gas-surface interactions
| AD-A261402 | p 2646 N93-26402

SINGLE STAGE TO ORBIT VEHICLES
Aerospace-plane flights and stratospheric ozone: Review and preliminary assessment of the National Aerospace Plane (NASP) operations
| RAND/N-3464-AF | p 2767 N93-26327

SINGLE-PHASE FLOW
Predictive modeling of particle-laden, turbulent flows
| DE93-008208 | p 2698 N93-25309

SINGULARITY (MATHEMATICS)
Optimal thrust magnitude on a singular arc in atmospheric flight p 2819 N93-25410
Analysis of wing wake roll-up using a vortex-in-cell method p 2579 N93-25706

SINTERING
Densification of ceramics by gas overpressure sintering
| MTL-TR-92-45 | p 2657 N93-26432

SIS (SUPERCONDUCTORS)
A superconducting tunnel junction receiver for submillimeter astronomy, and analysis of observations of post-AGB star molecular envelopes
p 2889 N93-25440

SIZE (DIMENSIONS)
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988
| AD-A260869 | p 2800 N93-25628

SIZE DISTRIBUTION
Volatiles in interplanetary dust particles: A comparison with CI and CM chondrites p 2896 N93-26062
Intensity distribution of the x ray source for the AXAF VETA-I mirror test p 2854 N93-26184
Particulate emissions from gas turbine engines
| AD-A261374 | p 2595 N93-26339

SKIN FRICTION
Uniform roughness studies
| WL-TR-92-3041 | p 2706 N93-25951

SKY SURVEYS (ASTRONOMY)
The ALEXIS data processing package: An update
| DE93-007374 | p 2899 N93-25185
Starburst Galaxies: Hard X-ray spectra and contribution to the diffuse background
| NASA-CR-192790 | p 2892 N93-25211
A study of the large-scale infrared emission from a selected dark cloud
| NASA-CR-192775 | p 2888 N93-25289
The structure of the nearby universe traced by theIRAS galaxies
| NASA-CR-192809 | p 2889 N93-25331
Cape Photographic Durchmusterung, volume 1
| NASA-RP-1300-VOL-1 | p 2890 N93-26002
Cape Photographic Durchmusterung, volume 2
| NASA-RP-1300-VOL-2 | p 2890 N93-26003
Cape Photographic Durchmusterung, volume 3
| NASA-RP-1300-VOL-3 | p 2890 N93-26004
ROSAT x ray survey observations of active chromospheric binary systems and other selected sources
| NASA-CR-192933 | p 2891 N93-26426

SKYLAB 1
The initial flight anomalies of Skylab 1
p 2619 N93-24692

SLABS
Minimization of heat slab nodes with higher order boundary conditions
| DE93-004238 | p 2695 N93-24966

SLENDER CONES
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176

SLIDING
A micromechanical viscoplastic stress-strain model with grain boundary sliding
| DE93-009109 | p 2649 N93-25095

SLIDING CONTACT
Three-dimensional boundary element analysis of contact and fracture problems p 2725 N93-25335

SLIDING FRICTION
Energy dissipation in inelastic flow of cohesionless granular media p 2703 N93-25662

SLOTS
A three-dimensional algebraic grid generation scheme for gas turbine combustors with inclined slots
| NASA-CR-191095 | p 2694 N93-24759
Shock tube application to the study of compressible turbulent boundary layer with mass injection
p 2697 N93-25252
Radial spline assembly for antifriction bearings
| NASA-CASE-MFS-28629-1 | p 2719 N93-26001

SLUDGE
Converting environmental wastes into valuable resources p 2759 N93-25572
Regulatory impact analysis of the Part 503 sewage sludge regulation
| PB93-110625 | p 2768 N93-26567

SLURRIES
Low cost dewatering of waste slurries
p 2769 N93-25573
Ultrasonic polishing p 2670 N93-25580
Particle size as a factor in agglomeration in slurry fuels p 2625 N93-26013

SLURRY PROPELLANTS
Atomization and combustion of a gelled, metallized slurry fuel
| AD-A261778 | p 2647 N93-26602

SMALL SCIENTIFIC SATELLITES
Satellite communications application to Pacific countries above Ku band p 2683 N93-26471

SMART STRUCTURES
Damage-survivable and damage-tolerant laminated composites with optimally placed piezoelectric layers
| AD-A260879 | p 2636 N93-25631
Design of flexible rods with embedded SMA actuators
| AD-A260742 | p 2729 N93-25846
Smart structural composites with piezoelectric micro-constituents
| AD-A260970 | p 2640 N93-26225
Investigation of coupled analysis techniques for adaptive material structural systems
| AD-A261359 | p 2868 N93-26332

SMOKE DETECTORS
Contributions of microgravity test results to the design of spacecraft fire safety systems
| NASA-TM-106093 | p 2614 N93-24755

SNOW
Alternative strategies for the use of satellite data analysis systems for hazard monitoring and disaster mitigation
p 2743 N93-24805
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874

SNOW COVER
Passive microwave remote sensing of snow-covered floating ice during spring conditions in the Arctic and Antarctic
| ISBN-0-315-70444-6 | p 2754 N93-25422

SOBOLEV SPACE
Line formation and the Poynting-Robertson effect in accretion discs p 2847 N93-25355

SOCIAL FACTORS
Small business access to equity capital
| PB93-144582 | p 2872 N93-25735

SODIUM
Temperature-dependent electrical conductivity of soda-lime glass
| DE93-007872 | p 2654 N93-25359
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR
| AD-A261224 | p 2645 N93-26300

SOFTWARE ENGINEERING
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
Analysis of large system black box verification test data
| NASA-CR-192885 | p 2815 N93-24748
The ALEXIS data processing package: An update
| DE93-007374 | p 2899 N93-25185
PCG: A software package for the iterative solution of linear systems on scalar, vector and parallel computers
| DE93-007366 | p 2809 N93-25315
FORTRAN M as a language for building earth system models
| DE93-007897 | p 2763 N93-25370
The database Query Support Processor (QSP)
p 2807 N93-25577
Software lifecycle support environment (SLCSE) knowledge-based enhancements
| AD-A261042 | p 2811 N93-25791
Multivariate statistical analysis software technologies for astrophysical research involving large data bases
p 2878 N93-25796
SAVS: A Space Analysis and Visualization System
p 2881 N93-25812
A Spatial Analysis and Modeling System (SAMS) for environment management p 2881 N93-25813
Model-based reasoning for system and software engineering: The Knowledge From Pictures (KFP) environment p 2825 N93-25978
In search of meta-knowledge p 2826 N93-25983
An OSI architecture for the Deep Space Network
p 2679 N93-26121
High performance computing and communications panel report p 2807 N93-26131
Research directions in software analysis, synthesis and certification
| AD-A261367 | p 2812 N93-26336
Towards a formalism for program generation
| AD-A261689 | p 2812 N93-26368
Test, Control and Monitor System (TCMS) operations plan
| NASA-CR-193098 | p 2873 N93-26419
Test, Control and Monitor System maintenance plan
| NASA-CR-193099 | p 2873 N93-26420
Managing real-time software projects: Problems and issues
| AD-A261428 | p 2813 N93-26453
IDEF6: A design rationale capture method concept paper
| AD-A261594 | p 2884 N93-26523

SOFTWARE RELIABILITY
Putting time into proof outlines
| NASA-CR-192978 | p 2809 N93-25152
Statistical modelling of software reliability
| NASA-CR-192985 | p 2809 N93-25257
Software testing initiative for strategic defense systems
| AD-A261350 | p 2831 N93-26330
Managing real-time software projects: Problems and issues
| AD-A261428 | p 2813 N93-26453

SOFTWARE REUSE
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
An application of machine learning to the organization of institutional software repositories
p 2825 N93-25981
The design and implementation of a reusable component library and a retrieval/integration system
| AD-A261827 | p 2812 N93-26271

Department of Defense technical architecture framework for information management. Volume 1: Implementation concept, version 1.1
| AD-A261911 | p 2884 N93-26531
Three view language: A graphics-based language for requirements definition, version 01.00.00
| AD-A261732 | p 2813 N93-26583

SOFTWARE TOOLS
Object-oriented tools for distributed computing p 2817 N93-25576
ASTROS-ID: Software for system identification using mathematical programming
| AD-A260867 | p 2810 N93-25627
High level design for distributed application instrumentation
| AD-A260812 | p 2710 N93-25696
Construction of an advanced software tool for planetary atmospheric modeling p 2815 N93-25799
A methodology and software environment for testing process model's sequential predictions with protocols
| AD-A260980 | p 2882 N93-25844
The design and implementation of a reusable component library and a retrieval/integration system
| AD-A261827 | p 2812 N93-26271
Research directions in software analysis, synthesis and certification
| AD-A261367 | p 2812 N93-26336

SOIL EROSION
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856

SOIL MECHANICS
Lunar regolith and structure mechanics p 2670 N93-26412

SOIL MOISTURE
Land surface processes and climate modeling p 2783 N93-25685
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351

SOILS
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571

SOL-GEL PROCESSES
Passive vibration damping materials: Piezoelectric ceramics composites for vibration damping applications
| AD-A260792 | p 2727 N93-25690

SOLAR ACTIVITY
Nonlinear techniques for forecasting solar activity directly from its time series p 2603 N93-24716
Further analysis of ECOM-721 data
| AD-A260863 | p 2774 N93-25790
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR ACTIVITY EFFECTS
Bit hit/solar activity correlation study
| AD-A261381 | p 2896 N93-26340

SOLAR ARRAYS
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Laser beamed power: Satellite demonstration applications
| NASA-CR-190793 | p 2623 N93-25132
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
Structural load control during construction p 2669 N93-26409

SOLAR CELLS
New concepts for high efficiency energy conversion: The avalanche heterostructure and superlattice solar cells
| DE92-010592 | p 2758 N93-25098
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
| DE93-000073 | p 2759 N93-25102
Non-H2Se, ultra-thin CIS devices
| DE93-000078 | p 2759 N93-25253
Role of polycrystallinity in CdTe and CuInSe2 photovoltaic cells
| DE93-000045 | p 2759 N93-25504

SOLAR COLLECTORS
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
| DE93-000073 | p 2759 N93-25102

SOLAR ENERGY
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096
Advanced energy systems and technologies - National R and D programme
| DE93-769943 | p 2758 N93-25097

SOLAR FLARES
Star tracker operation in a high density proton field p 2600 N93-24699
The generation of Langmuir waves by thick target electron beams in solar flares p 2861 N93-25730
Use of Taguchi design of experiments to optimize and increase robustness of preliminary designs p 2670 N93-26063
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR FLUX
Further analysis of ECOM-721 data
| AD-A260863 | p 2774 N93-25790

SOLAR GRAVITATION
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706

SOLAR HEATING
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096

SOLAR INTERIOR
Inverse problem with continuous parameters for solar oscillations p 2895 N93-25728

SOLAR MAGNETIC FIELD
Beam position and total current monitor for heavy ion fusion beams
| DE93-007653 | p 2851 N93-25325
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR NEUTRINOS
An investigation of neutrino properties through study of the sun, supernovae, the early universe and lab data p 2898 N93-25180
The Sudbury Neutrino Observatory
| DE93-007697 | p 2899 N93-25327

SOLAR ORBITS
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707

SOLAR OSCILLATIONS
Inverse problem with continuous parameters for solar oscillations p 2895 N93-25728

SOLAR PHYSICS
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR PROMINENCES
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR RADIATION
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Analysis of LARI sensor system
| DE93-006334 | p 2761 N93-24977
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096
Summary information and data sets for NREL's Solar Radiation Research Laboratory, 1981 - 1991
| DE93-000052 | p 2898 N93-25101
Comparison of high-resolution solar irradiance spectra and the solar luminosity in the period 1980-1989
| NASA-CR-192776 | p 2898 N93-25222
Further analysis of ECOM-721 data
| AD-A260863 | p 2774 N93-25790
ATMOS: Long term atmospheric measurements for mission to planet Earth
| NASA-TM-108720 | p 2757 N93-26429
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR RADIATION SHIELDING
New directions in phthalocyanine pigments
| NASA-CR-192443 | p 2656 N93-26155

SOLAR RADIO BURSTS
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR RADIO EMISSION
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR SENSORS
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory p 2600 N93-24697
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Accurate attitude determination of the LACE satellite p 2605 N93-24726
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Upper Atmosphere Research Satellite (UARS) attitude accuracy using coarse attitude sensors p 2607 N93-24735

SOLAR SPECTRA
Comparison of high-resolution solar irradiance spectra and the solar luminosity in the period 1980-1989
| NASA-CR-192776 | p 2898 N93-25222

SOLAR WIND
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081
The upper atmosphere and ionosphere of Mars p 2897 N93-26393
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLAR X-RAYS
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538

SOLDERED JOINTS
Aqueous cleaning of flux residue from solder joints
| KCP-613-4803 | p 2652 N93-26208

SOLDERS
Automated inspection of solder joints for surface mount technology
| NASA-TM-104580 | p 2721 N93-26137

SOLENOIDS
Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641
Magnetic field source for bi-chambered electron beam devices
| AD-A261316 | p 2691 N93-26299

SOLID ELECTROLYTES
Thin rechargeable batteries for CMOS SRAM memory protection p 2694 N93-25583

SOLID LUBRICANTS
Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204

SOLID MECHANICS
Formulation and treatment of frictional contact problems using finite elements p 2717 N93-25412
Mechanics and control of multibody structural systems | AD-A261576 | p 2619 N93-26456
Use and analysis of finite element methods for problems of solid mechanics and fracture | AD-A261574 | p 2731 N93-26522
SOLID PHASES
Metastable SiC and SiGeC alloys by carbon implantation and solid phase epitaxy | DE93-007594 | p 2863 N93-25387
SOLID PROPELLANT COMBUSTION
A model of concurrent flow flame spread over a thin solid fuel | NASA-CR-191111 | p 2663 N93-24946
Modeling of H2/N2O flames p 2627 N93-26026
Dark zone modeling of solid propellant flames p 2628 N93-26028
Detection of atomic oxygen and hydrogen in solid propellant flames and pyrolysis gases using multiphoton laser-induced fluorescence p 2628 N93-26029
Infrared fiber optic diagnostic for solid propellant combustion p 2628 N93-26031
Condensed-phase processes during solid propellant combustion. Part 4: Chemical and microscopic examination of laser-irradiated propellant samples p 2628 N93-26032
Interactions of acoustic waves and combustion of homogeneous solid propellants in rocket motors p 2630 N93-26039
Flame response in oscillatory solid propellant combustion p 2630 N93-26041
SOLID PROPELLANT ROCKET ENGINES
An in-depth probabilistic study of external tank attach ring | NASA-TM-108403 | p 2624 N93-25671
Particle behavior in solid propellant rocket motors and plumes | AD-A260900 | p 2624 N93-25913
The 29th JANNAF Combustion Subcommittee Meeting, volume 2 | CPIA-PUBL-593-VOL-2 | p 2624 N93-26005
Thermal radiation in non-metalized solid rocket motors: Effect on burning rate and temperature sensitivity p 2626 N93-26020
Determination of burn rate requirements from ASRM performance specifications p 2627 N93-26023
Interactions of acoustic waves and combustion of homogeneous solid propellants in rocket motors p 2630 N93-26039
Experimental investigation of flow turning losses in unstable rocket motors p 2630 N93-26040
SRB environment evaluation and analysis. Volume 3: ASRB plume induced environments | NASA-CR-192519 | p 2631 N93-26054
SOLID PROPELLANTS
The 29th JANNAF Combustion Subcommittee Meeting, volume 2 | CPIA-PUBL-593-VOL-2 | p 2624 N93-26005
Improved burn rate determination techniques p 2627 N93-26021
Dark zone modeling of solid propellant flames p 2628 N93-26028
Detection of atomic oxygen and hydrogen in solid propellant flames and pyrolysis gases using multiphoton laser-induced fluorescence p 2628 N93-26029
SOLID STATE
Solid-state isotopic power source for computer memory chips p 2694 N93-25596
SOLID STATE DEVICES
High speed solid state circuit breaker p 2694 N93-25598
SOLID STATE LASERS
Advances in nonlinear optical materials and devices | NASA-CR-192681 | p 2852 N93-25281
An active solid state ring laser gyroscope p 2709 N93-25291
SOLID STATE PHYSICS
Proceedings of the 16th International Workshop on Condensed Matter Theories | AD-A261078 | p 2868 N93-26252
SOLID SURFACES
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR | AD-A261224 | p 2645 N93-26300
SOLID SUSPENSIONS
Development of an expendable particle sensor | AD-A261127 | p 2710 N93-26044
SOLID WASTES
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571
SOLID-SOLID INTERFACES
Models of crack growth along polymer interfaces p 2728 N93-25750
Fundamental aspects of metal joining: The study of strong interfaces | AD-A261293 | p 2653 N93-26304
SOLIDIFICATION
A model for the filling of cold cavities with solidifying, semi-crystalline polymers | DE93-003817 | p 2655 N93-25507
Solidification processing and phase transformations in ordered high temperature alloys | AD-A261751 | p 2652 N93-26284
Phase-field models for anisotropic interfaces | PB93-164564 | p 2646 N93-26323
Computation of complex solidification morphologies using a phase-field model | PB93-156743 | p 2869 N93-26547
SOLIDS
Correlated wavefunction quantum Monte Carlo approach to solids | DE93-007730 | p 2863 N93-25367
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces | AD-A261265 | p 2657 N93-26303
Liquid and solid ion plasmas | AD-A261888 | p 2862 N93-26528
SOLIDS FLOW
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738
SOLITARY WAVES
From fractals to wormholes via string theory p 2871 N93-25742
SOLUBILITY
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571
SOLVATION
Molecular/polymeric magnetism | DE93-008635 | p 2847 N93-25114
SOLVENTS
Femtosecond dynamics in hydrogen-bonding solvents: Formamides | DE93-003476 | p 2643 N93-25123
Temperature dependent sensor response caused by polymer-solvent interactions | DE93-005368 | p 2655 N93-25444
Converting environmental wastes into valuable resources p 2759 N93-25572
Effects of moisture and other contaminants in friction composites | AD-A261226 | p 2640 N93-26301
SONOLUMINESCENCE
Spectra of stable sonoluminescence | AD-A260621 | p 2844 N93-25637
SOOT
Measurements of soot formation and hydroxyl concentration in near critical equivalence ratio premixed ethylene flame | NASA-CR-191099 | p 2642 N93-25116
SORBENTS
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534
SORPTION
Novel approaches to the construction of miniaturized analytical instrumentation | NASA-CR-191988 | p 2709 N93-25345
Effects of moisture and other contaminants in friction composites | AD-A261226 | p 2640 N93-26301
SOUND FIELDS
Low-frequency room responses. Part 2: Calculation methods and experimental results | BBC-RD-1992/9-PT-2 | p 2673 N93-25169
Experimental investigation of flow turning losses in unstable rocket motors p 2630 N93-26040
SOUND PRESSURE
Low-frequency room responses. Part 2: Calculation methods and experimental results | BBC-RD-1992/9-PT-2 | p 2673 N93-25169
SOUND PROPAGATION
Low-frequency room responses. Part 1: Background and qualitative considerations | BBC-RD-1992/8-PT-1 | p 2673 N93-25168
Low-frequency room responses. Part 2: Calculation methods and experimental results | BBC-RD-1992/9-PT-2 | p 2673 N93-25169
Proceedings of the 5th International Symposium on Long Range Sound Propagation | AD-A260666 | p 2845 N93-25643
SOUND TRANSDUCERS
Optical fiber for acoustic sensor applications | AD-A261580 | p 2857 N93-26515
SOUND TRANSMISSION
The design of a modular sound absorber for very low frequencies | BBC-RD-1992/10 | p 2673 N93-25170
SOUND WAVES
Low-frequency room responses. Part 2: Calculation methods and experimental results | BBC-RD-1992/9-PT-2 | p 2673 N93-25169
A modular wideband sound absorber | BBC-RD-1992/11 | p 2673 N93-25171
Spectra of stable sonoluminescence | AD-A260621 | p 2844 N93-25637
Proceedings of the 5th International Symposium on Long Range Sound Propagation | AD-A260666 | p 2845 N93-25643
Far field rotor noise | AD-A260703 | p 2845 N93-25651
Generation of acoustic waves by focused infrared neodymium-laser radiation p 2714 N93-25761
Nonlinear wave phenomena related to interactions in the ionosphere | AD-A261450 | p 2776 N93-26348
Monaural and binaural processing of complex waveforms | AD-A261659 | p 2846 N93-26358
SPACE BASES
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410
SPACE COMMERCIALIZATION
Space research in Sweden, 1990-1991 p 2888 N93-25887
Space business indicators p 2886 N93-26158
SPACE COMMUNICATION
The Telecommunications and Data Acquisition Report | NASA-CR-192887 | p 2671 N93-24659
Management of space networks p 2672 N93-24671
Hydrogen masers for space p 2716 N93-24980
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks p 2832 N93-24983
Deep Space Network information system architecture study p 2679 N93-26126
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview p 2680 N93-26128
SPACE DEBRIS
Space environmental interactions for the space exploration initiative p 2897 N93-26396
SPACE ENVIRONMENT SIMULATION
Time dependent simulation of cosmic-ray shocks including Alfven transport | NASA-CR-192931 | p 2899 N93-24752
Numerical and experimental analyses of large composite skeletal satellite systems p 2616 N93-25463
SPACE EXPLORATION
An approach for finding long period elliptical orbits for precursor SEI missions p 2604 N93-24720
Summary and recommendations on nuclear electric propulsion technology for the space exploration initiative | NASA-TM-105707 | p 2622 N93-24744
Space Nuclear Thermal Propulsion Test Facilities Subpanel | NASA-TM-105708 | p 2622 N93-25105
JSC research and technology | NASA-TM-104763 | p 2901 N93-25188
Space transfer vehicle concepts and requirements study. Volume 1: Executive summary | NASA-CR-192524 | p 2610 N93-25479
NASA Center for Intelligent Robotic Systems for Space Exploration | NASA-CR-193208 | p 2826 N93-25986
Evaluating science return in space exploration initiative architectures | NASA-TP-3339 | p 2897 N93-26094
Nuclear safety policy working group recommendations on nuclear propulsion safety for the space exploration initiative | NASA-TM-105705 | p 2632 N93-26200
Electrical and Chemical Interactions at Mars Workshop. Part 2: Appendix | NASA-CP-10093-PT-2 | p 2897 N93-26392
Representative systems for space exploration p 2897 N93-26395
Space environmental interactions for the space exploration initiative p 2897 N93-26396
Modeling and analysis tools p 2897 N93-26397
Mars exploration planning p 2898 N93-26399
SPACE LOGISTICS
Space transfer vehicle concepts and requirements study. Volume 2, book 1: STV concept definition and evaluation | NASA-CR-192525 | p 2611 N93-25510
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces | NASA-CR-192527 | p 2611 N93-25513
Dynamics of on-orbit construction process p 2669 N93-26406
SPACE MISSIONS
Systems engineering considerations for operational support systems p 2666 N93-24689

Precise Doppler tracking from the Medicina VLBI station p 2608 N93-24998
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
NASA Microgravity Science and Applications Program
| NASA-TM-108775 | p 2663 N93-25194
An alternate approach to space missions involving a long tether p 2616 N93-25470
Space transfer vehicle concepts and requirements study. Volume 2, book 1: STV concept definition and evaluation
| NASA-CR-192525 | p 2611 N93-25510
Space life support technology applications to terrestrial environmental problems p 2803 N93-25617
Planetary data analysis and display system: A version of PC-McIDAS p 2880 N93-25806
STS-39 Space Shuttle mission report
| NASA-CR-193063 | p 2611 N93-25955
STS-37 Space Shuttle mission report
| NASA-CR-193062 | p 2612 N93-25956
STS-43 Space Shuttle mission report
| NASA-CR-193064 | p 2612 N93-25957
STS-40 Space Shuttle mission report
| NASA-TM-108737 | p 2612 N93-25958
STS-45 Space Shuttle mission report
| NASA-CR-193054 | p 2612 N93-25959
STS-47 Space Shuttle mission report
| NASA-CR-193056 | p 2612 N93-25960
An architecture for object-oriented intelligent control of power systems in space p 2823 N93-25968
STS-44 Space Shuttle mission report
| NASA-TM-108735 | p 2612 N93-25988
STS-42 Space Shuttle mission report
| NASA-CR-193059 | p 2613 N93-25989
STS-48 Space Shuttle mission report
| NASA-CR-193060 | p 2613 N93-25990
STS-46 Space Shuttle mission report
| NASA-CR-193058 | p 2613 N93-25991
STS-50 Space Shuttle mission report
| NASA-CR-193057 | p 2613 N93-25992
STS-52 Space Shuttle mission report
| NASA-CR-193061 | p 2613 N93-25993
Analysis of the lettuce data from the variable pressure growth chamber at NASA Johnson Space Center: A three-stage nested design model p 2794 N93-26069
Distributed project scheduling at NASA: Requirements for manual protocols and computer-based support p 2815 N93-26075
Nuclear safety policy working group recommendations on nuclear propulsion safety for the space exploration initiative
| NASA-TM-105705 | p 2632 N93-26200
Representative systems for space exploration p 2897 N93-26395
Mars exploration planning p 2898 N93-26399

SPACE NAVIGATION
An approach for finding long period elliptical orbits for precursor SEI missions p 2604 N93-24720
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109
Geometric distortion analysis of a wide-field astrograph p 2621 N93-26111

SPACE PERCEPTION
Neural basis of motion perception
| AD-A261452 | p 2798 N93-26349

SPACE PLASMAS
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081

SPACE POWER REACTORS
Nuclear electric propulsion for planetary science missions: NASA technology program planning
| NASA-TM-106139 | p 2632 N93-26210
Representative systems for space exploration p 2897 N93-26395

SPACE PROCESSING
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740

SPACE PROGRAMS
Environment Observation and Climate Modelling Through International Space Projects. Volume 2: Remote Sensing for Environmental Monitoring and Resource Management
| ESA-ISY-1-VOL-2 | p 2737 N93-24775
Viewgraph description of Penn State's Propulsion Engineering Research Center: Activity highlights and future plans
| NASA-CR-192317 | p 2622 N93-24943
Space research in Sweden, 1990-1991 p 2888 N93-25887
A study of mapping exogenous knowledge representations into CONFIG p 2827 N93-26072
Space business indicators p 2886 N93-26158

SPACE RENDEZVOUS
Optimal cooperative power-limited rendezvous p 2607 N93-24904
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952

SPACE SHUTTLE BOOSTERS
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671
SRB environment evaluation and analysis. Volume 1: Redesigned SRB flight heating evaluation
| NASA-CR-192517 | p 2631 N93-26053
SRB environment evaluation and analysis. Volume 2: RSRB joint filling test/analysis improvements
| NASA-CR-192518 | p 2631 N93-26057

SPACE SHUTTLE MAIN ENGINE
A neural network-based estimator for the mixture ratio of the Space Shuttle Main Engine
| NASA-TM-106070 | p 2622 N93-25089
Calculations of combustion response profiles and oscillations
| NASA-TM-106135 | p 2623 N93-25236
Detection of bearing failure in mechanical devices using neural networks p 2822 N93-25965
Remtech SSME nozzle design TPS
| NASA-CR-192516 | p 2631 N93-26056
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine
| NASA-TM-106097 | p 2632 N93-26211

SPACE SHUTTLE ORBITERS
Dynamics of on-orbit construction process p 2669 N93-26406
Controls for orbital assembly of large space structures p 2620 N93-26408
Structural load control during construction p 2669 N93-26409

SPACE SHUTTLE PAYLOADS
Tethered Satellite System Contingency Investigation Board
| NASA-TM-108704 | p 2616 N93-25231
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight
| AD-A261646 | p 2618 N93-26232

SPACE SHUTTLES
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
STS-39 Space Shuttle mission report
| NASA-CR-193063 | p 2611 N93-25955
STS-37 Space Shuttle mission report
| NASA-CR-193062 | p 2612 N93-25956
STS-43 Space Shuttle mission report
| NASA-CR-193064 | p 2612 N93-25957
STS-40 Space Shuttle mission report
| NASA-TM-108737 | p 2612 N93-25958
STS-45 Space Shuttle mission report
| NASA-CR-193054 | p 2612 N93-25959
STS-47 Space Shuttle mission report
| NASA-CR-193056 | p 2612 N93-25960
Multi-viewpoint clustering analysis p 2825 N93-25980
STS-44 Space Shuttle mission report
| NASA-TM-108735 | p 2612 N93-25988
STS-42 Space Shuttle mission report
| NASA-CR-193059 | p 2613 N93-25989
STS-48 Space Shuttle mission report
| NASA-CR-193060 | p 2613 N93-25990
STS-46 Space Shuttle mission report
| NASA-CR-193058 | p 2613 N93-25991
STS-50 Space Shuttle mission report
| NASA-CR-193057 | p 2613 N93-25992
STS-52 Space Shuttle mission report
| NASA-CR-193061 | p 2613 N93-25993
ASRM design philosophy and modelling challenges p 2627 N93-26022
External tank aerothermal design criteria verification
| NASA-CR-192514 | p 2618 N93-26055
A vision architecture for the extravehicular activity retriever p 2827 N93-26071
Liquid Rocket Booster (LRB) for the Space Transportation System (STS) Systems Study. Amendment 13: Orientation meeting
| NASA-CR-192515 | p 2614 N93-26152
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373

SPACE STATION FREEDOM
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105
Space Station Freedom assembly and operation at a 51.6 degree inclination orbit
| NASA-TM-107731 | p 2615 N93-25174
Space biology research development
| NASA-CR-192830 | p 2792 N93-25242
Gas-Grain Simulation Facility (GGSF). Volume 1: Stage 1 facility definition studies
| NASA-CR-177606 | p 2887 N93-25442
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
Robotic Variable Polarity Plasma Arc (VPPA) welding p 2720 N93-25605
A genetic algorithm tool (splicer) for complex scheduling problems and the Space Station Freedom resupply problem p 2814 N93-25613
Estimating spares requirements for Space Station Freedom using the M-SPARE model
| AD-A260878 | p 2617 N93-25630
Advanced life support study. Modification 10: ECLSS logistical support analysis for Space Station Freedom
| NASA-CR-192481 | p 2801 N93-25888
The effects of video compression on acceptability of images for monitoring life sciences' experiments p 2805 N93-25930
Study of plate-fin heat exchanger and cold plate for the active thermal control system of Space Station p 2619 N93-26064
A prototype for simulation of the space-to-ground assembly/contingency system of Space Station Freedom p 2619 N93-26065
A vision architecture for the extravehicular activity retriever p 2827 N93-26071
Spacelab, Spacehab, and Space Station Freedom payload interface projects p 2620 N93-26080
Model reduction for Space Station Freedom p 2620 N93-26081
Knowledge-based decision support for Space Station assembly sequence planning
| NASA-CR-193048 | p 2599 N93-26095
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
Assured crew return vehicle man-systems integration standards
| NASA-CR-193065 | p 2614 N93-26329

SPACE STATION PAYLOADS
Earth observing system. Output data products and input requirements, version 2.0. Volume 1: Instrument data product characteristics
| NASA-TM-108770 | p 2755 N93-25460
Earth observing system. Output data products and input requirements, version 2.0. Volume 2: Analysis of IDS input requirements
| NASA-TM-108771 | p 2755 N93-25461

SPACE STATION STRUCTURES
A prototype for simulation of the space-to-ground assembly/contingency system of Space Station Freedom p 2619 N93-26065

SPACE STATIONS
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221
Architecture of autonomous systems
| NASA-CR-192974 | p 2801 N93-26047
The role of pyridoxine as a countermeasure for in-flight loss of lean body mass p 2796 N93-26068
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209
Center for Space Construction Third Annual Symposium
| NASA-CR-192688 | p 2669 N93-26405
Dynamics of on-orbit construction process p 2669 N93-26406
Interaction dynamics and control for orbital assembly p 2669 N93-26407
Controls for orbital assembly of large space structures p 2620 N93-26408
Structural load control during construction p 2669 N93-26409
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410

SPACE TRANSPORTATION
Space transfer vehicle concepts and requirements study. Volume 2, book 4: Integrated advanced technology development
| NASA-CR-192528 | p 2611 N93-25512
Task 5: Architecture sensitivity to STME performance
| MCR-92-5010 | p 2609 N93-26176

SPACE TRANSPORTATION SYSTEM
Weather forecasting expert system study
| NASA-CR-192929 | p 2777 N93-24747
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
Knowledge-based decision support for Space Station assembly sequence planning
| NASA-CR-193048 | p 2599 N93-26095
Liquid Rocket Booster (LRB) for the Space Transportation System (STS) Systems Study. Amendment 13: Orientation meeting
| NASA-CR-192515 | p 2614 N93-26152
Assured crew return vehicle man-systems integration standards
| NASA-CR-193065 | p 2614 N93-26329
SPACE TRANSPORTATION SYSTEM FLIGHTS
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
A genetic algorithm tool (splicer) for complex scheduling problems and the Space Station Freedom resupply problem p 2814 N93-25613
STS-39 Space Shuttle mission report
| NASA-CR-193063 | p 2611 N93-25955
STS-37 Space Shuttle mission report
| NASA-CR-193062 | p 2612 N93-25956
STS-43 Space Shuttle mission report
| NASA-CR-193064 | p 2612 N93-25957
STS-40 Space Shuttle mission report
| NASA-TM-108737 | p 2612 N93-25958
STS-45 Space Shuttle mission report
| NASA-CR-193054 | p 2612 N93-25959
STS-47 Space Shuttle mission report
| NASA-CR-193056 | p 2612 N93-25960
STS-44 Space Shuttle mission report
| NASA-TM-108735 | p 2612 N93-25988
STS-42 Space Shuttle mission report
| NASA-CR-193059 | p 2613 N93-25989
STS-48 Space Shuttle mission report
| NASA-CR-193060 | p 2613 N93-25990
STS-46 Space Shuttle mission report
| NASA-CR-193058 | p 2613 N93-25991
STS-50 Space Shuttle mission report
| NASA-CR-193057 | p 2613 N93-25992
STS-52 Space Shuttle mission report
| NASA-CR-193061 | p 2613 N93-25993
Distributed project scheduling at NASA: Requirements for manual protocols and computer-based support p 2815 N93-26075
Utilization of the graded universal testing system to increase the efficiency for assessing aerobic and anaerobic capacity p 2794 N93-26077
SPACE-TIME FUNCTIONS
Propagation velocity and space-time correlation of perturbations in turbulent channel flow
| NASA-TM-103932 | p 2695 N93-25082
SPACEBORNE EXPERIMENTS
Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717
The Columbus Metrology Science Team: Report on activities p 2670 N93-24987
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
Tethered Satellite System Contingency Investigation Board
| NASA-TM-108704 | p 2616 N93-25231
Laser ignition application in a space experiment
| NASA-TM-106133 | p 2664 N93-25337
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594
MIT Space Engineering Research Center
| NASA-CR-192879 | p 2821 N93-25833
STS-45 Space Shuttle mission report
| NASA-CR-193054 | p 2612 N93-25959
STS-42 Space Shuttle mission report
| NASA-CR-193059 | p 2613 N93-25989
STS-50 Space Shuttle mission report
| NASA-CR-193057 | p 2613 N93-25992
STS-52 Space Shuttle mission report
| NASA-CR-193061 | p 2613 N93-25993
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight
| AD-A261646 | p 2618 N93-26232
United States Army space experiment 601
| AD-A261460 | p 2798 N93-26353
SPACEBORNE LASERS
Basic design of a spaceborne hydrogen maser p 2716 N93-25024
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389
SPACECRAFT
Readings in Systems Engineering
| NASA-SP-6102 | p 2665 N93-24678
SPACECRAFT ANTENNAS
Ka-band feed arrays for spacecraft reflector antennas with limited scan capability: An overview p 2680 N93-26128
SPACECRAFT CHARGING
SCATHA mission termination report p 2605 N93-24725
Plasma sheath effects on ion collection by a pinhole
| NASA-TM-106098 | p 2615 N93-25090
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight
| AD-A261646 | p 2618 N93-26232
Detailed component design for a Compact Environmental Anomaly Sensor (CEASE)
| AD-A261729 | p 2620 N93-26248
Space environmental interactions for the space exploration initiative p 2897 N93-26396
SPACECRAFT COMMUNICATION
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems p 2814 N93-25589
SPACECRAFT CONFIGURATIONS
Space transfer vehicle concepts and requirements study. Volume 2, book 1: STV concept definition and evaluation
| NASA-CR-192525 | p 2611 N93-25510
SPACECRAFT CONSTRUCTION MATERIALS
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
| NASA-CR-192824 | p 2653 N93-25078
Composite materials for the extravehicular mobility unit p 2642 N93-26060
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
SPACECRAFT CONTAMINATION
Space environmental interactions for the space exploration initiative p 2897 N93-26396
Modeling and analysis tools p 2897 N93-26397
SPACECRAFT CONTROL
Flight Mechanics/Estimation Theory Symposium, 1992
| NASA-CP-3186 | p 2599 N93-24694
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
Analysis of the Command and Control Segment (CCS) attitude estimation algorithm p 2604 N93-24722
Optimal cooperative power-limited rendezvous p 2607 N93-24904
A survey of life support system automation and control
| NASA-TM-103977 | p 2667 N93-25085
Aerospace vehicle model simplification for feedback control p 2596 N93-25292
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems p 2814 N93-25589
An autonomous satellite architecture integrating deliberative reasoning and behavioural intelligence p 2823 N93-25970
Dynamics of on-orbit construction process p 2669 N93-26406
Controls for orbital assembly of large space structures p 2620 N93-26408
Structural load control during construction p 2669 N93-26409
Mechanics and control of multibody structural systems
| AD-A261576 | p 2619 N93-26456
SPACECRAFT DESIGN
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Space Station Freedom assembly and operation at a 51.6 degree inclination orbit
| NASA-TM-107731 | p 2615 N93-25174
Space transfer vehicle concepts and requirements study. Volume 2, book 1: STV concept definition and evaluation
| NASA-CR-192525 | p 2611 N93-25510
Space transfer vehicle concepts and requirements study. Volume 2, book 2: System and program requirements trade studies
| NASA-CR-192526 | p 2611 N93-25511
Space transfer vehicle concepts and requirements study. Volume 2, book 4: Integrated advanced technology development
| NASA-CR-192528 | p 2611 N93-25512
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
Space transfer vehicle concepts and requirements study. Volume 3, book 1: Program cost estimates
| NASA-CR-192529 | p 2611 N93-25514
Advanced life support study. Modification 10: ECLSS logistical support analysis for Space Station Freedom
| NASA-CR-192481 | p 2801 N93-25888
National Launch System. Task 4: System architecture options analysis
| MCR-92-5011 | p 2609 N93-26098
SPACECRAFT DOCKING
Rendezvous, proximity operations and capture quality function deployment report
| NASA-TM-108752 | p 2614 N93-25952
SPACECRAFT ELECTRONIC EQUIPMENT
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Fractal determination of parameters in lightning and ESD model p 2686 N93-24893
Ultra stable oscillators for satellite applications p 2621 N93-25027
Preliminary results of a newly designed mini-OCXO oscillator especially dedicated to space applications p 2621 N93-25028
Microwave synthesizers in space p 2693 N93-25038
SPACECRAFT ENVIRONMENTS
EnviroNET p 2886 N93-26398
SPACECRAFT EQUIPMENT
Detailed component design for a Compact Environmental Anomaly Sensor (CEASE)
| AD-A261729 | p 2620 N93-26248
SPACECRAFT GUIDANCE
Computationally efficient algorithms for real-time attitude estimation p 2602 N93-24709
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode p 2605 N93-24724
Trajectory optimization for the National aerospace plane
| NASA-CR-192954 | p 2589 N93-25670
SPACECRAFT INSTRUMENTS
Earth observing system. Output data products and input requirements, version 2.0. Volume 1: Instrument data product characteristics
| NASA-TM-108770 | p 2755 N93-25460
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4449 | p 2689 N93-25618
SPACECRAFT LAUNCHING
What is a system? NASA's phased project description p 2665 N93-24681
Practical aspects of transfer from GTO to lunar orbit p 2604 N93-24719
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Applications of triggered lightning to space vehicle operations p 2619 N93-24878
Development of models for predicting the triggering of lightning by launch vehicles p 2610 N93-24899
CRRES: Combined release and radiation effects satellite program summary
| NASA-CR-192469 | p 2774 N93-25886
Space research in Sweden, 1990-1991 p 2888 N93-25887
Inferring heuristic classification hierarchies from natural language input p 2825 N93-25979
National Launch System. Task 4: System architecture options analysis
| MCR-92-5011 | p 2609 N93-26098
SPACECRAFT MANEUVERS
SCATHA mission termination report p 2605 N93-24725
Attitude control of the LACE satellite: A gravity gradient stabilized spacecraft p 2605 N93-24727
External tank aerothermal design criteria verification
| NASA-CR-192514 | p 2618 N93-26055
SPACECRAFT MODELS
Rate determination from vector observations p 2603 N93-24713
What is the relationship between altitude and weight in a model rocket? p 2603 N93-24715
SPACECRAFT MODULES
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209
SPACECRAFT MOTION
The dynamics and control of large flexible asymmetric spacecraft p 2617 N93-25525

Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109

SPACECRAFT ORBITS

Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721

Mars: The dynamics of orbiting satellites and gravity model development p 2896 N93-25439

Minimum-fuel power-limited transfers between coplanar elliptic orbits p 2608 N93-25684

A determination of the radio-planetary frame tie from comparison of Earth orientation parameters p 2676 N93-26106

Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110

SPACECRAFT POWER SUPPLIES

Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project

| NASA-TM-106096 | p 2687 N93-24746

Laser beamed power: Satellite demonstration applications

| NASA-CR-190793 | p 2623 N93-25132

The interaction of high voltage systems with the environments of the Moon and Mars

| NASA-TM-106107 | p 2618 N93-26148

DC-DC power converter research for Orbiter/Station power exchange

| NASA-CR-192939 | p 2633 N93-26425

SPACECRAFT PROPULSION

Summary and recommendations on nuclear electric propulsion technology for the space exploration initiative

| NASA-TM-105707 | p 2622 N93-24744

Space exploration initiative candidate nuclear propulsion test facilities

| NASA-TM-105710 | p 2622 N93-24753

Viewgraph description of Penn State's Propulsion Engineering Research Center: Activity highlights and future plans

| NASA-CR-192317 | p 2622 N93-24943

Stationary plasma thruster evaluation in Russia

| NASA-CR-192823 | p 2859 N93-25206

Space transfer vehicle concepts and requirements study. Volume 2, book 4: Integrated advanced technology development

| NASA-CR-192528 | p 2611 N93-25512

The design of a propulsion system using vent gas from a liquid helium cryogenic system p 2623 N93-25539

Nuclear electric propulsion for planetary science missions: NASA technology program planning

| NASA-TM-106139 | p 2632 N93-26210

SPACECRAFT REENTRY

Analysis of reentry into the White Sands Missile Range (WSMR) for the LifeSat mission p 2603 N93-24717

Multi-viewpoint clustering analysis p 2825 N93-25980

A hybrid multigrid technique for computing steady-state solutions to supersonic flows p 2582 N93-26078

SPACECRAFT SHIELDING

An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory

| NASA-CR-192824 | p 2653 N93-25078

SPACECRAFT STABILITY

Spacecraft detumbling through energy dissipation p 2600 N93-24696

Nonlinear stability analysis of the attitude motion of spin-stabilized thrusting spacecraft p 2617 N93-25527

SPACECRAFT STRUCTURES

Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723

The MODE family of on-orbit experiments: The Middeck Active Control Experiment (MACE) p 2599 N93-25835

Model reduction for Space Station Freedom p 2620 N93-26081

Expert systems for assembly sequence evaluation p 2669 N93-26411

Mechanics and control of multibody structural systems

| AD-A261576 | p 2619 N93-26456

SPACECRAFT TRACKING

TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703

Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704

Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721

Orbiter-orbiter and orbiter-lander tracking using same-beam interferometry p 2677 N93-26110

Geometric distortion analysis of a wide-field astrograph p 2621 N93-26111

SPACECRAFT TRAJECTORIES

Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem p 2603 N93-24718

An approach for finding long period elliptical orbits for precursor SEI missions p 2604 N93-24720

Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721

Optimal cooperative power-limited rendezvous p 2607 N93-24904

Mars: The dynamics of orbiting satellites and gravity model development p 2896 N93-25439

External tank aerothermal design criteria verification

| NASA-CR-192514 | p 2618 N93-26055

Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125

SPACECREWS

JPRS report: Science and technology. Central Eurasia: Life sciences

| JPRS-ULS-92-022 | p 2795 N93-25407

The application of integrated knowledge-based systems for the Biomedical Risk Assessment Intelligent Network (BRAIN) p 2799 N93-25595

Utilization of the graded universal testing system to increase the efficiency for assessing aerobic and anaerobic capacity p 2794 N93-26077

Automation and robotics human performance

| NASA-CR-193049 | p 2802 N93-26153

SPACELAB

Spacelab, Spacehab, and Space Station Freedom payload interface projects p 2620 N93-26080

SPACELAB PAYLOADS

STS-40 Space Shuttle mission report

| NASA-TM-108737 | p 2612 N93-25958

SPATIAL DISTRIBUTION

Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855

The effects of large-amplitude, low-frequency excitation on a three-dimensional jet p 2702 N93-25553

SPATIAL RESOLUTION

Interest of complementary data of coarse and high spatial resolution for agro-climatic crop monitoring p 2750 N93-24853

High speed x ray gating cameras for ICF imaging applications

| DE93-007500 | p 2709 N93-25515

Commercial applications multispectral sensor system p 2758 N93-25615

Detecting the scale and resolution effects in remote sensing and GIS p 2756 N93-25707

Intensity distribution of the x ray source for the AXAF VETA-I mirror test p 2854 N93-26184

SPECIES DIFFUSION

The extent and status of mangroves in Mombasa district, Kenya: A case study based on remote sensing p 2746 N93-24826

SPECIFICATIONS

Languages for requirements specifications

| RSRE-MEMO-4585 | p 2810 N93-25453

SPECTRA

An improved spectral load balancing method

| DE93-007582 | p 2810 N93-25386

Toward a parallel recursive spectral bisection mapping tool

| DE93-006632 | p 2816 N93-25414

Parallelizing the spectral transform method: A comparison of alternative parallel algorithms

| DE93-008664 | p 2816 N93-25521

Research support for the Laboratory for Lightwave Technology

| AD-A261488 | p 2856 N93-26343

Complex auditory signals

| AD-A261491 | p 2846 N93-26374

OLYMPUS/ACTS scintillation experiment at the Lewis Research Center p 2685 N93-26481

Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions

| DE93-007669 | p 2647 N93-26599

SPECTRAL CORRELATION

Implementation of cyclic spectral analysis methods

| AD-A261715 | p 2681 N93-26372

SPECTRAL ENERGY DISTRIBUTION

Complex auditory signals

| AD-A261491 | p 2846 N93-26374

SPECTRAL LINE WIDTH

Noise measurements in single-mode GaAlAs diode lasers p 2716 N93-25067

SPECTRAL METHODS

Studies of the analyte-carrier interface in flow injection analysis

| DE93-008374 | p 2644 N93-25311

An improved spectral load balancing method

| DE93-007582 | p 2810 N93-25386

Incompressible spectral-element method: Derivation of equations

| NASA-TM-106109 | p 2708 N93-26554

SPECTRAL REFLECTANCE

ANOVA method to estimate vegetation indices sensitivity assessing nitrogen fertilizing influence on spectral reflectance coefficients p 2739 N93-24782

Spectral remote sensing of anomalous mineralogy induced by hydrocarbon migration and uranium mineralization, San Rafael Swell, Utah, USA p 2739 N93-24783

Lithologic mapping with LANDSAT Thematic Mapper guided by laboratory spectral measurements, Air, Niger (Africa) p 2742 N93-24803

Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing p 2751 N93-24859

Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860

Forest damage detection and reflection of conifers: From micro to field level p 2752 N93-24864

Scale dependence in the reflectance of deciduous woodland: Evidence from a helicopter-mounted spectroradiometer p 2752 N93-24865

Condensation on cooled surfaces of optical devices at the cosmic conditions p 2753 N93-24869

Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570

SPECTRAL RESOLUTION

European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820

SPECTRAL SIGNATURES

Use of airborne imaging spectrometry to the definition of optimised specifications for land applications with future spaceborne imaging spectrometers p 2738 N93-24776

Potential operational use of remote sensing from space in forestry p 2745 N93-24817

Observation of forest damages in the Harz mountains by means of satellite remote sensing p 2749 N93-24848

Measuring the intensity of nitrogen fertilization of grassland by means of remote sensing p 2751 N93-24859

Combining spectral information with crop rotation knowledge for crop classifications p 2752 N93-24861

SPECTRAL THEORY

On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276

Prediction of global cloud cover with a very high resolution global spectral model

| AD-A261047 | p 2785 N93-25777

SPECTROMETERS

Condensation on cooled surfaces of optical devices at the cosmic conditions p 2753 N93-24869

Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870

Large area, low capacitance Si(Li) detectors for high rate x ray applications

| DE93-007661 | p 2692 N93-26598

SPECTROPHOTOMETRY

Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770

SPECTRORADIOMETERS

Remote sensing geology p 2744 N93-24815

SPECTROSCOPIC ANALYSIS

Measurements of density, temperature, and their fluctuations in turbulent supersonic flow using UV laser spectroscopy

| NASA-TM-103943 | p 2708 N93-25076

Development of resonance ionization spectroscopy for genome mapping and DNA sequencing using stable isotopes as DNA labels

| DE93-007815 | p 2793 N93-26587

SPECTROSCOPY

Scale dependence in the reflectance of deciduous woodland: Evidence from a helicopter-mounted spectroradiometer p 2752 N93-24865

Ion trap frequency standard research at PTB p 2841 N93-25050

Photomodulation spectroscopy of photocarrier dynamics, electronic defects and morphology of conducting polymers

| DE93-010140 | p 2655 N93-25524

Electrochemical and spectroscopic studies of molten halides

| AD-A261687 | p 2646 N93-26439

The surface characterization of a series of hydroxybenzenes on Ag(111): An EELS and TDS study
| DE93-007541 | p 2647 N93-26595

SPECTRUM ANALYSIS
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 4
| NASA-CR-192834 | p 2769 N93-24910
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 2
| NASA-CR-192833 | p 2770 N93-25088
Comparison of high-resolution solar irradiance spectra and the solar luminosity in the period 1980-1989
| NASA-CR-192776 | p 2898 N93-25222
Development of a cone penetrometer for measuring spectral characteristics of soils in situ
p 2776 N93-25570
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594
Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773
Tomographic analysis of sight infrared spectra of low pressure flames p 2628 N93-26030
On the cross-stream spectral method for the Orr-Sommerfeld equation
| NASA-TM-107737 | p 2845 N93-26086
Implementation of cyclic spectral analysis methods
| AD-A261715 | p 2681 N93-26372
Analysis of the IBSS spectra of Space Shuttle control engine exhaust
| AD-A261749 | p 2632 N93-26373

SPECULAR REFLECTION
Enhanced backscattering from rough surfaces
| AD-A261000 | p 2676 N93-25855

SPEECH
Perception and the temporal properties of speech
| AD-A261439 | p 2686 N93-26490

SPEECH RECOGNITION
Speech research
| AD-A260643 | p 2675 N93-25639
The adult literacy evaluator: An intelligent computer-aided training system for diagnosing adult illiterates p 2799 N93-26082

SPERMATOZOA
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363

SPHERICAL COORDINATES
Rapid exploration of curvilinear grids using direct volume rendering
| NASA-CR-192765 | p 2808 N93-24944

SPHERICAL SHELLS
Simulation study of MHD dynamo: Convection in a rotating spherical shell
| NIFS-207 | p 2860 N93-25356

SPHEROMAKS
Ion temperature measurements in the Maryland Spheromak p 2859 N93-25290

SPIN EXCHANGE
The physics of spin polarized gases
| AD-A261396 | p 2850 N93-26288

SPIN STABILIZATION
SCATHA mission termination report
p 2605 N93-24725
Attitude control of the LACE satellite: A gravity gradient stabilized spacecraft p 2605 N93-24727
Nonlinear stability analysis of the attitude motion of spin-stabilized thrusting spacecraft p 2617 N93-25527
Investigation of liquid sloshing in spin-stabilized satellites
| AD-A261671 | p 2619 N93-26438

SPIN-LATTICE RELAXATION
Deuteron and oxygen-17 NMR studies of molecular motion in methanol-saturated Nafion membranes
| AD-A261579 | p 2851 N93-26514

SPINNERS
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954

SPIRAL GALAXIES
Numerical modeling of barred spiral galaxies
p 2893 N93-25537
Far-infrared emission, gas, and ultraluminous HII regions in M101
| NASA-CR-192791 | p 2890 N93-25755

SPLICING
Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques
| DE93-008074 | p 2721 N93-25518

SPLINE FUNCTIONS
Elastic curves on the sphere
| AD-A261057 | p 2829 N93-26228

SPLINES
Radial spline assembly for antifriction bearings
| NASA-CASE-MFS-28629-1 | p 2719 N93-26001

SPLITTING
Phase differences of the fields in a Ramsey resonator for submillimetric frequency standards
p 2840 N93-25042

SPORADIC E LAYER
High Frequency (HF) radiowave propagation
| AD-A261726 | p 2681 N93-26280

SPORADIC METEOROIDS
The Taurid meteoroid complex p 2889 N93-25536

SPOT (FRENCH SATELLITE)
Satellite remote sensing for environmental geology: The Bandung (West Java) experience p 2739 N93-24784
The use of SPOT data in natural disaster prevention and damage assessment p 2743 N93-24811
Interest of complementary data of coarse and high spatial resolution for agro-climatic crop monitoring
p 2750 N93-24853

SPRAY NOZZLES
Narrow-body aircraft water spray optimization study
| DOT/FAA/CT-TN93/3 | p 2582 N93-25224

SPRAYERS
Fuel injector: Air swirl characterization aerothermal modeling, phase 2, volume 1
| NASA-CR-189193 | p 2592 N93-24754
INEL spray-forming research p 2658 N93-25562
Vision-aided monitoring and control of thermal spray, spray forming, and welding processes
p 2670 N93-25604
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948
Development of a second generation spray combustion code p 2626 N93-26016
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine
p 2626 N93-26017

SPRAYING
INEL spray-forming research p 2658 N93-25562

SPREAD SPECTRUM TRANSMISSION
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites
p 2686 N93-24999
A Biphase Shift Keying (BPSK), direct sequence, spread spectrum modem for Petite Amateur Navy Satellite (PANSAT)
| AD-A261301 | p 2618 N93-26295
Geolocation of an electromagnetic emitter using a cyclostationary time difference of arrival technique
| AD-A261781 | p 2686 N93-26603

SPREADING
Electrostatic fiber spreader
| AD-D015677 | p 2640 N93-26143

SPRING (SEASON)
Passive microwave remote sensing of snow-covered floating ice during spring conditions in the Arctic and Antarctic
| ISBN-0-315-70444-6 | p 2754 N93-25422

SPUTTERING
Sputter deposition of yttrium-oxides
| DE93-007499 | p 2654 N93-25382

SQUARE WAVES
Symbol signal-to-noise ratio loss in square-wave subcarrier downconversion p 2672 N93-24668
A frequency generating source: Frequency synthesizers p 2693 N93-25041
Bandwidth compression of noisy signals with square-wave subcarrier p 2678 N93-26120

SQUEEZED STATES (QUANTUM THEORY)
Interferometric measurement with squeezed light
| AD-A260910 | p 2856 N93-26457

STABILITY
How can millisecond pulsars improve the long term stability of atomic time scales? p 2832 N93-24985
High-order cyclo-difference techniques: An alternative to finite differences
| NASA-TM-107745 | p 2575 N93-25074
Transverse instabilities in a relativistic klystron two-beam accelerator
| DE93-007110 | p 2852 N93-25375
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
Spectra of stable sonoluminescence
| AD-A260621 | p 2844 N93-25637
Nonlinear vibrations, stability, and dynamics of structures and mechanisms
| AD-A260871 | p 2728 N93-25838
On the stability of finite plastic deformations
| AD-A261526 | p 2730 N93-26361
Theoretical treatment of spin-forbidden and electronically nonadiabatic processes. Methods and applications
| AD-A261596 | p 2851 N93-26525

STABILITY TESTS
Stability analysis and modeling of rotating flexible structures
| DE93-008493 | p 2844 N93-25520
Aeroelastic response and aeromechanical stability of helicopters with elastically coupled composite rotor blades p 2588 N93-25530
Performance of a 12-GHz fiber-optic system for beam-waveguide antenna stability testing
p 2677 N93-26113

STABILIZATION
Thermal decomposition and stabilization of ammonium dinitramide p 2630 N93-26038

STAGE SEPARATION
Space transfer vehicle concepts and requirements study. Volume 2, book 2: System and program requirements trade studies
| NASA-CR-192526 | p 2611 N93-25511

STAGNATION PRESSURE
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758
An experimental study of under-expanded jets
p 2577 N93-25467

STAGNATION TEMPERATURE
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758

STAINLESS STEELS
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201

STANDARD DEVIATION
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739

STANDARDIZATION
GPS standardization for the needs of time transfer
p 2836 N93-25016
Guidelines for evaluating and expressing the uncertainty of NIST measurements results
| PB93-159465 | p 2830 N93-26318
NDT standards from the perspective of the Department of Defense
| MTL-TR-92-68 | p 2722 N93-26434

STANDARDS
Zoning of aircraft: A review of the definitions
p 2583 N93-24880
Improved PI-network measurement of all quartz crystal parameters by appropriate modelling of the test fixture
p 2833 N93-24995
The measurement of the resonant frequency of quartz crystal units: An ongoing saga p 2833 N93-24996
Rubidium atomic frequency standards for GPS block 2R p 2836 N93-25014
Development of ASTM standards in support of advanced ceramics development
| DE93-003024 | p 2654 N93-25361
An OSI architecture for the Deep Space Network
p 2679 N93-26121
Proof of fault coverage for a formal protocol test procedure
| AD-A261612 | p 2680 N93-26166

STANDING WAVES
Basic research thermoacoustic heat transport
| AD-A261334 | p 2759 N93-26310

STAR CLUSTERS
A study of the large-scale infrared emission from a selected dark cloud
| NASA-CR-192775 | p 2888 N93-25289
30 Doradus in the Large Magellanic Cloud: The stellar content and initial mass function p 2894 N93-25559

STAR FORMATION
Structure and star forming activities of the cold massive molecular cloud G216-2.5 p 2893 N93-25477
Shells, outflows and star formation in the giant molecular cloud Monoceros R2 p 2893 N93-25555
30 Doradus in the Large Magellanic Cloud: The stellar content and initial mass function p 2894 N93-25559

STAR TRACKERS
The results of the in-flight attitude sensor calibration for the Arthur Holly Compton Gamma Ray Observatory
p 2600 N93-24697
Star tracker operation in a high density proton field
p 2600 N93-24699
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode
p 2605 N93-24724
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors
p 2606 N93-24733

Upper Atmosphere Research Satellite (UARS) attitude accuracy using coarse attitude sensors p 2607 N93-24735

STARBURST GALAXIES
Starburst Galaxies: Hard X-ray spectra and contribution to the diffuse background
| NASA-CR-192790 | p 2892 N93-25211

STATE VECTORS
Sequential design of a linear quadratic controller for the Deep Space Network antennas p 2679 N93-26123
Generalized probability model for calculation of interference to the Deep Space Network due to circularly Earth-orbiting satellites p 2679 N93-26127

STATIC ELECTRICITY
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901

STATIC LOADS
An improved spectral load balancing method
| DE93-007582 | p 2810 N93-25386

STATIC PRESSURE
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
| NASA-TM-106086 | p 2575 N93-24911
The transient development of vortices over delta wings p 2576 N93-25269
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

STATIC TESTS
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901

STATIONKEEPING
TDRSS orbit determination using short baseline differenced carrier phase p 2601 N93-24701
Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721

STATISTICAL ANALYSIS
Improvements in ERBS attitude determination without gyros p 2602 N93-24710
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Assessment and forecasting of crop yield in Niger through NOAA NDVI data p 2750 N93-24851
Global drought monitoring from NOAA polar orbiting satellites p 2750 N93-24852
Interest of complementary data of coarse and high spatial resolution for agro-climatic crop monitoring p 2750 N93-24853
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855
The evaluation of technical models used for major-accident hazard installations. Report to Commission of the European Communities Directorate General 12
| CUED/A-AERO/TR-19 | p 2668 N93-25238
Statistical modelling of software reliability
| NASA-CR-192985 | p 2809 N93-25257
Multivariate statistical analysis software technologies for astrophysical research involving large data bases p 2878 N93-25796
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938
Implementation of quality improvement techniques for management and technical processes in the ACRV project p 2723 N93-26074
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine
| NASA-TM-106097 | p 2632 N93-26211

STATISTICAL CORRELATION
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Bit hit/solar activity correlation study
| AD-A261381 | p 2896 N93-26340
Implementation of cyclic spectral analysis methods
| AD-A261715 | p 2681 N93-26372

STATISTICAL DISTRIBUTIONS
Experimental studies of fundamental problems in quantum optics
| AD-A261183 | p 2853 N93-25822

STATISTICAL MECHANICS
Multilevel techniques in large scale computation
| AD-A261082 | p 2828 N93-25762

STATISTICAL WEATHER FORECASTING
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
The effects of sampling frequency on the climate statistics of the ECMWF general circulation model
| DE93-003338 | p 2761 N93-25145

STATOR BLADES
The blade curving effects in a turbine stator cascade with low aspect ratio
| AD-A261063 | p 2595 N93-26239

STATORS
The blade curving effects in a turbine stator cascade with low aspect ratio
| AD-A261063 | p 2595 N93-26239

STEADY FLOW
Steady induction effects in geomagnetism. Part 1B: Geomagnetic estimation of steady surficial core motions: A non-linear inverse problem
| NASA-TP-3272-PT-1B | p 2776 N93-26421

STEADY STATE
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221
Simultaneous determination of gain parameters in steady state lasers
| DE93-007389 | p 2713 N93-25381
A hybrid multigrid technique for computing steady-state solutions to supersonic flows p 2582 N93-26078
Dynamic modeling of fluid transmission lines of the DSN 70-meter antennas by using a lumped parameter model p 2678 N93-26119
Oblique MHD cosmic-ray modified shocks: Two-fluid numerical simulations
| NASA-CR-192930 | p 2900 N93-26132
Another look at the driven cavity problem
| AD-A261903 | p 2708 N93-26543

STEEL STRUCTURES
Photovoltaic power without batteries for continuous cathodic protection p 2759 N93-25597

STEELS
Seismic buckling capacity of unstiffened, free-standing steel containments
| DE93-005325 | p 2723 N93-24957
In situ surface studies of conversion coatings for steel and aluminum
| AD-A261016 | p 2655 N93-25861
Hydrogen-induced stress corrosion cracking susceptibility analysis of pitch links from the AH-64 Apache helicopter
| AD-A260692 | p 2651 N93-25895

STELLAR ATMOSPHERES
Steady-state numerical models of accreting neutron stars: The effect of atmospheric CNO depletion and diffusion p 2889 N93-25624
Radial velocity measurements of carbon stars p 2895 N93-25713

STELLAR CORONAS
ROSAT investigation of flaring and activity on Prox Cen
| NASA-CR-192972 | p 2891 N93-26139

STELLAR ENVELOPES
A superconducting tunnel junction receiver for submillimeter astronomy, and analysis of observations of post-AGB star molecular envelopes p 2889 N93-25440
The effects of rotation on the winds from hot stars p 2894 N93-25620

STELLAR EVOLUTION
Origin and evolution of cataclysmic variables p 2893 N93-25245
30 Doradus in the Large Magellanic Cloud: The stellar content and initial mass function p 2894 N93-25559

STELLAR FLARES
ROSAT investigation of flaring and activity on Prox Cen
| NASA-CR-192972 | p 2891 N93-26139

STELLAR LUMINOSITY
Comparison of high-resolution solar irradiance spectra and the solar luminosity in the period 1980-1989
| NASA-CR-192776 | p 2898 N93-25222

STELLAR MAGNETIC FIELDS
Chromospheric activity in algol binaries
| AD-A261440 | p 2896 N93-26508

STELLAR MAGNITUDE
Cape Photographic Durchmusterung, volume 1
| NASA-RP-1300-VOL-1 | p 2890 N93-26002
Cape Photographic Durchmusterung, volume 2
| NASA-RP-1300-VOL-2 | p 2890 N93-26003
Cape Photographic Durchmusterung, volume 3
| NASA-RP-1300-VOL-3 | p 2890 N93-26004

STELLAR MASS
Origin and evolution of cataclysmic variables p 2893 N93-25245
Structure and star forming activities of the cold massive molecular cloud G216-2.5 p 2893 N93-25477

STELLAR MASS ACCRETION
Steady-state numerical models of accreting neutron stars: The effect of atmospheric CNO depletion and diffusion p 2889 N93-25624

STELLAR MASS EJECTION
A revised and expanded catalogue of mass ejections observed by the Solar Maximum Mission coronagraph
| NASA-CR-193146 | p 2899 N93-26556

STELLAR MODELS
Steady-state numerical models of accreting neutron stars: The effect of atmospheric CNO depletion and diffusion p 2889 N93-25624

STELLAR OSCILLATIONS
Diskoseismology: Probing relativistic accretion disks p 2894 N93-25622

STELLAR ROTATION
The effects of rotation on the winds from hot stars p 2894 N93-25620

STELLAR SPECTRA
An atlas of selected calibrated stellar spectra
| NASA-CR-177604 | p 2888 N93-25135
Radial velocity studies of the secondary in cataclysmic variables p 2888 N93-25286
Photospheric abundance analysis of low-mass pre-main sequence stars p 2894 N93-25623
Radial velocity measurements of carbon stars p 2895 N93-25713

STELLAR STRUCTURE
Diskoseismology: Probing relativistic accretion disks p 2894 N93-25622

STELLAR SYSTEMS
Prograde anomalous orbits in triaxial gravitational potentials that rotate about the long axis: VLA neutral hydrogen observations and modeling of the inclined rings around the galaxies NGC 2685 and NGC 660 p 2607 N93-25396

STELLAR WINDS
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770
The effects of rotation on the winds from hot stars p 2894 N93-25620

STELLARATORS
Assessment of torsatrons as reactors
| DE93-006721 | p 2858 N93-24969

STEREOPHONICS
Low-frequency room responses. Part 1: Background and qualitative considerations
| BBC-RD-1992/8-PT-1 | p 2673 N93-25168

STEREOPHOTOGRAPHY
High resolution stereo imaging and data compression p 2753 N93-24867

STEREOSCOPY
Experiments in multiple-baseline stereo
| AD-A261415 | p 2757 N93-26448

STIFFENING
Fatigue resistance of orthotropic plates with trapezoidal stiffeners
| TRL-TRANS-T3908 | p 2726 N93-25419

STIFFNESS
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements p 2635 N93-25544
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938
Damage detection and mitigation of composite structures using smart materials
| AD-A261121 | p 2639 N93-25945

STIFFNESS MATRIX
Using a multifrontal sparse solver in a high performance, finite element code
| NASA-CR-192718 | p 2828 N93-25223
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938

STIMULATED EMISSION
Simultaneous determination of gain parameters in steady state lasers
| DE93-007389 | p 2713 N93-25381

STIMULATION
Mechanical stimulation of skeletal muscle mitigates glucocorticoid induced decreases in prostaglandin synthesis
| NASA-CR-193040 | p 2794 N93-24763

STIRLING CYCLE
Malone refrigeration
| DE93-005439 | p 2668 N93-25447

STIRLING ENGINES
Test results of a Stirling engine utilizing heat exchanger modules with an integral heat pipe
| NASA-TM-105883 | p 2759 N93-25136
Malone refrigeration
| DE93-005439 | p 2668 N93-25447

STOCHASTIC PROCESSES
Fuel injector: Air swirl characterization aerothermal modeling, phase 2, volume 1
| NASA-CR-189193 | p 2592 N93-24754
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106

Stochastic and seismic design response of linear and nonlinear structures p 2726 N93-25484
Control of complex dynamic systems by neural networks p 2827 N93-25611
Time series analysis and multivariate analysis
| AD-A261014 | p 2830 N93-25860
Probability and statistics applied to the theory of algorithms
| AD-A261019 | p 2830 N93-25863
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938
Substantiation of a stochastic model of rhythmic phenomena
| AD-A261232 | p 2830 N93-26262
Methods of optimization under uncertainty
| AD-A261487 | p 2873 N93-26342

STOICHIOMETRY
Hot corrosion of the B2 nickel aluminides
| NASA-CR-191082 | p 2649 N93-25128
Polyimides with improved compression moldability
| NASA-CASE-LAR-14457-1 | p 2656 N93-25997
Kinetic studies in gas-phase reaction mechanisms important to the combustion process of high energy density materials: The H2/NO2 reaction p 2628 N93-26027
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
| NASA-TM-105959 | p 2633 N93-26204

STORAGE RINGS (PARTICLE ACCELERATORS)
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368

STORAGE TANKS
Tank issues: Design and placement of vapor monitoring wells
| PB93-161131 | p 2768 N93-26536

STORM DAMAGE
Assessment of storm damage in forests using SPOT imagery p 2748 N93-24842
Guide for conducting convective windstorm surveys
| PB93-148427 | p 2787 N93-26570
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584

STORM SURGES
Magnetotail processes associated with auroral surge formation
| ATR-90(7186)-1 | p 2895 N93-26147

STORMS
Investigation of winter mountain storms in Utah during the 1989 Utah/NOAA field program
| PB93-153021 | p 2785 N93-25849
A climatology of polar low occurrences in the Nordic Seas and an examination of katabatic winds as a triggering mechanism
| AD-A261719 | p 2786 N93-26245
An investigation into the causative mechanisms for explosive cyclone development over the Atlantic
| AD-A261831 | p 2786 N93-26273

STORMS (METEOROLOGY)
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
National Weather Service Winter Weather Workshop
| PB93-146785 | p 2785 N93-25775
The North Dakota thunderstorm project
| PB93-153039 | p 2785 N93-25776
Synoptic and Mesoscale Meteorology Instruction Workshop
| PB93-156347 | p 2785 N93-25870
Rainfall frequency atlas of the Midwest
| PB93-164606 | p 2785 N93-25872
Natural and augmented snowfall growth processes and their interactions with the natural and modified aerosol
| PB93-153096 | p 2786 N93-25874

STOVL AIRCRAFT
Jet-induced ground effects on a parametric flat-plate model in hover
| NASA-TM-104001 | p 2581 N93-26099

STRAIN DISTRIBUTION
Image correlation velocimetry
| AD-A261599 | p 2707 N93-26163
Failure considerations in composite systems based on 3D micromechanical stress fields, part A
| AD-A261698 | p 2641 N93-26382

STRAIN ENERGY RELEASE RATE
Numerical investigations on fracture behavior of ductile materials p 2725 N93-25411

STRAIN GAGES
The constant current loop: A new paradigm for resistance signal conditioning
| NASA-TM-108744 | p 2673 N93-25181
Magnetic multilayer strain gage
| AD-D015672 | p 2710 N93-26141

STRAIN MEASUREMENT
Internal strain analysis of ceramics using scanning laser acoustic microscopy
| NASA-CR-191118 | p 2721 N93-25451

STRAIN RATE
Approximate analysis on strain rate effects and behavior of stress and strain fields at the crack tip in Mode 2 in metallic materials, appendix no. 1
| AD-A260836 | p 2728 N93-25785
High strain rate damage development and failure mechanisms in tungsten heavy alloys
| AD-A260856 | p 2651 N93-25788

STRAKES
Helicopter low-speed yaw control
| NASA-CASE-LAR-14219-1 | p 2597 N93-25998

STRANDS
Thermal radiation in non-metalized solid rocket motors: Effect on burning rate and temperature sensitivity p 2626 N93-26020

STRANGE ATTRACTORS
Boundedness and asymptotics of the generalized theodorus iteration
| AD-A261427 | p 2829 N93-26452

STRANGENESS
Strangeness production in S + Pb and p + Pb collisions at 200 GeV/c per nucleon nucleon
| DE93-007654 | p 2847 N93-25326
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364

STRATA
Experiments on the physics of turbulent mixing in stably stratified ocean layers
| AD-A261312 | p 2790 N93-26298

STRATIFIED FLOW
Effects of surface thermal forcing on stratified flow past an isolated obstacle
| PB93-156776 | p 2776 N93-26548

STRATOCUMULUS CLOUDS
Summary by the cloud and aerosol research group for ASTEX
| AD-A261292 | p 2766 N93-26292

STRATOSPHERE
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 1: Workshop objectives and summary
| NASA-RP-1292-VOL-1 | p 2762 N93-25157
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 2: Comparisons with global atmospheric measurements
| NASA-RP-1292-VOL-2 | p 2762 N93-25158
The atmospheric effects of stratospheric aircraft. Report of the 1992 Models and Measurements Workshop. Volume 3: Special diagnostic studies
| NASA-RP-1292-VOL-3 | p 2762 N93-25159
Kelvin waves in total column ozone
| NASA-CR-192984 | p 2764 N93-25431
The pressure modulation system in the Improved Stratospheric and Mesospheric Sounder p 2773 N93-25739

STRESS ANALYSIS
Quartz crystal twinning under mechanical stress: Finite element analysis p 2839 N93-25032
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533
Reliable stress and fracture mechanics analysis of complex aircraft components using a h-p version of FEM
| AD-A260628 | p 2726 N93-25638
Computational gearing mechanics
| NASA-CR-191127 | p 2719 N93-25884
Optimization techniques for contact stress analysis
| AD-A260846 | p 2729 N93-25911
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201
Approximate techniques for predicting size effects on cleavage fracture toughness (J(sub c))
| AD-A261591 | p 2731 N93-26516
The influence of primary and secondary orientations on the elastic response of a nickel-base single-crystal superalloy
| NASA-TM-106125 | p 2731 N93-26550

STRESS CORROSION CRACKING
Hydrogen-induced stress corrosion cracking susceptibility analysis of pitch links from the AH-64 Apache helicopter
| AD-A260692 | p 2651 N93-25895
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201

STRESS DISTRIBUTION
Stress distribution in composite flatwise tension test specimens
| NASA-TM-106074 | p 2634 N93-25071
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533
Numerical simulation of damage and progressive failures in composite laminates using the layerwise plate theory p 2636 N93-25661
Low-velocity impact of composite sandwich plate p 2637 N93-25695
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701
Structural dynamic analysis of bearingless rotor blade p 2590 N93-25719
Crack tip fields in ductile crystals and bicrystals p 2866 N93-25749
Failure considerations in composite systems based on 3D micromechanical stress fields, part A
| AD-A261698 | p 2641 N93-26382

STRESS INTENSITY FACTORS
Reliable stress and fracture mechanics analysis of complex aircraft components using a h-p version of FEM
| AD-A260628 | p 2726 N93-25638

STRESS MEASUREMENT
Micromechanics of fatigue
| AD-A260577 | p 2729 N93-25901
Experimental studies of stress management by optical fluorescence
| AD-A261539 | p 2730 N93-26362

STRESS RELAXATION
Internal strain analysis of ceramics using scanning laser acoustic microscopy
| NASA-CR-191118 | p 2721 N93-25451

STRESS-STRAIN RELATIONSHIPS
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764
Approximate analysis on strain rate effects and behavior of stress and strain fields at the crack tip in Mode 2 in metallic materials, appendix no. 1
| AD-A260836 | p 2728 N93-25785
Thermomechanical response of shape memory composites
| AD-A260828 | p 2639 N93-25919

STRETCHING
Deuteron and oxygen-17 NMR studies of molecular motion in methanol-saturated Nafion membranes
| AD-A261579 | p 2851 N93-26514

STRIATION
Trailing vortex/free-surface interaction
| AD-A261654 | p 2581 N93-26195

STRING THEORY
Cosmic string cosmology p 2891 N93-24907
From fractals to wormholes via string theory p 2871 N93-25742

STRONGLY COUPLED PLASMAS
Liquid and solid ion plasmas
| AD-A261888 | p 2862 N93-26528

STRONTIUM
Collisional recombination lasers p 2713 N93-25393

STROUHAL NUMBER
Vortex shedding in oscillatory flow p 2700 N93-25438

STRUCTURAL ANALYSIS
Evaluation of MARC for the analysis of rotating composite blades
| NASA-TM-4423 | p 2723 N93-24909
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
Integrated aerodynamic-structural wing design optimization p 2587 N93-25279
Integration of design, thermal, structural, and optical analysis, including thermal animation p 2814 N93-25601

STRUCTURAL DESIGN
Grid sensitivity for aerodynamic optimization and flow analysis
| NASA-CR-192980 | p 2575 N93-25117
Integrated aerodynamic-structural wing design optimization p 2587 N93-25279
Reliable stress and fracture mechanics analysis of complex aircraft components using a h-p version of FEM
| AD-A260628 | p 2726 N93-25638
Design and analysis of curved composite components for rotorcraft fuselage frames p 2589 N93-25701
Development and application of an advanced ductile fracture mechanics methodology p 2727 N93-25718
Nonlinear vibrations, stability, and dynamics of structures and mechanisms
| AD-A260871 | p 2728 N93-25838
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
Design concepts for pressurized lunar shelters utilizing indigenous materials p 2670 N93-26414
Lunar surface structural concepts and construction studies p 2670 N93-26417

STRUCTURAL ENGINEERING
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584
STRUCTURAL FAILURE
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371
J and CTOD estimation equations for shallow cracks in single edge notch bend specimens
| AD-A261679 | p 2731 N93-26390
STRUCTURAL PROPERTIES (GEOLOGY)
Earthquake vulnerability map of the Lake Constance area p 2753 N93-24872
Geologic structure and processes of the eastern Pacific margin: California and Costa Rica p 2771 N93-25424
STRUCTURAL RELIABILITY
An efficient technique for structural reliability with applications p 2727 N93-25681
STRUCTURAL STABILITY
Active control of NITINOL-reinforced structural composites
| AD-A261062 | p 2638 N93-25780
MIT's interferometer CST testbed
p 2609 N93-25836
Repair, evaluation, maintenance, and rehabilitation research program. Continuous Deformation Monitoring System (CDMS)
| AD-A261833 | p 2586 N93-26274
STRUCTURAL VIBRATION
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors
p 2604 N93-24723
Attitude control of the LACE satellite: A gravity gradient stabilized spacecraft p 2605 N93-24727
Global dynamic modeling of a transmission system
| NASA-CR-191117 | p 2716 N93-24751
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
On the effective reflection properties of the randomly segmented elastic bar p 2724 N93-25328
Pyroshock: Bibliography
| DE93-007605 | p 2726 N93-25489
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834
Computational gearing mechanics
| NASA-CR-191127 | p 2719 N93-25884
Digital filter control of remotely operated flexible robotic structures
| DE93-007587 | p 2827 N93-26596
STRUTS
An in-depth probabilistic study of external tank attach ring
| NASA-TM-108403 | p 2624 N93-25671
MIT's interferometer CST testbed
p 2609 N93-25836
Structural load control during construction
p 2669 N93-26409
STUDENTS
MIT Space Engineering Research Center
| NASA-CR-192879 | p 2821 N93-25833
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933
The 1993/1994 NASA Graduate Student Researchers Program
| NASA-EP-283 | p 2872 N93-26051
Contribution of personality to the prediction of success in initial air traffic control specialist training
| DOT/FAA/AM-93/4 | p 2797 N93-26138
SUBASSEMBLIES
Expert systems for assembly sequence evaluation
p 2669 N93-26411
SUBDUCTION (GEOLOGY)
Geologic structure and processes of the eastern Pacific margin: California and Costa Rica p 2771 N93-25424
SUBMARINES
Membrane technology: A search for membranes for submarine atmosphere control
| AD-A260581 | p 2801 N93-25904
SUBMILLIMETER WAVES
Phase differences of the fields in a Ramsey resonator for submillimetric frequency standards
p 2840 N93-25042
Solid state frequency synthesis up to 600 GHz: An application to the Mg frequency standard
p 2842 N93-25058
Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation
| AD-A261117 | p 2609 N93-25770
SUBROUTINE LIBRARIES (COMPUTERS)
NSWC library of mathematics subroutines
| AD-A261511 | p 2884 N93-26575
SUBROUTINES
Interactive interface for National Center for Atmospheric Research (NCAR) Graphics p 2878 N93-25794
SUBSONIC FLOW
Uniform roughness studies
| WL-TR-92-3041 | p 2706 N93-25951
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198
An extended Lagrangian method
| NASA-TM-106129 | p 2707 N93-26203
SUBSTRATES
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
Phosphorus-, nitrogen-, sulfur-, and chlorine-containing molecules on surfaces
| AD-A261265 | p 2657 N93-26303
Halogen adlayers on Ag(111)
| AD-A261792 | p 2850 N93-26443
SUCCESS PROJECT
Implementation of quality improvement techniques for management and technical processes in the ACRV project p 2723 N93-26074
SUCTION
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764
SUDDEN IONOSPHERIC DISTURBANCES
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538
SULFUR
Results from the NA36 on strangeness production in 200 GeV/c per nucleon S + Pb and p - Pb reactions
| DE93-007711 | p 2848 N93-25364
SULFUR FLUORIDES
Redistribution of trace chemical species by a small convective cloud
| PB93-156164 | p 2765 N93-25873
SUMMER
Gordon Conference on Point Defects, Line Defects and Interfaces in Semiconductors
| AD-A261485 | p 2868 N93-26357
SUNSPOTS
Solar-geophysical data number 581, January 1993. Part 1: (Prompt reports). Data for December, November 1992, and late data
| PB93-161743 | p 2899 N93-26537
Solar-geophysical data number 581, January 1993. Part 2: (Comprehensive reports). Data for July 1992 and miscellaneous
| PB93-161750 | p 2899 N93-26538
SUPERCHARGERS
Radial inflow turbine study
| AD-A260767 | p 2594 N93-25917
SUPERCOMPUTERS
Supercomputer Debugging Workshop 1992
| DE93-007322 | p 2805 N93-25165
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448
Use of high performance networks and supercomputers for real-time flight simulation p 2598 N93-25574
Construction of a connectionist network supercomputer
| AD-A260929 | p 2820 N93-25648
The state of computing at Los Alamos National Laboratory, FY 1991
| LA-12326-MS | p 2811 N93-25943
SUPERCONDUCTING DEVICES
Environmental test program for superconducting materials and devices
| DE93-003646 | p 2864 N93-25506
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588
SUPERCONDUCTING FILMS
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
| NASA-CR-192344 | p 2863 N93-25219
Film fabrication technologies at NREL
p 2658 N93-25563
SUPERCONDUCTING MAGNETS
Low temperature Hall and Shubnikov-de Haas effects
| AD-A261871 | p 2869 N93-26540
SUPERCONDUCTING SUPER COLLIDER
Studies of avalanche photodiodes for scintillating fibre tracking readout
| DE93-008370 | p 2689 N93-25491
SUPERCONDUCTIVITY
Consequences of spontaneous and anomalous symmetry breaking for the orbital and mass flow hydrodynamics of He-3 - A p 2698 N93-25295
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
| JPRS-UPM-92-004 | p 2844 N93-25402
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
| JPRS-UPM-92-003 | p 2844 N93-25403
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
| JPRS-UPM-93-001 | p 2844 N93-25404
Inelastic scattering in condensed matter with high intensity Moessbauer radiation
| DE93-008763 | p 2864 N93-25503
A novel method for characterization of superconductors: Physical measurements and modeling of thin films
p 2871 N93-25584
Developing and improving numerical algorithms to study intrinsically correlated electron systems
| AD-A261214 | p 2849 N93-25734
Advanced HTS S-N-S devices
| AD-A261552 | p 2869 N93-26381
Computational methods for flow problems: Parallel algorithms, flow control, and novel approaches
| AD-A261400 | p 2707 N93-26400
Transition metal chelate-fulleride compounds: Electrocrystallization of semiconducting (Ru(bpy)s)(C60)2
| AD-A261549 | p 2869 N93-26577
SUPERCONDUCTORS
A novel method for characterization of superconductors: Physical measurements and modeling of thin films
p 2871 N93-25584
Aerospace devices for magnetic replicas
| NASA-CR-192958 | p 2865 N93-25667
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
Experimental and theoretical studies of proximity effect and Coulomb blockade phenomena in Josephson junctions
| AD-A261652 | p 2867 N93-26194
Electronics and Electrical Engineering Laboratory technical publication announcements covering laboratory programs, July to September 1992 with 1992/1993 EEEL events calendar
| PB93-158632 | p 2884 N93-26530
SUPERCRITICAL FLOW
Influence of supercritical conditions on pre-combustion chemistry and transport behavior of jet fuels
| AD-A261813 | p 2661 N93-26268
SUPERCRITICAL PRESSURES
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948
SUPERFLUIDITY
Consequences of spontaneous and anomalous symmetry breaking for the orbital and mass flow hydrodynamics of He-3 - A p 2698 N93-25295
SUPERHIGH FREQUENCIES
Effect-specific analysis of propagation parameters
p 2684 N93-26478
The Virginia Tech OLYMPUS propagation experiment
p 2685 N93-26479
SUPERLATTICES
New concepts for high efficiency energy conversion: The avalanche heterostructure and superlattice solar cells
| DE92-010592 | p 2758 N93-25098
Magnetic excitations in antiferromagnetically coupled superlattices: Fe/Mo and Fe/Cr
| DE93-007894 | p 2863 N93-25369
Electric field effects on quantum-confined semiconductor structures p 2865 N93-25703
Measurement of optical properties of infrared bandgap superlattices
| AD-A260859 | p 2866 N93-25789
Short-period superlattice materials for heterojunction bipolar transistors
| AD-A260701 | p 2866 N93-25897
Optoelectronic III-V heterostructures on Si substrates
| AD-A261651 | p 2867 N93-26193
SUPERNOVAE
An investigation of neutrino properties through study of the sun, supernovae, the early universe and lab data
p 2898 N93-25180
SUPERPLASTICITY
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632
SUPERSONIC AIRCRAFT
Experimental performance of a ventral nozzle with pitch and yaw vectoring capability for SSTOVL aircraft
| NASA-TM-106054 | p 2592 N93-25129
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391

SUPERSONIC COMBUSTION
Solid fuel supersonic combustion p 2625 N93-26010
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets p 2625 N93-26012
SUPERSONIC COMBUSTION RAMJET ENGINES
Generic hypersonic vehicle performance model | NASA-CR-192953 | p 2587 N93-25162
Optimized scramjet engine integration on a waverider airframe p 2593 N93-25480
Workshop Report: A validation study of Navier-Stokes codes for transverse injection into a Mach 2 flow p 2624 N93-26008
The effect of entrance radius and film injection on wall heating in scramjet nozzles p 2625 N93-26009
SUPERSONIC FLOW
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction | NASA-TM-106086 | p 2575 N93-24911
Measurements of density, temperature, and their fluctuations in turbulent supersonic flow using UV laser spectroscopy | NASA-TM-103943 | p 2708 N93-25076
A contribution to the great Riemann solver debate | NASA-CR-191409 | p 2575 N93-25083
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls | NASA-TM-106087 | p 2696 N93-25175
An investigation of laser velocimetry measurements within high speed, complex flows p 2697 N93-25237
Supersonic shock wave/vortex interaction | NASA-CR-192917 | p 2576 N93-25249
Experimental and computational investigation of helium injection into air at supersonic and hypersonic speeds p 2577 N93-25487
Studies in air/air supersonic mixing layers p 2582 N93-26007
Workshop Report: A validation study of Navier-Stokes codes for transverse injection into a Mach 2 flow p 2624 N93-26008
A hybrid multigrid technique for computing steady-state solutions to supersonic flows p 2582 N93-26078
An extended Lagrangian method | NASA-TM-106129 | p 2707 N93-26203
SUPERSONIC HEAT TRANSFER
Heat transfer measurements in swept shock wave/turbulent boundary-layer interactions p 2704 N93-25705
SUPERSONIC SPEED
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF) p 2598 N93-26006
The effect of entrance radius and film injection on wall heating in scramjet nozzles p 2625 N93-26009
Experimental effects of wing location on wing-body pressures at supersonic speeds | NASA-TM-4434 | p 2581 N93-26085
Supersonic aeroelastic instability results for a NASP-like wing model | NASA-TM-107739 | p 2591 N93-26553
Optically smart surfaces survivability testing at Mach 3 | AD-A261785 | p 2857 N93-26566
SUPERSONIC TRANSPORTS
Aerodynamic design and synthesis of the oblique flying wing supersonic transport p 2587 N93-24768
Screening studies of advanced control concepts for airbreathing engines | NASA-TM-106042 | p 2592 N93-25079
Bibliography on propulsion airframe integration technologies for high-speed civil transport applications, 1980-1991 | NASA-TM-105602 | p 2573 N93-26136
SUPERSONIC WIND TUNNELS
NASA Lewis 8- by 6-foot supersonic wind tunnel user manual | NASA-TM-105771 | p 2597 N93-25080
SUPPORT SYSTEMS
Systems engineering considerations for operational support systems p 2666 N93-24689
JSC research and technology | NASA-TM-104763 | p 2901 N93-25188
Adaptive decision support systems: Concepts, characterization, and an application p 2876 N93-25475
Department of Defense technical architecture framework for information management. Volume 3: Reference model and standards profile, version 1.3 | AD-A261913 | p 2882 N93-26230
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight | AD-A261646 | p 2618 N93-26232
A hypertext framework for group support systems | AD-A261731 | p 2885 N93-26582
Task Type E report for National Launch Demonstration Center (NLDC) (Task 32) | MCR-91-5010 | p 2610 N93-26591
SUPPORTS
Automated inspection of solder joints for surface mount technology | NASA-TM-104580 | p 2721 N93-26137
SURFACE DEFECTS
Correlation of damage threshold and surface geometry of nodular defects in HR coatings as determined by in-situ atomic force microscopy | DE93-007509 | p 2654 N93-25384
Continuum and micromechanics treatment of constraint in fracture | AD-A260927 | p 2727 N93-25647
Defect initiation/growth and energy dissipation induced by deformation and fracture | AD-A261703 | p 2869 N93-26385
Modeling of electric-field enhancement at nodular defects in dielectric mirror coatings | DE93-007513 | p 2857 N93-26593
SURFACE DIFFUSION
Surface diffusion studies by optical diffraction techniques | DE93-007707 | p 2853 N93-25550
SURFACE ENERGY
Surface energy fluxes at Central Florida during the convection and precipitation electrification experiment | NASA-CR-192826 | p 2769 N93-24945
Theoretical predictions of platinum-rhodium bimetallic catalysts | DE93-007540 | p 2649 N93-25428
Phase-field models for anisotropic interfaces | PB93-164564 | p 2646 N93-26323
SURFACE FINISHING
Surface preparation and characterization of a 400 micrometer diameter fused silica optical fiber for direct optical initiation (DOI) applications | DE93-005485 | p 2852 N93-25182
Ultrasonic polishing p 2670 N93-25580
Surface finish quality of the outer AXAF mirror pair based on x ray measurements of the VETA-I p 2855 N93-26191
SURFACE GEOMETRY
On machine capacitance dimensional and surface profile measurement system p 2670 N93-25579
Computational gearing mechanics | NASA-CR-191127 | p 2719 N93-25884
SURFACE IONIZATION
Diagnostics of diamond film deposition plasmas | AD-A260866 | p 2860 N93-25626
SURFACE LAYERS
In situ surface studies of conversion coatings for steel and aluminum | AD-A261016 | p 2655 N93-25861
Experiments on the physics of turbulent mixing in stably stratified ocean layers | AD-A261312 | p 2790 N93-26298
SURFACE NAVIGATION
Using fuzzy behaviors for the outdoor navigation of a car with low-resolution sensors | DE93-002428 | p 2584 N93-25120
SURFACE PROPERTIES
Inherent optical properties of lakes as measured by Landsat 5 Thematic Mapper p 2746 N93-24828
Surface diffusion studies by optical diffraction techniques | DE93-007707 | p 2853 N93-25550
SURFACE REACTIONS
Theoretical studies of surface reactions on metals and electronic materials | DE93-009761 | p 2650 N93-25502
A numerical simulation of adsorption onto a crystalline surface | AD-A261079 | p 2866 N93-25781
Activation of methane by clean and chemically modified single crystal oxide surfaces | PB93-157295 | p 2644 N93-25817
Dynamics of gas-surface interactions | AD-A261402 | p 2646 N93-26402
SURFACE ROUGHNESS
Uniform roughness studies | WL-TR-92-3041 | p 2706 N93-25951
Isolation and analysis of key components of seafloor relief | AD-A261635 | p 2790 N93-26170
Interface engineering in oxide fiber/oxide matrix composites | AD-A261705 | p 2641 N93-26579
SURFACE TEMPERATURE
Winter warming from large volcanic eruptions | NASA-CR-192848 | p 2763 N93-25244
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models | AD-A260894 | p 2789 N93-25657
Land surface processes and climate modeling p 2783 N93-25685
Neural networks for atmospheric retrievals p 2824 N93-25975
Effects of surface thermal forcing on stratified flow past an isolated obstacle | PB93-156776 | p 2776 N93-26548
SURFACE WAVES
The instability of a liquid jet in a compressible airstream p 2703 N93-25560
SURFACTANTS
Structure of sodium 4-(1'-heptylnonyl) benzenesulfonate adsorbed on alumina using H-2 NMR | AD-A261224 | p 2645 N93-26300
SURGES
A system to measure lightning-induced transients on spacecraft umbilical lines p 2693 N93-24889
Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898
Active stabilization of aeromechanical systems | AD-A261366 | p 2595 N93-26335
SURVEILLANCE
Rome Laboratory Journal, 1992 | AD-A260821 | p 2911 N93-25910
Algorithms for space-based infrared surveillance | AD-A261891 | p 2857 N93-26542
SURVEILLANCE RADAR
The ATC evaluation of the prototype Airport Surveillance Radar Wind Shear Processor (ASR-WSP) at Orlando International Airport | DOT/FAA/CT-TN92/48 | p 2673 N93-25210
SURVEYS
The JGOFS North Atlantic Bloom Experiment: An overview p 2735 N93-24934
Data management for JGOFS: Theory and design p 2735 N93-24935
The continuous plankton recorder survey: A long-term, basin-scale oceanic time series p 2736 N93-24937
Experimental modal survey of the probe mass mock-up | DE93-008846 | p 2617 N93-25494
Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988 | AD-A260869 | p 2800 N93-25628
Aircraft electrical and environmental systems, AFSCs 452x5, 454x5, and 454x6 | AD-A261213 | p 2590 N93-25733
Design Knowledge Management System (DKMS) Beta Test Report | AD-A261453 | p 2883 N93-26350
SWEDEN
Space research in Sweden, 1990-1991 p 2888 N93-25887
SWELLING
Temperature dependent sensor response caused by polymer-solvent interactions | DE93-005368 | p 2655 N93-25444
SWEPT WINGS
Stationary crossflow instability on an infinite swept wing p 2580 N93-25865
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings | NASA-TP-3259 | p 2581 N93-26134
Supersonic aeroelastic instability results for a NASP-like wing model | NASA-TM-107739 | p 2591 N93-26553
SWIRLING
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2 | NASA-CR-189193 | p 2592 N93-25106
SWITCHES
Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project | NASA-TM-106096 | p 2687 N93-24746
Modeling of plasma flow switches at low, intermediate and high energies | DE93-007359 | p 2858 N93-25167
SYMBOLIC PROGRAMMING
Analysis of symbolic parameter models | AD-A261930 | p 2811 N93-26253
SYMBOLS
Symbol signal-to-noise ratio loss in square-wave subcarrier downconversion p 2672 N93-24668
Information transmission using CHAOS | AD-A261519 | p 2883 N93-26377

SYMMETRY
Hypervelocity impact study: The effect of impact angle on crater morphology
| NASA-CR-192711 | p 2724 N93-25260
New ground states in unconventional superconductors p 2688 N93-25282

SYNCHRONISM
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites p 2686 N93-24999
Synchronisation, acquisition and tracking for telemetry and data reception p 2614 N93-25000
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
Mixed constellation synchronization of GPS time p 2836 N93-25015
Time and frequency reference for a trajectory measurement system p 2837 N93-25023
Time generation and distribution system for a military national synchronization p 2842 N93-25060
Timing a national telecommunications network using GPS p 2687 N93-25062
Strategies for synchronisation in an evolving telecommunications network p 2687 N93-25063
Supercomputer Debugging Workshop 1992
| DE93-007322 | p 2805 N93-25165
A software development approach for parallel processing systems integrating object-oriented and functional paradigms p 2816 N93-25481
Virtually-synchronous communication based on a weak failure suspector
| NASA-CR-193003 | p 2721 N93-26135
Fast mutual exclusion for uniprocessors
| AD-A261663 | p 2883 N93-26389

SYNCHRONOUS SATELLITES
Analysis of the effects of mean local node-crossing time on the evolution of Sun-synchronous orbits p 2602 N93-24706
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
SCATHA mission termination report p 2605 N93-24725
Satellite communications application to Pacific countries above Ku band p 2683 N93-26471

SYNCHROTRON RADIATION
Synchrotron radiation X ray topography study of lateral field resonators p 2833 N93-24994
Poster session: Fifth Users Meeting for the Advanced Photon Source
| DE93-006019 | p 2598 N93-26498

SYNCHROTRONS
Preliminary design of the BPM electronics memory scanner/dual boxcar averager for the advanced photon source
| DE93-007893 | p 2848 N93-25368

SYNOPTIC METEOROLOGY
Synoptic and Mesoscale Meteorology Instruction Workshop
| PB93-156347 | p 2785 N93-25870
Rainfall frequency atlas of the Midwest
| PB93-164606 | p 2785 N93-25872

SYNTHESIS (CHEMISTRY)
Design of a high activity and selectivity alcohol catalyst
| DE93-008101 | p 2659 N93-25111
A novel process for methanol synthesis
| DE93-008037 | p 2659 N93-25118
Probe molecule studies: Active species in alcohol synthesis
| DE93-008097 | p 2659 N93-25119
New directions in phthalocyanine pigments
| NASA-CR-192443 | p 2656 N93-26155
Characterization of the synthesis of M-61, a random equilibrium silicone terpolymer, using dry starting materials
| KCP-613-4985 | p 2657 N93-26213
Electrochemical and spectroscopic studies of molten halides
| AD-A261687 | p 2646 N93-26439

SYNTHESIZERS
Design, fabrication, and testing of a three-dimensional acoustic orientation instrument (3-D AOI): Drawings, engineering and associated lists (conceptual and development design)
| AD-A260934 | p 2845 N93-25915
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279

SYNTHETIC APERTURE RADAR
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777
The scope of DLR's SAR calibration program p 2738 N93-24778
Registration of the use of agricultural fields and soil erosion using satellite remote sensing p 2751 N93-24856
Methods of evaluating the effects of coding on SAR data p 2804 N93-25926
SAR-related stress variability in the marine atmospheric boundary layer
| AD-A261129 | p 2775 N93-25946
DSN acquisition of Magellan high-rate telemetry data p 2614 N93-26124

SYNTHETIC RESINS
Extruded films from modified polypropylene resin: Dielectric and breakdown studies
| AD-A261382 | p 2657 N93-26341

SYSTEM EFFECTIVENESS
Analysis of large system black box verification test data
| NASA-CR-192885 | p 2815 N93-24748
Firmware development improves system efficiency p 2807 N93-25606

SYSTEM FAILURES
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588

SYSTEM IDENTIFICATION
The 32nd CDC: System identification using interval dynamic models
| NASA-CR-192895 | p 2818 N93-25155
Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199
ASTROS-ID: Software for system identification using mathematical programming
| AD-A260867 | p 2810 N93-25627
Exploitation of cyclostationarity for signal-parameter estimation and system identification
| AD-A260833 | p 2728 N93-25784

SYSTEMS ANALYSIS
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
Space transfer vehicle concepts and requirements study. Volume 2, book 3: STV system interfaces
| NASA-CR-192527 | p 2611 N93-25513
A digital hardware test system analysis with test vector translation
| AD-A260849 | p 2810 N93-25786
System Concept of Operations Evaluator (SCOPE)
| AD-A261257 | p 2813 N93-26563
A hypertext framework for group support systems
| AD-A261731 | p 2885 N93-26582

SYSTEMS ENGINEERING
Readings in Systems Engineering
| NASA-SP-6102 | p 2665 N93-24678
The systems engineering overview and process (from the Systems Engineering Management Guide, 1990) p 2665 N93-24679
Systems engineering for very large systems p 2665 N93-24680
What is a system? NASA's phased project description p 2665 N93-24681
Management issues in systems engineering p 2665 N93-24682
Spacecraft systems engineering: An introduction to the process at GSFC p 2665 N93-24683
Systems engineering and integration and management for manned space flight programs p 2666 N93-24684
The SE role in establishing, verifying and controlling top-level program requirements p 2666 N93-24685
The importance of cost considerations in the systems engineering process p 2666 N93-24686
Systems engineering and the user: Incorporation of user requirements into the SE process p 2666 N93-24687
Systems engineering and integration processes involved with manned mission operations p 2666 N93-24688
Systems engineering considerations for operational support systems p 2666 N93-24689
Political and institutional factors affecting systems engineering p 2666 N93-24690
Optimization in the systems engineering process p 2666 N93-24691
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
Ultra stable oscillators for satellite applications p 2621 N93-25027
First experience with the ASN-16 GLONASS receiver p 2693 N93-25033
Time generation and distribution system for a military national synchronization p 2842 N93-25060
Integrated Development Support Environment (IDSE)
| AD-A261088 | p 2877 N93-25763
Architecture of autonomous systems
| NASA-CR-192974 | p 2801 N93-26047
Advanced Launch System (ALS) test requirements
| MCR-91-5004 | p 2610 N93-26181
Develop margin philosophy to attain robustness
| MCR-92-5005 | p 2610 N93-26182
Advanced technology for portable personal visualization
| AD-A261294 | p 2807 N93-26293
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366
Proceedings of the complex systems engineering synthesis and assessment technology workshop
| AD-A261404 | p 2807 N93-26403
Systems engineering studies of on-orbit assembly operations p 2669 N93-26410
CALS-HSC data element dictionary
| AD-A261560 | p 2813 N93-26461
System Concept of Operations Evaluator (SCOPE)
| AD-A261257 | p 2813 N93-26563
Task Type E report for National Launch Demonstration Center (NLDC) (Task 32)
| MCR-91-5010 | p 2610 N93-26591

SYSTEMS INTEGRATION
Land cover, an essential component of the CORINE information system on the environment: GIS implications p 2740 N93-24787
A knowledge-based approach to waste disposal sites detection through integration of Landsat-TM imagery and geographical context information p 2741 N93-24796
Cartography and statistics of crops under irrigation in the Donana area of Andalucia through the use of Landsat-TM imagery and its incorporation into a GIS p 2751 N93-24855
Runway Visual Range (RVR) Operational Test and Evaluation (OT&E) integration and OT&E operational test report
| DOT/FAA/CT-TN93/37 | p 2584 N93-25243
Piloted simulation of an air-ground profile negotiation process in a time-based Air Traffic Control environment
| NASA-TM-107748 | p 2585 N93-26087
Bibliography on propulsion airframe integration technologies for high-speed civil transport applications, 1980-1991
| NASA-TM-105602 | p 2573 N93-26136
Methodology investigation: Global Positioning System integration (GPS)
| AD-A261054 | p 2586 N93-26237
CALS-HSC data element dictionary
| AD-A261560 | p 2813 N93-26461
Improved selective catalytic NOx control technology for compressor station reciprocating engines
| PB93-158566 | p 2768 N93-26529

SYSTEMS MANAGEMENT
Management issues in systems engineering p 2665 N93-24682
Spacecraft systems engineering: An introduction to the process at GSFC p 2665 N93-24683
Systems engineering and integration and management for manned space flight programs p 2666 N93-24684
The SE role in establishing, verifying and controlling top-level program requirements p 2666 N93-24685
Systems engineering and the user: Incorporation of user requirements into the SE process p 2666 N93-24687
Political and institutional factors affecting systems engineering p 2666 N93-24690
Optimization in the systems engineering process p 2666 N93-24691
System of Experts for Intelligent Data Management (SEIDAM) p 2879 N93-25800
Intelligent access to multiple relational database systems
| AD-A261198 | p 2881 N93-25824
Fast mutual exclusion for uniprocessors
| AD-A261663 | p 2883 N93-26389
Test, Control and Monitor System maintenance plan
| NASA-CR-193099 | p 2873 N93-26420

SYSTOLIC ARRAYS
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650

T

T TAURI STARS
Structure and star forming activities of the cold massive molecular cloud G216-2.5 p 2893 N93-25477
Photospheric abundance analysis of low-mass pre-main sequence stars p 2894 N93-25623

TACTILE SENSORS (ROBOTICS)
Modeling of a full vision system using combined Visual/Haptic search for remote object identification
| AD-A260977 | p 2801 N93-25867

TAIWAN
Effects of Taiwan orography on the motion and structure of typhoons
| AD-A261819 | p 2786 N93-26270

TALC
Chromate-free corrosion resistant talc coatings for aluminum alloys
| DE93-005370 | p 2655 N93-25446
TANKS (COMBAT VEHICLES)
Elastomer compound developed for high wear applications p 2659 N93-25607
A Hierarchical Target Extraction, Recognition, and Tracking (HiTert) system
| AD-A260567 | p 2854 N93-25898
TARGET ACQUISITION
Algorithms for space-based infrared surveillance
| AD-A261891 | p 2857 N93-26542
TARGET RECOGNITION
Efficient generation of synthetic terrain imagery for automatic target recognition
| AD-A260705 | p 2756 N93-25653
A Hierarchical Target Extraction, Recognition, and Tracking (HiTert) system
| AD-A260567 | p 2854 N93-25898
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
TARGETS
Sputter deposition of yttrium-oxides
| DE93-007499 | p 2654 N93-25382
TASK COMPLEXITY
Performance-based testing and success in Naval advanced flight training
| AD-A260838 | p 2590 N93-25933
TASKS
Tree classification software p 2814 N93-25591
Conversion of the CTA, Inc., en route operations concepts database into a formal sentence outline job task taxonomy
| AD-A261410 | p 2586 N93-26447
TAURID METEOROIDS
The Taurid meteoroid complex p 2889 N93-25536
TAXONOMY
Biodiversity indication by Earth observation data p 2751 N93-24858
TAYLOR SERIES
Image correlation velocimetry
| AD-A261599 | p 2707 N93-26163
TDR SATELLITES
TDRSS orbit determination using short baseline differenced carrier phase p 2601 N93-24701
Application of GPS tracking techniques to orbit determination for TDRS p 2601 N93-24702
TDRSS-user orbit determination using batch least-squares and sequential methods p 2601 N93-24703
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704
Orbit determination and orbit control for the Earth Observing System (EOS) AM spacecraft p 2601 N93-24705
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications
| NASA-CR-192715 | p 2673 N93-25198
A prototype for simulation of the space-to-ground assembly/contingency system of Space Station Freedom p 2619 N93-26065
TECHNOLOGICAL FORECASTING
Using AI/expert system technology to automate planning and replanning for the HST servicing missions p 2822 N93-25962

Energy and Technology Review, August-September 1992
| DE93-005882 | p 2901 N93-24974
The evaluation of technical models used for major-accident hazard installations. Report to Commission of the European Communities Directorate General 12
| CUED/A-AERO/TR-19 | p 2668 N93-25238
Energy and Technology Review, October - December 1992
| DE93-007784 | p 2674 N93-25299
The PACSAT Communications Experiment (PCE)
| DE93-008185 | p 2674 N93-25308
Technology 2002: The Third National Technology Transfer Conference and Exposition, volume 1
| NASA-CP-3189-VOL-1 | p 2901 N93-25561
Film fabrication technologies at NREL p 2658 N93-25563
Technology for America's economic growth: A new direction to build economic strength
| AD-A261553 | p 2887 N93-26458
TECHNOLOGY UTILIZATION
Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670
Natural disasters and their mitigation using space technology p 2742 N93-24804
Technology Transfer 92/93
| DE93-003623 | p 2887 N93-24965
The development progresses of hydrogen masers at Shanghai Observatory p 2716 N93-25048
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-003 | p 2737 N93-25398
JPRS report: Science and technology. Central Eurasia: Earth sciences
| JPRS-UES-92-002 | p 2737 N93-25426
The 1993 Goddard Conference on Space Applications of Artificial Intelligence
| NASA-CP-3200 | p 2822 N93-25961
High performance computing and communications panel report p 2807 N93-26131
Technology for America's economic growth: A new direction to build economic strength
| AD-A261553 | p 2887 N93-26458
TECTONICS
Earthquake vulnerability map of the Lake Constance area p 2753 N93-24872
Geologic structure and processes of the eastern Pacific margin: California and Costa Rica p 2771 N93-25424
Crustal deformation studies in subaerial parts of the world oceanic rift system: Iceland and Afar p 2789 N93-25558
TELECOMMUNICATION
The Telecommunications and Data Acquisition Report
| NASA-CR-192887 | p 2671 N93-24659
Synopsis of timing measurement techniques used in telecommunications p 2687 N93-25064
Rome Laboratory Journal, 1992
| AD-A260821 | p 2911 N93-25910
Anomalous event diagnosis for environmental satellite systems p 2619 N93-25971
The Telecommunications and Data Acquisition Report
| NASA-CR-192804 | p 2676 N93-26105
Advanced optical fiber communication systems
| AD-A261802 | p 2856 N93-26256
A channel simulation processor for the multi-node tactical network simulator
| AD-A261810 | p 2776 N93-26430
TELECONFERENCING
Gigabit network communications research
| AD-A260644 | p 2675 N93-25640
TELEMETRY
A functional description of the Buffered Telemetry Demodulator (BTD) p 2614 N93-24667
Resolution of the COBE Earth sensor anomaly p 2600 N93-24700
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Synchronisation, acquisition and tracking for telemetry and data reception p 2614 N93-25000
An advanced data-acquisition system for wind energy projects
| DE93-000079 | p 2874 N93-25254
The Generic Spacecraft Analyst Assistant (GenSAA): A tool for developing graphical expert systems p 2814 N93-25589
Exploitation of cyclostationarity for signal-parameter estimation and system identification
| AD-A260833 | p 2728 N93-25784
DSN acquisition of Magellan high-rate telemetry data p 2614 N93-26124
Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125
TELEOPERATORS
Telerobotic rovers for extraterrestrial construction p 2670 N93-26416
TELEROBOTICS
Modeling of a full vision system using combined Visual/Haptic search for remote object identification
| AD-A260977 | p 2801 N93-25867
Telerobotic rovers for extraterrestrial construction p 2670 N93-26416
TELESCOPES
Testing of the on-board attitude determination and control algorithms for SAMPEX p 2600 N93-24698
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728
Development of laser guide stars and adaptive optics for large astronomical telescopes
| DE93-007511 | p 2888 N93-25320
Development of a tool-set for simultaneous, multi-site observations of astronomical objects p 2878 N93-25795
Feasibility experiment for sodium-layer laser guide stars at the Lawrence Livermore National Laboratory
| DE93-007115 | p 2715 N93-26503
TELEVISION RECEPTION
An example of a phase-segregated enhanced PAL broadcasting system
| BBC-RD-1992/6 | p 2674 N93-25239
TELEVISION SYSTEMS
Experiments with the HIVITS HDTV contribution CODED
| BBC-RD-1992/12 | p 2674 N93-25391
Adaptive liquid crystal TV based joint transform correlator as applied to real-time pattern recognition
| AD-A260724 | p 2864 N93-25655
Emerging large-screen display technology
| AD-A261066 | p 2681 N93-26241
TELEVISION TRANSMISSION
Use of the TV-signal in stabilizing a local rubidium oscillator p 2693 N93-25029
An example of a phase-segregated enhanced PAL broadcasting system
| BBC-RD-1992/6 | p 2674 N93-25239
Experiments with the HIVITS HDTV contribution CODED
| BBC-RD-1992/12 | p 2674 N93-25391
TEMPERATE REGIONS
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
| AD-A260889 | p 2783 N93-25633
TEMPERATURE COMPENSATION
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001
OSCCAR: Oscillator-compensated with a capacitance array p 2693 N93-25002
Noise-optimal control of HEMT LNA's for compensation of temperature deviations p 2678 N93-26115

TEMPERATURE CONTROL
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007
Study of plate-fin heat exchanger and cold plate for the active thermal control system of Space Station p 2619 N93-26064
The reuse of logistics carriers for the first lunar outpost alternative habitat study p 2671 N93-26083
Improvements in X-band transmitter phase stability through Klystron body temperature regulation p 2678 N93-26114
Plasma current collection of Z-93 thermal control paint as measured in the Lewis Research Center's plasma interaction facility
| NASA-TM-106132 | p 2618 N93-26215
Multivariable control for flexible IC processing
| AD-A261685 | p 2692 N93-26366

TEMPERATURE DEPENDENCE
Temperature-dependent electrical conductivity of soda-lime glass
| DE93-007872 | p 2654 N93-25359
Temperature dependent sensor response caused by polymer-solvent interactions
| DE93-005368 | p 2655 N93-25444
Temperature dependence of radiation damage and its annealing in silicon detectors
| DE93-003854 | p 2869 N93-26494

TEMPERATURE DISTRIBUTION
Indian Ocean analyses p 2733 N93-24925
The effects of large-amplitude, low-frequency excitation on a three-dimensional jet p 2702 N93-25553
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
| AD-A260901 | p 2727 N93-25658
A new LU-SGS flow solver for calculating reentry flows p 2579 N93-25759

TEMPERATURE EFFECTS
Radiation and temperature effects on electronic components investigated under the CSTI high capacity power project
| NASA-TM-106096 | p 2687 N93-24746
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
FNAS computational modeling
| NASA-CR-192512 | p 2863 N93-25225
Integration of design, thermal, structural, and optical analysis, including thermal animation p 2814 N93-25601
Active control of NITINOL-reinforced structural composites
| AD-A261062 | p 2638 N93-25780
Deformations of active flexible rods with embedded line actuators
| AD-A261207 | p 2729 N93-25950
Thermal radiation in non-metalized solid rocket motors: Effect on burning rate and temperature sensitivity p 2626 N93-26020
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
| NASA-CR-191121 | p 2652 N93-26235
Thermally induced stresses in a composite exposed to fire
| AD-A261714 | p 2641 N93-26371

TEMPERATURE GRADIENTS
Crystal growth and physical characterizations of GaPO4 p 2840 N93-25044

TEMPERATURE MEASUREMENT
Thermoelasticity in quartz p 2841 N93-25047
Measurements of density, temperature, and their fluctuations in turbulent supersonic flow using UV laser spectroscopy
| NASA-TM-103943 | p 2708 N93-25076
Fibre optic sensors for heat transfer studies p 2853 N93-25748
Flame structure studies of a lean, 20 torr H2/N2O/AR flame employing molecular beam mass spectrometry p 2627 N93-26025
An experimental and analytical study of the unsteady combustion of homogeneous energetic solids using the laser-recoil method p 2630 N93-26042
Research support for the Laboratory for Lightwave Technology
| AD-A261488 | p 2856 N93-26343

TEMPERATURE PROFILES
The effects of large-amplitude, low-frequency excitation on a three-dimensional jet p 2702 N93-25553

TEMPERATURE RATIO
Optimizing the G/T ratio of the DSS-13 34-meter beam-waveguide antenna p 2678 N93-26118

TEMPERATURE SENSORS
SiC microsensor with piezoresistive diamond sensing elements
| AD-A261346 | p 2868 N93-26312

TEMPLATES
Template synthesis of electronically conductive polymers: A new route for achieving higher electronic conductivities
| AD-A261616 | p 2658 N93-26437

TEMPORAL DISTRIBUTION
The advances in F and T technology: Their benefits of and for space science and technology p 2831 N93-24979
Time generation and distribution system for a military national synchronization p 2842 N93-25060

TEMPORAL RESOLUTION
Correlation between NDVI values derived from NOAA AVHRR HRPT data and ground measurements of precipitation in the EFEDA study area (Spain) p 2738 N93-24780
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
Geologic and hydrogeologic mapping of Iceland with multisensor data (JERS-1, ERS-1, SPOT, Landsat and SEASAT) p 2740 N93-24792
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map p 2743 N93-24807
European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820
Atmospheric correction of Landsat/TM data over mountainous terrain for forestry applications p 2752 N93-24862
The sub 60 ps timing resolution using large area silicon avalanche diodes
| DE93-007723 | p 2688 N93-25365
High speed x ray gating cameras for ICF imaging applications
| DE93-007500 | p 2709 N93-25515

TENSILE PROPERTIES
Development of dispersion-strengthened XD (trademark) Cu alloys for high heat-flux applications
| NASA-CR-191124 | p 2653 N93-24761
Mechanical properties of martensitic alloy AISI 422
| DE93-006563 | p 2649 N93-25255
Processing and mechanical properties of laminated metal composites of Al/Al-25 vol. percent SiC and ultrahigh carbon steel/brass
| DE93-007504 | p 2635 N93-25383

TENSILE STRENGTH
High strain rate damage development and failure mechanisms in tungsten heavy alloys
| AD-A260856 | p 2651 N93-25788
Interface engineering in oxide fiber/oxide matrix composites
| AD-A261705 | p 2641 N93-26579

TENSILE TESTS
Stress distribution in composite flatwise tension test specimens
| NASA-TM-106074 | p 2634 N93-25071
Room temperature fracture of FeCo
| DE93-008266 | p 2650 N93-25519

TENSION
Effect of cytoskeletal reagents on stretch activated ion channels
| AD-A261089 | p 2793 N93-25764

TERMINAL BALLISTICS
Investigation and modeling of penetration process for composite laminates impacted by a blunt-ended projectile p 2637 N93-25675

TERMINAL GUIDANCE
Two neural network algorithms for designing optimal terminal controllers with open final time
| NASA-CR-177599 | p 2817 N93-25137

TERMINOLOGY
Agreement in naming objects and concepts for information retrieval p 2881 N93-25826

TERMS
Glossary of environmental terms and acronym list
| PB93-158004 | p 2765 N93-25851

TERNARY ALLOYS
Metal alloy and method of preparation thereof
| AD-D015670 | p 2652 N93-26234

TERRAIN
Use of the 1991 ASCOT field study data in a mesoscale model employing a four-dimensional data assimilation technique
| DE93-002683 | p 2769 N93-24672
ILS mathematical modeling study of an ILS glide slope proposed for runway 19L at the Meridian Naval Air Station, Mississippi
| DOT/FAA/CT-TN93/8 | p 2584 N93-24741
Use of airborne imaging spectrometry to the definition of optimised specifications for land applications with future spaceborne imaging spectrometers p 2738 N93-24776
The use of polarimetric multifrequency SAR for characterizing terrain classes p 2738 N93-24777
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
Use of the Environmental Resource Management and Analysis System at the Fernald Environmental Management Project
| DE93-002943 | p 2760 N93-24955
Efficient generation of synthetic terrain imagery for automatic target recognition
| AD-A260705 | p 2756 N93-25653
Pressure torques and circulation changes in Rocky Mountain lee cyclones p 2783 N93-25724
Effects of Taiwan orography on the motion and structure of typhoons
| AD-A261819 | p 2786 N93-26270

TERRAIN ANALYSIS
Land cover, an essential component of the CORINE information system on the environment: GIS implications p 2740 N93-24787
The regional planning and control using the satellite data p 2740 N93-24788
Land cover monitoring in the Netherlands applying satellite remote sensing p 2740 N93-24789
Detection of land use/land cover changes using remote sensing and GIS in Vietnam p 2740 N93-24791
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
Swedish forest information atlas p 2749 N93-24847
Observation of forest damages in the Harz mountains by means of satellite remote sensing p 2749 N93-24848

TEST CHAMBERS
Ice thickness measurement system for the icing research tunnel calibration
| NASA-TM-106095 | p 2708 N93-24737
A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing
| NASA-CR-191438 | p 2695 N93-25087
Hazards of explosives dusts: Particle size effects
| DE93-009380 | p 2668 N93-25498
Behavior of a steel-liner-and-bolts system under very high thermal and mechanical loading: The CONVEX Liner Add-On to DIAMOND FORTUNE
| DE93-007512 | p 2731 N93-26507

TEST EQUIPMENT
Commercial Precipitation Static (P-static) test equipment p 2711 N93-24901
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672

TEST FACILITIES
Nuclear thermal propulsion technology: Results of an interagency panel in FY 1991
| NASA-TM-105711 | p 2621 N93-24740
Space exploration initiative candidate nuclear propulsion test facilities
| NASA-TM-105710 | p 2622 N93-24753
Space Nuclear Thermal Propulsion Test Facilities Subpanel
| NASA-TM-105708 | p 2622 N93-25105
Advanced Launch System (ALS) test requirements
| MCR-91-5004 | p 2610 N93-26181
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209
Duct protection coating concept development and test: Test specimen fabrication, conditioning, and testing documentation.
| AD-A261250 | p 2657 N93-26278

TEST STANDS
A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems
| NASA-TM-106015 | p 2846 N93-26551

TETHERED SATELLITES
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Tethered Satellite System Contingency Investigation Board
| NASA-TM-108704 | p 2616 N93-25231
An alternate approach to space missions involving a long tether p 2616 N93-25470
STS-46 Space Shuttle mission report
| NASA-CR-193058 | p 2613 N93-25991
Data analysis support for the Shuttle Potential and Return Electron Experiment (SPREE) on the Tethered Satellite System 1 (TSS-1) flight
| AD-A261646 | p 2618 N93-26232

TETHERING
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Tethered Satellite System Contingency Investigation Board
|NASA-TM-108704| p 2616 N93-25231
An alternate approach to space missions involving a long tether p 2616 N93-25470
TEXTS
Improving information search at the user interface: The impact of graphical innovation on query formulation and expression p 2873 N93-24905
Pyroshock: Bibliography
|DE93-007605| p 2726 N93-25489
Visualizing the semantic content of large text databases using text maps p 2826 N93-25982
THALLIUM COMPOUNDS
Development of high Tc (greater than 100 K) Bi, Tl and Y-based materials as superconducting circuit elements
|NASA-CR-192344| p 2863 N93-25219
THEMATIC MAPPERS (LANDSAT)
Spectral remote sensing of anomalous mineralogy induced by hydrocarbon migration and uranium mineralization, San Rafael Swell, Utah, USA p 2739 N93-24783
Lithologic mapping with LANDSAT Thematic Mapper guided by laboratory spectral measurements, Air, Niger (Africa) p 2742 N93-24803
Application of multitemporal Landsat-MSS and -TM data for the development of an inundation-risk-map p 2743 N93-24807
European applications of space-borne Earth observation for land cover mapping p 2745 N93-24820
Remote sensing of land resource management in agriculture with regard to its influence on the environment p 2750 N93-24850
Biodiversity indication by Earth observation data p 2751 N93-24858
Atmospheric correction of Landsat/TM data over mountainous terrain for forestry applications p 2752 N93-24862
Classifying multispectral data by neural networks p 2825 N93-25976
Bibliography of remote sensing techniques used in wetland research
|AD-A261704| p 2757 N93-26440
THEMATIC MAPPING
Spectral remote sensing of anomalous mineralogy induced by hydrocarbon migration and uranium mineralization, San Rafael Swell, Utah, USA p 2739 N93-24783
Complex investigation of a system industrial site-environment using remote sensing and landscape-geochemical methods p 2741 N93-24798
The use of remote sensing and GIS for the assessment of environmental degradation caused by fires, applied upon South-Euboia (central Greece) p 2742 N93-24802
Remote sensing of coastal zone Sabkha deposits, Gulf of Sirt, Libya p 2746 N93-24827
Inherent optical properties of lakes as measured by Landsat 5 Thematic Mapper p 2746 N93-24828
Multi-date algorithms for predicting surface water quality parameters in estuarine and coastal waters using Landsat TM data
|ED-659-CP| p 2746 N93-24829
Evaluation of nearshore suspended sediment concentration through Landsat TM data: First results p 2747 N93-24833
Monitoring and evaluation of morphohydrographical changes in the Danube Delta by remote-sensing p 2747 N93-24834
Coastal environmental mapping using Landsat data
|ED-658-CP| p 2747 N93-24835
The national parks of Bavarian Forest and Sumava: A Landsat TM perspective on the structure and dynamics of the largest woodland of Central Europe p 2748 N93-24837
Mapping of windfall damage in the Hunsrueck plateau with Landsat TM-data p 2749 N93-24843
Forest decline monitoring using Landsat TM, digital stand data and DEMs p 2749 N93-24846
Swedish forest information atlas p 2749 N93-24847
Observation of forest damages in the Harz mountains by means of satellite remote sensing p 2749 N93-24848
Toward a satellite based crop information system in Hungary p 2750 N93-24849
EUROSTARS: A system for thematic analysis of remote sensed data p 2753 N93-24871
Integrating satellite imagery and digital elevation data for geobotanical mapping in Quetico Provincial Park, Ontario, Canada p 2754 N93-25430
THEOREM PROVING
Use of fuzzy relational information retrieval technique for generating control strategies in resolution-based automated reasoning p 2874 N93-25258
THEOREMS
Monte Carlo approach to the approximation of invariant measures
|PB93-159069| p 2830 N93-26317
THEORETICAL PHYSICS
Topics in CP violation
|DE93-007615| p 2847 N93-25323
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
|JPRS-UPM-92-004| p 2844 N93-25402
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
|JPRS-UPM-92-003| p 2844 N93-25403
JPRS report: Science and technology. Central Eurasia: Physics and mathematics
|JPRS-UPM-93-001| p 2844 N93-25404
From fractals to wormholes via string theory p 2871 N93-25742
THERAPY
Automatic detection of seizures with applications p 2796 N93-25592
THERMAL ANALYSIS
A heat transfer analysis of a mobile vehicle radiation-shielded operator compartment
|DE93-007428| p 2800 N93-25318
The nature of the glass transition and its determination by thermal analysis
|DE93-006746| p 2654 N93-25374
Integration of design, thermal, structural, and optical analysis, including thermal animation p 2814 N93-25601
SRB environment evaluation and analysis. Volume 1: Redesigned SRB flight heating evaluation
|NASA-CR-192517| p 2631 N93-26053
Remtech SSME nozzle design TPS
|NASA-CR-192516| p 2631 N93-26056
THERMAL CONDUCTIVITY
Design and validation of optimal experiments for estimating thermal properties of composite materials p 2635 N93-25541
Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature
|NASA-CR-191121| p 2652 N93-26235
Tables for the thermophysical properties of ethane
|PB93-160786| p 2646 N93-26319
THERMAL CYCLING TESTS
Development of thin film thermocouples on ceramic materials for advanced propulsion system applications
|NASA-TM-106017| p 2709 N93-25173
THERMAL DECOMPOSITION
Determination of the thermal stability of perfluoropolyalkyl ethers by tensimetry
|NASA-TM-106081| p 2654 N93-25093
Thermal decomposition of HMX, mononitroso-RDX, TNCHP and K6 in the liquid phase: Results from simultaneous thermogravimetry modulated beam mass spectrometry measurements p 2628 N93-26033
Development of rate expressions for the thermal decomposition of RDX p 2629 N93-26034
Chemistry during the induction time in heated nitramines p 2629 N93-26035
Thermal decomposition and stabilization of ammonium dinitramide p 2630 N93-26038
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
|AD-A261804| p 2662 N93-26387
THERMAL EMISSION
The effects of cloud inhomogeneities upon radiative fluxes, and the supply of a cloud truth validation dataset
|NASA-CR-191711| p 2787 N93-26492
THERMAL ENERGY
Aquifer thermal energy (heat and chill) storage
|DE93-006446| p 2759 N93-25183
THERMAL EXPANSION
Thermoelasticity in quartz p 2841 N93-25047
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
|AD-A260901| p 2727 N93-25658
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
A three-dimensional model for the residual stresses in a unidirectional composite plate p 2728 N93-25825
Characterization of aerospace grade resins and composites through pressurized volumetric dilatometry
|AD-A260794| p 2639 N93-25918
Thermal expansion measurements of polymer matrix composites and syntactics
|MTL-TR-92-27| p 2640 N93-25954
THERMAL FATIGUE
Fatigue in single crystal nickel superalloys
|AD-A261742| p 2652 N93-26282
THERMAL MAPPING
Image analysis by integration of disparate information p 2824 N93-25973
THERMAL PROTECTION
An investigation of the degradation of Fluorinated Ethylene Propylene (FEP) copolymer thermal blanketing materials aboard LDEF in the laboratory
|NASA-CR-192824| p 2653 N93-25078
Remtech SSME nozzle design TPS
|NASA-CR-192516| p 2631 N93-26056
THERMAL RADIATION
Thermal infrared radiation transfer in the planetary boundary layer p 2772 N93-25688
Thermal radiation in non-metalized solid rocket motors: Effect on burning rate and temperature sensitivity p 2626 N93-26020
THERMAL STABILITY
Determination of the thermal stability of perfluoropolyalkyl ethers by tensimetry
|NASA-TM-106081| p 2654 N93-25093
Characterization of ceramic capacitors for high-voltage pulse-discharge applications
|DE93-007601| p 2689 N93-25417
Design and validation of optimal experiments for estimating thermal properties of composite materials p 2635 N93-25541
Mullite whiskers and mullite-whisker felt p 2642 N93-25586
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
|AD-A260915| p 2661 N93-25914
Thermal decomposition of HMX, mononitroso-RDX, TNCHP and K6 in the liquid phase: Results from simultaneous thermogravimetry modulated beam mass spectrometry measurements p 2628 N93-26033
Chemistry during the induction time in heated nitramines p 2629 N93-26035
THERMAL STRESSES
Stress and reliability analyses of multilayered composite cylinder under thermal and mechanical loads p 2726 N93-25533
THERMIONIC EMISSION
Photoexcitation of carbon fullerenes
|AD-A260739| p 2849 N93-25644
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
|AD-A261170| p 2714 N93-25774
THERMIONICS
Thermionic current measurement in quartz p 2840 N93-25045
THERMOCHEMICAL PROPERTIES
Development and application of computational aerothermodynamics flowfield computer codes
|NASA-CR-192940| p 2574 N93-24736
THERMOCHEMISTRY
Development and application of computational aerothermodynamics flowfield computer codes
|NASA-CR-192940| p 2574 N93-24736
THERMOCLINES
Observations of an intrathermocline vortex p 2788 N93-24769
THERMOCOUPLE PYROMETERS
New pyro-optic techniques for imaging of long wavelength IR-Radiation (pyro-optic initiation program)
|AD-A260969| p 2856 N93-26224
THERMOCOUPLES
Development of thin film thermocouples on ceramic materials for advanced propulsion system applications
|NASA-TM-106017| p 2709 N93-25173
Physical and chemical processes governing the CO2 laser-induced deflagration of ammonium dinitramide (ADN) p 2629 N93-26037
THERMODYNAMIC PROPERTIES
Quartz crystal twinning under mechanical stress: Finite element analysis p 2839 N93-25032
Thermodynamic, kinetic, and structural properties of linear polyethylene crystallized from polymer-diluent mixture p 2864 N93-25528
Photoexcitation of carbon fullerenes
|AD-A260739| p 2849 N93-25644
Thermal decomposition and stabilization of ammonium dinitramide p 2630 N93-26038
Application of the Saha equation to high temperature (greater than or equal to) rocket exhaust
|AD-A261648| p 2632 N93-26174
Thermal decomposition of energetic materials. 4: Deuterium isotope effects and isotopic scrambling condensed-phased decomposition of 1,3,5-trinitrohexahydro-s-triazine
|AD-A261804| p 2662 N93-26387
Thermodynamic properties of natural gas mixtures
|PB93-167112| p 2872 N93-26509
Thermodynamic properties of natural gas mixtures
|PB93-156818| p 2872 N93-26558
THERMODYNAMICS
The nature of the glass transition and its determination by thermal analysis
|DE93-006746| p 2654 N93-25374

Measurements and computations of external heat transfer and film cooking in turbines
| RAE-TM-P-1223 | p 2592 N93-25455
Thermomechanical response of shape memory composites
| AD-A260828 | p 2639 N93-25919
Detection of atomic oxygen and hydrogen in solid propellant flames and pyrolysis gases using multiphoton laser-induced fluorescence p 2628 N93-26029

THERMOELASTICITY
Thermoelasticity in quartz p 2841 N93-25047
Thermoelastic stresses in multi-layered media in non-uniform temperature fields
| AD-A260901 | p 2727 N93-25658
Quantifying distributed damage in composites via the thermoelastic effect p 2637 N93-25691
Thermomechanical response of shape memory composites
| AD-A260828 | p 2639 N93-25919

THERMOELECTRICITY
Solid-state isotopic power source for computer memory chips p 2694 N93-25596

THERMOGRAPHY
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768

THERMOGRAVIMETRY
Thermal decomposition of HMX, mononitroso-RDX, TNCHP and K6 in the liquid phase: Results from simultaneous thermogravimetry modulated beam mass spectrometry measurements p 2628 N93-26033

THERMOMECHANICAL TREATMENT
Study of grain refinement in Al alloy 2519 using backscattering orientation-contrast mode in the scanning electron microscope
| AD-A260886 | p 2651 N93-25632

THERMOPHYSICAL PROPERTIES
Tables for the thermophysical properties of ethane
| PB93-160786 | p 2646 N93-26319

THERMOPLASTIC RESINS
Effect of water immersion on fiber/matrix adhesion
| AD-A260704 | p 2636 N93-25652
Inelastic behavior of thermoplastic composites p 2636 N93-25674
Characterization of aerospace grade resins and composites through pressurized volumetric dilatometry
| AD-A260794 | p 2639 N93-25918

THERMOSPHERE
A study of vibrationally excited N2(+) ions in the daytime thermosphere p 2770 N93-25179
The Venus 130-nm dayglow as a diagnostic of thermospheric structure and dynamics p 2896 N93-25285
Polarizing Michelson interferometer for measuring thermospheric winds
| ISBN-0-315-70442-X | p 2784 N93-25731

THICK PLATES
Behavior of a steel-liner-and-bolts system under very high thermal and mechanical loading: The CONVEX Liner Add-On to DIAMOND FORTUNE
| DE93-007512 | p 2731 N93-26507

THICKNESS
Ice thickness measurement system for the icing research tunnel calibration
| NASA-TM-106095 | p 2708 N93-24737

THIN FILMS
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD)
| DE92-010560 | p 2862 N93-24953
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
| DE93-000073 | p 2759 N93-25102
Development of thin film thermocouples on ceramic materials for advanced propulsion system applications
| NASA-TM-106017 | p 2709 N93-25173
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
Analysis of pull-tests for determining the effects of ion implantation on the adhesion of iron films to sapphire substrates
| DE93-006732 | p 2725 N93-25373
Laser Induced Phonons (LIPs) in MBE grown ZnSe
| RSRE-MEMO-4544 | p 2864 N93-25454
High resolution interface nanochemistry and structure
| DE93-009750 | p 2635 N93-25501
Role of polycrystallinity in CdTe and CuInSe2 photovoltaic cells
| DE93-000045 | p 2759 N93-25504
Fast diagnostics of laser ablation used for pulsed laser deposition
| DE93-005155 | p 2713 N93-25508
Film fabrication technologies at NREL p 2658 N93-25563
Optical and scratch resistant properties of diamondlike carbon films deposited with single and dual ion beams p 2658 N93-25564
A novel method for characterization of superconductors: Physical measurements and modeling of thin films p 2871 N93-25584
Diagnostics of diamond film deposition plasmas
| AD-A260866 | p 2860 N93-25626
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823
Extruded films from modified polypropylene resin: Dielectric and breakdown studies
| AD-A261382 | p 2657 N93-26341
RF vacuum microelectronics
| AD-A261784 | p 2692 N93-26565

THIN PLATES
Electroelastic equations for electroded thin plates subject to large driving voltages
| AD-A261123 | p 2675 N93-25772

THREE BODY PROBLEM
Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem p 2603 N93-24718
Optimal transfers between libration-point orbits in the elliptic restricted three-body problem p 2608 N93-25758

THREE DIMENSIONAL FLOW
Implementation of the Turn Function Method in a three-dimensional, parallelized hydrodynamics code
| DE93-003744 | p 2696 N93-25124
Three-dimensional flow in radial turbomachinery and its impact on design
| NASA-CR-192957 | p 2593 N93-25668
Flow and heat transfer experiments in the turbine airfoil/endwall region p 2704 N93-25725

THREE DIMENSIONAL MODELS
Demonstration for novel self-organization theory by three-dimensional magnetohydrodynamic simulation
| NIFS-212 | p 2859 N93-25227
A method for transient, three-dimensional neutron transport calculations
| DE93-007243 | p 2847 N93-25256
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
An alternate approach to space missions involving a long tether p 2616 N93-25470
A three-dimensional model for the residual stresses in a unidirectional composite plate p 2728 N93-25825
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164

THREE DIMENSIONAL MOTION
Variational theory of motion of curved, twisted and extensible elastic rods
| AD-A261028 | p 2729 N93-25941

THROATS
Experimentation in the low-density plume of a simulated electrothermal thruster for computer code validation
| NASA-CR-191112 | p 2622 N93-24758

THRUST
Studies of several small seawater MHD thrusters using the high-field solenoid of MIT's Bitter Magnet Laboratory
| AD-A260645 | p 2860 N93-25641

THRUST CHAMBERS
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine p 2626 N93-26017
Space transportation booster engine thrust chamber technology, large scale injector
| NASA-CR-192531 | p 2633 N93-26557

THRUST CONTROL
Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272

THRUST VECTOR CONTROL
Robust nonlinear control of vectored thrust aircraft
| NASA-CR-192727 | p 2596 N93-25199

THUNDERSTORMS
The 1992 International Aerospace and Ground Conference on Lightning and Static Electricity: Addendum
| DOT/FAA/CT-92/20-ADD-1 | p 2777 N93-24875
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Study of atmospheric electrical events above complex terrain p 2780 N93-24897
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
Comparative performance of lightning air terminals under natural storm conditions p 2781 N93-24902
Parametric analysis of atmospheric processes
| NASA-CR-192523 | p 2770 N93-25086
The charge and size of precipitation particles inside thunderstorms and mesoscale convective systems on the Great Plains p 2781 N93-25275
The North Dakota thunderstorm project
| PB93-153039 | p 2785 N93-25776
The initiation of lightning and the growth of electric fields in thunderstorms
| AD-A261455 | p 2787 N93-26352
Guide for conducting convective windstorm surveys
| PB93-148427 | p 2787 N93-26570

THYRISTORS
High speed solid state circuit breaker p 2694 N93-25598
Investigations of the transient behavior of the cathode fall region in planar and hollow cathodes
| AD-A261636 | p 2691 N93-26171

TIDES
Sea level variation p 2734 N93-24929
A coastal hazards data base for the US East Coast
| NASA-TM-108265 | p 2791 N93-26586

TILT ROTOR AIRCRAFT
Screening studies of advanced control concepts for airbreathing engines
| NASA-TM-106042 | p 2592 N93-25079

TIMBER INVENTORY
Standwise forest inventory and mapping for operational management planning p 2752 N93-24863

TIME
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
Hydrogen masers for space p 2716 N93-24980
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks p 2832 N93-24983
Atomic time scales for dynamical astronomy p 2832 N93-24984
How can millisecond pulsars improve the long term stability of atomic time scales? p 2832 N93-24985
Prospects of two-way international time scale comparisons p 2832 N93-24988
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites p 2686 N93-24999
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
Control of environmental and clock parameters in Time and Frequency Standards Laboratory p 2835 N93-25007
Mixed constellation synchronization of GPS time p 2836 N93-25015
GPS standardization for the needs of time transfer p 2836 N93-25016
Comparison of GLONASS and GPS time transfers p 2836 N93-25017
Collaboration in the UK on time transfer using the GLONASS system p 2837 N93-25019
Time and frequency reference for a trajectory measurement system p 2837 N93-25023

TIME DEPENDENCE
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760
BBU code development for high-power microwave generators
| DE93-007111 | p 2688 N93-25397
Numerical simulation of time-dependent thermocapillary convection in layered fluid systems p 2700 N93-25472
Energy transfer properties and mechanisms
| DE93-008540 | p 2849 N93-25488
Kinetic studies in gas-phase reaction mechanisms important to the combustion process of high energy density materials: The H2/NO2 reaction p 2628 N93-26027
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions
| DE93-007669 | p 2647 N93-26599

TIME DIVISION MULTIPLEXING
The Data Multiplexing Network (DMN) phase 3 Extended Distance Data Cable (EDDC) test and evaluation
| DOT/FAA/CT-TN93/11 | p 2680 N93-26160

TIME MARCHING
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342

TIME MEASUREMENT
Cosmic string cosmology p 2891 N93-24907
Frequency and Time Forum
| ESA-SP-340 | p 2831 N93-24978
Hydrogen masers for space p 2716 N93-24980
The application of the PRARE principle for precise two-way time transfer to space-based atomic clocks p 2832 N93-24983
Atomic time scales for dynamical astronomy p 2832 N93-24984
How can millisecond pulsars improve the long term stability of atomic time scales? p 2832 N93-24985

Relativistic effects for low Earth orbit satellites using GPS p 2608 N93-24986
Prospects of two-way international time scale comparisons p 2832 N93-24988
A new modem for microwave time synchronisation via geosynchronous telecommunication satellites p 2686 N93-24999
A system design for laser time synchronization via geodetic satellite Ajisai p 2716 N93-25005
The accuracy of SYLT- and RNS-based time scales at MTI and SNT during 1990-1991 p 2835 N93-25006
Analytical techniques for improved time transfer using common view of direct broadcasting satellites p 2835 N93-25008
Comparison of GLONASS and GPS time transfers p 2836 N93-25017
Collaboration in the UK on time transfer using the GLONASS system p 2837 N93-25019
Time and frequency reference for a trajectory measurement system p 2837 N93-25023
Time stability: An improvement of the multi-variance method for the oscillator noise analysis p 2839 N93-25036
The development progresses of hydrogen masers at Shanghai Observatory p 2716 N93-25048
Investigations of the frequency instability of CH1-75 hydrogen masers p 2716 N93-25049
Oscillators for mobile GPS receivers p 2694 N93-25055
Designing for frequency and time metrology at the 10 to the minus 18 power level p 2842 N93-25059
Time generation and distribution system for a military national synchronization p 2842 N93-25060
Timing and time signal distribution in digital communications networks p 2686 N93-25061
Timing a national telecommunications network using GPS p 2687 N93-25062
Strategies for synchronisation in an evolving telecommunications network p 2687 N93-25063
Synopsis of timing measurement techniques used in telecommunications p 2687 N93-25064

TIME SERIES ANALYSIS
Nonlinear techniques for forecasting solar activity directly from its time series p 2603 N93-24716
Observations of an intrathermocline vortex p 2788 N93-24769
The continuous plankton recorder survey: A long-term, basin-scale oceanic time series p 2736 N93-24937
Ocean time-series near Bermuda: Hydrostation S and the US JGOFS Bermuda Atlantic time-series study p 2736 N93-24938
Inverse sequential procedures for the monitoring of time series
|NASA-CR-192959| p 2765 N93-25666
Time series analysis and multivariate analysis
|AD-A261014| p 2830 N93-25860
Coastal ocean processes: A science prospectus
|AD-A261702| p 2790 N93-26384

TIME SIGNALS
Pseudo Wigner-Ville distribution, computer program, and its applications to time-frequency domain problems
|AD-A261839| p 2813 N93-26431

TIME TEMPERATURE PARAMETER
An evaluation of thermal energy storage options for precooling gas turbine inlet air
|DE93-005980| p 2758 N93-24975
Fundamental and applied aspects of defect engineering in GaAs
|AD-A260573| p 2867 N93-25899

TISSUES (BIOLOGY)
Cellular and tissue injury during nonfreezing cold injury and frostbite
|AD-A260574| p 2795 N93-25900

TITAN
DSN observations of Titan p 2680 N93-26129
Residual mean meridional circulation in titan's middle atmosphere
|PB93-162931| p 2898 N93-26571

TITANIUM
Monitoring damage growth in titanium matrix composites using acoustic emission
|NASA-TM-107742| p 2634 N93-25072

TITANIUM ALLOYS
Micromechanics of fatigue
|AD-A260577| p 2729 N93-25901
Thermal coatings for titanium-aluminum alloys
|NASA-TM-107760| p 2651 N93-26048
Solidification processing and phase transformations in ordered high temperature alloys
|AD-A261751| p 2652 N93-26284

TITANIUM COMPOUNDS
Processing and properties of Ti5Si3
|DE93-007284| p 2649 N93-25149

TITANIUM OXIDES
Vickers indentation hardness of stoichiometric and reduced single crystal TiO2 (rutile) from 25 to 800 C
|NASA-TM-105959| p 2633 N93-26204

TOBACCO
Using terrestrial plants in biomonitoring
|PB93-158780| p 2766 N93-26316

TOKAMAK DEVICES
Density dependence of line intensities and application to plasma diagnostics
|NIFS-209| p 2857 N93-24950
Plasma heating in toroidal systems
|NIFS-208| p 2858 N93-25092
Effect of continuous eigenvalue spectrum on plasma transport in toroidal systems
|NIFS-214| p 2859 N93-25215
TSC plasma halo simulation of a D3-D vertical displacement episode
|DE93-008688| p 2860 N93-25493

TOLERANCES (MECHANICS)
Ultrasonic polishing p 2670 N93-25580
Reliable stress and fracture mechanics analysis of complex aircraft components using a h-p version of FEM
|AD-A260628| p 2726 N93-25638

TOLLMIEN-SCHLICHTING WAVES
Numerical simulation of leading-edge receptivity to freestream vorticity p 2577 N93-25388

TOMOGRAPHY
Effect of cytoskeletal reagents on stretch activated ion channels
|AD-A261089| p 2793 N93-25764
Tomographic analysis of sight infrared spectra of low pressure flames p 2628 N93-26030
Inverse problems in nondestructive evaluations
|AD-A261370| p 2722 N93-26337

TOOLING
Special tooling disposition for aircraft entering post production support
|AD-A261614| p 2573 N93-26168

TOPEX
Star tracker operation in a high density proton field p 2600 N93-24699
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704

TOPOGRAPHY
Orbit determination support of the Ocean Topography Experiment (TOPEX)/Poseidon operational orbit p 2601 N93-24704
A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707
Synchrotron radiation X ray topography study of lateral field resonators p 2833 N93-24994
Crystal growth of berlinite: Methods for growing longer crystals and improving the quality p 2838 N93-25025
Crystal growth and physical characterizations of GaPO4 p 2840 N93-25044
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument p 2711 N93-25614
Topography from shading and stereo p 2879 N93-25803
Isolation and analysis of key components of seafloor relief
|AD-A261635| p 2790 N93-26170
Interaction of an eddy with a continental slope
|AD-A261550| p 2791 N93-26578

TORCHES
Development and use of hydrogen-air torches in an altitude facility
|NASA-TM-106047| p 2598 N93-26214

TORNADOES
Positive cloud-to-ground flashes in severe storms p 2780 N93-24896
Initialization of a modeled convective storm using Doppler radar-derived fields p 2782 N93-25294
Guide for conducting convective windstorm surveys
|PB93-148427| p 2787 N93-26570
Tornado: An engineering-oriented perspective
|PB93-148435| p 2788 N93-26584

TOROIDAL PLASMAS
Density dependence of line intensities and application to plasma diagnostics
|NIFS-209| p 2857 N93-24950
R and D of transmission lines for ECH system
|NIFS-210| p 2687 N93-24951
Effect of continuous eigenvalue spectrum on plasma transport in toroidal systems
|NIFS-214| p 2859 N93-25215
Thermal and electric oscillation driven by orbit loss in helical systems
|NIFS-213| p 2860 N93-25346

TORQUE
Momentum accumulation due to solar radiation torque, and reaction wheel sizing, with configuration optimization p 2600 N93-24695
Pressure torques and circulation changes in Rocky Mountain lee cyclones p 2783 N93-25724

TORSION
Apparatus and methods for determining balance of a cylindrical vehicle
|AD-D015637| p 2717 N93-25228

TOTAL OZONE MAPPING SPECTROMETER
Kelvin waves in total column ozone
|NASA-CR-192984| p 2764 N93-25431
Rossby-gravity waves in tropical total ozone data
|NASA-CR-192983| p 2764 N93-25432

TOTAL QUALITY MANAGEMENT
Implementation of quality improvement techniques for management and technical processes in the ACRV project p 2723 N93-26074
Design and implementation of a pilot orientation program for new NASA engineering employees
|NASA-TM-105907| p 2872 N93-26205

TOUGHNESS
Mechanical properties of martensitic alloy AISI 422
|DE93-006563| p 2649 N93-25255
High temperature fracture toughness of Ni3Al alloy IC-396M
|DE93-008564| p 2650 N93-25492
High strain rate damage development and failure mechanisms in tungsten heavy alloys
|AD-A260856| p 2651 N93-25788

TOWED BODIES
Dynamics and control of maneuverable tethered flight vehicles p 2615 N93-24767
Experimental study of the effect of helical grooves on an infinite cylinder
|AD-A260890| p 2676 N93-25912

TOXIC HAZARDS
Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571

TOXICITY
A comparison of the WIND System atmospheric models and MATS data
|DE93-002687| p 2760 N93-24673
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860
Application of non-thermal plasmas to pollution control
|DE93-007515| p 2763 N93-25385
The acute inhalation toxicity of pyrolysis products of halon 1301
|AD-A260874| p 2795 N93-25629

TOXINS AND ANTITOXINS
Immunoconjugates: Magic bullets for cancer therapy? p 2796 N93-25567

TRACE CONTAMINANTS
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
|NASA-CR-192937| p 2767 N93-26427

TRACE ELEMENTS
Redistribution of trace chemical species by a small convective cloud
|PB93-156164| p 2765 N93-25873

TRACKING (POSITION)
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
Observation of radiation from lightning discharges by LPATS p 2779 N93-24888

TRACTORS
Transmission system for a transfer device gripping a double wheel
|CA-PATENT-APPL-SN-2024585| p 2597 N93-25178

TRADESCANTIA
Using terrestrial plants in biomonitoring
|PB93-158780| p 2766 N93-26316

TRAINING DEVICES
Design and implementation of a pilot orientation program for new NASA engineering employees
|NASA-TM-105907| p 2872 N93-26205

TRAINING EVALUATION
Contribution of personality to the prediction of success in initial air traffic control specialist training
|DOT/FAA/AM-93/4| p 2797 N93-26138

TRAINING SIMULATORS
Fidelity and validity in distributed interactive simulation: Questions and answers
|AD-A260971| p 2810 N93-25711

TRAJECTORIES
Modified point mass trajectory simulation for base-burn projectiles
|BRL-TR-3321| p 2609 N93-25985

TRAJECTORY ANALYSIS
Tsien's method for generating non-Keplerian trajectories. Part 2: The question of thrust to orbit a sphere and the restricted three-body problem p 2603 N93-24718
An approach for finding long period elliptical orbits for precursor SEI missions p 2604 N93-24720

Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721

TRAJECTORY CONTROL

A ground track control algorithm for the Topographic Mapping Laser Altimeter (TMLA) p 2602 N93-24707

Optimal cooperative power-limited rendezvous p 2607 N93-24904

Two neural network algorithms for designing optimal terminal controllers with open final time | NASA-CR-177599 | p 2817 N93-25137

Nonholonomic geometry, mechanics and control p 2724 N93-25270

Control and optimization of aircraft trajectories p 2596 N93-25543

A surface integral algorithm for the motion planning of nonholonomic mechanical systems | AD-A261746 | p 2720 N93-26249

TRAJECTORY MEASUREMENT

Time and frequency reference for a trajectory measurement system p 2837 N93-25023

TRAJECTORY OPTIMIZATION

Optimal finite-thrust time-bounded direct-ascent interception p 2607 N93-25272

Optimal thrust magnitude on a singular arc in atmospheric flight p 2819 N93-25410

Control and optimization of aircraft trajectories p 2596 N93-25543

Trajectory optimization for the National aerospace plane | NASA-CR-192954 | p 2589 N93-25670

Minimum-fuel power-limited transfers between coplanar elliptic orbits p 2608 N93-25684

Optimal transfers between libration-point orbits in the elliptic restricted three-body problem p 2608 N93-25758

TRANSATMOSPHERIC VEHICLES

Information requirements analyses for transatmospheric vehicles | AD-A261189 | p 2590 N93-25949

TRANSCONTINENTAL SYSTEMS

Prospects of two-way international time scale comparisons p 2832 N93-24988

TRANSDUCERS

The constant current loop: A new paradigm for resistance signal conditioning | NASA-TM-108744 | p 2673 N93-25181

TRANSFER FUNCTIONS

The 32nd CDC: System identification using interval dynamic models | NASA-CR-192895 | p 2818 N93-25155

The 32nd CDC: Robust stabilizer synthesis for interval plants using Nevanlina-pick theory | NASA-CR-192894 | p 2818 N93-25156

TRANSFER ORBITS

Practical aspects of transfer from GTO to lunar orbit p 2604 N93-24719

Minimum-fuel power-limited transfers between coplanar elliptic orbits p 2608 N93-25684

Optimal transfers between libration-point orbits in the elliptic restricted three-body problem p 2608 N93-25758

Space transfer concepts and analyses for exploration missions. Technical directive 12: Beamed power systems study | NASA-CR-192532 | p 2599 N93-26146

TRANSFORMATIONS (MATHEMATICS)

Image coding by way of wavelets p 2671 N93-24665

Polar decomposition for attitude determination from vector observations p 2602 N93-24711

Combining spectral information with crop rotation knowledge for crop classifications p 2752 N93-24861

NSWC library of mathematics subroutines | AD-A261511 | p 2884 N93-26575

TRANSFORMERS

Nondestructive evaluation of ferrite c-cores | KCP-613-4677 | p 2721 N93-25939

TRANSIENT RESPONSE

Applications of stress envelope concepts to aircraft EMP and lightning survivability p 2584 N93-24898

TRANSISTOR AMPLIFIERS

Noise-optimal control of HEMT LNA's for compensation of temperature deviations p 2678 N93-26115

RF vacuum microelectronics | AD-A261784 | p 2692 N93-26565

TRANSISTOR CIRCUITS

Dedicated oscillator for immersed crystal sensor p 2837 N93-25020

TRANSISTORS

RF vacuum microelectronics | AD-A261784 | p 2692 N93-26565

TRANSIT TIME

Ultrasonic rate measurement of multiphase flow | DE93-000112 | p 2695 N93-24954

The third-order permittivity of quartz obtained by different methods p 2840 N93-25046

TRANSITION FLIGHT

Development and testing of the digital control system for the Archytas unmanned air vehicle | AD-A261656 | p 2597 N93-26196

TRANSITION FLOW

Dynamics of turbulent slugging in transitional pipe flow p 2702 N93-25548

TRANSITION METALS

Reclamation with recovery of radionuclides and toxic metals from contaminated materials, soils, and wastes p 2769 N93-25571

Transition metal chelate-fulleride compounds: Electrocrystallization of semiconducting (Ru(bpy)s)(C60)2 | AD-A261549 | p 2869 N93-26577

TRANSITION TEMPERATURE

Monolithic integration of semiconductor and superconductor components | AD-A260589 | p 2690 N93-25906

Deformation mechanisms of NiAl cyclicly deformed near the brittle-to-ductile transition temperature | NASA-CR-191121 | p 2652 N93-26235

TRANSLATING

A digital hardware test system analysis with test vector translation | AD-A260849 | p 2810 N93-25786

TRANSMISSION

The design and evaluation of transmit and receive antennas for an ionospheric communications probe system. B: Sloping-vee beams | AD-A261866 | p 2682 N93-26388

TRANSMISSION ELECTRON MICROSCOPY

Transmission electron microscopy investigation of ion implantation damage in GaAs and other semiconductors p 2865 N93-25715

TRANSMISSION LINES

R and D of transmission lines for ECH system | NIFS-210 | p 2687 N93-24951

Published assessments bearing on the future use of ceramic superconductors by the electric power sector | DE93-007737 | p 2658 N93-26588

TRANSMISSIONS (MACHINE ELEMENTS)

Global dynamic modeling of a transmission system | NASA-CR-191117 | p 2716 N93-24751

Transmission system for a transfer device gripping a double wheel | CA-PATENT-APPL-SN-2024585 | p 2597 N93-25178

Computational gearing mechanics | NASA-CR-191127 | p 2719 N93-25884

TRANSONIC FLOW

Prediction of unsteady flows in turbomachinery using the linearized Euler equations on deforming grids | NASA-CR-192919 | p 2696 N93-25109

Computation of transonic flow over a porous surface projectile p 2577 N93-25409

Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542

Model fan passage flow simulation | AD-A261613 | p 2707 N93-26167

Unsteady airfoil flow solutions on moving zonal grids | AD-A261925 | p 2582 N93-26198

TRANSONIC NOZZLES

Direct solutions of the Navier-Stokes equations with application to static aeroelasticity p 2697 N93-25259

TRANSONIC SPEED

A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing | NASA-CR-191438 | p 2695 N93-25087

Shock tube application to the study of compressible turbulent boundary layer with mass injection p 2697 N93-25252

Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF) p 2598 N93-26006

TRANSONIC WIND TUNNELS

NASA Lewis 8- by 6-foot supersonic wind tunnel user manual | NASA-TM-105771 | p 2597 N93-25080

A feasibility study of using Langley 0.3-m transonic cryogenic tunnel sidewall boundary-layer removal system for heavy gas testing | NASA-CR-191438 | p 2695 N93-25087

TRANSPARENCE

Visual processing of object velocity and acceleration | AD-A261048 | p 2800 N93-25778

TRANSPONDERS

Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670

TRANSPORT AIRCRAFT

An approach to configuration design synthesis of subsonic transport aircraft using artificial intelligence techniques p 2589 N93-25692

TRANSPORT PROPERTIES

Asymptotic derivation of the simplified P(sub N) equations | DE93-007342 | p 2828 N93-25151

Quantum conductance fluctuations in self-aligned, pinch-narrowed MOSFETs p 2863 N93-25265

TRANSPORT THEORY

Diabaticity of nuclear motion: Problems and perspectives | DE93-007252 | p 2847 N93-25148

Asymptotic derivation of the simplified P(sub N) equations | DE93-007342 | p 2828 N93-25151

TRANSPORTATION

Emissions from ethanol and LPG fueled vehicles | DE93-006410 | p 2660 N93-25192

Workshop on Diamond and Diamond-Like-Carbon Films for the Transportation Industry | DE93-007491 | p 2658 N93-26506

TRANSPUTERS

Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870

TRANSVERSE WAVES

Surface Transverse Wave (STW) quartz resonators in the GHz range p 2836 N93-25012

TRAPPED MAGNETIC FIELDS

Aerospace devices for magnetic replicas | NASA-CR-192958 | p 2865 N93-25667

TRAPPED PARTICLES

A simple and compact source of cold atoms for cesium fountains and microgravity clocks p 2831 N93-24981

Plasma heating in toroidal systems | NIFS-208 | p 2858 N93-25092

TRAPPED VORTICES

Interaction of an eddy with a continental slope | AD-A261550 | p 2791 N93-26578

TRAPPING

Ion trap frequency standard research at PTB p 2841 N93-25050

Controlling an optical frequency by a single ion p 2841 N93-25051

TRAVELING SALESMAN PROBLEM

Linear-programming tools in integer programming: The traveling salesman | AD-A261398 | p 2812 N93-26290

TRAVELING WAVE TUBES

Dynamic behavior of helix interaction circuits | AD-A261362 | p 2692 N93-26334

TRAVELING WAVES

Transverse instabilities in a relativistic klystron two-beam accelerator | DE93-007110 | p 2852 N93-25375

TREES

Entropy reduction via simplified image contourization p 2804 N93-25924

TREES (PLANTS)

Anomalous bioelectric potentials of silk trees in Naples zoo (Italy) prior to an earthquake in May, 1991 p 2753 N93-24873

TRELLIS CODING

A low-complexity and high performance concatenated coding scheme for high-speed satellite communications | NASA-CR-192715 | p 2673 N93-25198

TREND ANALYSIS

Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812

TRENDS

Current trends in satellite data supply for environmental monitoring p 2754 N93-24874

Assessing patterns of change in anthropometric dimensions: Secular trends of US Army females, 1946-1988 | AD-A260869 | p 2800 N93-25628

TRIBOLOGY

Properties of extruded PS-212 type self-lubricating materials p 2659 N93-25565

TRIODES

RF vacuum microelectronics | AD-A261784 | p 2692 N93-26565

TROMBE WALLS

Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551

TROPICAL METEOROLOGY

Numerical simulation of the seasonal and interannual variability of the tropical Atlantic Ocean circulation during the 1980's p 2789 N93-25445

Climate data bases of the People's Republic of China, 1841-1988 | DE93-007907 | p 2764 N93-25517

On the vertical structure of seasonal, interannual and intraseasonal flows p 2782 N93-25557

Tropical cyclogenesis in the western North Pacific p 2783 N93-25714

Tropical cyclone/upper-atmospheric interaction as inferred from satellite total ozone observations p 2784 N93-25741

TROPICAL REGIONS
Tropical forest monitoring with high resolution satellite data p 2748 N93-24841
On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276
Kelvin waves in total column ozone
|NASA-CR-192984| p 2764 N93-25431
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
|AD-A260889| p 2783 N93-25633

TROPICAL STORMS
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
|AD-A260889| p 2783 N93-25633
Tropical cyclogenesis in the western North Pacific p 2783 N93-25714
Tropical cyclone/upper-atmospheric interaction as inferred from satellite total ozone observations p 2784 N93-25741

TROPOSPHERE
Propagation at microwave frequencies in the presence of tropospheric stratified layers p 2674 N93-25340
Observed annual and interannual variations in tropospheric water vapor p 2782 N93-25549
Occultation of a compact radio source by Venus p 2676 N93-26107
A nanoradian differential VLBI tracking demonstration p 2677 N93-26108
Deep-space navigation with differenced data types. Part 3: An expanded information content and sensitivity analysis p 2614 N93-26109

TRUSSES
The MODE family of on-orbit experiments: The Middeck Active Control Experiment (MACE) p 2599 N93-25835
Interaction dynamics and control for orbital assembly p 2669 N93-26407
Controls for orbital assembly of large space structures p 2620 N93-26408
Structural load control during construction p 2669 N93-26409

TTL INTEGRATED CIRCUITS
TF-4020A: TFL's new compact military rubidium standard p 2838 N93-25026

TUMBLING MOTION
Spacecraft detumbling through energy dissipation p 2600 N93-24696

TUMORS
Measuring the metastatic potential of cancer cells p 2794 N93-25566
Immunoconjugates: Magic bullets for cancer therapy? p 2796 N93-25567

TUNABLE LASERS
Laser physics and laser techniques
|AD-A261595| p 2715 N93-26524

TUNGSTEN ALLOYS
High strain rate damage development and failure mechanisms in tungsten heavy alloys
|AD-A260856| p 2651 N93-25788
Shear band formation in a W-Ni-Fe alloy under plate impact
|AD-A260702| p 2651 N93-25907

TUNING
Investigations of the frequency instability of CH1-75 hydrogen masers p 2716 N93-25049
Synthetic-perturbation tuning of MIMD programs
|PB93-161339| p 2812 N93-26321

TURBINE BLADES
Heat transfer in rotating serpentine passages with selected model orientation for smooth or skewed trip walls
|NASA-TM-106126| p 2667 N93-25177
Turbine turbobrake systems p 2717 N93-25268
Three-dimensional flow in radial turbomachinery and its impact on design
|NASA-CR-192957| p 2593 N93-25668
Flow control of low heat load turbine airfoils
|AD-A260941| p 2595 N93-26219
The blade curving effects in a turbine stator cascade with low aspect ratio
|AD-A261063| p 2595 N93-26239

TURBINE ENGINES
Measurements and computations of external heat transfer and film cooling in turbines
|RAE-TM-P-1223| p 2592 N93-25455
Design and performance of nozzle-less volute casings for inward flow radial turbines p 2593 N93-25471
Effect of a metal deactivator fuel additive on fuel deposition in fuel atomizers at high temperature
|AD-A260915| p 2661 N93-25914

TURBINE PUMPS
On-line implementation of nonlinear parameter estimation for the Space Shuttle main engine
|NASA-TM-106097| p 2632 N93-26211

TURBINES
Turbine turbobrake systems p 2717 N93-25268
Estimating turbine limit load
|NASA-CR-191105| p 2580 N93-25883
Development of a method to determine the autoxidation of turbine fuels
|AD-A260578| p 2661 N93-25902
Radial inflow turbine study
|AD-A260767| p 2594 N93-25917

TURBOCOMPRESSORS
The effects of reaction on axial compressor performance p 2594 N93-25882
Radial inflow turbine study
|AD-A260767| p 2594 N93-25917
Active stabilization of aeromechanical systems
|AD-A261366| p 2595 N93-26335

TURBOFAN ENGINES
The WINCOF-I code: Detailed description
|NASA-CR-190779| p 2573 N93-24760
Transient performance of fan engine with water ingestion
|NASA-CR-190778| p 2573 N93-25134
Model fan passage flow simulation
|AD-A261613| p 2707 N93-26167

TURBOFANS
A computational method for the analysis of acoustic radiation from turbofan inlets p 2845 N93-25717

TURBOJET ENGINES
A preliminary sizing method for unmanned aircraft using multi-variate optimisation p 2587 N93-25408

TURBOMACHINE BLADES
Prediction of unsteady flows in turbomachinery using the linearized Euler equations on deforming grids
|NASA-CR-192919| p 2696 N93-25109
Three-dimensional flow in radial turbomachinery and its impact on design
|NASA-CR-192957| p 2593 N93-25668

TURBOMACHINERY
Three-dimensional flow in radial turbomachinery and its impact on design
|NASA-CR-192957| p 2593 N93-25668
Numerical modelling of viscous turbomachinery flows with a pressure correction method p 2594 N93-25702
Fibre optic sensors for heat transfer studies p 2853 N93-25748
Computation of broadband mixing noise from turbomachinery
|AD-A261611| p 2846 N93-26165

TURBULENCE
Flow visualizations of perpendicular blade vortex interactions
|NASA-CR-192725| p 2696 N93-25208
Studies in air/air supersonic mixing layers p 2582 N93-26007
Turbulence interacting with chemical kinetics in airbreathing combustion of ducted rockets p 2625 N93-26012
Measurements of scalar power spectra in high Schmidt number turbulent jets
|AD-A261542| p 2707 N93-26379
Chaos metrics for testing lagrangian particle models
|AD-A261429| p 2776 N93-26454

TURBULENCE EFFECTS
Numerical modelling of viscous turbomachinery flows with a pressure correction method p 2594 N93-25702
Flame-turbulence interactions
|AD-A260957| p 2645 N93-26220

TURBULENCE MODELS
Assessment of closure coefficients for compressible-flow turbulence models
|NASA-TM-103882| p 2697 N93-25247
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Proceedings of the NUWC Division Newport Seminar Series on Turbulence and its Control
|NUWC-NPT-TM-922089| p 2707 N93-26328

TURBULENT BOUNDARY LAYER
Surface and flow field measurements in a symmetric crossing shock wave/turbulent boundary-layer interaction
|NASA-TM-106086| p 2575 N93-24911
Shock tube application to the study of compressible turbulent boundary layer with mass injection p 2697 N93-25252
An experimental study of the sources of fluctuating pressure loads beneath swept shock/boundary-layer interactions
|NASA-CR-192918| p 2698 N93-25266
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Heat transfer measurements in swept shock wave/turbulent boundary-layer interactions p 2704 N93-25705
An experimental study of passive drag reduction in a turbulent boundary layer by a riblet surface p 2705 N93-25746
Large-eddy simulation of temporally developing boundary layers with embedded streamwise vortices p 2705 N93-25753
Correlations between organized turbulent structures and wall pressure fluctuations
|PB93-156479| p 2706 N93-25885
Uniform roughness studies
|WL-TR-92-3041| p 2706 N93-25951
Hybrid rocket fuel combustion study p 2626 N93-26019
Proceedings of the NUWC Division Newport Seminar Series on Turbulence and its Control
|NUWC-NPT-TM-922089| p 2707 N93-26328

TURBULENT COMBUSTION
A premixed laminar flame interacting with a vortex resulting in flame stretch and quenching p 2642 N93-24771
Eulerian-Eulerian treatment of turbulent dense spray combustion in a bipropellant liquid rocket engine p 2626 N93-26017

TURBULENT FLOW
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow
|DE93-003362| p 2695 N93-24963
Measurements of density, temperature, and their fluctuations in turbulent supersonic flow using UV laser spectroscopy
|NASA-TM-103943| p 2708 N93-25076
Propagation velocity and space-time correlation of perturbations in turbulent channel flow
|NASA-TM-103932| p 2695 N93-25082
Assessment of closure coefficients for compressible-flow turbulence models
|NASA-TM-103882| p 2697 N93-25247
Predictive modeling of particle-laden, turbulent flows
|DE93-008208| p 2698 N93-25309
Numerical simulation of a shock wave/turbulent boundary layer interaction in a duct p 2699 N93-25342
Dynamics of turbulent slugging in transitional pipe flow p 2702 N93-25548
Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551
Computational modelling of 3D flow in complex ducts and passages p 2704 N93-25698
A basic research model of natural gas combustion in turbulent flow, phase 2
|PB93-158509| p 2644 N93-25819
Correlations between organized turbulent structures and wall pressure fluctuations
|PB93-156479| p 2706 N93-25885
Visualization of a Mach 2 reacting flow using Planar Laser-Induced Fluorescence (PLIF) p 2598 N93-26006
Image correlation velocimetry
|AD-A261599| p 2707 N93-26163
Trailing vortex/free-surface interaction
|AD-A261654| p 2581 N93-26195
Experiments on the physics of turbulent mixing in stably stratified ocean layers
|AD-A261312| p 2790 N93-26298
Interaction of vorticity with a free surface
|AD-A261524| p 2707 N93-26360
Measurements of scalar power spectra in high Schmidt number turbulent jets
|AD-A261542| p 2707 N93-26379

TURBULENT HEAT TRANSFER
Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551

TURBULENT JETS
An experimental study of under-expanded jets p 2577 N93-25467
Liquid surface breakup of nonturbulent and turbulent liquids p 2700 N93-25473
Measurements of scalar power spectra in high Schmidt number turbulent jets
|AD-A261542| p 2707 N93-26379
Oxides of nitrogen emissions from turbulent hydrocarbon/air jet diffusion flames, phase 2
|PB93-152478| p 2768 N93-26533

TURBULENT MIXING
An experimental study of under-expanded jets p 2577 N93-25467
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534
Image correlation velocimetry
|AD-A261599| p 2707 N93-26163
Computation of broadband mixing noise from turbomachinery
|AD-A261611| p 2846 N93-26165
Experiments on the physics of turbulent mixing in stably stratified ocean layers
|AD-A261312| p 2790 N93-26298

TWILIGHT GLOW
Anomalous aspects of magnetosheath flow and of the shape and oscillations of the magnetopause during an interval of strongly northward interplanetary magnetic field
| NASA-CR-192851 | p 2770 N93-25081

TWINNING
Quartz crystal twinning under mechanical stress: Finite element analysis p 2839 N93-25032

TWO DIMENSIONAL BOUNDARY LAYER
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls
| NASA-TM-106087 | p 2696 N93-25175

TWO DIMENSIONAL MODELS
The rate form of equilibrium equation for problems of steady-state, elastic, viscous flows p 2704 N93-25708
Workshop Report: A validation study of Navier-Stokes codes for transverse injection into a Mach 2 flow p 2624 N93-26008
ADCIRC: An advanced three-dimensional circulation model for shelves, coasts, and estuaries. Report 1: Theory and methodology of ADCIRC-2DDI and ADCIRC-3DL
| AD-A261608 | p 2790 N93-26164
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

TWO PHASE FLOW
Fuel Injector: Air swirl characterization aerothermal modeling, phase 2, volume 2
| NASA-CR-189193 | p 2592 N93-25106
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
The modeling of complex continua: Fundamental obstacles and grand challenges
| DE93-006507 | p 2696 N93-25193
Flow visualizations of perpendicular blade vortex interactions
| NASA-CR-192725 | p 2696 N93-25208
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221
Measurement of velocities in gas-liquid two-phase flow using laser Doppler velocimetry
| DE93-008083 | p 2698 N93-25306
Annular flow enhanced two-phase evaporative heat exchanger for space-based systems p 2700 N93-25478
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738

TWO STAGE TURBINES
Estimating turbine limit load
| NASA-CR-191105 | p 2580 N93-25883

TYPHOONS
Typhoon prediction (recurvature - 1990 experiment)
| AD-A260673 | p 2786 N93-25892
Effects of Taiwan orography on the motion and structure of typhoons
| AD-A261819 | p 2786 N93-26270

U

U.S.S.R.
Selected translated abstracts of Russian-language climate-change publications: 1. Surface energy budget
| DE93-003189 | p 2760 N93-24952
Digest of Russian Space Life Sciences, issue 33
| NASA-CR-3922(39) | p 2792 N93-25195
JPRS report: Central Eurasia. Aviation and cosmonautics, no. 9, September 1992
| JPRS-UAC-93-003 | p 2574 N93-26325
Science, Technology, and Industrial Policy in the Former Soviet Union
| DE93-006528 | p 2887 N93-26499

U.S.S.R. SPACE PROGRAM
First experience with the ASN-16 GLONASS receiver p 2693 N93-25033
Former Soviet Republic capabilities in space and science
| DE93-007613 | p 2598 N93-25322

UH-60A HELICOPTER
Techniques for designing rotorcraft control systems
| NASA-CR-192960 | p 2597 N93-26046
Helicopter forced response vibration analysis method RTVIB20
| AD-A261809 | p 2597 N93-26260

ULTRAHIGH FREQUENCIES
Design of a low phase noise UHF oscillator using a partly metallized dielectric resonator p 2693 N93-25003
Flight termination receiver catalog
| AD-A261558 | p 2682 N93-26460
L- and K-band LMSS propagation measurements using MARECS-B, OLYMPUS, and ACTS p 2683 N93-26467

ULTRASONIC CLEANING
Ultrasonic polishing p 2670 N93-25580
Development of a replacement for trichloroethylene in the two-stage cleaning process
| KCP-613-4941 | p 2669 N93-26207

ULTRASONIC MACHINING
Ultrasonic polishing p 2670 N93-25580

ULTRASONIC RADIATION
Methods of determining loads and fiber orientations in anisotropic non-crystalline materials using energy flux deviation
| NASA-CASE-LAR-14399-1 | p 2729 N93-26102

ULTRASONIC SCANNERS
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768

ULTRASONIC TESTS
Investigation of corrosion in aluminum/adhesive lap-splices using pulse-echo ultrasonic techniques
| DE93-008074 | p 2721 N93-25518
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements p 2635 N93-25544
In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768
Nondestructive evaluation of ferrite c-cores
| KCP-613-4677 | p 2721 N93-25939

ULTRAVIOLET LASERS
Ultraviolet waveguide lasers for phased array lidar
| AD-A261657 | p 2715 N93-26363

ULTRAVIOLET SPECTRA
Spectra of stable sonoluminescence
| AD-A260621 | p 2844 N93-25637

ULTRAVIOLET SPECTROMETERS
Further analysis of ECOM-721 data
| AD-A260863 | p 2774 N93-25790

ULTRAVIOLET SPECTROSCOPY
The interaction of HCN/DCN with Si(100)-2x1
| AD-A260837 | p 2645 N93-25920

UNDERGROUND STORAGE
Tank issues: Design and placement of vapor monitoring wells
| PB93-161131 | p 2768 N93-26536

UNDERWATER ACOUSTICS
Proceedings of the 5th International Symposium on Long Range Sound Propagation
| AD-A260666 | p 2845 N93-25643

UNITED STATES
Achieving the promise of the bioscience revolution: The role of the Federal Government
| PB93-139970 | p 2793 N93-25457

UNIVERSE
Cosmic string cosmology p 2891 N93-24907
Tully-Fisher distances and motions in the northern sky p 2889 N93-25621

UNIVERSITY PROGRAM
Viewgraph description of Penn State's Propulsion Engineering Research Center: Activity highlights and future plans
| NASA-CR-192317 | p 2622 N93-24943
The 1993/1994 NASA Graduate Student Researchers Program
| NASA-EP-283 | p 2872 N93-26051
Center for Advanced Propulsion Systems (fellowship)
| AD-A260571 | p 2632 N93-26216

UNIX (OPERATING SYSTEM)
An analysis of file migration in a UNIX supercomputing environment
| NASA-CR-192908 | p 2809 N93-25131
A trace-driven analysis of name and attribute caching in a distributed system
| NASA-CR-192899 | p 2815 N93-25251
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588
SAVS: A Space Analysis and Visualization System p 2881 N93-25812

UNSTEADY AERODYNAMICS
Aerodynamic foundations for use of unsteady aerodynamic effects in flight control p 2576 N93-25274
Application of finite-state inflow to flap-lag-torsion damping in hover p 2587 N93-25486

UNSTEADY FLOW
Prediction of unsteady flows in turbomachinery using the linearized Euler equations on deforming grids
| NASA-CR-192919 | p 2696 N93-25109
A simple, approximate model of parachute inflation
| DE93-002465 | p 2576 N93-25121
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134
Unsteady airfoil flow solutions on moving zonal grids
| AD-A261925 | p 2582 N93-26198

UPLINKING
Feasibility study of a Ka-/Ka-band dichroic plate with stepped rectangular apertures p 2671 N93-24660
Improvements in X-band transmitter phase stability through Klystron body temperature regulation p 2678 N93-26114
More rain compensation results p 2686 N93-26486

UPPER ATMOSPHERE
Aspects of the design of a satellite borne infra-red radiometer p 2620 N93-25474
JARE data reports. No. 171 (upper atmosphere physics 9). Data, Syowa and Asuka Stations, 1989 p 2774 N93-25889
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution
| NASA-CR-192832 | p 2775 N93-26084

UPPER ATMOSPHERE RESEARCH SATELLITE (UARS)
Polar decomposition for attitude determination from vector observations p 2602 N93-24711
A multimission three-axis stabilized spacecraft flight dynamics ground support system p 2603 N93-24714
Upper Atmosphere Research Satellite (UARS) onboard attitude determination using a Kalman filter p 2606 N93-24732
Goddard Space Flight Center (GSFC) Flight Dynamics Facility (FDF) calibration of the Upper Atmosphere Research Satellite (UARS) sensors p 2606 N93-24733
Solar array thermal snap and the characteristics of its effect on UARS p 2607 N93-24734
Upper Atmosphere Research Satellite (UARS) attitude accuracy using coarse attitude sensors p 2607 N93-24735
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
STS-48 Space Shuttle mission report
| NASA-CR-193060 | p 2613 N93-25990

UPWIND SCHEMES (MATHEMATICS)
Navier-Stokes simulations of unsteady transonic flow phenomena p 2578 N93-25542

URANIUM FLUORIDES
Recommendations for a Kalman filter to estimate and control freeze and sublime rates of gaseous diffusion plant freezer/sublimer systems
| ORNL/TM-12183 | p 2668 N93-25937

URBAN DEVELOPMENT
Satellite remote sensing for environmental geology: The Bandung (West Java) experience p 2739 N93-24784
Monitoring and analysis of urban trends using multitemporal satellite-imagery (case-study: Greater Cairo) p 2740 N93-24790
The photointerpretation of the area taken over from agriculture by intense urbanization at Villabate (Palermo, Italy) p 2742 N93-24800

URINE
Health and environmental chemistry: Analytical techniques, data management, and quality assurance
| DE93-002853 | p 2760 N93-24674

USER MANUALS (COMPUTER PROGRAMS)
Federal Communications Commission (FCC) Transponder Loading Data Conversion Software. User's guide and software maintenance manual, version 1.2
| NASA-CR-191067 | p 2808 N93-24947
High temperature composite analyzer (HITCAN) user's manual, version 1.0
| NASA-TM-106002 | p 2724 N93-25070
DSD Technology: A detonation reactive Huygens code
| LA-12235-MS | p 2706 N93-25987
Application of the Saha equation to high temperature (greater than or equal to) rocket exhaust
| AD-A261648 | p 2632 N93-26174
AMPHIB: A users manual
| AD-A261769 | p 2669 N93-26285
METal matrix composite ANalyzer (METCAN): Theoretical manual
| NASA-TM-106025 | p 2641 N93-26552

USER REQUIREMENTS
Systems engineering and the user: Incorporation of user requirements into the SE process p 2666 N93-24687
Factors associated with perceptions of productivity and usage of information technology in a service organization p 2875 N93-25421
A framework for the design of usable electronic text p 2877 N93-25754

UTILITIES
Published assessments bearing on the future use of ceramic superconductors by the electric power sector
| DE93-007737 | p 2658 N93-26588

V

V/STOL AIRCRAFT
Experimental performance of a ventral nozzle with pitch and yaw vectoring capability for SSTOVL aircraft
| NASA-TM-106054 | p 2592 N93-25129
ASTOVL combat aircraft design synthesis and optimization p 2589 N93-25704

Jet-induced ground effects on a parametric flat-plate model in hover
| NASA-TM-104001 | p 2581 N93-26099

VACANCIES (CRYSTAL DEFECTS)
Fundamental and applied aspects of defect engineering in GaAs
| AD-A260573 | p 2867 N93-25899

VACUUM
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311

VACUUM APPARATUS
Vacuum powder injector and method of impregnating fiber with powder
| NASA-CASE-LAR-14179-1 | p 2668 N93-26101

VACUUM CHAMBERS
Control of crystallite size in diamond film chemical vapor deposition
| AD-D015660 | p 2867 N93-26090

VALENCE
Accurate determination of Auger line shape binding energies
| AD-A261803 | p 2868 N93-26258

VALLEYS
Use of remote sensing and GIS for the environmental planning proposal of the Sarno River Valley (Campania, southern Italy) p 2741 N93-24797

VALVES
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201

VANES
Three-dimensional flow in radial turbomachinery and its impact on design
| NASA-CR-192957 | p 2593 N93-25668

VAPOR DEPOSITION
Fundamental studies of defect generation in amorphous silicon alloys grown by remote plasma-enhanced chemical-vapor deposition (Remote PECVD)
| DE92-010560 | p 2862 N93-24953
Mechanistic studies of the CVD of silicon nitride from SiF4 and NH3
| DE93-004500 | p 2644 N93-25312
Novel approaches to the construction of miniaturized analytical instrumentation
| NASA-CR-191988 | p 2709 N93-25345
Diagnostics of diamond film deposition plasmas
| AD-A260866 | p 2860 N93-25626
Thermal coatings for titanium-aluminum alloys
| NASA-TM-107760 | p 2651 N93-26048
Control of crystallite size in diamond film chemical vapor deposition
| AD-D015660 | p 2867 N93-26090
Adhesion and corrosion behavior of Al-Zn and TiN/Ti/TiN coatings on a DU-0.75 wt. percent Ti alloy
| MTL-TR-92-56 | p 2658 N93-26433

VAPOR PHASE EPITAXY
An inverted AlGaAs/GaAs patterned-Ge tunnel junction cascade concentrator solar cell
| DE93-000073 | p 2759 N93-25102

VAPOR PHASES
The WINCOF-I code: Detailed description
| NASA-CR-190779 | p 2573 N93-24760
An experimental study of particle-laden jet interactions with cocurrent flows p 2701 N93-25534
Kinetic studies in gas-phase reaction mechanisms important to the combustion process of high energy density materials: The H2/NO2 reaction p 2628 N93-26027
Mechanisms of decomposition and oxidation of borane compounds
| AD-A261137 | p 2645 N93-26045

VAPORIZING
Atomizing-gas temperature effect on cryogenic spray dropsize
| NASA-TM-106106 | p 2709 N93-25191
Fundamental studies of droplet interactions in dense sprays
| AD-A261165 | p 2661 N93-25948

VAPORS
A new method for infrared imaging of air currents in and around critical hazard fume hoods
| DE93-003009 | p 2761 N93-24956
Temperature dependent sensor response caused by polymer-solvent interactions
| DE93-005368 | p 2655 N93-25444
Tank issues: Design and placement of vapor monitoring wells
| PB93-161131 | p 2768 N93-26536

VARACTOR DIODES
Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670

VARIABILITY
Propagation of radiation in astrophysical media: Gravitational lenses and astrophysical masers p 2892 N93-24949
SAR-related stress variability in the marine atmospheric boundary layer
| AD-A261129 | p 2775 N93-25946

VARIANCE (STATISTICS)
Considerations of the error variances of time-averaged estimators for correlated processes
| AD-A261796 | p 2830 N93-26255

VARIATIONS
Data management for JGOFS: Theory and design p 2735 N93-24935

VAX COMPUTERS
Implementation of custom colors in the DECwindows environment
| AD-A261456 | p 2757 N93-26574

VECTOR ANALYSIS
Polar decomposition for attitude determination from vector observations p 2602 N93-24711
Rate determination from vector observations p 2603 N93-24713
Quaternion normalization in spacecraft attitude determination p 2606 N93-24730
Attitude determination using vector observations: A fast optimal matrix algorithm p 2606 N93-24731
Improved determination of vector lithospheric magnetic anomalies from MAGSAT data
| NASA-CR-192784 | p 2771 N93-25201

VECTOR PROCESSING (COMPUTERS)
Using a multifrontal sparse solver in a high performance, finite element code
| NASA-CR-192718 | p 2828 N93-25223

VECTOR QUANTIZATION
Wavelet transform-vector quantization compression of supercomputer ocean model simulation output
| DE93-005453 | p 2876 N93-25448

VEGETABLES
Analysis of the lettuce data from the variable pressure growth chamber at NASA Johnson Space Center: A three-stage nested design model p 2794 N93-26069

VEGETATION
Land cover monitoring in the Netherlands applying satellite remote sensing p 2740 N93-24789
Detection of land use/land cover changes using remote sensing and GIS in Vietnam p 2740 N93-24791
Determination of environmental dynamics using NOAA satellite data and a water balance model for the Mediterranean landscape p 2741 N93-24794
Agroclimatological zonation by AVHRR data for vegetation monitoring p 2741 N93-24795
Potential operational use of remote sensing from space in forestry p 2745 N93-24817
An expert system shell for inferring vegetation characteristics: Inrerface for the addition of techniques (Task H)
| NASA-CR-192897 | p 2754 N93-25154
Integrating satellite imagery and digital elevation data for geobotanical mapping in Quetico Provincial Park, Ontario, Canada p 2754 N93-25430
Evaluating climate-vegetation interactions at climate model sub-grid scales p 2764 N93-25476

VEGETATION GROWTH
North-central Mexico blue grama rangeland biomass assessment at the end of the rainy season using NOAA-AVHRR-LAC p 2750 N93-24854

VEGETATIVE INDEX
Correlation between NDVI values derived from NOAA AVHRR HRPT data and ground measurements of precipitation in the EFEDA study area (Spain) p 2738 N93-24780
ANOVA method to estimate vegetation indices sensitivity assessing nitrogen fertilizing influence on spectral reflectance coefficients p 2739 N93-24782
Agroclimatological zonation by AVHRR data for vegetation monitoring p 2741 N93-24795
Assessment and forecasting of crop yield in Niger through NOAA NDVI data p 2750 N93-24851
Global drought monitoring from NOAA polar orbiting satellites p 2750 N93-24852
Crop agroecological diagnostics by remote sensing technique p 2751 N93-24860

VEHICLES
Apparatus and methods for determining balance of a cylindrical vehicle
| AD-D015637 | p 2717 N93-25228

VELOCITY
Visual processing of object velocity and acceleration
| AD-A261048 | p 2800 N93-25778

VELOCITY DISTRIBUTION
The transient development of vortices over delta wings p 2576 N93-25269
The effects of large-amplitude, low-frequency excitation on a three-dimensional jet p 2702 N93-25553
Propagation of finite amplitude sound in a waveguide with a parabolic sound velocity profile
| ARL-TR-92-11 | p 2846 N93-26179
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584

VELOCITY ERRORS
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657

VELOCITY MEASUREMENT
Ultrasonic rate measurement of multiphase flow
| DE93-000112 | p 2695 N93-24954
An investigation of laser velocimetry measurements within high speed, complex flows p 2697 N93-25237
The transient development of vortices over delta wings p 2576 N93-25269
Measurement of velocities in gas-liquid two-phase flow using laser Doppler velocimetry
| DE93-008083 | p 2698 N93-25306
The effects of large-amplitude, low-frequency excitation on a three-dimensional jet p 2702 N93-25553
An investigation on planar velocimetry by spatial cross-correlation p 2578 N93-25664
An investigation of photothermal velocimetry for application to transient, high-speed gas flows p 2579 N93-25720
Direct measurement of velocity space transport in a plasma p 2861 N93-25831
System for calibrating a gyro navigator
| AD-D015668 | p 2586 N93-26093
Pulsed laser Rayleigh scattering diagnostic for hydrogen/oxygen rocket exit plane flowfield velocimetry
| NASA-TM-106098 | p 2631 N93-26149
Image correlation velocimetry
| AD-A261599 | p 2707 N93-26163
Trailing vortex/free-surface interaction
| AD-A261654 | p 2581 N93-26195
Basic research thermoacoustic heat transport
| AD-A261334 | p 2759 N93-26310

VENUS (PLANET)
The Venus 130-nm dayglow as a diagnostic of thermospheric structure and dynamics p 2896 N93-25285
Occultation of a compact radio source by Venus p 2676 N93-26107
Galileo early cruise, including Venus, First Earth, and Gaspra encounters p 2599 N93-26125
Revealing the face of Venus: Magellan
| NASA-CR-192922 | p 2898 N93-26517

VENUS ATMOSPHERE
The Venus 130-nm dayglow as a diagnostic of thermospheric structure and dynamics p 2896 N93-25285
Occultation of a compact radio source by Venus p 2676 N93-26107

VERBAL COMMUNICATION
Spontaneous discovery and use of categorical structure
| AD-A261658 | p 2798 N93-26364

VERTICAL AIR CURRENTS
Redistribution of trace chemical species by a small convective cloud
| PB93-156164 | p 2765 N93-25873

VERTICAL DISTRIBUTION
On the vertical structure of seasonal, interannual and intraseasonal flows p 2782 N93-25557

VERTICAL TAKEOFF AIRCRAFT
Reduction in size and unsteadiness of a VTOL ground vortex by ground fences
| NASA-CR-192997 | p 2580 N93-26049

VERY LARGE SCALE INTEGRATION
Construction of a connectionist network supercomputer
| AD-A260929 | p 2820 N93-25648
Very high-speed arithmetic processors (The Gauss Machine)
| AD-A260693 | p 2806 N93-25650
VLSI for high-speed digital signal processing
| AD-A260754 | p 2690 N93-25678
The design and implementation of a read prediction buffer
| AD-A260902 | p 2806 N93-25934

VERY LONG BASE INTERFEROMETRY
The advances in F and T technology: Their benefits of and for space science and technology p 2831 N93-24979
Precise Doppler tracking from the Medicina VLBI station p 2608 N93-24998
The development progresses of hydrogen masers at Shanghai Observatory p 2716 N93-25048
A determination of the radio-planetary frame tie from comparison of Earth orientation parameters p 2676 N93-26106
A nanoradian differential VLBI tracking demonstration p 2677 N93-26108

VERY LOW FREQUENCIES
The design of a modular sound absorber for very low frequencies
| BBC-RD-1992/10 | p 2673 N93-25170
A modular wideband sound absorber
| BBC-RD-1992/11 | p 2673 N93-25171

Very low frequency signals and whistler-mode amplification in the magnetosphere and limit-cycle behavior in the CECAF infrared free electronic laser
| AD-A261776 | p 2716 N93-26601

VIBRATION
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
Monolithic quartz vibrating beam accelerometer p 2711 N93-25011
A study of vibrationally excited N2(+) ions in the daytime thermosphere p 2770 N93-25179
Helmeted head and neck dynamics under whole-body vibration p 2800 N93-25531
ASTROS-ID: Software for system identification using mathematical programming
| AD-A260867 | p 2810 N93-25627
Evaluation of a vibration diagnostic system for the detection of spur gear pitting failures
| NASA-TM-106103 | p 2718 N93-25672
Nonlinear vibrations, stability, and dynamics of structures and mechanisms
| AD-A260871 | p 2728 N93-25838

VIBRATION DAMPING
Attitude control of the LACE satellite: A gravity gradient stabilized spacecraft p 2605 N93-24727
UARS in-flight jitter study for EOS
| NASA-CR-191419 | p 2615 N93-25133
Identification and control of lightly damped, large space structures: An experimental evaluation p 2616 N93-25351
Graphite/epoxy composite laminates with co-cured interlaminar damping layers p 2642 N93-25587
Passive vibration damping materials: Piezoelectric ceramics composites for vibration damping applications
| AD-A260792 | p 2727 N93-25690
Using input command pre-shaping to suppress multiple mode vibration p 2732 N93-25834
MIT's interferometer CST testbed p 2609 N93-25836
Mechanics and control of multibody structural systems
| AD-A261576 | p 2619 N93-26456
Digital filter control of remotely operated flexible robotic structures
| DE93-007587 | p 2827 N93-26596

VIBRATION MODE
Vibration, buckling, and postbuckling of laminated composites with delaminations p 2723 N93-24765
Joint flexibility effects on the dynamic response of structures. Part 2: Stochastic analysis
| AD-A261003 | p 2729 N93-25938

VIBRATIONAL SPECTRA
Molecular interactions and properties with many-body methods
| AD-A261688 | p 2850 N93-26367
Spectroscopic effects of disorder and vibrational localization in mixed-halide metal-halide chain solids
| DE93-007361 | p 2646 N93-26505

VIDEO COMMUNICATION
Video scan rate conversion method and apparatus for achieving same
| AD-D015661 | p 2854 N93-26091

VIDEO DATA
Data processing and control in a transputer system for remote sensing of the Earth p 2753 N93-24870
Evaluation of lens distortion errors in video-based motion analysis
| NASA-TP-3266 | p 2797 N93-25736

VIDEO EQUIPMENT
United States Army space experiment 601
| AD-A261460 | p 2798 N93-26353

VIDEO SIGNALS
Video scan rate conversion method and apparatus for achieving same
| AD-D015661 | p 2854 N93-26091

VIRTUAL REALITY
Autonomic physiological data associated with simulator discomfort
| NASA-CR-177609 | p 2794 N93-24738

VISCOELASTIC DAMPING
Graphite/epoxy composite laminates with co-cured interlaminar damping layers p 2642 N93-25587

VISCOELASTICITY
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522

VISCOPLASTICITY
A micromechanical viscoplastic stress-strain model with grain boundary sliding
| DE93-009109 | p 2649 N93-25095

VISCOSITY
Tables for the thermophysical properties of ethane
| PB93-160786 | p 2646 N93-26319
On the stability of finite plastic deformations
| AD-A261526 | p 2730 N93-26361

VISCOUS DAMPING
On the effect of acoustic coupling on random and harmonic plate vibrations
| NASA-TM-107740 | p 2844 N93-25189

VISCOUS FLOW
Prediction of forces and moments for hypersonic flight vehicle control effectors
| NASA-CR-193033 | p 2595 N93-24762
Computation of hypersonic viscous flowfields using the parabolized Navier-Stokes equations p 2694 N93-24766
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow
| DE93-003362 | p 2695 N93-24963
The steady Navier-Stokes problem for low Reynolds number viscous jets p 2698 N93-25264
Numerical modelling of viscous turbomachinery flows with a pressure correction method p 2594 N93-25702
The rate form of equilibrium equation for problems of steady-state, elastic, viscous flows p 2704 N93-25708
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779
Model fan passage flow simulation
| AD-A261613 | p 2707 N93-26167

VISIBILITY
Runway Visual Range (RVR) Operational Test and Evaluation (OT&E) integration and OT&E operational test report
| DOT/FAA/CT-TN93/37 | p 2584 N93-25243

VISION
The prevalence of artificial lens implants in the civil airman population
| DOT/FAA/AM-92/14 | p 2794 N93-25214
Receptoral and neural aliasing
| AD-A261438 | p 2799 N93-26489

VISUAL CONTROL
Robotic Variable Polarity Plasma Arc (VPPA) welding p 2720 N93-25605

VISUAL FIELDS
Visual perception of elevation
| AD-A261394 | p 2797 N93-26307
Neuropsychological components of object identification
| AD-A261449 | p 2797 N93-26347
Receptoral and neural aliasing
| AD-A261438 | p 2799 N93-26489

VISUAL FLIGHT
Visual approach data collection at St. Louis Lambert Field (STL)
| DOT/FAA/CT-TN93/2 | p 2584 N93-24948

VISUAL PERCEPTION
Visual processing of object velocity and acceleration
| AD-A261048 | p 2800 N93-25778
Perceptual factors that influence use of computer enhanced visual displays
| NASA-CR-192961 | p 2811 N93-26150
Visual perception of elevation
| AD-A261394 | p 2797 N93-26307
Neural basis of motion perception
| AD-A261452 | p 2798 N93-26349
Coordinated action in 3-D space
| AD-A261418 | p 2799 N93-26449

VISUAL STIMULI
Topography from shading and stereo p 2879 N93-25803

VISUAL TASKS
Duration of alpha suppression increases with angle in a mental rotation task
| AD-A261592 | p 2798 N93-26435

VITERBI DECODERS
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications
| NASA-CR-192715 | p 2673 N93-25198

VLASOV EQUATIONS
Effect of continuous eigenvalue spectrum on plasma transport in toroidal systems
| NIFS-214 | p 2859 N93-25215

VOICE COMMUNICATION
Speech research
| AD-A260643 | p 2675 N93-25639
Admission control in integrated voice/data multihop radio networks
| AD-A261055 | p 2680 N93-26227

VOIDS
Improved composite fabrication process
| AD-D015679 | p 2640 N93-26145

VOLCANOES
Winter warming from large volcanic eruptions
| NASA-CR-192848 | p 2763 N93-25244

VOLTAGE CONVERTERS (DC TO DC)
DC-DC power converter research for Orbiter/Station power exchange
| NASA-CR-192939 | p 2633 N93-26425

VOLTAGE REGULATORS
A microcomputer compensated crystal oscillator MCXO p 2834 N93-25001

VORTEX BREAKDOWN
Supersonic shock wave/vortex interaction
| NASA-CR-192917 | p 2576 N93-25249
Simulation of vortex bursting p 2580 N93-25881

VORTEX GENERATORS
Vortex shedding in oscillatory flow p 2700 N93-25438

VORTEX SHEDDING
The transient development of vortices over delta wings p 2576 N93-25269
Vortex shedding in oscillatory flow p 2700 N93-25438

VORTEX SHEETS
Analysis of wing wake roll-up using a vortex-in-cell method p 2579 N93-25706

VORTICES
Observations of an intrathermocline vortex p 2788 N93-24769
A premixed laminar flame interacting with a vortex resulting in flame stretch and quenching p 2642 N93-24771
Computational study of the aerodynamics and control by blowing of asymmetric vortical flows over delta wings p 2574 N93-24772
The modeling of complex continua: Fundamental obstacles and grand challenges
| DE93-006507 | p 2696 N93-25193
Flow visualizations of perpendicular blade vortex interactions
| NASA-CR-192725 | p 2696 N93-25208
Supersonic shock wave/vortex interaction
| NASA-CR-192917 | p 2576 N93-25249
The transient development of vortices over delta wings p 2576 N93-25269
A dynamical theory for hurricane spiral bands p 2782 N93-25352
Dynamics of Gulf Stream meanders and frontal eddies in the South Atlantic Bight p 2788 N93-25354
The interaction of modulated vortex pairs with a free surface p 2701 N93-25485
Tangential fuselage blowing on an ogive cylinder p 2578 N93-25545
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
| AD-A260889 | p 2783 N93-25633
Analysis of wing wake roll-up using a vortex-in-cell method p 2579 N93-25706
Initial streamwise vorticity formation in a two-stream mixing layer p 2579 N93-25752
Large-eddy simulation of temporally developing boundary layers with embedded streamwise vortices p 2705 N93-25753
Simulation of vortex bursting p 2580 N93-25881
Method of measuring cross-flow vortices by use of an array of hot-film sensors
| NASA-CASE-LAR-14824-1-SB | p 2706 N93-26000
Reduction in size and unsteadiness of a VTOL ground vortex by ground fences
| NASA-CR-192997 | p 2580 N93-26049
Conical Euler analysis and active roll suppression for unsteady vortical flows about rolling delta wings
| NASA-TP-3259 | p 2581 N93-26134
Trailing vortex/free-surface interaction
| AD-A261654 | p 2581 N93-26195
Flame-turbulence interactions
| AD-A260957 | p 2645 N93-26220
Interaction of vorticity with a free surface
| AD-A261524 | p 2707 N93-26360

VORTICITY
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls
| NASA-TM-106087 | p 2696 N93-25175
The transient development of vortices over delta wings p 2576 N93-25269
A dynamical theory for hurricane spiral bands p 2782 N93-25352
Numerical simulation of leading-edge receptivity to freestream vorticity p 2577 N93-25388
Initial streamwise vorticity formation in a two-stream mixing layer p 2579 N93-25752
Interaction of vorticity with a free surface
| AD-A261524 | p 2707 N93-26360

VORTICITY EQUATIONS
Implementation of the Turn Function Method in a three-dimensional, parallelized hydrodynamics code
| DE93-003744 | p 2696 N93-25124

VULNERABILITY
Minutes of the Twenty-Fifth Explosives Safety Seminar, volume 4
| AD-A261116 | p 2660 N93-25769

W

WAFERS
Two- and three-dimensional high performance, patterned overlay multi-chip module technology p 2694 N93-25581
MOCVD process technology for affordable, high-yield, high-performance MESFET structures. Phase 3: MIMIC | AD-A261178 | p 2690 N93-25820
Fundamental and applied aspects of defect engineering in GaAs | AD-A260573 | p 2867 N93-25899

WAKES
Application of finite-state inflow to flap-lag-torsion damping in hover p 2587 N93-25486
Analysis of wing wake roll-up using a vortex-in-cell method p 2579 N93-25706

WALKING MACHINES
Biped control via nonlinear dynamics p 2718 N93-25697

WALL FLOW
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow | DE93-003362 | p 2695 N93-24963
Assessment of closure coefficients for compressible-flow turbulence models | NASA-TM-103882 | p 2697 N93-25247
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738
Thermocapillary flow near a cold wall | AD-A261050 | p 2706 N93-25779

WALL JETS
Reduction in size and unsteadiness of a VTOL ground vortex by ground fences | NASA-CR-192997 | p 2580 N93-26049

WALL PRESSURE
An experimental study of the sources of fluctuating pressure loads beneath swept shock/boundary-layer interactions | NASA-CR-192918 | p 2698 N93-25266
A model for the filling of cold cavities with solidifying, semi-crystalline polymers | DE93-003817 | p 2655 N93-25507
Correlations between organized turbulent structures and wall pressure fluctuations | PB93-156479 | p 2706 N93-25885

WALLS
An analysis of lift forces on aerosols in a wall bounded turbulent shear flow | DE93-003362 | p 2695 N93-24963
The design of a modular sound absorber for very low frequencies | BBC-RD-1992/10 | p 2673 N93-25170
Nonlinear evolution of the first mode supersonic oblique waves in compressible boundary layers. Part 1: Heated/cooled walls | NASA-TM-106087 | p 2696 N93-25175
Laminar and turbulent natural convection heat transfer in Trombe wall channels p 2702 N93-25551
Radial spline assembly for antifriction bearings | NASA-CASE-MFS-28629-1 | p 2719 N93-26001

WALSH FUNCTION
Walsh function generator for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument | NASA-TM-4449 | p 2689 N93-25618

WAR GAMES
Fidelity and validity in distributed interactive simulation: Questions and answers | AD-A260971 | p 2810 N93-25711

WARFARE
Science, technology, and national security p 2886 N93-25232

WARNING SYSTEMS
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation | AD-A261233 | p 2583 N93-26263

WASTE DISPOSAL
Development of a cone penetrometer for measuring spectral characteristics of soils in situ p 2776 N93-25570
Development of a heuristic knowledge base for the selection of applicable or relevant and appropriate environmental requirements | AD-A261038 | p 2765 N93-25864
Human factors in environmental management: New directions from the Hanford site | DE93-004337 | p 2767 N93-26495

WASTE TREATMENT
Converting environmental wastes into valuable resources p 2759 N93-25572
Development of a pyrolysis waste recovery model with designs, test plans, and applications for space-based habitats p 2803 N93-26076
Human factors in environmental management: New directions from the Hanford site | DE93-004337 | p 2767 N93-26495
Treatment of hazardous organic wastes using silent discharge plasmas | DE93-003789 | p 2768 N93-26592

WASTE WATER
Health and environmental chemistry: Analytical techniques, data management, and quality assurance | DE93-002853 | p 2760 N93-24674
Low cost dewatering of waste slurries p 2769 N93-25573

WATER
The WINCOF-I code: Detailed description | NASA-CR-190779 | p 2573 N93-24760
Narrow-body aircraft water spray optimization study | DOT/FAA/CT-TN93/3 | p 2582 N93-25224
Effects of moisture and other contaminants in friction composites | AD-A261226 | p 2640 N93-26301

WATER BALANCE
Determination of environmental dynamics using NOAA satellite data and a water balance model for the Mediterranean landscape p 2741 N93-24794

WATER DEPTH
Preliminary studies leading toward the development of a LIDAR bathymetry mapping instrument p 2711 N93-25614

WATER IMMERSION
Effect of water immersion on fiber/matrix adhesion | AD-A260704 | p 2636 N93-25652

WATER MANAGEMENT
Remote sensing in hydrology and water management p 2744 N93-24816
Applications of remote sensing for tidal waters, coastal areas and inland waters p 2745 N93-24819

WATER POLLUTION
NORSMAP 1989: Norwegian remote sensing spectrometry for mapping and monitoring of algal blooms and pollution p 2746 N93-24824
Non-local description of pollution transport in random medium p 2763 N93-25329
Space life support technology applications to terrestrial environmental problems p 2803 N93-25617
Inorganic nitrogen and phosphorus dynamics in the water column of the Patuxent River | PB93-172955 | p 2767 N93-26511
Model for transport of floating debris in the ocean | PB93-172997 | p 2768 N93-26559

WATER QUALITY
Oil pollution and water quality mapping of Augusta Bay, Italy using remote sensing techniques p 2746 N93-24823
NORSMAP 1989: Norwegian remote sensing spectrometry for mapping and monitoring of algal blooms and pollution p 2746 N93-24824
Multi-date algorithms for predicting surface water quality parameters in estuarine and coastal waters using Landsat TM data | ED-659-CP | p 2746 N93-24829
Loss of temporal coherence of laser light propagated through simulated coastal waters | AD-A261303 | p 2715 N93-26296

WATER RECLAMATION
Low cost dewatering of waste slurries p 2769 N93-25573

WATER RESOURCES
Interactive forecasting with the National Weather Service River Forecast System p 2788 N93-25616

WATER RUNOFF
Remote sensing in hydrology and water management p 2744 N93-24816

WATER TABLES
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system | AD-A261454 | p 2787 N93-26351

WATER TEMPERATURE
Neural networks for atmospheric retrievals p 2824 N93-25975

WATER TREATMENT
Treatment of hazardous organic wastes using silent discharge plasmas | DE93-003789 | p 2768 N93-26592

WATER VAPOR
The WINCOF-I code: Detailed description | NASA-CR-190779 | p 2573 N93-24760
Observed annual and interannual variations in tropospheric water vapor p 2782 N93-25549

WAVE ATTENUATION
Rain rate and modeled fade distributions at 20 GHz and 30 GHz derived from five years of network rain gauge measurements p 2683 N93-26468
On the estimation of risk associated with an attenuation prediction p 2683 N93-26469
Satellite communications application to Pacific countries above Ku band p 2683 N93-26471
Brightness temperature and attenuation diversity statistics at 20.6 and 31.65 GHz for the Colorado Research Network p 2684 N93-26473
ESA's planning and coordination of the OLYMPUS propagation experiment p 2684 N93-26477
Effect-specific analysis of propagation parameters p 2684 N93-26478
The Virginia Tech OLYMPUS propagation experiment p 2685 N93-26479
Status of the Olympus experiment at CRC p 2685 N93-26480
Rain compensation algorithm using adaptive linear prediction p 2685 N93-26485

WAVE EQUATIONS
Time dependent simulation of cosmic-ray shocks including Alfven transport | NASA-CR-192931 | p 2899 N93-24752
Elastic modeling and migration in Earth models p 2771 N93-25433

WAVE FRONT DEFORMATION
DSD Technology: A detonation reactive Huygens code | LA-12235-MS | p 2706 N93-25987

WAVE FUNCTIONS
Performance results of a 300-degree linear phase modulator for spaceborne communications applications p 2672 N93-24670
Correlated wavefunction quantum Monte Carlo approach to solids | DE93-007730 | p 2863 N93-25367

WAVE GENERATION
Theoretical and experimental investigation of electron beam acceleration and sub-millimeter wave generation | AD-A261117 | p 2609 N93-25770

WAVE INTERACTION
Interactions of acoustic waves and combustion of homogeneous solid propellants in rocket motors p 2630 N93-26039

WAVE PACKETS
On the generation and dispersion of Yanai waves with a spectral Chebyshev-collocation reduced-gravity ocean model p 2788 N93-25276
Bimolecular reaction dynamics from photoelectron spectroscopy of negative ions | DE93-007669 | p 2647 N93-26599

WAVE PROPAGATION
Tracking sharp interface of two fluids by the CIP (Cubic-Interpolated Propagation) scheme | NIFS-206 | p 2698 N93-25277
Propagation at microwave frequencies in the presence of tropospheric stratified layers p 2674 N93-25340
A dynamical theory for hurricane spiral bands p 2782 N93-25352
Determination of the elastic constants of composite materials from ultrasonic group velocity measurements p 2635 N93-25544
Proceedings of the 5th International Symposium on Long Range Sound Propagation | AD-A260666 | p 2845 N93-25643
Generation of acoustic waves by focused infrared neodymium-laser radiation p 2714 N93-25761
DSD Technology: A detonation reactive Huygens code | LA-12235-MS | p 2706 N93-25987
Propagation of finite amplitude sound in a waveguide with a parabolic sound velocity profile | ARL-TR-92-11 | p 2846 N93-26179
Laser propagation through turbulence | AD-A260712 | p 2714 N93-26217
High Frequency (HF) radiowave propagation | AD-A261726 | p 2681 N93-26280
Analysis of longitudinal impact on semi-infinite circular bars and tubes. Appendix no. 2 | AD-A261556 | p 2731 N93-26459
Proceedings of the 16th NASA Propagation Experimenters Meeting (NAPEX 16) and the Advanced Communications Technology Satellite (ACTS) Propagation Studies Miniworkshop | NASA-CR-192800 | p 2682 N93-26463
Opening remarks p 2682 N93-26464
The ACTS propagation program p 2683 N93-26465
L- and K-band LMSS propagation measurements using MARECS-B, OLYMPUS, and ACTS p 2683 N93-26467
A database for propagation models p 2684 N93-26472
Brightness temperature and attenuation diversity statistics at 20.6 and 31.65 GHz for the Colorado Research Network p 2684 N93-26473
WARC 92 and some thoughts as to its impact on the NASA propagation program p 2684 N93-26475
ESA's planning and coordination of the OLYMPUS propagation experiment p 2684 N93-26477

Effect-specific analysis of propagation parameters
p 2684 N93-26478
Status of the Olympus experiment at CRC
p 2685 N93-26480
Observations on the NASA Propagation Program
p 2685 N93-26482
ACTS propagation terminal update
p 2685 N93-26484
Rain compensation algorithm using adaptive linear prediction p 2685 N93-26485

WAVE REFLECTION
On the effective reflection properties of the randomly segmented elastic bar p 2724 N93-25328

WAVE SCATTERING
Enhanced backscattering from rough surfaces
| AD-A261000 | p 2676 N93-25855

WAVE-PARTICLE INTERACTIONS
Time dependent simulation of cosmic-ray shocks including Alfven transport
| NASA-CR-192931 | p 2899 N93-24752
Alfven wave transport effects in the time evolution of parallel cosmic-ray modified shocks
| NASA-CR-192932 | p 2899 N93-25161
Very low frequency signals and whistler-mode amplification in the magnetosphere and limit-cycle behavior in the CECAF infrared free electronic laser
| AD-A261776 | p 2716 N93-26601

WAVEFORMS
Monaural and binaural processing of complex waveforms
| AD-A261659 | p 2846 N93-26358

WAVEGUIDE ANTENNAS
Performance of a 12-GHz fiber-optic system for beam-waveguide antenna stability testing
p 2677 N93-26113
Optimizing the G/T ratio of the DSS-13 34-meter beam-waveguide antenna p 2678 N93-26118

WAVEGUIDE LASERS
Ultraviolet waveguide lasers for phased array lidar
| AD-A261657 | p 2715 N93-26363

WAVEGUIDES
Time resolved studies of in-well and cross-well carrier transport in MQW semiconductor structures
| AD-A261170 | p 2714 N93-25774
Propagation of finite amplitude sound in a waveguide with a parabolic sound velocity profile
| ARL-TR-92-11 | p 2846 N93-26179
Analysis of longitudinal impact on semi-infinite circular bars and tubes. Appendix no. 2
| AD-A261556 | p 2731 N93-26459

WAVERIDERS
Optimized scramjet engine integration on a waverider airframe p 2593 N93-25480

WEAPON SYSTEMS
The systems engineering overview and process (from the Systems Engineering Management Guide, 1990)
p 2665 N93-24679
Fidelity and validity in distributed interactive simulation: Questions and answers
| AD-A260971 | p 2810 N93-25711
CALS-HSC data element dictionary
| AD-A261560 | p 2813 N93-26461
Technical operating report on the Data Integration and Collection Environment (DICE) instrumentation system design
| AD-A261105 | p 2591 N93-26572

WEAR
Elastomer compound developed for high wear applications p 2659 N93-25607
Advanced bristle seals for gas turbine engines
| AD-A261296 | p 2720 N93-26564

WEAR RESISTANCE
Macromolecules for inhibition of corrosion and wear
| AD-A261041 | p 2655 N93-25816

WEATHER
A comparison of the WIND System atmospheric models and MATS data
| DE93-002687 | p 2760 N93-24673
Applications of triggered lightning to space vehicle operations p 2619 N93-24878

WEATHER FORECASTING
Weather forecasting expert system study
| NASA-CR-192929 | p 2777 N93-24747
The need for spaceborne observations for meteorology and climatology p 2744 N93-24813
A single-point warning system for thunderstorms and electric fields p 2711 N93-24900
Application of optical remote sensing to the study of surface fluxes related to cloud formation
| DE93-003783 | p 2781 N93-25125
The ATC evaluation of the prototype Airport Surveillance Radar Wind Shear Processor (ASR-WSP) at Orlando International Airport
| DOT/FAA/CT-TN92/48 | p 2673 N93-25210
A systematic satellite approach for estimating central pressures of mid-latitude oceanic storms
| NOAA-TR-NESDIS-63 | p 2781 N93-25220
Rossby-gravity waves in tropical total ozone data
| NASA-CR-192983 | p 2764 N93-25432
Numerical simulation of the seasonal and interannual variability of the tropical Atlantic Ocean circulation during the 1980's p 2789 N93-25445
Interactive forecasting with the National Weather Service River Forecast System p 2788 N93-25616
Computation of moisture flux from ocean to atmosphere using a synergy of SSM/I-derived precipitable water and ECMWF analyses p 2774 N93-25757
National Weather Service Winter Weather Workshop
| PB93-146785 | p 2785 N93-25775
Typhoon prediction (recurvature - 1990 experiment)
| AD-A260673 | p 2786 N93-25892
Development and testing of improved techniques for modeling the hydrologic cycle in a mesoscale weather prediction system
| AD-A261454 | p 2787 N93-26351

WEATHER MODIFICATION
Investigation of winter mountain storms in Utah during the 1989 Utah/NOAA field program
| PB93-153021 | p 2785 N93-25849

WEDGES
Combined LAURA-UPS hypersonic solution procedure
| NASA-TM-107682 | p 2696 N93-25176

WEIGHT (MASS)
What is the relationship between altitude and weight in a model rocket? p 2603 N93-24715

WEIGHTING FUNCTIONS
Computation and learning in neural networks with binary weights
| AD-A261182 | p 2821 N93-25821

WEIGHTLESSNESS
JPRS report: Science and technology. Central Eurasia: Life sciences
| JPRS-ULS-92-022 | p 2795 N93-25407
Numerical study of cavity natural convection flow with augmenting and counteracting effects by projection finite element method p 2701 N93-25540
MAC to VAX connectivity: Heartrate spectral analysis system p 2796 N93-25594
Conceptual design for the Space Station Freedom fluid physics/dynamics facility
| NASA-TM-103663 | p 2618 N93-26209

WELDED JOINTS
Fatigue resistance of orthotropic plates with trapezoidal stiffeners
| TRL-TRANS-T3908 | p 2726 N93-25419
Laser welding of selected aerospace alloys
p 2718 N93-25435
Robotic Variable Polarity Plasma Arc (VPPA) welding
p 2720 N93-25605
External stress-corrosion cracking of a 1.22-m-diameter type 316 stainless steel air valve
| NASA-TP-3190 | p 2652 N93-26201

WELDING
Vision-aided monitoring and control of thermal spray, spray forming, and welding processes
p 2670 N93-25604
Thermocapillary flow near a cold wall
| AD-A261050 | p 2706 N93-25779

WETLANDS
Bibliography of remote sensing techniques used in wetland research
| AD-A261704 | p 2757 N93-26440

WHEATSTONE BRIDGES
The constant current loop: A new paradigm for resistance signal conditioning
| NASA-TM-108744 | p 2673 N93-25181

WHEELS
Position and force control of a vehicle with two or more steerable drive wheels
| DE92-041301 | p 2717 N93-25100

WHISKER COMPOSITES
Mullite whiskers and mullite-whisker felt
p 2642 N93-25586

WHISKERS (CRYSTALS)
Whisker growth studies under conditions which resemble those available on an orbiting space station
| NASA-CR-192701 | p 2664 N93-25218

WHISPERING GALLERY MODES
R and D of transmission lines for ECH system
| NIFS-210 | p 2687 N93-24951
Microwave frequency discriminator with a cryogenic sapphire resonator for ultra-low phase noise
p 2693 N93-24982

WHITE NOISE
Frequency generation and synthesis in the DRSS
p 2693 N93-25054
Figure of merit for direct-detection optical channels
p 2678 N93-26117
New results in signal design for the AWGN channel
| AD-A261424 | p 2682 N93-26451

WIDE ANGLE LENSES
Miniature Optical Wide-Angle-Lens Startracker (Mini-OWLS) p 2606 N93-24728
High resolution stereo imaging and data compression
p 2753 N93-24867
Evaluation of lens distortion errors in video-based motion analysis
| NASA-TP-3266 | p 2797 N93-25736

WILDLIFE
Incorporating biodiversity considerations into environmental impact analysis under the National Environmental Policy Act
| PB93-139806 | p 2766 N93-25878

WIND (METEOROLOGY)
A climatology of polar low occurrences in the Nordic Seas and an examination of katabatic winds as a triggering mechanism
| AD-A261719 | p 2786 N93-26245
The Martian lower atmosphere p 2897 N93-26394

WIND EFFECTS
Mapping of windfall damage in the Hunsrueck plateau with Landsat TM-data p 2749 N93-24843
An observational study of the local and remote response of the equatorial Pacific to westerly wind events during the 1991-92 El Nino
| AD-A261777 | p 2787 N93-26286
Wind-driven coastal generation of annual mesoscale eddy activity in the California current
| AD-A261355 | p 2790 N93-26331
Model for transport of floating debris in the ocean
| PB93-172997 | p 2768 N93-26559
Guide for conducting convective windstorm surveys
| PB93-148427 | p 2787 N93-26570

WIND MEASUREMENT
Polarizing Michelson interferometer for measuring thermospheric winds
| ISBN-0-315-70442-X | p 2784 N93-25731

WIND PROFILES
Empirical wind model for the middle and lower atmosphere. Part 1: Local time average
| NASA-TM-104581 | p 2770 N93-25160

WIND SHEAR
The ATC evaluation of the prototype Airport Surveillance Radar Wind Shear Processor (ASR-WSP) at Orlando International Airport
| DOT/FAA/CT-TN92/48 | p 2673 N93-25210
Setting values for TDWR/LLWAS 3 integration parameters
| AD-A260740 | p 2783 N93-25645

WIND TUNNEL APPARATUS
NASA Lewis 8- by 6-foot supersonic wind tunnel user manual
| NASA-TM-105771 | p 2597 N93-25080
Nozzle diffuser for use with an open test section of a wind tunnel
| NASA-CASE-LAR-14424-1-SB | p 2598 N93-25996

WIND TUNNEL MODELS
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202
Optically smart surfaces survivability testing at Mach 3
| AD-A261785 | p 2857 N93-26566

WIND TUNNEL TESTS
Measurements of density, temperature, and their fluctuations in turbulent supersonic flow using UV laser spectroscopy
| NASA-TM-103943 | p 2708 N93-25076
A simple, approximate model of parachute inflation
| DE93-002465 | p 2576 N93-25121
Experimental study of the effect of helical grooves on an infinite cylinder
| AD-A260890 | p 2676 N93-25912
Fabrication of composite propfan blades for a cruise missile wind tunnel model
| NASA-TM-105270 | p 2730 N93-26202
Supersonic aeroelastic instability results for a NASP-like wing model
| NASA-TM-107739 | p 2591 N93-26553

WIND TUNNELS
Nozzle diffuser for use with an open test section of a wind tunnel
| NASA-CASE-LAR-14424-1-SB | p 2598 N93-25996

WIND TURBINES
An advanced data-acquisition system for wind energy projects
| DE93-000079 | p 2874 N93-25254

WIND VELOCITY
An analysis of mesoscale convective systems observed during the 1992 Tropical Cyclone Motion field experiment
| AD-A260889 | p 2783 N93-25633
Errors caused by incompatible wind and buoyancy forcing in the ocean general circulation models
| AD-A260894 | p 2789 N93-25657

Summary by the cloud and aerosol research group for ASTEX
| AD-A261292 | p 2766 N93-26292
Tornado: An engineering-oriented perspective
| PB93-148435 | p 2788 N93-26584
WINDPOWER UTILIZATION
An advanced data-acquisition system for wind energy projects
| DE93-000079 | p 2874 N93-25254
WINDS ALOFT
Polarizing Michelson interferometer for measuring thermospheric winds
| ISBN-0-315-70442-X | p 2784 N93-25731
WINGS
General aviation aircraft: Normal acceleration data analysis and collection project
| DOT/FAA/CT-91/20 | p 2586 N93-24739
Analysis of wing wake roll-up using a vortex-in-cell method p 2579 N93-25706
WINTER
Investigation of winter mountain storms in Utah during the 1989 Utah/NOAA field program
| PB93-153021 | p 2785 N93-25849
WIRE
PROAV Cable Warning System (CWS) - U.S. Army aircraft Integration assessment and OCONUS field evaluation
| AD-A261233 | p 2583 N93-26263
WIRE CLOTH
Reduction in size and unsteadiness of a VTOL ground vortex by ground fences
| NASA-CR-192997 | p 2580 N93-26049
WIRING
Report of the Seasat Failure Review Board p 2619 N93-24693
WORDS (LANGUAGE)
Facilitation and interference in identification of pictures and words
| AD-A261484 | p 2798 N93-26356
Perception and the temporal properties of speech
| AD-A261439 | p 2686 N93-26490
WORK HARDENING
Analysis of shaped charge jet penetration experiments with Pen
| UCRL-LR-110773 | p 2730 N93-26177
Use and analysis of finite element methods for problems of solid mechanics and fracture
| AD-A261574 | p 2731 N93-26522
WORK-REST CYCLE
Simulated sustained flight operations and performance. Part 1: Effects of fatigue
| AD-A261012 | p 2801 N93-25859
WORKING FLUIDS
Malone refrigeration
| DE93-005439 | p 2668 N93-25447
WORKLOADS (PSYCHOPHYSIOLOGY)
Physiological indices of mental workload
| AD-A261692 | p 2798 N93-26391
WORKSTATIONS
A trace-driven analysis of name and attribute caching in a distributed system
| NASA-CR-192899 | p 2815 N93-25251
Interfacing a high performance disk array file server to a Gigabit LAN
| NASA-CR-192898 | p 2816 N93-25458
Splash 2 p 2814 N93-25575

X

X RAY ANALYSIS
Crystal growth of berlinite: Methods for growing longer crystals and improving the quality p 2838 N93-25025
Crystal growth and physical characterizations of GaPO4 p 2840 N93-25044
VETA-I x ray test analysis
| NASA-CR-192321 | p 2854 N93-26183
X-ray computed tomography for casting development
| AD-A261786 | p 2722 N93-26526
X ray computed tomography for failure analysis
| AD-A261884 | p 2722 N93-26527
X RAY APPARATUS
Poster session: Fifth Users Meeting for the Advanced Photon Source
| DE93-006019 | p 2598 N93-26498
X RAY ASTRONOMY
Starburst Galaxies: Hard X-ray spectra and contribution to the diffuse background
| NASA-CR-192790 | p 2892 N93-25211
ROSAT x ray survey observations of active chromospheric binary systems and other selected sources
| NASA-CR-192933 | p 2891 N93-26426
X RAY ASTROPHYSICS FACILITY
Intensity distribution of the x ray source for the AXAF VETA-I mirror test p 2854 N93-26184
VETA-1 x ray detection system p 2854 N93-26185
VETA x ray data acquisition and control system p 2854 N93-26186
Correcting x ray spectra obtained from the AXAF VETA-I mirror calibration for pileup, continuum, background and deadtime p 2854 N93-26187
AXAF VETA-I mirror encircled energy measurements and data reduction p 2855 N93-26188
Precision of the calibration of the AXAF engineering test article (VETA) mirrors p 2855 N93-26189
Image analysis of the AXAF VETA-I x ray mirror p 2855 N93-26190
Surface finish quality of the outer AXAF mirror pair based on x ray measurements of the VETA-I p 2855 N93-26191
The x ray reflectivity of the AXAF VETA-I optics p 2855 N93-26192
X RAY BINARIES
ROSAT x ray survey observations of active chromospheric binary systems and other selected sources
| NASA-CR-192933 | p 2891 N93-26426
X RAY DETECTORS
VETA-1 x ray detection system p 2854 N93-26185
X RAY DIFFRACTION
Synchrotron radiation X ray topography study of lateral field resonators p 2833 N93-24994
Measurement results of the crystallographic orientation of the SC cut round plates p 2840 N93-25040
Probe molecule studies: Active species in alcohol synthesis
| DE93-008097 | p 2659 N93-25119
X RAY IMAGERY
High speed x ray gating cameras for ICF imaging applications
| DE93-007500 | p 2709 N93-25515
VETA-1 x ray detection system p 2854 N93-26185
X RAY LASERS
Progress in imaging microscopy with x ray lasers at LLNL
| DE93-007508 | p 2712 N93-25363
X RAY SOURCES
Steady-state numerical models of accreting neutron stars: The effect of atmospheric CNO depletion and diffusion p 2889 N93-25624
Intensity distribution of the x ray source for the AXAF VETA-I mirror test p 2854 N93-26184
Correcting x ray spectra obtained from the AXAF VETA-I mirror calibration for pileup, continuum, background and deadtime p 2854 N93-26187
Surface finish quality of the outer AXAF mirror pair based on x ray measurements of the VETA-I p 2855 N93-26191
The x ray reflectivity of the AXAF VETA-I optics p 2855 N93-26192
X RAY SPECTRA
Starburst Galaxies: Hard X-ray spectra and contribution to the diffuse background
| NASA-CR-192790 | p 2892 N93-25211
Correcting x ray spectra obtained from the AXAF VETA-I mirror calibration for pileup, continuum, background and deadtime p 2854 N93-26187
Large area, low capacitance Si(Li) detectors for high rate x ray applications
| DE93-007661 | p 2692 N93-26598
X RAY SPECTROSCOPY
The interaction of HCN/DCN with Si(100)-2x1
| AD-A260837 | p 2645 N93-25920
Interaction of O2 with the Fe(.84)Cr(.16) (001) surface studied by photoelectron spectroscopy
| AD-A261065 | p 2645 N93-26251
X RAY TELESCOPES
The ALEXIS data processing package: An update
| DE93-007374 | p 2899 N93-25185
The x ray reflectivity of the AXAF VETA-I optics p 2855 N93-26192
X RAYS
Large area, low capacitance Si(Li) detectors for high rate x ray applications
| DE93-007661 | p 2692 N93-26598
X-30 VEHICLE
Aerospace-plane flights and stratospheric ozone: Review and preliminary assessment of the National Aerospace Plane (NASP) operations
| RAND/N-3464-AF | p 2767 N93-26327
XENON CHLORIDE LASERS
Ultraviolet waveguide lasers for phased array lidar
| AD-A261657 | p 2715 N93-26363

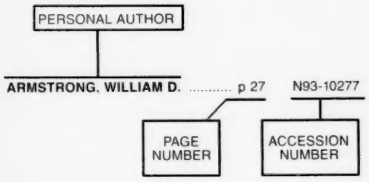
Y

YAG LASERS
Injection seeded, diode-pumped, short pulse Nd:YAG ring laser for space-based laser ranging p 2713 N93-25389
YAW
Helicopter low-speed yaw control
| NASA-CASE-LAR-14219-1 | p 2597 N93-25998
YBCO SUPERCONDUCTORS
Studying the kinetics of magnetization in high Tc superconductors
| NASA-CR-192916 | p 2862 N93-25108
Rheology of YBa2Cu3O(7-x) precursors
| DE93-007285 | p 2863 N93-25362
Environmental test program for superconducting materials and devices
| DE93-003646 | p 2864 N93-25506
Aerospace devices for magnetic replicas
| NASA-CR-192958 | p 2865 N93-25667
Advanced HTS S-N-S devices
| AD-A261552 | p 2869 N93-26381
YEAST
Biological production of ethanol from coal
| DE93-008947 | p 2660 N93-25496
YTTERBIUM ISOTOPES
Ion trap frequency standard research at PTB p 2841 N93-25050
YTTRIUM OXIDES
Sputter deposition of yttrium-oxides
| DE93-007499 | p 2654 N93-25382

Z

ZEOLITES
Gravity-dependent transport phenomena in zeolite crystal growth p 2664 N93-25740
ZINC COATINGS
In situ surface studies of conversion coatings for steel and aluminum
| AD-A261016 | p 2655 N93-25861
ZINC OXIDES
Non-H2Se, ultra-thin CIS devices
| DE93-000078 | p 2759 N93-25253
ZINC SELENIDES
IR materials producibility
| AD-A261099 | p 2853 N93-25766
ZINC TELLURIDES
Study of surface behavior in function of temperature of the quaternary system (Hg, Cd, Zn)Te
| AD-A260968 | p 2867 N93-26223
ZIRCONIUM COMPOUNDS
Laser Induced Phonons (LIPs) in MBE grown ZnSe
| RSRE-MEMO-4544 | p 2864 N93-25454
ZIRCONIUM OXIDES
Transformation plasticity and fracture behavior of ceria-TZP/alumina composites p 2638 N93-25760
ZONAL FLOW (METEOROLOGY)
Kelvin waves in total column ozone
| NASA-CR-192984 | p 2764 N93-25431

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The page number helps you locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

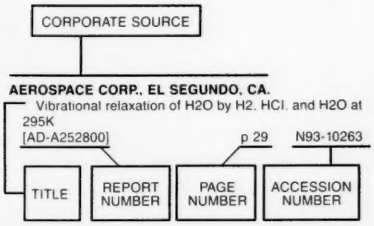
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number denotes the number by which the citation is identified. The page number helps you locate the citation in the abstract section. The titles are arranged under each corporate source in ascending accession number order.

A

ACADEMIA SINICA, WUHAN (CHINA).
Experiments on a diode-laser-pumped Rb-87 maser
p 2716 N93-25030

ACADEMY OF SCIENCES (USSR), ALMA-ATA.
Condensation on cooled surfaces of optical devices at the cosmic conditions p 2753 N93-24869

ACADEMY OF SCIENCES (USSR), MOSCOW.
Aerospace monitoring for ecological hazard and disaster mitigation p 2744 N93-24812

Data availability and data archeology from the former Soviet Union p 2735 N93-24932

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
AGARD membership, 1993
| AGARD-MEMB-93 | p 2873 N93-26428

AERODYNE RESEARCH, INC., BILLERICA, MA.
Infrared fiber optic diagnostic for solid propellant combustion p 2628 N93-26031

AEROJET-GENERAL CORP., IUKA, MS.
Improved burn rate determination techniques
p 2627 N93-26021

ASRM design philosophy and modelling challenges
p 2627 N93-26022

Determination of burn rate requirements from ASRM performance specifications p 2627 N93-26023

AERONAUTICAL RADIO, INC., ANNAPOLIS, MD.
Expert system for UNIX system reliability and availability enhancement p 2723 N93-25588

AERONAUTICAL RESEARCH INST. OF SWEDEN, STOCKHOLM.
Reliable stress and fracture mechanics analysis of complex aircraft components using a h-p version of FEM
| AD-A260628 | p 2726 N93-25638

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
In-flight evaluation of noise levels and assessment of active noise reduction systems in the Seahawk S-70B-2 helicopter
| AD-A260689 | p 2845 N93-25649

In-situ ultrasonic C-scanner
| AD-A261113 | p 2638 N93-25768

Estimation of coefficients in a rational function from observed values
| AD-A261126 | p 2828 N93-25773

AEROSPACE CORP., EL SEGUNDO, CA.
Mixed constellation synchronization of GPS time
p 2836 N93-25015

Analysis of transient photoluminescence measurements on GaAs and AlGaAs double heterostructures
| AD-A261154 | p 2867 N93-25947

Magnetotail processes associated with auroral surge formation
| ATR-90(7186)-1 | p 2895 N93-26147

Interaction of O2 with the Fe(.84)Cr(.16) (001) surface studied by photoelectron spectroscopy
| AD-A261065 | p 2645 N93-26251

AEROSPACE MEDICAL RESEARCH LABS., WRIGHT-PATTERSON AFB, OH.
Information requirements analyses for transatmospheric vehicles
| AD-A261189 | p 2590 N93-25949

AEROSPACE TECHNICAL INTELLIGENCE CENTER, WRIGHT-PATTERSON AFB, OH.
Substantiation of a stochastic model of rhythmic phenomena
| AD-A261232 | p 2830 N93-26262

AEROSPATIALE, SURESNES (FRANCE).
Numerical modelling of induced effects of lightning strike on an all composite helicopter p 2583 N93-24879

AIR FORCE ACADEMY, CO.
Orbit determination error analysis and comparison of station-keeping costs for Lissajous and halo-type libration point orbits and sensitivity analysis using experimental design techniques p 2604 N93-24721

Another look at the driven cavity problem
| AD-A261903 | p 2708 N93-26543

AIR FORCE ENVIRONMENTAL TECHNICAL APPLICATIONS CENTER, SCOTT AFB, IL.
Bit hit/solar activity correlation study

HAWAII UNIV., MANOA.
A low-complexity and high performance concatenated coding scheme for high-speed satellite communications
| NASA-CR-192715 | p 2673 N93-25198
HCC SCIENCE AND TECHNOLOGY CO., SUMMIT, NJ.
Development of organic nonlinear optical materials
| AD-A261332 | p 2856 N93-26309
HELSINKI UNIV. OF TECHNOLOGY, OTANIEMI (FINLAND).
Computational and experimental studies on large scale solar heating
| DE93-769942 | p 2758 N93-25096
Advanced energy systems and technologies - National R and D programme
| DE93-769943 | p 2758 N93-25097
HERIOT-WATT UNIV., EDINBURGH (SCOTLAND).
Fibre optic sensors for heat transfer studies p 2853 N93-25748
HONEYWELL, INC., BLOOMINGTON, MN.
Research on lead titanate films for radiation detection
| AD-A261187 | p 2849 N93-25823
Monolithic integration of semiconductor and superconductor components
| AD-A260589 | p 2690 N93-25906
RF vacuum microelectronics
| AD-A261784 | p 2692 N93-26565
HONEYWELL, INC., MINNEAPOLIS, MN.
Software lifecycle support environment (SLCSE) knowledge-based enhancements
| AD-A261042 | p 2811 N93-25791
Knowledge-based control for robot self-localization p 2822 N93-25963
HOUSTON UNIV., TX.
Dynamics of turbulent slugging in transitional pipe flow p 2702 N93-25548
Aerospace devices for magnetic replicas
| NASA-CR-192958 | p 2865 N93-25667
Initial streamwise vorticity formation in a two-stream mixing layer p 2579 N93-25752
An architecture for object-oriented intelligent control of power systems in space p 2823 N93-25968
National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, volume 1
| NASA-CR-188242-VOL-1 | p 2911 N93-26058
Metabolic response of environmentally isolated microorganisms to industrial effluents: Use of a newly described cell culture assay p 2794 N93-26066
National Aeronautics and Space Administration (NASA)/American Society for Engineering Education (ASEE) Summer Faculty Fellowship Program, 1992, volume 2
| NASA-CR-188242-VOL-2 | p 2914 N93-26070
A hybrid multigrid technique for computing steady-state solutions to supersonic flows p 2582 N93-26078
The adult literacy evaluator: An intelligent computer-aided training system for diagnosing adult illiterates p 2799 N93-26082
HOWARD UNIV., WASHINGTON, DC.
Dynamics and robust control of a sampled data system for large space structures. Volume 2: The LQG/LTR methodology for the discrete-time system and the design of reduced order robust digital controller for orbiting flexible shallow spherical shell system
| AD-A260793 | p 2599 N93-25693
HUGHES AIRCRAFT CO., CULVER CITY, CA.
Advanced data visualization and sensor fusion: Conversion of techniques from medical imaging to Earth science p 2880 N93-25810
HUGHES AIRCRAFT CO., FULLERTON, CA.
Step stress testing of receiver/transmitter units
| AD-A261286 | p 2730 N93-26279
HUGHES AIRCRAFT CO., LOS ANGELES, CA.
Systems engineering for very large systems p 2665 N93-24680
HUGHES AIRCRAFT CO., TORRANCE, CA.
RF vacuum microelectronics
| AD-A261343 | p 2691 N93-26311
HUGHES DANBURY OPTICAL SYSTEMS, INC., CT.
Star tracker operation in a high density proton field p 2600 N93-24699
Optimizing the fine lock performance of the Hubble Space Telescope fine guidance sensors p 2604 N93-24723
The Hubble Space Telescope fine guidance system operating in the coarse track pointing control mode p 2605 N93-24724
HUGHES STX, INC., LANHAM, MD.
Lossless compression of image data products on th e FIFE CD-ROM series p 2804 N93-25929
HUNTER COLL., NEW YORK, NY.
NMR studies of ion mobility and association in polyether-based polymer electrolytes
| AD-A260662 | p 2655 N93-25642
Deuteron and oxygen-17 NMR studies of molecular motion in methanol-saturated Nafion membranes
| AD-A261579 | p 2851 N93-26514

NEW JERSEY INST. OF TECH., NEWARK.
Particle dynamics modeling of boundary effects in granular Couette flow p 2705 N93-25738

NEW MEXICO INST. OF MINING AND TECHNOLOGY, SOCORRO.
Lightning precursor signatures from dual-polarization radar measurements of storms p 2777 N93-24877
Remote sensing of precipitation and electrification with a dual-polarization, coherent, wideband radar system
| AD-A260779 | p 2756 N93-25679
Interface engineering in oxide fiber/oxide matrix composites
| AD-A261705 | p 2641 N93-26579

NEW MEXICO STATE UNIV., LAS CRUCES.
Improving information search at the user interface: The impact of graphical innovation on query formulation and expression p 2873 N93-24905
Modeling of the WSTF frictional heating apparatus in high pressure systems p 2648 N93-26079

NEW ORLEANS UNIV., LA.
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 4
| NASA-CR-192834 | p 2769 N93-24910
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution, appendix 2
| NASA-CR-192833 | p 2770 N93-25088
Determination of design and operation parameters for upper atmospheric research instrumentation to yield optimum resolution with deconvolution
| NASA-CR-192832 | p 2775 N93-26084

NEW SOUTH WALES UNIV., KENSINGTON (AUSTRALIA).
An autonomous satellite architecture integrating deliberative reasoning and behavioural intelligence
p 2823 N93-25970

NEW YORK UNIV., NEW YORK.
Boundary plasma modelling for ITER
| DE93-007963 | p 2859 N93-25302
Facilitation and interference in identification of pictures and words
| AD-A261484 | p 2798 N93-26356
Duration of alpha suppression increases with angle in a mental rotation task
| AD-A261592 | p 2798 N93-26435
Imaging regional changes in the spontaneous activity of the brain: An extension of the minimum-norm least-squares estimate
| AD-A261593 | p 2798 N93-26436
Neuromagnetic investigation of cortical regions underlying short-term memory
| AD-A261445 | p 2799 N93-26521

NIPPON ELECTRIC CO. LTD., YOKOHAMA (JAPAN).
High resolution stereo imaging and data compression
p 2753 N93-24867

NIPPON TELEGRAPH AND TELEPHONE PUBLIC CORP., YOKOSUKA (JAPAN).
Timing and time signal distribution in digital communications networks p 2686 N93-25061

NORTH CAROLINA AGRICULTURAL AND TECHNICAL STATE UNIV., GREENSBORO.
Uniform roughness studies
| WL-TR-92-3041 | p 2706 N93-25951
Optical characterization of Ga(1-x)In(x)As(y)Sb(1-y)/GaSb alloy and device application
| AD-A261713 | p 2870 N93-26581

NORTH CAROLINA STATE UNIV., RALEIGH.
Aerial photographic sampling for statewide resource inventory p 2755 N93-25441
Theoretical studies of surface reactions on metals and electronic materials
| DE93-009761 | p 2650 N93-25502
A new LU-SGS flow solver for calculating reentry flows p 2579 N93-25759
Heterogeneous photocatalytic oxidation of atmospheric trace contaminants
| NASA-CR-192937 | p 2767 N93-26427

NORTH CAROLINA UNIV., CHAPEL HILL.
Observations of an intrathermocline vortex
p 2788 N93-24769
Observations and models of shock structures in Herbig-Haro objects p 2891 N93-24770
Advanced technology for portable personal visualization
| AD-A261294 | p 2807 N93-26293

NORTH CAROLINA UNIV., CHARLOTTE.
Two-phase/two-phase heat exchanger analysis
| NASA-CR-192783 | p 2697 N93-25221
Activity report
| AD-A261933 | p 2829 N93-26199

NORTH DAKOTA ATMOSPHERIC RESOURCE BOARD, BISMARCK.
The North Dakota thunderstorm project
| PB93-153039 | p 2785 N93-25776

NORTH DAKOTA UNIV., GRAND FORKS.
Redistribution of trace chemical species by a small convective cloud
| PB93-156164 | p 2765 N93-25873

NORTHROP CORP., PICO RIVERA, CA.
A procedure for defining lightning risk to air vehicles
p 2583 N93-24885

NORWEGIAN DEFENCE RESEARCH ESTABLISHMENT, KJELLER.
Registration of the use of agricultural fields and soil erosion using satellite remote sensing
p 2751 N93-24856

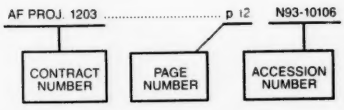
ZURICH UNIV. (SWITZERLAND).
Remote sensing in hydrology and water management
p 2744 N93-24816

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The page number helps to locate the citation in the abstract section. The accession number denotes the number by which the citation is identified.

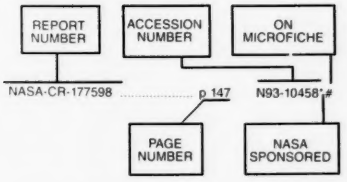
REPORT NUMBER INDEX

Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The accession number denotes the number by which the citation is identified. The page number helps to locate the citation in the abstract section. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

Appendix

NASA SCIENTIFIC AND TECHNICAL INFORMATION PROGRAM PRODUCTS AND SERVICES

The NASA Scientific and Technical Information (STI) Program provides for the collection and announcement of aerospace-related reports and literature obtained worldwide through agreements and exchanges. The result of the collection is the comprehensive NASA STI Database that covers aeronautics, space, and supporting disciplines.

The STI Database, documents generated or obtained by NASA, and products and services derived from or supporting the database are made available to the NASA research community and to the public. Descriptions and sources of these items are presented in the following pages.

Scientific and Technical Aerospace Reports (*STAR*) is an abstract journal, listing citations with abstracts for aerospace-related reports obtained from worldwide sources. *STAR* is issued on the first of each month, and announces current documents that have been entered into the NASA STI Database during the previous month. The reports are of the following types:

- NASA, NASA contractor, and NASA grantee reports;
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms;
- Translations in report form;
- NASA-owned patents and patent applications;
- Other U.S. Government agency and foreign patents and patent applications;
- Domestic and foreign dissertations and theses.

Journal, book, and conference literature, journal translations, and certain foreign dissertations having the same subject scope as *STAR* are announced in a companion journal, *International Aerospace Abstracts* (*IAA*). *IAA* is issued on the 1st and 15th of each month and is available from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, NY 10019.

ELIGIBILITY AND REGISTRATION FOR NASA STI PRODUCTS AND SERVICES

Organizations of the type listed below that have registered with NASA can receive products and services.

- NASA offices and installations, contractors, subcontractors, grantees, and consultants;
- Other U.S. Government agencies and their contractors;
- Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
- Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
- Organizations abroad that have established reciprocal documents exchange arrangements with NASA.

The central service points — central points of document acquisition and control within qualified organizations — or individuals are eligible to register for NASA STI products and services. Domestic organizations or individuals may be eligible to receive various classes of NASA publications and services and should address their requests for registration or further information to:

ATTN: Registration Services
NASA Center for AeroSpace Information
800 Elkridge Landing Road
Linthicum Heights, MD 21090-2934
301-621-0390

Organizations abroad should direct requests to:

National Aeronautics and Space Administration
Scientific and Technical Information Program (JTT)
International STI Program
Washington, DC 20546-0001
USA
703-271-5640

SUBJECT SCOPE

The subject scope of *STAR* and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of Earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

HOW TO USE *STAR* SUBJECT CATEGORIES

Abstracts in *STAR* are categorized by 10 major subject divisions that are divided further into 76 specific subject categories. The subject divisions and categories are listed in the Table of Contents together with a note for each that defines its scope and provides any cross-references. For example:

16 SPACE TRANSPORTATION
Includes passenger and cargo space transportation, e.g., shuttle operations; and space rescue techniques. For related information see also *03 Air Transportation and Safety* and *18 Spacecraft Design, Testing and Performance*. For space suits see *54 Man/System Technology and Life Support*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents available on microfiche are designated by a pound sign (#) following the accession number.

LIMITED REPRODUCIBILITY

A note of limited reproducibility appears in the citation, if there are factors affecting the reproducibility of more than 20% of the document. These factors include faint or broken type, color photographs, black and white photographs, foldouts, dot matrix print, or some other factor that limits the reproducibility of the document. This notation also appears on the microfiche header.

COLOR COPIES

An increasing number of NASA scientific and technical reports are being produced with color graphs, charts, illustrations, and photographs. An indication that a document has color pages follows the source and pricing (SAP) information in the *STAR* citation.

Registered users of the NASA Scientific and Technical Information Program will receive ordered documents with color at no additional cost, as long as stock copies of the document are available. Otherwise, an additional fee of $2.00 per color page will be charged. The NASA Center for AeroSpace Information staff will contact registered users to determine individual user's needs.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number, and the U.S. Patent Class. Patent applications are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

Printed copies of patents (which are not microfiched) are available for purchase from the U.S. Patent and Trademark Office.

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the U.S. Patent and Trademark Office.

NASA patent application specifications are sold in both paper copy and microfiche by the NASA Center for AeroSpace Information (CASI). The N accession number should be used in ordering either paper copy or microfiche from CASI.

The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

National Aeronautics and Space Administration
Associate General Counsel for Intellectual Property
Code GP
Washington, DC 20546-0001

SOURCES FOR DOCUMENTS

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below, and their addresses are listed on page A-6. If the publication is available from a source other than those listed, the publisher and address will be displayed on the availability line or in combination with the corporate source line.

Avail: CASI. Sold by the NASA Center for AeroSpace Information. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page A-7.

NOTE ON ORDERING DOCUMENTS: When ordering publications from CASI, use the N accession number or other report number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, address inquiry to the BLL.)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: ESDU. Pricing information on specific data, computer programs, and details on Engineering Sciences Data Unit (ESDU) topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page A-6.

Avail: Fachinformationszentrum, Karlsruhe. Gesellschaft fur wissenschaftlich-technische Information mbH 7514 Eggenstein-Leopoldshafen 2, Germany.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, CA. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration (JBD-4), Public Documents Room (Room 1H23), Washington, DC 20546-0001, or public document rooms located at NASA installations, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: NTIS. Sold by the National Technical Information Service. Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) are available. For information concerning this service, consult the NTIS Subscription Section, Springfield, VA 22161.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications on page A-3.)

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed on page A-6. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

FEDERAL DEPOSITORY LIBRARIES: To provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 53 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. (These libraries are not sales outlets.) At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 53 regional depositories. A list of the regional GPO libraries, appears on page A-8. A local library can contact a regional depository library to help locate specific reports, or direct contact may be made by an individual.

PUBLIC COLLECTION OF NASA DOCUMENTS

An extensive collection of NASA and NASA-sponsored publications is maintianed by the British Library Lending Divison, Boston Spa, Wetherby, Yorkshire, England, for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*.

European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA—Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

SUBMITTING DOCUMENTS

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those you will transmit to NASA, DOD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Center for AeroSpace Information, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR*'s companion journal, *IAA*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on a public sale at the NASA Center for AeroSpace Information. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

STAR is publicly available on annual subscription from the NASA Center for AeroSpace Information (CASI) at $94.00 domestic, $117.00 foreign. Single copy prices: $33/domestic, $41/foreign.

An annual, cumulative *STAR Index* is also available at $54/domestic and $65/foreign.

STAR is available to registered users on annual subscription from the NASA Center for AeroSpace Information, ATTN: Registration Services, 800 Elkridge Landing Road, Linthicum Heights, MD 21090-2934.

Microfiche of the abstract sections of *STAR* are available, on annual subscription, from CASI. Annual subscription rates are $216.00 North America; $432.00 foreign.
